## DFT-1573

(Error) Pin length of load pin '%s' when processing indx '%d' exceeded TDR bus length.

**Description**

This error message is issued when TDR bus length is less than the pin length of the load pins.

Error: Pin length of load pin 'dm1' when processing indx '35' exceeded TDR bus length (DFT-1573)

## DFT-1574

(Error) Found more than one ISO/LS cell for input port %s. Cannot skip ISO/LS cell for the port.

**Description**

This error message is issued during UPF analysis for adding dedicated wrapper when more than a single ISO/LS is connected to a net which itself is connected to an input port. This happens when the app option "test_soc_core_wrap_skip_iso_cells" is set to true.

For example,

Error: Found more than one ISO/LS cell for input port i_rd. Cannot skip ISO/LS cell for the port. (DFT-1574)

**What Next**

Tool does not handle this scenario as of now. This will be supported in the near future to skip all ISO/LS cells and add DW cell for all those paths.

Feedback

## DFT-1575

(Error) "Options '-clock_mixing', '-voltage_mixing' and '-power_domain_mixing' are allowed with app option 'dft.scan.allow_wrapper_chain_clock_mixing_setting' only."

**Description**

This error message is issued when user try to specify the options '-clock_mixing', '-voltage_mixing' and '-power_domain_mixing' with 'set_wrapper_configuration' without enabling the app option 'dft.scan.allow_wrapper_chain_clock_mixing_setting'.

**What Next**

Please retry the options with enabling the app option 'dft.scan.allow_wrapper_chain_clock_mixing_setting'.

## DFT-1579

(Error) Option '%s' is not supported if option -type is not user specified.

**Description**

You receive this error message when -type option is not user specified and user has specified option %s in set_boundary_cell command. If option -type is specified the error will be removed.

## DFT-1581

(Error) Invalid class name, only class pmm is allowed.

**Description**

Valid value for -class is pmm. No other value is allowed.

**What Next**

(Error) Architecting plan not available. generate_dft either failed or not run

**Description**

Architecting plan not available. generate_dft either failed or not run

Feedback

**What Next**

Please Review DFT Specifications

---

## DFT-1653

(warning) No port specified, specify port or port list

**Description**

You receive this warning message when no port is specified for test point.

---

## DFT-1654

(Error) Could not find '%s' in the model

**Description**

You receive this error message when you specify wrong signal in '-control_signal' field of 'set_testability_configuration' command.

**What Next**

Please use correct signal name in '-control_signal' field of 'set_testability_configuration' command.

---

## DFT-1655

(Error) The signal '%s' must be specified as '%s'

**Description**

You receive this error message when you specify wrong signal type with 'set_testability_configuration' command.

**What Next**

Please use correct signal type with 'set_testability_configuration' command.

---

## DFT-1656

(Error) The ['%s'] field value range is '%d' to '%d'.

**Description**

You receive this error message when you specify a value that is out of allowed range for a field like '-test_points_per_scan_cell', '-max_test_points', '-max_test_point_registers' and '-max_test_point_register_percent' in 'set_testability_configuration' command.

Feedback

**What Next**

Please use a value within the allowed range.

---

## DFT-1657

(Error) The '%s' value range is '0' to '%d'.

**Description**

You receive this error message when you specify a value that is out of allowed range for field '-target_test_coverage' in 'set_testability_configuration' command.

**What Next**

Please use a value within the allowed range.

---

## DFT-1658

(Error) Incorrect -effort switch value: '%s'. Please specify: 'low', 'high' or 'medium'

**Description**

You receive this error message when you specify a value that is not allowed for field '-effort' in 'set_testability_configuration' command.

**What Next**

Please use an appropriate value for '-effort' field.

---

## DFT-1659

(Error) Incorrect -target switch value: '%s'. Please specify: atpg_conflict | auto_self_gating | multicycle_paths | random_resistant | self_gating | shadow_wrapper | untestable_logic | user | x_blocking

**Description**

You receive this error message when you specify a value that is not allowed for field '-target' in 'set_testability_configuration' command.

**What Next**

Please specify: atpg_conflict | auto_self_gating | multicycle_paths | random_resistant | self_gating | shadow_wrapper | untestable_logic | user | x_blocking in '-target' field of 'set_testability_configuration' command

Feedback

## DFT-1660

(Error) Incorrect -target usage for '%s' switch. Please specify '-target %s'

**Description**

You receive this error message when you specify an option that is not supported with specified target.

**What Next**

Please specify the appropriate target as suggested by the message.

## DFT-1661

(Error) Target %s is required to enable %s

**Description**

You receive this error message when you specify target auto self gating in set_testability_configuration but do not have self gating optimization enabled.

## DFT-1662

(Error) The signal '%s' must be specified as '%s'

**Description**

You receive this error message when you specify a wrong signal type for a field in 'set_test_point_element' command.

**What Next**

Please use correct signal type with 'set_test_point_element' command.

## DFT-1663

(Error) Invalid value for '-type'. It should be control_0 | control_1 | observe | force_0 | force_1 | force_01

**Description**

You receive this error message when you specify a value that is not allowed for '-type' field in 'set_test_point_element' command.

**What Next**

Use an allowed value for '-type' field in 'set_test_point_element' command.

Feedback

## DFT-1664

(Error) Options %s cannot be specified together

**Description**

You receive this error message when you specify options that are not supported together in the 'set_testability_configuration' command

For example: 1) Options test_point_type and target_test_coverage cannot be specified together 2) Options max_test_points, max_test_point_registers, and max_test_point_register_percent cannot be specified together

## DFT-1665

(Error) Options '%s' must be specified together with %s

**Description**

You receive this error message when you do not specify options that must be specified together for a field in 'set_testability_configuration' command

For example: 1) Option only_from_file should be specified together with option test_point_file 2) Option effort should be specified together with option target random_resistant 3) Option isolate_elements should be specified together with option target shadow_wrapper

## DFT-1666

(Error) Invalid command syntax. Please provide at least one option.

**Description**

You receive this error message when you specify no option with 'set_testability_configuration' command.

**What Next**

Please provide at least one option with 'set_testability_configuration' command.

## DFT-1667

(Error) Invalid value for '-type'. It should be control_0 | control_1 | observe | force_0 | force_1 | force_01

**Description**

You receive this error message if you use invalid value for test point '-type' field

Feedback

## DFT-1668

(Error) '%s' option not supported with partition

**Description**

You receive this error message when you specify an option that is not supported in partition

**What Next**

Use an appropriate option that is supported in partition. Refer to the man page of 'set_testability_configuration' to check which options can be specified on a per-partition basis

## DFT-1669

(Error) Ignoring test point '%s' specified in wrong partition '%s'. Specify under '%s' or set the application option 'dft.tp_enable_partition_search' to true

**Description**

You receive this error message when the test point is ignored because it is specified in the wrong partition. This could happen because you may have used a set_test_point_element to insert the test point on a hierarchy from a DFT partition different from the current_dft_partition

**What Next**

Specify the test point in the correct partition or set the application option 'dft.tp_enable_partition_search' to true.

## DFT-1670

(Error) Unable to remove user defined test point '%s'. The test point is either not defined in partition '%s' or already removed.

**Description**

You receive this error message when the tool is not able to remove user defined test point.

**What Next**

You can check if the user defined test point exists in the defined partition.

Feedback

## DFT-1671

(Error) Ignoring test point '%s' specified in wrong partition '%s'. Specify under '%s' or set the application option 'dft.tp_enable_partition_search' to true.

### Description

You receive this error message when the test point is ignored because it is specified in wrong partition.

### What Next

Specify the test point in correct partition or set the application option 'dft.tp_enable_partition_search' to true.

## DFT-1672

(Error) Ignoring the command 'set_testability_configuration' as client is not enabled. Use 'set_dft_configuration -testability enable' to enable the client

### Description

You receive this error message if you use the 'set_testability_configuration' command without having specified 'set_dft_configuration -testability enable' previously

### What Next

You can add 'set_dft_configuration -testability enable' prior to the current command

## DFT-1673

(Error) Ignoring the command 'set_test_point_element' as client is not enabled. Use 'set_dft_configuration -testability enable' to enable the client.

### Description

You receive this error message if you use the set_test_point_element command without having specified set_dft_configuration -testability enable previously

### What Next

Add set_dft_configuration -testability enable prior to the current command

## DFT-1674

(Error) Ignoring the command 'run_test_point_analysis' as client is not enabled. Use 'set_dft_configuration -testability enable' to enable the client.

Feedback

**Description**

You receive this error message if you use the run_test_point_analysis command without having specified set_dft_configuration -testability enable previously

**What Next**

Add set_dft_configuration -testability enable prior to the current command

---

## DFT-1675

(Error) Ignoring the command 'run_test_point_analysis' as testability configuration is not defined. Use 'set_testability_configuration' to specify configuration.

**Description**

You receive this error message if you use the run_test_point_analysis command without having specified set_testability_configuration previously

**What Next**

Add set_testability_configuration configuration prior to the current command

---

## DFT-1676

(Error) Ignoring the command 'remove_test_point_element' as client is not enabled. Use 'set_dft_configuration -testability enable' to enable the client.

**Description**

You receive this error message if you use the 'remove_test_point_element' command without having specified 'set_dft_configuration -testability enable' previously.

**What Next**

You can add 'set_dft_configuration -testability enable' prior to the current command.

---

## DFT-1677

(Error) Test point report generation failed (DFT-3705).

**Description**

You receive this error message when the test point report generation is failed.

---

## DFT-1678

(Error) Value specified for option %s should be within %d and %d.

Feedback

**Description**

You receive this error message when you specify a value that is out of range for a field like '-test_points_per_scan_cell' in 'set_test_point_element' command.

**What Next**

Use a value within the allowed range.

---

## DFT-1679

(Error) No port specified, specify port or port list

**Description**

You receive this error message when no port is specified for test point.

---

## DFT-1680

(Error) Failed to insert %s test point at %s

**Description**

You receive this error message when the tool is unable to insert a control or a force_01 test point at the specified location

---

## DFT-1681

(Error) Missing control signal for test point target %s

**Description**

You receive this error message when control signal is missing for the specified test point target.

**What Next**

Check that you have specified a correct control signal for the specified test point target.

---

## DFT-1682

(Error) Missing clock signal and local clock hookup pin specification for user defined test points for partition %s

**Description**

You receive this error message when clock signal and local clock specification are missing for user defined test points.

Feedback

## DFT-1684

(Error) Unable to open the test point file %s

**Description**

You receive this error message when the tool is unable to open test point file at the specified location.

**What Next**

Check the existence of the file at the specified location.

## DFT-1685

(Error) Value %s for option '-test_point_types' is not valid. Please specify one of: control_0, control_1, control, observe, force_01

**Description**

You receive this error message when you specify a value for field '-test_point_types' that is not valid. Please specify one of: control_0, control_1, control, observe, force_01.

**What Next**

Correct the test point types.

## DFT-1686

(Error) Missing target specification for test point insertion for partition %s

**Description**

You receive this error message when the target specification is missing for test point insertion for the specified partition

**What Next**

Check the test point target specification for the partition.

## DFT-1687

(Error) Missing specifications for Max test point registers for one or more targets for partition %s

Feedback

**Description**

You receive this error message when max test point registers specification is missing for one or more targets for the specified partition.

**What Next**

Check the max test point registers specification for the test point target for the specified partition.

---

## DFT-1688

(Error) Tool cannot locate successful SpyGlass batch run to load GUI.

**Description**

You receive this error message when tool is not able to locate successful SpyGlass batch run to load GUI.

**What Next**

Check that you have a valid Spyglass project file generated by Fusion Compiler test point analysis step.

---

## DFT-1689

(Error) Tool cannot locate existing SpyGlass project directory.

**Description**

You receive this error message when tool is not able to locate existing SpyGlass project directory.

**What Next**

Check you have a valid SpyGlass project directory generated by Fusion Compiler test point analysis step.

---

## DFT-1690

(Error) Missing current design.

**Description**

You receive this error message when current design is not specified.

**What Next**

Check you have specified the correct design.

Feedback

## DFT-1691

(Error) Elaborate Failed. Make sure module %s is read properly.

**Description**

You receive this error message when the module specified using define_dft_design is not properly analyzed.

**What Next**

Check the module you have specified as DFT design is elaborated and built correctly.

## DFT-1692

(Error) DFT IP %s is unavailable. Make sure it is analyzed post compile.

**Description**

You receive this error message during insert_dft when tool is unable to find the user defined IP since it would have been optimized in logic opto hence try to analyze it post compile command.

## DFT-1693

(error) Vectored name '%s' of a bus port specified in interface. Specify pin name '%s' only

**Description**

You receive this error message when no a vectored pin is specified in the interface list

## DFT-1694

(error) Specified file '%s' doesn't exist or can't be read

**Description**

You receive this error message when specified file doesn't exist or can't be read.

## DFT-1695

(Error) Clock %s cannot be specified together in %s and %s

**Description**

Clock %s cannot be specified together in %s and %s

Feedback

**What Next**

Please Review DFT Specifications

---

## DFT-1696

(Error) Clock %s cannot be specified together with -clock_signal/-allowed_clock_signal and -disallowed_clock_signals

**Description**

You receive this error message when clock gating enable signal is missing for the specified test point target.

---

## DFT-1700

(Error) No test point test mode control has been specified.

**Description**

You receive this error message because no test point test mode control has been specified.

---

## DFT-1703

(Error) Incorrect combination for synchronized clocks was specified.

**Description**

Incorrect combination for synchronized clocks was specified.

**What Next**

Please Review DFT Specifications

---

## DFT-1704

(Error) Required argument '-pllclocks' was not found.

**Description**

Required argument '-pllclocks' was not found.

**What Next**

Please Review DFT Specifications

Feedback

## DFT-1705

Error : You must specify either '%s' or '%s' option.

**Description**

This information is shown when it is mandatory to define one of the option and no option is defined.

For example,

write_test_protocol -out des_unit.comp1.spf Error: You must specify either '-pattern_exec' or '-test_mode' option. (DFT-1705)

write_test_protocol -target {{u1 ./des_unit_withSIB_merged.pdl} {u2 ./des_unit_withSIB_merged.pdl} {twox_top ./twox_top_merged.pdl}} -output ./twox_top.scan.spf Error: You must specify either '-pattern_exec' or '-test_mode' option. (DFT-1705)

**What Next**

Please Review DFT Specifications

## DFT-1707

(Error) Test mode '%s' is not defined

**Description**

Test mode '%s' is not defined

**What Next**

Please Review DFT Specifications

## DFT-1715

(Error) Unsuccessful chain update: %s

**Description**

You receive this error message if an issue occurred when processing a update_stub_chain command.

**What Next**

Verify that the options provided on the update_stub_chain command are correct. The -start_point option must be a driver pin while the -stop_point option must be a load pin, and both pins must be present in the stub chain provided by the -chain option.

Feedback

## DFT-1716

(Error) Unsuccessful chain connect: %s

**Description**

You receive this error message if an issue occurred when processing a connect_element_to_stub_chain command.

**What Next**

Verify that the options provided on the connect_element_to_stub_chain command are correct. The -floating_scanin option must be a load pin while the -floating_scanout option must be a driver pin, and both pins must be part of the same cell or sub-block.

## DFT-1717

(Error) Unsuccessful chain disconnect: %s

**Description**

You receive this error message if an issue occurred when processing a disconnect_element_from_stub_chain command.

**What Next**

Verify that the options provided on the disconnect_element_from_stub_chain command are correct. The -scanin option must be a load pin and must be from a stub chain element of the current ScanDEF.

## DFT-1718

(Error) Cannot add element with scan-in '%s' to stub chain '%s' since it's already present on SCANDEF

**Description**

You receive this error message when trying to add a new stub chain element through connect_element_to_stub_chain command from a cell that is already in the ScanDEF.

**What Next**

Verify that the cell specified by the -floating_scanin and -floating_scanout options is not already present in one of the existing stub chains of the current ScanDEF.

Feedback

## DFT-1719

(Error) Cannot remove element with scan-in '%s' from stub chain since it's not present on SCANDEF

### Description

You receive this error message when trying to remove the stub chain element of a cell that is not in the ScanDEF through disconnect_element_from_stub_chain command.

### What Next

Verify that the cell specified by the -scanin option is present in one of the existing stub chains of the current ScanDEF.

## DFT-1720

(Error) Pin '%s' cannot be used for SCANDEF purposes since it does not have physical information

### Description

You receive this error message when trying to add a new stub chain element through connect_element_to_stub_chain command from a cell does not have physical information.

### What Next

Verify that the cell specified by the -floating_scanin and -floating_scanout options do have physical information as it is required to be added to the ScanDEF.

## DFT-1721

(Error) Mismatch on provided (%d) and computed (%d) bit-length for segment with scan-in pin '%s'

### Description

You receive this error message when the bit length specified in the -bit_len option of connect_element_to_stub_chain command does not match the bit length of the multibit cell specified by the -floating_scanin and -floating_scanout options.

### What Next

Verify that the -bit_len value is correct for the given -floating_scanin and -floating_scanout options. If the -floating_scanin and -floating_scanout options point to a multi-bit cell with a reference library cell, the tool will compute the bit length automatically so the -bit_length option is optional.

Feedback

If the value provided by the -bit_len option its correct, there could be an issue with the design library or the library cell of the specified scan pins.

For single-bit cells, macros and sub-blocks, the tool will rely on the value provided by the -bit_len option. If the -bit_len option is not provided in those cases, the tool will consider the new stub element as bit length one.

---

## DFT-1751

(Error) Invalid '%s' file specified for design '%s'

**Description**

Invalid '%s' file specified for design '%s'

**What Next**

Please Review DFT Specifications

---

## DFT-1752

(Error) No instance found for design '%s'. Ignoring specified test model

**Description**

No instance found for design '%s'. Ignoring specified test model

**What Next**

Please Review DFT Specifications

---

## DFT-1753

(Error) Sub-server -> sub-server architecure not allowed due to known limitations

**Description**

Sub-server -> sub-server architecure not allowed due to known limitations

**What Next**

Please Review DFT Specifications

---

## DFT-1754

(Error) Test model '.ict.zip' missing for design '%s'

Feedback

**Description**

Test model '.ict.zip' missing for design '%s'

**What Next**

Please Review DFT Specifications

---

## DFT-1755

(Error) DFT_ACCESS client is enabled and test models (wks/ict/icl/pdl/masis) are not provided.

**Description**

DFT_ACCESS client is used to enable hierarchical flow where the lower level blocks are integrated at the current level. Hence the user must specify the test models (wks/ict/icl/pdl/masis) for the lower level blocks.

**What Next**

Specify any one of the test models (wks/ict/icl/pdl/masis) using the 'read_test_model' command for the lower level.

---

## DFT-1757

(Error) Sub-server -> shadow-server architecure not allowed due to known limitations

**Description**

Sub-server -> shadow-server architecure not allowed due to known limitations

**What Next**

Please Review DFT Specifications

---

## DFT-1758

(Error) Functional clock pin not present for the memory module

**Description**

The 'plan_dft' command provides clock information on memory clock pins which is used during memory grouping in the next step. Hence it is mandatory to have functional clock pins in MASIS files when spyglass is invoked for memory clock report generation.

Feedback

**What Next**

User can review and provide the functional clock pin in MASIS files if it is missing. If functional clock pins are skipped intentionally from MASIS files then user must run 'plan_dft -single_clock_grouping on' command which will skip the memory clock report generation and consider all memories under single clock domain.

---

## DFT-1760

(Error) Invalid compiler type. Valid types are - %s

**Description**

Invalid compiler type. Valid types are - %s

**What Next**

Please Review DFT Specifications

---

## DFT-1761

(Warning) No instance found for design '%s'. Ignoring specified icl/pdl/masis test model

**Description**

No instance found for design '%s' in input rtl. Ignoring specified icl/pdl/masis test model

**What Next**

Please Review input rtl or read the icl/pdl/masis testmodel after plan dft stage.

---

## DFT-1765

(Error) Incorrect compiler name '%s' specified for compiler type '%s'.

**Description**

Incorrect compiler name '%s' specified for compiler type '%s'.

**What Next**

Please Review DFT Specifications

---

## DFT-1770

(Error) Invalid input. Expecting list of pair (<compiler_type>,<compiler_name>).

Feedback

**Description**

Invalid input. Expecting list of pair (<compiler_type>,<compiler_name>).

**What Next**

Please Review DFT Specifications

---

## DFT-1771

(Error) Required argument '-interface' was not found.

**Description**

Required argument '-interface' was not found.

**What Next**

Please Review DFT Specifications

---

## DFT-1772

(Error) Error: Missing current design. Information: Skipping set_testmax_configuration command option check.

**Description**

Error: Missing current design. Information: Skipping set_testmax_configuration command option check.

**What Next**

Please Review DFT Specifications

---

## DFT-1773

(Error) Unrecognized option '%s' passed. For correct command info use 'validate_dft -help'.

**Description**

Unrecognized option '%s' passed. For correct command info use 'validate_dft -help'.

**What Next**

Please Review DFT Specifications

Feedback

## DFT-1778

(Error) %s signal '%s' from design '%s' does not have %s clock information in test model.

**Description**

The Error message is shown when ScanDataIns/ScanDataOuts have missing capture/launch clock information in the CTL.

**What Next**

1. Please add the required information in the CTL being read. Otherwise, CTL core segments cannot be integrated/stitched into scan chains.

## DFT-1791

(Error) There is no DFT IP specification to be reported.

**Description**

You receive this error message if you do not specify any IP/DFT configuration(ieee_1687/Bsd/ieee_1500/Hsio).

Error: There is no DFT IP specification to be reported (DFT-1791)

**What Next**

Define the correct IP Specification by set_dft_configuration command.

## DFT-1794

(Error) Insufficient top interface pins for supporting serdes upstream { %d %d } with topInterface of {SI: %d, SO: %d}

**Description**

This error message reports that the size of upstream of serdes is greater than the size of the top interface (upstream interface) pins available in streaming fabric.

**What Next**

Verify that the size of upstream in serdes defined with -upstream {n_si n_so} is less than the size of sfip upstream interface.

## DFT-1800

(Error) Test DRC failed.

Feedback

**Description**

This message is issued, when internal call to test DRC fails.

**What Next**

Please run dft_drc and check errors.

---

## DFT-1801

(Error) %s is not available.

**Description**

This message is issued when part of the DFT specification is unexpectedly missing or incomplete. For example,

Error: LOS PipelineScan enable on partition default_partition is not available. (DFT-1801)

Potential causes can be:

- Pipeline scan enable has been enabled, but LOSPipelineEnable signal specification is missing for a partition.
- ScanDataIn and ScanDataOut pins cannot be found or are mismatched (specified more of one type than the other)
- Elements specified via set_scan_path cannot be found in the netlist.

**What Next**

The error message describes the part of the DFT specification that is inconsistent. Review it to ensure all necessary signals were specified and accepted by the tool.

Pay special attention to DFT partitions, as it is easy to accidentally specify signals that only apply to one partition, which can leave the other partitions missing necessary signal specifications.

Verify that pins and cells in the DFT specification still exist in the netlist by the time insert_dft occurs. Optimizations occurring between specification and DFT insertion can result in the removal of elements. In these cases you can try setting dont_touch on them.

---

## DFT-1802

(Error) %s is not supported.

Feedback

**Description**

This message is issued when part of the DFT specification is not supported. For example,

Error: Multiple pad cells on SO are not supported. (DFT-1802)

**What Next**

The error message describes the part of the DFT specification that is inconsistent. Review it to ensure all necessary signals were specified and accepted by the tool.

---

## DFT-1803

(Error) Scan path %s has incompatible elements: %s.

**Description**

This message is issued when some cells of set_scan_path specification are not compatible. For example,

Error: Scan path PATH0 has incompatible elements: different power domains. (DFT-1803)

**What Next**

Check set_scan_path specification.

---

## DFT-1804

(Error) %s is not found in the netlist.

**Description**

This message is issued when part of the DFT specification is not found in the netlist. For example,

Error: SO0 is not found in the netlist. (DFT-1804)

**What Next**

The error message describes the part of the DFT specification that is inconsistent. Review it to ensure all necessary signals were specified and accepted by the tool.

---

## DFT-1805

(Error) %s.

Feedback

**Description**

This message is issued when part of the DFT SCAN Synthesis can not find prerequisite data. For example,

Error: The design hierarchy is not accessible. (DFT-1805) Error: The design's test model is not accessible. (DFT-1805)

**What Next**

The error message describes the part of the DFT specification that is inconsistent. Review it to ensure all necessary signals were specified and accepted by the tool.

---

## DFT-1811

(Error) %s is not defined as a partition

**Description**

%s is not defined as a partition

**What Next**

Please Review DFT Specifications

---

## DFT-1816

(Error) %s

**Description**

This is a generic scan architecting error message. You receive this error message if it is not possible to build scan chains according to provided set_scan_configuration settings.

**Messages:**

%i zero-size chain(s) - Please check set_scan_configuration settings or if the design has enough valid scan cells for scan stitching.

max_length violation. max_length should be at least %i - Scan architecting finished constructing chains but couldn't follow set_scan_configurantion -max_length setting. Please check set_scan_* settings.

Requested 0 chain from scan synthesis. Settings error - Scan architecting received request to build 0 chains. Please check set_scan_* settings.

set_scan_path -class scan/occ must have equal number of scan chains (%i USCAN) groups for %i available chains - Some user defined scan paths are empty. Please check if elements of set_scan_path are valid.

Feedback

Sufficient number of chains not available to architect internal scan cells - Scan architecting couldn't build requested number of scan chains. Please check clock or voltage mixing settings or provide enough number of scan chains.

Sufficient number of chains not available to architect wrapper/internal scan cells - Scan architecting couldn't build requested number of scan chains. Please check clock or voltage mixing settings or provide enough number of scan chains.

Requirement of chain_count cannot be satisfied with Given number of ScanDataIn & ScanDataOut ports - There is a mismatch between requested number of chains and provided SI/SO ports. Please check set_scan* settings.

Requirement of chain_count cannot be satisfied. Minimum chain_count to be %i - Scan architecting couldn't build scan chains successfully with given scan specification. Please check clock or voltage mixing settings or provide enough number of scan chains.

Given scanDataIn & ScanDataOut ports are not sufficient. Minimum ports to be %i - Please match chain_count settings with the count of ScanDataIn/ScanDataOut signals or provide additional ScanDataIn/ScanDataOut signals.

Requirement of set_scan_configuration can not be satisfied with given number of ports. Required %i, available %i SI/SO port pairs. Mode is %s, partition is %s. - ScanDataIn/ ScanDataOut signals are defined less than required for scan architecting.

One of -chain_count or -max_length should be specified - At least one setting chain_count or max_length should be specified. Please update set_scan_configuration.

No scan chain end-points found' - ScanDataIn / ScanDataOut signals are not found. Please add necessary signals.

Requirement of chain_count specification cannot be satisfied. Minimum chain_count to be %i - Scan architecting needs more chains to meet clock / power requirements. Please update set_scan_confituration -chain_count.

Failed to balance %s chains. - Scan architecting couldn't balance chains. Please check clock / power mixing settings.

**What Next**

Please review set_scan_configuration settings and set_scan_compression_configuration settings if scan compression is used.

---

## DFT-1817

(Error) %s

Feedback

**Description**

This is a generic set_scan_path related scan architecting error message. You receive this error message if it is not possible to build scan chains according to provided set_scan_path settings.

**Messages:**

There are no enough chains to allocate existing-occ

There are no enough chains to allocate internal set_scan_path

Not enough chains available for architecting in partition %s, mode %s. Problematic clock is edge is %s.

**What Next**

Please review set_scan_path settings.

---

## DFT-1818

(Error) The design does not have scan chains

**Description**

This message is issued when there are no valid scan chains defined for the design. For example,

Error: The design does not have scan chains (DFT-1818)

**What Next**

The error message shows fundamental error in scan specification. Please check scan specifications.

---

## DFT-1819

(Error) The design does not have scan cells

**Description**

This message is issued when there are no valid scan cells to process in the design. For example,

Error: The design does not have scan cells (DFT-1819)

**What Next**

The error message shows fundamental error in the design. Please check design netlist and scan specifications.

Feedback

## DFT-1820

(Error) %s

**Description**

This is a generic wrapper scan architecting error message. You receive this error message if it is not possible to build scan chains according to provided set_wrapper_configuration settings.

**Messages:**

Cannot meet set_wrapper_configuration -chain_count. Minimum chain_count should be %i. Mode is %s, partition is %s.

Can't distribute wrapper chains for %s clock.

**What Next**

Please review set_wrapper_configuration settings.

## DFT-1821

(Error) Subblock mixes clock edges while top block does not allow mixing. (partition %s)

**Description**

This message is issued when one of subblocks has mixed clock edges, while DFT specification does not allow mixing clock edges. For example,

Error: Subblock mixes clock edges while top block does not allow mixing. (partition default_partition) (DFT-1821)

**What Next**

The error message shows that DFT clock mixing specification is not compatible with subblocks.

Check subblock generation script and disable edge mixing or update set_scan_configuration -clock_mixing settings for the top block.

## DFT-1822

(Error) Subblock mixes clocks while top block does not allow mixing. (partition %s)

Feedback

**Description**

This message is issued when one of subblocks has mixed clockd, while DFT specification does not allow mixing clocks. For example,

Error: Subblock mixes clocks while top block does not allow mixing. (partition default_partition) (DFT-1822)

**What Next**

The error message shows that DFT clock mixing specification is not compatible with subblocks.

Check subblock generation script and disable clock mixing or update set_scan_configuration -clock_mixing settings for the top block.

---

## DFT-1823

(Error) There are no scan cells to process in mode %s, partition %s.

**Description**

This message is issued when there are no valid scan cells to process in specific mode and partition. For example,

Error: There are no scan cells to process in mode Internal_scan, partition is default_partition. (DFT-1823)

**What Next**

The error message shows fundamental error in the design. Please check design netlist and scan specifications.

---

## DFT-1824

(Error) Number of clock edge crossing (%s) scan segments exceeds requested chain count (%s). Since only one clock edge crossing is allowed per chain, cannot honor specification. Problematic mode is %s, partition is %s.

**Description**

This message is issued when number of segments with crossing clock edges exceeds scan chain count requested. In such setting it is not possible to honor specification. For example,

Error: Number of clock edge crossing (5) scan segments exceeds requested chain count (4). Since only one clock edge crossing is allowed per chain, cannot honor specification. Problematic mode is Internal_scan, partition is default_partition. (DFT-1824)

Feedback

**What Next**

The error message shows that DFT specification can not be honored. Please update chain_count.

---

## DFT-1825

(Error) No clock/test_mode signal(via ‘set_dft_signal’ or user_opt_file) is specified. Please specify clock/test_mode signals through the “set_dft_signal” command in order to achieve the ‘check_dft’ command purpose.

**Description**

The 'check_dft' command is required to have clock/reset or testmode signals in order to perform scan analysis.

**What Next**

Users need to define clock/reset or testmode signals through the 'set_dft_signal' command

---

## DFT-1830

(Error) %s

**Description**

This is a generic set_scan_group processing error message. You receive this error message if it is not possible to build scan group according to the spec.

**Messages:**

Scan group's %s clock was not identified correctly. Group skipped.

**What Next**

Please review set_scan_group settings.

---

## DFT-1831

(Error) %s

**Description**

This is a generic set_scan_group settings error message. You receive this error message if settings of scan group are not compatible with other set_scan* commands

Feedback

**Messages:**

Scan group's %s clock %s is not specified correctly as clock in the test model. Group skipped.

Scan group's %s clock %s is set equivalent to %s signal. This signal is not specified correctly as clock in the test model. Group skipped.

**What Next**

Please review set_scan_group settings.

---

## DFT-1832

(Error) Ignoring test model of '%s' for scan architecting as it has missing information. Found while processing signal '%s' from core segment '%s' and test mode '%s'

**Description**

This error message is shown when signal information is not found in the corresponding test model file. In this case test model will be ignored for scan stitching purposes. For example,

Error: Ignoring test model of 'shift_r1' for scan architecting as it has missing information. Found while processing signal 'CaptureClock' from core segment 'chain2' and test mode 'Internal_scan'

**What Next**

Please check the test model file using the information printed by this message as a starting point.

---

## DFT-1836

(Error) Must specify 'true' or 'false' for the %s option

**Description**

Must specify 'true' or 'false' for the %s option

**What Next**

Please Review DFT Specifications

---

## DFT-1837

(Error) Required '%d' %s, but only '%d' DFT signal(s) of type '%s' are specified.

Feedback

**Description**

Required '%d' %s, but only '%d' DFT signal(s) of type '%s' are specified.

**What Next**

Please Review DFT Specifications

---

## DFT-1838

(Error) Minimum '%d' DFT signal(s) of type '%s' are required for testing core(s), but only '%d' parallel %s are specified in streaming fabric specification.

**Description**

Minimum '%d' DFT signal(s) of type '%s' are required for testing core(s), but only '%d' parallel %s are specified in streaming fabric specification.

**What Next**

Please Review DFT Specifications

---

## DFT-1840

(Error) The specified fabric clock %s is one of the excluded clocks.

**Description**

The specified fabric clock %s is one of the excluded clocks.

**What Next**

Please Review DFT Specifications

---

## DFT-1841

(Error) The specified value for option %s is invalid.

**Description**

The specified value for option %s is invalid.

**What Next**

Please Review DFT Specifications

Feedback

## DFT-1842

(Error) Option %s is required to be defined together with option %s for fabric clock pre-shift pulse suppress.

**Description**

Option %s is required to be defined together with option %s for fabric clock pre-shift pulse suppress.

**What Next**

Please Review DFT Specifications

## DFT-1843

(Error) Missing pipe stage value, %s must end with a positive integer

**Description**

Missing pipe stage value, %s must end with a positive integer

**What Next**

Please Review DFT Specifications

## DFT-1844

(Error) The specified value %s is not a valid instance name for %s option.

**Description**

The specified value %s is not a valid instance name for %s option.

**What Next**

Please Review DFT Specifications

## DFT-1846

(Error) Ignoring command 'set_dft_streaming_fabric_configuration' as client is not enabled. Use 'set_dft_configuration -streaming_fabric enable' to enable the client.

**Description**

Ignoring command 'set_dft_streaming_fabric_configuration' as client is not enabled. Use 'set_dft_configuration -streaming_fabric enable' to enable the client.

Feedback

**What Next**

Please Review DFT Specifications

---

## DFT-1851

(Error) The option value for %s is not sufficient, total number of option values must be even.

**Description**

The option value for %s is not sufficient, total number of option values must be even.

**What Next**

Please Review DFT Specifications

---

## DFT-1852

(Error) The specified %s value for option -name does not match with any streaming fabric element name.

**Description**

The specified %s value for option -name does not match with any streaming fabric element name.

**What Next**

Please Review DFT Specifications

---

## DFT-1853

(Error) set_scan_group -class bypass doesn't support negative clocks in spec. Ignoring clocks spec for scan group %s. Problematic clock is %s.

**Description**

This error message is sent when set_scan_group -class bypass has -bypass_head_clock or -bypass_tail_clock negative clock specification. In this case both -bypass_head_clock and -bypass_tail_clock specifications will be ignored. For example,

Error: set_scan_group -class bypass doesn't support negative clocks in spec. Ignoring clocks spec for scan group BYPASS_GROUP. Problematic clock is tail. (DFT-1853)

**What Next**

Please check clock specifications.

Feedback

## DFT-1854

(Error) The specified value for option %s does not match with any name defined with set_dft_streaming_fabric.

**Description**

The specified value for option %s does not match with any name defined with set_dft_streaming_fabric.

**What Next**

Please Review DFT Specifications

## DFT-1855

(Error) The specified %s value for option -name does not match with any streaming fabric element name.

**Description**

The specified %s value for option -name does not match with any streaming fabric element name.

**What Next**

Please Review DFT Specifications

## DFT-1856

(Error) The specified configuration requires streaming fabric to have %d number of signal of type %s, (specified %d).

**Description**

The specified configuration requires streaming fabric to have %d number of signal of type %s, (specified %d).

**What Next**

Please Review DFT Specifications

## DFT-1857

(Error) The specified %s value for option name does not match with any name defined with set_dft_streaming_fabric_interface.

Feedback

**Description**

The specified %s value for option name does not match with any name defined with set_dft_streaming_fabric_interface.

**What Next**

Please Review DFT Specifications

---

## DFT-1861

(Error) %s is not defined as %s in set_dft_signal

**Description**

This error shows that input specified to the option -test_data is not of type test_data. Please define it as -type test_data using set_dft_signal.

**What Next**

Please specify correct port with option test_data in set_autofix_configuration

SH "SEE ALSO"

```
set_autofix_configuration
set_dft_signal
```

---

## DFT-1866

(Error) Ignoring command 'set_dft_streaming_fabric' as client is not enabled. Use 'set_dft_configuration -streaming_fabric enable' to enable the client.

**Description**

Ignoring command 'set_dft_streaming_fabric' as client is not enabled. Use 'set_dft_configuration -streaming_fabric enable' to enable the client.

**What Next**

Please Review DFT Specifications

---

## DFT-1867

(Error) Ignoring command 'set_dft_streaming_fabric_element' as streaming fabric client is not enabled. Use 'set_dft_configuration -streaming_fabric enable' to enable the client.

Feedback

**Description**

Ignoring command 'set_dft_streaming_fabric_element' as streaming fabric client is not enabled. Use 'set_dft_configuration -streaming_fabric enable' to enable the client.

**What Next**

Please Review DFT Specifications

---

## DFT-1870

(Error) Wrong port direction, The Bypass signal %s must have direction %s.

**Description**

Wrong port direction, The Bypass signal %s must have direction %s.

**What Next**

Please Review DFT Specifications

---

## DFT-1871

(Error) Port %s is not of type %s

**Description**

Port %s is not of type %s

**What Next**

Please Review DFT Specifications

---

## DFT-1873

(Error) Failed to generate correct streaming fabric IP or model. Fix reported error to proceed.

**Description**

Failed to generate correct streaming fabric IP or model. Fix reported error to proceed.

**What Next**

Please Review DFT Specifications

Feedback

## DFT-1875

(Error) scandump mode is not specified for bypass variation2. Stitching bypass groups as usual scan groups.

**Description**

This error message is sent when bypass variation2 is specified but scandump is not provided.

**What Next**

Please add scandump mode specification via set_app_option –name dft.scan.scandump_mode_for_bypass.

## DFT-1876

(Error) bypass with global clock is enabled, but global clock is not specified. Ignoring the option, stitching bypass groups without global clock.

**Description**

This error message is sent when bypass variation2 with global clock is enabled, but global clock was not specified.

**What Next**

Please add global clock specification.

## DFT-1877

(Error) bypass with global clock is enabled, but bypass variation2 is not enabled. Ignoring the option.

**Description**

This error message is sent when bypass variation2 with global clock is enabled, but bypass variation itself was not enabled.

**What Next**

Please enable bypass variation2 via set_app_option –name dft.scan.scan_segment_bypass_variation2.

## DFT-1878

(Error) Regex for chain names is not correct. The command is discarded. Please check regex.

Feedback

**Description**

Correct regex expression for chain names is required for add_chain_bypass command. The error shows that provided regex expression was not correct.

**What Next**

Please update regex expression in add_chain_bypass comman specification.

---

## DFT-1879

(Error) Failed to attach segment %s to fabric.

**Description**

Failed to attach segment %s to fabric.

**What Next**

Please Review DFT streaming fabric Specifications

---

## DFT-1882

(Error) Validate model %s segment %s failed.

**Description**

Validate model %s segment %s failed.

**What Next**

Please Review DFT streaming fabric Specifications

---

## DFT-1883

(Error) SFIP does not have socket modes.

**Description**

SFIP does not have socket modes.

**What Next**

Please Review DFT streaming fabric Specifications

---

## DFT-1884

(Error) Fail to create %s segment for %s

Feedback

**Description**

Fail to create %s segment for %s

**What Next**

Please Review DFT streaming fabric Specifications

---

## DFT-1889

(Error) Pin specified in -hookup_pin is inside abstract design of type ctl/bam/etm. Specified pin can't be used for specifying dft signal.

**Description**

The Error message is shown when pin specified under '-hookup_pin' switch in 'set_dft_signal' is inside any abstract design(ctl/bam/etm).

**What Next**

1. Specify pin which is not inside abstract design.

---

## DFT-1890

(Error) "

**Description**

"

**What Next**

Please specify mandatory arguments '-algo_name' and '-algo_value' for create_mbist_algorithm command.

---

## DFT-1892

(Error) the controller clock chain %s : %d has been traced in multiple scan paths. \n

**Description**

In non multimode flow, same occ controller cannot be specified in multiple set_scan_path. Please enable multimode flow <set_app_options -name dft.scan.enable_general_multimode_support -value true> and enable the spc/occ flow <set_app_options -name dft.scan.occ_spc_chain_arch_flat_flow -value true> to trace occ ctrl in multiple scan path

Feedback

**What Next**

Please Review DFT Specifications

---

## DFT-1893

(Error) A [set_scan_path -class occ/spc] is required if DFT Shift Power Control segment %s is present , please add set_scan_path for %s\n

**Description**

Must specify 'set_scan_path' for the %s , please add set_scan_path for %s\n

**What Next**

Please Review DFT Specifications

---

## DFT-1894

(Error) %s instance is not present , %s can not be specified inside %s hierarchy, Use 'set_ungroup [get_cells %s] false'

**Description**

%s instance is not present, %s can not be specified inside % hierarchy , Use 'set_ungroup [get_cells %s] false'

**What Next**

Please Review DFT Specifications

---

## DFT-1895

(Error) Unable to instantiate the DFT IP %s in %s hierarchy, due to %s instance does not exist.

**Description**

Unable to instantiate the DFT IP %s in %s hierarchy, due to %s instance does not exist.

**What Next**

Please Review DFT Specifications

---

## DFT-1896

(Error) Failed to instantiate: %s --- Ref module: %s.

## DFT-2022

(Warning) ICG cell feeding scan cells for multiple (%d) partitions. ICG %s, partitions %s.

**Description**

Integrated Clock Gating (ICG) cells are required to have their TE (Test Enable) pins connected to ScanEnable or TestMode signals during stages of *dft_drc*, *preview_dft* and/or *insert_dft* commands for allowing the SCAN clocks pass through the ICG cells in a transparent mode, else the SCAN clock data can not reach the DFT SCAN cells, producing a SCAN data blockage.

The ScanEnable or TestMode DFT signals can be defined per DFT partition (see command *define_dft_partition and set_dft_signal for details). Given that, different SCAN cells can be associated to different DFT partitions, and therefore they need to be handled by different ScanEnable and/or TestMode signals defined for its specific partition.*

For setting up all ICG TE connection properly, the ICG TE pins needs to be connected to ScanEnable or TestMode signals in sync with the SCAN cells they are providing clock to.

If this message is issued, it means the ICG reported is driving the clock of SCAN cells that belong to different DFT partitions, and there might be clashes or conflicts about what would be the correct ScanEnable or TestMode signal to use for that ICG cell, if DFT partition uses different signals ports/hookup pins.

Feedback

**What Next**

Review the *dft_drc* reports after DFT SCAN insertion to identify potential SCAN chain blockages (S1 errors) that might be related to this scenario.

As ICG insertion happens before DFT SCAN Synthesis and it is not aware to DFT setup, or DFT setup might not even exist at the time ICG cells are inserted, there is no way to prevent this problem.

Consider using ECO operation to bypass the clock signal for SCAN cells that might get blocked because its driving ICG is connected to other DFT partition signal. Remember that the ICG is still driving some SCAN cells for that partition so not all SCAN cells on that ICG clock tree are subject to a potential issue.

---

## DFT-2023

(Information) Using enable data from partition %s for ICG enable %s

**Description**

The message explicitly informs which partition's signals will be used to drive the TestEnable signal of the ICG cell.

This information is important when more an ICG cells is driving SCAN cells from different DFT partitions, and therefore there might be more than one candidate TestMode or ScanEnable signals valid to drive the ICG TestEnable pin.

**What Next**

Review the *dft_drc* reports after DFT SCAN insertion to identify potential SCAN chain blockages (S1 errors) that might be related to this scenario.

As ICG insertion happens before DFT SCAN Synthesis and it is not aware to DFT setup, or DFT setup might not even exist at the time ICG cells are inserted, there is no way to prevent this problem.

Consider using ECO operation to bypass the clock signal for SCAN cells that might get blocked because its driving ICG is connected to other DFT partition signal. Remember that the ICG is still driving some SCAN cells for that partition so not all SCAN cells on that ICG clock tree are subject to a potential issue.

---

## DFT-2025

(Warning) Unable to update the target hierarchy for terminal lockup insertion of dual rail cell %s: %s.

Feedback

### Description

This warning message is thrown by DFT scan Synthesis during terminal lockup latch insertion when the dft.scan.mv_aware_terminal_lockup_placement application option is enabled.

If a terminal lockup is about to be inserted for a scan cell whose clock pin is fed by a secondary voltage supply and the dft.scan.mv_aware_terminal_lockup_placement application option is enabled, the tool will try to insert the terminal lockup latch in the hierarchy of the clock source instead, preventing the creation of a LS cell to fix the MV violation in the clock net of the terminal lockup latch. If the tool was unable to insert the lockup latch in the hierarchy of the clock source, this warning message will be thrown with the name of the affected scan cell and the issue that occurred, and the terminal lockup latch insertion will be skipped for that cell.

### What Next

Verify that the voltage supplies of the clock source and their containing hierarchy are compatible. If the clock source is a port or a hierarchical pin, try creating a buffer and defining it as hookup pin of the clock signal using set_dft_signal command.

## DFT-2040

(Warning) DFT clock not found for CTL clock pin in DFT DRC clock table.

**Description**

DFT relies on TetraMAX to determine accurate clock domain information for scan cells in a design. This data is referred to as the DFT DRC clock table.

When a clock pin belonging to a CTL cell is found in the fanout of a scan clock, this clock table is consulted to obtain accurate clock domain information. If this pin is not found in that table, the tool issues this warning message. This means the tool could assign the wrong clock domain to this CTL, which can result in scan chains that violate user-provided DFT specifications. If this warning is issued for a CTL chain's clock, that chain may not end up stitched during Scan Synthesis to prevent future DFT DRC issues.

**What Next**

The message contains the name of the specific CTL clock pin instance that caused the problem. Verify the CTL models of the affected cells to confirm whether there's a problem with its clock pin specifications.

Feedback

Otherwise, it could be indicative of a bug in DFT DRC or TetraMAX.

## DFT-2041

(Warning) Port '%s' is connected to no I/O Registers and %d clock-gating cells through enable pin and %d CTL cell pins; dedicated wrapper cell will be added to the port due to missing I/O registers

**Description**

This warning message is issued when tool is inserting a dedicated wrapper cell to port which is connected to no I/O Registers and clock-gating cells through enable pin and CTL cell pins

For example,

Warning: Port 'in3' is connected to no I/O Registers and 5 clock-gating cells through enable pin and 3 CTL cell pins; dedicated wrapper cell will be added to the port due to missing I/O registers (DFT-2041)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration*

## DFT-2042

(Error) Currently '-view exist' is not supported for BSD.

**Description**

Currently '-view exist' is not supported for BSD.

## DFT-2060

(Error) Discarding test mode '%s' as test mode of type '%s' has already been defined.

**Description**

Discarding test mode '%s' as test mode of type '%s' has already been defined.

**What Next**

Please Review DFT Specifications

## DFT-2061

(Warning) Dedicated wrapper has not been added for port '%s' for any load, as no powersafe location has been found for it.

**Description**

This warning message is issued when tool is unable to find any hierarchy on the connected net of the port which is safe to insert from UPF point of view

For example,

Warning: Dedicated wrapper has not been added for port 'i_rd' for any load, as no powersafe location has been found for it. (DFT-2061)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration -add_wrapper_cells_to_power_domain enable.*
- *define_dft_partition <> -wrapper enable*

**What Next**

Change design to make sure there is powersafe location where dedicated wrapper cells can be inserted.

Feedback

## DFT-2062

(Warning) Dedicated wrapper has been added for port %s with fixable violation.

**Description**

This warning message is issued when a dedicated wrapper cell has been added to port at a location which can lead to a UPF violation which can be fixed by insertion of MV cells.

For example,

Warning: Dedicated wrapper has been added for port i_rd with fixable violation. (DFT-2062)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration -add_wrapper_cells_to_power_domain enable.*
- *define_dft_partition <> -wrapper enable*

**What Next**

Check violation and try to fix that violation depending on type of violation.

## DFT-2063

(Warning) Dedicated wrapper has not been added for load %s of port '%s' as no powersafe location has been found for it.

**Description**

This warning message is issued when tool is unable to find any hierarchy on the connected net of the port which is safe to insert from UPF point of view for a specific flat load of the port.

For example,

Warning: Dedicated wrapper has not been added for load ABC of port 'i_rd' as no powersafe location has been found for it. (DFT-2063)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration -add_wrapper_cells_to_power_domain enable.*
- *define_dft_partition <> -wrapper enable*

**What Next**

Change design to make sure there is powersafe location where dedicated wrapper cells can be inserted.

Feedback

## DFT-2064

(Warning) Dedicated wrapper cell cannot be inserted to output port '%s' as there is a feedthrough path to input port, which is excluded from wrapping

**Description**

This warning message is issued when tool is inserting a dedicated wrapper cell to an output port which is connected to input port via feedthrough path, which is excluded from wrapping.

This is to show that output port wasn't wrapped with dedicated wrapper cell in order to avoid xvalue propogation in lbist combinational path.

Please note that this message has precedence over all preceding messages showing that a dedicated wrapper cell will be added to the port. That is, if this message is shown along other messages for the same port, a dedicated wrapper cell will not be added to the port.

For example,

Warning: Dedicated wrapper cell cannot be inserted to output port 'g3_out3[0]' as there is a feedthrough path to input port, which is excluded from wrapping (DFT-2064)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration*
- *define_dft_partition <> -wrapper enable*

**What Next**

Change design to make sure there is powersafe location where dedicated wrapper cells can be inserted.

## DFT-2065

(Warning) A dedicated wrapper cell is added to input port '%s' as there is a feedthrough path to output port, which is wrapped with a dedicated wrapper cell

**Description**

This warning message is issued when tool is inserting a dedicated wrapper cell to an input port which is connected to output port via feedthrough path, which is wrapped with dedicaated wrapper cell.

This is to avoid xvalue propogation to output port which is connected to input port via feedthrough path. A dedicated wrapper cell is added to input port to avoid x value propogation.

Feedback

For example,

Warning: A dedicated wrapper cell is added to input port 'g1_in2[2]' as there is a feedthrough path to output port , which is wrapped with a dedicated wrapper cell (DFT-2065)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration*
- *define_dft_partition <> -wrapper enable*

**What Next**

Change design to make sure there is powersafe location where dedicated wrapper cells can be inserted.

---

## DFT-2066

(Error) An integer greater than or equal to 0 should be specified

**Description**

An integer greater than or equal to 0 should be specified

**What Next**

Please Review DFT Specifications

---

## DFT-2067

(Warning) Port '%s' is connected to no I/O Registers and %d CTL cell pins; dedicated wrapper cell will be added to the port due to missing I/O registers

**Description**

This warning message is issued when tool is inserting a dedicated wrapper cell to port which is connected to no I/O Registers and CTL cell pins

For example,

Warning: Port 'in3' is connected to no I/O Registers and 3 CTL cell pins; dedicated wrapper cell will be added to the port due to missing I/O registers (DFT-2067)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration*

Feedback

## DFT-2068

(Warning) Port '%s' is connected to %d clock-gating cells through enable pin which exceeds clock-gating cell threshold %d; dedicated wrapper cell will be added to the port

**Description**

This warning message is issued when tool is inserting a dedicated wrapper cell to port which is connected to clock-gating cells through enable pin which exceeds clock-gating cell threshold

For example,

Warning: Port 'in3' is connected to 5 clock-gating cells through enable pin which exceeds clock-gating cell threshold 3; dedicated wrapper cell will be added to the port (DFT-2068)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration*

## DFT-2069

(Warning) Port '%s' is connected to %d CTL cell pins which exceed CTL cell threshold %d; dedicated wrapper cell will be added to the port

**Description**

This warning message is issued when tool is inserting a dedicated wrapper cell to port which is connected to CTL cell pins which exceeds CTL cell threshold

For example,

Warning: Port 'in3' is connected to 5 CTL cell pins which exceeds CTL cell threshold 3; dedicated wrapper cell will be added to the port (DFT-2069)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration*

## DFT-2070

(Error) Only one hierarchy is allowed with '-include' option while '-wrapper' option is enabled

**Description**

Only one hierarchy is allowed with '-include' option while '-wrapper' option is enabled

Feedback

**What Next**

Please Review DFT Specifications

---

## DFT-2071

(Error) %s is not a valid partition name. Partition name can only contain alphanumeric characters (a-z, A-Z, 0-9) and the underscore (_).

**Description**

%s is not a valid partition name. Partition name can only contain alphanumeric characters (a-z, A-Z, 0-9) and the underscore (_).

**What Next**

Please Review DFT Specifications

---

## DFT-2072

Warning: Expected value on pin '%s' %s, actual value is %s

**Description**

The dft_drc command issues this warning message while validating a test model instance connectivity. The warning may be serious. It indicates that at least one constant pin (with the Constant data type) or test-mode pins on the DFT-modeled instance is not set to its expected logical value, as a result of the instance integration.

**What Next**

This is only a warning message. No action is required.

However, since this warning may be serious, you can look for the accompanying TEST-3083 information message(s) for the details on which pins are involved.

---

## DFT-2075

(Warning) pin %s is inside a BAM instance. Hence ignoring it from user specification

**Description**

Pin present inside bam instance would be ingored from user specification.

Feedback

## DFT-2104

(Warning) 'dft.test_split_wrp_cell' is only supported in UPF aware dedicated wrapper insertion flow. App-option will be ignored.

**Description**

The app-option 'dft.test_split_wrp_cell' can only be supported for UPF flow as it requires extra UPF checks for split logic placement. If its a case of non-upf flow than this app-option won't be honored and regular flow would be triggered for wrapper cell insertion.

**What Next**

To honor the app-option please enable upf flow by the following command set_wrapper_configuration -add_wrapper_cells_to_power_domains enable

## DFT-2105

(Error) Invalid TDR pin bit index for '%s' check supported register length

**Description**

You receive this error message when you specify a value that is out of allowed range for option '-exact_length' in 'set_scan_path' command.

set_dft_signal -view spec -tdr_pin TDR[6] -type TestMode Error: Invalid TDR pin bit index for 'TDR' check supported register length (DFT-2105)

**What Next**

Please use a value within the allowed range.

## DFT-2106

(Error) Invalid TDR register name. '%s' register is not defined.

**Description**

You receive this error message if you use the register pin in the 'set_dft_signal' command without specifying the register by 'set_scan_path' command.

set_dft_signal -view spec -tdr_pin temp_TDR[0] -type TestMode Error: Invalid TDR register name. 'temp_TDR' register is not defined (DFT-2106).

**What Next**

Add set_scan_path temp_TDR -class ieee_1687 -exact_length 3 -reset_state 000 -init_data 000 prior to the current command.

Feedback

## DFT-2107

(Error) Error while generating SPF during port pattern API call

**Description**

Error while generating SPF during port pattern API call

**What Next**

## DFT-2108

(Error) Bus type '%s' '%s' is not supported

**Description**

Bus type '%s' '%s' is not supported

**What Next**

Please Review DFT Specifications

## DFT-2109

(Error) Bsd Interface Signal of type '%s' is missing in '%s' command, it is mandatory to specify this signal.

**Description**

Bsd Interface Signal of type '%s' is missing in define_dft_design/set_dft_signal, it is mandatory to specify this signal.

**What Next**

Please Review define_dft_design Specification.

## DFT-2110

(Warning) Unsuccessful Q-Gating insertion on partition %s: %s

**Description**

This message is issued during Q-Gating insertion of Scan Synthesis when invalid Q-Gating setup is found. For example:

Warning: Unsuccessful Q-Gating insertion on partition PART1: missing or invalid Q-Gating enable signal (DFT-2110)

Feedback

### What Next

Verify that the values from set_scan_suppress_toggling options are properly defined following set_scan_suppress_toggling man page. For -min_slack option, the max value is defined by dft.scan.q_gating_min_slack_max_value app option, so the value in set_scan_suppress_toggling command should be under that range. Also verify that a Q-Gating signal, defined by set_dft_signal -usage scan_toggle, is specified on each DFT partition with Q-Gating setup or in the default partition instead.

---

## DFT-2120

(Warning) Cannot find valid allowed hierarchy for DFT insertion. Using %s

### Description

You receive this warning message if you use commands *set_allow_new_cells* or *create_voltage_area_rule* for limiting the creation of new cells on certain hierarchies, and *insert_dft* requires to insert a DFT cell at any of those restricted hierarchies but cannot locate an alternative allowed hierarchies (like parent hierarchies) available for such insertion.

In the scenario described above, the tool warns that the user intent of limiting cell insertion/creation on the reported hierarchy cannot be honored and one or more DFT cells will be added in the restricted hierarchy.

### What Next

Check if the restricted hierarchy really requires to be in that state, or check if parent hierarchies of the restricted hierarchy can be set as allowed for insertion of new cell as an alternative placeholder.

---

## DFT-2121

(Warning) Autofix ignored for %s violation because set_dft_configuration %s not enabled.

### Description

This warning shows that the option %s is not enabled in set_dft_configuration before executing the autofix feature to fix %s violation in the design.

### What Next

Please enable %s option in set_dft_configuration before executing insert_dft -autofix.

SH "SEE ALSO"

```
set_autofix_configuration
set_dft_configuration
set_dft_signal
```

Feedback

## DFT-2122

(Warning) Ignoring %s because scan cells are not allowed in %s mode.

**Description**

This warning shows that the option %s is not supported for the test mode %s due to scan cells not allowed in this mode. Hence, will be ignored while executing the set_wrapper_configuration command.

SH "SEE ALSO"

`set_wrapper_configuration`

## DFT-2126

(Error) Can not honor %s specification for %s

**Description**

This is error message is thrown when mixing retention and non-retention flops is not allowed (via set_scan_configuration ), but set_scan_group / set_scan_path specification contains both retention and non retention flops. Thus, set_scan_configuration and set_scan_group / set_scan_path specs are not compatible and the error is thrown.

**Messages:**

Error: Can not honor set_scan_group specification for scan group "SSG_ERROR" since it includes a mix of retention and non-retention registers, and retention cell mixing is turned off by the user. (DFT-2126)

Error: Can not honor set_scan_path specification for scan path "SSP_ERROR1" since it includes a mix of retention and non-retention registers, and retention cell mixing is turned off by the user. (DFT-2126)

**What Next**

Please review set_scan_configuration / set_scan_path / set_scan_group settings.

## DFT-2130

(Warning) Cannot enable routing distance analysis. No connected leaf driver found

**Description**

Some optimizations like SCAN chain architecting with blockage awareness requires to initialize the routing engine with at least one leaf cell driver pin as reference.

Feedback

In too small designs, like reduced test cases, it might not be possible to find a valid leaf cell driver pin connected to a valid net.

If that is the case, blockage aware optimizations might not be initialized and they will continue in non-blockage aware mode.

**What Next**

Check that the design is big enough to have valid SCAN cells with proper driver pins connected to valid nets before starting *preview_dft* or *insert_dft* commands. If it is too small to find them, this warning message can be simply ignored.

---

## DFT-2131

(Warning) New hold mux architecture flow is only supported with in-compile flow

**Description**

You receive this warning message when you try to use new hold mux architecture with pre-compile flow enabled.

**What Next**

Disable the pre-compile flow and use breakpoint flow while using new hold mux architecture to avoid this warning.

---

## DFT-2147

(Error) Register name '%s' cannot be specified for IDCODE and USERCODE instruction.

**Description**

Register name '%s' cannot be specified for IDCODE and USERCODE instruction.

**What Next**

## DFT-2188

(warning) %s Warning %s

**Description**

This message is issued when off-by-default SCAN SQL event database is enabled, and some isues are detecting during database operations.

Typical messages includes:

- "Connection warning Connection with database fail"
- "Query warning <SQL QUERY ERROR MESSAGE>"
- "Pragma warning <SQL PRAGMA ERROR MESSAGE>"

**What Next**

This feature for SCAN SQL event database is experimental and unreleased, so its operation and debugging requires R&D analysis. Please contact DFT PE team for further support diagnosing what the root cause issue is.

## DFT-2189

(Warning) Port '%s' is connected to %d output registers, which exceeds %s reuse threshold %d. However, dedicated wrapper cell is not added due to shared only user specification for the port.

**Description**

Port '%s' is connected to %d output registers, which exceeds %s reuse threshold %d. However, dedicated wrapper cell is not added due to shared only user specification for the port.

## DFT-2248

(Error) %s capture value '%s' cannot be represented in the specified '%d' bits.

**Description**

%s capture value '%s' cannot be represented in the specified '%d' bits.

**What Next**

Please Review DFT Specifications

## DFT-2291

(Warning) Ignoring instance '%s' because it is located inside a block abstraction model.

**Description**

Any hierarchy specified inside the block abstraction model is being ignored.

**What Next**

Remove the hierarchy specified inside block abstraction model to avoid this warning.

Feedback

## DFT-2300

(Warning) No PMU instance found using the given pattern '%s' in set_slm_stitching_strategy -pmm_instance_name_pattern option. Please specify correct pattern name in regular expression format for e.g. path_monitor_unit.*_loop1.

**Description**

This msg comes if no PMU instance is found with the given regular expression in set_slm_stitching_strategy -pmm_instance_name_pattern option. Please specify correct pattern name in regular expression format for e.g. path_monitor_unit.*_loop1.

## DFT-2323

(Warning) Option value '%s' is deprecated. Please use '%s' .

**Description**

You receive this warning message if you specify the deprecated class option by set_dft_ring command.

Warning: Option value 'ieee_1687' is deprecated. Please use 'ieee1687'. (DFT-2323)

**What Next**

Define correct class type for set_dft_ring command.

## DFT-2520

(Warning) Threshold check failed for the port '%s', no dedicated wrapper cell is added to the port as the port is traced to Dft Signal pin.

**Description**

You receive this warning message in Dft core wrapper insertion when threshold check fails for a port, but the tool is not adding a dedicated wrapper cell as the port is traced to Dft Signal internal pin in shared wrapper analysis.

When app option dft.test_core_wrap_ignore_dft_signal_fanout_logic is set to true, core wrapper insertion will not add dedicated wrapper cell to a port when threshold check fails for the port, but the port is traced to Constant/TestMode/ScanEnable Dft signal internal pin in shared wrapper analysis.

## DFT-2521

(Error) Specified in-place wrapper cell %s is not found in current design, ignoring the cell.

Feedback

**Description**

You receive this error message in Dft core wrapper insertion when a cell to be in-place wrapped is not found in current design. User specifies cells to be in-place wrapped using the app option dft.test_core_wrap_in_place_wrp_cell_names.

When a specified cell is not found in current design, tool ignores the cell.

Specify correct cell names with the app option to avoid the error.

---

## DFT-2522

(Warning) Specified reuse threshold value %s for in-place wrapper cell %s is not valid, ignorning the specified reuse threshold value.");

**Description**

You receive this warning message in Dft core wrapper insertion when incorrect reuse threshold value is specified for a in-place wrapper cell. Allowed reuse threshold values for in-place wrapper cells are >= -1. User specifies cells to be in-place wrapped using the app option dft.test_core_wrap_in_place_wrp_cell_names.

Tool uses parent partition's reuse threshold value in partitions flow and current design reuse threshold value in non partitions flow as reuse threshold value for the specified in-place wrapper cell when incorrect reuse threshold is specified for the cell.

Specify correct reuse threshold value with the app option to avoid the warning.

---

## DFT-2530

(Warning) Ignoring dedicated wrapper cell insertion on clock pin %s path as app option test_core_wrap_analysis_avoid_dwc_insertion_clk_path is enabled

**Description**

App option test_core_wrap_analysis_avoid_dwc_insertion_clk_path is on so avoid DWC insertion on clk path and also during fanin analysis via clock pin of wrapper cells

**What Next**

Please review the warning to check pins which are not wrapped due to this violation or disable app option if tool should not check this condition and continue adding dedicated wrapper cell on clock path

---

## DFT-2552

(Error) Couldn't find '%s' pin on wrapper cell '%s'

Feedback

**Description**

You receive this warning message in Dft core wrapper insertion when tool is trying to connect wrapper cell to pin of a port. This error is when tool couldn't find pin for connections.

---

## DFT-2600

(Error) The pattern list is parsed as key-value pair of portname and associated bit value, please provide correct number of arguments.

**Description**

The pattern list is parsed as key-value pair of portname and associated bit value, please provide correct number of arguments.

**What Next**

Please Review DFT Specifications

---

## DFT-2601

(Error) The provided bit value is invalid, please provide valid binary value 0 or 1

**Description**

The provided bit value is invalid, please provide valid binary value 0 or 1

**What Next**

## DFT-2605

(Error) One or more of the provided ports are invalid, please provide valid port names

**Description**

One or more of the provided ports are invalid, please provide valid port names

**What Next**

Please Review DFT Specifications

## DFT-2606

(Error) Compliance ports can only be input or inout, please provide valid port direction for "%s"

**Description**

Compliance ports can only be input or inout, please provide valid port direction for "%s"

**What Next**

Please Review DFT Specifications

## DFT-2650

(Warning) Tool cannot find dominant clock %s. Default clock %s shall be used

**Description**

You receive this warning message when tool is not able to find specified dominant clock and specified default clock shall be used.

Feedback

## DFT-2651

(Warning) Tool cannot find local clock hookup pin %s

**Description**

You receive this warning message when tool is not able to find the specified local clock hookup pin.

## DFT-2652

(Warning) %s.

**Description**

You receive this warning message when you specify an invalid object name for a field in 'set_testability_configuration' command.

## DFT-2653

(Warning) Ignoring test point specification for '%s'. %s

**Description**

You receive this warning message when the test point specifications are ignored because a. Test point inside reference modules are not supported b. new cells are not allowed in current test point location

## DFT-2654

(Warning) %s.

**Description**

You receive this warning message when you specify an invalid instance name for a field in 'set_test_point_element' command.

## DFT-2656

(Warning) Rejected test point %s '%s'. %s

**Description**

You receive this warning message when a test point is rejected at a location for reason like max test point sharing limit reached for registers, hierarchical pin is not connected,

Feedback

test point is reported inside reference module, pin is not connected, test point insertion will result in MV violations, net is a constant net, test point already exists at the location etc.

---

## DFT-2657

(Warning) Tool couldn't find signal %s in design

**Description**

You receive this warning message when the specified signal is not found in the design

---

## DFT-2659

(Warning) Supply net difference between test point location %s and %s %s, causing MV violation.

**Description**

You will receive this warning message when there is mismatch in power of test point and selected clock/control signal.

---

## DFT-2661

(Warning) Make sure observe pin is a vector with size equivalent to minimum test point sharing ratio

**Description**

You receive this warning when you define tp_observe/tp_observe_control type design using define_dft_design

---

## DFT-2662

(Warning) Rejected duplicate test point '%s'.

**Description**

You will receive this warning message when test point location specified is duplication of exisiting specification.

---

## DFT-2690

(warning) No debug license detected, file %s contains activated debug logs

Feedback

**Description**

No debug license detected, file will be activated by default an it will contain all activated debug logs

---

## DFT-2691

(Warning) Debug file is already opened. Using debug file %s

**Description**

DFT debug command *enable_dft_debug* requires to define an explicit debug file. But if other previous debug commands like *enable_debug* or *enable_compile_debug* already opened a debug file, their debug file stream is reused for DFT debug log data too.

**WHAT'S NEXT**

Take note of the log file path and name effectively used, so the file can be easily retrieved and analyzed later when required.

---

## DFT-2702

(Error) Incorrect value '%s' specified for option '%s'

**Description**

Incorrect value '%s' specified for option '%s'

**What Next**

Please Review DFT Specifications

**What Next**

Please Review DFT Specifications

---

## DFT-2721

(Warning) Tool couldn't find signal %s in design

**Description**

You receive this warning message when the specified signal is not found in the design

---

## DFT-2722

(Error) Incorrect pattern for set_access_control

**Description**

Incorrect pattern for set_access_control

**What Next**

Please Review DFT Specifications

---

## DFT-2724

(Error) '%s' file not found

**Description**

'%s' file not found

**What Next**

Please Review DFT Specifications

---

## DFT-2757

(Warning) Unable to fork new processes due to resource issues. Please try on bigger compute machine

**Description**

You receive this warning message when current compute machine is not sufficient(does not have enough memory) to run tool on current design. This could lead to missing some importtant steps in the flow which results in error or undefined behavior or incorrect results.

Feedback

### What Next

User can try to run the design on different/larger(memory) compute machine.

---

## DFT-2759

(Warning) Environment variable '%s' will be depricated in future release. Please use '%s' app option instead of this environment variable

### Description

Users get this messsage when they use environment varibale to enable specific flow or behavior for which an app option already exists. Even with this message the flow will run fine and this is just a heads up to user to update their scripts as the environment varibale will be removed in future releases.

### What Next

Users are expected to update their scripts to remove environment varibale and replace it with app option.

---

## DFT-2821

(Warning) Subblock mixes clock edges while top block does not allow mixing. (partition %s)

### Description

This message is issued when one of subblocks has mixed clock edges, while DFT specification does not allow mixing clock edges. For example,

Warning: Subblock mixes clock edges while top block does not allow mixing. (partition default_partition) (DFT-2821)

### What Next

The warning message shows that DFT clock mixing specification is not compatible with subblocks.

Check subblock generation script and disable edge mixing or update set_scan_configuration -clock_mixing settings for the top block.

---

## DFT-2822

(Warning) Subblock mixes clocks while top block does not allow mixing. (partition %s)

Feedback

**Description**

This message is issued when one of subblocks has mixed clockd, while DFT specification does not allow mixing clocks. For example,

Warning: Subblock mixes clocks while top block does not allow mixing. (partition default_partition) (DFT-2822)

**What Next**

The warning message shows that DFT clock mixing specification is not compatible with subblocks.

Check subblock generation script and disable clock mixing or update set_scan_configuration -clock_mixing settings for the top block.

---

## DFT-2831

(Warning) Invalid cell for ScanDEF generation of serial routed group found in -include_elements specification (%s). ScanDEF generation of group %s will be skipped

**Description**

This message is issued during Scan Synthesis when an invalid cell was defined in set_scan_group -include_elements specification if used with -serial_routed true. For example:

Warning: Invalid cell for ScanDEF generation of serial routed group found in -include_elements specification (core_cell). ScanDEF generation of group scan_group1 will be skipped (DFT-2831)

**What Next**

This warning shows that some of the cells defined in the -include_elements option of a scan group defined with -serial_routed true where found invalid.

For serial routed groups, only leaf cells are allowed in the -include_elements specification. Verify that all the cells defined in -include_elements specification are correctly written and don't include hierarchical cells or CTL designs.

---

## DFT-2832

(Warning) Skipping serial routed group %s from ScanDEF (unable to trace internal elements through access data pins)

Feedback

**Description**

This message is issued during ScanDEF generation step of Scan Synthesis when the tool couldn't generate a ScanDEF ordered segment for a pre-stitched scan group because the internal trace of the group failed. For example:

Warning: Skipping serial routed group scan_group1 from ScanDEF (unable to trace internal elements through access data pins) (DFT-2832)

**What Next**

This warning shows that the internal tracing of the reported serial routed scan group was not possible and it will be excluded from the ScanDEF. Verify that the internal elements that connect the ScanDataIn and ScanDataOut are properly connected and, if the group was defined using the -include_elements option, that all the internal elements were specified and in the correct order.

---

## DFT-2902

(Warning) 'check_dft' command should be run to get an early estimate of the coverage and scan readiness of the design.

**Description**

It is recommended to run 'check_dft' to get the coverage and scan readiness of the design before actual IP insertion.

---

## DFT-2905

(Error) "-type '1839_stap' without enabling -std {ieee1838_2019} is not allowed."

**Description**

This error message is issued when -type '1838_stap' is used without enabling -std {ieee1838_2019}.

Error: -type '1839_stap' without enabling -std {ieee1838_2019} is not allowed.(DFT-2905)

**What Next**

Enable -std {ieee1838_2019} using set_bsd_configuration.

---

## DFT-2907

(Error) "-type '1838_stap' is not allowed when 1838 stap ports are defined using -view exist."

Feedback

**Description**

This error message is issued when any of the 1838 stap port are defined using option -view exist.

Error: -type '1838_stap' is not allowed when 1838 stap ports are defined using -view exist. (DFT-2907)

**What Next**

Don't define any of the 1838 stap port using option -view exist.

---

## DFT-2910

(Error) Not able to build PRPG. Consider increasing the PRPG width.

**Description**

This error message will be displayed when PRPG width is small, Increase the PRPG width to build PRPG.

---

## DFT-2911

(Warning) the 'setup_rtl_flow' command is not specified. Specify this command before the 'create_port, create_bus_port, create_connection' command. Otherwise, testmax_advisor can lead to FATAL at runtime

**Description**

This warning will be displayed only in the RTL shell if the users does not specify the 'setup_rtl_flow' command. This command is required to observe pseudo signal notification from NDM

---

## DFT-2912

(Warning) the 'Enabling external clock in few/all partitions, default partition will be considered for OCC Scan chain'

**Description**

this will be be due to Enabling external clock in few/all partitions, default partition will be considered for OCC Scan chain. if in few/all partitions, external clocks is enabled with pipeline, default partition is always considered for enabling external clock dummy OCC chain

Feedback

## DFT-2913

(Warning) the 'External clocks should be enabled in all partitions else leads to K41 DRC violation

**Description**

This warning will be displayed if the external clocks are not enabled in all partitions

## DFT-2921

(Error) Instance '%s' not found in design '%s'

**Description**

Instance '%s' not found in design '%s'

**What Next**

Please Review DFT Specifications

## DFT-2922

(Error) File path '%s' not found or not accessible

**Description**

File path '%s' not found or not accessible

**What Next**

Please Review DFT Specifications

## DFT-2923

(Error) No memories found in design. Aborting plan_dft command...

**Description**

No memories found in design. Aborting plan_dft command...

**What Next**

Please Review DFT Specifications

## DFT-2928

(Error) No corresponding PDL test models specified (for specified ICL test models).

Feedback

**Description**

No corresponding PDL test models specified (for specified ICL test models).

**What Next**

Please Review DFT Specifications

---

## DFT-2929

(Error) No corresponding ICL test models specified (for specified PDL test models).

**Description**

No corresponding ICL test models specified (for specified PDL test models).

**What Next**

Please Review DFT Specifications

---

## DFT-2932

(Error) Please enable top_server/shadow_server command when IEEE_1687 and dft_access both are enable.

**Description**

You receive this error message when IEEE_1687 and dft_access both are enable and server is not used.

Error: Please enable top_server/shadow_server command when IEEE_1687 and dft_access both are enable. (DFT-2932)

**What Next**

Please enable server.

---

## DFT-2933

(Warning) Current version does not match with recommended version '%s' for '%s'."

**Description**

This warning message will be displayed when selected SMS/SHS compiler vesrion does not match with recommended compiler version. User must use recommended compiler versions to avoid unforeseeable issues. The message will be displayed when compilers information is populated.

Feedback

## DFT-2935

(Error) Hier SIDO-MIMC case missing local_codec_drc_cycle specification in '%s'.

**Description**

This error message will be displayed when local_codec_drc_cycle specification is missing in Hier SIDO-MIMC case.

## DFT-2951

(Error) Current version '%s' of '%s' is earlier than recommended version '%s'. Aborting execution

**Description**

This error message will be displayed when version of underlying tools SpyGlass, EMBEDIT is earlier than the recommended version. User must stick to recommended version of tools to avoid unforeseeable issues. The error will be reported on fist use of SpyGlass/EMBEDIT modules.

## DFT-2952

(Error) Current version '%s' of '%s' is greater than recommended version '%s'. Aborting execution

**Description**

This error message will be displayed when version of underlying tools SpyGlass, EMBEDIT is greater than the recommended version. User must stick to recommended version of tools to avoid unforeseeable issues. The error will be reported on fist use of SpyGlass/EMBEDIT modules.

## DFT-2953

(Error) Synopsys spyglass module not loaded or corrupted. Aborting execution

**Description**

This error message will be displayed when no SpyGlass module is found in TMM installtion area(testmax_advisor link) and SPYGLASS_HOME is not set. The error is also reported when specified SpyGlass is corrupt(incomplete installation). The error will be reported on fist use of SpyGlass module.

Feedback

## DFT-2954

(Error) Synopsys embedit module not loaded. Aborting execution

**Description**

This error message will be displayed when no EMBEDIT module is found in TMM installtion area(embedit directory) and EMBEIDT_HOME is not set and EMBEDIT binaries is not in PATH variable. The error will be reported on fist use of EMBEDIT module.

## DFT-2955

(Error) Synopsys vcs/vcsmx module not loaded or VCS_HOME is not set. Aborting execution

**Description**

This error message will be displayed when no VCS module is loaded and VCS_HOME is not set. The error will be reported on fist use of VCS module.

## DFT-2956

(Error) "%s tck time (%f.00) must be less than strobe_time (%f.00) (specified with test_bsd_default_strobe App option)."

**Description**

You receive this error message when you specify a strobe time which is less than TCK fall and rise time.

set_dft_signal -view exist -type TCK -port tck -timing [list 45 55] set_app_options -as_user_default -name dft.test_bsd_default_strobe -value 40 //strobe time less than tck timing

write_testbench -o bsd_rtl_patterns -test_mode all_dft_protocol -type {all} Error: Rising tck time (45.000000.00) must be less than strobe_time (40.000000.00) (specified with test_bsd_default_strobe App option). (DFT-2956) Error: Falling tck time (45.000000.00) must be less than strobe_time (40.000000.00) (specified with test_bsd_default_strobe App option). (DFT-2956)

**What Next**

Please use a strobe time more than the TCK rise and fall time.

Feedback

## DFT-2961

(Warning) %s option is not supported in %s shell for set_boundary_cell. Ignoring this option.

**Description**

Following option of set_boundary_cell is not supported in the designated shell. It is supported only in TestMax Manager shell.

## DFT-2978

(Warning) Specified interface merge type %s is invalid. Using default interface merge type mux.

**Description**

This warning message reports that the specified streaming fabric interface merge type for ScanDataOut is invalid, and the default merging type mux will be used.

**What Next**

Verify the merge type definition in the set_dft_streaming_fabric_interface command. Only xor and mux merge tyes are accepted.

## DFT-2989

(Error) Invalid specification with -dedicated_chains_for option.

**Description**

Describes any configuration error while specifying *set_scan_configuration* -dedicated_chains_for.

The error message contains a description of the problem. Common causes can be:

- Tried to specify this option for a specific test mode or partition.
- Specified an unknown or unsupported scan type.

**What Next**

Review usage of *set_scan_configuration* -dedicated_chains_for

## DFT-2999

(Information) splitting chain %s to %d sub-chains, dropping %d elements to maximize number of optimizable elements.

Feedback

### Description

Stub chains which have MV crossings or non transparent elements are split during dft optimization, and elements might be dropped. Stub chains can be reconfigured during dft optimization to improve QoR. If a stub chain has MV crossings (a change in voltage area, power domain, or power supply), which can occur if no MV information was available during dft synthesis, the stub chain is split where MV crossings are found, to avoid incompatible connections. If stub chain splitting would produce a chain that is not optimizable (for example, no cells are available to be promoted to START and STOP for the new stub chain), then those elements are dropped from the scandef considered in dft optimization. The dropped elements remain scan stitched.

### What Next

If this message is seen in the flow, verify that the UPF setup has been properly sourced before dft synthesis.

### See Also

- report_stub_chains

---

## DFT-3001

(Information) Writing protocol for test mode %s in %s.

### Description

## DFT-3005

(Information) Logical scan chain information and reporting not available after P&R backend commands.

### Description

You receive this Information message if you used DFT Scan reporting commands that use logical Scan chain information after a FC or ICC2 backend command was called.

The complete logical DFT scan chain data needed for reporting and similar commands is available after DFT was inserted (*insert_dft*), during the frontend flow steps like *compile_fusion* and it is kept persistent during NDM based *save_block*, *open_block* or alike operations.

During optimizations changes on logical DFT scan chains are tracked and the data is kept up to date, but once any backend command is called (FC or ICC2) it is not possible to maintain the information up to date, and therefore the data is reset, and commands depending on it cannot report anymore, so if DFT logical scan chain reporting is needed, then it should be obtained before any backend command is being executed, e.g. after *insert_dft* or *compile_fusion*.

Frontend commands affected by this, are e.g.: *report_scan_path*, *report_dft* (with *-scan_path* option and/or Scan Path Architecture section), *get_scan_cell_names*, *get_scan_chain_names* and *get_scan_chains*.

Nevertheless, all DFT stub chain (ScanDEF) based reports will continue to work as expected because they are based on independent scan stub chain (ScanDEF) data.

### What Next

If DFT logical scan chain reporting is needed, then it should be obtained before any backend command is being executed, e.g. directly after *insert_dft* or *compile_fusion*, but user can continue using all DFT stub chain (ScanDEF) based reporting commands.

## DFT-3083

(Information) Constant pins of DFT-modeled instance %s(%s) are incorrectly controlled in all_dft mode.

**Description**

The message shows that testmode/constant signal polarity of core and the top level differs.

**What Next**

This is an information-only message. No action is required.

Feedback

## DFT-3085

Information: Stopping core wrapping analysis at cell %s for core %s.

**Description**

Stopping core wrapper analysis at cell as it crosses the boundary of partition currently being processed.

**What Next**

This is an information-only message. No action is required.

For example,

Information: Stopping core wrapping analysis at cell gtcgpinf_vccgt_wrap1 for core "gtcgpinf_vccinf_wrap1". (DFT-3085)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration -add_wrapper_cells_to_power_domain enable.*
- *define_dft_partition <> -wrapper enable*

## DFT-3086

(Error) Unable to insert AON custom wrapper cell for port '%s' as no lib cell specified for AON dual rail mux. App option 'dft.test_ao_dedicated_wrp_mux_lib_cell' is not set. Ignoring port for wrapper analysis.

**Description**

Ignoring port for AON custom wrapper insertion. This could be because of the app option 'dft.test_ao_dedicated_wrp_mux_lib_cell' is not set. The app option sets the value for AON dual rail mux library cell name which is required for AON custom wrapper insertion.

**What Next**

1. Set the app option 'dft.test_ao_dedicated_wrp_mux_lib_cell' value.

## DFT-3087

(Warning) Could not find clock control signals on top IP. Cannot mask clock gating cells of partition %s.

**Description**

This warning message is issued when DFT Top IP does not have gate cells control pins for specified partition for wrapper gate cells feature

Feedback

For example,

Warning: Could not find clock control signals on top IP. Cannot mask clock gating cells of partition default_partition (DFT-3087)

The commands that can trigger this warning message are:

- *insert_dft*
- *preview_dft*
- *set_wrapper_configuration*

**What Next**

Specify gate cells control signals wrp_cell_clk_ctrl and core_cell_clk_ctrl using set_dft_signal command for the partition missing these signals

---

## DFT-3088

(Warning) Unable to find IP in partition %s, falling back to default_partition IP signals.

**Description**

This warning message is issued when DFT Top IP is not present in specified partition for wrapper gate cells feature

For example,

Warning: Unable to find IP in partition default_partition, falling back to default_partition IP signals (DFT-3088)

The commands that can trigger this warning message are:

- *insert_dft*
- *preview_dft*
- *set_wrapper_configuration*

**What Next**

Specify gate cells control signals wrp_cell_clk_ctrl and core_cell_clk_ctrl using set_dft_signal command for the partition missing these signals

---

## DFT-3089

(Error) Could not find clock control signals in design. Cannot perform clock masking.

Feedback

**Description**

This error message is issued when tool is unable to find gate cell control signal via user specification or DFTTop IP to perform clock masking for one or all DFT partitions

For example,

Error: Could not find clock control signals in design. Cannot perform clock masking (DFT-3089)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*
- *set_wrapper_configuration*

**What Next**

Specify gate cells signals wrp_cell_clk_ctrl and core_cell_clk_ctrl for gate cells functionality or disable gate_cells functionality via set_wrapper_configuration -gate_cells none option

---

## DFT-3090

(Information) Skipping Q-Gating insertion on partition %s: %s

**Description**

This message report that Q-Gating insertion will be skipped on a certain DFT partition. For example:

Information: Skipping Q-Gating insertion on partition PART1: Invalid Q-Gating configuration (DFT-3090)

**What Next**

Verify that the values from set_scan_suppress_toggling options are properly defined following set_scan_suppress_toggling man page. For -min_slack option, the max value is defined by dft.scan.q_gating_min_slack_max_value app option, so the value in set_scan_suppress_toggling command should be under that range. Also verify that a Q-Gating signal, defined by set_dft_signal -usage scan_toggle, is specified on each DFT partition with Q-Gating setup or in the default partition instead.

---

## DFT-3091

(Warning) No gate cells signals found for partition %s. Clock gating cells in partition %s wont be masked

Feedback

**Description**

This warning message is issued when control signals (wrp_cell_clk_ctrl and core_cell_clk_ctrl) are missing for wrapper gate cells feature

For example,

Warning: No gate cells signals found for partition default_partition. Clock gating cells in partition default_partition wont be masked (DFT-3091)

The commands that can trigger this warning message are:

- *insert_dft*
- *preview_dft*
- *set_wrapper_configuration*

**What Next**

Specify gate cells control signals wrp_cell_clk_ctrl and core_cell_clk_ctrl using set_dft_signal command for the partition missing these signals

---

## DFT-3092

(Error) Leaf level hierachy %s is not allowed with '-include' option while '-wrapper' option is enabled.

**Description**

This error message is issued when user tries to give a leaf level hierarchy as a soft core partition via -wrapper enable option

For example,

Error: Leaf level hierachy de_a/o_rrdy_reg is not allowed with '-include' option while '-wrapper' option is enabled (DFT-3092)

The commands that can trigger this error message are:

- *define_dft_partition*

**What Next**

Check the ICG module name provided for new gate cell addition is a valid ICG cell

---

## DFT-3093

(Error) %s pin not found for ICG reference cell module '%s'. New CG cells wont be added.

Feedback

**Description**

This error message is issued when tool is unable to find relevant pins on clock gating cell specified for set_wrapper_configuration gate_cell feature via dft.test_icg_p_ref_for_dft app option

For example,

Error: Clock input pin not found for ICG reference cell module 'CGLPXT' (DFT-3093)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*
- *set_wrapper_configuration*

**What Next**

Check the ICG module name provided for new gate cell addition is a valid ICG cell

---

## DFT-3094

(Error) Test mode encoding for test mode '%s' is same as test mode '%s'.

**Description**

This error message is issued when tool encounters same encoding values values for two user define test modes

For example,

Error: Test mode encoding for test mode 'test_mode1' is same as test mode 'test_mode2' (DFT-3094)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*
- *set_test_mode_encoding*

**What Next**

Review and correct TestMode signal encoding for the defined test modes

---

## DFT-3095

(Warning) set_scan_path -class wrapper is not supported without dedicated SI/SO signals.

Feedback

**Description**

This warning message is issued when a set_scan_path -class wrapper specification is encountered without ScanDataIn and ScanDataOut signal. This is not supported in tool.

For example,

Warning: set_scan_path -class wrapper is not supported without dedicated SI/SO signals (DFT-3095)

The commands that can trigger this warning message are:

- *insert_dft*
- *preview_dft*

**What Next**

Remove the set_scan_path -class wrapper specification or provide ScanDataIn and ScanDataOut for those set_scan_paths in order to provide set_scan_path specification and rerun. Otherwise tool will ignore the specification and move on further with insert_dft

---

## DFT-3096

(Error) Failed to create DFT Top IP for partition %s.

**Description**

This error message is issued tool is unable to create a valid DFT Top IP module for a partition

For example,

Error: Failed to create DFT Top IP for partition default_partition (DFT-3096)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

---

## DFT-3097

(Information) Accepted test mode encoding specification in partition %s for %s mode

**Description**

This information message is printed when set_test_mode_encoding command is accepted.

Feedback

For example,

Information: Accepted test mode encoding specification in partition "part_A" for wrp_if_c mode (DFT-3097)

The commands that can trigger this error message are:

- *set_test_mode_encoding*

---

## DFT-3098

(Information) Port '%s' is excluded from wrapping due to user specification

**Description**

This information is shown when port is excluded from wrapping due to user specification which is set by command set_boundary_cell -type none.

For example,

Information: Port 'out3' is excluded from wrapping due to user specification (DFT-3098)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*
- *set_boundary_cell -type none*

**What Next**

Check wrapping status of port which is mentioned above. Port should not be wrapped.

---

## DFT-3099

(Information) Port '%s' is excluded from wrapping as pin connected to it is excluded from wrapping due to user specification

**Description**

This information is shown when port is excluded from wrapping as it is connected to pin which is excluded from wrapping by command set_boundary_cell -type none.

For example,

Information: Port 'out3' is excluded from wrapping as pin connected to it is excluded from wrapping due to user specification (DFT-3099)

Feedback

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*
- *set_boundary_cell -type none*

**What Next**

Check wrapping status of port which is mentioned above. Port should not be wrapped.

---

## DFT-3100

(Information) DFT Scan insertion was disabled by %s

**Description**

This message is issued when there are external reasons for *insert_dft* command to skip performing DFT SCAN insertion over a design.

For example, this message will be issued if user disables DFT SCAN insertion using application option dft.scan.insertion_disabled (default false).

**What Next**

If the behavior is undesired, review the DFT & design setup to remove the commands or options that enabled the skipping of DFT SCAN insertion.

---

## DFT-3105

(Information) Port '%s' is connected to hierarchical cell '%s' having user specification; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when a port is connected to hierarchical cell having set_boundary_cell -type WC_D1 specification; dedicated wrapper cell will be added to the port

For example,

Information: Port 'in1' is connected to hierarchical cell 'in1' having user specification; dedicated wrapper cell will be added to the port. (DFT-3105)

Feedback

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*
- *set_boundary_cell -type WC_D1*

**What Next**

Check wrapping status of port which is mentioned above. Port should not be wrapped.

---

## DFT-3106

(Error) Misr Load value should be greater than number of outputs in the CODEC to consider.

**Description**

Misr Load value should be greater than number of outputs in the CODEC to consider.

**What Next**

Please Review DFT Specifications

---

## DFT-3107

(Error) Number of MISRs should always be factor of scanouts per CODEC for correct concatenation.

**Description**

Number of MISRs should always be factor of scanouts per CODEC for correct concatenation.

**What Next**

Please Review DFT Specifications

---

## DFT-3108

(Error) -shared_outputs value should be same across all partitions.

**Description**

-shared_outputs value should be same across all partitions.

**What Next**

Please Review DFT Specifications

Feedback

## DFT-3109

(Information) Port '%s' is connected to cell '%s', which is represented by a CTL model; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when a port is connected to cell having represented by CTL model; dedicated wrapper cell will be added to the port

For example,

Information: Port 'in1' is connected to cell 'de_a', which is represented by a CTL model; dedicated wrapper cell will be added to the port. (DFT-3109)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

## DFT-3110

(Information) Port '%s' is connected to cell '%s', which is represented by a BAM model; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when a port is connected to cell having represented by BAM model; dedicated wrapper cell will be added to the port

For example,

Information: Port 'in1' is connected to cell 'de_a', which is represented by a BAM model; dedicated wrapper cell will be added to the port. (DFT-3110)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

Feedback

## DFT-3111

(Information) Port '%s' is connected to clock-gating cell '%s'; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when a port is connected clock-gating cell; dedicated wrapper cell will be added to the port

For example,

Information: Port 'in1' is connected to clock-gating cell 'clock_gate1'; dedicated wrapper cell will be added to the port. (DFT-3111)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

## DFT-3112

(Information) Port '%s' is connected to cell '%s', which is included in a user scan chain; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when a port is connected cell which is included in user scan chain; dedicated wrapper cell will be added to the port

For example,

Information: Port 'out3' is connected to cell 'de_a', which is included in a user scan chain; dedicated wrapper cell will be added to the port. (DFT-3112)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

Feedback

## DFT-3113

(Information) Port '%s' is connected to Multi-Bit IO register '%s'; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when a port is connected to multi-bit IO register; dedicated wrapper cell will be added to the port

For example,

Information: Port 'out3' is connected to Multi-Bit IO register 'i_reg'; dedicated wrapper cell will be added to the port. (DFT-3113)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

## DFT-3114

(Information) Port '%s' has a dedicated wrapper cell user specification; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when a port has dedicated wrapper cell specification; dedicated wrapper cell will be added to the port

For example,

Information: Port 'out3' has a dedicated wrapper cell user specification; dedicated wrapper cell will be added to the port. (DFT-3114)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

Feedback

## DFT-3115

(Information) I/O registers associated with port '%s' have combinational logic depth %d greater than the specified depth threshold %d; dedicated wrapper cell will be added to the port.

### Description

This information is shown I/O registers associated with port have combimational logic depth greater than specified depth threshold dedicated wrapper cell will be added to the port.

For example,

Information: I/O registers associated with port 'out3' have combinational logic depth 4 greater than the specified depth threshold 2; dedicated wrapper cell will be added to the port. (DFT-3115)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

### What Next

Check wrapper report. Port mentioned above should have ded wrapper cell.

## DFT-3116

(Information) Port '%s' is connected to %d input registers and %d output registers, which exceeds %sreuse threshold %d; dedicated wrapper cell will be added to the port.

### Description

This information is shown when port is connected to input and output registers whose count exceed reuse threshold value; dedicated wrapper cell will be added to the port.

For example,

Information: Port 'out3' is connected to 4 input registers and 5 output registers, which exceeds input reuse threshold 3; dedicated wrapper cell will be added to the port. (DFT-3116)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

Feedback

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

---

## DFT-3117

(Error) Size of the list specified by -misr_custom_names must be equal to the number of MISRs specified by set_logicbist_configuraion.

**Description**

Size of the list specified by -misr_custom_names must be equal to the number of MISRs specified by set_logicbist_configuraion.

**What Next**

Please Review DFT Specifications

---

## DFT-3118

(Information) Port '%s' is excluded from wrapping due to %s DFT signal specification

**Description**

This information is shown when port is excluded from wrapping due to DFT signal specification

For example,

Information: Port 'out3' is excluded from wrapping due to Reset DFT signal specification (DFT-3118)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*
- *set_boundary_cell*

**What Next**

Check wrapper report. Port mentioned above should not be wrapped.

---

## DFT-3120

(Information) Soft core port '%s' is excluded from core wrapping as it is connected to port/pin '%s' having DFT signal specification

Feedback

**Description**

This information is shown when soft core port is excluded from wrapping as it is connected to port/pin which has DFT signal specification

For example,

Information: Soft core port 'in3[0]' is excluded from core wrapping as it is connected to port/pin 'out3[0]' having DFT signal specification (DFT-3120)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

---

## DFT-3121

(Information) Port '%s' is connected to %d input registers, which exceeds %sreuse threshold %d; dedicated wrapper cell will be added to the port.

**Description**

This information is shown when port is connected to input registers whose count exceed reuse threshold value; dedicated wrapper cell will be added to the port.

For example,

Information: Port 'out3' is connected to 4 input registers, which exceeds input reuse threshold 2; dedicated wrapper cell will be added to the port. (DFT-3121)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

---

## DFT-3122

(Information) Port '%s' is connected to %d output registers, which exceeds %sreuse threshold %d; dedicated wrapper cell will be added to the port.

Feedback

**Description**

This information is shown when port is connected to output registers whose count exceed reuse threshold value; dedicated wrapper cell will be added to the port.

For example,

Information: Port 'out3' is connected to 5 output registers, which exceeds output reuse threshold 2; dedicated wrapper cell will be added to the port. (DFT-3122)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

---

## DFT-3127

(Information) Adding dedicated wrapper cell on %s branch for port '%s' on pin '%s'

**Description**

This information is shown when

For example,

Information: Adding dedicated wrapper cell on out branch for port 'out3' on pin 'out3[0]' (DFT-3127)

The commands that can trigger this error message are:

- *insert_dft*
- *preview_dft*

**What Next**

Check wrapper report. Port mentioned above should have ded wrapper cell.

---

## DFT-3128

(Error) Insufficient bus length %d of TDR register '%s' specified for bist_cdr, expected length : %d

**Description**

Insufficient bus length %d of TDR register '%s' specified for bist_cdr, expected length : %d

Feedback

**What Next**

Please Review DFT Specifications

---

## DFT-3129

(Error) Invalid register width %d has been specified for %s in set_logicbist_configuraion.

**Description**

Invalid register width %d has been specified for %s in set_logicbist_configuraion.

**What Next**

Please Review DFT Specifications

---

## DFT-3136

(Information) value missing for %s , please provide input in {%s:%s} format.

**Description**

This information is shown ipunt/value specified in the wrong format

For example,

Information: set_pipeline_scan_enable_configuration -clock_based_fanout_limit {losp 12}

The commands that can trigger this error message are:

- *set_pipeline_scan_enable_configuration*

**What Next**

Check the command , there is not value specified for mention input.

---

## DFT-3137

(Info) Adding dedicated wrapper cell for internal pin '%s' because of user specification

**Description**

This information message is issued when tool is inserting a dedicated wrapper cell to internal_pin because of user specification. set_boundary_cell -internal_pins [list of pins]

Example,

set_boundary_cell -internal_pins { dd_d/o_tval} -type WC_D1

Feedback

## DFT-3138

(Info) A dedicated wrapper will be added to port '%s' because dedicated wrapper insertion flow is enabled

**Description**

This information message is shown when reuse threshold is set to -1. In this scenerio every port will have a dedicate wrapper cell.

Example,

set_wrapper_configuration -reuse_threshold -1

## DFT-3139

(Information) Modified wrapper IP will be instantiated in top hierarchy as user didn't specified the location for partial wrapper cell in split wrapper cell flow.

**Description**

This information is shown when user donot specifies the location for partial wrapper cell in split wrapper cell flow. This information will only occur if the app-option 'dft.test_split_wrp_cell' is enabled without specifying the location of DFT_CX hierarchy. Hence, as a fall-back mechanism the modified wrapper IP would be instantiated in the top hierarchy.

**What Next**

Please specify the location for partial wrapper cell in split wrapper cell flow using the following commands:

set_dft_location set_boundary_cell -location

## DFT-3140

(Info) For port '%s', not adding Dedicated Wrapper cell to loads '%s' due to non fixable MV violations

**Description**

This information message is shown in upf aware flow when tool could not find the location to insert dedication wrapper cell without introducing non fixable MV violations.

## DFT-3141

(Information) Option %s is obsolete, use %s option inside parameters or map_parameters.

Feedback

**Description**

This information is shown when option is not part of latest tool , its obsolete and should be used with parameter list option

For example,

Information: set_watermark_configuration -location de_a

The commands that can trigger this error message are:

- *set_watermark_configuration*

**What Next**

Check the command , use option inside parameterlist option.

---

## DFT-3142

(Information) %s Reg length updated with new value = %d.

**Description**

This information is shown when exact_length in set_scan_path is different than specified in security configuration

For example,

Information: set_scan_path KEY -class ieee_1687 -exact_length 10
set_logic_lock_configuration -exact_length 32 -level gate -exec_name TRLL generate_dft

The commands that can trigger this error message are:

- *generate_dft*

**What Next**

Check the command , Reg length will be updated .

---

## DFT-3143

(Information) In shared wrapper flow user needs to specify short wrapper chains using set_wrapper_configuration in scan compression mode.

**Description**

The information message is shown when shared wrapper flow is enabled and number of short wrapper chains are not specified. This information message helps fix DFT-1083 error.

Feedback

For example,

Information: In shared wrapper flow user needs to specify short wrapper chains using set_wrapper_configuration in scan compression mode. (DFT-3043)

The combinations of commands that can trigger this warning message are:

- *set_wrapper_configuration* • *generate_dft*

**What Next**

Specify wrapper chain count of short chains mode (compression_mode|wrp_if) as following and run again set_wrapper_configuration -chain_count N -test_mode (compression_mode|wrp_if)

set_wrapper_configuration generate_dft

---

## DFT-3144

(Information) fanout_limit for %s should be positive integer.

**Description**

This information is shown when fanout_limit is specified with negative value.

For example,

Information: set_pipeline_scan_enable_configuration -clock_based_fanout_limit {losp:-12}

The commands that can trigger this error message are:

- *set_pipeline_scan_enable_configuration*

**What Next**

Check the command , please specified the positive value.

---

## DFT-3145

(Information) no specified value of clock_based_fanout_limit for %s, honoring global setting....

**Description**

This information is shown when clock_based_fanout_limit is specified with zero value

For example,

Information: set_pipeline_scan_enable_configuration -clock_based_fanout_limit {losp:0}

Feedback

The commands that can trigger this warning message are:

- *set_pipeline_scan_enable_configuration*

**What Next**

Warnning : global fanout_limit will be consider.

---

## DFT-3146

(Information) clock_based_fanout_limit value for %s is overwritten with %d.

**Description**

This information is shown clock_based_fanout_limit value is specified more than once for a port/hookup pin

For example,

Information: set_pipeline_scan_enable_configuration -clock_based_fanout_limit {losp:12} set_pipeline_scan_enable_configuration -clock_based_fanout_limit {losp:20}

The commands that can trigger this warning message are:

- *set_pipeline_scan_enable_configuration*

**What Next**

Check the command , clock_based_fanout_limit value is overridden by new value.

---

## DFT-3147

(Information) Please regenerate the library %s with library manager version newer than O-2018.06-SP3.

**Description**

You receive this information message when library manager version used to generate ndm Libraries is O-2018.06-SP3 or older.

---

## DFT-3148

(Information) Violating all segments of cell instance %s(%s)

**Description**

Message displays that the CTL cell has failed the test model connectivity checks. Hence all the segments of the CTL cell will not be considered for scan stitching during insert_dft.

Feedback

**What Next**

To skip test model connectivity checks for all the CTL cells in the design. Please do set_dft_drc_configuration -test_validate_test_model_connectivity false

---

## DFT-3150

(Error) No aon_enable signal defined for port/pin specified with '-aon_enable' option

**Description**

No aon_enable signal defined for port/pin specified with '-aon_enable' option

**What Next**

Please Review DFT Specifications

---

## DFT-3151

(Error) -aon_enable option is mandatory with type WC_Q0_AO/WC_Q1_AO cell.

**Description**

Specifying '-aon_enable' option in set_boundary_cell command is mandatory for cell type WC_Q0_AO/WC_Q1_AO. The option '-aon_enable' accepts aon_enable signal type port/pin.

**What Next**

1. Use option '-aon_enable' in set_boundary_cell command.

---

## DFT-3153

(Info) Port '%s' is connected to latch '%s'.Dedicated wrapper cell will be added due to app option test_core_wrap_add_dw_for_ports_connected_to_latch is enabled

**Description**

This information message is issued when tool is inserting a dedicated wrapper cell to port if port is connected to a latch and app option test_core_wrap_add_dw_for_ports_connected_to_latch is enabled.

---

## DFT-3154

(Information) New hold mux architecture support is enabled.

Feedback

**Description**

You recieve this information message when the app option for the new hold mux architecture is enabled and pre-compile flow is not used.

---

## DFT-3155

(Information) Skipping wrapping port '%s' as the number of dedicated wrapper cells %d is exceeding the user specified dedicated wrapper cell threshold per port %d.\n

**Description**

Port '%s' is not wrapped since it exceeds max DWC per port threshold set by user.

**What Next**

set_wrapper_configuration -max_dwc_per_port

---

## DFT-3160

(Warning) CG cell %s requires TE stitching but design is already CG stitched.

**Description**

Integrated Clock Gating (ICG) cells need to have their TE pins connected to the correct ScanEnable or TestMode signals, task that needs to be performed during *insert_dft* command.

There are special flows like the usage of command *connect_clock_gate_test_enables* that can perform the TE pin ICG connections on advance given the proper DFT Specification is provided. If that's the case, and as ICG TE pin connection is expected to be done once per design/flow, a later call to *insert_dft* command is not expected to connect again the TE pins of ICGs.

But if in previous scenario, during *insert_dft* command some ICG cells are detected like requiring to have their TE pins connected to the DFT signals, this warning message will be issued to alert user that this TE pin unconnected cells can lead to DFT SCAN insertion problems.

**What Next**

If this message is issued, check that the ICG is manually connected to the correct TestMode or ScanEnable signal before executing DFT Scan insertion (*insert_dft* command).

Feedback

## DFT-3179

(Error) "Wrong partial range specified for the following interface port %s"

### Description

You receive this error message when you specify a range for bus port or pin that is not in correct range or syntax for option '-interface' in 'set_dft_hsio_element' command.

set_dft_hsio_element \ interfcae [list \ o_SO {{sub_inst/i_SO1 sub_inst/i_SO2[8:]}} \ // wrong syntax, missing lsb ] Error: Wrong partial range specified for the following interface port 'sub_inst/i_SO2' (DFT-3179)

set_dft_hsio_element \ interfcae [list \ o_SO {{sub_inst/i_SO1 sub_inst/i_SO2[4:8]}} \ //lsb is greater than msb ] Error: Wrong partial range specified for the following interface port 'sub_inst/i_SO2' (DFT-3179)

### What Next

Please use a value in the correct range. Check proper syntax to pass partial range to avoid error.

## DFT-3180

(Information) %s port '%s' is connected to an %s port via combinational path having 0 I/O registers. Dedicated wrappers will be added to CG/CTL branches.

### Description

This information is shown when an input/output port is connected to an output/input port via combinational path and has 0 I/O registers. Additionally, dedicated wrappers are to be added on CG/CTL branches.

For example,

Information: Input port 'sr_u2/in13' is connected to an Output port via combinational path having 0 I/O registers. Dedicated wrappers will be added to CG/CTL branches. (DFT-3180)

The commands that can trigger this message are:

- *insert_dft*
- *preview_dft*

### What Next

Check wrapper report. Port should have one or more dedicated wrappers on CG/CTL branches.

Feedback

## DFT-3219

(Information) Starting test protocol creation.

**Description**

Tool has started creation of test protocol.

## DFT-3248

(Error) Provided value '%s' of app-option dft_cloned_cg_hookup_pin is not per expected format. Expected format is {SourcePin:DestPin}

**Description**

App option dft_cloned_cg_hookup_pin value for specifying cloned clock gating cell source pin is not as per expected format which is {SourcePin:DestPin}. For e.g. - C_reg/pin1:A_reg/pin2

**What Next**

Please provide correct value of app_option dft_cloned_cg_hookup_pin as per expected format

## DFT-3265

(Information) Identified system/test clock port %s (%5.1f,%5.1f).

**Description**

Tool has identified the given port as a system or test clock with specified rise and fall times.

## DFT-3266

(Information) Identified active low asynchronous control port "%s".

**Description**

Tool has identified the given port as an asynchronous control with specified active state.

## DFT-3267

(Information) Skipping ScanDEF-based optimization due to user option.

Feedback

**Description**

You receive this information message when the tool is going to skip ScanDEF-based optimization during compile_fusion due to user option. This can be triggered if the user sets the 'dft.scan.scandef_based_opto' application option to false.

**What Next**

Enable ScanDEF-based optimization setting 'dft.scan.scandef_based_opto' to true.

---

## DFT-3500

(Information) endpoint clk pin '%s' is not connected to ICG rather connected to top level port, ignoring it.

**Description**

If an endpoint(register) clk pin is connected to top level port then it's clkgate can't be determined and PMM stitching needs clkgate information. So this endpoint will not be considered for stitching in *slm_stitch* command.

---

## DFT-3501

(Information) %s.

**Description**

It prints status message like which step is currently running and status message after the step is done.

---

## DFT-3502

(Information) PMU '%s' is not connected to any endpoint because of '%s'.

**Description**

If there are no available endpoint is within the PMU boundary area then this message might be printed. In case of slack based connection methodology this message might be printed if PMU search range endpoints clock gates have less endpoints than set_slm_stitching_strategy -num_eps_per_icg option value.

---

## DFT-3551

(Warning) Current version '%s' of '%s' is earlier than recommended version '%s'

Feedback

**Description**

This warning message will be displayed when version of underlying tools SpyGlass, EMBEDIT is earlier than the recommended version. By default the severity of this message is error(DFT-2951) but user can downgrade the severity to warning, by using environment variable(setenv TESTMAX_SKIP_RELEASE_COMPATIBILITY_CHECKS true), and move ahead in specical cases under R&D guidence.

---

## DFT-3552

(Warning) Current version '%s' of '%s' is greater than recommended version '%s'

**Description**

This warning message will be displayed when version of underlying tools SpyGlass, EMBEDIT is greater than the recommended version. By default the severity of this message is error(DFT-2952) but user can downgrade the severity to warning, by using environment variable(setenv TESTMAX_SKIP_RELEASE_COMPATIBILITY_CHECKS true), and move ahead in specical cases under R&D guidence.

---

## DFT-3553

(Warning) Recommended version not specified for '%s'. Skipping version check

**Description**

This warning message will be displayed when TMM is not able to find recommended version of SpyGlass and EMBEDIT for version checking. The version checking will be skipped in this case.

---

## DFT-3554

(Warning) Not able to extract current version for '%s'. Skipping version check

**Description**

This warning message will be displayed when TMM is not able to extract version of SpyGlass and EMBEDIT for recommended version checking. The version checking will be skipped in this case.

---

## DFT-3555

(Warning) Overriding '%s' using '%s' = '%s'

Feedback

**Description**

This warning message will be displayed when user set SpyGlass and EMBEDIT modules using envormnet varibale SPYGLASS_HOME and EMBEDIT_HOME.

---

## DFT-3556

(Error) Requested more %s than total %s stages. %s must be less than total %s stages.

**Description**

This Error message will be displayed when user sets IduCodecDepth value greater than the pipeline stage value.

---

## DFT-3599

(Error) Invalid value '%s' for option '%s' specified, allowed options are n'b1, n'b0 or binary value.

**Description**

You receive this error message if you specify the wrong value for reset_state and init_data of TDR.

Error: Invalid value '' for option '-init_data' specified, allowed options are n'b1, n'b0 or binary value (DFT-3599).

**What Next**

Define the correct value for reset_state/init_data of TDR.

---

## DFT-3650

(Information) Test point file generated at: %s

**Description**

You receive this information message when the test point file is generated at the specified location.

---

## DFT-3651

(Information) Test point architect completed.

**Description**

You receive this information message when the test point architect is completed.

Feedback

## DFT-3652

(Information) Test point insertion completed.

**Description**

You receive this information message when the test point insertion is completed.

## DFT-3653

(Information) Unable to open file : %s

**Description**

You receive this information message when the tool is not able to open a file mentioned in the message.

**What Next**

Check if working directory has write permission and space available.

## DFT-3654

(Information) Test point architect failed.

**Description**

You receive this information message when the test point architect is failed.

## DFT-3656

(Information) Test point report generation successful.

**Description**

You receive this information message when the test point report is successfully generated.

## DFT-3657

(Information) Test point '%s' is specified in partition '%s' but considering it under '%s' since partition search is enabled.

**Description**

You receive this information message when the test point is specified in one partition but tool considers it under another partition because partition search is enabled.

Feedback

## DFT-3658

(Information) Test point '%s' is specified in partition '%s' but considering it under '%s' since partition search is enabled.

**Description**

You receive this information message when the test point is specified in one partition but tool considers it under another partition because partition search is enabled.

## DFT-3660

(Information) Skipping test point insertion for target %s

**Description**

You receive this information message when the test point insertion is skipped for the specified target.

## DFT-3661

(Information) No test points shall be inserted for partition %s, as no target has been enabled.

**Description**

You receive this information message when the no test point will be inserted by the tool because of missing target specifications for that partition.

## DFT-3662

(Information) Max test point register specifications for targets for partition %s shall be ignored

**Description**

You receive this information message when the max test point register specifications will be ignored for the specified target.

## DFT-3663

(Information) Loading Spyglass GUI using existing project directory '%s'.

**Description**

This information message contains the path to SpyGlass project directory

Feedback

## DFT-3664

(Information) Exiting Spyglass GUI.

**Description**

You receive this information message when the SpyGlass GUI exits.

## DFT-3665

(Information) Opening a pipe %s to SpyGlass.

**Description**

You receive this information message when SpyGlass execution is going to begin

## DFT-3666

(Information) SpyGlass setup files are created at %s

**Description**

This information message contains the path to SpyGlass setup files.

## DFT-3667

(Information) Skipping test point analysis.

**Description**

You receive this information message when the tool is going to skip test point analysis. Please check the test point commands.

## DFT-3668

(Information) Using %s as DFT test point IP

**Description**

You receive this information message when the tool is unable to find the user defined module in the library and uses default controller IP.

## DFT-3669

(info )Additional port name(s) of module %s not defined is(are) : %s.

Feedback

**Description**

You receive this info message when there are additional ports in the module but not/ cannot define in the interface list. Just an FYI for the user.

---

## DFT-3670

(info )Changing test point from '%s' (%s) to '%s' (%s) due to legal move at higher hierarchy.

**Description**

You receive this info message when there is there is test point relocation to another functionally equivalent location in upper hierarchy.

---

## DFT-3671

(info ) 'control_01' type test points will be implented as 'force_01' test points.

**Description**

You receive this info message when control_01 type test points are specified through set_test_point_element. We implement control_01 to force_01 test points through set_test_point_element to minimize area as control_01 test points use two registers.

---

## DFT-3672

(Info) Using '%s' (%s) as clock-gating enable signal for test point target '%s' for partition '%s'

**Description**

You receive this info message when a signal is used for clock-gating enable for test point target and partition.

---

## DFT-3700

(Information) Picking compilers from path '%s'

**Description**

This information message contains the path to compilers picked from TMM installtion area.These compilers will be picked automatically if user does not specify compilers path in TMM TCL script.

Feedback

## DFT-3712

(Information) Stub chain '%s' was removed from the ScanDEF as it does not have remaining stub elements. Dropping %d bit(s) on %d element(s)

**Description**

This information message provide details about a stub chain being dropped after a successful update_stub_chain command.

## DFT-3713

(Information) Updating START point of stub chain '%s' to '%s'. Dropping %d bit(s) on %d element(s)

**Description**

This information message provide details about the updated START point after a successful update_stub_chain command.

## DFT-3714

(Information) Updating STOP point of stub chain '%s' to '%s'. Dropping %d bit(s) on %d element(s)

**Description**

This information message provide details about the updated STOP point after a successful update_stub_chain command.

## DFT-3715

(Information) Splitting stub chain '%s' into sub-chains '%s' and '%s'. Dropping %d bit(s) on %d element(s)

**Description**

This information message provide details about the stub chain split after a successful update_stub_chain command.

## DFT-3716

(Information) Adding element to floating section of stub chain '%s'. It has %d bit(s) and scan-in pin '%s'

Feedback

**Description**

This information message provide details about the added stub chain element after a successful connect_element_to_stub_chain command.

---

## DFT-3717

(Information) Removing element from stub chain '%s'. It has %d bit(s) and scan-in pin '%s'

**Description**

This information message provide details about the removed stub chain element after a successful disconnect_element_from_stub_chain command.

---

## DFT-3718

(Information) Updating test point clock to %s

**Description**

You receive this information message when the tool is updating test point clock.

---

## DFT-3719

(Error) Test model '.ict.zip' missing of component '%s' for design '%s'

**Description**

Test model '.ict.zip' missing of component '%s' for design '%s'

**What Next**

Please Review DFT Specifications

---

## DFT-3802

(Warning) %s.

**Description**

This warning message is issued when an invalid cell specification is passed to some DFT commands that take a list of cells as a parameter.

There are multiple reasons that can cause this warning to be issued, so the exact description depends on the logic of each particular command. The message provides an explanation of what parameter was considered invalid and why. For example,

Warning: Skipping u_des_unit/ctl/ctmi_1027: is not a sequential cell. (DFT-3802)

Feedback

The commands that can trigger this warning message are:

- *define_scan_cell_set*
- *set_scan_configuration*
- *set_scan_element*
- *set_scan_group*
- *set_scan_path*
- *set_scan_skew_group*

**What Next**

Verify the specifications being passed to these DFT commands. The warning message names the exact cell that couldn't be accepted and the reason for rejection.

---

## DFT-3888

(Information) DFT Scan Event SQL Observer -- SQL Report

**Description**

This message is used to print reports for two different scenarios:

1) PSE clusters results (DEBUG). Available if debug message DFT-5958 is enabled.

2) If experimental SQL SCAN statistics are enabled. Internal R&D feature. Not released.

**What Next**

Disable the enabling conditions if these reports are no longer required.

---

## DFT-3889

(Error) Parameter '%s' cannot be active low for non-differential pad types, in flow to add wrapper cells on pads

**Description**

When wrapper configuration is enabled along with specifications for pads, the following pad pins data_in, data_out and port cannot be active low.

**What Next**

Please Review define_dft_design specifications and set data_in, data_out and port to active high.

Feedback

## DFT-3890

(Information) Ignoring -add_wrapper_cells_to_power_domains option during wrapper analysis in initial_map

**Description**

When wrapper configuration is enabled with -add_wrapper_cells_to_power_domains, it will not be honoured during initial_map stage.

**What Next**

Wrapper configuration with -add_wrapper_cells_to_power_domains is honoured only during DFT insertion phase.

## DFT-4000

(Error) Total no of tdr bits defined are not enough to define all the testmodes.

**Description**

This error message is issued when defined number of TDR bits are not enough to define all the testmodes.

Error: Total no of tdr bits defined are not enough to define all the testmodes. (DFT-4000)

**What Next**

Increase the TDR bits according to the testmodes defined.

## DFT-4001

(Warning) Could not find any instance of ctl design '%s'

**Description**

When there is not matching ctl instance for design provided in read_test_model cmd.

**What Next**

Please provide matching ctl instance.

## DFT-4002

(Error) Given partition %s has not been defined

Feedback

**Description**

When an undefined partition is listed in the design provided in get_total_flop_count command.

**What Next**

Please provide valid partition name in the command.

---

## DFT-4010

(Error) Test Mode specified is not defined

**Description**

Test Mode specified is not defined

**What Next**

Please Review DFT Specifications

---

## DFT-4011

(Error) %s is not defined as a Test Mode

**Description**

%s is not defined as a Test Mode

**What Next**

Please Review DFT Specifications

---

## DFT-4020

(Error) Unable to open file '%s' with information for constraint-based wrapper analysis.

**Description**

This message is shown when constraint-based wrapper analysis is enabled but the wrapper constraint file was not found. The wrapper constraint file is generated automatically by the run_test_point_analysis command prior to DFT insertion. If you have a wrapper constraint file with a non-default name or you want to change the default value, you can specify it by setting the application option dft.test_core_wrap_constraints_file_name

**What Next**

1. check run_test_point_analysis output.

Feedback

## DFT-4021

(Warning) Pin '%s' is not found in the design for constraint-based wrapper analysis.

### Description

Tool is unable find the pin present in spyglass generated wrapper constraints file during run_test_point_analysis.

### What Next

1. check if pin exists in the design. 2. check the app run_test_point_analysis output.

## DFT-4022

(Warning) Ignoring in-place wrapping for instance '%s' present inside a block abstraction model hierarchy.

### Description

You receive this error message in Dft core wrapper insertion when a cell to be in-place wrapped is located inside a block abstraction model. User specifies cells to be in-place wrapped using the app option dft.test_core_wrap_in_place_wrp_cell_names.

When a specified cell is located inside a block abstraction model, tool ignores the cell.

Specify correct cell names with the app option to avoid the message.

## DFT-4025

(Warning) Since dft.test_wrp_power_domain_aware_dw_wrp_clk is enabled, user needs to provide a set of wrapper clocks and disable use_system_clock_for_dedicated_wrp_cells. Disabling power aware clock selection for dedicated core wrapper cells

### Description

When user enable power aware clock selection for dedicated wrapper cells, there has to be a set of wrapper clock in the system specified via "set_dft_signal -type wrp_clock", to perform power aware clock selection. If this not the case power aware clock selection will be disabled. Also for power aware clock selection use_system_clock_for_dedicated_wrp_cells should be disable in set_wrapper_configuration command.

SH "SEE ALSO"

```
set_wrapper_configuration(1)
dft.test_wrp_power_domain_aware_dw_wrp_clk(2)
```

Feedback

## DFT-4030

(Error) Unable to insert AON custom wrapper cell for port '%s' as no AON dual rail mux libcell found with name %s. Ignoring port for wrapper analysis.

**Description**

Ignoring port for AON custom wrapper insertion. This could be because tool is not able to find AON dual rail mux library cell module which is required for AON custom wrapper insertion.

**What Next**

1. check the app option 'dft.test_ao_dedicated_wrp_mux_lib_cell' value.

## DFT-4031

(Error) Failed to write %s to file %s.

**Description**

Failed to write wrapper IP. This may occur because of bad wrapper IP logic.

**What Next**

1. Recheck the wrapper IP logic.

## DFT-4033

(Warning) Overriding '%s' wrapper cell type to %s wrapper cell as per user specification against type %s wrapper cell identified by wrapper analysis.

**Description**

This message is shown when there is a type mismatch between user specified wrapper cell and wrapper analysis determined cell type. In such cases we honor user specifications and issue the warning. Because of user forced type for wrapper cells, the wrapping status of all ports associated with such wrapper cells might be affected.

**What Next**

1. check set_wrapper_configuration.

## DFT-4091

(Error) Invalid value for option '-unified' specified, allowed options are enable|disablenDiscarding Timing constraints generation.

Feedback

**Description**

Invalid value for option '-unified' specified, allowed options are enable|disablenDiscarding Timing constraints generation.

**What Next**

Please Review DFT Specifications

---

## DFT-4851

(info) ICG TE stitching verbose report

**Description**

This message can be enabled by user configuration to print extra information about the ICG TE stitching results, using set_msg command:

set_msg DFT-4851 -level information

**What Next**

Set the message back to verbose or delete the original set_msg call if this report is no longer required.

---

## DFT-4860

(info) Scan chain post processing verbose messages

**Description**

This message can be enabled by user configuration to print extra information about extra optimizations performed over SCAN chains after they have been architected.

It can be enabled by the following command.

set_msg DFT-4860 -level information

**What Next**

Set the message back to verbose or delete the original set_msg call if this report or information is no longer required.

---

## DFT-4861

(info) DFT Scan Synthesis clock gathering stats.

Feedback

**Description**

This message can be enabled by user configuration to print extra statistical information about the SCAN clock gathering process, i.e. the stage where all DFT clock signals are traversed to locate and identify every SCAN cell driven by the corresponding clock.

It can be enabled by the following command.

set_msg DFT-4861 -level information

**What Next**

Set the message back to verbose or delete the original set_msg call if this report or information is no longer required.

---

## DFT-4895

(info) PSE reclustering summary report

**Description**

This message can be enabled by user configuration to print extra information about the Pipeline Scan Enable (PSE) reclustering process, showing the different compatible PSE groups and the amount of loads assigned to them.

It can be enabled by the following command.

set_msg DFT-4895 -level information

**What Next**

Set the message back to verbose or delete the original set_msg call if this report or information is no longer required.

---

## DFT-5041

(Error) Incorrect value '%s' specified for option '%s'

**Description**

Incorrect value '%s' specified for option '%s'

**What Next**

Please Review DFT Specifications

Feedback

## DFT-5050

(Error) audit_report_option is disabled in set_testmax_configuration command, ignoring insert_ded_wrp_in_netlist option.

**Description**

audit_report_option is disabled in set_testmax_configuration command, ignoring insert_ded_wrp_in_netlist option.

**What Next**

Please Review DFT Specifications

## DFT-8991

(Error) Failed in reading attachment data for design %s and design library %s.

**Description**

Inconsistency in DFT Specification Data. Failed to read it. This may occur because of the inconsistency in the design attachment data.

**What Next**

1. Regenerate the saved block with the current version of the tool 2. As a temporary workaround, disable the persistency check using the following environment variable. This way the check is ignored and the flow is allowed to proceed further. setenv dft_tdm_spec_persistency false

## DFT-8993

(Error) Incorrect -target specification, either empty or invalid list provided. Correct specification : -target [list [list inst pdl] [list inst pdl]] / -target {{inst pdl} {inst pdl}}.

**Description**

This error message is issued when target pair is empty/invalid.

Error: Incorrect -target specification, either empty or invalid list provided. Correct specification : -target [list [list inst pdl] [list inst pdl]] / -target {{inst pdl} {inst pdl}}. (DFT-8993)

**What Next**

Define valid target pair

Feedback

### DFT-8994

(Error) "PDL file passed as the target doesn't exist."

**Description**

This error message is sent when during write_test_protocol command

For example,

Error: "PDL file passed as the target doesn't exist." (DFT-8994)

**What Next**

Please check for correct PDL file name to be passed with target under write_test_protocol command.

## DFTSCHD

### DFTSCHD-001

(warning) No schematic support for DFT violation (%s).

**Description**

Check the man page for %s DRC violation.

## DIO

### DIO-001

(error) Incorrect value specified for option %s.

**Description**

The input option value may not meet the requirements.

**What Next**

Please follow the command man page to input option value that matches the format.

### DIO-002

(error) The option %s is mutually exclusive with option %s.

Feedback

**Description**

The mutually exclusive options are specified.

**What Next**

Please correct the options so that do not violate any mutual exclusion requirement.

---

## DIO-003

(error) Python execute file (%s) error, please find detail in file *.debug.log.

**Description**

There occurs error while executing python command. Detail info is dumped in file *.debug.log.

**What Next**

Please get the detail error info and contact AE for help.

---

## DIO-004

(error) Could not create instance %s since it is outside block boundary (%s line %u).

**Description**

This error can occur while executing read_design_io command. It means that the object with the specified name could not be created as it will extend outside the boundary of the current block. Hence the entry at the specified CSV file and line number will be ignored.

**What Next**

Please check the CSV file and modify the X_origin and Y_origin on the particular line number so that the object lies inside the current block's boundary.

---

## DIO-005

(warning) Mismatch in object types of reference cell and instance (%s line %u).

**Description**

This warning message is issued when the bump type or object type of the reference is different from the type inferred from the instance. For example, if the instance name is specified under C4_inst column, but the ref cell specified under Reference_name is of type ubump, it is considered as a mismatch.

Feedback

**What Next**

Please check if instance name is written at right column or value of reference name is correct.

---

## DIO-006

(error) Could not find bond_pad_def with name %s.

**Description**

No bond_pad_def with the given name was found in the current design.

**What Next**

Please check that a correct reference name for is specified for the bond pad object. Also ensure that the bond_pad_def with the specified name is already existing in the current design.

---

## DIO-007

(warning) Option -cell_origin_type is ineffective when origin for the specified reference cell is its center.

**Description**

The -cell_origin_type option depends on the reference cell - whether its origin {0 0} is at the lower left of the ref cell, or at the center. This option is effective only for ref cells with origin at lower left.

**What Next**

Please check that the reference cell with correct origin type is specified if -cell_origin_type option needs to be effective.

---

## DIO-008

(error) The net name in cell(s) %s is invalid.

**Description**

This message will be triggered if 1. xlsx cell content only consists of symbols, e.g., %, $,',etc. 2. there are some spaces in the middle of cell content, e.g., aa bb

**What Next**

Please check the content in the cell and correct it.

Feedback

## DIO-009

(information) Assuming via_def %s is to be used to create TSV instance %s (%s line %u).

**Description**

This message indicates that no ref cell with the specified name was found, however a via def with the same name is available. Hence the tool will use the via def with the specified name for creating the TSV instance.

**What Next**

Confirm that ref cell with the specified name is indeed not available, and it is ok to use the TSV def for creating the TSV.

## DIO-010

(warning) Could not set preferred pins for port %s.

**Description**

This warning message indicates that preferred_pin attribute could not be set for the specified port. This could be due to various reasons. For example, the die side of the preferred pins is not consistent or could not be determined. Second possibility is that the preferred pin is not a pad.

**What Next**

Check whether the correct set of bump cells are specified corresponding to the given port, and that the relevant attributes are set correctly.

## DIO-011

(information) Incorrect value '%s' of %s on line %u as it should have been '%s' as per pseudo_bump data.

**Description**

This message indicates that the specified attribute value provided is not correct as per pseudo_bump data.

**What Next**

Please provide the correct value as per pseudo_bump data.

## DIO-012

(warning) The chiplet instance '%s' do contain probe pads or direct probes.

Feedback

**Description**

The chiplet name i.e., instance name, provided in the command line do not conatin probe pads or direct probes.

**What Next**

Please check the instance name provided in the command line has probe pads or direct pads.

---

## DIO-013

(warning) The chiplet instance '%s' do not exist in the design.

**Description**

The chiplet name i.e., instance name, provided in the command line do not exist in the design or provided instance name is not a valid chiplet.

**What Next**

Please check the instance name provided in the command line is valid or not.

---

## DIO-014

(error) Failed to write probe card for the chiplet instance '%s' for the region '%s' and the side is '%s'.

**Description**

Failed to write probe card spec for the chiplet i.e., instance name, provided in the command line

**What Next**

Please get the detail error info and contact AE for help.

---

## DIO-015

(warning) No chiplet/die found in the design.

**Description**

No chiplet/die present in the design to write the bumps count in to csv file.

**What Next**

Please make sure that the design has valid chiplet(s)/die(s).

Feedback

## DIO-016

(warning) No bumps found in the design.

**Description**

No bumps found in any of the chiplet(s)/die(s) of the design to write bumps count in to csv file.

**What Next**

Please make sure that the design has bumps to write a csv file.

## DIO-017

(Information) No bump found in the region '%s' of the chiplet '%s'.

**Description**

No bump found in the one of the regions of the chiplet instance.

## DIO-018

(Error) No port named '%s' found on top-level design (%s line %u).

**Description**

The port with the given name on the specified line does not exist on the current top-level design.

**What Next**

Check whether the port name in CSV file is correct, or use invoke the comamnd with *-create_ports* option so that the missing port will be automatically created in the design.

# DM

## DM-100

(error) Unable to create port '%s' because port creation is not allowed on design '%s.'

**Description**

Port creation is disabled in the design. This is usually done to prevent "port-punching" in a design.

Feedback

**What Next**

Change the value of the *is_port_punching_ok* attribute on the design if appropriate to allow modification of ports.

---

## DM-101

(error) Unable to delete port '%s' because port deletion is not allowed on design '%s.'

**Description**

Port deletion is disabled in the design. This is usually done to prevent "port-punching" in a design.

**What Next**

Change the value of the *is_port_punching_ok* attribute on the design if appropriate to allow modification of ports.

---

# DMM

---

## DMM-010

(Warning) Switching between mismatch configs is not recommended.

**Description**

It is not recommended to switch between configs because there might be some design mismatches already repaired in previous config. And those mismatches will not be in sync with current config anymore. There is currently no provision to re-mitigate or invalidate those already mitigated objects.

**What Next**

Make sure not to change current config if some mismatches have already been repaired.

---

## DMM-011

(Warning) Changing current repair(handler) for a mismatch type in between a flow is not recommended.

**Description**

It is not recommended to change current repair(handler) for a mismatch type in between a flow because there might be some design mismatches already repaired with previous

Feedback

handler. And those mismatches will not be in sync with current repair anymore. There is currently no provision to re-mitigate or invalidate those already mitigated objects.

**What Next**

Make sure not to change current repair if some mismatches have already been repaired.

---

## DMM-012

(Warning) Changing action for a mismatch type in between a flow is not recommended.

**Description**

It is not recommended to change action for a mismatch type in between a flow because there might be some design mismatches already repaired with previous action. And those mismatches will not be in sync with current action anymore. There is currently no provision to re-mitigate or invalidate those already mitigated objects.

**What Next**

Make sure not to change action if some mismatches have already been repaired.

---

## DMM-013

(Information) No mismatch exists on ref library '%s'.

**Description**

The specified reference library is found with no mismatch information.

---

## DMM-014

(error) Action '%s' is not allowed for '%s' mismatch type.

**Description**

This action type is not in the allowed list of actions for this mismatch type.

**What Next**

Use report_mismatch_config output to check which action types are allowed for this mismatch type.

---

## DMM-015

(error) Mismatch config '%s' do not exists.

Feedback

**Description**

The provided mismatch config do not exists. Check and use existing configs.

**What Next**

Use report_mismatch_configs output to check which mismatch configs are available to use.

---

## DMM-016

(error) Mismatch config '%s' already exists.

**Description**

The provided mismatch config already exists.

**What Next**

Use report_mismatch_configs to see available configs to use.

---

## DMM-017

(error) Config '%s' does not exists.

**Description**

The named config does not exists. Please use '-all' option to see the existing configs and use one of them.

**What Next**

Use report_mismatch_configs to see available configs to use.

---

## DMM-021

(Warning) Over-riding current design mismatch config '%s' by block-specific config '%s'.

**Description**

The design mismatch config settings are stored on a block when it is created. When it is opened or made the current block, these are restored. If they are different from the session's current config settings, the block's settings over-ride the session's settings and come into effect.

**What Next**

Use 'get_current_mismatch_config' and 'report_mismatch_config -verbose' to check what config settings came into effect. for this mismatch type.d

Feedback

## DMM-022

(Information) Restoring current design mismatch config value to '%s'.

**Description**

The block-specific design mismatch config settings are active when the block is open and is the current block. When the block is closed, these block-specific settings are removed and are replaced by the session's config settings that were in effect before this block was opened. This message indicates that the mismatch config setting has been restored to the previous value.

**What Next**

Use 'get_current_mismatch_config' and 'report_mismatch_config -verbose' to check what config settings came into effect.

## DMM-030

(error) '%s' is an empty rtl module.

**Description**

This denotes that an empty rtl module is read-in. Configure DMM mismatch empty_logic_module to convert it into macro.

**What Next**

Use report_mismatch_config output to check which action types are allowed for this mismatch type.

## DMM-040

(information) Resizing cell ‘%s’.

**Description**

When creating a macro type blackbox on an empty module mismatch mitigated using the create_macro strategy, tool will resize the macro without creating a new blackbox.

**What Next**

This is an information message no action is needed.

## DMM-041

(warning) Mitigated empty module cannot be moved to specified library or renamed.

Feedback

### Description

When creating a macro type block-box on an empty module mismatch mitigated using the create_macro strategy -library & -name options will be ignored.

### What Next

Review your design mismatch configuration and set the correct strategy action for the empty_logic_module, to disable the mitigation.

### See Also

- report_design_mismatch
- report_mismatch_configs

---

## DMM-042

(warning) Mitigated empty module cannot be move to library ‘%s’

### Description

When creating a macro type blackbox on an empty module mismatch mitigated using the create_macro strategy the -name option will be ignored.

### What Next

Review your design mismatch configuration and set the correct strategy action for the empty_logic_module, to disable the mitigation

### See Also

- report_design_mismatch
- report_mismatch_configs

---

## DMM-100

(Info) Information: Mismatch type %s is detected on object type %s at object %s. There are total %d objects of this mismatch type on this design. Out of these %d objects are repaired using %s repair strategy.

```

## DMM-113

(Info) Information: Mismatch type %s is detected on object type %s at object %s. There are total %d objects of this mismatch type on this design. Out of these %d objects are repaired using %s repair strategy.

**Description**

The mismatch type %mmtype is found to exists on %objtype %objname .

The following table lists more information of the mismatch type:

Table:

```
Field   Information
  Mismatch Object Name   %mmobjname
  Object Name   %objname
  Object Type   %objtype
  Repaired State   %repairedstate
  Repair Strategy   %mmhandler
```

Feedback

## DMM-114

(Info) Information: Mismatch type %s is detected on object type %s at object %s. There are total %d objects of this mismatch type on this design. Out of these %d objects are repaired using %s repair strategy.

### Description

The mismatch type %mmtype is found to exists on %objtype %objname .

The following table lists more information of the mismatch type:

Table:

```
Field   Information
  Mismatch Object Name   %mmobjname
  Object Name   %objname
  Object Type   %objtype
  Repaired State   %repairedstate
  Repair Strategy   %mmhandler
```

## DMM-115

(Warning) Auto deriving '%s' routing direction for layer '%s'.

### Description

There is no layer routing direction provided by user and also not available in technology file. So auto deriving the routing direction for the specified layers.

## DMM-116

(information) Total %d mismatches are found on block '%s'.

### Description

If there exists any inconsistency between design and reference data, they are regarded as a mismatch in the flow. These mismatches can be related to a missing reference, port name case, missing routing direction on a metal layer etc.

When such a mismatch is detected, it is collected and recorded on design. These mismatches are captured during specific flows like linking and routability checks.

### What Next

Check output of report_design_mismatch to find more details about mismatches.

Feedback

### See Also

- report_design_mismatch

---

## DMM-117

(warning) Reporting design mismatch(es) or creating or setting design mismatch configuration after early data check has been enabled.

### Description

User is reporting on design mismatch(es) or is creating or setting design mismatch configuration after the early data check (EDC) system has been enabled. The design mismatch commands and reports are still accepted by the tool after enabling the EDC system. However, the design mismatch manager turned inactive and will no longer check, record, or repair design mismatches since these are now checked and handled by the EDC system. It is still possible to report the mismatches that have been recorded by the design mismatch manager before the EDC system got enabled.

### What Next

The warning can be ignored when reporting design mismatches that got recorded before enabling EDC. When creating or configuring design mismatch configuration, consider using the EDC system instead by using related EDC checks with matching policies and strategies. The EDC system is enabled by 'set_early_data_check_policy' or by 'set_qor_strategy -mode early_design' command. Please refer to below commands related to the EDC system.

set_early_data_check_policy

```
report_early_data_checks
get_early_data_check_records
```

---

## DMM-121

(warning) Repair skipped for '%s' for object '%s' as it would cause loss of UPF data.

### Description

Repaired skipped for design mismatch as it would cause UPF data loss as part of converting empty logic module to macro.

### What Next

If you do not want to repair then change action to 'ignore'. If still repair is needed then enable design mismatch to repair before loading upf.

Feedback

# DPAP

## DPAP-001

(Information) Tool calculated threshold pin count of the partitions is '%d'.

### Description

When pin balancing of partitions is enabled during partitioning, the tool internally calculates a threshold value of number of pins in the partition.

### What Next

This is an information message. No action is required.

### See Also

- explore_logic_hierarchy

## DPAP-002

(warning) The value of plan.auto_group.group_npins_max, set by the user is significantly small. This may result in large number of partitions and runtime cost.

### Description

User set threshold value of pin count of partitions is small.

### What Next

Set a higher value for threshold pin count.

### See Also

- explore_logic_hierarchy

## DPAP-003

(Information) %s. Skipping pin balancing of partitions. %s

### Description

Pin Balancing of partitions is skipped.

### What Next

This is an information message. No action is required.

Feedback

**See Also**

## DPAP-006

(Information) %s. %s.

**Description**

Skipping the user given invalid values in 'plan.auto_group.results_grading_criteria'. Using default values in case none of values are valid.

**What Next**

Check app-option man page for valid values.

Feedback

**See Also**

- explore_logic_hierarchy

---

## DPAP-010

(Information) The priority order of constraints used in auto-partitioning is : %s %s.

**Description**

The priority order of partitioning constraints is as specified in the message.

**What Next**

This is an information message. No action is required.

**See Also**

- explore_logic_hierarchy

---

## DPAP-101

(error) Max cell count of a partition has either not been specified or invalid value has been specified for auto-partitioning. Specify by using app-option 'plan.auto_group.group_ncells_max'. Exiting Command.

**Description**

The specified command option requires a valid value of maximum cell count allowed in a partition to function correctly. Specify by using app-option 'plan.auto_group.group_ncells_max'.

**What Next**

Specify a valid value of maximum cell count allowed in a partition by using app-option 'plan.auto_group.group_ncells_max'.

**See Also**

- setup_design_for_auto_partition
- explore_logic_hierarchy

---

## DPAP-102

(warning) Value of app-option '%s' has been changed after the setup_design_for_auto_partition command. Ignoring the changed app-option value.

Feedback

**Description**

The above app-option need to be set before setup_design_for_auto_partition command is run. The setting should remain the same throughout auto-partition.

**What Next**

Set the above app-option before setup_design_for_auto_partition command is run.

**See Also**

- setup_design_for_auto_partition
- explore_logic_hierarchy

---

## DPAP-103

(warning) Virtual Groups have changed since setup_design_for_auto_partition command. Ignoring the changes in virtual groups.

**Description**

The virtual group definitions should remain the same through auto-partition setup and run.

**What Next**

Do not make any virtual group changes between setup and run of auto-partition.

**See Also**

- setup_design_for_auto_partition
- explore_logic_hierarchy

---

## DPAP-104

(warning) Partition candidate hierarchy '%s' specified by the user is ignored because of user specified constraints %s.

**Description**

Partition candidate specified are ignored as candidates for partition due to user specified constraints on the chierarchy, its parent or any child hierarchy.

**What Next**

Remove the user constraints.

Feedback

**See Also**

- setup_design_for_auto_partition
- explore_logic_hierarchy

---

## DPAP-105

(warning) Leaf cell count of the partition candidate hierarchy '%s' specified by user is greator than the maximum cell count of a partition specified by the user through the app-option 'plan.auto_group.group_ncells_max'.

**Description**

Leaf cell count of the partition candidate specified by the user is more than the maximum cell count of a partition. This will violate the partition max cell count.

**What Next**

Increase the maximum cell count of a partition or choose a smaller partition candidate.

**See Also**

- setup_design_for_auto_partition
- explore_logic_hierarchy

---

## DPAP-201

(Warning) %s. Ignoring the module.

**Description**

The module is not an MIM in the design and will be ignored in mim handling during auto-partitioning.

**What Next**

Please correct the reference module name in the command option -enable_mim of setup_design_for_auto_partition command.

**See Also**

- setup_design_for_auto_partition
- explore_logic_hierarchy

Feedback

## DPAP-202

(Information) %s (Module: %s) is/are not identified as MIM. (%s)

### Description

The module instances in the message are not considered MIMs in auto-partitioning. The reason is stated in the message.

### What Next

This is an information message. No action is required.

### See Also

- setup_design_for_auto_partition
- explore_logic_hierarchy

## DPAP-203

(Information) %s.

### Description

The instance(s) are not considered as MIM instances. These instances are either user specified existing partitions/physical blocks or parent/child hierarchies of the user specified existing partition/physical blocks.

### What Next

This is an information message. No action is required.

### See Also

- setup_design_for_auto_partition
- explore_logic_hierarchy

## DPAP-204

## DPAP-250

(Information) No hierarchies in the design have been identified as candidates for partition. Exiting Auto-Partition.

### Description

Either there are no hierarchies in the design or the hierarchies in the design have been constrained so that they are not identified as candidates for partitioning the design. Exiting Auto-Partition.

Feedback

### What Next

This is an information message. No action is required.

### See Also

- auto_partition_design
- set_auto_partition_constraints

# DPBUS

## DPBUS-001

(error) No bus plan exists.

### Description

You used a command that needs a bus plan to have been created, but no bus plan was found.

### What Next

Create a bus plan using create_busplans.

## DPBUS-002

(error) Constraint %s not supported.

### Description

There are a limited set of constraints supported by the tool. The supported constraints are <, <=, >, >= and =.

### What Next

Change to use a supported constraint.

## DPBUS-003

(error) Bus %s cannot be constrained to itself.

### Description

The same bus is specified in both the *-from* and in the *-to* bus sets. This means a bus should be contrained to itself. This is not supported.

Feedback

**What Next**

Change *-from* or *-to* to ensure the same bus does not appear in both sets.

---

## DPBUS-004

(error) Buses %s and %s cannot be constrained to be in a cycle.

**Description**

Adding the requested bus constraint would cause a constraint cycle involving the two buses reported. This is not supported.

**What Next**

Change *-from* or *-to* to ensure the constraints do not form a cycle.

---

## DPBUS-005

(error) Layer %s not recognized.

**Description**

You have specified a layer which the tool does not recognize as a layer.

**What Next**

Use *get_layers* to see list of layers.

---

## DPBUS-006

(error) Buffer %s is not recognized.

**Description**

You have specified a buffer which the tool does not recognize.

**What Next**

This command wants the ref_module_name of a buffer. Find an example buffer cell in the design and get the attribute ref_module_name. Use the ref_module_name for this command.

---

## DPBUS-007

(error) Buffer %s is not usable.

Feedback

**Description**

You have specified a buffer which the tool cannot use. This is because the specified buffer is marked as "dont use".

**What Next**

Look at the "dont use" attribute on the lib cell. For example, *get_attribute -name dont_use [get_lib_cells */bufferName]*. To set attribute to false, for example use *set_attribute -name dont_use -value false [get_lib_cells */bufferName]*. An alternate way is to use *set_lib_cell_purpose*.

---

## DPBUS-008

(error) Cannot specify %s without %s or %s

**Description**

You used a command option that requires another option to also be specified.

**What Next**

Refer to the manual page for this command for detailed information on valid options.

---

## DPBUS-010

(error) Bus %s is part of a fanin bus %s. It cannot be removed.

**Description**

You have specified to remove a bus which is part of a fanin bus. To remove this bus you need to remove the fanin bus instead.

**What Next**

Use *remove_busplans -fanin_bus <fanin_bus_name>* to remove the fanin bus.

---

## DPBUS-011

(error) Bus %s is not a starting bus for fanin bus %s. It cannot be the current bus.

**Description**

You have specified an incorrect bus to be the current bus for a fanin bus. Only buses at the start of a fanin bus can be the current bus. The current bus represents the bus that timing analysis will be done for the fanin bus. To uniquely identify all the paths in the fanin bus only the starting buses can be made into the current bus.

Feedback

**What Next**

Use *get_attribute -name start_buses [get_busplans -fanin_bus <fanin_bus_name>]* to see all the starting buses on <fanin_bus_name>. Pick one of these buses to be the current bus.

---

## DPBUS-012

(error) Bus %s is not found.

**Description**

You have specified a bus which does not exist.

**What Next**

Use *report_busplans* * to see all the buses.

---

## DPBUS-013

(error) No fanin bus gates found.

**Description**

You have specified certain gates to be used to create a fanin bus, but those gates were not found.

**What Next**

Make sure the gates exist in design.

---

## DPBUS-014

(error) Fanin bus gate %s has attribute busplan_trace_through.

**Description**

You specified a fanin bus gate which has the busplan_trace_through attribute set. This is not allowed as the fanin bus gate has special treatment which conflicts with busplan_trace_through setting.

**What Next**

Remove the busplan_trace_through attribute from this cell.

---

## DPBUS-015

(error) Could not create the sub-buses needed for fanin bus %s

Feedback

**Description**

A fanin bus is composed of normal fanout buses. These buses are called sub-buses of the fanin bus. For some reason, the sub-buses were not able to be created.

**What Next**

There could be a number of reasons why this happens. First check that the fanin gates are properly specified so as to create a fanin bus. Second check that none of the nets are already used by some other bus.

Another thing to try is to manually create the sub-buses to see where the problem occurs. This can be done by adding the fanin gates to the start_end_cells by *create_busplans -add_start_end_cells*, then use *create_busplans -from -to* to create each sub-bus.

---

## DPBUS-016

(error) Found sub-buses with branches for fanin bus %s.

**Description**

A fanin bus is composed of normal fanout buses. These fanout buses are called sub-buses of the fanin bus. A current limitation is that the sub-buses cannot have branches. Another way to look at this is that the tool does not support a bus with both fanin and fanout nodes.

**What Next**

Decide whether to have a fanin bus or a fanout bus.

---

## DPBUS-017

(error) Could not create the fanin bus %s.

**Description**

This is a generic message indicating the fanin bus creation failed. There should be more detailed information in previous messages.

**What Next**

There could be a number of reasons why this happens. First check that the fanin gates are properly specified so as to create a fanin bus. Second check that none of the nets are already used by some other bus.

Another thing to try is to manually create the sub-buses to see where the problem occurs. This can be done by adding the fanin gates to the start_end_cells by *create_busplans -add_start_end_cells*, then use *create_busplans -from -to* to create each sub-bus.

Feedback

## DPBUS-018

(error) Bus(es) {%s} have branches. This command does not support branching buses.

**Description**

You used a command that only supports 2 pin buses. The given buses have branches and thus are not a 2 pin buses. These buses are skipped.

**What Next**

Plan these buses using the manual controls.

## DPBUS-019

(error) The name %s has already been used for %s.

**Description**

The name given has already been used and this command requires a unique name.

**What Next**

Choose a different name for this object.

## DPBUS-020

(error) Bus(es) {%s} have feedthroughs. This command does not support buses with feedthroughs.

**Description**

You used a command that only supports top level buses. The given buses have feedthroughs and thus are not a top level buses. These buses are skipped.

**What Next**

Plan these buses using the manual controls.

## DPBUS-021

(error) Bus(es) {%s} have fixed elements. This command does not support buses with fixed elements.

**Description**

You used a command that does not support fixed elements. Buses with fixed elements are skipped.

Feedback

**What Next**

Remove the fixed attribute on bus elements or plan these buses using the manual controls.

---

## DPBUS-022

(error) Cannot add elements before the starting element or after the ending element.

**Description**

The starting and ending elements cannot be changed so it is not allowed to add elements before the starting element or after the ending element.

**What Next**

Do not attempt to add elements before the starting element or after the ending element.

---

## DPBUS-023

(error) Bus(es) {%s} does not have proper layers.

**Description**

You used a command that requires each bus to have proper layers. Layer for a bus are given in the associated net estimation rule. The bus needs to have correct horizontal as well as vertical layer assigned in the net estimation rule.

To determine the rule associated with a bus use *get_attribute -name rule [get_busplans <busname>]*

To see the horizontal and vertical layers associated with a rule use *report_net_estimation_rule <rulename>*

To change a rule use *set_net_estimation_rule -parameter layer -horizontal_value <horLayer> -vertical_value <verLayer> <rulename>*

**What Next**

Change the rule so that the horizontal and vertical layers are properly set.

---

## DPBUS-024

(error) Bus(es) {%s} has unassigned pins.

**Description**

You used a command that requires all pins on all the nets in the bus to have pins assigned. To assign pins use *place_pins* command

Feedback

**What Next**

Place all the pins then try again.

---

## DPBUS-025

(error) Bus %s did not route because %s.

**Description**

The specified bus failed to route due to an internal issue as stated in message.

**What Next**

Plan this bus using auto-plan or manually.

---

## DPBUS-026

(error) Rule %s: specified layers %s and %s are not adjacent. Adjacent layers or user-provided register / buffer spacing is required.

**Description**

The layers specified for the indicated net estimation rule are not adjacent. In this situation, the net estimation timing engine cannot compute register / buffer spacing based on indirect attributes (layer, clock, scenario, etc). Non-adjacent layers are permitted, but only if the user directly specifies user-computed register / buffer spacing values.

**What Next**

Modify the net estimation rule settings to use 2 adjacent layers.

Or

Directly specify register / buffer spacing values for the net estimation rule.

**See Also**

- set_net_estimation_rule
- report_net_estimation_rules

---

## DPBUS-027

(error) Option %s is mutally exclusive with these options %s.

**Description**

The listed command option is mutually exclusive with all other options listed.

Feedback

**What Next**

Look at manpage for this command for more information on command options.

---

## DPBUS-028

(error) %s is not a physical cell.

**Description**

The listed cell is logical cell only. The command requires a physical cell.

**What Next**

Change input cell to a physical cell.

---

## DPBUS-029

(error) Can't find frame view for reference design %s.

**Description**

The listed reference design does not have a frame view. The command requires a frame view to get boundary and area information.

**What Next**

Check that the reference library for this design is linked and available.

---

## DPBUS-030

(error) Balance does not support buses with repeated MIBs.

**Description**

The balancing feature has a limition that it does not support buses with repeated MIBs. A repeated MIB bus is a bus that goes through 2 or more instances of the same MIB using the same pins in each case.

**What Next**

Balancing must be done manually for this type of bus.

---

## DPBUS-050

(error) Error in XML file: %s

Feedback

### Description

An error was detected in the specified XML file while executing the command load_busplans. Examine the detailed error message and attempt to resolve the problem with the file before calling load_busplans again.

### See Also

- load_busplans

---

## DPBUS-051

(error) Error creating busplan %s

### Description

An error was detected while creating a busplan. This may be due to an incorrectly specified XML input file passed to load_busplans. Examine the output messages and try to correct the problem.

### See Also

- load_busplans

---

## DPBUS-052

(error) Error saving XML file %s

### Description

An error was detected while writing an XML file from report_busplans, write_busplans, or write_net_estimation_rules.

### What Next

Examine the output message(s) and try to correct the problem.

### See Also

- write_busplans
- report_busplans
- write_net_estimation_rules

Feedback

## DPBUS-053

(error) General list processing error: %s

### Description

An error was detected while processing an XML file passed to load_busplans. Verify the format of your input XML file.

### See Also

- load_busplans

## DPBUS-054

(error) Bus % does not have any ports.

### Description

This command only works on buses with top level ports. The given bus has no top level ports.

### What Next

Only apply command on buses with top level ports.

## DPBUS-055

(error) Copy busplan %s to %s failed because %s.

### Description

The copy failed. The most common reason is that the structure of the 2 bus section is not the same. There must be a 1-1 mapping between the non-virtual objects in the 2 bus section. Non-virtual objects means pins, ports, and registers elements.

### What Next

These two buses sections cannot be copied. Find a matching section to copy instead.

## DPBUS-056

(error) Error in XML file: %s

Feedback

### Description

An error was detected in the specified XML file while executing the command read_net_estimation_rules. Examine the detailed error message and attempt to resolve the problem with the file before calling read_net_estimation_rules again.

### See Also

- read_net_estimation_rules

---

## DPBUS-057

(warning) Busplan %s is missing element(s) %s that were found in the save file.

### Description

While executing the *load_busplans* command, the indicated busplan did not contain all the non-virtual elements that were expected, based on the file being loaded. For example: busplan1 was created at some point in time and had actual (not virtual) registers as part of its elements and the busplan definition was saved to a file. Later, an attempt to load/recreate busplan1 into a different session is made, where 1 or more of those registers do not exist. This warning will be printed to indicate the missing elements and their type.

Note: the busplan will exist with the same start and end points as before, but the intermediate elements will be different, and an undetermined number of virtual elements were re-created. Depending on whether the virtual elements were present before, between or after the missing elements, some, none or all of them may have been re-created.

### What Next

Remove the busplan using the *remove_busplans* command and use *load_busplans -only_create ...* to recreate the busplan without virtual elements. Alternatively, use *load_busplans -only_create -replace_existing virtual elements (if any).*

### See Also

- load_busplans
- remove_busplans
- start_busplan_gui
- write_busplans

---

## DPBUS-058

(Warning) Busplan %s has new elements (%s). Use merge to restore virtual elements.

Feedback

### Description

The *load_busplans* command encountered a netlist that is different from the original netlist used to create the save file. Specifically, there are new elements as detailed in the error message. The new elements prevent a successful re-creating of previous virtual elements, so the busplan was not restored the same way it was saved.

### What Next

Use GUI-based merge to resolve the differences between the saved version of the busplan and the current busplan.

### See Also

- load_busplans
- start_busplan_gui
- write_busplans

---

## DPBUS-100

(error) Failed to set net estimation rule %s parameter %s

### Description

Setting the net estimation rule parameter failed. The most likely cause is that the value specified for the parameter is not valid. For example if the parameter is layer, then the specified value must be a routing layer.

### What Next

Fix the value to a valid setting.

### See Also

- DPBUS-101

---

## DPBUS-101

(error) Error creating net estimation rule %s.

### Description

The net estimation rule was not created due to an error reported just before this error. This is most likely due to an error in trying to set an invalid value for a rule that does not yet exist. If the rule already exists, *DPBUS-100* will be issued instead.

Feedback

### What Next

Fix the parameter value to be valid.

### See Also

- DPBUS-100

---

## DPBUS-102

(warning) Using top-level corner %s for net estimation rule %s.

### Description

The net estimation rule is defined in a sub-block, but the corner referenced by the net estimation rule was not defined in the same sub-block. However, a corner with the same name was found to be defined in the top-level block (current design) and is being used instead.

### What Next

According to the recommended methodology, the corner referenced by the net estimation rule would also be defined in the sub-block and be defined the same way as the corner in the top block. However, depending on how the current blocks and associated constraints were defined, this may be awkward. Accordingly, this situation does not require any corrective action, but the warning is issued so that corrective action can be taken, if desired.

### See Also

- create_corner
- report_net_estimation_rules
- set_net_estimation_rule

---

## DPBUS-103

(Error) Corner %s defined in net estimation rule %s was not found.

### Description

The corner referred to by the net estimation rule could not be found. If the net estimation rule is defined in a sub-block, both the sub-block and the top-level block (current design) were searched to try to locate a defined corner by that name.

Feedback

### What Next

Define a corner with the referenced name in the block that the net estimation rule is defined in, or use a different, already existing corner for the net estmation rule.

### See Also

- create_corner
- report_net_estimation_rules
- set_net_estimation_rule

---

## DPBUS-200

(warning) bus %s skipped for spreading due to invalid timing.

### Description

The command *route_busplans -spread* checks to ensure a busplan has valid timing before attempting to spread it. Invalid timing is the result of incomplete data in the net estimation rule associated with the busplan. In order to spread this busplan, ensure the net estimation rule associated with the busplan is properly configured.

### See Also

- route_busplans
- set_net_estimation_rule

---

## DPBUS-201

(warning) bus %s skipped for spreading due to negative slack.

### Description

The command *route_busplans -spread* checks to ensure a busplan has positive slack before attempting to spread it and the named busplan had negative slack when attempting to spread it. This can be resolved by either modifying the busplan to have positive slack, such as by adding virtual registers or using a different net estimation rule, or by using the *-skip_wns_check-fP option of route_busplans -spread (or setting the check box under "Settings" in the Pipeline Register Planning GUI).*

### See Also

- modify_busplan
- route_busplans

Feedback

- set_net_estimation_rule
- start_busplan_gui

---

## DPBUS-202

(warning) bus %s skipped for spreading due to branches.

**Description**

The command *route_busplans -spread* currently cannot handle spreading of busplans with branches in channels. Such busplans are skipped.

**See Also**

- route_busplans

---

## DPBUS-203

(warning) bus %s skipped for spreading - not rectilinear.

**Description**

The command *route_busplans -spread* cannot handle spreading of busplans with non-rectilinear sections. The *-no_plan_busplans* option was specified to the *route_busplans* command, so this busplans was skipped without attempting to resolve the non-rectilinear section(s).

**See Also**

- route_busplans

---

## DPBUS-204

(warning) bus %s skipped for spreading - not rectilinear.

**Description**

The command *route_busplans -spread* cannot handle spreading of busplans with non-rectilinear sections. An attempt was made to perform an "Auto-plan" (*route_busplans -quick*) operation on the busplan, but the result still contained one or more non-rectilinear sections. This busplan was skipped for spreading.

**See Also**

- route_busplans

Feedback

## DPBUS-205

(Warning) No busplans found suitable for spreading.

### Description

The command *route_busplans -spread* was invoked with one or more busplans passed to it. After checking the busplans, no busplans suitable for spreading were found. No spreading was performed.

### See Also

- route_busplans

## DPBUS-500

(warning) From pin %s is dropped from consideration.

### Description

There are several reasons why a from pin can be filtered out. First, the from pin must be on a start_end_cell or the from pin must be a top level port. By default all blocks and hard macros are considered to be start_end_cells but any physical cell can be added by create_busplans -add_start_end_cells. Second, the from pin must be a net driver pin. Third, the tracing done from the from pin must reach a pin on a start_end_cell (or top level port). If using the -to option, then the from pin must reach a to pin.

### What Next

Most likely need to use -add_start_end_cells option to include the cell the from pin is on.

## DPBUS-501

(warning) To pin %s is not on any start_end_cell and is dropped from consideration.

### Description

It is required that to pins must be on a start_end_cell (specified by create_busplans -start_end_cells) or to pins must be a top level port. This is not the case for the given to pin.

### What Next

Most likely need to set the -start_end_cells to include the cell the to pin is on.

Feedback

## DPBUS-502

(warning) All to pin %s have been dropped.

**Description**

It is required that to pins must be on a start_end_cell (specified by create_busplans -start_end_cells) or to pins must be a top level port. All the specified to pins have been dropped by above criteria so no buses can be created.

**What Next**

Most likely need to set the -start_end_cells to include the cells the to pins are on.

## DPBUS-503

(warning) To pin %s is not on a bus starting from any from pin.

**Description**

A bus trace starting from the from pins did not reach the given to pin. Thus there is no bus going to this to pin. Note that bus tracing does not go through arbitrary combinational logic. It only traces through repeaters, registers, latches, level shifers, and isolation cells.

**What Next**

If this is unexpected, one thing to try is to see what buses can be found using create_busplan -auto. This will show what, if any, buses can be found that end in the to pins.

## DPBUS-504

(warning) Movebound %s is overlapping block and/or placement blockages.

**Description**

When creating a movebound for top level registers, the tool attempts to create the movebound such that it will not overlap top level blocks or top level soft/hard placment blockages. Sometimes this fails and then the movebound will overlap top level blocks or placement blockages. This can often happen if the top level register is placed on top of a block instead of in a top level channel.

**What Next**

Investigate the given movebound and manual adjust it if needed.

Feedback

## DPBUS-505

(warning) Cannot remove default net estimation rule %s.

**Description**

The default net estimation rule cannot be removed as certain pipeline register planning functionalities depend on this. Command will proceed without removing this rule.

**What Next**

Do not attempt to remove the default net estimation rule.

## DPBUS-506

(warning) Cannot remove net estimation rule %s. It is used by busplan %s.

**Description**

The given net estimation rule is being used by 1 or more busplans, one of which is given. To remove a net estimation rule, it must not be used by any busplan.

**What Next**

Change all the busplans using the given net estimation rule to use a different rule. Can use modify_busplan -change_rule for this.

## DPBUS-508

(warning) On bus plan %s, cannot find net estimation rule %s. The default net estimation rule %s will be used instead.

**Description**

The given net estimation rule could not be found. Most likely it was deleted via the command *remove_net_estimation_rules*. Since the rule could not be found, the default rule will be used in its place.

**What Next**

It is recommended to fix this warning. To fix this, use *modify_busplan* to change the rule on the bus plan to an existing net estimation rule. You can also create a new net estimation rule using *set_net_estimation_rule*.

## DPBUS-509

(warning) Cell %s has been deleted, busplan %s correspondingly is deleted.

Feedback

**Description**

The given cell has been removed. That cell is part of the given busplan. The busplan is no longer valid so it has been removed.

**What Next**

Consider if this cell removal is correct.

---

## DPBUS-510

(error) Cannot rename bus plan %s to %s - the name %s is already in use.

**Description**

The new bus plan name is already being used by another bus. To rename a bus plan, the new name must not be used by any existing bus.

**What Next**

Choose a different new name for the bus plan rename operation.

---

## DPBUS-511

(warning) Bus %s is part of fanin bus %s and has been removed without removing the corresponding fanin bus.

**Description**

A sub-bus of a fanin bus has been removed without removing the corresponding faning bus. This causes the fanin bus to be inconsistent and could lead to incorrect results.

**What Next**

Remove the fanin bus before removing the bus.

---

## DPBUS-512

(warning) Cell instance %s is already part of bus %s, so it cannot be a start end cell instance.

**Description**

The given cell is already a part of the given bus. Cells which are part of existing buses cannot be added to the start end cell instance list. This is because it would cause an inconsistency between the start cell instances and the existing busplans.

Feedback

If the given cell instance is a hierarchical cell instance, then this means that there is cell in given bus which is a desendant of that hierarchical cell instance. This is also considered as being part of bus and has same issue as described above.

**What Next**

If it is desired that the given cell be a start end cell instance, then remove the given bus first.

---

## DPBUS-513

(warning) Movebound %s is overlapping movebound %s.

**Description**

When creating the script for creating movebounds for pipeline registers, the tool may create movebounds which overlap. If the movebounds are hard, then this may create a placement over-utilization issue.

**What Next**

Investigate the given movebound and manual adjust it if needed and recreate the movebound script. Alternately make the movebounds soft by editing the movebound script.

---

## DPBUS-514

(warning) Unable to determine bus %s %s budget.

**Description**

The launch or capture budget was not determined. This is most likely because there is a problem with the timing setup. Another reason is that there are no input/output delays at the ports of the bus.

**What Next**

Try using report_timing to see if is any issue with the timing setup. Check if there are input/output delays on the ports of the bus.

---

## DPBUS-515

(warning) Unable to determine layers for bus %s. All layers will be used.

Feedback

### Description

There is some problem with the layer specification for the given bus. Most likely the issue is that here is no horizontal or no vertical layer specified. The layer specification is given by the net estimation rule associated with the given bus.

### What Next

If you are ok to use all layers, then nothing needs to be done. If you want to pick only specific layers, then determine the net estimation rule associated with the bus. Check the layer specification for that rule. The rule must include a horizontal and a vertical layer specification. Certain commands treat the horizontal and vertical layers as a range of layers rather than 2 independent layers. In this case the range of layers must include at least 1 horizontal and 1 vertical layer.

---

## DPBUS-516

(warning) Bus(es) %s are not planned and so were ignored.

### Description

This command requires that buses are planned to be considered. Planned buses are buses with valid timing (in busplanning GUI bus will have green color). For most accurate results, the topology of the bus should also be legal.

### What Next

If you are ok to ignore these buses, then nothing needs to be done. If you want these buses to be considered, then plan the buses by setting a net estimation rule with valid timing (one way is to set the register spacing on the net estimation rule), adding the suggested registers, and creating a topology for the bus(es).

---

## DPBUS-517

(warning) The bus elements %s and %s are not MIB compliant.

### Description

The given bus elements correspond to 2 sets of MIB feedthrough ports, each of which is part of a bus (ie a bus element). These are called MIB bus feedthrough port sets.

For MIB compliance it is required that every MIB bus feedthrough port set are either unrelated or one is a subset of the other or they are a subset of a parent MIB bus.

For example suppose there are 3 MIBS, B1, B2, and B3. If there is a feedthrough bus element corresponding to the ports B1/data[0..10] and there is a feedthrough bus element corresponding to the ports B2/data[5..10]. Then in this case these 2 MIB bus port sets are compliant because B2 is subset of B1. If there is also a feedthrough bus element

Feedback

corresponding to the ports B3/data[1..6], that is also compliant because B2 and B3 are subsets of B1.

On the other hand if B1 did not exist, then B2 port set and B3 port set are not MIB compliant because one port sets is not a subset of the other.

A second requirement is that the fanout inside the MIB is the same. For example if the bus1 includes the path, port B1/data[0] to B1/out1[0] and B1/out2[0], then if bus2 only includes the path, port B1/data[0] to B1/out1[0], then this is not compliant.

**What Next**

Manually recreate the buses to ensure all the MIB bus feedthrough port sets match.

---

## DPBUS-518

(warning) Port %s is in %s, but is not in %s.

**Description**

This indicates half of an MIB compliance issue between 2 buses. There should be two such messages. One indicating port in first bus, but not in second bus. The other indicating port in second bus, but not in first bus. These 2 messages indicate these 2 buses are incompatible with each other.

For MIB compliance it is needed that one of these buses feedthrough port set is a subset of the other.

**What Next**

Manually recreate the buses to ensure the MIB bus feedthrough port sets of one bus is subset of the other.

---

## DPBUS-519

(warning) The bus elements %s and %s are not MIB %s compliant.

**Description**

For 2 buses to be MIB compliant it is necessary for the structure of the bus inside the MIB to be the same. It is also necessary for the placement and fixed attribute of the bus elements inside the MIBs to be the same with respect to the MIB. Finally it is necessary for the net estimation rule to be the same and the clock be the same.

This warning indicates that either the structure of the bus inside the MIBs is not the same or the (fixed) location of the bus elements is not the same or the rule or clock is not the same. The structure is related to the number and type of bus elements in the MIB.

Feedback

### What Next

Decide which bus has the desired structure, location, rule, or clock. Use the *copy_busplan* command to copy the structure and locations from the desired to the other. Set the rule to be the same using *modify_busplan -change_rule*. Finally if the clock is the issue, check the SDC to see which clock is the correct one to use.

---

## DPBUS-520

(warning) Found that removal of bus element %s may cause MIB compliance issue.

### Description

This warning is because you have requested an operation that would require the removal of a bus element that is the parent bus of an MIB bus group. To maintain that all busplans are MIB compliant, this is not allowed. The command will proceed without the removal of this bus element.

### What Next

Manually create the busplans in such a way that removal is not needed. This can be done by creating the bus with the given bus element first.

---

## DPBUS-521

(info) Creating busplan %s requires busplan %s to be created as well.

### Description

In order to maintain MIB compliance, the parent MIB busplan of the busplan currently being processed must be created first. Since this busplan does not already exist, it is being created before the child MIB busplan, even though it is not part of the list of busplans to be created based on the parameters specified to load_busplans.

### See Also

- load_busplans
- report_busplans

---

## DPBUS-522

(Error) Busplan %s requires MIB parent busplan %s, which could not be created.

Feedback

### Description

In order to maintain MIB compliance, the MIB parent busplan of the busplan currently being loaded needs to exist. However, it does not already exist, and its definition does not exist in the current XML file. Creation of the current busplan is canceled.

### What Next

Create the MIB parent busplan first and retry the current operation, load a different XML file, or use the *-ignore_MIB_compliance* option to load_busplans.

### See Also

- load_busplans
- report_busplans

---

## DPBUS-523

(warning) Busplans %s and %s have a required MIB parent loop. The dependency %s to %s is dropped in order to continue.

### Description

In order to maintain MIB compliance, the MIB parent busplan of the busplan currently being loaded needs to exist. However, it does not already exist, and trying to create it requires the current busplan - a loop. In order to try to continue, this depdendency will be dropped.

### What Next

This situation should not occur if the saved file was created by *write_busplans*, but it may occur due to manual editing of the .xml file. If the resulting busplans are not correct, verify that the .xml file was correctly constructed.

### See Also

- load_busplans
- write_busplans

---

## DPBUS-800

(info) Did not find any blocks or hard macros to be start_end cells. You may have to add cells using -add_start_end_cells.

Feedback

**Description**

By default, blocks, IOs and hard macros are considered to be objects from which busplans can be created. For example, there could be a busplan created between two blocks, B1 and B2. For example, there could be a busplan created between IOs and block B1.

This message is indicating that the tool could not find any blocks or hard macros in the design. Thus the only busplans that could be found would be between IOs.

**What Next**

If there are no blocks or hard macros in the design then there is nothing to do. If there are blocks or hard macros in the design then use the -add_start_end_cells option to add those blocks or hard macros into consideration if desired. You can see the list of start end cells using *report_busplans -start_end_cells*

---

## DPBUS-801

(info) While tracing %s, unable to trace through gate %s.

**Description**

To identify buses, the netlist is traced. The tracing will only go through buffers and inverters. During tracing from the given pin, the given gate was found which tracing was not able to go through so no bus can be created with the given pin.

**What Next**

This bus cannot be created at this time.

---

# DPCHK

**What Next**

Please check the design.

**See Also**

- read_tech_file

Feedback

## DPCHK-100

(warning) Option %s of the rule %s may not necessarily be fixed

### Description

When removing violations of spacing/enclosure/location rules, some rule value options are not targeted by the fix_floorplan_rules command and may not be fixed, even though they are checked by check_floorplan_rules. In particular, the command does not bring macros closer to each other or to the boundary. So, -max option is ignored, as well as anything that behaves like -max. For example, if there is a valid_range, increasing the distance to at least the lower bound of the range is supported, but decreasing the distance to the upper bound of the range is not, i.e. since the valid range {A B} behaves like -min A -max B, only -min A is supported. Valid list and forbidden range are treated similarly; also note that valid list values must be on grid in order to be satified.

### What Next

If this is expected, just ignore this message. Otherwise, please check the rule setting.

### See Also

- fix_floorplan_rules
- set_floorplan_spacing_rules
- set_floorplan_enclosure_rules
- set_floorplan_location_rules
- report_floorplan_rules

# DPI

## DPI-001

(error) total unplaced IO width is larger than total unused IO guide length

## DPI-004

(error) zero or negative height was specified.

**Description**

The specified height needs to be greater than 0.

**What Next**

Please specify positve height value.

## DPI-005

(error) zero or negative chip-to-site was specified.

**Description**

The specified chip-to-site needs to be greater than 0.

Feedback

**What Next**

Please specify positve chip-to-site value.

---

## DPI-006

(error) The specified utilization is equal to or less than 0.01.

**Description**

The specified utilization needs to be greater than 0.01.

**What Next**

Please specify a value greater than 0.01.

---

## DPI-007

(error) The specified aspect ratio is less than 0.01.

**Description**

The specified aspect ratio needs to be greater than 0.01.

**What Next**

Please specify a value greater than 0.01.

---

## DPI-008

(warning) the specified core area is too small.

**Description**

The specified core area is too small, may need specify larger area to contain all the cells in the design.

**What Next**

Please specify larger core dimensions.

---

## DPI-009

(error) Unable to create core placement area.

**Description**

The tool is unable to create core placement area with computed boundaries.

Feedback

## DPI-010

(error) Unable to create die area.

**Description**

The tool is unable to create die area with computed boundaries.

## DPI-011

(error) no boundaries defined for cell %s.

**Description**

Boundaries of all cells need to be defined in library.

**What Next**

Please check correspinding .NDM library or LEF/DEF

## DPI-012

(error) the IO %s has been assigned two IO guides.

**Description**

Same IO has been assigned to two different IO guides.

**What Next**

Please remove the IO from one of the IO guide.

## DPI-013

(error) unable to write the IO placement file %s.

**Description**

The IO placement file is not able to be opend for write.

**What Next**

Please check if there is enough disk space for the file. Also, please make sure the sub-directory exists.

## DPI-014

(error) unable to read the IO placement file %s.

Feedback

**Description**

The IO placement file is not able to be opend for read.

**What Next**

Please check if the file is readable.

---

## DPI-015

(error) unable to find the IO guide %s from IO placement file.

**Description**

The IO guide specified in IO placement file does not exist.

**What Next**

Please create the IO guide before specifying it in the IO placement file.

---

## DPI-016

(error) unable to find the IO pad %s from IO placement file.

**Description**

The IO pad specified in IO placement file does not exist.

**What Next**

Please check if the IO pad is in the database.

---

## DPI-017

(error) There is no IO guide created.

**Description**

IO guide and/or ring are required for IO placement.

**What Next**

Please use create_io_guide or create_io_ring to create IO guide and/or IO ring.

---

## DPI-018

(error) unable to find cornerpad %s.

Feedback

**Description**

The specified master does not exist.

**What Next**

Please check the specified master name.

---

## DPI-019

(error) unable to place IO %s in IO guide %s.

**Description**

To perform IO placement successfully, the width of IO guide needs to be larger than the summation of IO width

**What Next**

Please either increase the width of IO guide or remove IO pads from the IO guide.

---

## DPI-020

(error) Invalid core side dimension for the given shape.

**Description**

When creating floorplan by using core side dimension length, the number of core side dimensions must match the given shape. For rectangular, 2 sides must be specified; for L shape, 4 sides must be specified; for T and U shapes, 6 sides must be specified.

**What Next**

Please specify the correct number of side dimensions.

---

## DPI-021

(error) invalid core offset for the given shape.

**Description**

When specifying the offset between core and die, user can specify one core to die offset value which will be applied to all sides of the core shape, or specify a list of offset values which will be applied to individual side of the core shape. However,if user specify multiple offset values, the number of offsets must match the given shape. For rectangular, 4 offset values must be specified; for L shape, 6 offset values must be specified; for T and U shapes, 8 offset values must be specified. If -coincident option is set to *false*, only 4 offset values should be specified.

Feedback

**What Next**

Please specify the correct number of core offset.

---

## DPI-022

(error) the core area is too large to fit in the existing die boundary.

**Description**

This error occurs when user specifies the -keep_boundary option in the *initialize_floorplan* command and the core area is too big to fit into the existing die boundary or the core side offset is too large.

**What Next**

Please modify one or several of the constraints of the core area such as utilization ratio, shape, dimension and core side offsets.

---

## DPI-023

(error) invalid %s shape definition.

**Description**

The %s shape based on the specified dimension is not a valid shape. It either has intersecting points or not a regular polygon.

**What Next**

Please check the specified dimension.

---

## DPI-024

(error) zero or negative dimension is specified.

**Description**

The specified dimension needs to be greater than 0.

**What Next**

Please specify positve dimension value.

---

## DPI-025

(error) negative core-to-die offset is specified.

Feedback

**Description**

The specified core-to-die offset needs to be no less than 0.

**What Next**

Please specify positve offset value.

---

## DPI-026

(error) cannot find site def.

**Description**

The site def information defined in technology file is required to create floorplan.

**What Next**

Please update the technology file.

---

## DPI-027

(error) the row core ratio %f is smaller than the core utilization %f.

**Description**

There is not enough core area to honor the row-core space. Row core ratio must be greater than or equal to the core utilization.

**What Next**

Please specify a smaller row core ratio or increase the core area.

---

## DPI-028

(error) invalid core-side ratio %f.

**Description**

The core side ratio is too large or too small such that one of the core area side exceeds the maximal allowable dimension.

**What Next**

Please specify a reasonable core side ratio.

---

## DPI-029

(error) unable to choose a tile from technology file.

Feedback

**Description**

There are multiple tiles defined in the technology file. However, user did not specify which tile to use for floorplan creation.

**What Next**

Please specify the -tile option in *initialize_floorplan* command.

---

## DPI-030

(error) Initialize floorplan failed because no technology information is available in the library.

**Description**

The library is missing technology information. This command requires the technology information.

**What Next**

Please check your library.

---

## DPI-031

(error) Pathline loading failed.

**Description**

This command cannot load pathline information. The database is corrupted.

**What Next**

Please erase the existing pathlines and then create your IO placement result using the recommend flow.

---

## DPI-032

(error) Bump assignment cannot be completed due to the lack of accessible bumps.

**Description**

The tool is unable to find enough bumps to assign to IO pad pins. Specifically, bumps assigned to any pad pins will eventually be connected those pins through RDL routes. During IO placement, the routability is checked using pathline routing. If the space between bumps are too small to route rdl pathlines to connect bumps to pad pins, no bump assignment will be performed for the corresponding IO pads.

Feedback

**What Next**

Please check the pathlines in IO placement result to identify the region where pathlines are not rerouted. If possible, users can adjust the bump locations and/or pad locations to reduce congestion. Users can also use matching types to guide bump assignment.

---

## DPI-033

(error) Net %s connecting I/O bumps and pads is connected to cell instance %s of another type.

**Description**

Nets between bumps and pad should not be connected to other on-chip devices such as standard cells. The design netlist is wrong if such nets exist.

**What Next**

Check the design netlist and fix any netlist errors.

---

## DPI-034

(error) Remove bump %s to pad %s assignment due to netlist.

**Description**

User assignment cannot have conflicts with current netlist. If a bump is connected to a pad driver through a net, this bump cannot be assigned to other pads.

**What Next**

Please check the design netlist and fix any netlist errors. The specified constraint will be removed since it cannot be satisfied.

---

## DPI-035

(error) Currently, only one-to-one mapping between pad and bump is supported.

**Description**

Currently, IO placement can only support one-to-one mapping between pad and bump.

**What Next**

Please check the IO placement result and make modification if needed.

Feedback

## DPI-036

(error) bump %s to pad %s assignment will not be considered during io placement.

**Description**

The specified bump to pad assignment will not be honored.

**What Next**

If the assignment is needed, please modified the netlist so that the specified bump and pad are connected by a net, which will not be connected to other bumps or pads.

## DPI-037

(error) pad drivers overflow in IO guide %s.

**Description**

Pads are placed beyond the specified IO guide.

**What Next**

Please reassign pads to the specified IO guide or change the IO guide constraints. Alternatively, you can increase the IO guide length. Make sure that the IO guide is wide enough and then perform io placement again.

## DPI-038

(error) run out of bumps in guide %s.

**Description**

Some pads in the specified IO guides are not connected to any bumps.

**What Next**

Please reassign pads to the specified IO guide or adjust the bumps in the design. Perform io placement again after any adjustment.

## DPI-039

(error) cannot assign bump %s to pad %s since it is connected to pad %s.

**Description**

A bump cannot be connected to multiple pads.

Feedback

**What Next**

Choose a different bump to pad assignment.

---

## DPI-040

(error) cannot assign pad %s to bump %s since it is connected to bump %s.

**Description**

A bump cannot be connected to multiple pads.

**What Next**

Choose a different bump to pad assignment.

---

## DPI-041

(error) conflicted assignments are removed.

**Description**

Bump-to-pad assignments that are conflict to netlists are removed.

**What Next**

Choose a different bump to pad assignment if necessary.

---

## DPI-042

(error) bump %s to pad %s assignment cannot be satisfied according to the pathline routing result.

**Description**

The pathline routing creates a linear order for all bumps of the corresponding IO guide. The signal IO constraints create a linear order for all pads in the same IO guide. The position of the specified bump in the bump order and the position of the specified pad make it impossible to connect the bump and pad without introducing crossovers of rdl routes.

**What Next**

Change the IO signal constraints or bump-pad assignment or both. Note that the bump-pad assignment may be due to the netlist.

Feedback

## DPI-043

(error) bump %s to pad %s assignment and bump %s to pad %s assignment cannot be satisfied at the same time according to the pathline routing result.

### Description

The pathline routing creates a linear order for all bumps of the corresponding IO guide. The signal IO constraints create a linear order for all pads in the same IO guide. The order of the two specified bumps and the order of the two specified pads are different. It is impossible to connect the bumps and pads, respectively, without introducing crossovers of rdl routes.

### What Next

Change the IO signal constraints or bump-pad assignment or both. Note that the bump-pad assignment may be due to the netlist.

## DPI-044

(error) pad %s and pad %s violate the power spacing constraint of lib cell %s in IO guide %s.

### Description

The specified power spacing constraint is violated.

### What Next

Try to use ratio based constraints instead of spacing based constraints if possible. Try to change the existing signal IO constraints and/or bump-pad assignments.

## DPI-045

(error) pad %s and pad %s violate the power ratio constraint of lib cell %s in IO guide %s.

### Description

The specified power ratio constraint is violated.

### What Next

Try to change the existing signal IO constraints and/or bump-pad assignments.

## DPI-046

(error) power offset constraint of lib cell %s is violated in IO guide %s.

Feedback

**Description**

The specified power offset constraint is violated.

**What Next**

Try to change the existing signal IO constraints and/or bump-pad assignments. Check if the length of the IO guide can be increased for addition power pads.

---

## DPI-047

(error) net %s connect multiple bumps or multiple pads.

**Description**

Bump-pad assignment among multiple bumps and pad is not supported.

**What Next**

Enhancement will be added in later releases.

---

## DPI-048

(error) cannot assign pad cells to IO guides.

**Description**

place_io fails to assign pad cells to IO guides. There are two possible reasons. First, the total length of the selected IO guides is too short to hold all IO pad cells. Second, there are not enough usable bumps.

**What Next**

If the selected guide length is too short, you can increase the IO guide length or select more IO guides. If there are too few usable bumps, add more bumps.

---

## DPI-049

(error) Cannot perform bump and pad assignment for the I/O guides.

**Description**

The tool cannot identify the sets of bumps and pads for all I/O guides.

Feedback

**What Next**

You can try the following methods to resolve this issue:

- Adjust the I/O guide length.
- Select different I/O guides.
- Manually assign pads to I/O guides.
- Modify the number and locations of bumps.

---

## DPI-050

(error) No enough bumps are selected.

**Description**

Users do not specify enough bumps.

**What Next**

Please create additional bumps using create_bump_array command or select additional existing bumps.

---

## DPI-051

(error) Failed to store I/O signal constraints in the database.

**Description**

Errors occured during the storage of I/O signal constraint data. This could happend because the command could not identify the I/O guide of the constraint or the constraint data could be corrupted.

**What Next**

Try removing all existing I/O constraints and resetting them.

---

## DPI-052

(error) Failed to store or change bump assignment data in the database.

**Description**

Errors occurred during the storage of bump assignment data. Check the log file for previous error messages that might indicate why this occurred. This issue could also occur due to a corrupted design database.

Feedback

**What Next**

Try removing all existing bump assignments and resetting them.

---

## DPI-053

(error) Errors found on existing bumps.

**Description**

The tool found data errors on existing bumps. The design database might be corrupted.

**What Next**

Reload the design data.

---

## DPI-054

(error) Errors found during loading of design data

**Description**

The *place_io* command failed because it could not load design data, including bumps, pads, and I/O guides.

**What Next**

Make sure that the design data is loaded correctly.

---

## DPI-055

(warning) lines of IO guide %s and IO guide %s crossover.

**Description**

The lines of the specifies two IO guides cross over each other.

**What Next**

Try to move IO guides to avoid IO guide crossovers. Otherwise, pad cells within IO guide might overlap.

---

## DPI-056

(error) Error during netlist modification: %s.

**Description**

place_io failed to change the netlist according to io placement result.

Feedback

**What Next**

This is an obsolete message.

---

## DPI-057

(error) Anchor bump is missing in bump array %s.

**Description**

The lower left bump is the anchor bump of a given bump array. The anchor bump cannot be found. It is impossible for place_io to access bump array location.

**What Next**

The bumps in a bump array cannot be removed individually. Please recreate the bump array by removing the incomplete array and create a new array.

---

## DPI-058

(error) pad assignment and constraint conflict discovered.

**Description**

A pad is assigned to an IO guide according to its signal io constraints but to another guide according to pad assignment. Or a pad given in signal IO constraints cannot be found in the design.

**What Next**

Change either the signal io constraints or pad-guide assignment.

---

## DPI-059

(error) pad %s in signal constraint cannot be found in the design.

**Description**

A pad cell name is described in the signal io constraint but cannot be found in current design. This cell may be removed accidentally.

**What Next**

If the pad is deleted by mistake, load the correct netlist. Otherwise, change the signal io constraint before performing io placement.

Feedback

## DPI-060

(error) pad %s in IO guide %s is constrainted in IO guide %s.

**Description**

A pad is assigned to an IO guide according to its signal io constraints but to another guide according to pad assignment.

**What Next**

Change either the signal io constraints or pad-guide assignment.

## DPI-061

(error) pad %s cannot be placed correctly since its bump %s is not selected.

**Description**

place_io find the specified pad and bump are assigned to each other. Although the pad is selected in the current run, the bump is not selected. As a result, the specified pad cannot be placed correctly.

**What Next**

Select the specified bump, e.g., using -bump_array or -all options.

## DPI-062

(error) Not enough bumps: %s.

**Description**

Since pads need to be connected to bumps, there must be enough bumps being selected during IO placement.

**What Next**

Add or select additional bumps. Please check the manpage of place_io.

## DPI-063

(error) Design data error is detected during initial I/O guide and bump loading.

Feedback

**Description**

The *place_io* command must load the design data before performing I/O placement. This error occurs when the command finds errors during the data loading and cannot continue with I/O placement.

**What Next**

Check the log file for error and warning messages that occur before this message. Update the design data to correct any errors and reload the design data.

---

## DPI-064

(error) overlapping bumps exist.

**Description**

IO placement cannot be performed due to bump overlaps.

**What Next**

Search for earlier messages to find out which bumps overlap. Remove the bump overlap by moving or deleting bumps.

---

## DPI-065

(error) Internal error: %s.

**Description**

The *place_io* command encountered unexpected data.

---

## DPI-066

(error) fail to create new power pad for IO guide %s.

**Description**

place_io cannot insert new power pad for the given IO guide to meet the power io constraints. There are several potential reasons. The command may not know how to connect the new pad to the rest of the netlist. The IO guide may be too short to hold the new pad. There may not be enough bumps for the IO guide.

**What Next**

Look for additional error messages for the reason of this error and then fix it. You can also change the power io constraints.

Feedback

## DPI-067

(error) pathline crossing detected.

**Description**

The command found pathline crossings.

**What Next**

This is an internal error.

## DPI-068

(error) cannot route bump %s.

**Description**

Due to congestion, place_io cannot route pathlines from the specified bump to its pad cell.

**What Next**

Adjust the bump location distribution. If the bump is assigned to its pad by users, consider change the bump assignment.

## DPI-069

(error) bump assignment cannot be satisfied due to missing bump %s.

**Description**

The specified bump is not assigned to the IO guide which its pad is assigned to. As a result, the pad may not be placed appropriately.

**What Next**

Adjust the bump location, bump assignment, or the pad assignment.

## DPI-070

(error) bump %s assignment cannot be satisfied due to missing pad.

**Description**

The bump-pad assignment of the specified bump cannot be satisfied because the corresponding pad cell is not assigned to the I/O guide of the bump.

Feedback

**What Next**

Increase the I/O guide length.

---

## DPI-071

(error) bump %s assignment cannot be satisfied due to mismatching pads.

**Description**

The bump-pad assignment of the specified bump cannot be satisfied because different pads are assigned to the bump.

**What Next**

Check the bump assignment and fix any incorrect assignments. Currently, only one-to-one mapping is allowed between bump and pad.

---

## DPI-073

(error) Bump cell %s has more than one port.

**Description**

The tool supports only passive bump cells with a single port connection.

**What Next**

Change the type of bump cells used in the design.

---

## DPI-074

(error) Cannot identify a pin on pad %s to connect to the RDL net.

**Description**

A bump is assigned to the specified pad during bump assignment. However, the tool cannot identify a pin of the pad to be connected to the bump through an RDL net. As a result, the bump is not connected to any pin of the pad.

**What Next**

Check the pad to see if its RDL pins are labeled correctly. You can also create a matching type to select the pin.

---

## DPI-075

(error) bump %s has no connection for rdl nets.

Feedback

**Description**

The specified bump has no ports that can be connected to a rdl net.

**What Next**

Please change the bump cell.

---

## DPI-076

(error) cannot revert netlist modification on cell %s.

**Description**

The netlist is modified by a previous I/O placement command. The modification is not reverted but is used in the current I/O placement run. The modification is related to the specified cell instance.

---

## DPI-077

(warning) bump %s and bump %s have different dimensions.

**Description**

The specified bumps have different bounding boxes.

**What Next**

This message is issued once even if there are many bumps that have different dimensions. The reasons for bumps to have different bounding boxes can vary. Sometimes, bumps are of different reference cells. Sometimes bumps might have different orientations. Please check all bumps and make sure that they are correctly placed.

When bumps have different dimensions, place_io will combine various bounding boxes to create a single bounding box and use it during IO placement. Specifically, the width and height of the generated bounding box are equal to the largest width and height of all bump bounding boxes, respectively.

If the bump dimension variation is small, no additional action is needed. Otherwise, users can improve the IO placement result by running place_io multiple times. Specifically, if chip design area can be partitioned into areas that contain bumps of the same/similar sizes, users can perform IO placement one area at a time. Such an approach requires users to partition pad cells accordingly, however.

---

## DPI-078

(error) confusing netlist modification information ignored: %s.

Feedback

**Description**

The specified netlist modification cannot be reversed.

**What Next**

This may be caused by netlist modification after place_io. Please check the netlist for correctness.

---

## DPI-079

(error) Cannot store netlist modification information.

**Description**

The tool stores the netlist modifications performed during I/O placement so that subsequent I/O placement runs can revert the changes. However, some modifications cannot be stored during the current I/O placement run.

**What Next**

You can ignore this error if you do not plan run I/O placement multiple times.

**See Also**

- place_io

---

## DPI-080

(error) IO guides cannot hold pads %s.

**Description**

IO guides must be long enough to hold all IO pads assigned plus any pads and/or spacing specified by IO constraints.

**What Next**

Please change IO guide dimensions, pads assigned to guides, and/or IO guide constraints. Users can also check the orientations of pad reference cells. The orientation of reference cell should be the one as if the pad cell is placed along a bottom IO guide. If the reference cell orientation is not, users should set the reference_orientation attribute of the ref_block of the pad. The value is that, when the reference cell is placed with such an orientation, the cell is in the correct orientation placed along a bottom guide.

---

## DPI-081

(error) The option honor_pad_limit supports only rectangle shapes, not L, T, or U shape.

Feedback

**Description**

The option honor_pad_limit supports only rectangle shapes, not L, T, or U shape.

**What Next**

Please specify rectangle shape using -shape R, or remove the option -honor_pad_limit.

---

## DPI-082

(error) Cannot load matching types.

**Description**

IO placement cannot load matching types.

**What Next**

Please check all matching type and reset data if needed.

---

## DPI-083

(error) found IO pad overlap.

**Description**

IO placement finds pad overlap among pad cells. It might be due to wrong user constraints. For example, users might set fixed locations for two pads that overlap each other. Another reason of pad overlap is that some pads do not have lib-cell origins equal to (0,0). These pads are placed at locations shifted by their lib-cell origins, resulting in pad overlap.

**What Next**

Please correct or remove pad constraints. Please check the place_io messages for pad lib-cells with origins not equal to (0, 0). Change the origins to (0, 0) or insert space to avoid pad overlap.

---

## DPI-084

(error) The total width of pads selected is larger than the space of IO guides selected.

**Description**

Since the IO pads are placed within IO guides, the total available space within the selected IO guides must be equal to or larger than the total pads to be placed. Note that IO guide space is needed for pads in the design but not assigned to IO guides yet.

Feedback

**What Next**

Please select additional IO guides or enlarge guide dimensions. Alternatively, users can select few pads.

---

## DPI-085

(error) Break cell location cannot be determined by the two guides specified.

**Description**

This message is issued when users specify two IO guides when inserting break cells. However, the two IO guides are not sufficient for the command to derive the location of insertion.

The location of the break cells is the crossing point of extended lines of IO guides when the two guides are perpendicular to each other. When the two IO guides are in parallel, the two guide must have the same orientation and their extended lines must overlap. In addition, there must exist a gap between the two IO guides. The break cells will be placed at the end of the first guide if the first guide is in front of the second guide. If the first guide is after the second guide, the break cells are placed before the first guide. When none of the aforementioned conditions is satisfied, the break cell locations cannot be derived.

**What Next**

Please verify that the two IO guides specified are correct.

---

## DPI-086

(error) Fail to create a new break cell instance.

**Description**

The new break cell instance cannot be created.

**What Next**

Please check the reference cell name of the break cell.

---

## DPI-087

(error) The order of fixed pad %s and %s is conflicting with the IO signal constraints.

**Description**

The order of the specified pads in signal IO constraints does not match that derived from their locations. Since the pads have fixed locations, the order constraint cannot be satisfied.

Feedback

**What Next**

Please remove or change either order constraints or fixed location constraints or both.

---

## DPI-088

(error) The order constraint of IO guide %s cannot be satisfied due to fixed pads.

**Description**

The order constraints and fixed locations constraints of the specified IO guide cannot be honored at the same time.

**What Next**

Please remove or change either order constraints or fixed location constraints or both.

---

## DPI-089

(error) In IO guide %s, filler cells cannot cover the gap at %s with length %s.

**Description**

There still exist gaps after filler cell insertion in the specified IO guide. This can be caused by the fact that the gap is narrower than the smallest filler cell and only non-overlapping filler cells are specified. The starting coordinate and length of the gap are given. The gap extending direction is clock-wise, which is the same as that of the IO guide.

**What Next**

Please use overlapping filler cells. Alternatively, users can modify the pad placement to change the widths of gaps for filler cells. Users should check the orientation of filler cells and/or lib-cells. If the filler cell orientation is not set correctly, filler cells will not be placed properly, which can result in unfilled gaps.

---

## DPI-090

(error) IO guide %s overflow information: %s.

**Description**

This message explains why the specified IO guide cannot hold all its pads.

**What Next**

Users can increase IO guide lengths or assign pads to IO guides. Users can also check the orientations of pad reference cells. The orientation of reference cell should be the one as if the pad cell is placed along a bottom IO guide. If the reference cell orientation is not,

Feedback

users should set the reference_orientation attribute of the ref_block of the pad. The value is that, when the reference cell is placed with such an orientation, the cell is in the correct orientation placed along a bottom guide.

## DPI-091

(error) cannot create core area.

### Description

The core area cannot be created.

## DPI-092

(error) IO pad %s cannot fit in any IO guide.

### Description

There is no enough room in any IO guide to hold the specified pad. Sometimes, it is not enough that the total length of IO guides is equal to or a little longer than the total length of IO pads because a pad must be placed entirely within a single guide. For example, two IO guides of 10-unit long is not enough for a pad of 15-unit long. Note that only one pad name is reported. There might be other pads. When this error occurs, place_io command will still assign this pad to an IO guide and place the pad after the endpoint of the IO guide. The overflow amount is minimized for all IO guides.

### What Next

Users can increase IO guide lengths. If users create IO guides using the create_io_ring command, a larger IO ring is needed. To increase the ring dimension, users might need to re-run the initialize_floorplan command. It is recommended that the -honor_pad_limit option is used with the initialize_floorplan command if the die area is limited by IO pads.

## DPI-093

(error) Cannot perform pad assignment for the I/O guides.

### Description

The tool cannot identify the sets of pads for all I/O guides. For most cases, this error is caused by the fact that there is no enough IO guide space for all IO pads. Specifically, pads must be placed in IO guides. If guides are not long enough, pads cannot be placed properly. Instead, pads are placed outside of IO guides. Users can check each IO guide to find out which one contains more pads than its capacity.

Feedback

**What Next**

You can try the following methods to resolve this issue:

- Adjust the I/O guide length.
- Select different I/O guides.
- Manually assign pads to I/O guides.

One common case that results in this error is that the chip area is too small for all IO pads to be placed in a single IO ring. To resolve the problem, users can run the initialize_floorplan command with the option -honor_pad_limit. The chip area will be adjusted so that a single IO ring can hold all IO pads in the design.

---

## DPI-094

(error) Cells %s and %s overlap.

**Description**

The tool has identified a pair of overlapping cells.

**What Next**

Legalize the cell placement, if needed.

---

## DPI-095

(error) Pad %s cannot be placed in IO guide %s.

**Description**

Users assign the specified pad to the specified IO guide through pad assignment file. However, the guide is not large enough to hold the pad.

**What Next**

Remove other pads assigned in the guide or modify the pad assignment file. In addition, users can change the dimension of the IO guide.

---

## DPI-096

(error) power constraints cannot be satisfied.

Feedback

**Description**

Power constraints specified by users cannot be satisfied. Specifically, power pads might be added to the netlist in order to satisfy the power constraints. However, there is no enough IO guide capacity for the additional power pads.

**What Next**

Please modify power constraints or increase the IO guide length.

---

## DPI-097

(Error) The width '%f' of site def '%s' doesn't match the litho-grid-pitch '%f'.

**Description**

This message was issued because the width of the Site def to be used is not multiple integer of litho-grid-pitch.

**What Next**

Change the tile-definition in technology-file, so that it matches the min-grid(litho-grid).

---

## DPI-098

(Error) The height '%f' of site def '%s' doesn't match the litho-grid-pitch '%f'.

**Description**

This message was issued because the height of the Site def to be used is not multiple integer of litho-grid-pitch.

**What Next**

Change the tile definition in technology-file, so that it matches the min-grid(litho-grid).

---

## DPI-099

(Warning) The length '%f' of '%s' is not an integral multiple of the litho-grid-pitch '%f'.

**Description**

This message was issued because the length is not an integral multiple of litho-grid's pitch.

**What Next**

May need to change the length, so that it should be integral multiple of litho-grid-pitch.

Feedback

## DPI-100

(Warning) The block-boundary's coordinate '(%f, %f)' does not align with the FinFET grid.

**Description**

This message was issued because the user uses "initialize_floorplan -keep_boundary" to derive the block-boundary whose coordinates don't align with the FinFET grid.

**What Next**

Use "initialize_floorplan" without "-keep_boundary" specified.

## DPI-101

(Warning) The block-boundary's coordinate '(%f, %f)' does not align with the litho-grid.

**Description**

This message was issued because the user uses "initialize_floorplan -keep_boundary" to derive the block-boundary whose coordinates don't align with the litho-grid.

**What Next**

Use "initialize_floorplan" without "-keep_boundary" specified.

## DPI-102

(Warning) The origin '(%f, %f)' of physical-block %s does not align with the FinFET grid.

**Description**

This message was issued because the user uses "initialize_floorplan -keep_block_placement" to keep the placement of physical-blocks during floorplan process. However, the origin of the physical-block does not align with the FinFET grid

**What Next**

Redo "shape_blocks" to place the physical-blocks on FinFET grid.

## DPI-103

(Warning) The origin '(%f, %f)' of physical-block %s does not align with the litho-grid.

Feedback

**Description**

This message was issued because the user uses "initialize_floorplan -keep_block_placement" to keep the placement of physical-blocks during floorplan process. However, the origin of the physical-block does not align with the litho-grid

**What Next**

Redo "shape_blocks" to place the physical-blocks on litho-grid.

---

## DPI-104

(Warning) The origin '(%f, %f)' of macro %s does not align with the FinFET grid.

**Description**

This message was issued because the user uses "initialize_floorplan -keep_macro_placement" to keep the placement of macros during floorplan process. However, the origin of the macro does not align with the FinFET grid

**What Next**

Redo "create_placement -floorplan" to place the macros on FinFET grid.

---

## DPI-105

(Warning) The origin '(%f, %f)' of macro %s does not align with the litho-grid.

**Description**

This message was issued because the user uses "initialize_floorplan -keep_macro_placement" to keep the placement of macros during floorplan process. However, the origin of the macro does not align with the litho-grid

**What Next**

Redo "create_placement -floorplan" to place the macros on litho-grid.

---

## DPI-106

(Warning) The origin '(%f, %f)' of pad %s does not align with the FinFET grid.

**Description**

This message was issued because the user uses "initialize_floorplan -keep_io_placement" to keep the placement of io-pad during floorplan process. However, the origin of the pad does not align with the FinFET grid

Feedback

**What Next**

Redo "place_io" to place the pads on FinFET grid.

---

## DPI-107

(Warning) The origin '(%f, %f)' of pad %s does not align with the litho-grid.

**Description**

This message was issued because the user uses "initialize_floorplan -keep_io_placement" to keep the placement of io-pad during floorplan process. However, the origin of the pad does not align with the litho-grid

**What Next**

Redo "place_io" to place the pads on litho-grid.

---

## DPI-108

(error) bump %s is in block %s, not on top.

**Description**

Command place_io can only work if all bumps are on top level.

**What Next**

Try to pop the bump up to the top level.

---

## DPI-109

(error) pad %s is in block %s, not on top, and cannot be placed.

**Description**

Command place_io can only place pads that are on top level.

**What Next**

Try to pop the pad up to the top level or set the pad status to fixed.

---

## DPI-110

(error) unable to get technology data.

**Description**

The tool is not able to get technology data from main library.

Feedback

**What Next**

Please check if the main library contain technology data.

---

## DPI-111

(error) the total cell area is larger than the limit the tool can support.

**Description**

The total cell area is larger than the limit the tool can support.

**What Next**

Please reduce the total cell area.

---

## DPI-112

(error) %s in matching type %s is not the right type.

**Description**

Only pads, bumps, flip-chip drivers, and their pins and terminals can be added to matching types for IO placement.

**What Next**

Remove the object from the matching type.

---

## DPI-113

(error) some pads are placed outside of IO guides.

**Description**

place_io fails to place all pads within IO guides. It often happened when IO guides are very close to each other. As a result, one pad can occupy space in multiple IO guides so that there is less space in guides to place pads.

**What Next**

Please check the in the GUI to find out which pads are placed outside of IO guides based on previous error messages. User can either move IO guide far apart or assign pads to other guides using add_to_io_guide and remove_from_io_guide commands.

---

## DPI-114

(error) pad %s is placed outside of IO guide %s.

Feedback

**Description**

There is no enough room to place the specified pad in its guide. The guide might be selected by user or the tool. The guide is long enough to hold its pads. However, because pad in other guides occupy some space in this guide, there is no sufficient space left. This problem often occurs for designs with multiple IO rings.

**What Next**

User can adjust the locations of IO guides so that they are far away from each other or assign pads to guides using IO constraints or add_to_io_guide command.

---

## DPI-115

(error) pad %s is placed outside of IO guide.

**Description**

The tool is not able to place the specified pad in a guide. This often occurs for designs with multiple IO rings. Although the total length of IO rings is sufficient to hold all pads, because some pads are large and occupy multiple IO guide, the effective IO guide length is not enough.

**What Next**

User can adjust the IO guide locations and/or dimensions. User can also assign pads to IO guides. Contact Synopsys R&D if the problem cannot be resolved.

---

## DPI-116

(warning) Signal pin %s is overlapped with signal pin %s.

**Description**

There are signal pins overlapped after snapping them to wire tracks.

**What Next**

User can adjust signal pins location.

---

## DPI-117

(warning) Signal pin %s color is not same with track color.

**Description**

There is signal pin color is not same with wire track color.

Feedback

**What Next**

User can adjust signal pins location.

---

## DPI-118

(warning) The option %s will be obsolete in future release, please use %s instead.

**Description**

The given option will be obsolete in future release. Please change to use the new option or the new command instead.

**What Next**

Check the command man page to see correct options to use.

---

## DPI-120

(Warning) Command option '-core_rate_ratio' should not be set together with app option 'plan.flow.segment_rule'.

**Description**

Spacing between site rows is not support in the scenario when setting 'plan.flow.segment_rule'.

**What Next**

Check the design and specify the proper command.

---

## DPI-121

(Warning) %s'%s' outside of chip boundary.

**Description**

The chip boundary is no longer encapsulating objects that specified to be kept when specifying -keep_all or -keep_xxx_palcament.

**What Next**

Check the design.

---

## DPI-122

(warning) Invalid bump-padpin assignment.

Feedback

**Description**

The current existing assignment of bumps and padpins is invalid as there are multiple bumps and multiple pins/terminals in this assignment. So this assignment will be skipped when writing out matching types.

**What Next**

Please check the current existing assignment.

---

## DPI-123

(error) reference of cell %s cannot be found.

**Description**

The tool is not able to identify the reference cell of the specified cell instance. It cannot continue due to lack of information.

**What Next**

Please check and make sure no design data is missing. Reload the entire design before running IO placement.

---

## DPI-124

(warning) %s of pad %s will not have bump assignment.

**Description**

There is no available bump for the specified pad pin. These can be due to two reasons. First, the pin is part of a matching type. There are no enough bumps in the matching type for all pins, based on the uniquify number. Second, the pin is connected to a logic net. By default, each bump on the net is assigned to a unique pin on the same net. If there are more pins on the net, some of the pins will not have bump assigned to them.

**What Next**

If the pin belongs to a matching type, users can add more bumps to the matching type or change the uniquify number. If the pin is connected to a net, users can connect more bumps to the net or create a matching type for the pin with uniquify number larger than 1.

---

## DPI-125

(error) current top block is not defined.

Feedback

**Description**

Current top block is not defined. Top block must be defined to be able to load matching types or bump assginments.

**What Next**

Please check if top block is defined.

---

## DPI-126

(Warning) The '%s' of macro %s with value %f does not match litho grid's '%s' with value %f

**Description**

This warning message is reported because the hard macro 's width or height violates the litho grid on its potential allowed orientations.

**What Next**

Redo the macro 's library preparation or technology file setting.

---

## DPI-127

(Warning) The '%s' of macro %s with value %f does not match finfet grid's '%s' with value %f

**Description**

This warning message is reported because the hard macro 's width or height violates the FinFET grid on its potential allowed orientations.

**What Next**

Redo the macro 's library preparation or technology file setting. Also, user can restrict macro 's allowable orientation to avoid violating the FinFET grid.

---

## DPI-128

(warning) signal pad %s cannot satisfy min pitch because spacing is constrained by signal io constraints.

**Description**

The tool is not able to move this signal pad to satisfy min pitch because of the spacing set in signal io constraints.

Feedback

**What Next**

Please check and modify the signal io constraints if min pitch needs to be satisfied.

---

## DPI-129

(warning) IO pad %s cannot be moved to satisfy min pitch because the pad position is fixed.

**Description**

The tool is not able to move this I/O pad to satisfy min pitch because the pad position is fixed.

**What Next**

Please check and modify the status of the pad if min pitch needs to be satisfied.

---

## DPI-130

(warning) bump assignment for bump %s is lost due to netlist change.

**Description**

The bump had connections to pads after place_io. But the assignment is lost due to netlist change.

**What Next**

Please check the modifications on netlist.

---

## DPI-131

(error) Cannot handle some matching types.

**Description**

There are some matching types that cannot be processed.

**What Next**

Please look for matching types previously reported and delete or modify them.

---

## DPI-132

(error) rdl net %s has multiple ports on block %s.

Feedback

**Description**

No feedthrough is allowed on RDL nets. It means that a net can only have at most one port on a block instance.

**What Next**

User should modify the netlist to remove all feedthrough ports.

---

## DPI-133

(warning) cannot place some IO pads in blocks.

**Description**

The tool cannot place pads in blocks when there is no IO guide physically inside of the block instance.

**What Next**

Set status of all pads in blocks as fixed or use -bump_assignment_only option. Or add IO guides in the blocks. Note that IO guides can be created either on top or at block level.

---

## DPI-134

(error) io guide %s crosses the boundary of %s.

**Description**

No IO guide can cross the boundary of physical hierarchy.

**What Next**

Modify the IO guide or block boundary or both.

---

## DPI-135

(error) pad %s has incorrect assignment constraint in pad assignment file.

**Description**

The logic hierarchy of the specified pad is not the same as the physical hierarchy of the IO guide which the pad is assigned to.

**What Next**

Modify the IO guide or pad assignment file.

Feedback

## DPI-136

(error) guide %s in block %s has pad assignment from block %s.

**Description**

The specified guide is in a block but contains pads outside of the block.

**What Next**

Move the IO guide to the location consistent with the pads assigned to it. Or remove pads from the guides. The pads can be part of the signal constraint of the guide.

## DPI-137

(error) guide %s and guide %s match exactly in different MIB instances but have different power constraints.

**Description**

The specified guides are in different MIB instances. They overlap exactly within the reference block. However, they have different power constraints. Such a scenario is not permitted.

**What Next**

Modify the IO guides and/or power constraints.

## DPI-138

(error) guide %s and guide %s across each other in the same reference block but are not equal.

**Description**

The specified guides are either in the same instance or different instances of the same reference block. They are not identical but overlap each other. Such a scenario is not permitted.

**What Next**

Modify the IO guides so that they will not overlap.

## DPI-139

(error) block %s contains IO cells but is not placed.

Feedback

**Description**

All blocks with IO cells must be placed before running IO placement or bump assignment. Note that, if there are multiple physical hierarchy, all blocks containing a block with IO cells must also be placed.

**What Next**

Set the status of the specified block and all blocks containing the block, if any, to placed.

---

## DPI-140

(warning) Cannot satisfy no space constraints of IO guide %s as first pad %s is fixed.

**Description**

Due to the nature of the constraints or the netlist the no space constraints for an IO guide could not be satisfied.

**What Next**

Please verify existing signal constraints or the netlist.

---

## DPI-141

(warning) Cannot satisfy no space constraints of IO guide %s as last pad %s is fixed.

**Description**

Due to the nature of the constraints or the netlist the no space constraints for an IO guide could not be satisfied.

**What Next**

Please verify existing signal constraints or the netlist.

---

## DPI-142

(error) guide %s and guide %s match exactly in different MIB instances but have different signal constraints.

**Description**

The specified guides are in different MIB instances. They overlap exactly within the reference block. However, they have different signal constraints. Such a scenario is not permitted.

Feedback

**What Next**

Modify the IO guides and/or signal constraints.

---

## DPI-143

(error) bumps in bump cluster %s are in different matching types.

**Description**

The bumps in the same bump cluster must be connected together. They are not distinguishable. Therefore, you cannot assign those bumps to difference matching types.

**What Next**

Please remove or modify those matching types. You can have at most one matching type. The matching type can contain at most 1 bump in each bump cluster.

---

## DPI-144

(error) multiple bumps in bump cluster %s are in matching type %s.

**Description**

The bumps in the same bump cluster must be connected together. They are not distinguishable. Therefore, you cannot have two or more bumps described in a matching type.

**What Next**

Please remove extra bumps from the matching type. Adjust uniquify number if needed.

---

## DPI-145

(error) bump %s is in matching type %s and %s.

**Description**

The bump or its pin or its terminal is in more than one matching type. For example, the bump instance is in a matching type. The pin of the same bump is in another matching type. Since a bump has a single pin, the pin and the bump are the same object, which cannot be in two or more matching types.

**What Next**

Please change the matching types. A bump or its pin or its terminal can only be in a single matching type at most.

Feedback

## DPI-146

(error) terminal %s and its %s are in matching type %s and %s, respectively.

**Description**

The terminal is in more than one matching type. Specifically, the owner pad or owner pin of a terminal is in a different matching type from that of the terminal.

**What Next**

Please change the matching types.

## DPI-147

(error) pin %s and its pad are in matching type %s and %s, respectively.

**Description**

The pin is in more than one matching type. Specifically, the owner pad is in a different matching type from that of the pin.

**What Next**

Please change the matching types.

## DPI-148

(error) fail to connect power pad %s according to power constraint.

**Description**

The newly created cell is not connected to existing netlist according to its power constraints.

**What Next**

Please check the power constraint and netlist. Connect the pins of the pad to nets manually if necessary.

## DPI-149

(error) connectivty of power constraint is incorrect since port %s is not on power reference cell %s.

Feedback

**Description**

The pin connectivity information in the database does not match the reference cell. In particular, the connection related to the given pin cannot be honored since the port cannot be found on the reference cell.

**What Next**

Please check the power constraint and design library. Check all the ports of the reference cell. Re-set the power constraints if needed.

---

## DPI-151

(warning) Although '%s' is specified, the %s is still adjusted.

**Description**

The origin block_boundary or specified block_boundary has conflict with floorplan rule or does not snap to the finfet grid. Although '-keep_boundary' or '-control_type die -boundary' is specified, the block_boundary is still adjusted.

**What Next**

Please check if the adjusted block_boundary is expected. If not, please try some of below methods: (1) disable the finfet grid: set_app_options -name finfet.ignore_grid.std_cell -value true (2) remove the floorplan rules: remove_floorplan_rules (3) set following two DCM options: set_early_data_check_policy -check plan.floorplan.core_offset_conflict_enclosure_rules -policy tolerate set_early_data_check_policy -check plan.floorplan.core_area_length_conflict_width_rules -policy tolerate

---

## DPI-152

(Warning) Although '%s' is specified, the block_boundary is still adjusted.

**Description**

If user specify one of options '-side_ratio, -side_length, -shape, -boundary, -core_utilization, -macro_utilization', command will calculate core_area first and derive block_boundary from core_area, then the block_boundary may be changed although '-keep_boundary' is specified.

**What Next**

Please check if the adjusted block_boundary is expected. If not, please try to not specify '-keep_boundary' with any of options '-side_ratio, -side_length, -shape, -boundary, -core_utilization, -macro_utilization'.

Feedback

## DPI-201

(error) Boundary is illegal.

**Description**

The arguments(points) for -boundary can't form a legal boundary.

**What Next**

Please specify the correct values of points for -boundary.

**See Also**

- initialize_floorplan

## DPI-202

(error) Can't create %s with -core_offset values.

**Description**

Can't create %s with -core_offset values, it may self-intersect with settings.

**What Next**

Please specify the correct values of core offset.

**See Also**

- initialize_floorplan

## DPI-203

(error) Can't create core area.

**Description**

Can't create core area with the settings, the value of die boudary side ratio are conflict with the core offset values, these arguments can't form a legal core area.

**What Next**

Please specify the correct values of core offset or die boundary side ratio.

**See Also**

- initialize_floorplan

Feedback

## DPI-204

(warning) this option %s is not valid when you specify the -boundary option.

**Description**

*initialize_floorplan* command only honors the option -boundary when the option %s is used. In other words, the specified boundary is used to create the floorplan.

**What Next**

Please check if you specify the correct options to *initialize_floorplan* command.

## DPI-501

(warning) no boundaries defined for cell %s.

**Description**

Boundaries of all cells need to be defined in library.

**What Next**

Please check correspinding .NDM library or LEF/DEF

## DPI-502

(warning) The length of IO guide %s is less than total assigned pad width.

**Description**

The length of IO guide is not enough for assigned IOs.

**What Next**

Please increase the length of the IO guide, or remove some IOs from the IO guide.

## DPI-503

(warning) this option -core_utilization/-macro_utilization is only valid when you specify the -side_ratio option.

**Description**

*initialize_floorplan* command only honors the option -core_utilization/-macro_utilization when the option -side_ratio is used. Otherwise, the specified core or macro utilization is not used when creating the floorplan.

Feedback

**What Next**

Please check if you specify the correct options to *initialize_floorplan* command.

---

## DPI-504

(warning) only %d core side dimension is needed for %s shape core area.

**Description**

*initialize_floorplan* only need %d core side dimensions to define a %s shape core area.

**What Next**

The rest of core side dimension values in this option will be ignored.

---

## DPI-505

(warning) pad cell %s is placed away from its connection point.

**Description**

The specified pad cell might not be connected to its bump by RDL routes.

**What Next**

Please check the pathline connecting to the specified pad and adjust bump locations or pad constraints.

---

## DPI-506

(warning) Half of minimal spacing is used to create rdl pathlines for IO guide %s.

**Description**

The pathline spacing is equal to half of the default spacing since the default spacing cannot be satisfied.

**What Next**

Dual layer rdl routing might be needed.

---

## DPI-507

(warning) skipping IO guide %s since it contains no driver cells.

**Description**

The specified IO guide contains no IO drivers.

Feedback

**What Next**

Please assign drivers to the IO guide or use -all option. Note the if you use the -all option, place_io command will try to assign drivers based on bump distribution. So it is possible that some IO guides are not used for driver assignment.

---

## DPI-508

(warning) bump %s is far away from its driver.

**Description**

The specified bump is far away from the pad it is assigned to. The corresponding RDL routing might contain violations.

**What Next**

Please consider changing the bump-pad assignment or the pad-guide assignment or both.

---

## DPI-509

(warning) net %s is connected to multiple ports.

**Description**

Multiple top level terminals are connected to a single net. As a result, during IO placement, these ports might be assigned to a single bump.

**What Next**

Request for enhancement if you need to specify the bump for each port. Otherwise, you can ignore this message.

---

## DPI-510

(warning) There exists IO guide bbox overlap.

**Description**

IO guide boxes are defined by the IO guide lines and pad cells placed within IO guides. When IO guide boxes overlap with each other, the pad cells placed within the IO guides may overlap. To avoid pad overlaps, certain regions of IO guides may not be used, which reduce the capacity of IO guides.

**What Next**

Please check IO placement result for pad cell overlaps.

Feedback

## DPI-511

(warning) bump %s cannot be used for any selected IO guide.

**Description**

A bump can only be used for an IO guide if it is placed on the accessible side of the guide. The bump specified cannot be used for any IO guide selected for io placement.

**What Next**

If the given bump must be used, please move the bump to a new location. Otherwise, ignore this warning.

## DPI-512

(warning) bump placed beyond %s bound of IO guide %s.

**Description**

The range of bump location is usually within the length of IO guide. When the bumps are placed beyond the IO guide length, pathlines overlap might occur.

**What Next**

Please check the pathline routing result.

## DPI-513

(warning) pad cell %s has no pins for rdl connection and is treated as filler cells during IO placement.

**Description**

The specified cell is labeled as a pad cell. However, it has no pin so that it cannot be connected to any net. It will be placed as a filler cell.

**What Next**

Please check whether this cell is labeled or designed correctly.

## DPI-514

(warning) due to limited bump count, some pad pins are not connected to bumps.

Feedback

**Description**

During IO placement, pad pins with RDL connection property that are not connected to any bumps are connected to bumps without any net connections. However, since there are no enough bumps available, some or all of those pad pins are not connected to bumps.

**What Next**

Please check the netlist. If pad pins are not labeled correctly, fix the labeling. Otherwise, add additional bumps to the design.

---

## DPI-515

(warning) pin shape %s selected in matching type %s has no BUMP class label.

**Description**

The specified pin shape is selected in a matching type. Therefore, it will be connected to RDL nets. However, this pin shape does not have BUMP class label.

**What Next**

Please verify pin shape names in the matching type. Mark the pin shape to BUMP class if needed.

---

## DPI-516

(warning) The pad pins with BUMP class labels in matching type %s are more than what are expected.

**Description**

The expected number of pad pins with BUMP class labels in a matching type can be derived based on the associated bump count and uniquify number. The actual pin count is more than the expected count. As a result, some pad pins will not be connected to bumps.

**What Next**

Please change the bump count or uniquify number. Alternatively, users can change the pad pin labels.

---

## DPI-517

(warning) Pad pin %s without BUMP class label will be connected to bump %s.

Feedback

**Description**

In General, only pad pins with BUMP class labels will be connected to bumps. The specified pad pin does not have BUMP class label. However, a two pin net connect a bump to this pin. Therefore, the IO placement will assign the bump to the pad pin.

**What Next**

Please set BUMP class label to the pin or remove the two-pin net.

---

## DPI-518

(warning) There are not enough bumps on net %s for pad pins.

**Description**

When users define a uniquify number on a net connecting bumps and pad pins, the number of bumps on the net needs to be sufficient in order to honor the uniquify number.

**What Next**

Please check the net. Users can add more bumps to the net or reduce pad pins with BUMP class label. Users can also set uniquify number for the bumps and pad pins.

---

## DPI-519

(warning) There are no pad pins that will be connected to bumps.

**Description**

To be connected to a bump and RDL interconnect, a pad pin must have BUMP class label or is connected to a bump through a two-pin net. The place_io command cannot find any such pins. No bumps will be connected to any pads.

**What Next**

Please set pad pin labels correctly.

---

## DPI-520

(warning) No pad pins have BUMP class labels.

**Description**

During lib-cell preparation, pads should have their pins labeled as BUMP class so that place_io can connect these pins to RDL nets. However, no pad pins with BUMP class labels are found in the design.

Feedback

**What Next**

Please set pad pin labels correctly.

---

## DPI-521

(warning) The pitch format cannot be used for IO guide %s since its pads are not placed uniformly.

**Description**

Only when the locations of pads are placed with equal spacing, the pitch option can be used. When pitch option cannot be used, the order_only format is used instead. Note that pitch is difference from spacing. Pitch is the distance between the starting points of consecutive pads whereas the spacing is the gap between adjacent pads. To see the offset of the starting point of each pad, use the option fixed.

**What Next**

Please try to use other options or adjust pad locations.

---

## DPI-522

(warning) The spacing format cannot be used for IO guide %s since its pads have overlaps.

**Description**

When pad overlap exists, the spacing value cannot be computed since there is no non-negative gap between pads. The order_only format is used instead.

**What Next**

Please try to use other options or adjust pad locations.

---

## DPI-523

(warning) The design contains pads of type %s which have no RDL connection pins.

**Description**

The pads of the specified type have no pins with BUMP class labels. They might not be connected to bumps.

**What Next**

Please check the pin labeling of the lib-cell.

Feedback

## DPI-524

(warning) Relax spacing rule to generate pathlines.

**Description**

The default spacing rule or selected spacing rule cannot be used to generate pathlines due to congestion. A relaxed rule is used.

**What Next**

Please use RDL router to verify the routability of the IO pad placement.

## DPI-525

(warning) Object %s of matching type %s is ignored during IO placement.

**Description**

The specified object in the matching type is invalid. It might not exist anymore. IO placement will not consider it.

**What Next**

Please check the matching type.

## DPI-526

(warning) some pads are skipped and not written into the constraint file.

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. If there is no guide in the design or pad cells are not placed in any IO guide, these pads are not included in the signal constraints.

**What Next**

Please check the IO guides in the design or adjust IO pad locations.

## DPI-527

(warning) reference cell %s is treated as a filler.

**Description**

The specified reference cell is labeled as a pad cell. However, it will be treated as a filler cell.

Feedback

**What Next**

Please check whether this reference cell is labeled or designed correctly.

---

## DPI-528

(warning) No pad is written into the constraint file since there is no IO guide in the design.

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. There is no guide in the design. Therefore, nothing is written into the constraint file.

**What Next**

Please create IO guides.

---

## DPI-529

(warning) No pad is written into the constraint file since pads are not placed in IO guides.

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. If a pad is not placed with the right edge aligning any IO guide, it will not be reported as part of the signal constraint.

**What Next**

Please modify IO guides or adjust pad locations.

---

## DPI-530

(warning) pad %s is skipped and not written into the constraint file.

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. This means that the pad must be entirely within the IO guide and in the right orientation. Otherwise, the pad is not included in the signal constraints.

**What Next**

Please check the location and orientation of the pad.

Feedback

## DPI-531

(warning) Non-IO cell %s is detected during IO placement.

**Description**

Command place_io only considers IO pads and do not consider non-IO cells. If non-IO cells exist, they will not be placed and might overlap with IO pads.

**What Next**

Please check if the specified cell is an IO macro. If yes, please label it as IO pad.

## DPI-532

(warning) IO pad %s of reference %s in constraint file will have different orientation if placed by place_io.

.SH DESCRIPTION

The specified IO pad is assigned in an IO guide in the constraint file. However, its current orientation does not match that of the IO guide. If this IO constraint file is used during a place_io run, the pad will be placed in a different orientation.

**What Next**

Please check the specified pad. If users want to keep its orientation, its reference orientation must be changed. Users can also modify the constraint file if the pad should not be assigned to the IO guide.

## DPI-533

(warning) Fixed IO pad %s will not be placed in any IO guide.

**Description**

The specified IO pad is fixed. Therefore, it will not be moved during IO placement. However, it is not currently placed in any IO guides. It will remain at its location, not in any IO guide.

**What Next**

Please check the specified pad. If users want to place it into IO guides, please change its attribute.

## DPI-534

(warning) Fixed IO pad %s will not be moved according to users constraint.

Feedback

**Description**

The specified IO pad is fixed. However, it also has a fixed location constraint from users. The IO placement will ignore the user constraint.

**What Next**

Please check the specified pad. If users want it moved, please remove the fixed attribute.

---

## DPI-535

(warning) Fixed IO pad %s will be reassigned from guide %s to guide %s.

**Description**

The specified IO pad is fixed. The guide which it is assigned to is different from the guide which it is placed in. Therefore, the pad is reassigned to the new guide.

**What Next**

Please check the specified pad. If users do not want it reassigned, please remove the fix location constraint.

---

## DPI-536

(warning) matching type %s is removed since it has conflicts with net %s in the netlist.

**Description**

The user defined matching type cannot have conflicts with netlist connectivity. For example, if a user matching type only contain a fraction of components connected by a net, it is considered incomplete. Users either have to remove components of the net or add the rest of the components of the net. This matching type is ignored during IO placement.

**What Next**

Users need to modify the specified matching type.

---

## DPI-537

(warning) pad cell %s is removed from signal IO constraints of guide %s.

**Description**

The specified pad cell is fixed at a location different from the one in the constraint or outside of the IO guide. Therefore the pad is removed from the signal IO constraint.

Feedback

### What Next

Users need to modify the signal IO constraint or change the fixed status of the cell.

---

## DPI-538

(warning) pad cell %s is not placed in guides.

### Description

The specified pad cell is fixed at a location not aligned properly to its IO guide. Because the pad is close to or overlap with an IO guide, a fraction of the IO guide is reserved for the pad.

### What Next

Users need to check if the pad location is indeed correct.

---

## DPI-539

(warning) pad cell %s is assigned to guide %s, violating pad assignment requirement.

### Description

The specified pad cell has been assigned to an IO guide already, either by explicit pad assignment or signal IO guide constraints. This guide is not one of the guides specified in the pad assignment file. The pad assignment file will not be honored.

### What Next

Users need to check if the pad assignment is acceptable. If yes, modify the pad assignment file. If not, remove the pad assignment or modify signal IO constraints.

---

## DPI-540

(warning) pad cell %s is not connected to any bumps.

### Description

During IO placement, new power pads might be added to the netlist to satisfy power IO constraints. There might not be enough bumps for these power pads. As a result, these power pads are not connected to any bumps.

### What Next

Please verify existing power constraints. If powers pads are needed, please rerun place_io. Use matching types to specify bumps for those pads if needed.

Feedback

## DPI-541

(warning) %s of cell %s is not multiple of %s

**Description**

The dimension of an IO pad cell is not multiple of grid size. As a result, pads will not be snapped to grid points. Note that both width and height of any pad must be multiple of vertical and horizontal grid size since pads might be rotated when placed.

**What Next**

Please check grid definition or change IO pad lib-cells.

## DPI-542

(warning) finfet grid will not be honored during IO placement.

**Description**

The finfet grid cannot be honored during IO placement since some IO cells do not have proper dimensions. The litho grid will be used instead.

**What Next**

Please check finfet grid settings or change IO pad lib-cells.

## DPI-543

(warning) guide %s is skipped since it is entirely inside of guide %s.

**Description**

If an IO guide is completely inside of another IO guide, placing pads in both guides will lead to pad overlap. As a result, the smaller guide is ignored by place_io.

**What Next**

Please check all existing IO guides and remove wrong IO guides as needed.

## DPI-544

(warning) matching type %s is modified since it has conflicts with net %s in the netlist.

**Description**

when a net connects a pad pin in a matching type and a bump outside matching type, this net is said to have a conflict with the matching type. When a conflict exist, the matching

Feedback

type is modified. Specifically, the pin inside the matching type is removed from the matching type. Similarly, when a net connects a bump inside a matching type and a pad pin outside matching type, the bump is also removed from the matching type.

**What Next**

Users need to modify the specified matching type or the netlist.

---

## DPI-545

(warning) pad %s is in block %s, not on top.

**Description**

Command place_io cannot perform netlist changes on pads within blocks. Users need to connect pins of such pads to bump separately, if necessary.

**What Next**

If no netlist modification is needed, you can ignore this warning. Otherwise, try to pop the pad up to the top level or make the netlist change before running place_io.

---

## DPI-546

(warning) %s in matching type %s cannot be skipped since it is connected to a bump.

**Description**

Normally, if a matching type does not contain any bump, the RDL pins in the matching type will not be assigned to bumps. However, if a pin has already been connected to a bump through a two-pin net in the netlist, such a connection will remain as is.

**What Next**

If the connection is correct, user should remove the pin from the matching type. Otherwise, disconnect the pin from the net.

---

## DPI-547

(warning) bump %s in matching type %s cannot be skipped since it is connected to an IO pad pin.

**Description**

Normally, if a matching type only contains bumps, none of the bumps will be assigned to IO pads. However, if a bump has already been connected to an IO pad pin through a two-pin net in the netlist, such a connection will remain as is.

Feedback

### What Next

If the connection is correct, user should remove the bump from the matching type. Otherwise, disconnect the bump from the net.

---

## DPI-548

(warning) matching type %s is modified with components connected to net %s removed.

### Description

The user defined matching type contains components, e.g., bumps or IO pad pins, already being connected to the specified net. Since the net connectivity will be honores separately, such components are removed from the user defined matching type. IO placement will honor the components remaining in the matching type, if anything exist.

### What Next

Users need to modify the specified matching type. In particular, it is recommended to create a matching type for components that are connected by a single net, not multiple nets.

---

## DPI-549

(warning) %s is removed from matching type %s since it is not labeled as a valid IO component.

### Description

Only cells whose design types are pad or flip_chip_driver will be processed as IO cells. If a matching type contains non-IO cell instances, pins of non-IO cell instances, and/or terminals of non-IO cell instances, all such components will be removed from the matching type. Moreover, even a cell is a pad or flip_chip_driver, it is still considered an invalid IO component if it does not have any RDL pin, because no bump assignment is possible for a pad without a single RDL pin.

When a component is removed from a matching type, this matching type will not be honored fully. Only the remaining components, if any, will be honored.

### What Next

Users need to modify the specified matching type or the design_type of cell instances. If the cell is excluded because it does not have a RDL pin, users need to set the bump class labels of terminals of the cell. Alternatively, users can explicitly add pins or terminals into the matching type.

Feedback

## DPI-550

(error) matching type %s does not contain enough bumps.

### Description

A matching type should contain a minimal number of bumps, which is derived by the total number of pad pins and the uniquify number. If there are not enough bumps, the matching type cannot be honored fully.

### What Next

Users need to modify the specified matching type. For example, more bumps can be added to the matching type. Users can also change the number of pad pins to be assigned to a single bump by changing the uniquify number of the matching type. For instance, when the uniquify number of the matching type is set to 2, each bump in the matching type can be assigned to 2 pad pins at most. Note that the uniquify number is applied to all bumps in the matching type. If users only want to assign multiple pad pins to a specific bump in the matching type, they need to create a separate matching type only for that bump with the corresponding uniquify number.

## DPI-551

(warning) pad %s will be placed since it is assigned to guide %s.

### Description

Normally, if user specifies pad-only matching types in a non-flip-chip design, place_io will only place pads in the matching types. However, when a pad has already be assigned to a user selected guide or part of the signal IO constraint of a user selected guide, it will be placed even it is not in any matching type.

### What Next

User needs to modify the matching types, signal IO constraints, or pad-to-guide assignment. Specifically, if the pad needs to be placed, add it to a matching type. If the pad does not need to be placed, remove it from the corresponding IO guide or IO guide constraint.

## DPI-552

(warning) pad %s will not be placed since it is assigned to guide %s, which is not selected.

Feedback

**Description**

In this IO placement run, user selects a subset of IO guides in the command line. All pads that are assigned to IO guides not in the set will not be placed even they are in the selected matching types.

**What Next**

User needs to modify the matching types, signal IO constraints, or pad-to-guide assignment. Specifically, if the pad needs to be placed, add its IO guide to the guide list in the command line or change its guide assignment. If the pad does not need to be placed, remove it from the corresponding matching type.

---

## DPI-553

(error) unplaced bumps found.

**Description**

Bumps must be placed before running place_io. The unplaced bumps will ignored and not be used for bump assignment.

**What Next**

User must places bumps first. If bumps are at the correct locations, change bump status attributes from unplaced to correct values such as placed or fixed.

---

## DPI-554

(warning) Object %s is unplaced and will be ignored for overlap checking.

**Description**

The specified object has not been placed yet. It will not be considered for overlap checking.

**What Next**

Please place the specified object.

---

## DPI-555

(error) Object %s is not assigned to any IO pad pin.

**Description**

The specified object is not assigned to any pad pin.

Feedback

**What Next**

Please assign the specified object to an IO pad pin.

---

## DPI-556

(warning) pad %s will not be processed since it is in matching type %s without any bump.

**Description**

If a pad is in a matching type without any bumps, the pad will not be processed. No bump will be assigned to any RDL pin of this pad. This pad will not be moved.

**What Next**

Modify matching types if the pad needs to be processed during IO design.

---

## DPI-557

(warning) pad %s is fixed at a position outside of die area.

**Description**

The pad is fixed. It is not entirely within the die area.

**What Next**

Adjust the pad location or die area.

---

## DPI-558

(warning) Object %s is not an IO pad.

**Description**

The object specified for unplaced checking is not an IO pad.

**What Next**

Specify IO pads for unplaced checking..

---

## DPI-559

(warning) Cell %s will not be processed because %s.

**Description**

The cell will be ignored during IO design procedure.

Feedback

**What Next**

Check the reason and modify the design if needed.

---

## DPI-560

(warning) Matching type %s is not processed because it is not chosen.

**Description**

The matching type is not selected by the user. As a result, none of its components will be processed during IO placement.

**What Next**

If users want to process the matching type, included it in the command line. Do not use -matching_types option if all matching types need to be processed.

---

## DPI-561

(warning) %d cells of IO reference cell %s, for example %s, have %s not being multiple of %s

**Description**

The dimension of one or more IO pad cells is not multiple of grid size. As a result, pads will not be snapped to grid points. Note that both width and height of any pad must be multiple of vertical and horizontal grid size since pads might be rotated when placed. Users can ignore this warning if pads do not need to be aligned to the grid.

**What Next**

Please check grid definition or change IO pad lib-cells.

---

## DPI-562

(warning) Deleting filler cell %s which is a part of signal IO constraints on IO guide %s.

**Description**

The user has decided to delete a filler cell which is a part of an existing signal IO constraint.

**What Next**

The user should modify or delete the constraint if he chooses to delete a cell which is a part of a constraint.

Feedback

## DPI-563

(warning) Bump %s is inside a block instance and is ignored.

**Description**

The user has created a bump which is inside a block instance and hence it will not be processed.

**What Next**

The user should delete the particular bump instance from inside the block.

## DPI-564

(warning) Matching type %s contains component in a block.

**Description**

Currently, only bump assignment support multiple physical hierarchy. The matching type cannot be processed.

**What Next**

The user should delete the matching type. Or the bump_assignment_only option should be used. Please use report_matching_types command to check the matching type.

## DPI-565

(warning) Bumps exist in a block.

**Description**

The tool can only process bumps on top level. Other bumps will be ignored.

**What Next**

To perform bump assignment for bumps in blocks, open the block as the top design.

## DPI-566

(warning) pad pins in blocks are ignored since they are assigned to block-level bumps.

**Description**

The tool will excludes pad pins in blocks that are already connected to block level bumps.

Feedback

**What Next**

Verify the connectivity between block level bumps and block level pad pins.

---

## DPI-567

(warning) matching types in block %s are ignored.

**Description**

The tool will only honor matching types on top level.

**What Next**

Remove matching types in reference blocks.

---

## DPI-568

(warning) io guide %s in block %s is ignored during IO placement.

**Description**

No MPH support is available for IO pad placement. The block level IO guide is ignored.

**What Next**

Remove IO guides in in reference blocks.

---

## DPI-569

(warning) pad %s is not on top level and cannot be placed.

**Description**

No MPH support is available for IO pad placement. Some or all pins of the pad may not have bump assignment.

**What Next**

Place the pad at the right location and set it status to fixed.

---

## DPI-570

(warning) matching type %s is not properly assigned.

**Description**

Matching type does not have enough bumps assigned to meet user requirement.

Feedback

**What Next**

Assign the required bumps to pads or change the matching type specification.

---

## DPI-571

(warning) Newly created corner cell %s overlaps with existing pads and corners.

**Description**

The newly created corner cell overlaps with existing corner and pads in the design.

**What Next**

Move the objects to remove overlap.

---

## DPI-572

(warning) Matching type %s does not have enough bumps to satisfy uniquify number.

**Description**

The matching type has insufficient bumps.

**What Next**

Modify the matching type.

---

## DPI-574

(warning) Matching type %s and matching type %s have conflicting components.

**Description**

These matching types have components which are similar to each other.

**What Next**

Modify the matching types.

---

## DPI-575

(warning) Matching type %s.

**Description**

These matching types have components which are similar to each other.

Feedback

**What Next**

Modify the matching types.

---

## DPI-576

(warning) Matching type %s has bumps in blocks.

**Description**

The matching type has bump(s) inside blocks.

**What Next**

Modify the matching types.

---

## DPI-577

(warning) The %s.

**Description**

The named pad pins are counterparts of each other but belong to matching types with different uniquify number.

**What Next**

Modify the matching types so that these counterparts belong to the same matching type or different matching types with same uniquify number.

---

## DPI-578

(warning) matching type %s will be modified with components connected to net %s removed.

**Description**

The user defined matching type contains components, e.g., bumps or IO pad pins, already being connected to the specified net. Since the net connectivity will be honored separately, such components are removed from the user defined matching type. IO placement will honor the components remaining in the matching type, if anything exist.

**What Next**

Users need to modify the specified matching type. In particular, it is recommended to create a matching type for components that are connected by a single net, not multiple nets.

Feedback

## DPI-579

(warning) matching type %s will be removed since it has conflicts with net %s in the netlist.

**Description**

The user defined matching type cannot have conflicts with netlist connectivity. For example, if a user matching type only contain a fraction of components connected by a net, it is considered incomplete. Users either have to remove components of the net or add the rest of the components of the net. This matching type is ignored during IO placement.

**What Next**

Users need to modify the specified matching type.

## DPI-580

(warning) matching type %s will be modified since it has conflicts with net %s in the netlist.

**Description**

when a net connects a pad pin in a matching type and a bump outside matching type, this net is said to have a conflict with the matching type. When a conflict exist, the matching type is modified. Specifically, the pin inside the matching type is removed from the matching type. Similarly, when a net connects a bump inside a matching type and a pad pin outside matching type, the bump is also removed from the matching type.

**What Next**

Users need to modify the specified matching type or the netlist.

## DPI-581

(error) IO guide %s and IO guide %s are of the same side and overlap with each other.

**Description**

These two guides have the same direction and overlap with each other. Please modify.

**What Next**

Please modify the length of these two guides so that they don't overlap.

## DPI-582

(error) New location of specified hierarchical cell %s does not lie within the parent block instance boundary.

Feedback

**Description**

The new location of the specified hierarchical cell does not lie within the block boundary. Please modify.

**What Next**

Please modify the location so that the new location is within the block boundary.

---

## DPI-583

(warning) Specified cell %s overlaps with multiple hierarchical instances.

**Description**

The new location of the specified hierarchical cell overlaps with multiple hierarchical instances.

**What Next**

Please modify the location in order to avoid overlap.

---

## DPI-584

(warning) New location specified will cause the corner cell to overlap with multiple hierarchical instances.

**Description**

The new location of the specified hierarchical cell overlaps with multiple hierarchical instances.

**What Next**

Please modify the location in order to avoid overlap or use -force.

---

## DPI-585

(Error) Specified lib cell names have different heights.

**Description**

The different specified lib cell names have different heights.

**What Next**

Please modify the selection of lib cell names so that they have the same height.

Feedback

## DPI-586

(Error) Filler cells cannot be inserted on IO guide %s between offset %s and %s as that area overlaps with multiple hierarchical instances.

**Description**

Filler cells cannot be inserted in the specifed area as it overlaps with multiple hierarchical instances.

**What Next**

Please use -force to specify the parent block instance for the filler cells to be inserted.

## DPI-587

(warning) New location of specified hierarchical cell %s does not lie within the parent block instance boundary.

**Description**

The new location of the specified hierarchical cell does not lie within the block boundary. In case of MIBs all MIB instances of the modified cell will be moved correspondingly to the new location.

**What Next**

Please modify the location so that the new location is within the block boundary.

## DPI-588

(warning) New location for break cell module %s overlaps with multiple hierarchical instances and hierarchical instance %s is chosen as the parent instance.

**Description**

New location specifies with multiple instances.

**What Next**

Please modify so that overlap does not occur.

## DPI-589

(warning) pad %s for reference block %s is skipped and not written into the constraint file.

Feedback

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. This means that the pad must be entirely within the IO guide and in the right orientation. Otherwise, the pad is not included in the signal constraints.

**What Next**

Please check the location and orientation of the pad.

---

## DPI-590

(warning) io guide %s crosses the boundary of %s.

**Description**

IO guide crosses the boundary of physical hierarchy.

**What Next**

Modify the IO guide or block boundary or both.

---

## DPI-591

(error) Block %s and block %s overlap.

**Description**

User defined blocks overlap with each other.

**What Next**

Please modify the blocks to prevent overlap.

---

## DPI-592

(Warning) New cell location overlaps with multiple block instances, but it is still being created as user has specified option -force.

**Description**

New cell location overlaps with multiple block instance but cell is created.

**What Next**

Please check the cell location.

Feedback

## DPI-593

(Error) New cell location does not overlap with the pathname specified by -force.

**Description**

New cell location does not overlap with the pathname specified by -force.

**What Next**

Please check the -force option

## DPI-594

(Error) Filler cells cannot be inserted on IO guide %s between offset %s and %s as that block instance specified does not overlap with that area.

**Description**

Filler cells cannot be inserted in the specifed area as block instance specified by -force does not overlap with that area.

**What Next**

Please use -force to specify the parent block instance among the overlapping block instances in that area for the filler cells to be inserted.

## DPI-595

(warning) Filler cells inserted on IO guide %s between offset %s and %s eventhough it overlaps with multiple block instances as -force is specified.

**Description**

Filler cells inserted in the specifed area as block instance is specified by -force.

**What Next**

Please validate the new area is correct.

## DPI-596

(warning) cell %s is connected to a different net during place_io.

Feedback

**Description**

The netlist is modified. The specified cell is disconnected from its original net and connected to a new net according to bump assignment result. This can occur when two nets are merged to form a single net.

**What Next**

Please check the connectivity of the specified cell. Use LVS if needed.

---

## DPI-597

(error) IO cell %s has different owner from IO guide %s.

**Description**

Specified cell in constraint has different owner compared to IO guide.

**What Next**

Modify the IO constraint.

---

## DPI-598

(error) Fixed pad %s in IO guide %s is constrainted in IO guide %s.

**Description**

A fixed pad is in one IO guide and is constrained to another guide.

**What Next**

Change either the signal io constraints or pad-guide assignment or the status of the pad.

---

## DPI-599

(Warning) Cells %s %s and %s %s overlap.

**Description**

The tool has identified a pair of overlapping cells. These two cells cannot be moved by the tool. Therefore, the overlap cannot be resolved. The reason why both cells cannot be moved can vary. First, a cell might be fixed. Second, a cell's location might be specified by signal IO constraints. Thirdly, users may exclude the cell from placement using a matching type with no bump. Fourthly, the pad may be inside of a block which does not contain any IO guides.

Feedback

**What Next**

Check the cell placement if it meets desired requirements.

---

## DPI-600

(Error) Column %s occurs more than once. Initial occurence was at index %s.

**Description**

A column in CSV file occurs more than once.

**What Next**

Please check the file.

---

## DPI-601

(Error) Compulsary column %s does not exist in CSV file.

**Description**

A column which is compulsary does not exist in file

**What Next**

Please check the file.

---

## DPI-602

(Error) In line number %s of CSV file the number of entries in row (%s) does not match number of columns specified (%s).

**Description**

Number of entries does not match number of columns for specified line number.

**What Next**

Please check the file.

---

## DPI-603

(Error) In line number %s of CSV file distance specified for %s is incorrect.

**Description**

Distance in specified line number is not a number.

Feedback

**What Next**

Please check the file.

---

## DPI-604

(Error) In line number %s of CSV file the pad name for column %s is empty.

**Description**

Pad name in specified line number is empty.

**What Next**

Please check the file.

---

## DPI-605

(Warning) Ignoring line number %s of map file as number of entries in map file %s should be exactly 2.

**Description**

Bad specificaltion for map file in specified line number.

**What Next**

Please check the file.

---

## DPI-606

(Error) In line number %s standard column %s is specified in the first column of map file %s.

**Description**

Incorrect syntax in the map file.

**What Next**

Please check the file.

---

## DPI-607

(Warning) In line number %s specified standard column %s is not recognised in map file %s.

Feedback

**Description**

Incorrect syntax in the map file.

**What Next**

Please check the file.

---

## DPI-608

(Error) Standard column %s named as custom column %s has occured previously. Previous occurence was at %s.

**Description**

A column in CSV file occurs more than once.

**What Next**

Please check the file.

---

## DPI-609

(warning) Specified cell %s on top is moved to a location where it overlaps with hierarchical instance(s).

**Description**

The new location of the specified hierarchical cell overlaps with hierarchical instance(s).

**What Next**

Please check the locaton if it is correct.

---

## DPI-610

(warning) For reference block %s no pad is written in the constraint file as there is no IO guide in the particular reference block.

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. There is no guide in the reference block. Therefore, nothing is written into the constraint file.

**What Next**

Please create IO guides.

Feedback

## DPI-611

(warning) No pad is written into the constraint file since pads are not placed in IO guides for reference cell %s.

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. If a pad is not placed with the right edge aligning any IO guide, it will not be reported as part of the signal constraint.

**What Next**

Please modify IO guides or adjust pad locations.

## DPI-612

(warning) No pad is written in the constraint file as there is no IO guide in reference blocks.

**Description**

A pad is only written into the signal IO constraint file when it is placed correctly within an IO guide. There is no guide in the reference blocks. Therefore, nothing is written into the constraint file.

**What Next**

Please create IO guides.

## DPI-613

(warning) layer information is missing.

**Description**

Due to inconsistency of technology file update, some physical objects have unbounded layers.

**What Next**

Please correct technology information in the database. User can run report_unbound to get additional information

## DPI-614

(warning) bump assignment information cannot be stored %s.

Feedback

**Description**

Due to inconsistency of technology file update, some physical objects have unbounded layers. As a result, bump assignment information cannot be stored properly.

**What Next**

Please correct technology information in the database. User can run report_unbound to get additional information

---

## DPI-615

(warning) io guide %s has %d power constraints, which is more than 10.

**Description**

Although ICC 2 does not have limitation on how many power constraints an IO guide can have, it is rare that a guide can have more than 10 power constraints. It is possible that user does not describe the power constraints correctly.

**What Next**

Please use report_power_io_constraints to check whether all constraints are correct. Make any correction if needed.

---

## DPI-616

(warning) In power constraints specified for IO guide %s, for reference cell %s, the spacing value of %s is too less.

**Description**

For the above mentioned power constraint the spacing value is very low and is probably incorrect.

**What Next**

Please use report_power_io_constraints to check whether all constraints are correct. Make any correction if needed.

---

## DPI-617

(warning) No task is specified.

**Description**

The command has no task to perform.

Feedback

**What Next**

Please select *-report* option to report bump placement information. Please select *-min_spacing* option to check bump placement.

---

## DPI-700

(error) invalid Definition of app_option plan.flow.site_def_mapping.

**Description**

The specified app_option plan.flow.site_def_mapping is not valid.

**What Next**

Please specify the valid app_option plan.flow.site_def_mapping.

---

## DPI-701

(warning) definition of app_option plan.flow.site_def_mapping is dependent on -hybrid_site_def option

**Description**

The app_option plan.flow.site_def_mapping is dependent on command option -hybrid_site_def for command initialize_floorplan.

**What Next**

Please specify -hybrid_site_defs option for command initialize_floorplan.

---

## DPI-702

(error) invalid specified -last_row_site_fef_index option.

**Description**

The range of specified command option -last_row_site_fef_index should set between 0 to the last index of hybrid site def list.

**What Next**

Please specify the valid command option -last_row_site_fef_index.

---

## DPI-703

(warning) If -last_row_site_def_index option is defined, vertical parity (basic row account should be even or odd) cannot be guaranteed.

Feedback

**Description**

If -last_row_site_fef_index option is defined, vertical parity (basic row account should be even or odd) cannot be guaranteed.

**What Next**

Please skip setting plan.flow.segment_rule if -last_row_site_fef_index option is defined.

---

## DPI-704

(error) Failed because of the invalid hybrid site_rows creation.

**Description**

Failed for generating hybrid site_rows.

**What Next**

Please check the existing pre-defined site_defs and command option for command initialize_floorplan.

---

## DPI-705

(error) Failed because of the invalid multi-height site_rows creation.

**Description**

Failed for generating multi-height site_rows.

**What Next**

Please check the existing pre-defined site_defs, app_option plan.flow.site_def_mapping and command option for command initialize_floorplan.

---

## DPI-706

(error) invalid specified multiHeight site_def mapping: the sum of mapped site_def height should be equal to specidied multi-height site_def %s.

**Description**

The sum of mapped site_def height should be equal to specidied multi-height site_def.

**What Next**

Please specify the valid app_option plan.flow.site_def_mapping.

Feedback

## DPI-707

(error) invalid specification for overlapping site_def %s, failed for mapping the overlapping site_defs.

**Description**

The specified overlapping site_def cannot be mapped in specified row_pattern.

**What Next**

Please check the validation of row_pattern specification in the Physical Rule File (PRF).

## DPI-708

(error) invalid specified hybrid or multi-height site_def %s.

**Description**

The specified hybrid or multi_height site_def cannot be found in the existing site_defs.

**What Next**

Please check the existing site_defs and the specified app_option plan.flow.site_def_mapping, as well as the -hybrid_site_defs option for command initialize_floorplan.

## DPI-709

(error) the site_width for the site_defs which specified in site_defs under row_pattern should be equal.

**Description**

The specified site_defs under row_pattern should have equal site_def width.

**What Next**

Please check the validation of row_pattern specification in the Physical Rule File (PRF).

## DPI-710

(error) invalid specified multi-height site_def.

**Description**

The specified multi_height site_def is not valid.

Feedback

**What Next**

Please check the existing site_defs and the specified app_option plan.flow.site_def_mapping, as well as the -hybrid_site_defs option for command initialize_floorplan.

---

## DPI-711

(error) when specifying the -site_def_mapping, duplicated multi-height site_def is not allowed.

**Description**

The specified multi-height site_def cannot be duplicated.

**What Next**

Please check the specified app_option plan.flow.site_def_mapping.

---

## DPI-712

(error) multiple site_defs should be specified for -hybrid_site_def option.

**Description**

The number of specified hybrid_site_defs should be larger than one.

**What Next**

Please check the -hybrid_site_defs option for command initialize_floorplan.

---

## DPI-713

(warning) segment_rule for vertical parity (row counts) won't be honored if -hybrid_site_def is specified.

**Description**

plan.flow.segment_rule won't be honored if -hybrid_site_def is specified.

**What Next**

Please unset the valid plan.flow.segment_rule for command initialize_floorplan.

---

## DPI-714

(warning) User specified side_length %s will be automatically tuned to %s due to the requirement of %s.

Feedback

### Description

The user specified side_length will be automatically tuned due to some requirement in the command initialize_floorplan.

### What Next

Please check the user specified side_length option for command initialize_floorplan.

---

## DPI-715

(warning) The core boundary won't be automatically tuned for meeting the requirement of last_row_site_index specified in PRF.

### Description

If the command option "-keep_boundary" and command option "-row_pattern" is specified at same time for command initialize_floorplan, the core boundary won't be automatically tuned for meeting the requirement of last_row_site_index specified in PRF. Neverthess, if the core boundary already satisfied the requirement of last_row_site_index specified in PRF, initialize_floorplan -keep_boundary won't change the boundary.

### What Next

Please use command option -side_length instead.

---

## DPI-801

(error) Can not create %s track.

### Description

The checking is performed for uniform and non_uniform track creation in floorplan generation. Wire track pattern should be specified correctly before initialize_floorplan.

### What Next

Please set correct wire track pattern for the tool to proceed.

### See Also

- initialize_floorplan

---

## DPI-802

(warning) io guide %s is too close to a block $s.

Feedback

**Description**

When pads are placed along such an io guide, they may be partially inside some other blocks.

**What Next**

Please check the pad placement result. Adjust the guide location and or dimension if needed. The location of blocks can also be adjusted to avoid this issue.

---

## DPI-804

(error) Initialize_floorplan can not calculate the core area because both core area and standard cell area are 0.

**Description**

This error message is delivered because both core area and standard cell area are 0 so that initialize_floorplan cannot be conducted.

**What Next**

Please use initialize_floorplan -boundary instead.

---

## DPI-805

(warning) Power pad %s with reference cell %s has different connectivity from existing power constraint.

**Description**

The existing power pad has same reference cell as exisitng power constraint but different connectivity information.

**What Next**

Please check the existing power pads and the power constraints.

---

## DPI-806

(warning) Optional column %s does not exist in CSV file.

**Description**

A column which is optional does not exist in file

**What Next**

Please check the file and add the optional column if it is required.

Feedback

## DPI-807

(error) The %s.

**Description**

The pin of the specified filler cell can be connected to two possible nets.

**What Next**

Modify the netlist connection.

## DPI-808

(warning) Pin %s cannot be connected to a net.

**Description**

The filler pin cannot be connected to a net by abutment.

**What Next**

Please check the abutment in case the filler pin needs to be connected.

## DPI-809

(error) %s.

**Description**

This error message is dispalyed because there was a problem while parsing the provided patterns.

**What Next**

Please use the manpage to correct errors.

## DPI-810

(error) No patterns found for current design.

**Description**

No patterns were found to parse.

**What Next**

Please check the pattern definition file.

Feedback

## DPI-811

(error) Unable to create directory %s.

**Description**

Unable to create specified directory.

**What Next**

Please check if write permission is provided.

## DPI-812

(error) No pad pins in design match pad pins specified in patterns.

**Description**

Unable to find any pad pins in design.

**What Next**

Please check the pin assignment names in the pattern file.

## DPI-813

(error) Error encountered while parsing design data.

**Description**

Unable to parse design data.

**What Next**

Please check the design data.

## DPI-814

(error) Too many objects specified. Exceeds the number of colours available.

**Description**

Please specify less patterns.

**What Next**

Please specify less patterns.

Feedback

## DPI-815

(error) Cannot create images for pattern %s.

**Description**

Unable to create an image for specified pattern.

**What Next**

Please check earlier error messgaes and pattern specification to resolve the issue.

## DPI-816

(error) Cannot parse directory %s.

**Description**

Unable to parse directory specified.

**What Next**

Please check permissions and existence for specified directory.

## DPI-817

(error) Cannot find any training models to process.

**Description**

No training models specified.

**What Next**

Please check if the placeio directory has training models.

## DPI-818

(error) Cannot parse any model checkpoint files in %s.

**Description**

No checkpoint files found.

**What Next**

Please check if the checkpoint files are readable.

Feedback

## DPI-819

(error) Cannot find scaling factor information in %s.

**Description**

No scaling factor was found.

**What Next**

Please check if the file is present.

## DPI-820

(error) Cannot find any matching objects during detection.

**Description**

No matching objects found.

**What Next**

Please check objects present in design match iwth pattern specification file.

## DPI-821

(warning) Cannot find any pattern with name %s in current design.

**Description**

No pattern with specified name found in current design.

**What Next**

Please check pattern specification for the model specified and current design.

## DPI-822

(warning) Cannot find any instance of pattern %s in design.

**Description**

No instance of specified pattern found in the design.

**What Next**

Please check if any particular instance of specified pattern exists in design.

Feedback

## DPI-823

(warning) Cannot process ML data for pattern detection.

**Description**

Cannot process ML data for given design.

**What Next**

Please check log file for errors/warning for hints.

## DPI-824

(warning) The app option 'plan.floorplan.enable_user_core_offset' has been set as true. The actual core_offset will be strictly as users specified. The core area and die boundary will not be snapped to the site_def and grid.

**Description**

If users use the 'plan.floorplan.enable_user_core_offset' to assign the actual core_offset, core area and die boundary will not be snapped to the site_def and grid, which may bring about gaps between them.

**What Next**

Please make sure the app option is what you need.

## DPI-826

(warning) %s.

**Description**

Warnings are found during creating liner cells in current design.

**What Next**

Please check the design related to the warnings.

## DPI-827

(error) %s.

**Description**

Errors are found during creating liner cells in current design.

Feedback

**What Next**

Please check the design related to the errors.

---

## DPI-828

(warning) Not enough usable ports available to create terminals for bump shapes.

**Description**

There are not enough ports available to create terminals for the bump shapes which is necessary for RDL routing.

**What Next**

Please review the netlist and make necessary port connections to be able to perform RDL routing.

---

## DPI-829

(error) Cannot create a terminal for bump shape %s.

**Description**

Unable to create a terminal for specified bump shape.

**What Next**

Please check if the net connected to the bump shape is connected to a port.

---

## DPI-830

(warning) Cannot consider shape %s for place_io.

**Description**

place_io can only process shapes which are polygons or rectangles or trapezoids.

**What Next**

Please check if the shape is a polygon or a rectangle or a trapezoid.

---

## DPI-831

(warning) Conflict: %s, Related Core Offset Number: %u, Solution: %s.

Feedback

**Description**

There are conflicts between two or more floorplan enclosure rules. Conflicts show which floorplan rules have conflicts. Related core offset number shows which core offset conflicts with floorplan rules. Solution shows what the command has implemented to fix the conflict.

**What Next**

Check the floorplan enclosure rules and initializing floorplan options.

---

## DPI-832

(warning) Conflict: %s, Related Core Side Number: %u, Solution: %s.

**Description**

There are conflicts between two or more floorplan width rules. Conflicts show which floorplan rules have conflicts. Related core side number shows which core area side conflicts with floorplan rules. Solution shows what the command has implemented to fix the conflict.

**What Next**

Check the floorplan width rules and initializing floorplan options.

---

## DPI-833

(error) Width rule: %s conflicts with site %s.

**Description**

There are conflicts beetween width rules and site height or width.

**What Next**

Check the floorplan width rules and site width or height setting.

---

## DPI-834

(warning) The repaired result cannot satisfy width rules completely.

**Description**

When users use option '-boundary' to initialize floorplan, the 'initialize_floorplan' command cannot ensure the repaired result satisfy width rules completely.

When users set width rules for block boundary, the 'initialize_floorplan' command cannot ensure the repaired result satisfy width rules completely.

Feedback

**What Next**

Please use the command 'check_floorplan_rules' to check and fix_floorplan_rules to repair again.

---

## DPI-835

(error) There are conflicts between enclosure and width rules in direction %splease check floorplan rules.

**Description**

There are conflicts beetween enclosure and width rules in some directions. The command cannot create core area because of these conflicts.

**What Next**

Please check the step and offset options in enclosure and width rules.

---

## DPI-836

(warning) Cannot find suitable die side%d length value to satisfy floorplan block boundary width rules.

**Description**

Cannot find one suitable die side value to satisfy block boudnary width rules, and correspongding core area and core offset can satisfy std cell width rules and enclosure rules at the same time.

**What Next**

Please use the command 'check_floorplan_rules' to check and fix_floorplan_rules to repair again.

---

## DPI-837

(warning) Core area cannot accommodate the max macro size, please check side length/ ratio setting.

**Description**

When initialize floorplan by 'side_length' or side_ratio' option, the core area cannot accommodate the max macro size. This scenario may cause some bad results in next design planning flow.

Feedback

**What Next**

Please check 'side_length' or side_ratio' option setting.

---

## DPI-838

(error) Boundary points %s are unaligned, please check '-boundary' option setting.

**Description**

When initialize floorplan by '-boundary' option, the die or core area cannot be created to a poly rectangle shape. This scenario may cause some bad results in next design planning flow.

**What Next**

Please check '-boundary' option setting.

---

## DPI-839

(warning) %s is not a valid lib-cell name.

**Description**

The tool cannot open the given lib-cell. It will try to place pads without the given lib_cell. If the lib-cell is linked during IO placement, you can ignore this message.

**What Next**

Please try the full name or correct the name.

---

## DPI-840

(error) Some IO guides miss N5 rule settings.

**Description**

Some IO guides do not have N5 rules. The tool cannot continue.

**What Next**

Please set N5 rules on all IO guides or remove N5 rules from all IO guides.

---

## DPI-841

(error) some pads are not assigned to any IO guide.

Feedback

**Description**

During IO placement with N5 rules, all pads must be assigned to IO guides.

**What Next**

Please assign pads to IO guides using add_to_io_guide command or using IO guide constraints.

---

## DPI-842

(error) guide %s does not have complete order constraints.

**Description**

During IO placement with N5 rules, each IO guide must have an order signal constraint consisting of all pads on the guide.

**What Next**

Please set the signal contraint for the given guide.

---

## DPI-843

(error) cannot derive pad locations for guide %s with N5 rules.

**Description**

Only certain length values can have feasible pad placement solution when N5 rules are honored. The length of the given guide must be modified. Otherwise, no solution is possible.

**What Next**

Please modify guide length, pad-guide assignment, and/or N5 rules.

---

## DPI-844

(error) derived pad locations are incorrect for guide %s with N5 rules.

**Description**

Although tool derives the pad locations for the given guide, the derived values do not pass the internal checking. It is likely caused by incorrect design data.

**What Next**

Please contact tool supporting engineers. Modify guide length, pad-guide assignment, and/or N5 rules if possible.

Feedback

## DPI-845

(error) no possible pad placement solution for guide, please adjust guide length by %s.

**Description**

Only certain length values can have feasible pad placement solution when N5 rules are honored. The length of the given guide must be modified. Otherwise, no solution is possible. The recommended adjustment amount is provided.

**What Next**

Please modify guide length, pad-guide assignment, and/or N5 rules.

## DPI-846

(error) the block boundary cannot be non-rectilinear when -keep_boundary is set.

**Description**

The block boundary should be rectilinear when -keep_boundary is set.

**What Next**

Please specify a rectilinear boundary.

## DPI-847

(error) failed to create the ipc boundary ring.

**Description**

The ipc boundry ring cannot be created.

**What Next**

Please check the values of options of initialize_floorplan command.

# DPP

## DPP-001

(error) Failed to get the physical design.

**Description**

No physical design is available. This design does not have a core area or a die boundary.

Feedback

**What Next**

initialize_floorplan can be used to create the physical design. It is also possible to read it from DEF using read_def.

---

## DPP-002

(error) %s

**Description**

The inputs of the command option did not pass the sanity check.

**What Next**

Please refer to the specific message related to this error and make the changes in the option.

---

## DPP-003

(error) %s

**Description**

Failed to load the design from database.

**What Next**

When loading the design and building its internal data structure, the tool performs a number of sanity checks. Before this error message is reported, it should report the detailed information about what sanity check is failed. Please refer to those specific information to find the reason.

---

## DPP-004

(error) Failed to load the row and site structures.

**Description**

Shaping only supports certain types of row structures. This error message indicates that the input design has the row structure which is not supported by current shape_blocks.

**What Next**

Before reporting this error message, the tool will also report the specific row structure used in the design which is causing the problem. Please create the alternative rows which is supported by shape_blocks.

Feedback

## DPP-005

(error) Failed to get the big enough placeable area for %s.

**Description**

Found placeable cells/blocks to be placed but no sufficient placeable areas.

**What Next**

Please check if there are extra blockages.

## DPP-006

(error) failed to create the initial shape for MIB %s

**Description**

When shaping the design with MIBs, the tool needs to find the legal MIB shape so that it can fit all macros inside the MIB. If this is failed, the tool will stop proceeding.

**What Next**

Check if the design utilization is normal and also if macros inside MIBs have very restrict allowed orientations.

## DPP-007

(error) Incorrect shaping constraints.%s

**Description**

Failed in checking the constraints for shaping.

**What Next**

Please refer to the above checking messages for more information. Also check shape_blocks man page for shaping constraint syntax and examples.

## DPP-008

(error) Failed when loading the routing information. %s

**Description**

Could not get the correct routing information for channel estimation.

Feedback

**What Next**

Please refer to the reporting individual message to help resolve the problem. It is possible that you set the ignore layers incorrectly or perhaps need to set the ignore layer. There needs to be at least 1 routing layer in the horizonal direction and at least 1 routing layer in the vertical direction.

---

## DPP-009

(error) There are unplaced cells in the design.

**Description**

report_placement requires that all cells in the design are placed or fixed. This message indicates that one or more cells are not placed.

**What Next**

Please please check the design to make sure it is properly placed.

---

## DPP-010

(error) Fail to open the specified file %s.

**Description**

Option "-constraint_file file_name" provides the input file name. This error message indicates that the specified input file cannot be opened for reading.

**What Next**

Please check if file name is correct, or if file is in the correct path, or if the file has the read permission.

---

## DPP-011

(error) Minimum required channel size specified in option -min_channel_size is too big.

**Description**

The minumum channel size is larger than half of the minimum(core_width, core_height), which is apparently too big. This normally indicates a wrong input.

**What Next**

Please note that the option unit is in microns. Also please note that the bigger -min_channel_size is specified, the larger each block utilization will be.

Feedback

## DPP-012

(error) Channel size or keepout margin is too big.

**Description**

The channel sizes or keepout margins are utilizing too much of the available placement area, causing the utilization to exceed 100%.

**What Next**

Please use option "set_shaping_options -min_channel_size" to reduce the channel size to get an acceptable utilization. If the channel size has already been minimized but there is still a utilization problem, try reducing the keepout margins.

## DPP-013

(error) Target utilization is too small.

**Description**

The target utilization (shaping_target_utilization) specified in the constraint file is too small, which is making the total utilization over 100%.

**What Next**

Please increase the target utilization so as to get an acceptable utilization or increase the die size.

## DPP-014

(error) Block %s is read only.

**Description**

This command requires that blocks be editable. This is likely because the block will be changed by this command.

**What Next**

Make block editable by open_block -edit. Be careful to make the appropriate block view (e.g., design view or abstract view) editable.

## DPP-015

(error) Edit group %s contains objects in different physical hierarchies.

Feedback

**Description**

This command only supports edit groups in a single physical hierarchy. The command has detect an edit group that violates this rule and so cannot proceed.

**What Next**

Please remove the problematic edit group, or remove the objects that are in different physical hierarchies from the edit group.

---

## DPP-016

(error) Edit group %s contains unsupported placeable objects

**Description**

This command only supports certain types of edit groups. It only supports edit groups with hard macros in it or edit groups that have no placeable objects. This edit group violates this limitation.

**What Next**

Please remove the problematic edit group, or the unsupported objects within the edit group.

---

## DPP-017

(warning) Block instance %s is not on block grid.

**Description**

You get this message because the specified block instance's snap-point location is not on its associated block grid.

**What Next**

Please check the location of the block instance. You can use snap_cells_to_block_grid to move the cell to be on grid.

---

## DPP-018

(warning) The current orientation of block instance %s is not allowed by its associated block grid.

**Description**

You get this message because the specified block instance's orientation is not among the allowed orientations of its associated block grid.

Feedback

**What Next**

Please check the orientation of the block instance. Either correct the cell's orientation, or change the block grid.

---

## DPP-019

(error) Edit group %s is not supported.

**Description**

This command only supports edit groups with hard macros in the same physical hierarchy, voltage area, and/or move bound. Any edit groups containing cell instances which violates this limitation, are not supported. For example an edit group with a hard macro in movebound M1 and also a hard macro in movebound M2 is not supported. Another example is an edit group with a hard macro and an IO cell.

**What Next**

Remove the edit groups which are not supported, or remove the unsupported objects from the edit group.

---

## DPP-020

(error) Macro placement failed.

**Description**

Macro placement failed to run. There are a number of reasons why this may happen. The most common is that utilization of the design or a block in the design is over 100 percent. This could happen if the sliver size is set too high or a placement blockage is covering up a large area of the design.

**What Next**

Check any previous messages for reason for failure and fix the issue.

---

## DPP-021

(error) Placement for standard cells failed.

**Description**

Standard cell placement failed to run. There are a number of reasons why this may happen. The most common is that utilization of the design or a block in the design is over 100 percent.

Feedback

**What Next**

Check any previous messages for reason for failure and fix the issue.

---

## DPP-022

(warning) Block instance %s is out of the core area of design block %s.

**Description**

Block instance is out of the core area of design block.

**What Next**

Check block placement.

---

## DPP-023

(error) Block %s overlaps with %s.

**Description**

The two specified objects are placed overlapping each other. This command requires that there is no overlap to start with.

**What Next**

Check the design to make sure they are properly placed without overlap.

---

## DPP-024

(error) Block %s has no site rows.

**Description**

The specified block has no site rows and thus no core area defined. This command requires that blocks have valid site rows or site array.

**What Next**

Create valid site rows for block. Can do this by pushing down top level site rows using push_down_objects from the parent (ie top level) block or by using create_site_row inside the block.

For example, from the parent block which already has site rows do:

push_down_objects [get_site_rows]

Feedback

## DPP-025

(error) Could not find global routing congestion map.

**Description**

You got this error from incremental congestion-driven macro placement because the tool could not find the global route congestion map that is needed by the incremental congestiven-driven macro placement.

**What Next**

Run global routing using command create_channel_congestion_map or route_global to get the global routing congestion map.

If the design has physical hierarchies underneath and you want to run congestion-driven macro placement for the macros inside the child blocks as well, please run virtual flat global route to generate congestion map for the whole chip. Please see man page of create_channel_congestion_map or route_global for how to get congestion map for the whole chip.

## DPP-026

(error) No blocks or voltage areas are found. Nothing can be done for shape_blocks.

**Description**

The command shape_blocks requires that the design have blocks/VAs defined. If there are no blocks/VAs in the design and shape_blocks is running, it is most likely that the create block step has a problem or UPF is missing.

**What Next**

Create the blocks and/or load UPF before using this command.

## DPP-027

(error) Block %s is not a design view, and should be fixed before placement.

**Description**

If a block is not a design view, it must be fixed before placement.

**What Next**

Fix the block or change the block to be a design view.

Feedback

## DPP-028

(error) Block %s should have a valid shape before placement.

**Description**

It is required that each block hava a valid shape before running placement.

**What Next**

Create shapes for blocks using shape_blocks.

## DPP-029

(warning) The specified option %s value is too large for block %s. This might result in undesired results from report_placement.

**Description**

The specified option value is too large.

**What Next**

Set the correct option value.

## DPP-031

(error) %d blocks have the fixed shapes, which are over half of total %d blocks.

**Description**

If the design has too many blocks with fixed shapes, shape_blocks cannot perform well.

**What Next**

Reduce the number of blocks with fixed shapes so that the number is less than half of the total blocks. Another way is to mark the blocks with fixed shape as fixed (i.e., not placeable).

## DPP-032

(error) Available effective shape for macros of %s.

**Description**

The macros will not fit in this region or the region is too big to be handled by the tool. Macro placement will skip this region but continue for any other regions.

Feedback

**What Next**

Check the shape of this region and the relevant blockages in it. Also check for the presence of fixed objects that block area for macro placement.

If the shape is too large, check if the shape is correct. If the design is really that big, please consider changing the internal units. See *create_workspace -scale_factor* and *create_lib -scale_factor* for more information.

---

## DPP-033

(error) Sanity check for the grouping constraint failed.

**Description**

shape_blocks only support limited types of grouping constraints.

**What Next**

Remove the groups which are not supported based on the detailed messages reported.

---

## DPP-034

(error) Utilization is too high after considering the channel size and keepout margins.

**Description**

The adjusted design utilization after considering the channel size and the keepout margins is too high to be used in the later stage of the flow.

**What Next**

Please reduce the channel size and/or the block keepout margins.

---

## DPP-035

(error) Design %s has no core area.

**Description**

The design has no core area defined. This command requires that there be a valid core area.

**What Next**

Create a valid core area by reading it in via a DEF file or using initialize_floorplan command.

Feedback

If it is a block level design in a hierarchical design context, push_down_objects can be used to push the site rows and/or site arrays from the top level into the block.

---

## DPP-036

(error) Overlaps between move bounds or between move bound and physical block are found.

**Description**

The tool does not support partially overlapped move bounds.

**What Next**

Create move bounds without partial overlaps.

---

## DPP-037

(error) Macro packing failed for %s.

**Description**

Macro packing did not find a legal macro placement for this region. Please check that the macros can fit in the shape.

**What Next**

If the macros look like they should fit into the region, it is possible that the default keepouts are too large. You can turn off creation of default keepouts by setting the app option plan.place.auto_generate_blockages to false. However, this is applied to entire design being placed. If you want a more focused change, then put a manual hard_macro blockage on the macros in the region using *create_keepout_margin -type hard_macro*.

Another solution is to increase the size of the region.

---

## DPP-038

(error) Block %s has no valid boundary.

**Description**

The specified block has no boundary defined. This command requires that blocks have a valid boundary.

Feedback

**What Next**

Create a valid boundary for the block. Can do this by pushing down top level rows using push_down_objects or by using initialize_floorplan inside the block. For example:

push_down_objects [get_site_rows]

---

## DPP-039

(error) Top level design has no valid boundary.

**Description**

The top level design has no valid boundary defined. This command requires that there be a valid boundary.

**What Next**

Create a valid boundary by reading it in via a DEF file or using initialize_floorplan command.

---

## DPP-040

(error) Sanity check for the nested_va constraint failed.

**Description**

shape_blocks encountered an issue while parsing or applying the nested_va constraints.

**What Next**

Check existence of voltage areas named in the nested_va constraints, and check that there are no loops defined among voltage areas named in multiple constraints.

---

## DPP-041

(error) Can not run congestion driven due to macro overlaps.

**Description**

Can not run congestion driven placement due to macro overlaps. Congestion driven placement requires legal (no macro overlaps, macros inside core) macro placement.

**What Next**

Remove macro overlaps and make sure they are placed inside core. A new congestion map may need to be generated to reflect the new macro locations. To display the list of violations, use *report_placement -hard_macro_overlap -verbose high* .

Feedback

## DPP-042

(error) Macro %s is out of the placement area.

**Description**

Macro is not completely inside the placement area.

**What Next**

Make sure they are placed inside core. To display the list of violations, use *report_placement -hard_macro_overlap -verbose high* .

## DPP-043

(error) Macro %s overlaps another macro or a blockage.

**Description**

Macro overlaps another macro or a placement blockage.

**What Next**

Remove macro overlaps. To display the list of violations, use *report_placement -hard_macro_overlap -verbose high* .

## DPP-044

(error) There were issues with grid assignment. See previous warnings for details.

**Description**

The tool failed to properly match the grids to macros. According to the value of plan.macro.grid_error_behavior app option, the command will stop.

**What Next**

Check whether user choices for the grids were accurate. Previous warnings should indicate particular grid assignment issues. If you want to continue with the placement anyway, change the value of plan.macro.grid_error_behavior app option.

## DPP-045

(warning) Unused block shaping constraint (possibly overwritten by subsequent constraints, or no applicable regions found):\n%s

Feedback

**Description**

This block shaping constraint will not be taken into account. There are two situations in which this can occur. If a subsequent constraint of the same type applies to the same object (block, voltage area, move bound) the last defined constraint is considered, and previous definition will be ignored. Alternatively, this warning is also issued if a constraint cannot be applied to a suitable region. As an example, take a utilization constraint defined on a group that only contains block instances. Because utilization constraints don't apply to block instances, it will not be used. In this case, the utilization constraint should have been specified on the respective reference blocks.

**What Next**

Verify whether this constraint is allowed to be overwritten. If not, move the definition of this constraint to a later stage, such that it will not be overwritten by others. Also verify whether the constraint is applied to the proper type of object. Some constraints must be specified on the reference block instead of on a block instance.

---

## DPP-046

(error) Failed to place due to over utilization.

**Description**

Placement has failed because the block utilization is over 100%. The most common reason for this is that some part of the row structure is missing. Placement respects the row stucture.

**What Next**

Take a look at the rows in the block. If some part is missing recreate the rows.

---

## DPP-047

(error) Poly rule threshold is not redefined as a positive integer.

**Description**

Poly rule threshold must be positive integer when checking poly rule violations.

**What Next**

Redefine the poly rule threshold as a positive integer.

---

## DPP-048

(error) Poly rule violation in {{%s, %s} {%s, %s}}, width is %d

Feedback

**Description**

The length of this place-able rectangle is less than the poly rule threshold and no exception applies to this rectangle.

**What Next**

Adjust the position of the related hard macros, placement blockages, soft macros and voltage areas.

---

## DPP-049

(error) There are more than one type of unit tiles in the design.

**Description**

Poly rule checker can only check designs containing one type of unit tiles.

**What Next**

Delete the redundant types of unit tiles to make the design containing one type of unit tiles.

---

## DPP-050

(error) Vertical rows are not supported.

**Description**

Poly rule checker can check designs with only horizontal rows.

**What Next**

Use the poly rule checker for designs with only horizontal rows.

---

## DPP-051

(error) Cannot use -use_existing_placement because too many cells are not placed.

**Description**

The option -use_existing_placement uses the existing placement in the design to determine the module boundary shapes. If the cells are not placed then this option will not work.

**What Next**

First place the cells in the design then you can use the -use_existing_placement option. Use create_placement to place cells in the design.

Feedback

**See Also**

- create_placement

---

## DPP-052

(error) Macro %s has an illegal orientation.

**Description**

Macro orientation is not in the allowed set.

**What Next**

Change the macro orientation to one of the allowed set. The allowed set can be found using *report_macro_constraints -allowed_orientations*.

---

## DPP-053

(info) Trace mode is set to %s.

**Description**

The trace mode controls the way connectivity is extracted from the netlist. It can be set via plan.place.trace_mode.

**What Next**

You can check whether the displayed information matches the intended one.

---

## DPP-054

(info) Default error view %s is created in GUI error browser.

**Description**

Default error view is created in error browser.

**What Next**

Check error browser.

---

## DPP-055

(error) Detecting block instances of design %s using distinct views: %s.

Feedback

**Description**

Block shaping and macro placement require multiple instances of a block to use the same view.

**What Next**

Change the view of the reported block instances such that they only use a single view per reference block.

---

## DPP-056

(error) Macro orientation %s is not legal for macro cell %s, and macro relative location constraint is not derived since the macro is unplaced.

**Description**

The checking is performed for target macro orientation. The given orientation conflicts with the set of legal orientations for the given cell. Legal orientations are gotten from the reference library of the cell or set by command set_macro_options.

**What Next**

Please set correct option value for the tool to proceed.

---

## DPP-057

(info) %s.

**Description**

Command information report.

**What Next**

n/a.

---

## DPP-101

(error) Found above illegal shapes for placement.

**Description**

If the shape of block (or voltage area or move bound) is completely outside the boundary of its parent, it usually indicates some problems before placement.

**What Next**

Please move the related shape into its parent's boundary.

Feedback

## DPP-103

(error) %s overlaps with %s.

**Description**

Found overlaps between blocks and/or voltage areas after shape_blocks.

**What Next**

This should not happen when shape_blocks succeeds. Please check if it runs into the existing limitations in the log file; otherwise please report the problem.

## DPP-104

(error) Found the above situation which is not supported by incremental shaping.

**Description**

shape_blocks has some limitations when applying incremental shaping.

**What Next**

Before the tool removes the limitations, please manually shape the blocks.

## DPP-105

(error) MIB instance %s is fixed, but the MIB instance %s is not.

**Description**

It is required that either all MIB instances of the same master are fixed or all are not fixed for incremental shaping.

**What Next**

Please either unfix all MIBs or fix all MIBs of the same master.

## DPP-107

(error) Hierarchy %s to be expanded has no connectivity.

**Description**

The given hierarchy does not have any connectivity. The likely reason is that you are using an outline view, and the connectivity of this hierarchy was not loaded.

Feedback

Outline views are created using *read_verilog_outline*. The outline view has only a limited amount of connectivity to save on memory. The amount of netlist to load is controlled via options on *read_verilog_outline*.

**What Next**

If you have outline view and want to load the connectivity for the current hierarchy, look at the man page for *read_verilog_outline* and use options to load more of the netlist.

If you want to expand this hierarchy boundary without any connectivity, please use the option *-force* of command *explore_logic_hierarchy*.

---

## DPP-108

(error) Found invalid move bounds.

**Description**

If a move bound is completely blocked by a physical block, it is an invalid move bound. If the boundary of a move bound of a block is outside the block's boundary, it is invalid. Also if the element of a move bound is the same element of voltage area, it is invalid for placement.

**What Next**

Remove invalid move bounds or change the boundaries of invalid move bounds to make them valid.

---

## DPP-109

(error) Found fixed macros which are not inside the top level block boundary.

**Description**

Any fixed macro inside a physical block or voltage area should be placed inside the top level block (or chip) boundary so that shaping can create the legal shape to cover them.

**What Next**

Either unfix macros or move fixed macros inside the chip boundary.

---

## DPP-111

(error) Found the fixed block or voltage area which is not inside the chip boundary.

Feedback

**Description**

It is not allowed that the shape of fixed physical block or fixed voltage area is not completely inside the chip boundary.

**What Next**

Change the fixed shape so that it is completely inside the chip boundary.

---

## DPP-112

(error) Found overlaps between blocks.

**Description**

Any overlap between blocks is not allowed. This is mainly caused by the tool limitations.

**What Next**

Please fix the overlaps before moving to the next step, and also report the issue.

---

## DPP-113

(error) Found unsupported move bounds in shaping.

**Description**

Shaping is checking if the defined move bound is supported. When it detects the unsupported move bound, it will issue the detailed information for each related move bounds. Please make the change accordingly, otherwise those unshaped move bounds will cause the problem in the flow.

**What Next**

Remove the unsupported move bounds before shaping.

---

## DPP-114

(error) %s is not inside the core area.

**Description**

Incremental shaping requires that all blocks and voltage areas are inside the core area.

**What Next**

Move the corresponding blocks and voltage areas into the core area before applying incremental shaping.

Feedback

## DPP-115

(error) Found fixed shape blocks or voltage areas which are over utilized.

**Description**

When fixed shape blocks are over utilized, it will cause the problem in placement and optimization.

**What Next**

Change the shapes so that they are not over-utilized.

## DPP-116

(error) Found fixed shape block or voltage area whose input shape cannot be aligned to the boundary grid.

**Description**

When the width or height of the input fixed shape is not divisible by the boundary grid's X-step or Y-step, it is impossible to align this shape to the grid.

**What Next**

Change the input fixed shapes so that they can be aligned to the boundary grid.

## DPP-117

(error) shape_blocks failed to generate the valid solution.

**Description**

shape_blocks failed to find the shapes which can fit all macros and meet the utilization target.

**What Next**

There are many reasons for shape_blocks to fail. If the design has MIBs, using the constraint file to set MIB as the rigid blocks may help. If the design has many rigid blocks, fix some blocks if their locations are known to reduce the number of rigid blocks. If the design has large or many macros, fix the blocks which are macro dominant may help.

## DPP-118

(error) No more than %d physical blocks, voltage areas, and move bounds are supported. There are curretly %d.

Feedback

**Description**

There are too many physical blocks, voltage areas or move bounds in the design.

**What Next**

The pysical blocks, voltage areas, and move bounds are not intened to be used at a very fine scale, but are intended to contain larger groups of cells. Please constrain the cells in larger groups.

---

## DPP-119

(error) App option values %s and %s are mutally exclusive.

**Description**

The stated app option values are incompatible, so the command cannot proceed.

**What Next**

Please change the value for one of the options to a compatible one.

---

## DPP-120

(error) %s.

**Description**

To run placement or shaping, it is required that at least one site row has been created based on the valid site def.

**What Next**

Please create the site row with valid site def.

**See Also**

- create_site_def
- get_site_defs
- create_site_array
- create_site_row

---

## DPP-121

(Error) There is no active scenario with setup analysis activated for design %s.

Feedback

**Description**

The command expects to be able to analyze the setup times in the current scenario, or at least some scenario. If no active scenario has setup analysis activated, that can not happen. So you must activate setup timing in at least one scenario to continue.

**What Next**

Activate setup timing with "set_scenario_status".

---

## DPP-122

(Error) Block %s is nested inside module boundary %s

**Description**

Option "-place" does not support the nesting between block and module boundary.

**What Next**

To keep the physical block for placement, the module boundary has to be expanded such that the physical block is not nested inside any module boundary.

---

## DPP-123

(Error) No valid input is found %s

**Description**

The command will first check whether the input is valid or not. If it identifies the input which is not supported (for example, try to expand a physical block), it will issue a message and ignore this input. If all inputs are ignored, the tool will error out.

**What Next**

Please refer to the reported message before this error and make the changes in the option.

---

## DPP-124

(Error) Cannot find the corresponding %s for %s

**Description**

The tool could not find the valid module boundary (or bound) to continue the operation.

Feedback

**What Next**

Please check if there are other messages before this error. If not, please report this problem.

---

## DPP-125

(Error) Both center and distributed block placement types for block %s

**Description**

Specified block has some instances with the *block_placement_type* attribute equal to *center*, and some equal to *distributed*. For a given block, only one of those two values is allowed.

**What Next**

Check the values of this attribute for instances of the specified block, and change them appropriately.

---

## DPP-126

(warning) Block instance %s is out of the die area of design block %s.

**Description**

Block instance is out of the die area of design block.

**What Next**

Check block placement.

---

## DPP-127

(Error) Design is unmapped.

**Description**

Unmapped designs are not supported in macro placement. You can force the tool to try anyway, by setting the app option plan.macro.allow_unmapped_design to true, but, in that case, the result, or even that the tool will not have a serious problem, cannot be guaranteed.

**What Next**

Map the design.

Feedback

## DPP-128

(Error) Command-line option %s of create_placement -floorplan is not compatible with a shell design.

**Description**

The command-line options mentioned above is not compatible with shell designs.

**What Next**

Remove the command-line option.

## DPP-129

(Error) Style all_islands is compatible only with shell designs.

**Description**

The app option plan.macro.style has value all_islands, which is only compatible with shell designs.

**What Next**

Change the value of this app option to an appropriate one.

## DPP-201

(warning) No placeable block is found. Quit shaping.

**Description**

Did not find any placeable block.

**What Next**

Please make sure that blocks are created and not fixed in order to shape them.

## DPP-202

(warning) Ignored user input (%s %s).

**Description**

Wrong user input is identified and ignored.

**What Next**

Please correct the input based the detailed messages.

Feedback

## DPP-203

(warning) Cells in block %s are not placed.

### Description

You are getting message when running *report_placement -hierarchical*. When cells inside a block are not placed, report_placement will not report wire length or check violations inside this block.

### What Next

Please make sure that cells are placed, or run *report_placement* without the option *-hierarchical*.

## DPP-204

(warning) There are unplaced cells in the design.

### Description

report_placement only considers cells in the design that are placed or fixed. This message indicates that one or more cells are not placed or fixed. These cells will be ignored by this command. For example, the wirelength given by this report will be less than if all the cells were placed.

### What Next

If expectation is that design is placed, check the design to make sure all cells are properly marked with the placed attribute.

## DPP-205

(warning) Edit group %s is ignored

### Description

This command only supports edit groups with hard macros in the same physical hierarchy, voltage area, and/or move bound. Any edit group which violates this limitation will be ignored. Another reason for an edit group to be ignored is if it is a nested edit group. This command only considers the top most edit group. However note that if the top most edit group is supported, all nested edit groups will automatically be supported.

### What Next

The edit group objects relative locations may change after this command is run. You may want to check on this.

Feedback

## DPP-206

(warning) %s %s %s %.1f

**Description**

User specified -min_channel_size is not achieved.

**What Next**

One of the most common reasons is in order to fit macros inside each shape such that the shape cannot be reduced to get the required channel size.

If there is only one or two channels missing the required channel size, reducing the target utilization of the macro dominated block may make it easier to place macros inside the proposed shape, thus enabling to shrink the shape for the required channel size.

If many channels are missing the required channel size, please check if there are many macro dominated blocks and if some small macro dominated blocks can be merged into a big one; or if min_channel_size is too big to be achieved.

## DPP-207

(warning) Top level connections to the ports without locations will be ignored by placement.

**Description**

Ports are not placed before applying shape_blocks. This will impact the placement quality and thus impact the shaping results.

**What Next**

Please place ports before shaping.

## DPP-208

(warning) Block %s has an invalid boundary.

**Description**

The given block's boundary is not valid and so the block will be ignored. This could be because the block was not created properly, or the block boundary was somehow set to an incorrect value.

**What Next**

Take a look at the block and see why its boundary is invalid.

Feedback

## DPP-209

(warning) Merge of %s failed on cell %s.

**Description**

A floorplan merge between two different views was performed, likely during create_abstract, merge_abstract, or expand_outline. During this merge, the given information was dropped.

**What Next**

If this information is important you will need to reapply it.

## DPP-210

(info) Repelling group bound %s is ignored by macro placement.

**Description**

The macro placer detected a repelling group bound. These bounds are not considered during macro placement.

**What Next**

There's nothing that needs to be done.

## DPP-211

(warning) top level cells are not loaded.

**Description**

If the design is the outline view, top level connectivity is missing, which impacts the shaping QoR.

**What Next**

Run expand_outline to load the top level cells.

## DPP-212

(warning) Macro group location planning had difficulties for %s.

Feedback

### Description

The planning phase of macro placement had some difficulties finding a good solution. The macro legalizer will create a legal solution (if possible) but you might want to check the macro placement quality for the given region.

### What Next

Continue with the normal flow, but check the macro placement QoR.

---

## DPP-213

(Information) Created macro group %s.

### Description

This message gives the name of a group of macros which will be placed together.

### What Next

This is an informational message only. No action is required.

### See Also

- create_placement

---

## DPP-214

(Error) The group_bound %s contains fixed cells (e.g.: %s). Macro placement only supports group_bounds containing floating cells.

### Description

This message is shown for group_bounds that do not pass the macro placer's signin check.

### What Next

Modify the contents of the group_bound such that the group_bound only contains floating cells.

### See Also

- create_bound
- create_placement

Feedback

## DPP-215

(warning) Block %s: core area is (partially) outside boundary area

### Description

This message indicates that for the given block, the core area is not completely inside the block boundary. This may create problems for placement.

### What Next

This likely means that the block core area is not set up correctly. It can be fixed by using initialize_floorplan on the block or by push_down_objects of site rows from the top level.

## DPP-216

(Warning) The group bound %s was created with a nondefault value for %s. Macro placement will ignore this option.

### Description

This message is shown for group bounds that have unsupported options.

### What Next

Do not specify the option mentioned in the warning when creating the group bound. Macro placement supports effort levels low and medium, and does not depend on the dimension of a group bound. The contents of medium effort group bounds are kept together during macro placement, without forcing a particular location or shape as move bound or edit groups do. You can use a low effort group bound on higher level hierarchies, to tell macro placement to keep these hierarchies physically separate if possible.

### See Also

- create_bound
- create_placement

## DPP-217

(Warning) The -congestion option is not yet supported for macro placement in designs with physical hierarchy.

### Description

This design has physical hierarchy (sub-blocks), which is currently not supported for the congestion aware macro placement. Macro placement continues without congestion awareness. The standard cell placement will still use the -congestion flag.

Feedback

### What Next

Ignore the message until support has been added.

### See Also

- create_placement

---

## DPP-218

(warning) Block %s does not have a view suitable for placement.

### Description

You have asked to run a global placement inside given block, but the given block has a view that is incompatible with this. To run global placement, blocks need to have design view or a placement compatible abstract view. If you do not want a global placement, but want a flat placement instead, then use the command set_editability to control what blocks to place.

Placement will proceed without placing inside this block.

### What Next

Change to use a design view or placement compatible abstract for block or use set_editability to control what blocks to place.

---

## DPP-219

(warning) Hard macro %s is a spare cell.

### Description

The given hard macro is marked as a spare cell. A spare cell is a cell that has no connectivity and typically is a standard cell. It is unusual to have a hard macro marked as a spare cell and if many hard macros are marked as spare cells, then hard macro placement QoR will suffer because of lack of connectivity to drive placement.

### What Next

Check to see if this hard macro is really meant to be unconnected. If the hard macro is inside an abstract view, and you determine that the abstraction process caused the hard macro to be unconnected then switch to use design view instead.

---

## DPP-220

(warning) Potential over-utilization on %s %s.

Feedback

### Description

Based on a quick rough calculation of utilization, it appears that the given VA or block is over utilized. Since this calculation is rough, only a warning is issued. Later, a more accurate computation is done, and at that time if there is an issue, an error will be issued.

### What Next

If no error is issued, then there is nothing to do. If an error is issued, then check the block or VA to see why it is over utilized. It is possible the shape is too small.

---

## DPP-221

(warning) The -congestion_effort option only effects the standard cell congestion reduction, which is not enabled in this run.

### Description

The *-congestion_effort* option to *create_placement -floorplan* sets the effort level for the standard cell congestion reduction. The standard cell congestion reduction is only enabled if the *-congestion* option is used and the application option *plan.place.congestion_driven_mode* is set to *std_cell* or *both*.

In this run, the standard cell congestion reduction is not enabled, so the *-congestion_effort* option is ignored.

### What Next

Enable standard cell congestion reduction or leave out the *-congestion_effort* option.

### See Also

- create_placement
- plan.place.congestion_driven_mode

---

## DPP-222

(error) Option %s and app option %s are mutally exclusive.

### Description

The stated command option and app option settings are not supported together, so the command cannot proceed.

### What Next

Please change the option or app option to be compatible ones.

Feedback

## DPP-230

(warning) Can not run incremental placement due to unplaced cells, switching to non-incremental.

### Description

When running *-create_placement -floorplan -incremental*, it is expected that the macro cells are already placed. If they are not, *-incremental* is ignored and the cells are placed in a standard way.

### What Next

Make sure the cells are placed before using *-incremental*.

## DPP-231

(warning) Can not run incremental placement due to too many macro overlaps, switching to non-incremental mode.

### Description

When running *-create_placement -floorplan -incremental*, it is expected that the macro cells are inside core and if they overlap, they do it lightly. Heavy overlaps or too many cells outside their block will result in a switch to non-incremental placement.

### What Next

Make sure the macros do not overlap too much before using *-incremental*.

## DPP-232

(warning) Unable to parse app_option placement_file_mode: %s.

### Description

The app_option placement_file_mode accepts a mode, which is one of "none", "read", "write", optionally followed by a file name. For example: set_app_options -list {plan.macro.placement_file_mode "write preferred_macro_locations.tcl"} will instruct "create_placement -floorplan" to output the resulting macro locations to the file called "preferred_macro_locations.tcl".

### What Next

Verify that app_option placement_file_mode adheres to the proper format.

Feedback

## DPP-233

(error) Found multiple regions for voltage area %s (with element %s).

**Description**

When a voltage area has multiple regions which are not fixed, shape_blocks will ignore this voltage area.

**What Next**

Please fix the voltage area regions before running shape_blocks.

## DPP-234

(warning) Hierarchy %s has no connectivity.

**Description**

The given hierarchy does not have any connectivity. If this is expected, then there is no issue. However if it was expected to have connectivity, the likely reason is that you are using an outline view, and the connectivity of this hierarchy was not loaded.

Outline views are created using *read_verilog_outline*. The outline view has only a limited amount of connectivity to save on memory. The amount of netlist to load is controlled via options on *read_verilog_outline*.

**What Next**

If you have outline view, look at the man page for *read_verilog_outline* and use options to load more of the netlist.

## DPP-235

(warning) Did not find any buffer or inverter whose reference library cell site matches the block site.

**Description**

All the cells in the reference library were checked to find buffers and inverters. The tool was unable to find at least one buffer and one inverter whose site name matches with the block's site name. This is not a problem for placement, so this is only a warning. However this implies there is a problem either in the reference library setup or the block row site creation. Later, during virtual IPO, this will be a problem.

Feedback

### What Next

The problem is either with library prep or with the block sites created by *initialize_floorplan*. Change one or other so that site names match.

---

## DPP-236

(warning) Auto blockages in block/VA %s not created.

### Description

The most common reason for this messages is that the given block or voltage area (VA) has a very high utilization after auto blockages are created. This may lead to placement over utilization errors. Because of this, the tool did not create any auto blockages for this block or VA. The upper limit of this utilization is controlled using app option *plan.place.max_utilization_for_auto_blockages*.

A second possible reason for this message is that the VA has no hard macros. Auto blockages are not created in VAs that have no hard macros.

### What Next

If this is unexpected (ie the current utilization is low and there are not many channels to be blocked by auto blockages), the reason could be because one or more of below app options is set too high. Please see man pages for each of these app options to get more details on their functionality. App options: plan.place.max_utilization_for_auto_blockages, place.floorplan.sliver_size, plan.place.auto_generate_hard_blockage_channel_width, plan.place.auto_generate_soft_blockage_channel_width.

If one or more of these app options is set, try reducing the setting. You can recreate auto blockages with command *derive_placement_blockages*.

To force creation of blockages even if utilization is high use *derive_placement_blockages -force*.

---

## DPP-237

(warning) Macro %s does not have pins on one side, so it will not be considered for sandwich logic.

### Description

Sandwich logic is considered only for macros with signal pins only on one side. Pins of the two macros belonging to the sandwich will be placed facing each other.

### What Next

Do not use macros with pins on two sides for sandwich logic.

Feedback

## DPP-238

(warning) Macros %s and %s do not have the same shape, so they will not be considered as a pair for sandwich logic.

**Description**

Sandwich logic is considered only for pairs of macros with same shape.

**What Next**

Do not use pairs of macros with different shape for sandwich logic.

## DPP-239

(warning) Only floating standard cells can be marked as sandwich logic. Offending cell is %s.

**Description**

Only floating standard cells can be marked as sandwich logic for placement between a related macro pair.

**What Next**

Only include cells that are not marked fixed and have model type "standard cell".

## DPP-240

(warning) %s.

**Description**

Missing connectivity for macro placement.

**What Next**

Recreate the placement abstracts with the same settings for connectivity extraction that are currently set for macro placement.

## DPP-241

(warning) Channel %s of %s is not a multiple of %s grid pitch.

**Description**

Channel width or height is not a multiple of the grid pitch. This is likely to make it impossible to align macros to grid.

Feedback

**What Next**

Make sure channel widths and heights are multiples of the grid pitch.

---

## DPP-242

(warning) Macro %s is assigned grid %s, but there is no grid with that name.

**Description**

Specified macro was assigned a grid using set_macro_constraint command, but that grid does not exist. This setting will be ignored and macro will be assigned default grid, which is FinFET grid, if one exists, else litho grid.

**What Next**

Check if the grid name is misspelled or a grid with that name is deleted.

---

## DPP-243

(warning) -align_pins_to_track grid constraint on macro %s for orientation %s ignored as align point could not be determined.

**Description**

The tool failed to determine align point in order to snap pins to tracks. This is most likely because there are not enough pins (less than half) that can be simultaneously aligned to tracks, or perhaps there are pin shapes on multiple layers with the same routing direction. This setting will be ignored and macro will be assigned default grid, which is FinFET grid, if one exists, else litho grid.

**What Next**

Create a user grid that matches the tracks that you want to align pins to, and provide location of one of the pins (in master coordinates) to use as the align point.

---

## DPP-244

(warning) Can not color match all pins for macro %s. %s

**Description**

The tool failed to color match all pins to tracks. The specific reason is provided in the message. The tool will try to match as many pins as possible.

Feedback

**What Next**

Check whether the coloring for macro and tracks match properly. Check whether macro orientation precludes color matching, and if so, disallow such orientation using set_macro_constraints -allowed_orientations.

---

## DPP-245

(warning) There were issues with grid assignment. The command will stop after macro placement.

**Description**

The tool failed to properly match the grids to macros. According to the value of plan.macro.grid_error_behavior app option, the command will stop after macro placement, if possible.

**What Next**

Check whether user choices for the grids were accurate. Previous warnings should indicate particular grid assignment issues. If you want to continue with the placement anyway, change the value of plan.macro.grid_error_behavior app option.

---

## DPP-246

(warning) Cannot snap the fixed boundary object %s to the FinFet grid.

**Description**

When any dimension of the fixed block boundary (from shaping constraints) is not divisible by the FinFet grid, shaping cannot align all boundary edges to the FinFet grid.

**What Next**

It is better to create the shape so that its dimensions (i.e., edge lengths) are divisible by the FinFet grid.

---

## DPP-247

(warning) %s

**Description**

When the input pg strategy is invalid, compile_pg cannot create the pseudo PG shapes for shaping. Then shape_blocks will ignore the option -pg_strategy.

Feedback

**What Next**

Run compile_pg command to find why it is failing (e.g., missing nets) and provide the valid pg strategy.

---

## DPP-248

(warning) %s%s%s%s

**Description**

When the input is an existing module boundary, physical block or move bound, it will be ignored for the specified exploration.

**What Next**

Check if the input is wrong. Otherwise this warning can be ignored as the module boundary or move bound is already existing.

---

## DPP-249

(error) %s.

**Description**

Error during Importing the connections from an attribute for macro placement.

**What Next**

Check the design with the same settings for connectivity extraction that are currently set for macro placement.

---

## DPP-250

(warning) Found fixed shape blocks or voltage areas which are over utilized.

**Description**

When fixed shape blocks are over utilized, it will cause the problem in placement and optimization.

**What Next**

Change the shapes so that they are not over-utilized.

---

## DPP-251

(warning) Found master %s with edges that are neither horizontal nor vertical.

Feedback

**Description**

The command expects only cells whose boundary is a Manhattan polygon (i.e. polygon containing only horizontal and vertical edges). If the boundary is not such a polygon, the command will use the smallest Manhattan polygon containing the boundary instead of the actual boundary.

**What Next**

Check if the boundary is correct, or if it is supposed to be a Manhattan polygon.

---

## DPP-252

(warning) %s %s

**Description**

Could not find the virtual hierarchy which matches the specified input name. So the corresponding input is ignored.

**What Next**

Check if the input names are correct. With *set_app_options -list { plan.place.hierarchy_by_name true}*, get_cells cannot be used. Instead the virtual hierarchy names are used as inputs.

---

## DPP-253

(warning) %s%s%s%s

**Description**

When the input is not the expected module boundary or move bound, the specified exploration cannot be applied.

**What Next**

Check if the input is wrong. Otherwise follow the level based -expand/-collapse (or -virtual_group/-virtual_ungroup) to get the expected module boundary or move bound.

---

## DPP-254

(warning) %s is inside the physical block %s, which is ignored for exploration

**Description**

When the input is inside any committed block, the specified exploration cannot be applied.

Feedback

### What Next

To explore module boundary or move bound inside any committed block, first set the current design to the committed block and then apply the exploration options.

---

## DPP-255

(warning) Found two tracks on the same layer %s and with the same direction (%s), but different steps

### Description

There are multiple tracks on the same layer and the same direction, but with different steps. This adversely affects the ability to snap macro pins onto tracks (using *create_placement -floorplan* command), as well as to check whether they are snapped properly (using *report_placement -user_grid* command).

### What Next

Delete unnecessary tracks.

---

## DPP-256

(warning) Bound %s cannot be used for exploration because of content change(s).

### Description

When cells or ports are added to a bound or removed from a bound which is created by explore_logic_hierarchy, the bound cannot be used for exploration any more.

### What Next

Do not change the bound contents if the bound is to be explored using explore_logic_hierarchy.

---

## DPP-257

(warning) When plan.macro.auto_buffer_channels is set to true, plan.macro.%s will be ignored.

### Description

This message shows up when plan.macro.auto_buffer_channels is set to true, and some of plan.macro.max_buffer_stack_height, plan.macro.buffer_channel_height, plan.macro.max_buffer_stack_width, and plan.macro.buffer_channel_width are set to non-zero values. Those non-zero values will be ignored, as the coresponding values will now be automatically calculated.

Feedback

**What Next**

Make sure you wanted the values automatically calculated.

---

## DPP-258

(warning) No rule named %s, using default rule instead.

**Description**

The rule specified using plan.macro.buffer_rule_name does not exist. The tool will use the default rule instead.

**What Next**

Check the name of the rule.

---

## DPP-259

(warning) No buffer available for rule %s, using the default rule's buffer.

**Description**

The rule specified using plan.macro.buffer_rule_name does not have a buffer specified. The tool will use the default rule's buffer size instead.

**What Next**

Check the contents of the specified rule.

---

## DPP-260

(warning) No buffer available for the default rule, turning off automatic channel buffering.

**Description**

The default rule does not have a buffer specified; hence the tool cannot properly determine the buffer channel sizes and will turn off automatic channel buffering.

**What Next**

Check the contents of the default rule.

---

## DPP-261

(warning) No buffer spacings available for rule %s, using the default rule's values.

Feedback

**Description**

The rule specified using plan.macro.buffer_rule_name does not have buffer spacings. The tool will use the default rule's buffer spacing instead.

**What Next**

Check the contents of the specified rule.

---

## DPP-262

(warning) No buffer spacings available for the default rule, turning off automatic channel buffering.

**Description**

The default rule does not have buffer spacings; hence the tool cannot properly determine the buffer to buffer distances and will turn off automatic channel buffering.

**What Next**

Check the contents of the default rule.

---

## DPP-263

(info) %s

**Description**

Information about override and auto_select controlling the BB-star hierarchy selection algorithm.

**What Next**

If an error is reported, adjust the specified hierarchy names accordingly.

---

## DPP-264

(warning) Edit group %s marked flexible, but treated as rigid.

**Description**

The edit group (macro array) has is_flexible attribute set to true, but was not treated as flexible. In order to be treated as flexible, we expect clearly defined rectangular set of rows and columns of macros. This issue happens if the macros are not organized relatively neatly to be able to easily deduce rows/columns, or if the array is rectilinear.

Feedback

**What Next**

Make sure the macros are arranged in a way that rows and columns are easily deduced; using GUI macro array tool will ensure that. Additionally, make sure that it is a rectangular macro array; currently, the tool does not support flexible rectilinear macro arrays.

---

## DPP-265

(warning) Style %s is not compatible with a shell design, using style %s instead.

**Description**

The app option plan.macro.style has a value that is incompatible with a shell design, so the tool will treat it as though the another value is specified.

**What Next**

Next time use a compatible value.

---

## DPP-266

(warning) Value %s of app option %s is not compatible with a shell design, using the default value %s instead.

**Description**

Some app options values are not compatible with shell design, so they are reset to a compatible value in order for the command to proceed.

**What Next**

Next time use a compatible value.

---

## DPP-401

(info) cell %s is outside of placement area

**Description**

The specified cell is placed outside of its parent physical hierarchy's placement area.

**What Next**

Please check the design to make sure it is properly placed.

---

## DPP-403

(info) cell %s overlaps block %s

Feedback

**Description**

The specified cell is overlapping with the specified block.

**What Next**

Please check the design to make sure it is properly placed.

---

## DPP-405

(info) %s and %s overlap

**Description**

The two specified objects are placed overlapping each other. The objects could be hard macro cells or one could be a hard macro blockage. For a hard macro cell, overlapping includes any user defined hard macro keepout (create_keepout_margin -type hard_macro).

**What Next**

Please check the design to make sure it is properly placed.

---

## DPP-406

(info) %s is not on user grid (%s).

**Description**

The reported object is not on user grid. To see what user grids are defined for this object use *report_macro_constraints*.

**What Next**

Check the object to make sure it is properly placed and manually snap it to grid if desired. If the user grid is incorrect for this object use *set_macro_constraints -alignment_grid* to change it.

---

## DPP-407

(info) cell %s is not placed.

**Description**

One or more cells in design are not placed. In particular, the specified cell is not placed. This may have implications based on what command is being executed. For example, not placed cells may be ignored.

Feedback

**What Next**

This is an informational message.

---

## DPP-408

(info) %s and %s overlap

**Description**

The two specified physical hierarchy cells are placed overlapping each other.

**What Next**

Please check the design to make sure they are properly placed.

---

## DPP-409

(info) %s and %s have macro spacing rule violation

**Description**

The two specified objects have macro spacing rule violation each other. The objects could be hard macro cells. The macro spacing rule is set by app option plan.macro.spacing_rule_widths and plan.macro.spacing_rule_heights.

**What Next**

Please check the design to make sure it is properly placed.

---

## DPP-410

(info) Nothing is expanded because no sub-hierarchy size is more than %.1f%% of current hierarchy (%s) size.

**Description**

This message informs the user that either the input hierarchy has no sub-hierarchies or each sub-hierarchy is too small with respect to the threshold.

**What Next**

You can ignore this message if this is ok. Otherwise, adjust threshold using "explore_logic_hierarchy -threshold" if small sub-hierarchies are to be explored.

---

## DPP-411

(info) Block %s violates core area.

Feedback

**Description**

The specified block is not completely inside the core area. Typically, blocks should be placed inside the core area.

**What Next**

Check the design to make sure the block is placed correctly.

---

## DPP-412

(info) Block %s utilization differs from target by %.2f percentage points

**Description**

The actual utilization of the specified block does not match the target utilization by the amount specified. For example, if the target utilization is 60% and the current utilization is 65% then the difference is 5 percentage points.

**What Next**

It is normal for the actual block utilization to not exactly match the target utilization, but if the difference is large, the block shape may need to be adjusted.

---

## DPP-413

(info) Placing macro %s on preferred location {%s}.

**Description**

The location constrained through set_macro_constraints -preferred_location has been applied.

---

## DPP-414

(info) Ignoring preferred location of macro %s because it is fixed.

**Description**

The location constrained through set_macro_constraints -preferred_location has been ignored because the macro has a fixed location.

**What Next**

If the macro should be placed at the preferred location, mark it placeable. If the fixed location is correct, remove the preferred location constraint for this macro to avoid this message.

Feedback

## DPP-415

(info) Hierarchy bound %s has no connectivity.

**Description**

The given hierarchy bound does not have any connectivity. If this is expected, then there is no issue. However if it was expected to have connectivity, the likely reason is that you are using an outline view, and the connectivity of this hierarchy bound was not loaded.

Outline views are created using *read_verilog_outline*. The outline view has only a limited amount of connectivity to save on memory. The amount of netlist to load is controlled via options on *read_verilog_outline*.

**What Next**

If you have outline view, look at the man page for *read_verilog_outline* and use options to load more of the netlist.

## DPP-416

(info) All hard macros are fixed, no hard macro placement is done.

**Description**

You have requested the -floorplan option to create_placement which includes hard macro (HM) placement. However the tool has determined that all the HMs are fixed and thus there are no HMs to be placed.

It this is expected, then no action is required.

**What Next**

If this is not expected, then you need to determine why all the HMs are fixed and unfix the HMs that you want the tool to place. To determine the placement status of a HM use *get_attribute -name status [get_cells <cell_name>]*. Change all the HMs you want to place to status "placed" using the *set_attribute* command.

Another reason that all the macros are fixed could be that the app option place.coarse.fix_hard_macros is set to true (this is not the default). Use *report_app_options place.** to see values of all placement app options. If you dont want macros to be fixed, then use *set_app_options -list {place.coarse.fix_hard_macros false}*.

## DPP-417

(info) max_density auto set to %.2f for placement.

Feedback

**Description**

The app option plan.place.auto_max_density is set to true. Because of this, the tool will automatically turn on max_density control during placement of a block that has subblocks in it, if it determines that utilization is low. That means standard cells will be allowed to be placed in a clumped fashion, thus minimizing wirelength but potentially creating congestion.

**What Next**

If you do not want max_density to be turned on automatically, then turn off this app option using *set_app_options* command.

---

## DPP-418

(info) Macro %s is assigned %sgrid%s.

**Description**

This message displays grid information for a macro.

**What Next**

You can check whether the displayed information matches the intended one.

---

## DPP-419

(info) checking for fixed hard macro %s is skipped.

**Description**

This message shows the tool will skip checking density gradient violations for this fixed hard macro since user has specified '-ignore_fixed' option.

**What Next**

You can check whether the displayed information matches the intended one.

---

## DPP-420

(warning) checking for hard macro %s is skipped since it is overlapped with other hard macros.

**Description**

The tool find the hard macro is overlapped with other hard macros, so it will skip checking density gradient violations for this hard macro.

Feedback

**What Next**

Move those overlapped hard macros, then run report_placement -hard_macro_overlap and report_placement -physical_hierarchy_violations to make sure there is no placement violation in current design.

---

## DPP-421

(info) checking for small hard macro %s is skipped.

**Description**

This message shows the tool will skip checking density gradient violations for this small hard macro since both the width and height are less than the specified min macro size.

**What Next**

You can check whether the displayed information matches the intended one.

---

## DPP-422

(info) checking for small hard macro cluster %s is skipped.

**Description**

This message shows the tool will skip checking density gradient violations for this small hard macro cluster since both the width and height are less than the specified min macro size.

**What Next**

You can check whether the displayed information matches the intended one.

---

## DPP-425

(error) There exist relative location placement constraints loop:

**Description**

The macro or macro array relative location placement constraints are invalid when there exist constraint loop. For example, macro a anchor to b, macro b anchor to c, macro c anchor to a to construct a loop. The relavent macros or macro arrays are listed below this message. Since there is error in the constraint setting, the relative location constraints for these macros or macro arrays will be ignored by placement.

Feedback

**What Next**

Please review the macro relative location constraints for the macros or macro arrays listed below this message. You probably need to remove one or more of the constraints.

---

## DPP-426

(error) There exist bad relative location constraints path with root anchor object has no fixed location:

**Description**

If a macro is anchored by other macros while it does not anchor to other objects, it should be fixed, otherwise, the error message will be reported. The relavent macros or macro arrays are listed below this message. Since they don't eventually anchor to a fixed object, the relative location constraints for these macros will be ignored by placement.

**What Next**

Please review the relative location constraints on the macros or macro arrays listed below this message. If you think some constraints should not be there, please use *remove_macro_relative_locations* to remove them. It is possible that you missed setting a constraint on a macro to anchor it to a fixed object. If so, please use *set_macro_relative_location* to add the constraint. Also, user can mark the macro which has no relative location placement constraints but is anchored by other macros as "fixed".

---

## DPP-427

(Warning) Target object %s and anchor object %s are not in the same physical hierarchy. Skip it!

**Description**

The checking is performed for target and anchor object. The two objects should be in the same physical hierarchy.

**What Next**

Please set correct option value for the tool to proceed.

---

## DPP-428

(error) Insufficient space for packing contents. Detailed information: %s

Feedback

**Description**

The block shaper found that it has insufficient room for fitting the contents within the boundary of a block or voltage area. Contents of such a region may be (a combination of) macros, nested blocks or nested voltage areas.

**What Next**

Check macros, predefined (nested) block boundaries, keepouts, channel constraints, which influence the available and required space.

---

## DPP-429

(warning) Potentially insufficient space for packing contents. Detailed information: %s

**Description**

The block shaper may have difficulty finding a solution, because it might have insufficient room for fitting the contents within the boundary of a block or voltage area. Contents of such a region may be (a combination of) macros, nested blocks or nested voltage areas.

**What Next**

Check macros, predefined (nested) block boundaries, keepouts, channel constraints, which influence the available and required space.

---

## DPP-430

(error) Detected utilization issues. Detailed information: %s

**Description**

The block shaper found that it has insufficient room for fitting the contents within the boundary of a block or voltage area. Contents of such a region may be (a combination of) macros, nested blocks or nested voltage areas.

**What Next**

Check constraints that influence the target utilization, like channel size constraints, target area/utilization constraints and keepouts. Relax them to make more space available.

---

## DPP-431

(warning) The design block %s shape has changed.

Feedback

**Description**

The macro or macro array relative location constraints that derived from command derive_macro_relative_location do not guarantee to support the design block that has been changed the shape, such as from R floorplan to T floorplan.

**What Next**

Please review the design block floorplan shape.

---

## DPP-432

(warning) The placed macro or macro array %s is outside the core area boundary of block %s.

**Description**

The relative location placement place macro or macro array outside the block core area boundary.

**What Next**

Please review the relative location constraint or place the object inside block core area.

---

## DPP-433

(warning) There is relative location constraints both on macro array %s and macro %s that the macro array contains. Macro placement take the constraint on macro array.

**Description**

The relative location constraints on macro array and macro have conflict, and macro placement take the constraint on macro array.

**What Next**

Please review the relative location constraint for macro array and macros.

---

## DPP-434

(warning) There is relative location constraints on macro array %s's macro %s. Macro placement take the macro's constraint as the constraint on macro array.

**Description**

Macro placement take the macro's constraint as the constraint on macro array to resolve the conflict between the constraints of macro array and its macros.

Feedback

**What Next**

Please review the relative location constraint for macro array and macros.

---

## DPP-435

(info) Total utilization difference from target in design %s: %.2lf percentage points.

**Description**

The total utilization difference will be count at the top level.

**What Next**

N/A

---

## DPP-436

(error) Macro cell %s is associated with voltage area %s, but is not placed inside its effective voltage area region.

**Description**

Macro cell has its corresponding voltage area, during placement, it should be in right place, otherwise, the error message will be reported.

**What Next**

Please check the design to make sure it is properly placed.

---

## DPP-437

(error) Macro cell %s does not belong to voltage area %s, but the cell is placed inside the unrelated voltage area.

**Description**

Macro cell has its corresponding voltage area, during placement, it should be in right place, otherwise, the error message will be reported.

**What Next**

Please check the design to make sure it is properly placed.

---

## DPP-438

(error) Too many rigid blocks detected in %s.

Feedback

**Description**

This design contains too many rigid subblocks which is beyond the current capabilities of shape_blocks.

**What Next**

Define a rigid boundary for fewer subblocks, or enlarge the boundary of this design to provide more space for placing the rigid subblocks. Verify that padding by channel constraints and inner and outer keepouts don't take up too much space between the subblocks. Also take into account space taken up for achieving block grid alignment. Alternatively, consider placing the blocks manually.

---

## DPP-439

(error) Black box %s 's target utilization or target area or target boundary area is not valid.

**Description**

The black box should have a legal target area and target boundary area, if not, it should have a legal target utilization value which is bigger than 0 and not bigger than 1.

**What Next**

Check the settings of black box's target area and target boundary area, the value should be set, also, if these two values have not been set, the target utilization should be a valid value.

---

## DPP-441

(Warning) Found no block voltage area or power domain for shaping

**Description**

There must be at least one block, voltage area or power domain for shaping

**What Next**

If this is intended to be a hierarchical design and the user wants to run *shape_blocks* to place child blocks, please use *commit_block* command to create the child blocks.

If there are voltage areas which needs the placement of tool, user can use *create_voltage_area*, *shape_blocks* would create voltage area automatically for any power domain that does not have voltage areas. *create_power_domain* will create corresponding power domains.

Feedback

## DPP-442

(Warning) UPF data is invalid.

**Description**

During shaping and placement, valid UPF data is needed.

**What Next**

Please use *check_mv_design* to check the validation of MV setting.

## DPP-443

(Warning) App option plan.place.hierarchy_by_name is off.

**Description**

If the design has no logical hierarchy, there may be potential long run time issue for placement. If the logical hierarchy for the design is flat, it could result in long run time for / fBcreate_placement -floorplan/fp. To avoid the long placement run time, you can set app option "plan.place.hierarchy_by_name" to true

**What Next**

If the design is flat, user can set app option "plan.place.hierarchy_by_name" to true to reduce the run time.

## DPP-444

(Info) Macro %s belongs to RP group.

**Description**

In IC Compiler II, if the user wants to place a set of hard macros together and align them in a particular way, we recommend using the macro array tool to create edit group for the set of hard macros. However, sometimes the user needs to mix hard macros and standard cells in one RP Group, then *create_placement* will handle it during placement stage. For floorplan stage, the user wants to know which macro belongs to RP group and which has no RP ownership.

**What Next**

If the macro belongs to RP group, user must fix it after *create_placement -floorplan*.

## DPP-445

(Info) The number of illegal pin shapes of %s : %d.

Feedback

**Description**

For a legal pin shape, it must meet the following two requirements at the same time: (1) color attribute matched between pin shape and track should be matched, (2) the track center should be aligned with pin shape. If there are illegal pin shape, the report will be generated.

**What Next**

Redo the macro cell library preparation.

---

## DPP-446

(warning) Fixed content is hard to slice for %s

**Description**

The block shaper may have difficulty finding a solution, because it has trouble slicing the fixed contents within the boundary of a block or voltage area.

**What Next**

Check the locations of fixed macros or fixed nested blocks and rearrange them such that content belonging to the same nested block, voltage area or move bound is easier to cover by a rectangle or L-shape. Avoid situations that require more complex shapes (e.g. due to detouring around content of siblings).

---

## DPP-447

(Info) Cannot create child module boundary for %s because there is a module boundary in parent hierarchy %s

**Description**

By default, the command will not create the nested module boundary. So the input logic hierarchy is ignored.

**What Next**

Use *set_app_options -name plan.explore.allow_nested -value true* to force the tool to create nested module boundary.

---

## DPP-448

(Info) Reserved edge space for %d pins and/or ports

Feedback

**Description**

This message describes how much space is going to be kept free of macros along block/movebound/voltage area.

**What Next**

If this value is unexpectedly too low or even 0, check whether the tracks are reaching block boundary; otherwise, the command may interpret that as no space available for pins, and therefore would not attempt to leave any space free of macros. Also note that the command separately handles fixed/placed pins, so they do not count towards this.

---

## DPP-449

(Warning) Cannot group macros of block %s by hierarchy

**Description**

Cannot group macros for the block based on hierarchy either because: 1. This block contains a sub-block which crosses different logical hierarchies, or 2. This block is a sub-block itself which crosses different logical hierarchies.

**What Next**

Check the movebound or voltage area setting to see whether any of them crosses different logical hierarchies.

---

## DPP-450

(info) %s

**Description**

Block shaping has detected overutilization, and has found block instances referring to uneditable blocks. The current boundary of such blocks cannot be shaped, and might be the cause of overutilization.

**What Next**

Use set_editability to make the referred blocks editability, thus enabling shape_blocks to modify their boundary.

---

## DPP-451

(warning) Block shaping will load shaping constraints from Tcl, not from the file "%s".

Feedback

**Description**

Block shaping has been configured to import shaping constraints from Tcl, and therefore ignores the constraints provided by shape_blocks' option "-constraint_file %s".

**What Next**

Use "set_app_options -name plan.shaping.import_tcl_shaping_constraints -value false" to ignore Tcl shaping constraints and load shaping constraints from file.

---

## DPP-452

(warning) Ignoring detected shaping constraints in Tcl, because app_option plan.shaping.import_tcl_shaping_constraints is set to false.

**Description**

Block shaping can import shaping constraints from file or from Tcl, which is controlled by app_option plan.shaping.import_tcl_shaping_constraints. Use "set_app_options -name plan.shaping.import_tcl_shaping_constraints -value true" to have "shape_blocks" import shaping constraints from Tcl.

**What Next**

Use "set_app_options -name plan.shaping.import_tcl_shaping_constraints -value true" to enable importing Tcl shaping constraints during block shaping.

---

## DPP-453

(info) Imported shaping constraints from Tcl (%d constraints, %d channels and %d groups). For details, use app_option plan.shaping.report_import_constraints.

**Description**

This message gives an overview of the shaping constraints from Tcl that have been imported by "shape_blocks".

**What Next**

Use "set_app_options -name plan.shaping.report_import_constraints -value log" to get a detailed report about the imported Tcl shaping constraints during block shaping.

---

## DPP-454

(info) Exported (converted) shaping constraints to Tcl (%d constraints, %d channels and %d groups). For details, use app_option plan.shaping.report_export_constraints.

Feedback

**Description**

This message gives an overview of the shaping constraints that were converted to Tcl by "shape_blocks -constraint_file <name>".

**What Next**

Use "set_app_options -name plan.shaping.report_export_constraints -value log" to report the converted constraints during block shaping in the log. Use "set_app_options -name plan.shaping.report_export_constraints -value file" to write out a Tcl file containing the converted constraints.

---

## DPP-455

(error) %s

**Description**

Failed exporting (converting) shaping constraints.

**What Next**

Please refer to the above message for more information. Also check shape_blocks man page for shaping constraint syntax and examples.

---

## DPP-456

(error) The mutually exclusive app_options plan.shaping.export_tcl_shaping_constraints and plan.shaping.import_tcl_shaping_constraints are both enabled.

**Description**

The app_options plan.shaping.import_tcl_shaping_constraints and plan.shaping.export_tcl_shaping_constraints are mutually exclusive.

**What Next**

To import shaping constraints from tcl, only enable plan.shaping.import_tcl_shaping_constraints. To export (convert) shaping from a file to tcl, only enable plan.shaping.export_tcl_shaping_constraints.

---

## DPP-457

(error) Options %s and %s are mutually exclusive.

**Description**

Found mutually exclusive options.

Feedback

**What Next**

Drop one of the options and rerun the command.

---

## DPP-458

(error) Macros of macro group %s are not in same placeable area.

**Description**

All macros of a macro group must belong to same placeable area, i.e, a physical bloc, a movebound or a voltage area.

**What Next**

Remove macros which belong to a different placeable area and rerun the command.

---

## DPP-459

(error) Macros of macro array %s are not in same placeable area.

**Description**

All macros of a macro array must belong to same placeable area, i.e, a physical bloc, a movebound or a voltage area.

**What Next**

Remove macros which belong to a different placeable area and rerun the command.

---

## DPP-460

(error) Macro %s and macro group %s don't belong to same placeable area.

**Description**

All macros of a macro array must belong to same placeable area, i.e, a physical bloc, a movebound or a voltage area.

**What Next**

You cannot add the macro to this group.

---

## DPP-461

(warning) macro group with name %s already exists.

Feedback

**Description**

Macro group name must be unique in its block.

**What Next**

You cannot create two macro groups with same name.

---

## DPP-462

(warning) Macros don't belong to same placeable area.

**Description**

Macros of a macro group must belong to same placeable area, i.e., a physical block, a move bound, or a votage area.

**What Next**

You cannot create macro group with these macros.

---

## DPP-463

(warning) Cell %s is not a hard macro. Ignored.

**Description**

The given cell is not a hard macro cell.

**What Next**

This cell will be ignored.

---

## DPP-464

(error) Group %s has no macros, can not set boundary of this type.

**Description**

The given macro group has no macros, so the shape can not be auto-determined.

**What Next**

Add macros to the group, or change type to contour and add boundary list of points.

---

## DPP-465

(error) There is no such macro group.

Feedback

**Description**

The specified object is not a macro group.

**What Next**

Make sure the specified object is a macro group.

---

## DPP-466

(error) If -type is contour, boundary must be provided.

**Description**

The boundary list of points was not provided, but it is required when -type is contour.

**What Next**

Provide the list of points, or change type to something other than contour.

---

## DPP-467

(error) If -type is not contour, boundary can not be provided.

**Description**

When -type is not contour, the tool will automatically calculate the boundary, so the list of boundary points can not be provided.

**What Next**

Remove the list of points, or change type to contour.

---

## DPP-468

(error) Specified shape can have only horizontal and vertical edges.

**Description**

The specified shape contains edges that are neither horizontal nor vertical. This is not allowed.

**What Next**

Change the shape so that each edge is horizontal or vertical.

---

## DPP-469

(warning) Macro groups %s and %s don't match and cannot be cloned..

Feedback

**Description**

Macro groups must match each other to be cloned.

**What Next**

Use et_macro_group_packing_clone_candidates command to get clone candidates.

---

## DPP-470

(warning) Cell %s is ignored because %s.

**Description**

The cell is not valid.

**What Next**

No futher action is required.

---

## DPP-478

(warning) Usage of repelling group bounds%s with more than %d cores is still experimental.

**Description**

Repelling group bounds of two cores is supported for DCLS (Dual Core Lock Step). The use of more than two cores within one repelling group bound is still experimental.

**What Next**

The use of more than two cores may have an impact on QoR.

---

## DPP-479

(error) Block instance %s is out of the die area of design block %s.

**Description**

Block instance is out of the die area of design block.

**What Next**

Check block placement.

---

## DPP-480

(warning) Macro %s will be removed from movebound %s and added to macro group %s.

Feedback

**Description**

Macro group is as sub type of movebound. One macro can only belong to one movebound at one time. If a macro belonging to a movebound is added to a macro group, it will be removed from orignal movebound.

**What Next**

None.

---

## DPP-481

(warning) Macro %s will be moved from macro group %s to a new macro group %s.

**Description**

A macro can only belong to one macro group at one time. If it is added to a new macro group, it will be removed from old macro group.

**What Next**

None.

---

## DPP-482

(info) All macors are fixed, no macro group will be created.

**Description**

All macros are fixed, the command will not create any macro group.

**What Next**

None.

---

# DPPA

---

## DPPA-001

(warning) Failed to %s %s %s

**Description**

place_pins failed to place or legalize (in legalization mode) this pin.

Feedback

### What Next

This may be due to pin constraints setting error or internal data error. Please check pin constraint settings. In legalization mode, a legal slot cannot be found for the pin and it is not legalized as a result. This can be due to insufficient slot/track resources or pin constraint settings.

### See Also

- create_pin_blockage
- create_pin_guide
- create_routing_corridor
- create_topological_constraint
- read_pin_constraints
- set_block_pin_constraints
- set_bundle_pin_constraints
- set_individual_pin_constraints

---

## DPPA-002

(Error) Failed to place some of the block pins.

### Description

place_pins failed to place some pins.

### What Next

This may be due to the fact that there are no enough slots available to assign all the pins according to the pin constraints. Please check the pin constraint setting and make sure that there are enough slots available to place pins.

### See Also

- create_pin_blockage
- create_pin_guide
- create_routing_corridor
- create_topological_constraint
- read_pin_constraints

Feedback

- set_block_pin_constraints
- set_bundle_pin_constraints
- set_individual_pin_constraints

## DPPA-003

(warning) Not enough slots for %s %s of net %s on abutting edges between blocks %s and %s. Ignoring pin spacing constraints...

### Description

place_pins failed to place this pin while honoring pin spacing constraints.

### What Next

This may be due to the fact that there are no enough slot available to assign all the abutted pins according to the pin constraints. Please check the pin constraint setting and make sure that there are enough slots available to place abutted pins.

### See Also

- create_pin_blockage
- create_pin_guide
- create_routing_corridor
- create_topological_constraint
- read_pin_constraints
- set_block_pin_constraints
- set_bundle_pin_constraints
- set_individual_pin_constraints

## DPPA-004

(Warning) Not enough slots available for pin placement. Ignore pin spacing constraints.

### Description

place_pins failed to place some pins while honoring pin spacing constraints. place_pins will relax spacing constraints and place those pins.

Feedback

### What Next

This may be due to the fact that there are no enough tracks available to assign all the pins according to the pin constraints. Please check the pin constraint setting and make sure that there are enough tracks available to place pins.

### See Also

- create_pin_blockage
- create_pin_guide
- create_routing_corridor
- create_topological_constraint
- read_pin_constraints
- set_block_pin_constraints
- set_bundle_pin_constraints
- set_individual_pin_constraints

---

## DPPA-005

(Error) There are no valid blocks defined.

### Description

place_pins doesn't find any blocks or the blocks don't have valid boundaries.

### What Next

Command place_pins places block pins but it could not find any valid blocks. Please define block or set valid boundary for the block before perform place_pins.

### See Also

- commit_block
- initialize_floorplan

---

## DPPA-006

(Warning) There are unrecognized ports or pins on net %s.

### Description

The net reported is connected to a port or pin that may be corrupted.

Feedback

### What Next

This may be due to a bad netlist or an internal data error. Please check the net and make sure it is correct.

### See Also

- check_design
- report_nets

---

## DPPA-007

(Warning) Net %s contains a hierarchical loop.

### Description

A hierarchical loop is detected for the net reported.

### What Next

Please check the netlist connection use report_nets and make sure it is correct.

### See Also

- check_design
- report_nets

---

## DPPA-008

(Warning) There are unrecognized nets connected to net %s.

### Description

The net reported is not correctly connected to its upper hierarchy or lower hierarchy.

### What Next

This may be due to a bad netlist or an internal data error. Please check the netlist and input data and make sure it is correct.

### See Also

- check_design
- report_nets

Feedback

## DPPA-009

(Warning) There are routing errors on net %s.

**Description**

The net reported is not routed correctly.

**What Next**

This may be due to a bad cell placement. Please check that all cells connected to the net are placed within or outside of the right corresponding boundaries using command report_placement -physical_hierarchy_violations.

**See Also**

- report_placement

## DPPA-010

(Warning) There are routing errors on net %s.

**Description**

The net reported is not routed correctly.

**What Next**

This may be due to a bad cell placement. Please check that all cells connected to the net are placed within or outside of the right corresponding boundaries using command report_placement -physical_hierarchy_violations.

**See Also**

- report_placement

## DPPA-011

(Warning) Net %s is not routed.

**Description**

The net reported is not routed.

**What Next**

Please check the routing of the net. Make sure the net is routed.

Feedback

**See Also**

- place_pins
- route_global
- route_group

---

## DPPA-012

(Warning) The driver of the net %s is not connected to the route.

**Description**

The net reported is not fully routed.

**What Next**

Please check the routing of the net. Make sure the net is fully routed.

**See Also**

- place_pins
- route_global
- route_group

---

## DPPA-013

(Warning) There are floating ports or pins on net %s.

**Description**

The global router tries to connect a port or pin on the reported net. However, the port or pin is not hierarchically connected to the net.

**What Next**

This may be due to a bad netlist or an internal data error. Please check the routing of the net; netlist and the input data

**See Also**

- place_pins
- route_global
- route_group

Feedback

## DPPA-014

(Warning) There are errors when analyzing the routing on net %s.

**Description**

Netlist analysis failed for the indicated net.

**What Next**

Please check the net and report this error.

**See Also**

- place_pins
- route_global
- route_group

## DPPA-015

(Warning) There is a mismatch between the routing and the hierarchical netlist of net %s.

**Description**

The physical routing connects objects that are not hierarchically connected to the net reported.

**What Next**

This may be due to a bad netlist, bad placement or an internal data error. Please check the routing of the net and the netlist. Or use command report_placement -hierarchical to check if there is any hierarchical error in placement.

**See Also**

- check_design
- place_pins
- report_placement
- route_global
- route_group

Feedback

## DPPA-016

(Warning) Floating routes found on net %s.

**Description**

There exist routes that do not connect to any objects. This may be because of bad netlist, incorrect placement or other errors.

**What Next**

Please check the routing of the net and the netlist. Please check the placement using command report_placement -hierarchical.

**See Also**

- check_design
- place_pins
- report_placement
- route_global
- route_group

## DPPA-017

(Warning) Failed to derive feedthrough port direction for net %s.

**Description**

The tool cannot decide the feedthrough port direction on the specified net.

**What Next**

The feedthrough port direction is not set correctly during pin placement or the port direction was manually edited but not set correctly.

**See Also**

- place_pins

## DPPA-018

(Warning) Incomplete feedthrough creation on net %s.

Feedback

**Description**

Only a fraction of feedthrough ports are created on the specified net.

**What Next**

There is a mismatch between the routing and the netlist such that the ports or pins the net connects to does not match the physical routing. Please check the routing of the net and the netlist.

**See Also**

- place_pins
- route_global

---

## DPPA-019

(Warning) Cannot find the driver of net %s.

**Description**

The driver of the net cannot be identified. The feedthrough ports created on this net will be inout direction.

**What Next**

Please check the routing of the corresponding net and make sure inout feedthroughs are allowed.

**See Also**

- place_pins
- route_global

---

## DPPA-020

(Warning) Net %s contains routing loops.

**Description**

The routing of the indicated net is incorrect because it contains loops. The feedthrough creation on this net is skipped.

**What Next**

Please check and fix the routing of the net by removing the loop.

Feedback

**See Also**

- place_pins
- route_global

---

## DPPA-021

(Warning) Cannot find the driver of net %s.

**Description**

The driver of the net cannot be identified. The feedthrough ports created on this net will be inout direction.

**What Next**

Please check the routing of the corresponding net and make sure inout feedthroughs are allowed.

**See Also**

- place_pins

---

## DPPA-022

(Warning) The driver of net %s connects to an input port.

**Description**

The driver of the reported net is connected to an input terminal. Any feedthrough ports created on this net will be inout ports.

**What Next**

Check the net and make sure that inout feedthrough port is allowed.

**See Also**

- place_pins
- route_global

---

## DPPA-023

(Warning) Cannot place pins or create feedthroughs based on the global routing for net %s.

Feedback

### Description

The net reported is not fully routed or the routing does not follow the design hierarchy. Possible reasons are: there are missing terminals or pin shapes on this net, there are terminals or pin shapes on a non-routing layer, or there are unplaced cell that this net is connected to. Feedthrough creation is skipped for this net. Pins on this net will be placed based on connectivity rather than global routing results.

### What Next

Please fix the routing problem.

### See Also

- route_global
- route_group

---

## DPPA-024

(Warning) Found corrupted ports or pins.

### Description

There are corrupted ports or pins in the design.

### What Next

Please check the netlist. Possible examples of corrupted ports or pins can be unrecognized data of one or more ports or pins from the database. Make sure the database is saved correctly from previous session and not modified manually.

### See Also

- check_design

---

## DPPA-025

(Error) Internal error found on design.

### Description

Current operation cannot proceed due to unexpected data in feedthrough creation step.

### What Next

Please check the log to see if there are other error or warning messages right before this one. Fixing those errors may resolve this error.

Feedback

## DPPA-026

(warning) pin guide or route corridor is conflict with pin blockage or routing blockage or side constraint or layer constraint or topological constraint for %s %s, the pin guide or route corridor constraint will be ignored on this pin

### Description

There is a conflict beween pin guide or route corridor and the pin constraints as reported by this message. The pin guide or route corridor is therefore ignored.

### What Next

This may be due to the exclusive pin guide, pin blockage, routing blockage, side constraint, layer constraint or topological constraint conflicts with the pin guide or route corridor. Please fix the conflicting constraints.

### See Also

- create_pin_blockage
- create_pin_guide
- create_routing_corridor
- create_topological_constraint
- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints
- set_bundle_pin_constraints

## DPPA-027

(warning) %s %s connected to net %s which connects to more than 500 ports on blocks

### Description

There are too many block pins connected to the same net. This is more likely a user error as too many block pins connect to the same net will usually lead to low quality of result of pin placement.

### What Next

This may be due to tie high or tie low net that is not created properly. Please check original net list or check how the tie nets are created.

Feedback

**See Also**

- check_mv_design
- connect_pg_net

---

## DPPA-028

(Warning) No physical data defined.

**Description**

The tool cannot find the physical data from the database. Please check the design input.

**What Next**

Please check the design input and make sure that the physical data exists before running this command.

**See Also**

- write_pin_constraints

---

## DPPA-029

(Warning) The %s %s is in conflict with side or layer pin constraint on block %s.

**Description**

A constraint conflict is detected. The pin guide or routing corridor's overlapping portition with a block is on a side which is excluded from the block or individual pin constraints. Or the block or individual pin has a layer constraint that does not overlap with pin guide or routing corridor's layers. If the conflict exists during pin placement, pin placement will honor pin guide or routing corridor based constraint.

**What Next**

Please check the settings of the pin guide or routing corridor and the conflicting block or individual pin constraints and remove the conflict.

---

## DPPA-030

(Warning) There is a conflict between constraints of %s %s and %s %s which are connected together.

Feedback

### Description

The two connected block pins have pin constraints either from pin guide or from individual pin constraints on abutted edges but they do not overlap. As such, the pin placement and global route cannot find a valid location and layer to honor both pin constraints.

### What Next

Please check the constraints settings and remove the conflict.

### See Also

- create_pin_blockage
- create_pin_guide
- create_routing_corridor
- create_topological_constraint
- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints
- set_bundle_pin_constraints

---

## DPPA-031

(warning) net %s on block %s has forbidden feedthrough implied by a pin guide

### Description

This is probably because you have feedthroug implied by a pin guide on a net, however, the block cell or the net has feedthrough not allowed. This is feedthrough constraint conflict and feedthrough constraint from block cell or net will be ignored and pin guide will be honored.

### What Next

Please remove the feedthrough conflict and try again.

---

## DPPA-032

(warning) found pin guide and corner keepout constraint conflict for %s %s, all the pin guide constraint will be honored for this port

Feedback

**Description**

place_pins found pin guide corner keepout contraint conflict

**What Next**

Please re-create pin guide or reset corner keepout constraints so that they are NOT conflicting with each other

---

## DPPA-033

(warning) for the net %s, pin guide will not be honored because the number of intersections between the pin guide and block %s is larger than the number of top level connections for that net.

**Description**

For each pin guide, if you have multiple intersection with a block, it implies feedthrough guide. In order for a feedthrough guide to work properly, the number of intersections between this pin guide and a block should be smaller or equal than number of top level connections for that net.

**What Next**

Please re-create pin guide so that it meets this requirement.

---

## DPPA-034

(warning) net %s has pin guide which has only one intersection between pin guide and block cell %s while this net doesn't connect to this block cell, pin guide will be ignored

**Description**

Since it has only one intersection between pin guide and block cell and the net doesn't connect to this block cell, the pin guide is considered NOT created properly since there is NO pin associated with this pin guide.

**What Next**

Please re-create pin guide so that it meets this requirement.

---

## DPPA-035

(warning) Pin Guide %s is applied to the current design. Ignoring pin guide %s during push-down operation.

Feedback

**Description**

Since the pin guide's parent is the current design, push down operation will not push down this pin guide

**What Next**

Please re-create pin guide so that it meets this requirement.

---

## DPPA-036

(warning) pin guide %s has no intersection with its parent cell %s. Ignoring pin guide %s.

**Description**

The specified pin guide is outside of the bounding box of its parent cell. Push down or pin placement command will ignore this pin guide.

**What Next**

Please re-create pin guide so that it meets this requirement.

---

## DPPA-037

(warning) The %s associated with pin guide %s have no connection to the parent cell %s. Ignore the pin guide %s during push-down operation

**Description**

The associated physical pins or nets of the specified pin guide have no connection to the pin guide's parent cell.

**What Next**

Please re-create pin guide so that it meets this requirement.

---

## DPPA-038

(warning) No %s are popped up since command pop_up_objects does not support %s objects.

**Description**

The warning message was issued because site rows or tracks are in the object list for pop up, but these objects are not supported for command pop_up_objects

**What Next**

Please check the man page for command pop_up_objects.

Feedback

## DPPA-039

(warning) The pin %s %s associates with physical pins. Ignore this pin %s for pop up operation.

**Description**

During pin guide or pin blockage pop up, command pop_up_objects only handles the pin guides and pin blockages that associate with ports or nets.

**What Next**

Please re-create pin guide or pin blockage so that it meets this requirement.

## DPPA-040

(warning) The nets associated with pin %s %s either have no port connection or are feedthrough nets. Ignore this pin %s during pop up operation

**Description**

The associated nets of the specified pin guide or pin blockage have no port connection, or the associated nets are feedthrough nets. Command pop_up_objects only pops up pin guides or pin blockages that associate with ports or associate with non-feedthrough nets that have port connections.

**What Next**

Please re-create pin guide or pin blockage so that it meets this requirement.

## DPPA-041

(warning) %s objects will not be removed from block level since only partial MIB instances are selected for objects pop-up.

**Description**

The warning message is issued during popping up objects from MIB designs. Because user selects partial MIB instances for objects pop-up and sets block action to "remove". During pop-up, the block action "remove" is ignored and objects inside block will not be removed

**What Next**

Please read man page of pop_up_objects for details.

Feedback

## DPPA-042

(error) block cell or top level design %s doesn't have valid boundary or the boundary is not a rectilinear shape

**DESCRIPTION Command cannot find valid boundary for the block cell**

or top level design. This might be due to the un-setted boundary or the boundary is not a rectilinear boundary for a block cell of top level design. Global route and pin placement will skip such block cell or top level design.

**What Next**

Please set valid boundary for the block cell or top level design.

## DPPA-043

(error) only one of -pins, -nets, -ports, -bundles, -cells and -self options can be specified

**Description**

Command only accept one of the -pins, -nets, -ports, -bundles, -cells and -self options.

**What Next**

Please select only one of the -pins, -nets, -ports, -bundles, -cells and -self options.

**See Also**

- place_pins

## DPPA-044

(Warning) %s objects will not be pushed down due to %s mis-alignment among MIB instances.

**Description**

In case of mis-alignment, the default behavior of command push_down_objects is to issue warning message and do not push down the objects. User can set "-ignore_misalignment" option to true via command set_push_down_object_options.

**What Next**

Please fix the mis-aligned objects or set "-ignore_misalignment" to true using command set_push_down_object_options.

Feedback

## DPPA-045

(Warning) Pin locations are not updated because block boundary is incorrect.

**Description**

The warning message is issued because user streching the block boundary to an illegal shape.

**What Next**

Please change the boundary to the correct shape.

## DPPA-046

(Warning) Pin overlap occured.

**Description**

The warning message is issued because pins cannot be legally placed due to the block shape being changed and no enough slots.

**What Next**

Please re-shape block or run place_pins.

## DPPA-047

(Error) cannot open file %s

**Description**

The error message is issued because the file cannot be opened with the given file name. This could be there is no direcotry for the name. For instance, if you specify "dir/file_name" for the file name, but there is no "dir" under current directory, this error will be issued.

**What Next**

Please check if the file name with directory is correct.

## DPPA-048

(warning) The pin guide %s has parents. Ignore this pin guide for pop up operation.

**Description**

During pin guide pop up, command pop_up_objects only handles the pin guides that associate with ports or nets.

Feedback

### What Next

Please re-create pin guide or pin blockage so that it meets this requirement.

---

## DPPA-049

(Warning) Cannot find valid %s %s at line %d.

### Description

The command cannot find valid object when parsing pin constraints file. The object type could be cell, pin, port, net or bundle.

### What Next

Check if the object name and object is valid

### See Also

- read_pin_constraints

---

## DPPA-050

(warning) find invalid number %s at line %d

### Description

The command expect a number but cannot find it when parsing pin constraints file. This could happen when the command try to get a side number for specified "side" constraint. Or when try to get a pin offset location from "offset" constraints. Or when try to get a starting location or ending location for pin location range or pin order within a location range with "start" or "end" locations.

### What Next

Check if the specified number is valid or not.

### See Also

- read_pin_constraints

---

## DPPA-051

(warning) find invalid layer name %s at line %d

Feedback

### Description

The command expect a layer name but cannot find valid one when parsing pin constraints file. This could happen when the command try to get layer names for "layer" constraints.

### What Next

Check if the specified layer name is valid or not.

### See Also

- read_pin_constraints

---

## DPPA-052

(warning) no feedthrough constraint is specified at line %d

### Description

The command expect a feedthrough constraint statement (Feedthrough or NoFeedthrough) when parsing pin constraint file but could not find the constraint statement.

### What Next

Check if the feedthrough constraint statement is missing.

### See Also

- read_pin_constraints

---

## DPPA-053

(warning) no block cell is specified at line %d

### Description

The command expect a block cell name when parsing pin constraint file but could not find the valid block cell name

### What Next

Check if the cell name missing or incorrect.

### See Also

- read_pin_constraints

Feedback

## DPPA-054

(warning) invalid constraints specified at line %d

### Description

The command expect a valid pin constraints (layer, side, offset, spacing, order, pin range...) specified, but cannot parse such constraints when reading pin constraints file.

### What Next

Check if the specified constraint is valid or not at specified line.

### See Also

- read_pin_constraints

## DPPA-055

(warning) invalid %s constraint is specified

### Description

The command expect failed to parse a valid pin constraints (layer, side, offset, spacing, order, pin location range...).

### What Next

Check if the specified constraint is valid or not.

### See Also

- read_pin_constraints

## DPPA-056

(warning) side number %d is larger than number of sides for block %s, side constraint will be ignored.

### Description

A side number is specified for side or exclude_side constraints, but this number is larger than the total number of side on selected block.

### What Next

Correct the side number then reset the constraint again.

Feedback

**See Also**

- read_pin_constraints

---

## DPPA-057

(Warning) The mixed feedthrough ports of net %s inside cell instance %s all have OUT direction. Skip feedthrough removal on this net.

**Description**

The specified net is a mixed feedthrough net without any IN or INOUT feedthrough ports. Buffers may have been inserted into this net. Please check the man page to see if buffered feedthrough removal is supported

**What Next**

Check the man page of remove_feedthroughs on the support and usage of buffered feedthrough removal.

---

## DPPA-058

(warning) Found %s constraint assoicated with %s %s conflict with non-default routing rule on net %s, the non-default routing rule will be honored.

**Description**

There is a conflict between individual pin constraint and non-default routing rule, pin placement will honor the non-default routing rule when place pins.

**What Next**

Please check pin constraints on associated pins or nets and non-default routing rules

---

## DPPA-059

(warning) invalid key word "%s" is specified at line %d

**Description**

The command expect failed to parse a valid pin constraints key word (layer, side, offset, spacing, order, pin location range, cell, pin, port...).

**What Next**

Check if the specified constraint is valid or not.

Feedback

**See Also**

- read_pin_constraints

---

## DPPA-060

(warning) %s %s's offset constraint is longer than length of side of block %s.

**Description**

The offset constraint set on the pin or net or bundle is longer than block's side length.

**What Next**

Check if the specified constraint is valid or not.

**See Also**

- read_pin_constraints

---

## DPPA-061

(warning) unrecognized pin constraints statement detected in line %d.

**Description**

The command expects pin constraints statement, but cannot find a valid one which ends with ";".

**What Next**

Check if the pin constraints specified correctly.

**See Also**

- read_pin_constraints

---

## DPPA-062

(warning) invalid pin constraints at line %d.

**Description**

The command expect a valid pin constraints, but cannot parse the pin constraints statement.

**What Next**

Check if the pin constraints specified correctly.

Feedback

### See Also

- read_pin_constraints

---

## DPPA-063

(Error) MIB instance misalignment prevents the push-down of wire tracks. push_down operation will terminate.

### Description

The command encountered a situation where one or more wire tracks were found to be aligned differently for different MIB instances, and the user did not instruct the command to ignore misalignment of MIB instances. In this situation, the command will not push down the wire tracks and will announce an error and prematurely exit.

### What Next

Correct the MIB misalignment, or call the command with the option to ignore MIB misalignment.

---

## DPPA-064

(Error) Partial MIB selection encountered within the specified collection of block instances. Command will stop.

### Description

The command encountered a collection of block instances that included one or more MIB block instances, and at least one MIB reference block was instantiated only one time. If an MIB instance of a particular MIB reference block is specified, the command must perform MIB alignment checks. These checks require at least two MIB instances of each MIB block reference.

### What Next

Correct the specified collection of MIB block instances on the command line.

---

## DPPA-065

(Warning) MIB instance %s was singly specified within it's MIB group. MIB alignment checks will not be performed for this block instance.

### Description

The command encountered a situation where the command detected that a single MIB instance from among its MIB group was specified for push-down. When this occurs,

Feedback

MIB alignment checks cannot be made because at least 2 are required to perform this alignment check. The result is that the alignment check is not run for this particular instance. This may result in problems later if other MIB instances are not correctly aligned with this instance. Specification of singly-selected MIB block instances is discouraged.

**What Next**

Make sure that this MIB instance is correctly aligned with it's siblings.

---

## DPPA-066

(Warning) The following command-line-specified MIB block instances of the MIB reference block %s were specified partially (not all instances of the MIB group were included): \n%s \n MIB alignment checks will be run for this MIB group, but only on the partially specified MIB block instances\n\n.

**Description**

The command encountered a situation where the command detected that some, but not all, of MIB group of instances were specified on the command line. MIB alignment checks will only be made for those instances that were specified on the command line. This means that there is the potential for any omitted instance of the MIB group to be misaligned with the specified MIB instances.

**What Next**

Make sure that any non-specified MIB instance are correctly aligned with the ones that were specified.

---

## DPPA-067

(Error) push_down_objects does not explicitly support wire tracks. They are indirectly and automatically pushed down with cell rows.

**Description**

The command encountered a collection of wire tracks passed to the command. push_down_objects does not explicitly support wire tracks. Wire tracks are automatically created in a block when cell rows are specified for push-down.

**What Next**

Do not include a collection of wire tracks when calling push_down_objects. Instead, push down cell rows, which will automatically push down wire tracks.

Feedback

## DPPA-068

(Error) No physical block defined in the design.

**Description**

The command did not find any physical blocks in the design.

**What Next**

Make sure you have physical blocks before calling this command.

## DPPA-069

(Error) Failed to create and connect port-connected child net %s into block %s

**Description**

The command failed during push-down of cells to make child level connections

**What Next**

This is an internal error. Contact Synopsys.

## DPPA-070

(Error) Failed to create and connect tapped port-connected child net %s into block %s

**Description**

The command failed during push-down of cells to make child level connections on an existing child net

**What Next**

This is an internal error. Contact Synopsys.

## DPPA-071

(Warning) multi-tap cell connections not yet supported (net %s into block %s)

**Description**

The command encountered a cell that drives a block on multiple existing taps. This scenario is not yet supported by push_down_objects.

**What Next**

This is an internal warning. Contact Synopsys.

Feedback

## DPPA-072

(Warning) cannot find end statement for %s

### Description

The command expect an end constraint statement but couldn't find one. This may due to missing semi-column or incorrect statement. For topological constraint, please specify "END TOPOLOGICAL MAP;". For feedthrough control, please specify "END FEEDTHROUGH CONTROL;". For physical pin constraints, please specify "END PHYSICAL PIN CONSTRAINTS;". For pin spacing control, please specify "END PIN SPACING CONTROL;".

### What Next

Check to see if the end constraint statement correct.

### See Also

- read_pin_constraints

## DPPA-073

(Warning) Option "-use_existing_routing" is specified , however at least some of global routing is not present in the database.

### Description

When option "-use_existing_routing" specified, the tool expect the design has been routed already. If the nets are not routed , pin locations will not be determined based on routing , and will likely be non-optimal. It is recommended to re-run place_pins without using "-use_existing_routing" option.

### What Next

Check to see if the end constraint statement correct.

## DPPA-074

(Warning) Unrecognized pin constraints syntax at line %d

### Description

When parsing pin constraints file, the tool expect a valid pin constraints statement but cannot find one. Please use one of the following statement: START TOPOLOGICAL MAP; END TOPOLOGICAL MAP; START FEEDTHROUGH CONTROL; END

Feedback

FEEDTHROUGH CONTROL; START PHYSICAL PIN CONSTRAINTS; END PHYSICAL PIN CONSTRAINTS; START PIN SPACING CONTROL; END PIN SPACING CONTROL;

**What Next**

Check to see if the pin constraints statement correct or not

**See Also**

- read_pin_constraints

---

## DPPA-075

(Warning) find curly bracked mis-match pin constraints statement at line %d

**Description**

The tool expect pin constraint statement with matched curly bracket. This is probably because user input error or typo in the statement.

**What Next**

Check to see if the pin constraints statement correct or not

**See Also**

- read_pin_constraints

---

## DPPA-076

(Warning) push_down_objects has pushed cells into a MIB reference block %s for block instance %s. No other MIB block instances of this ref block will be considered for pushing down cell instances during this call to push_down_objects.

**Description**

The push_down_objects only allows pushing cells into multiply-instantiated block instance for one instance. This affects all other instances internally and for their port interfaces. Any other instances specified or encountered which have cells to be pushed down will be disregarded for push-down of cells during this command call

**What Next**

Be sure to only attempt to push cells into a single instance of a group of multiply-instantiated blocks (MIBs).

Feedback

## DPPA-077

(Warning) Pin location coordinate for %s %s is outside of block cell boundary and will be ignored.

### Description

If pin location is not inside block boundary, pin placement will ignore this constraint. If the pin location is specified inside block boundary and if the pin is not an off-edge pin, pin placement will snap the location to closest edge and wire track

### What Next

Please check pin location coordinate and make it inside block boundary

### See Also

- set_individual_pin_constraints

## DPPA-078

(Warning) A routing segment of block internal net %s with bounding box (in child) {{%s %s} {%s %s}} extends outside of the destination block boundary.

### Description

A net which is a block-internal net has a wire segment which extends outside of the boundary of a block that a top level cell instance is being pushed into.

### What Next

Modify your routes so that all block-owned net paths, contacts, and contact arrays are within the block boundaries. Or re-route this net in the child so that the routing is contained within the child block boundary.

## DPPA-079

(Warning) A contact of block internal net %s with bounding box (in child) {{%s %s}{%s %s}} extends outside of the destination block boundary.

### Description

A net which is a block-internal net has a contact which extends outside of the boundary of a block that a top level cell instance is being pushed into.

Feedback

### What Next

Modify your routes so that all block-owned net paths, contacts, and contact arrays are within the block boundaries. Or re-route this net in the child so that the routing is contained within the child block boundary.

---

## DPPA-080

(Warning) Find current routing topology does not match with topological constraints for net %s

### Description

The tool find that there is a mis-match between current routing results with topological constraints. This could because the topological constraints are conflict with other pin constraints or the topological constraints have errors in it

### What Next

Check the topological constraints and other pin constraints to see if they are conflict.

### See Also

- read_pin_constraints

---

## DPPA-081

(Warning) net %s violates topological constraints by not having a direct connection between %s %s and %s %s

### Description

The tool cannot honor topological constraints which has direct connection between two objects. This could happen due to bad constraints (topological constraints conflict with other pin constraints or routing layer direction is conflict with side direction) or due to bad design data (unplaced cells/pins/ports or block pins are placed and fixed outside of block boundary)

### What Next

Check the topological constraints and other pin constraints to see if they conflict, check design data to see if there are unplaced objects assoicated with this topological constraint or placed/fixed block pins outside owner block's boundary

### See Also

- read_pin_constraints

Feedback

## DPPA-082

(Warning) allowed routing layers range is different from pin constraint layer on cell %s, common layer range will be used

### Description

The tool detects that the minimum and maximum routing layers are different from pin constraint layers, the tool will use common layers for pin placement purpose

### What Next

Check the minimum and maximum routing layer and also pin constraint layers for this cell and see if this is intended

### See Also

- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints

## DPPA-083

(Error) there is no common layer range between allowed routing layers and pin constraint layer on cell %s

### Description

The tool detects that theres is no overlap layer range between minimum and maximum allowed routing layers and pin constraint layers, the tool will not proceed until there are common routing layers between those two constraints

### What Next

Remove the conflict between the minimum and maximum allowed routing layer and pin constraint layers for this cell

### See Also

- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints

Feedback

## DPPA-084

(Error) %s does not yet support the %s object type.

**Description**

The command was passed an object type that is not yet supported by the command.

**What Next**

Do not include this object type when calling this command.

## DPPA-085

(Warning) layer and sides topological constraints are conflict for net %s

**Description**

The command detect that there is no preferred layer when using the side specified from topological constraint, topological constraint will be ignored

**What Next**

Please check the conflict from layer constraint and side constraint

**See Also**

- read_pin_constraints
- create_channel_congestion_map

## DPPA-086

(Error) Pin %s has off-edge constraint, but there is no location or pin guide constraint associated with this pin.

**Description**

The command expects a pin guide constraint or a pin location constraint for this pin but cannot find those constraints. For off-edge pin placement, user has to specify either a pin guide or a pin location constraint.

**What Next**

Please add pin guide or pin location constraint for this pin.

Feedback

**See Also**

- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints
- create_pin_guide

---

## DPPA-087

(Warning) push_down_objects has encountered cells specified to be pushed into MIB reference block %s for block instance %s, but the reference block had already had cells pushed into it through a previously processed MIB instance. No other MIB block instances of this ref block are considered for pushing down cell instances during this call to push_down_objects.

**Description**

The push_down_objects only allows pushing cells into multiply-instantiated block instances for one instance. This affects all other instances internally and for their port interfaces. Any other instances specified or encountered which have cells to be pushed down will be disregarded for push-down of cells during this command call.

**What Next**

Be sure to only attempt to push cells into a single instance of a group of multiply-instantiated blocks (MIBs).

---

## DPPA-088

(Error) Failed to punch ports for net %s and pin %s.

**Description**

The push_down_objects attempted to punch ports to a connection in another hierarchical level and failed.

**What Next**

Report this problem

---

## DPPA-089

(Warning) %d pins on block %s have been placed with relaxed %s constraint(s).

Feedback

**Description**

The command relaxed some constraints in order to place those pins. For the pin spacing constraint, it might not be accurate as the pins that already placed without relaxing spacing may still have spacing violation if later placed pins violated pin-to-pin spacing. Please use check_pin_placement to get the pin list which has pin constraint violations.

**What Next**

Please use check_pin_placement to get more information on pins that violate pin constraint.

**See Also**

- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints
- check_pin_placement

---

## DPPA-090

(Warning) %d pins on block %s failed to place.

**Description**

The command failed to place pins. This may be because the pin constraint conflict, or no enough wire tracks available.

**What Next**

Please check pin constraints and also available wire tracks.

**See Also**

- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints

---

## DPPA-091

(Warning) Cannot create feedthrough routing for topological constrains on net %s

Feedback

**Description**

The command detects that the topological constraint specifies the routing topology to connect to a block which doesn't have original connection to the net. However place_pins cannot find other pins that can be used to create pure feedthrough routing on this block. This may be because the topological constraint specified incorrectly.

**What Next**

Please check topological constraints

**See Also**

- read_pin_constraints

---

## DPPA-092

(Error) Failed when trying to re-use exising tap-connected portName %s.

**Description**

The push_down_objects command attempted to trace a path across pushed-down buffers in an attempt to re-use a tap connection (existing connection to the block) name, and experienced a problem.

**What Next**

Report this problem

---

## DPPA-093

(Warning) Timing library is not loaded. Unable to determine if reference module %s is a buffer or inverter.

**Description**

The push_down_objects command, when attempting to traverse buffer chains for tap-connected port name re-use, discovered that the timing library was not loaded, so it cannot determine which instances are buffers or inverters.

**What Next**

Please change your library set-up to include timing libraries.

---

## DPPA-094

(Warning) Layer and sides pin constraints are conflict for pin %s.

Feedback

### Description

The command detect that there is no preferred allowed layer when using the side specified from pin constraint. If user intends to honor both side and layer constraints even the layer is not a preferred layer direction, user should set location and layer hard constraints in set_block_pin_constraints. If there is no hard constraints, the layer constraint will be ignored.

### What Next

Please check the conflict from layer constraint and side constraint.

### See Also

- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints

---

## DPPA-095

(Warning) Pin %s has off edge pin constraint that is conflict with bundle pin constraint, bundle pin constraint will be ignored for this pin.

### Description

The command detects that the pin has off edge pin constraint and also bundle pin constraint. When user set bundle pin constraints to be placed together, the tool expect to place all the bundle pins together on block edges. When there is off edge constraint for a bundle pin, the tool will honor off edge pin constraint and place rest of bundle pins together.

### What Next

Please check if the off edge pin constraint and bundle pin constraints are set correctly.

### See Also

- read_pin_constraints
- set_individual_pin_constraints
- set_bundle_pin_constraints

Feedback

## DPPA-096

(Warning) found %s on side %d of block %s on layer %s and there is no enough wire tracks available on this side

### Description

The command detects that the number of corner keepout wire tracks is larger than available tracks on block cell edge or corner keepout distance is larger than the length of block cell edge, pins will not be placed on this edge if there are wiretracks available on other edges

### What Next

Please check if the corner keep out pin constraints are setting correctly

### See Also

- set_block_pin_constraints

## DPPA-097

(warning) Find %s constraints assoicated with block %s conflict with non-default routing rule on net %s, non-default routing rule will be honored.

### Description

place_pins find block pin constraints and non-default routing rule conflict, pin placement will honor non-default routing rule and ignore block pin constraints when place pins

### What Next

Please check block pin constraints and and non-default routing rule

### See Also

- read_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints
- create_routing_rule

## DPPA-098

(Error) While traversing route shapes from the driver for net %s, not all shapes were reached.

Feedback

**Description**

Route tracing code failed to reach all routing shapes that it expected to reach. This is either a problem with the routing, or this may be an internal problem with the route tracing algorithm.

**What Next**

Report this problem

---

## DPPA-099

(Error) Failed to process/analyze routing for net %s, skipping this net.

**Description**

The command attempted to process/analyze routing for this net, but failed. This is probably due either to some routing problem (discontinuous routing outside of block instance boundaries or routing loop for example) or possibly an internal error.

---

## DPPA-100

(Error) Failed to process net %s for feedthrough creation. Will skip this net.

**Description**

The command attempted to consider this net for feedthrough creation, but failed. This could happen if the routing doesn't follow hierarchical connection on physical blocks. Or there is a routing loop that going through physical block area and the tool cannot determine the feedthrough pins direction

**What Next**

Please check if the net is routed correctly.

---

## DPPA-101

(Error) Failed to update subnets after feedthrough creation for net %s. Skipping this net.

**Description**

The command attempted to update route subnets after feedthrough creation, but failed.

**What Next**

Report this problem

Feedback

## DPPA-102

(Error) Failed to push down subnets after feedthrough creation for net %s. Skipping this net.

**Description**

The command attempted to push down net routing shapes for subnets of the routing graph, but failed.

**What Next**

Report this problem

## DPPA-103

(Warning) Unexpected net driver pinShapeType %s type: %d

**Description**

The command encountered a net driver shape that it did not expect.

**What Next**

Report this problem

## DPPA-104

(Error) When tracing routing from driver shapes, the command failed to find a driver shape to traverse from for net %s.

**Description**

The command encountered a route tracing problem when attempting to trace the route from a driver shape.

**What Next**

Report this problem

## DPPA-105

(Warning) Failed to find a net driver shape in a block that has an output port on the net for top-level net %s.

Feedback

**Description**

The command was searching for a driver shape within a block because the block has an output port on the top-level net.

**What Next**

Report this problem

---

## DPPA-106

(Error) Failed to find a crossing point where a path crosses a block boundary. Path: %s Block: %s Net: %s

**Description**

The command was processing a path crossing of a block boundary, but failed to correctly identify a specific coordinate for the center of the path as it crossed the block.

**What Next**

Report this problem

---

## DPPA-107

(Error) Failed to find an existing logical connection for entry crossing of subNet %d for blkNet %s.

**Description**

The command was processing a path crossing of a block boundary for a net that has a pre-existing logical connection to the block, but failed to conclusively associate that port with the block subnet.

**What Next**

Report this problem

---

## DPPA-108

(Error) net %s has collinear route segments or vias. Skipping net. Please re-route the net.

**Description**

The command was processing signal net for pushing down routing into blocks. It discovered that some routing of the net overlaps blocks to be pushed into in a collinear direction. This is not supported in signal routing push-down.

Feedback

### What Next

Please re-route the net so that it does not have collinear overlaps with a block that is being pushed into.

---

## DPPA-109

(Warning) The %s of the bundle pin constraint applied on pin %s conflicts with the %s of the previously applied %s pin constraint. The %s ignored.

### Description

The command detects a conflict between bundle pin constraints applied on the specified pin or port. The most possible reason is that the net of the pin or port is included in more than one bundles and these bundles have conflict constraint settings.

### What Next

Please check the conflict and reset the constraint accordingly.

### See Also

- create_bundle
- set_bundle_pin_constraints

---

## DPPA-110

(Warning) net %s has incomplete routing. Skipping net. Please completely route the net for signal route push-down into blocks.

### Description

The command was processing signal net for pushing down routing into blocks with feedthroughs allowed. It discovered that the net was not fully routed. This is not supported in signal routing push-down.

### What Next

Please fully route the net so that it can be properly analyzed for push-down into blocks.

---

## DPPA-111

(Warning) global bundle pin range or order constraints doesn't have associated edge

Feedback

**Description**

The command detects that the bundle pin range or order constraints don't have the associated edge. For the command to honor those constraints, user needs to specify the associated edge.

**What Next**

Please check and reset the constraint accordingly.

**See Also**

- set_bundle_pin_constraints
- set_individual_pin_constraints
- read_pin_constraints

---

## DPPA-112

(Error) Net %s has logical vs. physical inconsistency in nonFeedthrough physical crossings. Skipping net. Please re-route the net.

**Description**

The command detected that physical route crossings of one or more blocks by a net was not consistent with the logical connectivity of the net. This net needs to be re-routed in such a was that the physical is consistent with logical. There should be at least as many physical crossings as the logical connections to the block

**What Next**

Please re-route the net.

---

## DPPA-113

(Warning) Block sides pin constraints conflict with pin %s.

**Description**

The command detected that there are side constraints on the pin that conflict with block side constraint. The constraints on individual pins, nets or bundles will override block pin constraints.

**What Next**

Please check the conflict from block side constraint and individual pins/nets/bundles side constraint.

Feedback

**See Also**

- read_pin_constraints

## DPPA-114

(Error) place_pins and design planning global route cannot be used with clock routing topology routing mode

**Description**

The command detected that clock routing topology routing mode is turned on while it cannot be used together with place_pins or design planning global route since design planning global route is used to determine the pin locations for pin placement purpose.

**What Next**

Please reset the app option route.common.clock_topology's value to "normal"

---

## DPPA-115

(Error) Skipping propagation of shape %s of from-cell net %s because it would overlap with or touch %s of net %s in cell %s.

**Description**

The push_down_objects command or the pop_up_objects command, because the option to do overlap checking was on, detected that a net shape in the "from" cell, if propagated to the "to" cell, would overlap with existing routing. If overlap checking was indicated, the command infers that the existence of overlap should be considered an error, and the shape is skipped for propagation push-down.

**What Next**

Reroute the offending pre-routed net.

---

## DPPA-116

(Error) Skipping propagation of shape %s of from-cell net %s because it would overlap exactly %s of net %s in cell %s.

Feedback

**Description**

The push_down_objects command, because the option to do overlap checking was on, detected that a net shape in the top cell, if pushed down, would overlap exactly with existing routing. If the -routing_overlap_check is specified as true, then the command infers that the existence of overlap should be considered an error, and the shape is skipped for push-down.

The push_down_objects command or the pop_up_objects command, because the option to do overlap checking was on, detected that a net shape in the "from" cell, if propagated to the "to" cell, would overlap exactly with existing routing. If overlap checking was indicated, the command infers that the existence of overlap should be considered an error, and the shape is skipped for propagation push-down.

**What Next**

Reroute the offending pre-routed net.

---

## DPPA-117

(Warning) Pin %s and pin %s are connected to nets that belong to same bundle, however, both pins have pin offset/location constraints. The constraint on pin %s will be honored.

**Description**

In bundle pin placement, the tool will try to place all the pins together when their connected nets belong to same bundle. However, if multiple pins also have pin offset or location constraints on the same bundle, it is likely that the pin constraints will conflict with each other. When this happens, the tool will pick one of the pin location/offset constraint and ignore others.

**What Next**

Please remove pin location/offset constraints if they are more than one set on the pins that connected to nets belong to same bundle.

---

## DPPA-118

(error) Cell %s already exists.

**Description**

The *push_up_objects* command was used to try to create a cell in the current cell from a cell in a child block, but a cell with that name already exists in the current cell.

**What Next**

Report this problem.

Feedback

## DPPA-119

(Warning) Skipping creation of %s in block %s from the push-down of top net %s because it would overlap with or touch %s of net %s in the same block.

### Description

The push_down_objects command, because the option to do overlap checking was on, detected that the creation of a pin in a block, if created, would overlap with existing routing or pins in the block. If overlap checking was indicated, the command infers that the existence of overlap should be considered an error, and the pin is prohibited during routing push-down.

### What Next

Reroute the offending pre-routed net.

## DPPA-120

(Warning) Net %s has top-level discontinuity.

### Description

The check_nets_for_push_down command detected a pre-routed signal net that has top-level discontinuity.

### What Next

Reroute the offending pre-routed net.

## DPPA-121

(Warning) Pin %s has connections that are not same for all abutted mulitple instantiated blocks, this pin maybe placed shorted with other pins.

### Description

The connection to block cells are not same for all MIB instances. For instance, there are two MIB groups in a design with mib1_inst1 and mib1_inst2 belong to same MIB group while mib2_inst1 and mib2_inst2 belong to another MIB group. Pin A on mib1_inst1 connected to pin B on mib2_inst1 and pin A on mib1_inst2 connected to pin C on mib2_inst2. Instance mib1_inst1 is abutted with mib2_inst1 while mib2_inst2 is abutted with mib2_inst2. This can cause shorted pins situation when pins need to be placed on abutted edge as the pin B and pin C on mib2_inst1 or mib2_inst2 need to be placed together in order to create abutted connection to pin A to avoid single pin connection.

Feedback

### What Next

Check to see if the logic connection and floorplan is correct.

### See Also

- check_mib_for_pin_placement

---

## DPPA-122

(Error) check_nets_for_push_down detected exactly redundant paths. These can cause route traversal problems for the push_down_object command, and need to be reduced to single, non-redundant paths.

### Description

The push_down_objects command when pushing down signal nets needs to be able to traverse from the driver to all loads on the net. When paths exist which are perfectly redundant, this confuses the traversal and push-down algorithm, and usually indicates some error in the flow, so it is reported as an error.

### What Next

Examine the reported paths and delete the redundant ones.

---

## DPPA-123

(Warning) tap-connected P/G net %s has no child P/G nets in block instance %s (only tie high/low signal nets). Skipping block-level connections of this net.

### Description

The push_down_objects command when pushing down cells detected a scenario where a top-level cell(s) were connected to a P/G net which also connected to signal ports of the block that the cells were being pushed into. But the command detected that no block-level P/G net exists. This usually indicates a problem with the UPF setup.

### What Next

Please make sure the P/G has been defined correctly for the block that the cells are being pushed into.

---

## DPPA-124

(Warning) tap-connected P/G net %s has multiple P/G nets in block instance %s. Using the first one in the list.

Feedback

**Description**

The push_down_objects command when pushing down cells detected a scenario where a top-level cell(s) were connected to a P/G net which had multiple tap connections to the block that the cells were being pushed into. The command chose one of the ports for getting a child-level P/G net.

**What Next**

Please make sure that the results are what you wish.

---

## DPPA-125

(Error) No physical block defined in the design.

**Description**

A hierarchical design planning command detected that there are no physical blocks in the design. Hierarchical design planning commands require physical blocks upon which to perform hierarchical operations.

**What Next**

Please make sure that the design contains physical blocks before attempting hierarchical design planning commands.

---

## DPPA-126

(Error) Could not find a driver for net %s

**Description**

A hierarchical design planning command could not find a driver for a net when it was trying to make net connections

**What Next**

Please check the net.

---

## DPPA-127

(Error) No input tap found for connecting net %s for push-down cells.

**Description**

push_down_objects, when pushing down cells, encountered a net connected to the pushed-down cells that was previously connected to the block into which the cells were pushed. It was determined that the cells being pushed into the block included a driver on

Feedback

this tap-connected net meaning that it needed to find a pre-existing input connection to the block, and it could not find one.

**What Next**

Please check the net.

---

## DPPA-128

(Error) No input or output tap found for connecting net %s for push-down cells.

**Description**

push_down_objects, when pushing down cells, encountered a net connected to the pushed-down cells that was previously connected to the block into which the cells were pushed. It was determined that the cells being pushed into the block contained no driver on this tap-connected net meaning that it needed to find a pre-existing input or output connection to the block, and it could not find one.

**What Next**

Please check the net.

---

## DPPA-129

(warning) no target object in topological constraint pair in line %d.

**Description**

The command expects source and target topological constraint pair, but cannot find target object.

**What Next**

Check if the topological constraints specified correctly.

---

## DPPA-130

(Warning) child cell inst %s is outside the boundary of block design %s

**Description**

The command detected that a child cell inst connected to a net considered for push-down is outside of the block boundary. This can cause problems during push-down of the route.

**What Next**

Please fix the placement issue.

Feedback

## DPPA-131

(Error) net %s has block-level cell connections that include cells that are not placed inside the respective cell boundary. Skipping net. Please fix the cell placement issue.

### Description

The command detected that a net considered for push-down into a block contained child-level cell inst connections which included one or more cell instances that were not inside the block boundary. This can cause problems for the push-down of that net.

### What Next

Please fix the placement issue.

## DPPA-132

(Error) same-net MIB pin direction conflict detected. 2 boundary crossings occurring at the same location in the reference block (%s) but different directions. Topcell locations Location 1: {%s %s} Location 2: {%s %s} layer: %d

### Description

The command detected that a net considered for push-down into blocks crossed multiple instances of a reference block at the same location on the reference blocks, but in different directions. This usually results from one of the blocks being in a different orientation. For instance, abutted MIB instances cannot allow a pre-route crossing the abutted edge.

### What Next

Please fix the placement issue.

## DPPA-133

(Error) Net %s has a pin direction conflict on a MIB block instance. %s

### Description

The command detected that a net considered for push-down into blocks crossed multiple instances of a reference block at the same location on the reference blocks, but in different directions. This usually results from one of the blocks being in a different orientation. For instance, abutted MIB instances cannot allow a pre-route crossing the abutted edge.

### What Next

Please fix the placement issue.

Feedback

## DPPA-134

(Information) Deleted obsoleted port %s from reference block %s.

### Description

The command detected that a tap connection on a block has now become obsolete because all cells on the related net have been pushed down into the block. This is just an informational note, which by default will occur for 10 examples of obsoleted ports per call to the command. If you would wish to see more, then increase the message limit for the DPPA-134 information code. If you would prefer that these obsolete ports be retained, then use the block_action "retain_obsolete_ports" for object_type cells in the set_push_down_object_options command.

### What Next

Nothing needed. Just informational.

## DPPA-135

(Info) Obsoleted port(s) have been detected as a result of pushing cells into blocks. This means that they are no longer necessary on the block as all of the cells on the net have been pushed into the block for the given net. If you would prefer to retain these obsoleted ports, use the set_push_down_object_options command, and the block_action "retain_obsolete_ports" to suppress the deletion of these ports.

### Description

The command detected that one or more tap connections on a block has now become obsolete because all cells on the related net have been pushed down into the block. This is just an informational note and does not require any action. If you would prefer that these obsolete ports be retained, then use the block_action "retain_obsolete_ports" for object_type cells in the set_push_down_object_options command.

### What Next

Nothing needed. Just informational.

## DPPA-136

(Info) Filtered redundant %s (bbox: {{%s %s}{%s %s}} layer: %d) from MIB reference design %s for child net %s (when pushing down top-level net %s)

### Description

The command detected that, when pushing down shapes into reference blocks of MIB instances, that some redundant shapes were present. This can occur when different

Feedback

instances of MIB blocks have routing pushed into them. The command determines that it is legal for them to overlap, and if so, any shapes that are completely redundant (removable), it removes them.

**What Next**

Nothing needed. Just informational.

---

## DPPA-137

(Error) Failed to delete redundant %s (bbox: {{%d %d}{%d %d}} layer: %d) from MIB reference design %s for child net %s (when pushing down top-level net %s)

**Description**

The command detected that, when pushing down shapes into reference blocks of MIB instances, that some redundant shapes were present. This can occur when different instances of MIB blocks have routing pushed into them. The command determines that it is legal for them to overlap, and if so, any shapes that are completely redundant (removable), it removes them. In this case, the attempt to delete the redundant shape failed.

**What Next**

Report this. In the mean time, try to re-route the top-level routing to avoid this conflict.

---

## DPPA-138

(Warning) Failed to initialize uhSplitCntr object. UPF may not be properly loaded. New feedthrough ports won't get UPF MV constraints placed upon them.

**Description**

The command attempted to create and initialize a uhSplitCntr object for the purpose of later adding UPF constraints to new feedthrough ports created by either the place_pins command or the push_down_objects command (for signal net feedthroughs). It likely results from UPF not loaded properly.

**What Next**

Make sure that UPF is properly loaded.

---

## DPPA-139

(Warning) Failed to add MV constraints to new feedthrough ports on blkInst %s (ref: %s) %s

Feedback

### Description

The command attempted to add UPF MV constraints to newly added feedthrough ports.

### What Next

Make sure that UPF is properly loaded.

---

## DPPA-140

(Error) Net driver %s seems to be not connected to any routing.

### Description

The net driver for a net considered for push-down is a top-level driver pin that does not seem to be connected to any routing.

### What Next

Make sure top-level portions of routed nets is connected to top-level pins/ports.

---

## DPPA-141

(Warning) The error view specified with the -error_view option uses an invalid file extension (%s); using the file extension "err" instead.

### Description

The tool issues this warning when the error view specified with the *-error_view* option has an invalid file extension.

The command requires a file extension of "err" for the error view. If you specify a different file extension, the tool keeps the error view name, but replaces the file extension with "err".

Note that you can also specify the error view name without an extension. In this case, the tool adds the "err" extension, but does not issue a warning.

### What Next

To avoid this warning message, either use the "err" file extension or no file extension when you specify the error view name.

- report_placement

## DPPA-142

(Warning) Preferred routing direction conflict detected between existing direction %s and new direction %s for layer %s in block %s. Skipping preferred routing direction propagation for this block and layer.

### Description

When propagating preferred routing directions from one block to another, the command encountered a layer in the destination block that had an existing preferred routing direction that was different from the direction in the same layer in the source block. In this situation, the layer in this block is skipped for setting the preferred routing direction.

### What Next

Make sure that the new preferred routing directions are what you want in the destination block.

### See Also

- push_down_objects

## DPPA-143

(Warning) %s on %s is less than technology rule. This constraint is ignored.

### Description

The user defined pin width or length constraint, or the non default routing rule width associated with net on the pin, is less than the minimum value defined by the technology rule. As a result, the user defined constraint is ignored for pin placement or pin check. Note that pin creation uses the maximum of the minimum width and default width specified in technology file.

### What Next

Please double check the technology rule to make sure that user defined width or length constraint, or the non default routing rule, does not violate those defined in technology rule.

Feedback

- set_bundle_pin_constraints
- set_individual_pin_constraints
- set_routing_rule

---

## DPPA-144

(Error) MIB feed crossing conflict detected in reference block %s at reference coord: {%d %d} layerNumber: %d

**Description**

During checking of push-down of signal routing, top-level net routing required a feedthrough net in a Multiply-Instantiated-Block (MIB), but another crossing of this MIB produced a crossing previously that conflicts with this subsequent crossing.

**What Next**

Make sure that your MIB-crossing routes for this reference block do not conflict with other crossings of other instance of this reference block.

---

## DPPA-145

(Warning) When checking MIB feedthrough crossing conflicts, a conflict was detected for a MIB subnet from top net %s over reference block %s.

**Description**

During checking of push-down of signal routing, top-level net routing required a feedthrough net in a Multiply-Instantiated-Block (MIB), but another crossing of this MIB produced a crossing previously that conflicts with this subsequent crossing. This is not necessarily a problem, as long as the crossing that do exist in common match between instances of the reference block.

**What Next**

Make sure that your MIB-crossing routes for this top-level net do not conflict with other crossings of other instance of this reference block, or if they do, that it's just a matter of one instance having fewer crossings than another instance.

---

## DPPA-146

(Error) creation of pin in reference block %s with bbox {{%d %d} {%d %d}} on layer %d would cause this pin shorted with an existing pin. Skipping creation of this pin.

Feedback

**Description**

During pushing down of signal routing and during terminal creation on a block, it was detected that a pin location conflicted with an existing pin. This could happen when routing over MIB instances conflict.

**What Next**

Make sure that your MIB-crossing routes for this top-level net do not conflict with other crossings of other instance of this reference block.

---

## DPPA-147

(Error) MIB multiple child subnets conflict with each other in reference block %s from one ->top-net %s crossing instances in different ways. childNet1: %s childNet2: %s

**Description**

During block-level routing creation, it was detected that Multiply-Instantiated-Blocks (MIBS) were encountere and routing crossing a particular instance of a reference block would cause conflicts with routing that was previously created for a previous instance crossing.

**What Next**

Make sure that your MIB-crossing routes for this top-level net do not conflict with other crossings of other instance of this reference block.

---

## DPPA-148

(Error) Net %s has a MIB feedthrough conflict in the number of feed ports on a block. %s

**Description**

During push_down_objects, MIB's were encountered which involved multiple crossings of MIB instances resulting in block-level subnets that are in conflict with subnets from other routes pushed down into another instance of the MIB reference block.

**What Next**

Make sure that your MIB-crossing routes for this top-level net do not conflict with other crossings of other instance of this reference block.

---

## DPPA-149

(Error) Net %s has a MIB feedthrough conflict where matched feedthroughs' shapes don't match. %s

Feedback

### Description

During push_down_objects, MIB's were encountered which involved multiple crossings of MIB instances resulting in block-level subnets that are in conflict with subnets from other routes pushed down into another instance of the MIB reference block.

### What Next

Make sure that your MIB-crossing routes for this top-level net do not conflict with other crossings of other instance of this reference block.

---

## DPPA-150

(Warning) MIB feed crossing conflict detected in reference block %s at reference coord: {%s %s} layerNumber: %d current net: %s current instance: %s coord in parent: {%s %s}

### Description

During push_down_objects, MIB's were encountered which involved multiple crossings of MIB instances resulting in block-level subnets that are in conflict with subnets from other routes pushed down into another instance of the MIB reference block. This is only a warning, as the mismatch may simply be that a crossing of a boundary occurred for one instance, but not the other. If all other crossings are consistent, it is probably okay.

### What Next

Make sure that your MIB-crossing routes for this top-level net do not conflict with other crossings of other instance of this reference block, or that the re-used feedthrout is correct.

---

## DPPA-151

(Error) Only matched %d out of %d crossings of two MIB feed subnets that have the same entry crossing point on reference block %s. (block Instance: %s entry crossing point {%s %s}

### Description

During push_down_objects, MIB's were encountered which involved multiple crossings of MIB instances resulting in block-level subnets that are in conflict with subnets from other routes pushed down into another instance of the MIB reference block.

### What Next

Make sure that your MIB-crossing routes for this top-level net do not conflict with other crossings of other instance of this reference block.

Feedback

## DPPA-152

(Error) Pin %s is shorted with %s %s.

**Description**

The tool detects that when placing block pins based on their connected top terminals or when place synthesized pins, they are shorted with other top level terminals or other block pins.

**What Next**

Make sure that the top terminals are placed properly and the pin location constraints is set properly when place synthesized pins before *place_pins*.

## DPPA-153

(Warning) A no-net collinear %s, %s, was detected during push-down. Due to the collinear nature of this %s, it will be created in the block as a copy, and retained in the parent block.

**Description**

During push-down of no-net routing, a path or via was determined to be collinear. Since push-down operation never splits a path laterally, or a via (in any way), the command just propagated a copy to the block and left the original in the parent level.

**What Next**

If you want a no-net element to be pushed down fully, be sure that it does not straddle a block boundary.

## DPPA-154

(Warning) A parent-net-to-block-net mapping problem has been detected for net %s and reference block %s. Skipping parent-to-child net mapping for this net and reference block.

**Description**

During push-down of routing, where a net has an existing connection to a block, the command builds a map between the parent net and the block net. If the parent net and the block net are not of the same type (P/G or signal), this is a mapping problem and is skipped if the parent type is P/G and the block type is signal.

**What Next**

Make sure that you have correctly run connect_pg_net and created P/G nets in the block correctly.

Feedback

## DPPA-155

(Warning) The push_down_objects command detected a top-level P/G net to block-level signal net conflict for block %s. This usually indicates improper UPF and P/G connectivity prior to calling push_down_objects. Top level P/G net %s block-level signal net: %s

### Description

During push-down of routing, where a net has an existing connection to a block, the command builds a map between the parent net and the block net. If the parent net and the block net are not of the same type (P/G or signal), this is a mapping problem and is skipped if the parent type is P/G and the block type is signal.

### What Next

Make sure that you have correctly run connect_pg_net and created P/G nets in the block correctly.

## DPPA-156

(Warning) A parent-net-to-block-net mapping problem has been detected for net %s and reference block %s. A top-level P/G net has a connection to a block instance pin (%s) but no block-level P/G net previously existed. A new block-level net %s was created.

### Description

During push-down of routing, where a net has an existing connection to a block, the command builds a map between the parent net and the block net. If the parent net is a P/G net and a P/G port exists on the block, but no corresponding P/G net exists in the block, one is created.

### What Next

Make sure that you have correctly run connect_pg_net and created P/G nets in the block correctly.

## DPPA-157

(Warning) top terminal %s partially overlaps with block %s

### Description

The tool detects that a top terminal partially overlaps with a block. If this top terminal is connected to a block pin on the same block, then the block pin can be placed outside its block boundary.

Feedback

**What Next**

Make sure that the top terminals are placed properly before run *place_pins*.

---

## DPPA-158

(Warning) move_bound %s is not completely enclosed by the hierBoundary for module instance %s.

**Description**

During the command commit_blocks, a move_bound was encountered which overlapped a hierBoundary or partition, but only partially.

**What Next**

Make sure that if a move_bound is is not fully inside a hierBoundary or partition prior to running commit_block, that it is what you intend.

---

## DPPA-159

(Warning) move_bound %s is completely outside of hierBoundary for module instance %s, but it has members that belong to that module instance.

**Description**

During the command commit_blocks, a move_bound was encountered which did not overlap a hierBoundary or partition, but had cell members that belonged to that module instance.

**What Next**

Make sure that if a move_bound is not fully inside a hierBoundary or partition prior to running commit_block, and if the move_bound belongs to the module instance, that this is what you intended.

---

## DPPA-160

(Warning) pin %s are placed %s, router may not be able to connect to such pin

**Description**

The tool detects that a block pin is placed on the edge which is abutted with another block or with top design, or the pin is placed totally inside block. When this happens, the router might not be able to route to such a pin. This normally happens in multiple instantiated blocks (MIB) when the top level terminal is placed inside one of the MIB block boundary and the pin needs to be placed right below this terminal.

Feedback

**What Next**

Make sure that the top terminals are placed properly before *place_pins*.

---

## DPPA-161

(Error) Could not find %s %s in destination block %s. Won't add that %s to new move bound propagated during hierarchical DP operation.

**Description**

During a hierarchical DP command, when adding cells to a new move bound, a cell could not be found by name in the destination block.

**What Next**

Report this.

---

## DPPA-162

(Error) Failed to sort hierarchical pins based upon location for hierSubNet index %d of top net %s.

**Description**

During the push-down of signal net routing, an attempt to sort hierarchical pins based upon their locations on a block failed.

**What Next**

Report this.

---

## DPPA-163

(Warning) move_bound %s is not completely exclusive but overlaps the hierBoundary for module instance %s. It will be skipped from propagation.

**Description**

During the push-down of move bounds during commit_block, a move bound was detected which partially overlapped a hierBoundary but the cells in the bound were not exclusive to the module.

**What Next**

Make sure this is what was intended.

Feedback

## DPPA-164

(Warning) move_bound %s is partially exclusive and does not overlap the hierBoundary for module instance %s. It will be skipped from propagation.

**Description**

During the push-down of move bounds during commit_block, a move bound was detected which was only partially exclusive and did not overlap a hierBoundary of the module being committed.

**What Next**

Make sure this is what was intended.

## DPPA-165

(Warning) Shape %s is non-orthogonal. Skipping this shape.

**Description**

During the push-down/pop-up of routing, a non-orthogonal shape, %s, was detected, which is not supported.

**What Next**

Do not attempt to push down or pop up shapes that are non-orthogonal.

## DPPA-166

(Warning) Net %s has non-orthogonal shapes. Nets with non-orthogonal shapes are not supported by push-down/pop-up DP operations.

**Description**

During the push-down/pop-up of routing, a non-orthogonal shape, %s, was detected on a net, which is not supported.

**What Next**

Do not attempt to push down or pop up nets that have shapes that are non-orthogonal.

## DPPA-167

(Error) Pin %s is shorted with pin %s.

Feedback

**Description**

Pin placement detects that the pin currently placed is shorted with another pin. This might be because the pins created are based on top level objects (terminals or cells) but the top level objects are placed shorted with each other or they are placed at same location on top of different MIB instances which have same reference block

**What Next**

Please check top level objects (terminals or cells) and remove the shorted pins

---

## DPPA-168

(Error) Failed to create new pin in block %s by name %s

**Description**

An attempt to create a pin in a block failed during push-down or pop-up of objects

**What Next**

Report this

---

## DPPA-169

(Warning) The command encountered a non-feedthrough dangling route over block instance %s for net %s

**Description**

During signal route push-down for feedthrough creation, a section of routing was found which dangles over a block with no pre-existing logical connection, and the routing does not feed all the way through the block.

**What Next**

Please check your routing for this net.

---

## DPPA-170

(Error) The pop_up_object command did not receive any objects to pop up.

**Description**

The pop_up_objects command needs to have objects passed to it to pop up. None were detected.

Feedback

### What Next

Make sure that the collection that you have passed to the command contain valid objects to pop up.

---

## DPPA-171

(Warning) The topological segment from %s to %s of %s %s is not starting from or ending at a physical block. This segment has no effect and is ignored.

### Description

Neither the source nor the target in the topological constraint pair is on block instance.

### What Next

Make sure that the constraint pair specified correctly

### See Also

- read_pin_constraints

---

## DPPA-172

(Warning) Instance-based feedthrough allowance was detected for net %s, where some, but not all instances allowed feedthroughs. The only supported scenario is for all instances to allow feedthroughs. Since one instance was found to allow feedthroughs, the command will allow feedthroughs on all instances. If this is not what you want, then remove all instance-based pin constraints which allow feeds on some but not other instances.

### Description

The push_down_objects command detected a block-based pin constraint that allowed feedthroughs on the block instance, but also found one or more block-based constraints that disallowed feedthrough creation. The user control of feedthrough creation/noncreation currently is only offered on a whole net basis, on or off, for all blocks that the routing crosses. The command will honor the instance-based pin constraint allowing feedthroughs for all blocks that it crosses, and disregard the other, conflicting, pin constraints disallowing feedthrough creation.

### What Next

Please set pin constraints according to this restriction.

Feedback

## DPPA-173

(Warning) Routing shapes for net %s in block %s (for block instance %s) will not be popped up because it appears to be an internal net with no connections to any net outside the block.

**Description**

The pop_up_objects command encountered a specified net for pop-up which was not connected to any net outside the block that the net exists in. The pop_up_objects command only supports pop-up of routing for nets that are connected to nets outside the block.

**What Next**

Please only attempt to pop-up routing for nets which are connected to nets outside the block.

## DPPA-174

(Error) Pin mask constraint conflict between abutted pins detected.

**Description**

The mask constraints on abutted pins conflict with each other.

**What Next**

Change the mask constraints on the abutted pins to resolve the conflict.

## DPPA-175

(Error) Pin size violation detected.

**Description**

The actual pin size does not honor the value defined by individual pin constraints, or derived from net or bus constraints, or the default pin length to avoid mask constraint violation.

**What Next**

Ensure that constraints are set correctly, validate incorrect pin size in the error-browser GUI and check the log of pin-placement for any related warning or error messages.

## DPPA-176

(Error) Pin spacing violation detected.

Feedback

**Description**

The actual pin spacing does not honor the value defined by individual pin constraints, or derived from net or bus constraints, or the non default routing rule.

**What Next**

Ensure that constraints are set correctly, validate incorrect pin spacing in the error-browser GUI and check the log of pin-placement for any related warning or error messages.

---

## DPPA-177

(Error) Signal pin stacking violation detected.

**Description**

Two signal pins are overlapping on different layers. It is regarded as a violation if the pin placement constraints do not allow signal pin to signal pin overlapping.

**What Next**

Ensure that constraints are set correctly, validate incorrect stacking in the error-browser GUI and check the log of pin-placement for any related warning or error messages.

---

## DPPA-178

(Error) Signal pin to P/G stacking violation detected.

**Description**

Signal pin is overlapping with power or ground straps. It is regarded as a violation if the pin placement constraints do not allow signal pin to power or ground strap overlapping.

Ensure that constraints are set correctly, validate incorrect stacking in the error-browser GUI and check the log of pin-placement for any related warning or error messages.

---

## DPPA-179

(Error) Collinear overlap of shape %s with block instance %s for signal net %s detected. Skipping this shape for push-down.

**Description**

During push-down of signal net routing, it was determined that one or more shapes overlap collinearly with a block boundary, which is not allowed during signal route push-down. The shapes were not pushed down, and were left in the top block.

Feedback

**What Next**

Correct the signal routing.

---

## DPPA-180

(Error) The net %s has wire stubs in combination with multiple crossings of a blkInst that has wire-stubs in it. This would lead to potential ambiguity in how the wire-stubs should be traversed, and is not supported during routing push-down. Skipping this net.

**Description**

During push-down of signal net routing, it was determined that wire-stubs were in use in one or more block instances, and that the routing crossed a block instance that had wire-stubs on more than one occasion. This can lead to potentially incorrect traversal of wire stubs because the command makes an assumption that all routing in a block that has wire stubs should all belong to the same subnet in the block. And this may very probably not be what the user intended if the routing crosses multiple times.

**What Next**

Correct the wire-stub signal routing.

---

## DPPA-181

(Error) Wire-Stubs detected along with multiple crossings of block instance %s

**Description**

During push-down of signal net routing, it was determined that wire-stubs were in use in a block instances, and that the routing crossed that block instance that had wire-stubs on more than one occasion. This can lead to potentially incorrect traversal of wire stubs because the command makes an assumption that all routing in a block that has wire stubs should all belong to the same subnet in the block. And this may very probably not be what the user intended if the routing crosses multiple times.

**What Next**

Correct the wire-stub signal routing.

---

## DPPA-182

(Error) Failed to re-connect other affected MIB connections when pushing cells into block instance %s.

Feedback

**Description**

During push-down of cells into blocks, some connections on an MIB instance required using a new port (because the original port could not be reused). This requires finding the same port on other MIB instances and switching their connections to the newly-created port. This attempt to re-connect the MIB "other" port instances apparently failed.

**What Next**

Contact Synopsys.

---

## DPPA-183

(Error) Driver for net %s inside block %s is not placed inside the block boundary.

**Description**

During push-down of signal routing into blocks, a driver inside a block was found, but the cell instance was not placed inside the block boundary. For signal route push-down with feedthrough creation, it is necessary that cells be placed inside the block boundary.

**What Next**

Place the cells inside the block before running push-down of signal routing with feedthroughs.

---

## DPPA-184

(Error) Block %s via definition %s conflicts with top-cell via definition of the same name. Nets with routing in this block specified for pop-up which contain this via type will be skipped for pop-up.

**Description**

During pop-up of signal routing, a via definition conflict between a via type in the block and a via type in the top cell was discovered before the actual pop-up operation began. When this occurs, then for every block that has this conflict with the top block, nets specified for pop up will be checked before popping up the net, and if a net contains a via type that has been detected as having a conflict with the top, the net will be skipped for pop-up.

**What Next**

Correct the via name in either the top block or the child block, and try popping up the net again.

Feedback

## DPPA-185

(Error) Net %s in block %s contains a via type %s which has a conflict with a via type in the top block of the same name. Skipping this net for pop-up.

### Description

During pop-up of signal routing, a via definition conflict between a via type in the block and a via type in the top cell was discovered before the actual pop-up operation began. When this occurs, then for every block that has this conflict with the top block, nets specified for pop up will be checked before popping up the net, and if a net contains a via type that has been detected as having a conflict with the top, the net will be skipped for pop-up.

### What Next

Correct the via name in either the top block or the child block, and try popping up the net again.

## DPPA-186

(Error) Ambiguous wire-stubs detected for net %s over block instance %s.

### Description

During push-down of signal routing for feedthrough creation, routing was detected to involve wire-stubs (routing that does not touch pins inside a block). Push-down of signal routing for feedthrough creation can tolerate wire-stubs based upon the assumption that the command makes that all wire-stubs over a specific block instance should internally be considered physically connected, or stated alternately, as part of the same block-level subnet. Traversal for this net has resulted in the command detecting that wire-stubs within a block instance belong to multiple block-level subnets, which violates the assumption that all wire-stubs in an instance should be considered connected physically. If multiple subnets with wire-stubs within a block are implied by the routing, this means that there is ambiguity in how the command should treat these wire-stubs, and it is very likely that the result may not be what the user expects.

Such a scenario may likely happen if wire-stubs are used for an instance where routing leaves a block instance and feeds back upon the same instance (perhaps an existing output drives another port on the same instance) where a wire stub is used for both crossings of the boundary.

### What Next

Make sure that the routing for this net is non-ambiguous, particularly if the instance has multiple existing port connections to the net.

Feedback

## DPPA-187

(Warning) cell %s only partially overlaps block %s. Note that push-down of associated routing will very likely fail or produce incorrect results.

### Description

During push-down of cells into blocks, a cell was detected to overlap a block only partially. This is inadvisable, as the portion that exists outside of the block boundary will not be seen in the top cell. Note, also, that if any top-level routing associated with a pin of a pushed-down cell where the pin remains outside of the block boundary, the routing will likely not be able to be pushed into the block because the routing might not ever cross the block boundary.

### What Next

Make sure that all cells specified for push-down into a block are fully inside the block instance boundary before specifying them for push-down.

## DPPA-188

(Warning) cell %s specified for push-down overlaps more than one block. The command will only push this cell into one block, determined by the first block processed to receive cells. Note that push-down of associated routing will very likely fail or produce incorrect results.

### Description

During push-down of cells into blocks, a cell was detected to overlap more than one block instance. This is a very inadvisable scenario, and should be corrected by the user. Note, also, that if any top-level routing associated with a pin of a pushed-down cell where the pin remains outside of the block boundary, and inside the adjacent block, the routing will likely not be able to be pushed into the block because the result may be unpredictable and unsatisfactory to the user.

### What Next

Make sure that all cells specified for push-down into a block are fully inside one block instance boundary before specifying them for push-down.

## DPPA-189

(Warning) cell %s specified for push-down overlaps more than one block. The command will only push this cell into block %s .

Feedback

**Description**

During push-down of cells into blocks, a cell was detected to overlap more than one block instance. This is a very inadvisable scenario, and should be corrected by the user. But regardless, the command pushed down the cell in to a block that was chosen based upon which block is overlapped the most by the cell to be pushed down. If the area amounts of overlap are equal for multiple blocks, then the command chooses the block whose boundary contains the origin of the cell that overlaps multiple blocks. If that cell's origin does not fall within a block instance that can be pushed into, then the command chooses the block instance whose origin is closest to the cell's origin.

**What Next**

Make sure that all cells specified for push-down into a block are fully inside one block instance boundary before specifying them for push-down.

---

## DPPA-190

(warning) physical pin constraints can only be set on block cell instances or block pins, the constraints set on top level ports or standard-cell pins will be ignored for topological constraints at line %d

**Description**

The command failed to parse a valid topological constraint because a physical constraint (side, layer or offset) is set on a standard-cell pin or top level port. The tool can only set such (physical) constraints on block cell instances or block pins, but not on standard-cell pins or top level ports. Constraints set on top level ports will be ignored when runing place_pins from within this block, however if place_pins is run from parent of current block, then physical constraints set on top level terminals will be honored.

**What Next**

Remove the specified constraint

---

## DPPA-191

(Error) Asymmetric MIB Port connections detected.

**Description**

The MIB port has asymmetric connections across its block instances. This can result in sub-optimal pin-placement.

---

## DPPA-192

(Error) Pin and track mask constraint mismatch detected.

Feedback

**Description**

The mask constraint on the specified pin does not match the mask constraint on the track.

**What Next**

Ensure that constraints are set correctly, validate mismatch from the error-report from check_pin_placement check the log of place_pins for any related warning or error messages.

**See Also**

- create_track
- propagate_pin_mask_constraint
- read_def

---

## DPPA-193

(Error) Net %s has a dangling piece of wire not over a block. Skipping this net.

**Description**

The command detected that a piece of routing would be left dangling outside a block that the routing feeds through. The push_down_objects command does not allow a feedthrough creation where one side dangles over the top cell.

**What Next**

Please correct your routing for this net and try to push-down again.

---

## DPPA-194

(Error) net %s experienced a traversal problem and not all shapes on the net were visited. %s %s

**Description**

The command detected that some parts of the net (either pins or terminals or route shapes) did not get reached during traversal of the net to determine how feedthroughs should be created.

**What Next**

Please correct your routing for this net and try to push-down again.

Feedback

## DPPA-195

(Error) Failed to reach all original connections for net %s%s

**Description**

The command detected that some parts of the net (either pins or terminals or route shapes) did not get reached during traversal of the net to determine how feedthroughs should be created.

**What Next**

Please correct your routing for this net and try to push-down again.

## DPPA-196

(Error) The net %s violates feedthrough constraints on cell %s with feedthrough ports : %s

**Description**

The check_feedthrough command detected that the specified net violates feedthrough constraints on the specified block. The violating feedthrough ports are also listed.

**What Next**

Ensure that the constraints were read/set correctly with no errors or warnings.

## DPPA-197

(Error) The net %s violates topological constraints by not having a direct connection between cells %s and %s.

**Description**

The check_feedthrough command detected that the specified net violates its associated topological constraints by not having a direct connection between the two listed blocks.

**What Next**

Ensure that the topological constraints are correctly specified in the pin-constraint file and read-in correctly without any errors or warnings. Also check the logfile for warnings during pin-placement.

## DPPA-198

(Error) The net %s violates topological constraints by not having a direct connection between cell %s and instance pin %s.

Feedback

**Description**

The check_feedthrough command detected that the specified net violates its associated topological constraints by not having a direct connection between the block and instance pin listed.

**What Next**

Ensure that the topological constraints are correctly specified in the pin-constraint file and read-in correctly without any errors or warnings. Also check the logfile for warnings during pin-placement.

---

## DPPA-199

(Error) The net %s violates topological constraints by not directly connecting the cell %s and top level port %s.

**Description**

The check_feedthrough command detected that the specified net violates its associated topological constraints by not having a direct connection between the block and the top level port listed.

**What Next**

Ensure that the topological constraints are correctly specified in the pin-constraint file and read-in correctly without any errors or warnings. Also check the logfile for warnings during pin-placement.

---

## DPPA-200

(Error) The net %s violates topological constraints by not directly connecting the instance pins %s and %s.

**Description**

The check_feedthrough command detected that the specified net violates topological constraints by not having a direct connection between the instance pins that are listed.

**What Next**

Ensure that the topological constraints are correctly specified in the pin-constraint file and read-in correctly without any errors or warnings. Also check the logfile for warnings during pin-placement.

Feedback

## DPPA-201

(Error) The net %s violates topological constraints by not directly connecting the instance pin %s and top level port %s.

### Description

The check_feedthrough command detected that the specified net violates topological constraints by not having a direct connection between the instance pin and top level port listed.

### What Next

Ensure that the topological constraints are correctly specified in the pin-constraint file and read-in correctly without any errors or warnings. Also check the logfile for warnings during pin-placement.

## DPPA-202

(Error) The net %s violates topological constraints by not directly connecting top level port %s and top level port %s.

### Description

The check_feedthrough command detected that the specified net violates topological constraints by not having a direct connection between the listed top level ports.

### What Next

Ensure that the topological constraints are correctly specified in the pin-constraint file and read-in correctly without any errors or warnings. Also check the logfile for warnings during pin-placement.

## DPPA-203

(Error) Port %s on MIB Reference Module %s is a potentially swapped port.

### Description

The check_mib_for_pin_placement command detected that the specified port on the MIB reference module is potentially a swapped port. That is it does not connect to the same MIB pin across its MIB instances.

### What Next

check to see if such connection is reasonable for pin placement

Feedback

## DPPA-204

(Error) Port %s on MIB Reference Module %s connects to top level terminals which are not all at the same location.

**Description**

The check_mib_for_pin_placement command detected that the specified port on the MIB reference module connects to different top-level terminals (across the MIB instances) that do not all have the same location (relative to the MIB instance).

**What Next**

check to see if such connection is reasonable for pin placement

## DPPA-205

(Error) Port %s on MIB Reference Module %s has asymmetric connections.

**Description**

The check_mib_for_pin_placement command detected that the specified port on the MIB reference module has asymmetric. That is it does not connect to the same set of pins across its MIB instances and may cause problems during pin-placement.

**What Next**

check to see if such connection is reasonable for pin placement

## DPPA-206

(Warning) Total %d top level terminal violations detected in MIB instances.

**Description**

The check_mib_for_pin_placement command detected top level terminal violations. These can cause problems during pin-placement.

**What Next**

check to see if such connection is reasonable for pin placement

## DPPA-207

(Warning) Skipping net %d for alignment checking, because it has unplaced objects.

Feedback

**Description**

The specified net is being skipped for alignment checking since the -exclude_unplaced_objects option is set to true.

**What Next**

Ensure that the net has placed connections to allowe for alignment computation or ignore such nets for alignment.

---

## DPPA-208

(Warning) track %s is not within the boundary of block %s

**Description**

Tool detects that the track is defined outside of the boundary of a block instance

**What Next**

Please re-define the tracks so that they are inside the block boundary

---

## DPPA-209

(Error) Only site rows which belongs to a site array was passed into the push_down_object collection as stand-alone site rows. No actual standalone site rows were detected. Site rows that belong to site arrays are never explicitly pushed down. Instead, they are pushed down as part of a site array. This may have been unintentional and the result of the use of get_site_rows, which includes site-array-owned rows.

**Description**

The push_down_objects command detected that a site row which belongs to a site array was specified to be pushed down like a standalone site row. This is incorrect procedure. Only standalone site rows should be included in the object collection as site rows. If you want to push down a site array (which will include the site rows), then specify the site arrays using get_site_arrays. This may have occurred because get_site_rows now includes site-array-owned rows. You should first decide whether you even have standalone site rows in your design. If not, but you do have site arrays, you should just push down site arrays, instead of site rows. If you find you still must push down rows separately, you must deliberately apply a filter to get only the standalone rows. This can be done using the following: push_down_objects [get_site_rows -filter "is_derived==false"] .

**What Next**

Please correct your push_down_objects command line to push down site arrays instead of attempting to push down individual site rows belonging to a site array. Or, apply the "is_derived" filter to the get_site_rows command.

Feedback

## DPPA-210

(Error) Voltage Area %s is a primary VA. Only non-primary VA's (charging stations) are currently supported by push_down_objects. Skipping it for push-down.

**Description**

The push_down_objects command detected that a voltage area was specified for push-down. But the voltage area was a primary voltage area. Currently, the only type of voltage areas supported by push_down_objects is a charging_station voltage area.

**What Next**

Please only specify charging station voltage areas when calling push_down_objects.

## DPPA-211

(Error) This command does not support paths that are neither 1) Manhattan-style nor 2) 45-degree. Skipping shape %s.

**Description**

The push_down_objects/pop_up_objects command detected that a path was passed to the command which is diagonal, but not a 45 degree angle. Currently, these commands only support push/pop of paths that are either horizontal, vertical or 45-degree diagonal.

**What Next**

Please only specify paths to push_down_objects or pop_up_objects that are either 1) horizontal, 2) vertical, or 3) 45-degree diagonal.

## DPPA-212

(Error) This command only supports 45-degree paths that are for RDL nets. Skipping shape %s.

**Description**

The push_down_objects/pop_up_objects command detected that a path was passed to the command which is 45-degree diagonal, but had no net associated with it. Currently, these commands only support push/pop of 45-degree paths that are part of a net that is an RDL net.

**What Next**

Please only specify 45-degree paths to push_down_objects or pop_up_objects belong to RDL nets.

Feedback

## DPPA-213

(Error) Pin %s on cell %s is shorted with pin %s on cell %s.

**Description**

The specified pins are shorted with each other, that is they are on the same layer and touch or overlap with each other.

**What Next**

Confirm in GUI/Error-Browser that the pins are indeed shorted. Move/edit pin locations as appropriate.

place_pins

## DPPA-214

(Error) Port %s on cell %s has no pin.

**Description**

The specified port does not have a physical pin created.

**What Next**

Use GUI/Error-Browser to confirm that physical pins are missing.

## DPPA-215

(Error) A mixture of site row types was passed into the push_down_objects object collection as site-rows. This includes 1) standalone site rows and 2) site-array-owned site rows. The push_down_object command only pushes down standalone site row, and will ignore the site-array-owned rows that were passed. If you want to push down rows that belong to site arrays, you need to include site arrays in the collection (using get_site_arrays).

**Description**

The push_down_objects command detected that, along with standalone site rows, a site row which belongs to a site array was specified to be pushed down like a standalone site row. If you want to push down a site array (which will include the site rows), then specify the site arrays using get_site_arrays. This may have occurred because get_site_rows now includes site-array-owned rows. If you find you need to push down standalone site rows, and you don't want to see this error message, you must deliberately apply a filter to get only the standalone rows. This can be done using the following: push_down_objects [get_site_rows -filter "is_derived==false"] .

Feedback

**What Next**

Please correct your push_down_objects command line to apply the "is_derived" filter to the get_site_rows command.

---

## DPPA-216

(warning) Net %s is assigned to a pin guide, but appears to be covered by a previous pin guide. The pin guide %s is ignored.

**Description**

Pin guides should uniquely describe a range or set of ranges for pins. All pin guides must be obeyed; the router will not choose between alternate pin guides. If it appears that a net has already been fully covered by prior pin guides, and further pin guide will be discarded.

**What Next**

Please make sure that there are not duplicate or alternate pin guides for a single net.

---

## DPPA-217

(Warning) Path %s is neither manhattan style or 45 degree. This all-angle path is not supported for push-down or pop-up.

**Description**

A push or pop objects operation encountered a path that is "all-angle" (neither manhattan, nor 45-degree). Such a path is unsupported in this tool, and will not be pushed or popped.

**What Next**

Try to find out how such a path got introduced into your design. It is an illegal path.

---

## DPPA-218

(Error) Net %s was determined to have one or more paths that overlap a block edge collinearly for block instance %s. This overlap scenario is unsupported by push_down_objects for signal net routing.

**Description**

A push_down_objects for signal routing encountered a path that is "collinear" with a block edge. While this scenario is allowable for P/G nets, it is not allowed for signal routing. A "collinear" overlap is a wire that "straddles" a block edge in a way that is not perpendicular to the edge. Also, any via that only partially overlaps a block edge is also considered to be "collinear". These wire and via "collinear" scenarios are not supported in signal routes

Feedback

because they cannot be split in a way that part is put into the block and the other part is left at the top, or in an abutted block.

**What Next**

Re-route the specified net so that no section of the routing overlaps a block edge collinearly (in parallel with).

---

## DPPA-219

(Warning) Net %s has global routing elements. Push-down/pop-up operations only support detailed routing elements. Skipping this net.

**Description**

A push_down_objects or pop_up_objects operation detected a net that has global routing elements. These operations only support routing which is of type "detail" routing. This net will be skipped.

**What Next**

Make sure the net that you are attempting to push-down or pop-up has detail routing.

---

## DPPA-220

(Warning) P/G routing objects will not be pushed down into block instance %s (or any block instance) due to P/G strap mis-alignment among MIB instances. (This can be overridden with pg_routing push-down option -ignore_misalignment using set_push_down_object_options.)

**Description**

When mis-alignment of P/G straps over MIB instance is encoutered, the default behavior of command push_down_objects is to issue a warning message and to not push down the P/G routing objects in any block. The user can over-ride this by setting the "-ignore_misalignment true" option to the command "set_push_down_object_options -object_type pg_routing".

**What Next**

Please fix the mis-aligned objects or set "-ignore_misalignment" to true using command set_push_down_object_options.

---

## DPPA-221

(Warning) pin %s on cell %s will be ignored for spacing check due to a mismatch in routing layer direction and pin orientation.

Feedback

**Description**

The specified pin has a mismatch in routing layer direction and pin/edge direction. That is the pin is on a vertical routing layer but the pin is horizontal (placed on a vertical edge) or vice-versa.

**What Next**

Make sure that the routing direction is specified correctly for all layers.

---

## DPPA-222

(Warning) The direction of track %s in block %s does not match its layer (%s) routing direction.

**Description**

The specified track's direction (horizontal/vertical) does not match that of its routing layer's direction.

**What Next**

Make sure that the routing direction is specified correctly for all layers and for this track.

---

## DPPA-223

(Warning) Inconsistent routing direction. The layer %s has no tracks in its specified routing direction on block %s.

**Description**

The specified layer has no tracks defined for this cell that match its routing direction (horizontal/vertical).

**What Next**

Make sure that the routing direction is specified correctly for all layers and tracks.

---

## DPPA-224

(Error) Net %s specified for push-down into block instance %s is completely contained with the block instance boundary, but has no logical connection to it. This is not a supported net push-down scenario.

**Description**

The push_down_objects command detected a net that was specified for push-down into blocks that was an interconnection net of cell instances where all the cells overlapped the

Feedback

interior of the block instance boundary. In this case, we do not allow the net push-down, but require instead that the cells be pushed down into the block. If the cells are pushed down, all nets which interconnect between these cells exclusively will automatically be pushed into the block, along with the routing.

**What Next**

Push the cells which connect to this net into the block instead of trying to push the net that interconnect the cells.

---

## DPPA-225

(Error) NDR and track mask constraint mismatch detected.

**Description**

The pin has a non default routing rule that requires a particular mask constraint, which conflicts with the mask constraint on the track.

**What Next**

Check the non defualt routing rule and the track's mask constraints to make sure there are no conflicts.

**See Also**

- create_track
- create_routing_rule
- set_routing_rule

---

## DPPA-226

(Error) NDR and pin mask constraint mismatch detected.

**Description**

The pin has a non default routing rule that requires a particular mask constraint, which conflicts with the mask constraint on the pin.

**What Next**

Check the non default routing rule and the pin's mask constraints to make sure there are no conflicts.

Feedback

**See Also**

- create_routing_rule
- set_routing_rule

---

## DPPA-227

(Warning) Location constraint (%.3f %.3f) for %s %s is outside of block boundary.

**Description**

The pin location constraint is outside of the block boundary. In general, block pin should always be inside block boundary. This constraint will be ignored by the tool.

**What Next**

Please reset pin location constraint

**See Also**

- set_individual_pin_constraints
- read_pin_constraints

---

## DPPA-228

(Warning) MIB abutted pins %s and %s are shorted together.

**Description**

When synthesizing abutted pin connections, the push_down_objects command detected abutted MIB pins which resulted from push-down of routing into another MIB instance.

**What Next**

Examine your placement and/or recreate pre-routes.

push_down_objects(2)

---

## DPPA-229

(Warning) MIB abutted pin %s and terminal %s are stacked, but both are unconnected. Expected that the terminal would be connected to a net.

**Description**

When synthesizing abutted pin connections, the push_down_objects command detected an MIB feedthrough pin which touches a top terminal, but both are unconnected.

Feedback

**What Next**

Examine your placement and/or recreate pre-routes.

push_down_objects (2)

---

## DPPA-230

(Warning) MIB abutted pins %s and top terminal %s are shorted together.

**Description**

When synthesizing abutted pin connections, the push_down_objects command detected an MIB feedthrough pin which touches a top terminal, but both are connected to different nets.

**What Next**

Examine your placement and/or recreate pre-routes.

push_down_objects (2)

---

## DPPA-231

(Warning) Found incompatible abutted MIB pin pair (%s : %s)

**Description**

When synthesizing abutted pin connections, the push_down_objects command detected an MIB feedthrough pin which touches another MIB pin but the pin is inpcompatible with automatic MIB abutted pin stitching.

**What Next**

Examine your placement and/or recreate pre-routes.

push_down_objects (2)

---

## DPPA-232

(warning) Relax non default rule based mask constraints to place pin %s.

**Description**

The pin has non default rule based mask constraints that are incompatible with the track mask constraints settings. The tool has to relax the non default rule based mask constraints to place this pin.

Feedback

### What Next

Check the non default routing rule to make sure the mask constraints are compatible with the track mask constraints settings.

### See Also

- create_routing_rule
- set_routing_rule

---

## DPPA-233

(Warning) Site array %s in block instance %s is unaligned with it's existing counterpart in the parent block. Skipping propagation of this site array.

### Description

When uncommitting a block with site arrays, a site arrays was determined to already exist in the parent block, but one in the child would be unaligned with the one in the parent if propagated to the parent.

### What Next

Check the placement of your block or the offset of the site array within the block and re-run uncommit_block.

### See Also

- uncommit_block

---

## DPPA-234

(Warning) No %s found for parent net %s of popped net %s.

### Description

When popping up a net that was a feedthrough, the command attempted to determine the best parent net to inherit the split net connections, and the reconnect all connections to the chosen parent net. But in doing so, the command failed to either find a driver or other loads on the chosen parent net.

### What Next

This is a system error. Contact your AC.

Feedback

**See Also**

- pop_up_objects

---

## DPPA-235

(Warning) Split net %s is not empty. Will not delete this net.

**Description**

When popping up a net that was a feedthrough, the command attempted to exchange connections from a split net to an inheriting net and then delete the net, but after swapping connections and shapes, apparently the net still was not empty.

**What Next**

This is a system error. Contact your AC.

**See Also**

- pop_up_objects

---

## DPPA-236

(Warning) Non-MIB pin %s/%s would short with MIB feedthrough single pin %s

**Description**

When synthesizing abutted pins for single pins on MIB blocks, it was discovered that a short would occur if the pin were synthesized in the adjacent block.

**What Next**

Please check your placement and pre-routes.

**See Also**

- pop_up_objects

---

## DPPA-237

(Warning) Detected %s blockages in the top with more than %d instances with the same name %s. count = %d\nThese blockages, when propagated, will not be propagated using uniquified names.

Feedback

### Description

When propagating blockages in push_down_objects or pop_up_objects, the command detected blockages passed into the command that have the same name. Normally, these commands try to generate the propagated blockages using unique names. But if the number of redundant blockages with the same name is quite large, the confirmation of uniqueness of a name can be quite costly performance-wise. So when name redundancy exceeds a certain threshold, the command concludes that the redundant use of the name is intentional, and that the user would not want uniquification of blockage names.

### What Next

Please be sure that you intended to pass blockages that use redundant names.

### See Also

- push_down_objects
- pop_up_objects

---

## DPPA-238

(Error) Failed to reconnect split net connections when popping up feedthrough routing for net %s in block instance %s

### Description

When popping up feedthrough routing from blocks in pop_up_objects, the command attempted to re-combine split nets that were previously connected to feedthrough ports of a block, but encountered a problem.

### What Next

This is an internal error. Please report this.

### See Also

- push_down_objects
- pop_up_objects

---

## DPPA-239

(Error) failed to prepare outputport-connected conn-driven split net for consolitation for net %s.

Feedback

### Description

When popping up feedthrough routing from blocks in pop_up_objects, the command attempted to re-combine a port-connected split net that was previously connected to feedthrough ports of a block, but encountered a problem.

### What Next

This is an internal error. Please report this.

### See Also

- push_down_objects
- pop_up_objects

---

## DPPA-240

(Error) Shorted non-MIB pin %s/%s (abuts with MIB feedthrough pin %s)

### Description

When synthesizing MIB abutted pins (because the app option plan.pins.synthesize_abutted_pins was specified), a pin on a MIB instance was found to short with another pin with which it was not logically connected, and the abutment did not match the source abutted pin's type.

### What Next

Correct your existing pin placements or modify the routint pushed into MIB instances before pushing down.

### See Also

- push_down_objects

---

## DPPA-241

(Warning) Wire-stub crossing into blkInst %s at location {%d %d} on net %s which has multiple original inputs. Resolving randomly and assigning this crossing to existing input block pin %s .

### Description

During the push-down of routing that involves "wire-stub"'s crossing into a block instance, the command determined that multiple input connections exist for this block instance, and since the stubs don't physically touch a block-level pin or terminal, this introduces an ambiguity scenario regarding how to assign such input crossings. In this context, the

Feedback

command decides to automatically resolve the ambiguity randomly by choosing the 1st unassigned input connection to this crossing. The same is done for the other input wire stub crossing for this block instance and net.

**What Next**

Confirm that the randomly selected mapping of a wire-stub crossing to a pre-existing input connection is acceptable.

**See Also**

- push_down_objects

---

## DPPA-242

(Warning) Push_down_objects randomly chose one of a group of existing block-level port-connected nets that were part of the same net push-down to assign the feedthrough output ports to for block instance %s.

**Description**

During the push-down of routing that involves "wire-stub"'s crossing into a block instance, the command determined that multiple input connections exist for this block instance, as well as one or more output feedthrough crossings. The command randomly chose one of the existing block-level nets to assign the feedthrough output ports to.

**What Next**

Confirm that the randomly selected mapping of a wire-stub output crossing to a pre-existing input connection is acceptable.

**See Also**

- push_down_objects

---

## DPPA-243

(Warning) Skipping net for feedthrough removal due to MPH connections %s.

**Description**

remove_feedthroughs does not support feedthrough removal on nets that span Multiple Levels of Physical Hierarhcy. So this net is being skipped for feedthrough removal. User can set into lower levels of hierarchy and remove feedthroughs there before removing at the top (or higher level).

Feedback

### What Next

Confirm that the net has MPH connections and remove feedthroughs on lower levels of physical hierarhcy first.

### See Also

- report_feedthroughs

---

## DPPA-244

(warning) Cannot parse side or layer constraints at line %d

### Description

The command cannot parse side or layer constraints pin constraint file. This could happen due to a syntax error. For instance, when specifying side constraints, the command can parse side constraints {sides {1 2 3}} or {sides 1 2 3} but not {sides {1 2} 3} or {sides {{1 2} 3}}

### What Next

Check if the side or layer constraints are specified correctly

---

## DPPA-245

(Warning) Removing feedthrough ports of net %s due to MIB connections.

### Description

The specified net was not passed using the -nets option, but connects to MIB instances whose feedthrough ports are being removed due to feedthrough removal on a (different) user specified net. If feedthrough ports are not removed on this net, it would lead to dangling/unconnected nets.

### What Next

If feedthrough removal was not desired on this net, refine the set of nets specified on the command prompt to not include nets that connect to MIB instances.

---

## DPPA-246

(Warning) Inconsistent routing direction. Layer %s has no tracks in its specified routing direction on block %s

Feedback

**Description**

The specified layer has no tracks in the routing direction that is set on it for this particular block. This can be due to incorrectly set routing or track direction.

**What Next**

Confirm that the track directions and layer routing directions are set correctly.

---

## DPPA-247

(Info) Block pin %s lies directly under and is connected to a top level terminal.

**Description**

The specified port is directly under and connected to a top level terminal, hence no individual or block pin layer constraints are checked this port. The check_pin_placement command ensures that this pin is on the same layer as the corresponding top level terminal.

**What Next**

Nothing needed. Just informational.

---

## DPPA-248

(Warning) Failed to initialize uhSplitCntr object for charging stations. UPF may not be properly loaded. Will not be able to push-down charging stations.

**Description**

The command attempted to create and initialize a uhSplitCntr object for the purpose of checking for or pushing down charging stations (special voltage areas) It likely results from UPF not loaded properly.

**What Next**

Make sure that UPF is properly loaded.

---

## DPPA-249

(Error) Failed to update pushed repeater cells with UPF information.

**Description**

The push_down_objects command, during push-down of charging stations, and associated repeater cells, attempted to associate the pushed-down repeater cells with UPF information of their associated voltage area, but a problem occurred.

Feedback

**What Next**

Contact your Synopsys representative.

---

## DPPA-250

(Warning) Could not locate hierarchical repeater instance %s during charging station push-down.

**Description**

The push_down_objects command, during push-down of charging stations, and associated repeater cells, failed to find a repeater cell in a hierarchical table.

**What Next**

Contact your Synopsys representative.

---

## DPPA-251

(Error) Failed to create child-level charging station %s in block %s.

**Description**

The push_down_objects command, during push-down of charging stations, failed to find a child-level charging station (voltage area).

**What Next**

Contact your Synopsys representative.

---

## DPPA-252

(Error) Charging station %s is not appropriate for pushing down into block instance %s. Reason: %s

**Description**

The push_down_objects command, during push-down of charging stations, determined that the reference block of the instance did not meet necessary UPF qualifications for pushing down the charging station. The reason should be specified in the error message.

**What Next**

Depending upon the reason reported, the user may want to 1) check the original UPF, 2) check current design MV status (using report_power_domains, or check_mv_design, etc.), or 3) check if any warning message can be found in the split_constraints log output.

Feedback

## DPPA-253

(warning) No wire track is defined for block %s

### Description

The tool detects that there is no track defined in a block. If no track is defined for all the blocks including top level block, pin placement will not be able to place any pins.

### What Next

Please define wire tracks and try again.

### See Also

- create_track

## DPPA-254

(Warning) Cell instance %s belongs to a non-primary voltage area %s and is not a single-rail repeater cell. This cell cannot be pushed down into any block.

### Description

The push_down_objects command, during push-down of cells, determined that a cell instance belonged to a non-primary voltage area (also referred to as a gas station), and that cell instance is not a single-rail repeater cell. Currently, we do not support push-down of any cells that belong to a gas station unless it is a single-rail repeater cell. And then, in that case, such single-rail repeater cells can only be pushed down by pushing down the parent gas station which contains the repeater cell.

### What Next

Only attempt stand-alone cell push-down for cells that belong to a primary voltage area.

## DPPA-255

(Warning) Cell instance %s belongs to a non-primary voltage area %s and is a single-rail repeater cell. This cell can only be pushed down into a block by pushing down the owning voltage area (also referred to as gas station), during which the member repeater cells will be pushed down along with the gas station.

### Description

When pushing down cells, the *push_down_objects* command determined that a cell instance belonged to a non-primary voltage area (also referred to as a gas station), and that cell instance is a single-rail repeater cell. The tool does not support push down of

Feedback

any cells that belong to a gas station unless it is a single-rail repeater cell. Such single-rail repeater cells can be pushed down only by pushing down the parent gas station that contains the repeater cell.

**What Next**

Instead of attempting to push down gas station repeater cells standalone, push down the owning voltage area (gas station).

---

## DPPA-256

(Error) Cell instance %s is a dual-rail cell instance. This is currently only supported by push_down_objects if the cells have no UPF strategy and if you use the -allow_multi_rail_cells option to the set_push_down_object_options.

**Description**

The push_down_objects command, during push-down of cells, determined that a cell instance was a dual-rail cell. Push_down_objects currently does not support the MV requirements of dual-rail cells if they have a UPF strategy, and so this instance will be skipped. This can be over-ridden by using the set_push_down_object_options option, "-allow_multi_rail_cells true", but only if the cell instance has no UPF strategy.

**What Next**

Use the "set_push_down_object_options -object_type cells -allow_multi_rail_cells true" option to push down multi-rail cells with no UPF strategy.

**See Also**

- set_push_down_object_options

---

## DPPA-257

(Info) No feedthroughs are found in the design. Feedthrough shadow ECO script creation is skipped.

**Description**

The feedthrough shadow ECO script is to be used for re-creating the feedthroughs from push_down_objects and/or place_pins. However, the design does not have feedthroughs or the call of push_down_objects and/or place_pins with the -write_shadow_eco option does not create any feedthroughs. Therefore, feedthrough shadow ECO script creation is skipped and no scripts are created.

**What Next**

Nothing needed. Just informational.

Feedback

## DPPA-258

(Warning) Specified width/length for layer %s is less than the layer minimum width/length %s

### Description

The user defined pin width or length constraint, or the non default routing rule width associated with net on the pin, is less than the minimum value defined by the technology rule. As a result, the user defined constraint is ignored for pin placement or pin check.

### What Next

Please double check the technology rule to make sure that user defined width or length constraint, or the non default routing rule, does not violate those defined in technology rule.

## DPPA-259

(Warning) Specified %s for layer %s is less than the layer minimum %s %s

### Description

The user defined pin width or length constraint associated with net on the pin, is less than the minimum value defined by the technology rule for this particular net. As a result, the user defined constraint is ignored for pin placement or pin check.

### What Next

Please double check the technology rule to make sure that user defined width or length constraint, does not violate those defined in technology rule.

## DPPA-260

(Error) Check_objects_for_push_down currently only supports object types: nets and charging stations.

### Description

Currently, the check_objects_for_push_down only supports 2 types: 1) Nets and 2) charging stations (gas stations or non-primary voltage areas).

### What Next

Only attempt to call this command for Nets or Charging Stations (but not both types at the same time).

Feedback

## DPPA-261

(Error) Check_objects_for_push_down received no valid net (with routing) or charging station objects.

**Description**

The check_objects_for_push_down command did not receive any objects of type "net" or "charging station" (the 2 object types currently supported by the command).

**What Next**

Please specify a valid net or charging station for the command to check for push_down. (But one type at a time, net or charging station).

## DPPA-262

(Error) Check_objects_for_push_down can only be called for one object type at a time (currently either nets or charging stations, but not both).

**Description**

Because the check_objects_for_push_down returns a collection of objects found to violate some rule or cause a problem with push_down, it will not attempt to mix object types in the collection returned. For this reason, it is necessary to restrict the use of this command by allowing only one object type to be checked at a time. The user is not allow to mix object types in the same call to this command. Thus, the collection which may be returned by the command will be specific to the type specified to the command.

**What Next**

Only call the command for one object type at a time per call. (Either net or charging station.)

## DPPA-263

(Error) Could not intialize UPF for charging station push-down or check.

**Description**

During push_down_objects or check_objects_for_push_down for charging stations, the command could not initialize UPF. This usually means that UPF is not loaded or complete for this design.

**What Next**

Make sure that the UPF is correctly defined/loaded for this design.

Feedback

## DPPA-264

(Error) Shapes of charging station %s only partially overlap block instance %s.

**Description**

During push_down_objects or check_objects_for_push_down for charging stations, the command discovered that a charging station shape overlapped a block instance, but was not fully enclosed within the block instance boundary. This is not supported by push_down_objects for charging stations.

**What Next**

Make sure that the charging station voltage area shapes are fully enclosed by a block instance before attempting to push the charging station down into the block.

## DPPA-265

(Error) Failed to create charging station %s in block %s for blkInst %s

**Description**

During push_down_objects or check_objects_for_push_down for charging stations, the command failed to create a charging station in the deepest block that the charging station overlapped.

**What Next**

This may be a tool problem. Report this.

## DPPA-266

(Error) No technology defined for current design

**Description**

The tool cannot find technology assoicated with current design.

**What Next**

Please setup technology before running pin placement or global route related commands

## DPPA-267

(Warning) Is necessary to extend a pin geometry outside the block boundary to meet DRC requirement. Block %s port: %s pin box: {{%s %s}{%s %s}} layer: %s

Feedback

**Description**

During push-down of routing, a route overlap with a block resulted in a pin geometry that did not meet DRC rule requirements for minimum width. This is usually due to a rare case of the path only very slightly overlapping the block. In this case, the command is forced to extend the pin outside the boundary a very small amount, because extending the pin inside the boundary may result in a spacing violation.

**What Next**

Nothing required.

---

## DPPA-268

(Warning) Didn't find any enabled planning block for %s.

**Description**

The tool couldn't find an enabled block to run the specified command. This could happen if user uses set_editability to disable all the physical blocks from design planning or user forgets to define physical block in the design. This could also happen if there is no writable physical blocks (blocks are read only)

**What Next**

Check that set_editability are set correctly and/or check if there is any physical block in the design or check if all the blocks are writable.

---

## DPPA-269

(Error) Place_pins cannot be used with crosstalk driven mode in global route.

**Description**

The command detected that crosstalk driven mode is turned on while it cannot be used together with place_pins since place_pins uses global route to determine the pin locations.

**What Next**

Please reset the app option route.global.crosstalk_driven to "false"

---

## DPPA-270

(Error) Cannot load in technology of layer %s using its layer number.

Feedback

**Description**

The command cannot load the layer due to a failed query of the layer's technology using its layer number. This may happen due to user error or data corruption in the database.

**What Next**

Use check_design command for a sanity check.

---

## DPPA-271

(Warning) Place_pins and design planning global route cannot be used with single connection to pin routing mode. This single connection option will be ignored.

**Description**

The command detected that single connection to pin routing mode is turned on while it cannot be used together with place_pins or design planning global route since design planning global route is used to determine the pin locations for pin placement purpose.

**What Next**

Please reset the app option route.common.single_connection_to_pins to "off"

---

## DPPA-272

(Warning) Net %s connects to unplaced instance %s.

**Description**

The check_pin_placement detour check detected that this net connects to unplaced instances. Pins on such instances cannot be used for detour computation and will be ignored for detour computation. This can cause large detour values for such nets.

**What Next**

Ensure such instances are placed to allow for meaningful detour computation or ignore these nets for detour if applicable.

---

## DPPA-273

(Error) Push_down_objects detected that, during the push-down of the net %s into block instance %s, a feedthrough chosen for re-use in the block (based upon how the routing crosses the block) is already connected on this instance (to nets %s). Skipping this net for push-down.

Feedback

**Description**

The command detected that it could re-use an existing feedthrough based upon a pre-existing feedthrough in the block, but that the feedthrough ports of the block feedthrough are already connected to nets in the top. This is probably due to redundant top-level pre-routes of different nets that are exactly the same.

**What Next**

Please examine and correct the pre-routes over this block instance and make sure that they are not in conflict with each other.

---

## DPPA-274

(Warning) push_down_objects detected that, during the push-down of the charging station %s into block instance %s, a voltage area already existed by that name. The name that was created (%s) was modified to produce a unique name.

**Description**

The command detected that voltage area already existed in the ultimate destination block, and so the new voltage area of the charging station was created with a uniquified name based upon the original name.

**What Next**

Nothing required.

---

## DPPA-275

(Warning) A parent-net-to-block-net mapping problem has been detected for net %s and reference block %s. A top-level CLOCK net has a connection to a block instance pin (%s) but no block-level CLOCK net previously existed. A new block-level net %s was created.

**Description**

During push-down of routing, where a net has an existing connection to a block, the command builds a map between the parent net and the block net. If the parent net is a CLOCK net and a port exists on the block connected to that net, but no corresponding CLOCK net exists in the block, one is created.

**What Next**

Make sure that this is the behavior that you expect, or make sure that you have created clock nets in the block correctly.

Feedback

## DPPA-276

(Error) unexpected failure to locate a feedthrough net in block instance %s when updating feedthrough information for feedthroughs created during the push-down of net %s.

**Description**

During push-down of routing, some unexpected failure occurred in feedthrough creation in one of the block instances that the routing passed over.

**What Next**

Please check the routing for this net and report this problem.

## DPPA-277

(Warning) Net %s does not overlap all originally-connected blocks on the net. Block Instances that have no routing overlap: {%s}

**Description**

During push-down of routing with feedthroughs allowed, the command determined that not all originally-connected block instances had routing overlapping the block instance.

**What Next**

Please check the routing for this net and, if needed, fix the routing so that the command can traverse routing into every orgiginaly-connected block instance.

## DPPA-278

(Warning) Encountered more wire stub crossings into block instance %s than original inputs to the block instance for net %s. The push_down_objects command will generate feedthrough connections since feedthroughs are allowed for this net, but you may wish to make sure this result is what is intended, as this involves ambiguity concerning wire-stub crossings into the same block.

**Description**

During push-down of routing with feedthroughs allowed, the command encountered wire-stubs crossings from a driver to a receiving block in a scenario where more stubs existed thatn the number of inputs into the block. In this scenario, the command will create separate feedthrough split nets from the driver block to the receiving block. The stubs that overlap the receiving block (beyond the stubs consumed by the original inputs) will result in separate dangling subnets in that block. If this is not what you intended, then please consider turning of feedthrough allowance for this net and re-run push-down. The result

Feedback

with feedthroughs turned off will be EEQ pins for one of the original input pins into the block.

**What Next**

Please check the routing for this net and make sure the results are what you desire.

---

## DPPA-279

(Error) path %s crosses blkInst %s boundary at 45 degrees but crossing is unsupported.

**Description**

During RDL push-down of routing, an unsupported 45-degree crossing of a block boundary was encountered that is not supported.

**What Next**

Please check the routing for this net and make sure the routing is what was intended.

---

## DPPA-280

(Error) Failed to connect new synthesized port %s to tie-low net %s.

**Description**

During abutted pin synthesis during push-down of routing, the command failed to create a tie-low net in one of the abutted blocks.

**What Next**

Report this issue.

---

## DPPA-281

(Error) %s segment of path %s overlaps block inst %s in a collinear direction. Segment bbox: {{%s %s}{%s %s}} block edge: {{%s %s}{%s %s}}

**Description**

The command detected routing that overlaps a block collinearly (overlaps in a parallel fashion). The command does not support such a routing scenario.

**What Next**

Check the routing for this path and correct it before attempting to push it down again.

Feedback

## DPPA-282

(Warning) Charging Station (%s) shape was trimmed to fit inside destination block %s boundary.

**Description**

The push_down_objects command detected a charging station shape which did not fit completely inside the destination block boundary. It was trimmed to fit inside the block.

**What Next**

Make sure this is what was expected. If not, then you may wish to modify the original top-level charging station boundary to fit inside the final destination lower-level block.

## DPPA-283

(Warning) %s is not on the same physical level with %s. The instance will be skipped for writing topological constraints.

**Description**

The current instance is not one the same physical level with driver. Therefore, the instance cannot be recognized by ID in topological constraints. Skip the instance and continue building topological record.

**What Next**

Skip the current instance and continue building topological record.

## DPPA-284

(Warning) Instance %s %s. This instance will be ignored.

**Description**

The specified instance is is not a valid physical block instance that can be pushed down or popped up.

**What Next**

Make sure that you passed the cells that you intended into the command.

## DPPA-285

(Error) Destination block %s does not contain tech via definition %s. Skipping creation of via in destination block (source via %s). This may indicate a design flow problem.

Feedback

### Description

During creation of a via in a block (during push_down_objects or pop_up_objects), it was determined that the via was a tech via, meaning it is defined in a tech file. The destination block was in a different library thant the source block, and that libray tech did not contain the via definition. This likely indicates a design flow problem. Perhaps a bottom-up flow using DEF files, in which the DEF file for the block did not contain the via definition.

### What Next

If you are using a bottom-up DEF flow, make sure that the DEF file for blocks contains via definitions for all vias you wish to push into the block from the top.

---

## DPPA-286

(Warning) Cannot parse keyword %s at line %d in pin constraints file %s. This line is ignored.

### Description

The command cannot parse the specified keyword on the line indicated in the pin constraints file. Make sure the keyword and its required argument(s) are properly enclosed by a pair of curly braces. For example, {BUNDLE bundle1}, {SIDES {1 2 3}}, {CELL U1}.

### What Next

Check if the keyword and its required argument(s) are correctly specified and properly enclosed by a pair of curly braces.

### See Also

- read_pin_constraints

---

## DPPA-287

(Warning) Some nets were pushed down. However, one or more nets failed to push down. Please check all Warning and Error messages.

### Description

During push-down of routing, some nets pushed down without problems. But some nets encountered problems, and were not pushed down. The command will continue to push down net routing even if errors are detected on some. Please carefully check the log for Error message and fix problems described in the error messages.

### What Next

Check the log file for errors.

Feedback

## DPPA-288

(warning) net %s connects to %d ports on blocks

### Description

There are too many block pins connected to the same net. This is more likely a user error as too many block pins connect to the same net will usually lead to low quality of result of pin placement.

### What Next

This may be due to tie high or tie low net that is not created properly. Please check original net list or check how the tie nets are created.

### See Also

- check_mv_design
- connect_pg_net

## DPPA-289

(Warning) The following blocks are disabled for planning (no pin or feedthrough will be created on those blocks):%s.

### Description

Report the blocks that are disabled for planning in the current design.

Here, "disabled" can mean any one of the following: - The block is not editable - The block is in a library that is read-only on disc - The block is opened in another session

### What Next

Try setting the block as editable by using the *set_editability* command.

### See Also

- set_editability

## DPPA-290

(Warning) Did not push down cell rows (site arrays) or wire tracks into any block instance because of MIB misalignment.

Feedback

**Description**

The command has detected that the user has chosen to consider all block instances for cell row (site array) / wire track push-down. But the command has also detected that some MIB instances are misaligned with respect to each other. In this case, cell row (site array) and wire track push-down is prevented for all block instances (MIB and non-MIB instances). If you want to force push-down into all instances, consider setting the session option, -ignore_misalignment:

set_push_down_object_options -object_type pg_routing -ignore_misalignment true

Alternatively, you may force push-down of cell rows (site arrays) and wire tracks by using the -cells option of the push_down_objects command, and specify only non-MIB instances. If only non-MIB instances are included in the -cells collection, then the command disregards the MIB misalignment and allows the requested push-down operation.

**What Next**

Fix the misalignment issue with MIB's, or choose one of the option mentioned above.

---

## DPPA-291

(Warning) No slots found for pin creation on edge %d

**Description**

The command has detected that there were no slots for pin placement/creation on the specified edge. This is most likely due to lack of any tracks overlapping that particular edge, and can happen during pin-update due to wire-tracks not being appropriately pushed down.

In such a situation the tool will attempt to place/move pins to nearby edges. It is recommended to run place-pins or place-pins -incr after block reshaping.

**What Next**

Ensure that tracks are defined correctly either through the GUI or command line. Also run place-pins after reshaping is complete.

---

## DPPA-292

(Info) No edges changed for cell %s

**Description**

The pin-update code detected no change in edges for the specified cell. Hence pin-placement is kept unchanged.

Feedback

**What Next**

Nothing needed. Just informational.

---

## DPPA-293

(Error) Two cells overlap the same MIB reference block %s at the same reference location in the reference cell, but are different cell types. Cell1: %s Cell1 type: %s Cell2: %s Cell2 type: %s

**Description**

During push-down of cells over MIB instances, two cells were found to conflict in their location over their respective MIB block instances. In this case, the types of the cells were different. If multiple cells overlap an instance of an MIB reference block, they must be placed exactly by using the same orientation and the same reference block.

**What Next**

Fix the placement of cells overlapping the MIB instances.

---

## DPPA-294

(Error) Two cells overlap the same MIB reference block %s at the same reference location in the reference cell, but have different reference orientations. Cell1: %s Cell1 ori: %s Cell2: %s Cell2 ori: %s

**Description**

During push-down of cells over MIB instances, two cells were found to conflict in their location over their respective MIB block instances. In this case, the difference was in the orientation of the cells. If multiple cells are overlapping an instance of a MIB reference block, then they must be placed exactly by using the same orientation and the same reference block.

**What Next**

Fix the placement of cells overlapping the MIB instances.

---

## DPPA-295

(Error) Two cells overlap the same MIB reference block %s at the same reference location in the reference cell, but are not identically overlapping. Cell1: %s Cell1 bbox: {{%s %s} {%s %s}} Cell2: %s Cell2 bbox: {{%s %s}{%s %s}}

Feedback

**Description**

During push-down of cells over MIB instances, two cells were found to conflict in their location over their respective MIB block instances. In this case, the difference was in the bounding box of the cells. If multiple cells are overlapping an instance of a MIB reference block, then they must be placed exactly by using the same orientation and the same reference block.

**What Next**

Fix the placement of cells overlapping MIB instances.

---

## DPPA-296

(Warning) Net %s is logically a bidirectional (INOUT) net, but physically it is unidirectional. Feedthroughs will be created because the net direction can be determined.

**Description**

Feedthrough creation on INOUT nets has been disabled. The net in question is logically an INOUT net, but has been implemented in the physical netlist as unidirectional. Because the direction is known the feedthrough port directions can be properly set and a feedthrough net will be created.

**What Next**

If the desire is to not have a feedthrough net on this net, it must be excluded using set_individual_pin_constraints.

---

## DPPA-297

(Error) Push down of cells over MIB instance %s failed. Skipping push down for all instances of MIB block reference %s.

**Description**

During push-down of cells over MIB instances, a problem occurred when pushing cells into an MIB instance.

**What Next**

Check and ensure that the cell placement over all instances of this MIB block is correct.

---

## DPPA-298

(Error) Attempt to create pin %s at location where a pin %s alreaddy exists.

Feedback

**Description**

During abutted pin synthesize, it was detected that a pin about to be created would overlap with a previously created abutted pin.

**What Next**

Please report this problem.

---

## DPPA-299

(Warning) Parent signal net to child clock net mapping detected for parent net %s to child net %s in block %s for block instance %s. Allowing this mapping, but you may wish to check if this was intended.

**Description**

During push_down_objects for routing, a parent-to-child mapping process detected a net type mis-match between the parent net and a net in a child block that the top-level net was connected by a port on the child block. The command allowed this mapping to occur even though the parent net was of type SIGNAL and the child net was of type CLOCK. If this is not what you intended, you may wish to investigate this mis-match.

**What Next**

Make sure this net type mis-match is what you intended.

---

## DPPA-300

(Error) Chains over MIB instances that have at least one identical cell overlap, are not identical for all MIB instance of the same reference block %s.

**Description**

During push-down of cells over MIB instances of the type reported, the push_down_objects command detected that there were at least some identical cell overlap over at least some of the instances. When identical cell overlap is detected, and involves a connected change of more than one cell, it is required that this chain be replicated identically over all MIB instances of the same type for any instances that have any identical cell overlap.

**What Next**

Make sure that your cell chain that has some identical overlap is identical for each MIB instance that you want to re-use a chain within.

Feedback

## DPPA-301

(Error) Problem with identical cell overlap over MIB insances (for reference type %s). Skipping pushdown into block instances of this type.

### Description

During push-down of cells over MIB instances of the type reported, the push_down_objects command detected that there were at least some identical cell overlap over at least some of the instances. When identical cell overlap is detected, and involves a connected change of more than one cell, it is required that this chain be replicated identically over all MIB instances of the same type for any instances that have any identical cell overlap.

### What Next

Make sure that your cell chain that has some identical overlap is identical for each MIB instance that you want to re-use a chain within.

## DPPA-302

(Warning) Cell instance %s is a Multi-Rail cell with no associated strategy. It will be allowed for push-down, but the user should be aware that this cell, and any related ports created during push-down of this cell will NOT be automatically updated with UPF constraints. It is the responsibility of the user to perform UPF updating of this cell and related ports.

### Description

During push_down_objects for cells, an option to allow Multi-Rail cells with no MV strategy to be pushed down was enabled, and a cell that qualified for this exemption was detected and pushed down. In this scenario, the command does NOT automatically update the new new cell with MV constraints, nor any new ports created associated with the push-down of this cell, so it is the responsibility of the user to do this UPF updating.

### What Next

Nothing.

## DPPA-303

(Error) Cell instance %s is a Multi-Rail cell %s. The push_down_objects command does not support such a cell for push-down. This cell will not be included for push-down.

Feedback

**Description**

During push_down_objects for cells, an option to allow Multi-Rail cells with no MV strategy to be pushed down was enabled, and a cell that was not qualified for this exemption was detected and prevented from pushing down.

**What Next**

Make sure that you used the option to allow Multi-Rail cell push-down with no MV strategy, that you only pass cell which qualify for this option.

---

## DPPA-304

(Error) Cell instance %s is an MV Power-Switch cell. The push_down_objects command does not support such a cell for push-down. This cell will not be included for push-down.

**Description**

During push_down_objects for cells, a MV power switch cell was included in cells for push-down. This is because the insert_power_switch should have been used to directly add power switch cells into the block already.

**What Next**

Don't attempt to push-down top-level power switches.

---

## DPPA-305

(Error) Physical block instance %s does not have a valid physical boundary. This instance will be skipped for push/pop consideration.

**Description**

During push_down_objects block instances were examined for suitability for push-down (to receive objects). This block instance was either specified for push-down, or it was among all blocks for push-down. It was determined that this block did not have a valid physical boundary, without which it is not possible to perform push-down operations.

**What Next**

Check why you seem to have physical blocks, but some don't have valid physical boundaries.

---

## DPPA-306

(Error) Problem experienced in loading block boundaries.

Feedback

**Description**

During push_down_objects block instances were examined for suitability for push-down (to receive objects). During that process one or more blocks were encountered which had some problem.

**What Next**

Make sure all your physical blocks in your design are valid.

---

## DPPA-307

(Error) No valid blocks to be pushed into from top.

**Description**

During push_down_objects block instances were examined for suitability for push-down (to receive objects). During that process, the command concluded that there were no valid physical blocks to push into.

**What Next**

Make sure you have at least one valid physical block before calling push_down_objects.

---

## DPPA-308

(Information) %d %s created for %s.

**Description**

This message reports the number of mask constraint routing blockages or placement blockages created for a given block. If the reported number is 0, it is most likely there are no mask constraints defined.

**See Also**

- create_mask_constraint_routing_blockages

---

## DPPA-309

(Warning) There are(is) %d terminal(s) on %s with invalid layer number. The first a few are(is) %s.

**Description**

The indiciated terminals have invalid layer number. Please check the design to make sure they are created correctly.

Feedback

**See Also**

- create_mask_constraint_routing_blockages
- create_shape

---

## DPPA-310

(Warning) The top_action

**Description**

During push_down_objects for cells, the top_action "keep" was specified. The push_down_objects command only supports push-down of cells that are physical-only, and ignores any other cells passed into the command.

**What Next**

Nothing required.

---

## DPPA-311

(Warning) Top_action was

**Description**

During push_down_objects for cells, the top_action "keep" was specified. The push_down_objects command only supports push-down of cells that are physical-only, and ignores any other cells passed into the command. In this case, during inspection of cells passed into the command, the command found no cells which were physical-only.

**What Next**

Make sure to include only cells which are physical-only when using the cells object type top_action "keep"

---

## DPPA-312

(Warning) Skipped some non-physical-only cells during push-down of cells.

**Description**

During push_down_objects for cells, the top_action "keep" was specified. The push_down_objects command only supports push-down of cells that are physical-only, and ignores any other cells passed into the command. In this case, apparently the collection of cells passed into the command for push-down included non-physical-only cells. These were disregarded during this cell push-down session.

**What Next**

Make sure to include only cells which are physical-only when using the cells object type top_action "keep"

---

## DPPA-313

(Warning) The location of block pin %s is illegal. The block pin will be skipped for writing out existing physical and topological constraints.

**Description**

The location of the current pin is illegal. This might be because that the pin is placed outside of owner blocks's boundary, which is not supposed to happen. The pin will be skipped with this warning printed when writing out existing physical or topological constraints.

**What Next**

Check the pin placement result of this pin.

---

## DPPA-314

(Warning) Warning output directory %s already exists, over-writing existing data.

**Description**

The check-pin-placement command detected that the output directory specified already exists. The command will over-write any existing previously created files/reports in this direcotry.

**What Next**

Ensure the directory name is specified as expected.

---

## DPPA-315

(Error) Failed to push down site array into block %s (blkInst: %s

**Description**

During push-down of site arrays into a block, the command failed to successfully create a site array in the destination block. Please look for other messages describing unexpected scenarios.

**What Next**

Report this problem.

Feedback

## DPPA-316

(Warning) Destination ndm library %s has no tech information. Propagation of physical elements to the new block is not possible. Disregard this message if physical information in the new block is not required at this point.

**Description**

During commit_blocks (and during create_black_box) it was detected that a destination block did not possess technology file information. This information is necessary in order to do any real physical propagation of objects from a parent block to a new block. This can happen if the destination block is targeted to be placed into a separate ndm library which has been created without any technology file information.

**What Next**

Please make sure that you have created a destination library with technology file information. If physical information is not required at this point in the flow, then this message may be disregarded.

## DPPA-317

(Error) Destination ndm library %s has no tech information. Cannot propagate preferred routing directions.

**Description**

During propagation of preferred routing directions during wire track push-down into a destination block, the command determined that the destination block's ndm library had no technology information. This is a serious missing item.

**What Next**

Please make sure that you have created a destination library with technology file information.

## DPPA-318

(Error) Cannot open file %s . Skipping output file creation.

**Description**

Check Pin Placement could not open the specified file for writing the results of the check. As a result the command will revert back to displaying results on the command prompt.

**What Next**

Make sure read/write permissions are set appropriately.

Feedback

## DPPA-319

(Warning) Block %s has multiple views across all its instances.

### Description

As the instances of the same block have different views, the change made to one view will not sync to the other.

## DPPA-320

(Warning) Block connection %s has multiple physical pins (EQ pins - %d pins). Skipping this connection for Abutted Pin Synthesis.

### Description

During Abutted Pin Synthesis as part of push_down_objects for net routing , the command encountered some connections on block instances that had multiple physical pins.
These are referred to as EQ pins. Currently, Abutted Pin Synthesis does not support the synthesis of connections that have multiple physical pins in different parts of the block.

### What Next

Nothing, except just be aware that such pins are currently not supported.

## DPPA-321

(Information) The following blocks do not have associated technology files:%s.

### Description

Report the blocks that do not have associated technology files. If a block does not have a technology file with it, the tool cannot know physical data needed, e.g. minimum width allowed on a certain layer. Therefore, any operations or checks that are related to physical data cannot be performed.

### What Next

Check that the technology file is correctly set.

### See Also

- create_lib
- set_ref_libs

Feedback

## DPPA-322

(Error) Only one of -pins, -nets, -ports and objects can be specified.

### Description

Command only accepts one of the -pins, -nets, -ports and objects arguments. All of these options can be used to limit the checking to the specified set of pins/nets/ports/instances respectively.

### What Next

Please select only one of the -pins, -nets, -ports, objects arguments.

### See Also

- place_pins

## DPPA-323

(Error) %s definition does not exist for %s %s.

### Description

During Design Planning command, the command encountered a via or a row site which does not have a definition. This can happen if the user has removed the via or site definition using TCL commands. If the user has done this, it renders all vias or site rows which reference that definition invalid.

### What Next

Make sure your tech file contains the definitions for all vias and cell sites.

## DPPA-324

(Warning) Detected nets inside blocks that are of ABSTRACT views. The first few such nets are: %s.

### Description

During estimating wire length, the tool discovered some nets inside blocks that are of ABSTRACT views. Because ABSTRACT view does not contain the complete netlist, the estimated wire length of the corresponding net segments inside the blocks with ABSTRACT views may not be accurate.

### What Next

Change the blocks of ABSTRACT view to DESIGN view.

Feedback

**See Also**

- get_estimated_wirelength
- change_view

---

## DPPA-325

(Warning) Detected pins or ports without physical pin shapes. The first few such pins or ports are: %s.

**Description**

During estimating wire length, the tool discovered some pins or ports that do not have physical pin shapes. Therefore, the wire length estimation for the net segments that connect to those pins or ports will be ignored.

**What Next**

Check if the reference libraries are correctly linked, check if all block pins are properly placed.

**See Also**

- get_estimated_wirelength
- place_pins

---

## DPPA-326

(Warning) Detected pins or ports with multiple physical pin shapes. The first few such pins or ports are: %s.

**Description**

During estimating wire length, the tool discovered some pins or ports that have multiple physical pin shapes. The wire length estimation for the net segments that connect to those pins or ports will randomly choose one of the pin shapes.

**What Next**

Check if the multiple pin shapes with the same pin or port is expected.

**See Also**

- get_estimated_wirelength
- place_pins

Feedback

## DPPA-327

(Error) Block pin %s (shape %s) does not overlap the block it belongs to.

### Description

During push_down_objects for signal routing with feedthroughs, the command detected a driving pin of a physical block which did not overlap the block it belongs to. This may indicate a problem in the place_pins command.

### What Next

Check why such a pin exists.

### See Also

- place_pins

## DPPA-328

(Warning) Offset/location constraints ignored by place_pins for fixed pin %s.

### Description

The command detected offset/location constraints set on the specified pin and the pins physical status is fixed. Because such pins cannot be moved by place_pins, this constraint is ignored.

### What Next

Ensure that the pin is marked fixed correctly as expected, also check location/offset constraints to ensure correct intent.

## DPPA-329

(Information) The pin shape of %s is created on the same layer underneath the existing pin shape or terminal of %s because the latter is completely inside the boundary of %s and is connected to the former.

### Description

When a block port is connected to an existing pin that is completely inside the corresponding block boundary, the pin shape of the block port will be exactly the same as that existing pin, i.e. its pin shape, layer, and position.

### What Next

Check if the connected existing pin is created or placed correctly beforehand.

Feedback

**See Also**

- place_pins
- set_individual_pin_constraints

---

## DPPA-330

(Error) Failed to clear timing in top block %s.

**Description**

The command required that existing timing data be cleared for a block before proceeding, but the attempt to clear timing for that block failed.

---

## DPPA-331

(Error) Skip remove feedthroughs due to %s.

**Description**

Remove feedthroughs could not proceed due to the specified reason.

**What Next**

Address the issues mentioned in the previous warning/error messages prior to run remove_feedthroughs.

---

## DPPA-332

(Warning) Parent clock net to child signal net mapping detected for parent net %s to child net %s in block %s for block instance %s. Allowing this mapping, but you may wish to check if this was intended.

**Description**

During push_down_objects for routing, a parent-to-child mapping process detected a net type mis-match between the parent net and a net in a child block that the top-level net was connected by a port on the child block. The command allowed this mapping to occur even though the parent net was of type CLOCK and the child net was of type SIGNAL. If this is not what you intended, you may wish to investigate this mis-match.

**What Next**

Make sure this net type mis-match is what you intended.

Feedback

## DPPA-333

(Information) Identified % instance %s.

### Description

The check pin placement command identified an instance to be of the specified type. This is used to alert the user for non-typical instances that are being checked for pin violations.

### What Next

Ensure such instances are intended for checking pin placement.

### See Also

- report_cells

## DPPA-334

(Warning) The command %s does not support to use options %s together. Option %s is ignored.

### Description

The specified command line options of the corresponding design planning command cannot be used together.

### What Next

Remove the ignored command line option and try again.

## DPPA-335

(Warning) %s of value %.3f on pin %s is ignored due to its abutment to a fixed or existing pin.

### Description

The pin mentioned has a constrained width by individual pin constraint, bundle pin constraint or non default routing rule. But it also abuts to a fixed pin or an existing pin, whose width does not match the constrined width. A pair of abutted pins should have matched pin width. Therefore, the constrained width is ignored.

### What Next

Remove the constrined width or set it to match the pin it abuts to.

Feedback

**See Also**

- set_individual_pin_constraints
- set_bundle_pin_constraints

---

## DPPA-336

(Error) net %s connects to one or more cells which are found to overlap a block that is a target to be pushed into. Please make sure to include these cells for push-down, as the net cannot be pushed down without the cell.

**Description**

The push_down_objects command, when considering pushing down routing for a net into blocks, discovered that the net had pin connections to cells which are overlapping physical blocks that are eligible for pushing into. The push_down_objects command requires that in such a scenario, that the cell be pushed down before, in combination with the net that was specified for push-down. The command cannot push down a net that is connected to some leaf cell on top of a block that the routing overlaps.

**What Next**

Include all connected leaf cells for push-down if they overlap blocks that the routing may be pushed into.

---

## DPPA-337

(Error) Physical block connection %s in reference block %s has no layer. Skip this pin for abutted pin synthesis.

**Description**

The push_down_objects command, when examining new pins on MIB instances from the push-down of routing, encountered a pin that has no shape or layer.

**What Next**

Check if the technology file is correctly set.

---

## DPPA-338

(Information) Using %d threads for pin placement.

**Description**

This message reports the number of threads used in multi-threaded pin placement.

Feedback

### What Next

No action is required.

### See Also

- set_host_options

---

## DPPA-339

(Warning) %s %s from block being uncommitted, %s, could not be propagated upward.

### Description

During uncommit_block, there was a shape that could not be popped-up. This may be a via that exists in the block, but has no via definition that exists in the technology of the block that the via is being attempted to pop up to.

### What Next

Check if the technology file is correctly set.

---

## DPPA-340

(Warning) %s %s from block being uncommitted, %s, could not be propagated upward because a via_def in the parent block exists by the same name (%s), but is defined differently. Skipping this via during uncommit_block route pop-up.

### Description

During uncommit_block, via could not be popped up to a parent block because the parent block already had a via definition of the type of the via being popped up from a child block. But in this case, the definitions were found to be different. In this case, a warning is given and the via is skipped.

### What Next

Make sure that your blocks, if from different ICC2 libraries, have consistent via definitions.

---

## DPPA-341

(Warning) Net %s does not connect to cell %s. The constraint at line %d is skipped. Please consider using topological constraints.

### Description

The net and cell are not connected. The constraint is skipped. This case should be constrainted with topological constraints instead of physical pin constraints.

Feedback

### What Next

Please consider using topological constraints to constrain this case.

### See Also

- read_pin_constraints
- create_topological_constraint

---

## DPPA-342

(Warning) Command %s found that the pin %s has a non-defined block port. This may be the result of a linking problem.

### Description

The command encountered a pin that it can't find the block port information. This may be the result of a linking problem. The command will skip the net that contains this pin.

### What Next

Make sure that your environment set-up includes all libraries that the contains the blocks in this design.

---

## DPPA-343

(Error) Could not find the driver of the net %s. Skip this net.

### Description

During push_down_objects for net routing, the command encountered a problem when examining pins of the net while searching for the driver. This may be the result of a linking problem. The command will skip the net that contains this pin when this happens.

### What Next

Make sure that your environment set-up includes all libraries that the contains the blocks in this design.

---

## DPPA-344

(Warning) Pin geometry extended as a result of the pin_meet_fatwire_rule option. Block %s port: %s pin box: {{%s %s}{%s %s}} layer: %s

Feedback

**Description**

During push-down of routing, a route overlap with a block resulted in a pin geometry that was sized according to the pin_meet_fatwire_rule option. In this case, the command may extend the pin outside the boundary by some amount, because extending the pin inside the boundary may result in a spacing violation.

**What Next**

Nothing required.

---

## DPPA-345

(Error) Abutted pin synthesis failed.

**Description**

During push-down of routing, thus user has specified that the command should synthesize pins and nets for pins which abut after push_down. This process failed for some reason.

**What Next**

Report this.

---

## DPPA-346

(Information) Identified port %s with multiple pins.

**Description**

The check pin placement command identified a port with multiple pins. This message is used to inform users of non-typical ports/pins detected by the command. Such ports with multiple physical pins are usually power/ground or hard-macro pins.

**What Next**

Ensure such pins are intended for checking pin placement.

---

## DPPA-347

(Information) Option %s is ignored by the %s check.

**Description**

The specified option is ignored by the given check as part of the check_pin_placement command. This is expected since certain checks are not intended to honor specified options (like -cell_type, -pin_type etc.). The check will still run as expected while ignoring the specified option. Refer to the man-page for further details.

Feedback

**What Next**

Ensure that options are used as intended.

---

## DPPA-348

(Information) block cell %s is not placed.

**Description**

The tool detected that some of the block cells are not placed. Please fix the placement issue and try again

**What Next**

Ensure that the reported block cells are placed

**See Also**

- report_placement

---

## DPPA-349

(Warning) Net %s in bundle %s does not connect to cell %s. The constraint is skipped. Please consider using topological constraints.

**Description**

The net and cell are not connected. The constraint is skipped. This case should be constrainted with topological constraints instead of physical pin constraints.

**What Next**

Please consider using topological constraints to constrain this case.

**See Also**

- read_pin_constraints
- create_topological_constraint

---

## DPPA-350

(Warning) Net %s in bundle %s does not connect to cell %s. The constraint is skipped. Line number is %d. Please consider using topological constraints.

Feedback

### Description

The net and cell are not connected. The constraint is skipped. This case should be constrainted with topological constraints instead of physical pin constraints.

### What Next

Please consider using topological constraints to constrain this case.

### See Also

- read_pin_constraints
- create_topological_constraint

---

## DPPA-351

(Warning) Topological constraint in line %d is not associated with any net and will be ignored.

### Description

The topological constraints specified are not associated with any net.

### What Next

Check if topological constraints are specified correctly and the check could start from the last net before the given line number.

### See Also

- read_pin_constraints

---

## DPPA-352

(Warning) %s does not have the corresponding layer data of layer number %d.

### Description

The indiciated object has a layer number that does not have the corresponding layer data describing its technology rules and other properties. Make sure the design is correctly linked with the right technology files or libraries.

### What Next

Make sure that your environment setup includes all technology files or libraries.

Feedback

## DPPA-353

(Warning) Filtering MV cell %s from push-down. MV cells are not supported for push-down.

### Description

The push_down_objects command encountered an MV cell instances when examining cells passed into the command for push-down. Currently, such cells are not supported by the push_down_objects command.

### What Next

Avoid attempting to push down MV cells.

## DPPA-354

(Error) Unsupported tech file. Default width %s less than minimum width %s for layer %s .

### Description

Command detected that an unsupported tech file value is used, please fix the tech file with consistent values. Place-pins will error out when this mismatch is detected, the pin checker will issue this message and use the minimum width for size checking and ignore the default width. It is recommended to fix the tech-file and proceed for either command.

### What Next

Fix and re-run command.

## DPPA-355

(Warning) A P/G wire for P/G net %s that is wider than it's length was found to be running collinear to a block instance that it overlaps. Creating pin like a normal pin created from perpendicular overlap.

### Description

During push_down_objects, for a P/G net wire, a wire was determined to overlap a block instance collinearly (the direction of the length of the wire is the same as the direction of the edge of the instance). But in this rare case, the width of the wire is greater than the length of the wire, making the wire look like the opposite type (vertical looks like horizontal, horizontal looks like vertical). Normally, P/G collinear routing results in a pin that is the full shape of the collinear wire that runs collinear with the block edge, but in this rare case, the pin will be created like a normal perpendicular overlapping wire.

Feedback

**What Next**

Make sure the result is what you want.

---

## DPPA-356

(Warning) A P/G wire for P/G net %s that is wider than it's length (based upon start and stop endpoints) was found to be running collinear to a block instance that it overlaps. Creating pin like a normal pin created from perpendicular overlap.

**Description**

During push_down_objects, for a P/G net wire, a wire was determined to overlap a block instance collinearly (the direction of the length of the wire is the same as the direction of the edge of the instance). But in this rare case, the width of the wire is greater than the length of the wire, making the wire look like the opposite type (vertical looks like horizontal, horizontal looks like vertical). Normally, P/G collinear routing results in a pin that is the full shape of the collinear wire that runs collinear with the block edge, but in this rare case, the pin will be created like a normal perpendicular overlapping wire.

**What Next**

Make sure the result is what you want.

---

## DPPA-357

(Warning) Command %s can't find a parent hierarchy for logical instance %s . This may be the result of a linking problem.

**Description**

During a hierarchical command, the command failed to find a parent hierarchy for a logical instance. Sometimes, when there is a problem with linking, the ICC2 database does not get correctly updated to include this parent hierarchy information in association with logical instances.

**What Next**

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-358

(Warning) Command %s can't find a logical instance from a physical instance %s .

Feedback

**Description**

During a hierarchical command, the command failed to find a logical instance from a physical instance. Sometimes, when there is a problem with linking, the ICC2 database does not get correctly updated to include this physical-to-logical mapping in association with instances.

**What Next**

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-359

(Warning) Command %s can't find a physical parent instance of a physical pin %s .

**Description**

During a hierarchical command, the command failed to find a physical parent instance from a physical pin. Sometimes, when there is a problem with linking, the ICC2 database does not get correctly updated to include this physical pin to its owning block instance mapping in association with pins.

**What Next**

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-360

(Warning) Command %s can't find a logical hierarchy for reference block %s .

**Description**

During a hierarchical command, the command failed to find a logical hierarchy for a physical reference block. Sometimes, when there is a problem with linking, the ICC2 database may not get correctly updated to include this logical hierachy to physical reference block mapping.

**What Next**

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-361

(Warning) Command %s can't find a logical hierarchy for physical block instance %s .

Feedback

**Description**

During a hierarchical command, the command failed to find a logical hierarchy for a physical block instance. Sometimes, when there is a problem with linking, the ICC2 database may not get correctly updated to include this physical instance to logical hierachy mapping.

**What Next**

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-362

(Error) The command %s detected that some blocks that are eligible for pushing-into (including any block instances specified using the -cells option) do not have tech-file information. The command cannot continue as necessary data may be missing in these blocks and yield bad/wrong results. Blocks without tech file info: %s.

**Description**

During a push_down_objects or pop_up_objects command, the command checked each eligible block for push-down or pop-up, to determine whether necessar tech-file information was presend, and it discovered that some eligible blocks were lacking this information. Since it would be dangerous to continue, the command exited with an error status.

**What Next**

Make sure that each of the blocks in the design have correct tech-file information.

---

## DPPA-363

(Warning) Pin %s with location range constraints has been placed with relaxed spacing.

**Description**

During pin placement, the tool detects that it has to relax spacing constraints in order to place this pin which has location range constraints. The location range constraints maybe set through topological constraints, individual pin constraints or from pin constrain file

**What Next**

Make sure that there are enough room to place this pin within the defined location range constraints

Feedback

**See Also**

- set_individual_pin_constraints
- read_pin_constraints

---

## DPPA-364

(Error) Hierarchical physical block instance %s is not overlapped by top-level routing for net %s. Skip this net.

**Description**

During push_down_objects, for a signal net specified for feedthrough creation where it crosses blocks in ways that require a feedthrough, it was determined that the top-level routing did not reach every block instance that it the net is logically connected to. For feedthrough creation to work at all physical levels, it is required that all physical block instances have routing which at least touches all block that the flat physical net is connected to logically.

**What Next**

Make sure the top-level routing for the net reaches all connected blocks at all levels that are enabled for push-down.

---

## DPPA-365

(Warning) Net %s is connected to mib %s. The related feedthrough ports on all instances of %s will be removed.

**Description**

Feedthrough removal is performanced on blocks. All instances of a same block will be affected.

---

## DPPA-366

(Warning) Ignoring topological constraint on net %s due to %s.

**Description**

During pin placement, the tool detected a topological constraint that could not be honored for the specified reason. The constraint will be ignored.

**What Next**

Correct constraint and re-run command.

Feedback

## DPPA-367

(Warning) Failed to get physical hierarchical block instance for logical instance %s.

**Description**

During the current command, the command tried to generate a physical hierarchical block instance based upon a logical hierarchical instance of a physical block, but failed to generate it correctly. This may be due to a failure in linking or a reference library issue.

**What Next**

Make sure your design can link properly and that your reference libraries are complete.

## DPPA-368

(Warning) The command encountered an invalid hierarchical block port associated with pin %s.

**Description**

During the current command, the command tried to retrieve a hierarchical block port from a pin but the hierarchical block port was invalid. This may be the result of a linking problem.

**What Next**

Make sure your design can link properly and that your reference libraries are complete.

## DPPA-369

(Warning) The command failed to get a logical pin from a logical port for port %s.

**Description**

During the current command, the command tried to retrieve a logical pin for a logical port of a block, but the logical pin was invalid. This may be the result of a linking problem.

**What Next**

Make sure your design can link properly and that your reference libraries are complete.

## DPPA-370

(Warning) The command failed to get a physical pin from a logical pin for logical pin %s.

Feedback

**Description**

During the current command, the command tried to retrieve a physical pin from a logical pin of a block, but the physical pin was invalid. This may be the result of a linking problem.

**What Next**

Make sure your design can link properly and that your reference libraries are complete.

---

## DPPA-371

(Warning) The command failed to get a logical pin from a physical pin for physical pin %s.

**Description**

During the current command, the command tried to retrieve a logical pin from a physical pin of a block, but the logical pin was invalid. This may be the result of a linking problem.

**What Next**

Make sure your design can link properly and that your reference libraries are complete.

---

## DPPA-372

(Warning) The command failed to get a logical port from a physical port for physical port %s.

**Description**

During the current command, the command tried to retrieve a logical port from a physical port of a block, but the logical port was invalid. This may be the result of a linking problem.

**What Next**

Make sure your design can link properly and that your reference libraries are complete.

---

## DPPA-373

(Warning) The command failed to get a physical block port from a physical pin for physical pin %s.

**Description**

During the current command, the command tried to retrieve a physical block port from a physical pin of a block, but the physical port was invalid. This may be the result of a linking problem.

Feedback

**What Next**

Make sure your design can link properly and that your reference libraries are complete.

---

## DPPA-374

(Warning) Command can't find a physical instance from a logical instance %s.

**Description**

During a hierarchical command, the command failed to find a physical instance from a logical instance. Sometimes, when there is a problem with linking, the ICC2 database does not get correctly updated to include this logical-to-physical mapping in association with instances.

**What Next**

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-375

(Warning) Command can't find a parent block from a physical block instance %s.

**Description**

During a hierarchical command, the command failed to find a parent physical block from a physical block instance. Sometimes, when there is a problem with linking, the ICC2 database does not get correctly updated to include this logical-to-physical mapping in association with instances.

**What Next**

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-376

(Warning) Command can't find a reference block from a physical block instance %s.

**Description**

During a hierarchical command, the command failed to find a reference block from a physical block instance. Sometimes, when there is a problem with linking, the ICC2 database does not get correctly updated to include this logical-to-physical mapping in association with instances.

Feedback

### What Next

Make sure that your design includes all necessary reference libraries in the library search path.

---

## DPPA-377

(Warning) Block instance being uncommitted, %s, has a tech file that is incompatible with the tech file of the parent block, %s. Routing, if it exists, cannot be safely popped up for this instance. Skipping routing pop-up for this instance.

### Description

During uncommit_blocks, the tool detected that a block instance being uncommitted had a tech file that was found to be incompatible with the parent block of the block instance being uncommitted. This can cause problems during routing pop-up, so routing pop-up for this instance is skipped.

### What Next

Make sure that tech files of blocks to be uncommitted are compatible with their parent blocks' tech files.

---

## DPPA-378

(Warning) Cannot specify port for bundle topological constraints at line %d

### Description

Port is not valid for topological constraints of bundle.

### What Next

Use cell keyword to specify instances for topological constraints of bundle.

### See Also

- read_pin_constraints

---

## DPPA-379

(Warning) Pin %s is placed with relaxed %s.

### Description

During pin placement, the tool detects that it has to relax one or more constraints as indicated in order to place this pin. The specified constraints maybe set through

Feedback

topological constraints, individual pin constraints, bundle pin constraints, block pin constraints, incremental pin constraints, or from a pin constrain file.

**What Next**

Make sure that there are enough room to place this pin within the specified constraints.

**See Also**

- set_individual_pin_constraints
- set_bundle_pin_constraints
- set_block_pin_constraints
- read_pin_constraints

## DPPA-380

(Error) Site array %s already exists in block %s with normal shadow status. Skipping push-down of this site array in that block.

**Description**

During push_down_objects, a site arrays was specified to be pushed into blocks that it overlapped. The command detected that a site array already exists in the block with the same name, and the existing site array has a normal shadow status. In this case, the command will not delete the existing site array and replace it with a pushed-down one. Push-down of the site array from the parent block will be skipped.

**What Next**

Delete the site array manually in the block before attempting to push-down a site array from above.

## DPPA-381

(Error) Site array %s already exists in block %s but has a different site def than the one being pushed down. Skipping push-down of this site array in that block.

**Description**

During push_down_objects, a site arrays was specified to be pushed into blocks that it overlapped. The command detected that a site array already exists in the block with the same name, but the existing site array has different site definition. In this case, the command will not delete the existing site array and replace it with a pushed-down one. Push-down of the site array from the parent block will be skipped.

Feedback

**What Next**

Delete the site array manually in the block before attempting to push-down a site array from above.

---

## DPPA-382

(Error) Problem encountered processing routing push-down for net %s and wire %s and block instance %s.

**Description**

During push_down_objects, non-feedthrough routing push-down encountered a wire which failed to push-down properly into a block instance. This is likely an internal problem.

**What Next**

Report this.

---

## DPPA-383

(Warning) pin %s of hard macro block %s was specified for pop-up, but the pin is not P/G. Skipping this block pin.

**Description**

During pop_up_objects, a hard macro pin was specified for pop-up as a top-level terminal. But the pin specified was not a P/G pin. Currently, pop_up_objects only allows pop-up of pins from hard macros if the pin is P/G.

**What Next**

Please only attempt to pop-up hard macro pins that are P/G pins, and that are connected to a net in the top cell that is port-connected.

---

## DPPA-384

(Warning) Hard macro pin %s is not connected to any net. Skipping this hard macro pin connection for pop-up.

**Description**

During pop_up_objects, a hard macro pin was specified for pop-up as a top-level terminal. But the pin specified was not connected to a net. The pop_up_objects command only allows pop-up of pins that are connected to a net, and the net must be connected to a top-level port.

Feedback

### What Next

Please only attempt to pop-up hard macro pins that are P/G pins, and that are connected to a net in the top cell that is port-connected.

---

## DPPA-385

(Warning) Hard macro pin %s is connected to a net %s, but the net is not connected to a top-level port. Skipping this hard macro pin connection for pop-up.

### Description

During pop_up_objects, a hard macro pin was specified for pop-up as a top-level terminal. But the pin specified was connected to a net, but the net was not connected to a top-level port. The pop_up_objects command requires that the net that the hard macro pin is connected to is also connected to a top-level port so that the command can create a terminal for that port.

### What Next

Please only attempt to pop-up hard macro pins that are P/G pins, and that are connected to a net in the top cell that is port-connected.

---

## DPPA-386

(Warning) pin %s is not on any routing layer

### Description

During pin placement, the tool detects that the pin shape is not on any routing layers. In synthesize abutted pin mode, the tool will skip synthesizing abutted pins for this pins

### What Next

Make sure that the pin shape is on routing layer

---

## DPPA-387

(Warning) The command failed to pre-process a pre-existing feedthrough net, %s in reference block %s, in preparation for allowing that block feedthrough net to be re-used in subsequent feedthrough nets which may cross the same MIB block the same way. This feedthrough net will not be able to be reused.

### Description

During push_down_objects, the command was preparing all possible pre-existing feedthrough nets which feed through blocks. During this process, the command was

Feedback

unable to identify the coordinate and layer of the point in the block where the routing touches the block boundary. As a result, the command will not be able to re-use this pre-existing feedthrough when processing similar crossings of block instances of this same block type.

**What Next**

This is an unexpected scenario. Report this issue.

---

## DPPA-388

(Error) Failed to make top-level reconnections after push-down of cells into blocks.

**Description**

During push_down_objects, the command pushed down specified cells into blocks, but failed to successfully re-connect connections on the blocks that cells were pushed into.

**What Next**

This is an unexpected scenario. Report this issue.

---

## DPPA-389

(Warning) Block instance %s is not DP-enabled for modification.

**Description**

The command attempted to pre-open blocks and encountered a block instance(s) that is not DP-enabled for modification. This block instance will not be modified in this command.

**What Next**

Make sure you expect this block to not be modified.

---

## DPPA-390

(Error) Failed to reopen block %s for edit.

**Description**

The command attempted to pre-open blocks and encountered a block instance(s) that could not re-opened for EDIT. This block instance will not be modified in this command.

**What Next**

Do not include this block for hierarchical design planning operations.

Feedback

## DPPA-391

(Warning) Failed to create RDL pin shapes for net %s.

**Description**

During push_down_objects, the command pushed down an RDL net.

**What Next**

This is an unexpected scenario. Report this issue.

## DPPA-392

(Warning) Block net %s already is associated with an existing routing corridor (%s). Skip this net for current corridor %s.

**Description**

During push-down of a routing corridor, the command considered associating a net with a routing corridor in the block, but the command determined that the net was already associated with an existing routing corridor. In this case, the command will not associae this net with a new routing corridor.

**What Next**

Make sure this is what you expect.

## DPPA-393

(Warning) Failed to set %s %s on new voltage area %s.

**Description**

During push-down of a charging station, the command failed to set one of several charging station attributes from the charging statino in the parent.

**What Next**

Make sure that your UPF is correct.

## DPPA-394

(Warning) The new child-level charging station %s name was changed from the pushed-down charging station name %s due to a name conflict in the destination block.

Feedback

**Description**

During push-down of a charging station, the command encountered a charging station that already existed with the name of the station being pushed down. In this case, the command creates a unique name for the new charging station.

**What Next**

Make sure that this is what you expect.

---

## DPPA-395

(Warning) Failed to set new voltage area attributes for charging station %s.

**Description**

During push-down of a charging station, the command failed to successfully set all attributes on the new charging station.

**What Next**

Make sure that your UPF is correct.

---

## DPPA-396

(Warning) Overlap detected with pre-existing routing in one of the blocks the net %s crosses. Skip this net.

**Description**

During push-down of routing, the command detected a conflict with a pre-existing wire in a block that the net crosses. The command will skip the push-down of the net into the block.

**What Next**

Make sure that you expect this.

---

## DPPA-397

(Error) Failed to re-connect pins for net %s after cell push down.

**Description**

During push-down of cells, the command failed to re-connect a net affected by the cell push-down in the top cell.

**What Next**

Report this.

Feedback

## DPPA-398

(Error) Failed when checking for existing input tap-connections which are driven by cells respectively which ultimately are driven by one outside driver. Existing input tap connection name %s.

**Description**

The push_down_objects command attempted to trace a path across pushed-down buffers in an attempt to collect existing input tap connections which can be traced through multiple paths back to an outside driver.

**What Next**

Report this problem

## DPPA-399

(Error) Failed when processing existing input tap-connections which are driven by cells respectively which ultimately are driven by one outside driver. Existing input tap connection names %s.

**Description**

The push_down_objects command attempted to process a cell push-down connection scenario where multiple input tap connections which can be traced through multiple paths back to an outside driver, but encountered a failure.

**What Next**

Report this problem

## DPPA-400

(Error) Failed when tracing back and existing tap connection %s to the original driving net %s.

**Description**

The push_down_objects command attempted to trace back from an existing input tap connection across buffers to the original driving net, but failed.

**What Next**

Report this problem

Feedback

## DPPA-401

(Warning) No instances of hard macros found in the current block. Skipping hard macro P/G pin pop-up.

**Description**

The pop_up_objects command detected hard macro terminals specified for pop-up, but there were no instances of any hard macros found in the top block. Currently, pop_up_objects does not support MPH pop-up (specifying objects in blocks multiple levels below the current block.

**What Next**

Make sure that you are currently in a block that contains instances of the hard macros that you wish to have P/G pin popped up from.

## DPPA-402

(Warning) No instances of hard macros of type specified for pop-up (%s) found in the current block. Skipping hard macro P/G pin pop-up.

**Description**

The pop_up_objects command detected hard macro terminals specified for pop-up, but there were no instances of that specific hard macro type found in the top block. Currently, pop_up_objects does not support MPH pop-up (specifying objects in blocks multiple levels below the current block.

**What Next**

Make sure that you are currently in a block that contains instances of the hard macros that you wish to have P/G pin popped up from.

## DPPA-403

(Information) Block pin constraints %s are set for %s.

**Description**

Show information about which block pin constraints are set on which blocks.

## DPPA-404

(Information) Block pin constraints of %s are reset to default.

Feedback

**Description**

Show information about which block pin constraints on blocks are removed (reset to default).

---

## DPPA-405

(Information) %d individual pin constraints are removed from %s.

**Description**

Show information about individual pin constraints are removed from blocks.

---

## DPPA-406

(Information) %d bundle pin constraints are removed from %s.

**Description**

Show information about bundle pin constraints are removed from blocks and bundles.

---

## DPPA-407

(Information) %d topological constraints are removed from %s.

**Description**

Show information about topological constraints are removed from blocks.

---

## DPPA-408

(Information) %s pin constraints associated with %s are removed from block %s.

**Description**

Show information about individual pin constraints are removed from blocks.

---

## DPPA-409

(Warning) Net %s is connected to mib %s. The related feedthrough ports on all instances of %s will be removed.

**Description**

Feedthrough removal is performanced on blocks. All instances of a same block will be affected.

Feedback

## DPPA-410

(Warning) Synthesizing abutted pin creation is disabled under multithreading mode of command place_pins.

### Description

Synthesizing abutted pin creation is currently not supported under multithreading mode of command *place_pins*. To enable synthesizing abutted pin creation, please run *place_pins* in single threading mode.

### What Next

plan.pins.synthesize_abutted_pins (3) plan.pins.multi_threading (3)

## DPPA-411

(Warning) Failed to pop block net shapes for net %s from blkInst %s.

### Description

The current command attempted to pop up shape associated with a net in a block, but the attempt encountered a problem.

### What Next

Report this problem

## DPPA-412

(Warning) Ambiguous parent-to-child mapping for top-level net %s and multiple child-level nets in block instance %s. Chosen mapping is to net %s (chosen randomly).

### Description

The push_down_objects command, when trying to map a parent-net to child net for a particular instance found that an instance was connected to the parent net for multiple pins on the same block instance. This creates an ambiguous mapping scenario, and the command must choose one. It chooses the first pin encountered which has a child net and uses that net as the child net to assign the new child-level net shapes to.

### What Next

Make sure that the chosen child net is acceptable.

Feedback

## DPPA-413

(Error) Net %s has fixed pin(s) that do not align with routing. Pin(s): %s. Skipping this net for push-down.

**Description**

The check_objects_for_push_down or the push_down_objects command, when pre-analyzing signal-route push-down, found that one or more fixed pins exist in some physical level which are not connected to any routing or is not aligned with routing being pushed down. This is considered an error and the net will be rejected for push-down until the pin is removed or made non-fixed, or the routing is changed to reach the fixed pin.

**What Next**

Fix the issue related to this/these pin(s) and re-try push-down.

## DPPA-414

(Warning) Skip unplaced pin %s in feedthrough length measurement.

**Description**

Exclude the unplaced pins as measuring the feedthrough net length.

## DPPA-415

(Warning) Instance %s is not a physical block. Skip this instance for topological constraints.

**Description**

Topological constraints does not support non-physical instances. If non-physical instances are specified, the instance will be skipped.

## DPPA-416

(Information) non-fixed pin %s of net %s is overlapped by a route shape but the route shape does not overlap the block instance %s. This non-fixed pin will be preserved because it is necessary for connectivity.

**Description**

The push_down_objects command, when running a pre-check for routing completeness, determined that a logically connected block instance boundary was not overlapped by routing, but it was determined by the checker that a non-fixed pin of the block instance was overlapped by routing because the pin sticks outside of the block instance boundary.

Feedback

Normally, the command will delete pre-existing non-fixed pins on the net, but in this case, the pin is necessary to complete connectivity, so it will not be removed.

**What Next**

This is just information letting you know that a pin was not deleted. There should be no action necessary on your part..

---

## DPPA-417

(Warning) The %s allowed layers on %s %s are in conflict with block pin constraints allowed layers or min/max routing layers.

**Description**

The individual pin constraints, bundle pin constraints, topological constraints allowed layers or the NDR allowed layers of the indicated pin or port do not have common layers with the block allowed layers on the parent block or the top design. Or they are not within the min and max routing layers of the top design. The individual pin constraints, bundle pin constraints or topological constraints allowed layers will be honored.

**What Next**

Check constraints settings to remove the conflict. Or if the tool behavior is expected it is safe to ignore this warning.

**See Also**

- create_topological_constraint
- read_pin_constraints
- set_block_pin_constraints
- set_bundle_pin_constraints
- set_individual_pin_constraints
- set_ignored_layers

---

## DPPA-418

(Warning) Failed to find pin boundary-touching point for reference port %s on reference block %s.

**Description**

When collecting existing pin boundary-touching points for a reference block and port, the command failed to find a valid touching point.

Feedback

**What Next**

Report this

---

## DPPA-419

(Error) Multiple-input wire-stub ambiguity detected with wire-stub overlap of net %s with block instance %s .

**Description**

The command detected that some of the net routing was in the form of wire stubs that overlap a block instance that is multiply-connected to the net, with apparent existence of stubs intended for feedthrough outputs. This is an ambiguous scenario, as the command cannot know which input should be associated with which output feedthrough pin.

**What Next**

Please re-design your wire stubs over this instance to remove ambiguity. A good way to do this is to use full connectivity from input to output.

---

## DPPA-420

(Error) Net %s has wire-stub ambiguity involving some connected instances that are multi-input connections. Skipping this net.

**Description**

The command detected that some of the net routing was in the form of wire stubs that overlap a block instance that is multiply-connected to the net, with apparent existence of stubs intended for feedthrough outputs. This is an ambiguous scenario, as the command cannot know which input should be associated with which output feedthrough pin.

**What Next**

Please re-design your wire stubs over all instances that have been reported to have ambiguity, to remove ambiguity. A good way to do this is to use full connectivity from input to output over a multiply-connected instance.

---

## DPPA-421

(Information) Deleting pre-existing Non-Fixed pin %s for port %s of block %s.

**Description**

The command detected that some non-fixed pre-existing physical pins existed, which get deleted automatically, to be replaced with physical pins based upon the physical overlap

Feedback

of the routing being pushed down. Any pre-existing physical pin which are FIXED are honored and left where they are.

**What Next**

This is just an information message. No action is required of the user.

---

## DPPA-422

(Warning) Ultimate leaf cell driver, %s, has no routing connected to it, and the driver is placed on top of a physical block and this cell has not been pushed into that block, and has no existing connection to that block. No further push-down will be done in block %s for net %s.

**Description**

The command detected that during push-down of routing, an ultimate driving leaf cell at a physical level below the ultimate top block exists which is placed on top of a block with no connection to that block. Push-down will not push routing further down into that block because the driving leaf cell has not been pushed into that block.

**What Next**

This is just an warning message. Make sure the results are what you desire.

---

## DPPA-423

(Information) Skipping net %s because it does not appear to have detailed routing.

**Description**

The push_down_objects command detected a net that has no detailed routing shapes. The command only pushes down nets that have detailed routing (wires and vias). This is only an informational message, as the user may pass all nets into the command, but only some nets may have routing.

**What Next**

Make sure the net that you are attempting to push-down has detailed routing if you specifically expected this net to be pushed down.

---

## DPPA-424

(Warning) Creating new P/G net %s in block %s because block instance %s is not connected to the P/G net that a pushed cell was connected to in the top cell.

Feedback

### Description

The push_down_objects command detected a situation during cell push-down where the cell being pushed down was connected to a P/G net in the top, but the block the cell was pushed into was not connected to that P/G net. In this situation, the command creates a new P/G net using the name of the net that the pushed cell was connected to and appending the "__PUSHDOWN" name tag. This is a warning because this is an indicator that the recommended flow was not followed where the user applies P/G connections to the to block prior to pushing down cells into the block. It is strongly advised that the user deliberately creates the proper P/G nets in the block and run connect_pg_net in the block and in the top cell prior to pushing cells into the block, as connect_pg_net is the proper way to create P/G in a block rather than relying upon push_down_objects to create the power and ground

### What Next

Make sure that the P/G net created by push_down_objects is correctly applying P/G in the block, but it is better if the recommended flow of creating P/G with special P/G commands is followed.

---

## DPPA-425

(Warning) Creating new P/G port %s in block %s because block instance %s is not connected to the P/G net that a pushed cell was connected to in the top cell.

### Description

The push_down_objects command detected a situation during cell push-down where the cell being pushed down was connected to a P/G net in the top, but the block the cell was pushed into was not connected to that P/G net. In this situation, the command creates a new P/G port using the name of the net that the pushed cell was connected to and appending the "__PUSHDOWN" name tag. This is a warning because this is an indicator that the recommended flow was not followed where the user applies P/G connections to the to block prior to pushing down cells into the block. It is strongly advised that the user deliberately creates the proper P/G nets in the block and run connect_pg_net in the block and in the top cell prior to pushing cells into the block, as connect_pg_net is the proper way to create P/G in a block rather than relying upon push_down_objects to create the power and ground

### What Next

Make sure that the P/G port created by push_down_objects is correctly applying P/G in the block, but it is better if the recommended flow of creating P/G with special P/G commands is followed.

Feedback

## DPPA-426

(Warning) Duplicated constraints are found in topological constraints on line %d.

**Description**

Duplicated constraints are found inside the topological constraints specified in the given line. The duplicated constraints are skipped.

**What Next**

Please remove the duplicated constraints.

## DPPA-427

(Error) MIB feed crossing conflict detected in reference block %s at reference coord: {%s %s} layerNumber: %d Conflicting block instance: %s (input crossing point: {%s %s} top-cell coordinates, {%s %s} reference block coordinates) Reference block instance: %s (input crossing point {%s %s} top-cell coordinates, {%s %s} reference block coordinates).

**Description**

During checking of push-down of signal routing, top-level net routing required a feedthrough net in a Multiply-Instantiated-Block (MIB), but another crossing of this MIB produced an input crossing previously that conflicts with this subsequent input crossing.

**What Next**

Make sure that your MIB-crossing routes for this reference block do not conflict with other crossings of other instance of this reference block.

## DPPA-428

(Error) MIB feedthrough crossing direction conflict detected in reference block %s at reference coord: {%s %s} layerNumber: %d Conflicting block instance: %s ( crossing dir: %s crossing point: {%s %s} top-cell coordinates). Other block instance: %s ( crossing dir: %s crossing point {%s %s} top-cell coordinates).

**Description**

During checking of push-down of signal routing, top-level net routing required a feedthrough net in a Multiply-Instantiated-Block (MIB), but another crossing of this MIB block (involving a previous instance) produced a different crossing direction (in or out) at the same location in the reference block. Feedthrough nets have an input crossing and one or more output crossings, at specific coordinates and layers. When these occur on MIB block instances, the command must check to see if a previously created feedthrough can be re-used. When doing this, it compares the prospective feedthrough (the one that it

Feedback

is trying to see if it can match an already-created feedthrough), with existing feedthroughs, and for each crossing of the current block, it compares direction, and location and layer. In this case, it matched location and layer of an existing feedthrough crossing, but the direction was not the same. This feedthrough cannot be re-used, and in fact represents an error.

**What Next**

Make sure that your MIB-crossing routes for this reference block do not conflict with other crossings of other instance of this reference block.

---

## DPPA-429

(Warning) The sides/layer/spacing constraints on a block are conflict with topological constraints on net %s.

**Description**

The command detected that there are topological constraints on a net that are conflict with side/layer/spacing constraints on a block. The topological constraints will override block's side/layer/spacing constraints.

**What Next**

Please resolve the conflict between topological constraints and block's side/layer/spacing constraints

**See Also**

- read_pin_constraints
- set_block_pin_constraints
- report_topological_constraints

---

## DPPA-430

(Error) Net %s has sub-level routing which does not overlap a receiving block instance in a top-level instance which has multiple connections to the net being pushed down.

**Description**

The command detected, after analyzing the routing for this net, that inside of a block which has multiple input connections to the pushed net, that one or more of the child nets does not overlap all of the logically-connected bocks inside the multiply-connected block.

Feedback

**What Next**

Please fix the routing inside the multiply-connected block instance to reflect the child net logical connectivity.

---

## DPPA-431

(Error) Instance %s is not overlapped by its local routing for net %s.

**Description**

The command detected, after analyzing the routing for this net, that inside of a block which has multiple input connections to the pushed net, that one or more of the child nets does not overlap all of the logically-connected bocks inside the multiply-connected block.

**What Next**

Please fix the routing inside the multiply-connected block instance to reflect the child net logical connectivity.

---

## DPPA-432

(Error) Short(s) was detected during pre-examination of the routing of net %s. This net cannot be pushed down.

**Description**

The command detected, after analyzing the top-level routing for this net, that some of the routing shorted with one or more existing pins that were not connected to the full flat net. This may have occurred in physical levels below the top.

**What Next**

Please fix the routing that shorts with other pins.

---

## DPPA-433

(Error) Top level routing of net %s shorts with pin %s at location {%s,%s} layer number %d.

**Description**

The command detected, after analyzing the top-level routing for this net, that some of the routing shorted with one or more existing pins that were not connected to the full flat net. This may have occurred in physical levels below the top.

Feedback

### What Next

Please fix the routing that shorts with other pins.

---

## DPPA-434

(Warning) Routing for top-level net %s does not overlap a connected block %s, but this will not prevent push-down into the parent block of the non-overlapped instance.

### Description

The push_down_objects command, when running a pre-check for routing completeness, determined that a logically connected block instance was not overlapped by routing, but it was determined by the checker that this would not cause a problem for push-down into the instance's parent block, this non-overlap instance will not prevent the push-down of the net. It will result in no pin created on the non-overlapped instance.

### What Next

Make sure that this is acceptable. You may need to further route this lower level net to connect to the block instance.

---

## DPPA-435

(Warning) Power or ground net %s is detected in bundle %s as bit %u. The bundle pin constraint on this net is ignored.

### Description

A power or ground net is included in a bundle. The bundle pin constraint defined on this bundle, or the global defined bundle pin constraint, is ignored by the tool for this particular net. In general, power or ground net is excluded by the tool during place_pins, check_pin_placement, or check_mib_for_pin_placement.

### What Next

Check the bundle definition and make sure the power or ground nets are excluded from the bundles.

### See Also

- create_bundle

---

## DPPA-436

(Warning) The %s object %s of topological segment of %s %s is not on the same physical level as %s %s. This segment has no effect and is ignored.

Feedback

### Description

The starting object or ending object do not belong to the same parent level as specified, which is illegal for topological constraint segments.

### What Next

Make sure that the constraint pair specified correctly.

### See Also

- read_pin_constraints

---

## DPPA-437

(Error) Net %s in block %s has vias that lack a definition in the database.

### Description

During push-down of routing, a via was detected which has no definition in the database. The net which contains the via was skipped for push-down. This is probably the result of a library setup problem.

### What Next

Fix the via definition issue and re-try push down of this net.

---

## DPPA-438

(Warning) Skipping power or ground net %s. Power or ground nets are excluded for %s.

---

## DPPA-439

(Warning) Potential conflicting topological side constraint detected. The fixed pin %s on net %s is off-edge, %s boundary of %s. The fixed pin will be ignored in global route and pin placement.

### Description

In a segment of topological side constraint, if an element is a fixed pin and is off-edge, the fixed pin will be skipped. New pin will be created on block boundary based on the topological constraints.

Feedback

## DPPA-440

(Warning) Potential conflicting topological constraints detected. Topological segment of net %s connects %s with %s, but the fixed pin %s is not on the facing edge to %s.

**Description**

In topological constraints, the two elements of a segment are not on facing edges and connection of one element is a fixed pin.

## DPPA-441

(Warning) Conflicting block pin constraints detected. Routing direction of allowed layers %s incompatible with %s sides %s of block %s.

**Description**

The allowed sides and allowed layers set in block pin constraints are incompatible.

**What Next**

Please modify the conflicts in block constraints.

## DPPA-442

(Warning) Fixed pin %s might cause newly-placed abutted pin in cell %s to overlap with blockage %s that is close to the abutted edge %d of cell %s.

**Description**

For two abutted blocks, if there is a fixed pin in one block, the tool might place a new pin on the abutted edge of the other block, which could result in overlap with blockage that is close to the abutted edge.

**What Next**

Please review the pin or routing blockages and if the blockages are incorrectly created, either remove or re-create them so that they don't overlap or abut to the fixed pins in the design and also cause the abutted pin to be placed to be placed inside the blockage.

If the blockages are to be retained as it is, then either remove the terminals associated with the reported fixed pins or unfix the terminals (set physical_status to 'unrestricted') so that place_pins can work on the pin to find a legal location for it outside the blockage.

Feedback

**See Also**

- report_pin_blockages
- remove_pin_blockages
- remove_from_pin_blockage
- remove_routing_blockages

---

## DPPA-443

(Warning) Port %s is not a top level port. Please use keyword PIN.

**Description**

Keyword port can only be used to specify a top level port. Otherwise, please use pin.

---

## DPPA-444

(Warning) net %s connected to P/G or tie net, push down will skip pushing down this net and no feedthroughs will be created

**Description**

The push_down_objects command detected a situation during net push-down where the net being pushed down was connected to a P/G net or tie net segment. The PG net or tie net segment can be either in top or inside child block. Push down will skip processing this net and no feedthrough will be created for this net as well.

**What Next**

Make sure that the netlist generated properly.

---

## DPPA-445

(Warning) net %s connected to top level port %s which has multiple terminals. Push down will skip this nets for feedthrough creation.

**Description**

The push_down_objects command detected that the tool trying to push down a net and create feedthroughts. But the tool finds that there is a top level port on this net which has multiple terminals. Push down doesn't support creating feedthroughs for multiple terminals from same port.

Feedback

### What Next

Remove multiple terminals and try again

---

## DPPA-446

(Warning) The marker layer shape %s in hardmarco %s will not be popped up, because the block_action is not "keep".

### Description

The marker layer in the hardmacros can be popped up only when the block_action is "keep".

### See Also

- set_pop_up_object_options

---

## DPPA-447

(Warning) A valid number must be provided for %s.

### Description

The offset range or layer range must have a number equal or larger than zero.

### What Next

Please set a valid number for offset or layer range.

---

## DPPA-448

(Warning) Cannot find a non-reserved wire track whose track width is compatible to pin %s. Use the most closely matched track instead.

### Description

The pin indicated in the warning has width constrained from individual pin constraints, bundle pin constraints, or non-default routing rule. But none of the wire track available for pin placement has the compatible track width. The tool chooses the most closely matched track instead.

### See Also

- place_pins
- create_track

Feedback

## DPPA-449

(Warning) track %s in block %s is ignored for pin placement.

**Description**

The specified track is ignored for pin creation, due to incorrect track specification. As a result no pins can be created centered on this track. If there are many such tracks, then it can limit resources for pin placement.

**What Next**

Please check track defition and re-define tracks as needed.

## DPPA-450

(Warning) Fixed pin %s might cause newly-placed abutted pin to overlap with pre-existing pin %s that is close to the abutted edge %d of cell %s.

**Description**

For two abutted blocks, if there is a fixed pin in one block, the tool might place a new pin on the abutted edge of the other block, which could result in overlap with pre-existing pin that is close to the abutted edge.

## DPPA-451

(Warning) Signal net %s has feedthrough disallowed, push down will not creating feedthrough for this net

**Description**

The push_down_objects command finds that when pushing down a none-PG type net, the feedthorugh setting is disallowed. Push down will push down the net without creating feedthroughs

**What Next**

If user intends to create feedthroughts, please use set_individual_pin_constraints command to set feedthrough allowed for this net

## DPPA-452

(Warning) Net %s is tied to power or ground net. The individual pin constraint is applied to the connected %s %s instead%s.

Feedback

### Description

The signal net that is to apply the individual pin constraint is tied to power or ground net and physically is a power or ground net. Individual pin constraints cannot be applied to power or ground net. Therefore, the tool is applying the same constraint to the applicable pins or ports instead.

### What Next

Check if the signal net tied to power or ground is user's intention.

### See Also

- set_individual_pin_constraints
- connect_pg_net

---

## DPPA-453

(Error) Loop back topological constraints start from and end at cell %s detected without indicating pin names. This constraint is applied on net %s.

### Description

Because the topological path both start and end at the reported cell, user must indicate which pin it starts from and which pin it ends at. Note that such topological constraint can be applied either on the reported net, or on the bundle which contains the reported net.

### What Next

Check the topological constraints.

---

## DPPA-454

(Warning) Fixed pin %s in cell %s is overlapping with blockage %s.

### Description

This warning is reported when a terminal which has physical-status as 'Fixed' is found to abut or overlap with a routing blockage or an associated pin blockage and the pin layer is same as the layers associated with the blockage.

### What Next

If the blockages are incorrectly created, either remove or re-create them so that they don't overlap or abut to the fixed pins in the design.

Feedback

If the blockages are to be retained as it is, then either remove the terminals associated with the reported pins or unfix the terminals (set physical_status to 'unrestricted') so that place_pins can work on the pin to find a legal location for it outside the blockage.

**See Also**

- report_pin_blockages
- remove_pin_blockages
- remove_from_pin_blockage
- remove_routing_blockages

---

## DPPA-455

(Error) Fixed pin %s on cell %s is shorted with pin %s on cell %s.

**Description**

The specified pins are shorted with each other, that is they are on the same layer and touch or overlap with each other.

**What Next**

Confirm in GUI/Error-Browser that the pins are indeed shorted. Move/edit pin locations as appropriate.

---

## DPPA-456

(Information) Skipping pin %s for pin legalization.

**Description**

The place_pins command detected that the specified pin/port does not have any shape and is hence skipped for legalization. The legalization mode of place_pins is intended to be used to legalize pre-existing pin placement.

**What Next**

Use place_pins in regular mode (that is without -legalize) to create pin placement for such pins.

---

## DPPA-457

(Warning) Pin %s has incomplete routing.

Feedback

**Description**

The specified pin/port has routing, but its routing is incomplete and hence does not connect to another pin.

**What Next**

Check if the routing is missing.

---

## DPPA-458

(Warning) The fixed pin %s on net %s is off-edge, %s boundary of %s. The fixed pin will be ignored in global route and pin placement.

**Description**

The tool detects that there is a fixed pins not placed within owner block boundary, the fixed pin will be skipped. New pin will be created on block boundary.

---

## DPPA-459

(Warning) Synthesizing abutted pin creation is disabled under legalize mode of command place_pins.

**Description**

Synthesizing abutted pin creation is not supported when using the *-legalize* option of the command *place_pins*. This option is hence ignored during pin legalization. To enable synthesizing abutted pin creation, please run full *place_pins* without the legalize option.

**What Next**

plan.pins.synthesize_abutted_pins (3)

---

## DPPA-460

(Warning) Edge %d on block %s is not aligned with the manufacturing grid.

**Description**

The specified edge is not aligned with the manufacturing grid. This can cause pins to also not align with the grid and create potential routability issues.

**What Next**

Ensure that the design/floorplan setup is valid.

Feedback

## DPPA-461

(Warning) Cannot find compatible mask constraint for pin %s. Use center track mask constraint instead.

### Description

The tool cannot find a compatible mask constraint to set on the specified pin. It then uses the center track's mask constraint instead, which may cause mask constraint conflict with surrounding tracks.

## DPPA-462

(Warning) Detected invalid topological constraint. Cell %s and cell %s cannot be connected directly. This constraint is applied on net %s.

### Description

Topological constraints have indicated direct connection between two cells. However, in the given floorplann, these two cells cannot be connected directly.

## DPPA-463

(Warning) Detected infeasible connection of net %s, between cell %s and cell %s. There are feedthrough-unallowed or un-editable cell(s) separate cell %s and cell %s.

### Description

In the given floorplan, two cells can be connected only through some other cells. However, these other cells are not allowed for feedthroughs, or marked as un-editable.

### What Next

Review the block pin constraints for all the blocks that are between the cells reported in the message and modify them to enable feedthroughs through the required blocks. Also, review the hierarchical edit control set on the blocks that separate the reported cells.

### See Also

- report_block_pin_constraints
- report_editability

## DPPA-464

(Warning) Detected inconsistent blockage across MIBs. Blockage %s for cell %s does not have a counterpart for cell %s.

Feedback

**Description**

Inconsistent blockage across MIBs could cause routing/pin-assignment difficulties.

**What Next**

Verify if the blockages that are present on only a subset of the MIB instances (that belong to the same block reference group) are required. Remove them if they are not required before running place_pins.

In the scenario where the blockages are required, it is not necessary to replicate similar blockage across all the MIB instances. Pin placement would be able to detect and tolerate such inconsistencies and will place the pins with relaxed constraint (spacing, offset, layer) if necessary.

---

## DPPA-465

(Warning) Detected range/offset overlap between net/bundle/pins constraints. Net/bundle/pins %s overlaps with net/bundle/pins %s.

**Description**

Range/offset overlap between net/bundle/pins constraints could cause routing/pin-assignment difficulties.

**What Next**

If it is an offset overlap, please re-define the pin constraint to avoid offset violations/pin alignment issues after pin placement.

In case of a range overlap, if the overlapping range has enough tracks to place all the bundle pins within the specified range then you could ignore this warning. If not, please re-define the pin constraint to avoid offset violations/pin alignment issues after pin placement.

---

## DPPA-466

(Warning) Detected fixed pin %s associated with user constraints.

**Description**

Fixed pin will not be touched in pin assignment. So the user constraints on these pins will be ignored.

---

## DPPA-467

(Warning) Detected range/offset overlap between net/bundle/pins constraint and existing fixed pin. Offset/range constraint of net/bundle/pins %s overlaps with fixed pin %s.

Feedback

**Description**

Range/offset overlap between net/bundle/pins constraint and existing fixed pin could cause routing/pin-assignment difficulties.

**What Next**

If it is an offset overlap, please re-define the pin constraint to avoid offset violations/pin alignment issues after pin placement.

In case of a range overlap, if the overlapping range has enough tracks to place all the bundle pins within the specified range then you could ignore this warning. If not, please re-define the pin constraint to avoid offset violations/pin alignment issues after pin placement.

---

## DPPA-468

(Warning) Detected invalid topological constraint. The sides specified for cell %s and cell %s cannot be connected directly. This constraint is applied on net %s.

**Description**

Topological constraints have indicated direct connection between two cells on specified sides. However, in the given floorplann, the specified sides cannot be connected directly.

---

## DPPA-469

(Warning) Detected bad topological constraint. The sides specified for cell %s and cell %s are opposite to the facing sides. This constraint is applied on net %s.

**Description**

Topological constraints have indicated very unfavorable side connection for two cells, as the specified sides are opposite to the facing sides of the two cells.

---

## DPPA-470

(Warning) User provided window length is too small.

**Description**

The user provided value for window length to be used for the pin density map is too small. The default value will be used instead for pin density computation. A small window length leads to a very large number of windows/buckets and can adversely affect runtime.

**What Next**

Use a value greater than or equal to the default/minimum window length value.

Feedback

## DPPA-471

(Information) Using window length %s microns for pin density computation.

**Description**

The specified value is being used for pin density computation. Each edge of a physical block will be divided into sub-sections of the specified size for demand/capacity computation. Refer to man-page for further details.

**What Next**

This is just an information message. No action is required of the user.

## DPPA-472

(Information) Port instance %s is associated with pin blockage/guide %s, but this port is NOT on block.

**Description**

The port reported is not on a physical block.

## DPPA-473

(Warning) Detect block edge with no available tracks: side %d in cell %s does not have tracks on layer %s.

**Description**

The edge reported did not have intersecting track on the reported layer. This will cause pin assignment to skip such block edges for pin placement and may also have a significant impact on pin assignment QoR.

## DPPA-474

(Warning) Detected a net included in multiple bundles: net %s in block %s is included in the following bundles: %s.

**Description**

The net reported is included in multiple bundles. These bundles may have conflicting constraints for that net.

**What Next**

Review the bundle definitions and conflicting bundle pin constraints. Resolve any unintentional flow errors and bad pin constraints.

Feedback

## DPPA-475

(Warning) Detected dimension mismatch between the boundary and bbox, for block %s in %s view. At least one side the block bbox cannot be touched by the block boundary.

### Description

This can happen when physical objects of a block is outside of the boundary. This mismatch can cause incorrect result in global-routing/pin-assignment.

### What Next

Move the objects into the block boundary, or change the block boundary to enclose the objects.

### See Also

- move_objects
- resize_objects
- reshape_objects

## DPPA-476

(Warning) Detected inconsistent boundary between the %s view and frame view of the block %s.

### Description

This boundary inconsistency can lead to incorrect results of global-routing/pin-assigment.

### What Next

Either remove the frame view of this block from the design library or re-create the frame view for the block.

### See Also

- remove_blocks
- create_frame

## DPPA-477

(Warning) Detected fixed pin outside of block boundary: fixed pin %s is outside of the boundary of cell %s.

Feedback

### Description

*place_pins* will retain this out-of-boundary fixed pin shape while create an additional pin shape on the block boundary based on the applicable pin constraints. The redundant out-of-boundary pin shape can trigger off-edge and off-track violations during pin assignment quality checks.

### What Next

To avoid such redundant pin shapes, user can remove such terminals before running pin placement.

### See Also

- remove_terminals

---

## DPPA-478

(Warning) Detected conflict in layer constraint between pin spacing control and block pin constraints specified for block %s, on side %u. Layer %s %s allowed in block pin constraint, but %s allowed in pin spacing control. Layer %s will be ignored when pin is placed on side %u of block %s.

### Description

Layer constraint conflict has been detected between the block pin constraints and pin spacing control section defined in the pin constraint file read in using *read_pin_constraints*. Hence the layer mentioned in the warning will not be used for pin placement on the highlighted edge of the block. Such conflicts can arise due to the following reasons:

(1)Pin spacing control section does not specify spacing for a metal layer which is included in the list of allowed routing layers for a block in block pin constraints.

Note: For those edges specified in the pin spacing control section, those layers that are NOT listed are NOT allowed for pin placement.

(2)Pin spacing control section specifies spacing for a metal layer which is not included in the list of allowed routing layers for a block in block pin constraints.

Note: If the layers listed for an edge of the block in pin spacing control are NOT allowed for the corresponding reference blocks in block pin constraints, then those metal layers are NOT allowed for pin placement.

Such incomplete constraints might impact pin assignment QoR and also cause runtime issues because of less resources available for placing the pins. Please refer to the man page of *read_pin_constraints* for more details on pin spacing control section and its applications.

Feedback

### What Next

Report the allowed layers and pin spacing control constraints using *report_block_pin_constraints*, review the conflict and resolve them accordingly. In the pin spacing control section, specify spacing for all the layers that are to be considered for pin placement.

### See Also

- read_pin_constraints
- set_block_pin_constraints
- report_block_pin_constraints
- remove_block_pin_constraints

---

## DPPA-479

(Warning) Detected invalid topological constraint. Port/pin %s cannot reach its target on cell %s as specified in topological constraint. This constraint is applied on net %s.

### Description

Topological constraints have indicated direct connection between a port/pin cand its target. However, in the given floorplann, they cannot be connected directly.

### What Next

Verify if the port/pin and cell objects specified in the topology map can actually have a direct connection in the given abutted style floorplan. It is possible that an intermediate block cell exists between the two objects and the routing topology should pass through it, therefore not allowing a direct connection between the port/pin and cell.

Also, review the side/layer/offset values specified in the topological constraint and verify if they allow for a successful direct connection between the port/pin and cell objects in the given floorplan.

### See Also

- report_topological_constraints
- remove_topological_constraints

---

## DPPA-480

(Warning) Detected infeasible connection between port/pin %s and its target on cell %s. There are feedthrough-unallowed or un-editable cell(s) separate them.

Feedback

### Description

In the given floorplan, the port/pin reported can only connect to its target through some other cells. However, these other cells are not allowed for feedthroughs, or marked as un-editable.

### What Next

Review the block pin constraints for all the blocks that are between the objects reported in the message and modify them to enable feedthroughs through the required blocks. Also, review the hierarchical edit control set on the blocks that separate the reported cells.

### See Also

- report_block_pin_constraints
- report_editability

---

## DPPA-481

(Warning) Detected conflicting %s constraint. The allowed layer is incompatible with the allowed sides. The constraint is applied on net/pin/bundle %s.

### Description

The command detected that there is no preferred allowed layer compatible with the sides specified in pin constraint. Layer constraint will be ignored or relaxed while placing the pins.

### What Next

Resolve the conflict between the side and layer values specified in pin constraint.

### See Also

- report_individual_pin_constraints
- report_bundle_pin_constraints
- report_pin_constraints
- write_pin_constraints

---

## DPPA-482

(Warning) Detected conflicting bundle constraint. The allowed layer is incompatible with the allowed sides. The constraint is applied on all the bundles %s.

Feedback

**See Also**

- set_bundle_pin_constraints
- report_bundle_pin_constraints

## DPPA-483

(Error) Cell %s will not be moved down into cell %s, since it only partially overlaps with cell %s.

## DPPA-484

(Warning) Detected bad topology plan %s. Cell %s is specified as both start-point and end-point of a path, but the names of the pins are not specified for the start-point and/or the end-point.

**See Also**

- create_topology_plan
- create_topology_node
- create_topology_edge

## DPPA-485

(Warning) Topology node %s is in a loop-back path.

**See Also**

- create_topology_plan
- create_topology_node
- create_topology_edge

## DPPA-486

(Warning) Instantiation pairs of %s, %s and %s, %s have homogeneous logical connections but are associated with heterogeneous physical placement. The related pairs of pins are %s, %s and %s, %s. The related topology plan(s) are %s.

Feedback

### Description

There are homogeneous logical connections between the instantiation pairs of the reported two blocks, however, these pairs have heterogeneous physical placement. For example, block A has two instantiations A_0, A_1, block B has two instantiations B_0, B_1. Logical connection is as, A_0/out-->B_0/in, A_1/out-->B_1/in. The physical placement is as, A_0, B_0 both have orientation of R0; on the other hand,A_1 has orientation of R0, however, B_1 has other orientation (e.g MX). This mismatch between logical connection and physical placement can cause difficulties in pin assignment.

### What Next

It is likely that the heterogeneous physical placement here is a mistake. Please consider make the physical placement also homogeneous.

---

## DPPA-487

(Warning) MIB topology node inconsistency. %s

### See Also

- create_topology_node
- remove_topology_nodes
- report_topology_plans

---

## DPPA-488

(Error) Inconsistency between the actual netlist connectivity and the connectivity of topology edge %s.

### See Also

- get_topology_edges
- report_topology_plans

---

## DPPA-490

(Error) Topology edge %s should have repeater(s)%s, according to net estimation rule of topology plan %s.

### Description

The topology repeaters specified in the reported topology edge failed to honor the corresponding net estimation rule.

Feedback

**See Also**

- get_topology_repeaters
- report_topology_plans

## DPPA-491

(Warning) Topology edge %s of block %s intersects topology edge %s of block %s. This intersection happens inside block %s. The intersection between topology edges can cause difficulty for buffer/repeater insertion.

**Description**

The intersection between topology edges can cause difficulty for buffer/repeater insertion, since the prefered buffer/repeater zones for these two topology edges may both fall in the intersection part.

**See Also**

- report_topology_plans
- create_topology_edge

## DPPA-492

(Warning) Instantiation pairs of %s, %s and %s, %s have heterogeneous logical connections but are associated with homogeneous physical placement. The related nets are %s and %s. The related topology plan(s) are %s.

**Description**

There are heterogeneous logical connections between the instantiation pairs of the reported two blocks, however, these pairs have homogeneous physical placement. For example, block A has two instantiations A_0, A_1, block B has two instantiations B_0, B_1. Logical connection is as, {A_0/out[0],A_0/out[1]}-->{B_0/in[0],B_0/in[1]}, {A_1/out[0],A_1/out[1]}-->{B_1/in[1],B_1/in[0]}. The physical placement is as, A_0, B_0 both have orientation of R0; on the other hand, A_1 and B_1 also both have orientation of R0. This mismatch between logical connection and physical placement can cause difficulties in pin assignment.

**What Next**

It is likely that the homogeneous physical placement here is a mistake. Please consider make the physical placement also heterogeneous.

Feedback

## DPPA-493

(Warning) Detected inconsistent topology edges over MIBs. Topology edge %s and topology edge %s are indicating different implementations for the same net(s) in block %s.

### Description

The reported topology edges have inconsistent either shape layers, or topology repeaters, or net estimation rules.

### See Also

- create_topology_edge
- remove_topology_edges
- report_topology_plans

## DPPA-494

(Information) The pin order specified in topology node %s is inconsistent with the net order specifed in the bundle associated with the topology plan.

### See Also

- create_topology_node

## DPPA-495

(Warning) The bundle associated with topology plan %s is too wide. Extra repeater(s) may be needed to compensate the timing difference among the bundle bits.

### Description

When the bundle is too wide, extra register(s)/repeater(s) may be needed to balance the timing difference between the LSB and MSB, in case of turn. While these extra register(s)/repeater(s) may cause difficulty in the implementation of the topology plan.

### See Also

- create_topology_plan

## DPPA-496

(Error) The topology node %s has pins or ports placed on layer %s, but this layer is not included in the Net Estimation Rule (NER) that is associated with this node.

Feedback

**Description**

The objects assoicated with the topology node should placed only on the NER layers.

---

## DPPA-497

(Error) Topology edge %s of block %s is too close to topology edge %s of block %s. The collision happens in block %s.

**Description**

There may be difficulty in routing topology edges that are too close to each other.

**See Also**

- report_topology_plans
- create_topology_edge

---

## DPPA-498

(Error) Topology edge %s of block %s is too close to the boundary of cell %s.

**Description**

There may be difficulty in routing topology edges that are too close to cell boundary.

**See Also**

- report_topology_plans
- create_topology_edge

---

## DPPA-499

(Error) Topology edge %s of block %s overlaps cell %s, however, the reported edge is not allowed to create feedthroughs or flyover on the reported cell.

**See Also**

- report_topology_plans
- create_topology_edge

---

## DPPA-500

(Information) %s.

Feedback

**Description**

Generic information. For debug purpose. Do not use in normal message.

---

## DPPA-501

(Warning) MIB pins %s and %s connect to same pins on other abutted MIB instances, but the abutted MIB instances have different relative placement.

**Description**

The place_pins or design planning global route command detected that same MIB pins from different MIB instances connecting other abutted MIB instances with same pins. There is no soultion for this placement/connections to place pins on abutted edges. Global router will skip routing the nets connecting to those MIB pins. Pin placement will ignore single pin checking when place those pins

**What Next**

check to see if such connection and placement are reasonable for pin placement

---

## DPPA-502

(Warning) Constraints modified on an uneditable(read-only) block %s and it will be ignored.

**Description**

This message is issued when a read-only block is being modified.

**What Next**

check to see if this block is reasonable to be modified

---

## DPPA-503

(warning) value 'off' for option '-bundle_order' is not valid. Specify one of: ordered, increasing, decreasing, equal-distance, equal_distance

**Description**

Command only accept one of the ordered, increasing, decreasing, equal-distance,equal_distance for option 'bundle_order.

**What Next**

Command only accept one of the ordered, increasing, decreasing, equal-distance,equal_distance for option 'bundle_order.

Feedback

## DPPA-504

(Warning) The user specified nets do not connect to any valid pins.

**Description**

The user provided nets to the check_pin_placement command do not connect to any valid pins. This is most often due to an incorrect/incompatible -cell_type option used with the command. For example if the nets only connect to hard-macro pins but the -cell_type is the default value (BLOCK). This can lead to effectively no pins being checked.

Refer to the man page of check_pin_placement for more details.

**What Next**

Check to see what the correct -cell_type should be used.

## DPPA-505

(Warning) net %s has routing issue: routing causes short between pin %s and %s

**Description**

Command check_objects_for_push_down detects that a net has pre-route that overlap with a MIB instance. When creating pin based on such pre-route on MIB instance, this pin or same pins on other MIB instances will be shorted with other pin(s)

**What Next**

Correct routing issues

## DPPA-506

(Warning) track %s has invalid defintion.

**Description**

Tool detects that the track has an invalid definition. Most likely this is due to incorrect bounding box or high/low coordinates. The track will be ignored.

**What Next**

Please re-define the tracks so that they are valid or remove invalid tracks.

## DPPA-507

(Warning) Track width for track %s is less than layer's minimum width, default width will be used instead.

Feedback

### Description

This message is issued when a user-defined track width is less than the layer's minimum width. In such scenarios, the maximum of the default width and min-width rule defined by the technology file will be used during pin-creation and pin-checking.

### What Next

check to see if the track definition is correct.

---

## DPPA-508

(Warning) Inputs specified for command options -pins, -ports, -cells or -self will be ignored for writing topological constraints.

### Description

When -pins, -ports, -cells or -self command options are specified together with -topological_map and -from_existing_pins, the tool will ignore the values passed to those options while writing out topological map constraints based on existing pin locations.

### What Next

Please specify either net(s) or bundle(s) objects to print their routing topology map to the pin constraint file.

---

## DPPA-509

(Warning) Detected mismatch between origin and bounding bbox lower left coordinates for block %s.

### Description

Origin co-ordinates of the block is not the same as it's bottom left corner co-ordinates of the bounding bbox. This can happen when you resize the left-most or bottom most edge of the block and the origin will no longer be at the bottom left corner of the bounding bbox.

This mismatch can cause tool to print incorrect location co-ordinates based on existing pin placement since the location co-ordinates are written with respect to the block's origin.

If these location constraints are to be re-used in a new version of the design (which now has an origin == bounding_box.ll) to replicate golden pin placement, then read_pin_constraints will discard such invalid location constraints and thus replication of pin placement will not be possible.

### What Next

Reset the block origin to match it's bounding bbox's lower left co-ordinates before writing out pin constraints.

Feedback

## DPPA-510

(Warning) Pin offset/range or start/end specified for side %d of cell %s is outside the block boundary

### Description

Offset/range or start/end values specified for pins/port lies outside the block boundary and hence will be ignored.

### What Next

Input a valid offset/range or start/end value which is within the limits of the associated block edge's perimeter.

## DPPA-511

(Warning) Edge %d on block %s is too close to its parent block edge.

### Description

Tool detects that the specified edge is too close to its parent block edge. Most likely this is due to incorrect floorplan setup. The gap between those edges is less than min-depth on at least one layer. The place_pins command will treat the two edges as abutted, this can cause parent block pins to extend into the child block boundary. It is expected that block edges should either be abutted or at least min-depth/width apart if not abutted.

### What Next

Please fix floorplan issues.

### See Also

- report_block_shaping
- report_placement

## DPPA-512

(Warning) Detected conflicting constraints between %s and %s in line %d.

### Description

When there are conflicting constraints specified in the pin constraint file, the last constraint takes priority when we read in the pin con- straints file.

### What Next

Please review and resolve the conflict between the constraints in the pin-constraint file.

Feedback

### See Also

- read_pin_constraints

---

## DPPA-513

(Warning) Could not find any information in the database regarding how the shadow objects are created. The option -latest_rounds of command write_shadow_eco is ignored.

### Description

The shadow objects in the database could be created by old version of ICC-2. Or they could be created manually or by using shadow eco script created by write_shadow_eco. In either of the cases, they miss certain attribute that the option -latest_rounds of write_shadow_eco relies on.

### What Next

If the option -latest_rounds must be used, then please remove the feedthroughs and recreate them using the latest version of ICC-2 and then do write_shadow_eco again.

### See Also

- remove_feedthroughs
- place_pins
- push_down_objects

---

## DPPA-514

(Warning) There are no valid values specified by option -latest_rounds of command write_shadow_eco. This option is ignored.

### Description

None of the shadow objects in the database were created within the ranges of steps specified by the option -latest_rounds of command write_shadow_eco. It is most likely that the shadow objects in the database were created by N steps place_pins or push_down_objects, but the specified values by option -latest_rounds are all larger than N.

### What Next

Please specify valid values.

Feedback

**See Also**

- place_pins
- push_down_objects

---

## DPPA-515

(Warning) No routing layers found in the design. The command cannot continue.

**Description**

No routing layers were found in the design. They either have not been defined or have been removed. The command cannot complete as a result.

**What Next**

Please specify valid routing layers.

**See Also**

- check_design

---

## DPPA-516

(Information) Loading in %s span spacing rules on layer %s.

**Description**

The command detected the specified span spacing rules and will be loaded into the tool as a technology layer related spacing constraint.

**What Next**

This is just an information message. No action is required of the user.

---

## DPPA-517

(Warning) Found neither the mask1/mask2 spacing rules or same color span rules on layer %s.

**Description**

Tool expects to find exactly one of the per mask based span spacing rules or the generic same color span spacing rules on double patterning layers.

**What Next**

Please check the technology file for specified layer.

Feedback

## DPPA-518

(Warning) Inconsistent entries in the %s spacing rules on layer %s.

**Description**

Tool found that spacing related tables for the specified rule were of in-consistent sizes. This can lead to unexpected spacing constraints during pin creation or checking.

**What Next**

Please check the technology file for specified layer.

## DPPA-519

(Warning) Layer %s has both color based and non color based span spacing rules.

**Description**

Tool expects to find only one of color based span rules and non color based span rules on any given layer. The non color based rules will be ignored.

**What Next**

Please check the technology file for specified layer.

## DPPA-520

(Warning) Run the location check to validate location constraints on ports.

**Description**

The tool detected at least one port with a location constraint. Prior versions of the tool would check these constraints under the -offset switch for on-edge ports. The new option -location should now be used to check location constraints of both on and off edge ports.

**What Next**

Use the -location switch for such ports.

## DPPA-521

(Warning) Hard constraint off is ignored due to other values are specified at the same time.

**Description**

The value spacing, location, layer, length or width is specified together with value off when setting hard constraint in command *set_block_pin_constraints*. The value off is ignored.

Feedback

### What Next

Do not specify off when other hard constraint values are used.

### See Also

- set_block_pin_constraints

---

## DPPA-522

(Warning) Location constraint of %s %s is snapped to edge (side=%u).

### Description

The location constraint specified by user is snapped to the nearest edge. If the intention is to create an off-edge pin by location constraint, please use -off_edge option at the same time.

### What Next

Update the location constraint with -off_edge option is necessary.

### See Also

- set_individual_pin_constraints

---

## DPPA-523

(Warning) %s constraint applied on net %s will be ignored.

### Description

Location/off_edge constraints are not allowed on nets. Therefore, such constraints specified by the user for a net will be ignored.

### What Next

Instead, apply the location/off-edge constraint on the pin that connects to the corresponding net.

### See Also

- set_individual_pin_constraints

Feedback

## DPPA-524

(error) Pin location coordinate for %s %s is outside of block cell boundary and will be ignored.

### Description

If pin location is not inside block boundary, the set_individual_pin_constraints will ignore all setting and error out.

### What Next

Please check pin location coordinate and make it inside block boundary

### See Also

- set_individual_pin_constraints

## DPPA-525

(Warning) Edge %d on block %s is not aligned with the manufacturing grid.

### Description

Boundary co-ordinates of the reported block instance are not compatible with the length precision/scale factor defined in the technology file. Hence the reported block edge is not aligned with the manufacturing grid. The length of all edges of the block must be evenly divisible by the manufacturing grid precision defined in the technology file as shownbelow.

Technology { <snip> unitLengthName = "micron" <snip> gridResolution = 1 lengthPrecision = 2000 <snip> } TF length precision = 1 um / 2000 = 0.0005 um = manufacturing grid

### What Next

Verify the block boundary co-ordinates. Update the block boundary to make all edges be aligned with the manufacturing grid.

### See Also

- set_block_boundary

## DPPA-526

(Warning) Exclude-side constraint set for %s %s includes all the sides of it's parent block.

Feedback

**Description**

All sides of the block are disallowed for pin placement. This could have bad consequences on place_pins outcome and resulting QoR.

**What Next**

Update the exclude sides constraints.

**See Also**

- remove_individual_pin_constraints

---

## DPPA-527

(Warning) Pin-Guide(s) %s on block cell %s on side %d are overlap with routing blockages or pin blockages.

**Description**

The specified block has pin-guides that are overlap with routing blockages or pin blockages. This conflict can lead to sub-optimal pin-placement results or slower runtime as the tool will try to honor pin guide and avoid blockages at same time.

**What Next**

Update the pin-guide/pin blockage/routing blockages constraints.

---

## DPPA-528

(Warning) Entry on row %d of rule %s on layer %s is ignored.

**Description**

The specified entry in the specified rule or table is ignored. This most likely happens because the entry is not correctly formed as expected by the tool.

**What Next**

Ensure the specified rule has correct input.

---

## DPPA-529

(Warning) Loop back connection is detected on net %s with cell(s)%s. These objects are not pushed down into cell %s.

Feedback

**Description**

During push down, loop back net connection is detected in block. The command will not push down anything into that block.

**What Next**

Avoid to push down such unsupported connection.

---

## DPPA-530

(Error) The net %s has no wire-stubs representing the feedthrough connection. Skipping this net.

**Description**

During push-down of signal net routing, it was determined that no wire-stubs represent the required feedthrough.

**What Next**

Correct the wire-stub signal routing.

---

## DPPA-531

(Warning) No -pins, -ports, -nets option specified, constraints will not set for any object.

**Description**

During setting individual pin constraints, must have object specified for setting. Otherwise, the command will not set any constraints into DB.

**What Next**

Specifed object for setting constraints.

---

## DPPA-532

(Error) There is no netlist connection between the %s pin and the %s pin. The command will not add feedthroughs.

**Description**

During specifying the -from and -to pins, please make sure the netlist connection is present before executing the command.

**What Next**

Please run the command on the pins which are connected.

Feedback

## DPPA-533

(warning) cell %s is ignored as its parent cell is not enabled.

**Description**

The cell has been ignored

**What Next**

Check the editability of its parent block

## DPPA-534

(warning) MIB block %s is not aligned on power/ground strap. Found misaligned %s strap %s on metal layer %s at bbox %s.

**Description**

The MIB instance has misaligned strap.

**What Next**

Move or re-shape the MIB blocks with correct dimension and offsets, or update P/G mesh

## DPPA-535

(warning) Terminal(s) will not be created for %d pin(s) that do not have applicable region based pin constraints.

**Description**

The command *create_terminals_for_pins* only creates terminals for pins or ports that have preferred region based constraints. The region based constraint can be just the side constraints or with additional offset or range constraints. Or if the pins or ports already have existing non-fixed terminals.

**What Next**

Please apply applicable region based pin constraints.

## DPPA-536

(warning) Failed to create bundle pin objects. Cannot meet both bundle pin spacing and range constraints.

Feedback

**Description**

The command attempted to create pin objects for bundle pin, however with given bundle pin constraints, there is no enough space meet all requirments.

**What Next**

Modify bundle pin constraints

---

## DPPA-537

(warning) Bundle pins %s to %s contain one or more fixed terminals. Pin creation is skipped.

**Description**

The specified bundle pins have one or more pre-existing fixed pins, i.e. terminals. This prevents pin creation for them.

**What Next**

Remove the pre-exising fixed pins.

---

## DPPA-538

(warning) Logical %s %s has one or more existing fixed terminals. Pin creation is skipped.

**Description**

The specified logical port or pin already has pre-existing fixed pins, i.e. terminals. This prevents pin creation for it.

**What Next**

Remove the pre-exising fixed pins.

---

## DPPA-539

(warning) Cannot derive preferred pin location(s) from pin constraint(s) or existing physical terminal(s) of %s. Pin creation is skipped.

**Description**

The specified port(s) or pin(s) do not have applicable location based pin constraints or existing physical terminals for command *create_terminals_for_pins* to derive an initial pin location.

Feedback

### What Next

Apply suitable pin constraints with side, offset, or range.

---

## DPPA-540

(warning) Pin creation is skipped on block %s because it is read-only.

### Description

The specified is in read-only status because user purposely set it so, or the database is accessed by other session at the same time and is locked. Pin creation is therefore skipped on it.

### What Next

Remove the read-only restriction on the database and re-run *create_terminals_for_pins*.

---

## DPPA-541

(Error) Detected overlapping topology nodes on a same layer. The pins or ports on topology node %s are placed interleavingly with topology node %s.

### See Also

- report_topology_plans

---

## DPPA-542

(Information) Pre-existing pin %s is placed but not fixed/locked. However the newly created topology node will still anchor on it.

### See Also

- create_default_topology_plans

---

## DPPA-543

(Warning) Topology node %s contains or, abuts and connects to fixed pins or ports that are placed on layer %s, but this layer is not included in the Net Estimation Rule (NER) associated with this node.

Feedback

**See Also**

- create_topology_plan
- create_topology_edge

## DPPA-544

(Warning) Bundle %s does not have consistent routing topologies among each of its nets. Ports %s to %s will not be treated as bundle ports.

**Description**

The specified bundle has inconsistent routing topologies and the tool is not able to keep all bits of the pins together. Therefore they are not treated as bundle pins any more.

**What Next**

Check if there are conflicting bundle pin constraints, individual pin constraints, topological pin constraints or other routing related constraints are applied.

**See Also**

- set_bundle_pin_constraints
- set_individual_pin_constraints
- set_block_pin_constraints
- create_topological_constraint
- create_routing_corridor

## DPPA-545

(Warning) The pins or ports associated with topology node %s is inconsistent with the nets in the bundle associated with the topology plan.%s

**What Next**

Investigate the connectivity of the objects listed in the warning for incomplete or wrong connections.

**See Also**

- report_topology_plans

Feedback

## DPPA-546

(Warning) Skip topology edge %s because it does not have valid start or end nodes.

### See Also

- create_topology_edge
- report_topology_plans

## DPPA-547

(Error) Invalid buffer/register module specified for topology edge %s. Skip repeater cell insertions.

### See Also

- create_topology_edge
- create_topology_plan
- set_net_estimation_rule

## DPPA-548

(Warning) Detected orphan topology node %s.

### Description

The reported topology node either connects to no topology edge, or it is a virtual node which connects to only one topology edge.

### See Also

- create_topology_edge
- create_topology_node

## DPPA-549

(Error) Bundle %s has inconsistent number of existing %s across the bits.

### Description

The topology plan associated with the reported bundle will have incorrect topology repeater settings after *optimize_topology_plans*.

**See Also**

- create_topology_plan
- optimize_topology_plans

## DPPA-550

(Error) The route shape(s) for topology edge path %s deviated from the shape layer description.

## DPPA-551

(Error) Topology repeater %s does not have any physical repeater(s).

## DPPA-552

(Error) The physical repeater(s) associated with topology repeater %s are too far away from the previous or the next stage of repeater(s). This distance exceeds the spacing specified in Net Estimation Rule.

**See Also**

- create_topology_plan
- create_topology_edge

## DPPA-553

(Warning) Topology node %s owns pin(s) or port(s) that are not placed together. This can make the topology plan difficult to implement.

**See Also**

- create_topology_plan
- create_topology_node

## DPPA-554

(Warning) Topology edge %s has invalid net estimation rule %s.

Feedback

**See Also**

- create_topology_plan
- create_topology_edge
- set_net_estimation_rule

---

## DPPA-555

(Error) Topology repeater %s is too close to a corner on topology edge %s.

**Description**

The reported topology repeater is infeasible to implement.

**See Also**

- create_topology_repeater
- optimize_topology_plans

---

## DPPA-556

(Error) Topology repeater %s overlaps topology repeater %s.

**Description**

The reported topology repeaters are infeasible to implement.

**See Also**

- create_topology_repeater
- optimize_topology_plans

---

## DPPA-557

(Error) Topology repeater %s overlaps cell or blockage %s.

**Description**

The reported topology repeater is infeasible to implement.

**See Also**

- create_topology_repeater
- optimize_topology_plans

## DPPA-558

(Information) Identified ETM instance %s.

**Description**

The ETM instance is identified while loading the design and is treated as a hard macro.

**What Next**

This message is for information only. No action from user is needed.

**See Also**

- check_pin_placement

## DPPA-559

(Warning) Interleaving bundle pin constraints are too tight for %s to %s on bundle %s. Ignored.

**Description**

The interleaving bundle pin constraints applied on the specified pins of specified bundle are too tight to honor. The tool ignores them and treats the bundle pins as not interleaving.

**What Next**

Review the interleaving bundle pin constraints and relax them or create feasible interleaving bundle pin constraints.

**See Also**

- set_bundle_pin_constraints

## DPPA-560

(Warning) Bundle pin constraints are too tight for %s to %s on bundle %s. Ignored.

Feedback

### Description

The bundle pin constraints applied on the specified pins of specified bundle are too tight to honor. The tool ignores them and treats the bundle pins as normal block pins.

### What Next

Review the bundle pin constraints and relax them or create feasible bundle pin constraints.

### See Also

- set_bundle_pin_constraints

---

## DPPA-561

(Error) Not fully-optimized topology plans (%lu plans): %s.

### Description

The reported topology plans can be one of the following cases:

- The reported plan have node(s) whose constraint type is edge. However, *optimize_topology_plans* should have associated these node(s) with block pins.
- The reported plan have edge(s) without shape_layers. However, *optimize_topology_plans* should have created shape_layers for these edge(s).

### See Also

- optimize_topology_plans

---

## DPPA-562

(Error) Bad shape layers for alignable topology edge %s.

### Description

The start and end nodes of the reported topology edge have pins on a same layer, residing on alignable locations. Therefore, the reported topology edge SHOULD only include that layer.

### See Also

- optimize_topology_plans

Feedback

## DPPA-563

(Error) The topology node %s inconsistent with adjacent shape layer(s). The reported node has pin(s)/port(s) placed on layer %s, but the adjacent shape layer is on %s.

### See Also

- optimize_topology_plans

## DPPA-564

(Error) Topology plan %s has incorrect register stages.

### Description

The number of expected register stages can be specified as the following attributes on the topology plan: *numSeqRepeaters*, *sameNumSeqRepeaters*, or *seqRepeaters*.

### See Also

- optimize_topology_plans
- set_attribute

## DPPA-565

(Error) Topology plan versus netlist connectivity mismatch. %s

### Description

This will be infeasible for optimize_topology_plans.

### See Also

- create_topology_edge
- create_topology_node
- optimize_topology_plans

## DPPA-567

(Warning) Feedthrough pins with alignment violation: %s

### Description

The intra block feedthough pins are unaligned.

Feedback

### What Next

Ensure that alignment tolerance distance is set properly. Its default value is 0.

---

## DPPA-568

(Warning) Failed to update topology plan %s.

### Description

Please check topology plan, it could be routing result not valid, topology plan created with invalid node or edge, etc.

### See Also

- report_topology_plans

---

## DPPA-569

(warning) Edit group %s can not be pushed into cell %s as partially overlap.

### Description

The edit group partially overlaps the cell, cannot be pushed down

### What Next

Double check the location of the edit group.

---

## DPPA-570

(warning) Edit group %s has unsupported members %s to be pushed down.

### Description

The edit group has unsupported members.

### What Next

Double check the edit group members.

---

## DPPA-571

(warning) Edit group %s is not aligned with %s.

### Description

The edit group is not aligned with another edit group.

Feedback

**What Next**

Check for the alignment of these edit groups.

---

## DPPA-572

(warning) The only supported %s action is %s, please make sure the %s action of %s set as %s.

**Description**

The specified top/block action is unsupported.

**What Next**

Specify supported top/block actions.

---

## DPPA-573

(Warning) Feedthrough pins aligned, but on different metal layers: %s

**Description**

The intra block feedthough pins are aligned, but their layers mismatch.

**What Next**

Ensure that alignment tolerance distance is set properly. Its default value is 0.

---

## DPPA-574

(Warning) Skip bundle %s as it does not contain supernet(s).

**Description**

Currently only the supernets bundle is supported.

---

## DPPA-575

(Error) Narrow channel violation detected: Pin %s on edge %d. Missing connected pin on edge %d of cell %s

**Description**

Single pin across narrow channel.

Feedback

## DPPA-576

(Error) Narrow channel violation detected: Pin %s on edge %d. Unaligned with pin %s on edge %d

**Description**

The pins across a narrow channel are unaligned.

## DPPA-577

(Error) Narrow channel violation detected: Pin %s on edge %d. Connecting to multi-fanout net %s

**Description**

The number of pins across a narrow channel should be 2.

## DPPA-578

(Error) Narrow channel violation detected: Pin %s on edge %d. Not connecting to pin %s on edge %d

**Description**

The pins across a narrow channel are not connected.

## DPPA-579

(Error) Narrow channel violation detected: Pin %s on edge %d (on layer M%d). Layer-Mismatch with pin %s on edge %d(on layer M%d)

**Description**

The pins across a narrow channel are on different layers.

## DPPA-580

(Warning) pin %s from bundle %s has been placed at different edge from global routing's location.

**Description**

The bundle pins are not placed at the locations passed from global router. This may happen when there is no enough routing resource to place all the bundle pins together at routing location.

Feedback

### What Next

Check the routing location to see if there are enough routing resource for the bundle nets to route through. If the resource is not enough, you may need to use bundle pin constraints, topological pin constraints, pin/routing blockages or routing corridor to guide the routing to go through desired topologies.

### See Also

- check_pin_placement

---

## DPPA-581

(warning) new segment of original path %s is too short, the end cap is adjusted to fit its length.

### Description

The new segment is too short.

### What Next

Ensure the cut segment is long enough.

---

## DPPA-582

(Warning) Insufficient layers specified for bundle %s. Topology edge %s need to use both horizontal and vertical layers.

---

## DPPA-583

(Error) Invalid topology node %s.%s

---

## DPPA-584

(Warning) Contradictive net: pin %s tries to extend check scope to include net %s, but the net is explicitly excluded.

---

## DPPA-585

(Warning) Conflicting layer constraints between bundle pin constraint %s and Net Estimation Rule (NER) of topology plan %s. The NER will have higher priority.

Feedback

## DPPA-586

(Warning) Bundle %s cannot be folded.

## DPPA-587

(Error) Invalid topology node %s. The reported node has constraint type of origin, but has objects or constrained_objects.

## DPPA-588

(Warning) Skip topology edge %s because its shape layer(s) is crossing current block boundary.

### See Also

- create_topology_edge
- report_topology_plans

## DPPA-589

(Error) Bad sequential_repeaters constraint for topology plan %s.

### Description

The reported topology plan either has invalid syntax for *sequential_repeaters*, or the value specified in *sequential_repeaters* forms a loop with other topology plan(s).

### See Also

- create_topology_plan

## DPPA-590

(Warning) The min/max routing layer specified for net %s inconsist with %s.

### See Also

- set_block_pin_constraints

Feedback

## DPPA-591

(Warning) Topology plan cannot have '/' in the name. All the '/' will be replaced with '_'.

**See Also**

- create_topology_plan

## DPPA-592

(Error) Physical repeater %s does not associate with any topology repeater.

## DPPA-593

(warning) Bump region %s with pattern anchor block is not supported.

**Description**

Bump region with pattern anchor block is not supported.

**What Next**

Check the attribute.

## DPPA-594

(warning) There is a misalignment region %s in block %s, can not push down the bump region.

**Description**

There is a confliction between new child bump regions.

**What Next**

Check the alignment.

## DPPA-595

(warning) Grid %s is misaligned in block %s, can not push down the grid.

**Description**

There is a confliction between new child grid among MIB cells.

Feedback

**What Next**

Check the alignment.

## DPPA-596

(Error) Overbooked bump region %s. The signal number of the topology plan(s) is too large for the reported bump region.

**What Next**

Please check the bump count and the signal number of the topology plan(s).

**See Also**

- report_attributes

## DPPA-597

(Error) Topology edge %s of block %s is too close to the boundary of bump region %s.

**Description**

There may be difficulty in routing topology edges that are too close to bump region boundary.

**See Also**

- create_topology_edge

## DPPA-598

(Error) Infeasible topology node %s. The reported node maps to a fixed pin %s, but they are on different edges of cell %s.

**Description**

This will be infeasible for optimize_topology_plans.

## DPPA-599

(Warning) There is more than 1 pin connecting to %s.

## DPPA-600

(Warning) The routing informations of net %s are not enough to build a netlist.

Feedback

## DPPA-601

(Warning) Cannot decide the direction of routings for net %s, switch to non-feedthrough mode.

## DPPA-602

(Warning) There is no solution for net %s.

## DPPA-603

(Warning) The routings of net %s has multiple solutions.

## DPPA-604

(Warning) There are multiple solutions for pure internal shapes of net %s.

## DPPA-605

(Warning) Cannot find top level connectivity of %s, skip to map it.

## DPPA-606

(Warning) Skip object %s as its orientation is not supported to push down/pop up.

## DPPA-607

(Warning) Minimum area is too large or minimum length is too small on layer %s, this can cause large minimum pin length in pin placement.

**Description**

Command detected that the min area is too large or min length is too small for a layer. This will result in large minimum pin length for pin placement and can cause pin placement failure. This is likely a setup error, please check to see if there is an issue in the tech file definition.

**What Next**

Fix and re-run command.

Feedback

## DPPA-608

(Warning) The specified spine edge has invalid shape layers. Tool will not create fishbone connection for topology plan %s.

**What Next**

Fix and re-run command.

## DPPA-609

(warning) Feedthroughs of pattern name %s in block %s cannot construct a bus with same dimension to original bus.

## DPPA-610

(warning) Cannot find a unified new bus name for bus %s, skip matching related net-port names

## DPPA-611

(Warning) The specified cell %s has no hierarchical boundary.

## DPPA-612

(Warning) Multiple references are specified for module %s.

## DPPA-613

(Warning) The specified plan has invalid NER layers. Tool will not create fishbone connection for topology plan %s.

**What Next**

Fix NER and re-run command.

## DPPA-614

(error) Specified pin(s) and layer(s) have mismatched directions.

**Description**

Specified pin(s) and layer(s) should have same directions: horizontal or vertical.

Feedback

**What Next**

NA

---

## DPPA-615

(warning) Skip %d unplaced pins.

**Description**

Only apply to placed pins.

**What Next**

NA

---

## DPPA-616

(warning) Term %s is invalid to derive (%s)

**Description**

The term name should meet some conditions.

**What Next**

NA

---

## DPPA-617

(warning) Topology plan %s has node with constraint type tap, cannot proceses this plan.

**Description**

The node with constraint type tap is unsupported.

**What Next**

NA

---

## DPPA-618

(warning) Site rows that belong to site arrays cannot be explicitly popped. Instead, they can only be popped as part of a site array.

**Description**

Site rows belongs to a site array cannot be popped stand alone.

Feedback

**What Next**

NA

## DPPA-619

(Warning) Name collision happens: original name %s, new name %s.

**Description**

Two objects should use different names.

**What Next**

NA

# DPTOPO

## DPTOPO-026

(warning) Rule %s: specified layers %s and %s are not adjacent. User-provided register / buffer spacing is required.

**Description**

The layers specified for the indicated net estimation rule are not adjacent. In this situation, the net estimation timing engine cannot compute register / buffer spacing based on indirect attributes (layer, clock, scenario, etc). Non-adjacent layers are permitted, but only if the user directly specifies user-computed register / buffer spacing values.

**What Next**

Modify the net estimation rule settings to use 2 adjacent layers.

Or

Directly specify register / buffer spacing values for the net estimation rule.

**See Also**

- set_net_estimation_rule
- report_net_estimation_rules

## DPTOPO-027

(error) Net Estimation Rule %s: corner %s has no parasitic parameters set.

Feedback

### Description

The corner assigned to the indicated net estimation rule has no parasitic parameters set - early, late or both parameters are missing. Without this information, this net estimation rule cannot be used to obtain signal velocity for topology plans using the *get_topology_timing* command.

estimate_topology_timing will try to use net estimation rules defined on previous edges (or the main topology plan) to see if those have valid settings. If successful, DPTOPO-030 will be be issued to indicate the situation.

### What Next

Modify the corner parasitic parameter settings using the *set_parasitic_parameters* command.

### See Also

- set_parasitic_parameters

---

## DPTOPO-028

(error) Error timing topology plan %s from %s to %s.

### Description

There was an error estimating timing between the indicated elements of the named topology plan. An earlier error message should indicate the specific problem.

### What Next

Look for errors before this message and attempt to rectify them.

---

## DPTOPO-029

(Error) Rule %s has invalid corner setting (or none)

### Description

The corner referred to by the net estimation rule could not be found, or it was not set.

### What Next

Define a valid corner for the given net estmation rule.

Feedback

**See Also**

- create_corner
- report_net_estimation_rules
- set_net_estimation_rule

---

## DPTOPO-030

(Info) Net Estimation Rule %s was used instead of current rule %s

**Description**

The currently-in-effect net estimation rule for a given part of the topology plan was not properly initialized. Either the corner was not set, or parasitics were not properly initialized, etc. Look for previous errors/warnings.

By searching backwards along the topology plan (towards the start), a propoerly initialized rule was found, and this was used instead to estimate timing for the *estimate_topology_timing* command.

This situation may occur after *characterize_topology_plan* has pushed plans into child blocks and created reference nodes, but not all constraints and/or parasitics for the child block(s) have been properly set up. This is done as a convenience for the user to proceed even in the presence of incomplete data.

**What Next**

Ensure the rule labeled as "current" (the second name given in the error message) is properly configured, with a valid corner, valid parasitics, etc.

**See Also**

- create_corner
- set_net_estimation_rule
- set_parasitic_parameters

---

## DPTOPO-031

(error) Unsupported object type

**Description**

The topology node is associated with unsupported objects in its objects or constrained_objects attribute.

Feedback

### What Next

Update the topology plan or topology node to associate it with supported objects, such as hierarchical block pins or cells.

### See Also

- create_topology_plan
- create_topology_node

---

## DPTOPO-032

(error) Error Find loop in the topology plan %s, can not estimate delay for the topology plan.

### Description

There is a loop in the topology plan. So, estimate_topology_timing can not compute delay for the plan. Please fix the topology plan.

### What Next

Look for the loop and attempt to fix it.

---

## DPTOPO-033

(error) Error Unable to find -%s node, can not estimate delay for the topology plan.

### Description

The user specified node is not found. So, estimate_topology_timing can not continue. Please specify correct node for reporting.

### What Next

Specify correct node for reporting.

---

## DPTOPO-034

(error) Unable to find a path with specified to/from/through topology nodes/repeaters.

### Description

Unable to find a path with specified to/from/through topology nodes. Please provide correct to/from/through topology nodes/repeaters.

Feedback

**What Next**

Please provide correct to/from/through topology nodes/repeaters.

---

## DPTOPO-035

(error) Error Unsupported object type is found in %s list %s.

**Description**

The user specified node or repeater is not found. So, estimate_topology_timing can not continue. Please specify correct node or repeater for reporting.

**What Next**

Specify correct node for reporting.

---

## DPTOPO-036

(error) Error - No valid timing path found with given to/from/through options.

**Description**

Any timing path passes through user specified nodes or repeaters is not found. So, estimate_topology_timing can not report. Please specify correct nodes or repeaters for reporting.

**What Next**

Specify correct nodes/repeaters for reporting.

---

## DPTOPO-050

(Info) Topology Plan %s (referenced by plan %s) was added to the list of reported plans.

**Description**

While creating the report for the *write_topology_report* command, a topology plan in list of plans to be reported contained a topology node that referenced a topology plan not already in list of plans to be reported. To ensure completeness, the referenced plan was added to the report.

**What Next**

To disable this automatic adding of referenced plans, add the *-no_referenced_plans* option to the *write_topology_report* command.

Feedback

**See Also**

- report_topology_plans
- write_topology_report

---

## DPTOPO-100

(Error) No sources available for reporting.

**Description**

Calling the command *report_topology_project* with all 4 options: -no_rules, -no_supernets, -no_bundles and -no_plans will result in nothing to report.

**What Next**

Retry the command and remove at least one of the *-no_* options.

---

## DPTOPO-101

(Info) Reading XML file %s.

**Description**

Informational message printed during the running of read_topology_project.

---

## DPTOPO-102

(Error) Error reading XML datafile %s.

**Description**

An internal error occurred during the reading of a Topology Project XML file.

**What Next**

Verify that the file exists and has not been modified and was produced by a compatible version of write_topology_project.

---

## DPTOPO-103

(Error) %s is a directory, not a valid XML filename.

**Description**

A directory was passed to the -filename argument of read_topology_project. This option expects a valid Topology Project XML file, not a directory.

Feedback

**What Next**

Either use the -directory argument, if this directory is a valid XML directory created with write_topology_project, or pass in a valid XML filename.

---

## DPTOPO-104

(Errro) file %s does not exist.

**Description**

The file passed to read_topology_project does not exist.

**What Next**

Verify that the filename is correct and is available for reading by the current user.

---

## DPTOPO-105

(Information) Found %lu %s entries.

**Description**

Informational message printed by the command read_topology_project.

---

## DPTOPO-106

(Error) %s is a file, not a valid XML Topology Project directory.

**Description**

A filename was passed to the -directory argument of read_topology_project. This option expects a valid directory, not a file.

**What Next**

Either use the -filename argument, if this directory is a valid XML file created with write_topology_project, or pass in a valid XML directory name.

---

## DPTOPO-201

(warning) Topology plan %s has a non-Manhattan segment %s. Using Manhattan approximation.

Feedback

### Description

The *estimate_topology_timing* command detected a non-Manhattan wire / connection (not horizontal or vertical) as part of the indicated topology plan. The wire / connection will be converted to two separate wires, one vertical, one horizontal, and estimation will continue.

### What Next

For more accurate results, ensure that the plan has Manhattan routing / connections.

### See Also

- estimate_topology_timing

---

## DPTOPO-202

(error) Register cell setting '--ideal--' in net estimation rule %s is incompatible with estimate_topology_timing.

### Description

The command *estimate_topology_timing* requires a real lib cell assigned to both the buffer and register settings of the associated net estimation rule. The command cannot proceed to estimate timing with a setting of --ideal-- for the register.

### What Next

Set the register setting of the net estimation rule to a real register lib cell.

### See Also

- report_net_estimation_rules
- set_net_estimation_rule

---

## DPTOPO-203

(error) %s value set for net estimation rule %s is invalid.

### Description

The command *estimate_topology_timing* requires a real lib cell assigned to both the buffer and register settings of the associated net estimation rule. The rule either had an invalid register or buffer setting that was unable to be resolved to a valid lib cell.

### What Next

Set the register and/or buffer setting of the net estimation rule to a real lib cell.

### See Also

- report_net_estimation_rules
- set_net_estimation_rule

---

## DPTOPO-204

(error) Could not find a valid %s pin in lib cell %s of net estimation rule %s.

### Description

A valid pin of the specified type could not be found in the lib cell assigned to the net estimation rule. The *estimate_topology_timing* command requires a net estimation rule to have valid lib cells set for register and buffer settings. Both the register and buffer cells needs to have valid in and out pins. As well, the register needs to have a valid clk pin.

### What Next

Assign lib cells to the register and/or buffer settings for the net estimation rule that correspond to valid lib cells, with valid pins identified in the library.

### See Also

- report_net_estimation_rules
- set_net_estimation_rule

---

## DPTOPO-205

(error) Segment %s object %s has no nets.

### Description

In order to use the *-routing real* option for the command *estimate_topology_timing*, real nets with route shapes must exist in the netlist and be associated to the topology plan.

The specified objects were part of the plan, but no nets were associated with them which could be used to look up layer shape data.

### What Next

Ensure that all the elements of the topology plan are routed.

### See Also

- optimize_topology_plans

Feedback

## DPTOPO-206

(error) Cannot find net connectivity between %s (objects %s) and %s (object %s).

**Description**

In order to estimate timing for topology plans using *-routing real*, each element of the topology plan must be connected by real nets that have routing shapes.

**What Next**

Ensure that the objects are connected in the netlist.

## DPTOPO-207

(error) Cannot determine tech layer for the route shape %s.

**Description**

There was an error determining the tech layer information from the given route shape. *estimate_topology_timing* cannot continue with the option *-routing real* in this situation.

**What Next**

Ensure that the routing shapes and tech layer information is correct.

## DPTOPO-208

(error) Segment %s has %d bits, but sibling %s has %d bits.

**Description**

*estimate_topology_timing* with option *routing real* requires that sibling branches have the same number of bits in a branching topology plan.

**What Next**

Ensure that all the bits of the topology plan are present at every branch.

## DPTOPO-209

(error) Invalid net estimation rule for edge %s.

**Description**

The net estimation rule for the topology edge could not be determined.

Feedback

### What Next

Ensure a valid net estimation rule is set for the topology edge and/or the topology plan.

### See Also

- create_topology_edge
- create_topology_plan

---

## DPTOPO-210

(warning) Instance %s (associated with topology repeater %s) is not placed - only virtual cell timing is possible.

### Description

The indicated cell is not placed. In order to use the *-cell real* option of *estimate_topology_timing*, all cells associated with topology repeaters must be placed in order to determine the distance of the cell from the origin of the repeater.

### What Next

Ensure all cells associated with topology repeaters are placed, or use the *-cell virtual* option (or let *estimate_topology_timing* automatically select that option).

### See Also

- estimate_topology_timing

---

## DPTOPO-211

(error) topology plan %s cannot be timed with real routing.

### Description

The status of the topology plan, its associated objects and the netlist prevent *estimate_topology_timing* from using real routing for calculating the delays of the topology plan.

### What Next

See earlier errors/warnings for information about this situation.

---

## DPTOPO-212

(warning) Edge %s, bit %d, net %s has no routing shapes - cannot time using real routing.

Feedback

### Description

The indicated net, associated with the indicated bit of the indicated topology edge did not have any routing shapes. In order for *estimate_topology_timing* to estimate delays for topology plans using the option *-routing real*, actual routing shapes are required for each net associated with the plan.

### What Next

Ensure all nets associated with the topology plan are routed, or use virtual route timing.

### See Also

- estimate_topology_timing

---

## DPTOPO-213

(warning) Edge %s, bit %d has no nets with route shapes

### Description

The indicated bit of the indicated topology edge did not have any nets with routing shapes. In order for *estimate_topology_timing* to estimate delays for topology plans using the option *-routing real*, actual routing shapes are required for each net associated with the plan.

### What Next

Ensure all nets associated with the topology plan are routed, or use virtual route timing.

### See Also

- estimate_topology_timing

---

## DPTOPO-214

(warning) Edge %s has no nets

### Description

The indicated topology edge did not have any nets associated with it. In order for *estimate_topology_timing* to estimate delays for topology plans using the option *-routing real*, actual nets with routing shapes are required for each bit in the plan.

### What Next

Ensure all edges in the topology plan have real nets associated with them, or use virtual route timing.

Feedback

**See Also**

- estimate_topology_timing

---

## DPTOPO-215

(warning) No prior node with netlist objects found for node %s.

**Description**

In order to use the *-cell real* option of the command *estimate_topology_timing*, each repeater must have actual cells in the netlist associated with it, and they must match the object count of the previous node (ignoring virtual/tap nodes).

**What Next**

Ensure that the topology plan has netlist objects associated consistently with nodes/ repeaters.

---

## DPTOPO-216

(warning) Folded edge %u has %lu objects, but master edge %s has %lu objects.

**Description**

Folded edges must contain the same number of repeater cell references as the master edge in order to use the *-cell real* option of *estimate_topology_timing* command.

**What Next**

Ensure all repeaters / edges have the same number of associated repeater objects and it matches the node object count, or use virtual cell computations.

---

## DPTOPO-217

(warning) Repeater %u of edge %s has 0 objects.

**Description**

Repeaters must have an associated netlist cell for each bit of the topology plan in order to use the *-cell real* option of *estimate_topology_timing* command.

**What Next**

Ensure all repeaters have the required number of assoicated netlist cells.

Feedback

## DPTOPO-218

(warning) Repeater %u of edge %s has %u objects, but the prior node has %u objects.

**Description**

Repeaters must have an associated netlist cell for each bit of the topology plan in order to use the *-cell real* option of *estimate_topology_timing* command. This cell count must match the associated object count of the prior topology node (excluding virtual/tap nodes).

**What Next**

Ensure all repeaters have the required number of assoicated netlist cells and that this count matches the object count of the prior topology node.

## DPTOPO-219

(error) Topology element %s (edge %s) has %d bits, but %s has %d bits.

**Description**

*estimate_topology_timing* with option *routing real* requires that all topology objects on an edge have the same number of associated objects/nets/bits.

**What Next**

Ensure that all topology objects on the edge have properly associated objects.

## DPTOPO-220

(error) topology plan %s cannot be timed with real cell instances.

**Description**

The status of the topology plan, its associated objects and the netlist prevent *estimate_topology_timing* from using real cell instances for calculating the delays of the topology plan.

**What Next**

Verify that every topology repeater in the plan has one cell instance per net associated with it.

Earlier errors/warnings may also give additional information.

## DPTOPO-221

(warning) Cannot determine net(s) for bit %d of edge %s.

Feedback

### Description

*estimate_topology_timing* was unable to find any nets along the given edge for the given bit. This may be because the topology plan is unfinished and does not yet match up to the actual netlist. For example, if the topology plan expects a feedthrough edge, but the actual feedthroughs have not yet been created, or are not part of the supernet(s) of the plan.

### What Next

Ensure that the plan is not unintentionally inconsistent with the netlist.

### See Also

- estimate_topology_timing

---

## DPTOPO-225

(Error) Routing found %d bits, cell objects have %d bits

### Description

During topology plan netlist analysis, *estimate_topology_timing* found a difference in the number of bits between nets associated with the plan and cell/pin/port objects associated with nodes/repeaters.

### What Next

Correct the discrepancy before calling estimate_topology_timing again.

### See Also

- estimate_topology_timing
- report_topology_plans

---

## DPTOPO-226

(Error) Cannot time fully implemented plan %s in virtual cell mode

### Description

An attempt was made to call *estimate_topology_timing* with the options -routing real -cells virtual when the netlist is a fully implemented plan, which has route shapes on each net. This situation is incompatible with real routing, virtual cell mode. Either real routing, real cell mode or virtual routing, virtual cell mode can be used instead.

### What Next

Use -routing virtual -cell virtual, or -routing real -cell real options.

Feedback

**See Also**

- estimate_topology_timing

---

## DPTOPO-227

(Information) Estimating Delay for timing plan %s in 3dIC.

**Description**

*estimate_topology_timing* estimates the timing for the indicated topology plan defined in a 3DIC design.

**What Next**

If timing estimation is acceptable, nothing needs to be done.

**See Also**

- estimate_topology_timing

---

## DPTOPO-228

(error) Topology node %s does not associate with any object. The command estimate_topology_timing can not estimate the delay.

**Description**

The topology node of the topology plan does not associate with any object. The command *estimate_topology_timing* can not estimate delays of the topology plan.

**What Next**

Verify that topology node in the plan and associate object to it.

Earlier errors/warnings may also give additional information.

---

## DPTOPO-229

(Information) Estimating Delay for timing plan %s using ns_per_mm of net estimation rule.

**Description**

*estimate_topology_timing* estimates the timing for the indicated topology plan using ns_per_mm of net estimation rule.

**What Next**

If timing estimation is acceptable, nothing needs to be done.

Feedback

**See Also**

- estimate_topology_timing

---

## DPTOPO-230

(Error) Cut shapes for path segment %s to %s are inconsistent.

**Description**

*estimate_topology_timing* can operate in different timing modes, based on user preference or based on automatic selection. One such mode is *-routing real* (or real routing selected by the auto-detection algorithm) and virtual cell mode (again, user specified or auto-selected). In this mode, since there are not real standard cells associated with some or all of the topology repeaters, the center (origin) of the virtual topology repeater object is used as the location of the repeater.

An attempt is made to create a "cut line" to find the closest route shape that approaches the origin of the virtual repeater. This cut line is first drawn through the origin, perpendicular to the edge direction at the point where the repeater is. If, after a certain search distance, no route shape is found a bounding box search centered on the origin is used instead.

If the route shapes created for a given plan deviate significantly from the virtual plan locations (i.e. the topology object locations), then it may happen the route shapes found for two adjacent topology plan objects are "out of order". That is, repeater2 comes after repeater1 on a given plan, but the cut shape algorithm finds a route shape for repeater2 that is closer to the start pin/port of the topology plan (in route shape traversal order) than the route shape found for repeater1. In this case, the algorithm to find the shapes belonging to the topology plan subset repeater1 to repeater2 cannot be determined, and in fact, points to a serious issue with the route shapes - it would not be sensible to continue.

Depending on user paramters, if the "auto" setting for routing is in effect, then *estimate_topology_timing* will select the virtual routing option instead and re-estimate the timing of the plan using that mode instead. If the user has specified *-routing real*, an error is generated instead.

**What Next**

Improve either the virtual locations of the topology plan objects or the path of the route shapes associated with the nets/supernets of the plan such that they correlate better.

---

## DPTOPO-231

(Information) Unable to estimate delay for plan %s with %s - trying with %s.

### Description

*estimate_topology_timing* attempted to estimate the timing for the indicated topology plan using the indicated setting (either real routing or real cells) and unable to continue. As the setting was in "auto" mode (i.e. not user set), the virtual version of the setting (virtual routing or virtual cells) will be used instead, and the plan timing will be estimated with the virtual setting instead.

### What Next

If timing estimation in virtual mode is acceptable, nothing needs to be done.

Otherwise, see the log for prior errors indicating the problem that caused the switch to virtual mode and attempt to correct them.

### See Also

- estimate_topology_timing

---

## DPTOPO-232

(warning) Corner attached to the current design is a default corner without user settings.

### Description

The corner attached to current design is a default corner without user settings. So, the command *estimate_topology_timing* will use "ns_per_mm" of net estimation rule to estimate delay.

### What Next

The command *estimate_topology_timing* will use "ns_per_mm" of net estimation rule to estimate delay. The user may create a corner containig manual settings and this will override the default corner.

Feedback

**See Also**

- report_net_estimation_rules
- set_net_estimation_rule

---

## DPTOPO-233

(Information) Topology %s is a zero netlist TIP, so ns_per_mm of net estimation rule will be used to estimate delay.

**Description**

The given TIP is a zero netlist TIP. The command *estimate_topology_timing* will use ns_per_mm of net estimation rule to estimate its delay.

**What Next**

If timing estimation is acceptable, nothing needs to be done.

**See Also**

- estimate_topology_timing

---

## DPTOPO-234

(error) Unable to find a valid ns_per_mm of the nest estimation rule %s.

**Description**

The net estimation rule does not have a valid ns_per_mm. Thus, the command estimate_topology_timing can not estimate delay of the topology plan.

**What Next**

Verify that net estimation rule.

Earlier errors/warnings may also give additional information.

---

## DPTOPO-250

(Warning) Cannot determine associated pins on topology node %s. Topology plan merging is skipped on its edge.

**Description**

Merging topology plans, i.e., to match real repeater cells in the netlist to the corresponding topology repeaters in the topology plans, needs the related topology nodes with correct

Feedback

*objects* attribute. This normally means the topology node of a block should have corresponding block pins set as its *objects* attribute. The indicated topology node does not have this attribute set correctly.

**What Next**

Please set correct *objects* attribute on the specified topology node.

**See Also**

- create_topology_node
- set_attribute

---

## DPTOPO-251

(Warning) Netlist tracing backward from pin %s does not match topology plan tracing backward from topology node %s. Merging is skipped on its edge.

**Description**

The tool detects a mismatch between the netlist and the topology plan on the specified pin and the specified topology node. Merging topology plans, i.e., to match real repeater cells in the netlist to the corresponding topology repeaters in the topology plans, will be skipped for the topology repeaters of the specified topology edges.

**What Next**

Please fix the mismatch between the netlist and the topology plan.

**See Also**

- create_topology_plan

## DPTOPO-257

(Error) Topology node %s is not on the boundaries of its associated block. The command *merge_topology_plans* cannot proceed.

**Description**

The command *merge_topology_plans* requires the topology nodes must be defined on the block boundaries, block pins, top ports, move bounds, or of the origin type. The indicated topology node does not meet the requirements.

**What Next**

Fix the issues reported on the topology nodes. In most cases, it means the input topology plan does not come from the results of the command *optimize_topology_plans*.

**See Also**

- create_topology_plan
- create_topology_node
- create_topology_edge
- optimize_topology_plans

---

## DPTOPO-258

(Warning) Cannot determine the associated nets of topology plan %s.

Feedback

### Description

The tool cannot determine the associated nets from the indicated topology plan. It will be ignored in the corresponding operation.

### What Next

Please update the topology plan to associated it with correct object type. The supported object type is bundle of supernets.

### See Also

- create_topology_plan
- create_topology_node
- create_topology_edge
- optimize_topology_plans

---

## DPTOPO-259

(Warning) The net %s associated to topology plan %s is dangling.

### Description

The indicated net is a dangling net. It will be ignored in the corresponding operation.

### What Next

Please update the bundle or topology plan definition to exclude the dangling net or connect the dangling net to correct driver and loads.

### See Also

- create_topology_plan
- create_topology_node
- create_topology_edge
- create_bundle

---

## DPTOPO-260

(Error) The associated objects of topology node %s have inconsistent object types.

Feedback

### Description

The indicated topology node has different types of objects associated to it, which is not supported by command *merge_topology_plans*.

### What Next

Please update the topology node's associated objects so that they are of the same object types.

### See Also

- create_topology_plan
- create_topology_node
- create_topology_edge
- create_bundle

---

## DPTOPO-261

(Error) The associated constrained_objects of topology node %s have inconsistent object types.

### Description

The indicated topology node has different types of constrained_objects associated to it, which is not supported by command *merge_topology_plans*.

### What Next

Please update the topology node's associated constrained_objects so that they are of the same object types.

### See Also

- create_topology_plan
- create_topology_node
- create_topology_edge
- create_bundle

---

## DPTOPO-262

(Warning) Mismatch between topology node %s and pin %s.

Feedback

**Description**

By topology plan tracing and netlist tracing, the indicated topology node should have the indicated pin as part of its associated objects. But the actual objects or constrained_objects attribute of the topology node conflicts to the indicated pin. The command *merge_topology_plans* cannot merge the netlist to the topology plan properly.

**What Next**

Please check the predecessors and successors of the indicated topology node and pin and fix the mismatch.

**See Also**

- create_topology_plan
- create_topology_node
- create_topology_edge
- optimize_topology_plans

---

## DPTOPO-263

(Warning) Cannot find a valid topology node in topology plan %s.

**Description**

The topology plan does not have any valid topology nodes.

**What Next**

Please create valid topology nodes and edges for the topology plan.

**See Also**

- create_topology_plan
- create_topology_node
- create_topology_edge
- optimize_topology_plans

---

## DPTOPO-290

(Warning) Plan %s could not be written out - skipping.

Feedback

### Description

The indicated topology plan could not be processed by *write_topology_plans* as it constains invalid topology nodes.

### What Next

Please correct invalid topology nodes and re-invoke *write_topology_plans*.

### See Also

- create_topology_node
- write_topology_plans

---

## DPTOPO-300

(error) Plan %s could not be timed - skipping.

### Description

The indicated topology plan could not be processed by *estimate_topology_timing*.

### What Next

Look at earlier error/warning messages to determine the nature of the problem, then re-invoke *estimate_topology_timing*

---

## DPTOPO-301

(Information) The worst delay was %s from topology plan %s.

### Description

This is an informational messages. When the detail option of *estimate_topology_timing* is set to > 0, and more than one topology plan is timed, the worst plan name is reported.

### See Also

- estimate_topology_timing

---

## DPTOPO-302

(Error) No valid netlist object found for bit %d, end node %s, plan %s.

Feedback

### Description

When attempting to trace the netlist from end to start, the tracing logic could not determine a valid netlist object for the indicated bit index of the indicated topology node that belongs to the indicated topology plan.

This may be because no (or not enough) pin/port objects were set for the "objects" attribute of the topology node, or because the objects associated with the node are not connected to the supernet(s)/bundle(s) associated with the overall topology plan.

When this condition is encountered, netlist tracing analysis cannot be performed successfully, and the current topology analysis command stops with an error.

### What Next

Correct the object attribute of the indicated topology node, such that the correct number of pin/port objects are associated with the node and that the associated objects are associated with the supernet(s)/bundle(s) set in the overall topology plan object attribute.

### See Also

- get_attribute
- get_topology_nodes
- get_topology_plans
- report_topology_plans
- set_attribute

---

## DPTOPO-303

(Error) Unable to initialize netlist tracing for topology plan %s.

### Description

There was an error in the topology plan specification and/or netlist that prevents successful initialization of the topology plan / netlist tracing data, which is used to connect netlist objects to topology plan objects.

The *estimate_topology_timing* command cannot continue.

### What Next

Look for previous errors to describe the specific issue and resolve them and re-run *estimate_topology_timing*.

**See Also**

- DPTOPO-302
- get_attribute
- get_topology_nodes
- get_topology_plans
- report_topology_plans

## DPTOPO-350

(info) Finished processing %lu topology plans - created %d new supernet exceptions

**Description**

Informational message printed by the command *merge_topology_plans* to indicate how many topology plans were processed and how many new supernet exceptions were created.

**See Also**

- merge_topology_plans

## DPTOPO-351

(info) Finished processing %lu topology plans - associated %d std cells arrays with repeaters.

**Description**

Informational message printed by the command *merge_topology_plans* to indicate how many topology plans were processed and how many std cells arrays were associated with topology repeaters that previously had no objects associated with them.

**See Also**

- merge_topology_plans

# DPUI

## DPUI-001

(error) Cannot find or read file %s for option %s.

Feedback

**Description**

This option requires that the given file exist and be readable.

**What Next**

Check that the file exists and you have read permission.

---

## DPUI-002

(error) Unable to create directory %s.

**Description**

This command requires to have certain directories with write permission to put log files and other data. The given directory was not able to be created.

**What Next**

Check that you have permission to create and write files in given directory. If not, specify a different directory to the command.

---

## DPUI-003

(error) One of these options %s, %s is required.

**Description**

The command requires that you specify one of the listed options.

**What Next**

Please refer to the man page of the command to see why one of these options is required.

---

## DPUI-004

(error) Option %s requires one of %s.

**Description**

The option requires that you specify one of the listed possibilities.

**What Next**

Please refer to the man page of the command for more details.

---

## DPUI-005

(error) Error parsing option %s.

Feedback

**Description**

There has been an error when processing the specified option. This likely means that an unexpected input has been given to that option.

**What Next**

Look in log file for further errors or warnings regarding this option. Please refer to the man page of the command for more details on what input is required for the specified option.

---

## DPUI-006

(error) This command is only for a distributed processing worker.

**Description**

The requested command is intended only for an executable which is run as a distributed processing worker. This executable is not a distributed processing worker so this command is invalid.

**What Next**

To learn more about using distributed processing see set_host_options command.

---

## DPUI-007

(error) Error parsing option -var_list.

**Description**

There has been an error when processing the option -var_list. The recommended format for this option is a list of lists with one variable alternating with its corresponding value. For example, if you want to have a variable "a" with value "1" and variable "b" with value "hello world" then use -var_list {{a} {1} {b} {hello world}}. Other formats may also work but above is recommended format.

**What Next**

Try using above format for this option.

---

## DPUI-008

(error) Error parsing option -var_list, variable %s not accepted.

**Description**

There has been an error when processing the option -var_list. The listed variable has a space in it which is not allowed.

Feedback

The recommended format for this option is a list of lists with one variable alternating with its corresponding value. For example, if you want to have a variable "a" with value "1" and variable "b" with value "hello world" then use -var_list {{a} {1} {b} {hello world}}. Other formats may also work but above is recommended format.

**What Next**

Do not use spaces in variables. Try using above format for this option.

---

## DPUI-009

(error) Internal error: %s

**Description**

There has been an unexpected internal error.

**What Next**

Report this error to Synopsys.

---

## DPUI-010

(Error) Incorrect %s for option %s.

**Description**

This option requires certain values, but the given value is not the option asks for.

**What Next**

Check the command man page to see correct usages for option.

---

## DPUI-011

(error) %s is only valid for %s.

**Description**

The request option is only valid for certain object type.

**What Next**

Check the command man page to see correct usages for option.

---

## DPUI-012

(error) Reference lib %s is open. It must be closed to proceed.

Feedback

**Description**

To run a block in distributed mode, the block reference lib must be closed. This is to avoid database contention issues.

**What Next**

Close the reference lib of all affected blocks using close_lib. Be aware that a lib can be opened more than once.

---

## DPUI-013

(error) Options %s and %s are mutually exclusive.

**Description**

The listed command options are mutually exclusive. Only one of them can be specified.

**What Next**

Look at manpage for this command for more information on command options.

---

## DPUI-014

(error) The corner height of IO ring is less than the height of IO driver cell %s.

**Description**

The corner height of an IO ring should be at least as large as the height of IO driver cells within the IO ring.

**What Next**

Increase the corner height or remove the IO driver out of the IO ring.

---

## DPUI-015

(error) There are unsaved modified nlibs. These need to be discarded or saved. To bypass this check use -force option.

**Description**

While running in distributed mode, all nlibs will be closed, including the current (ie top level) nlib. To ensure no data is lost, the command checks to see if there are any modified nlibs. If so, then the command errors out for you to fix this issue.

Sometimes you are ok to discard the unsaved nlibs. In that case use the option -force to bypass this check.

Feedback

### What Next

Save all the modified nlibs using save_lib -all. If this doesn't work, then use the option -force.

---

## DPUI-016

(error) Block '%s' must be expanded before this operation.

### Description

This command requires that the current block is defined and is a fully expanded design view. Currently, your design is either missing, or it has not yet been expanded into a full netlist.

In the "high-capacity" flow for design preparation, the tool first loads an "outline view" of your design. This outline view contains a small fraction of the total design data, and it is intended to be used during hierarchy exploration and partitioning. The advantage of using an outline view is that you can work with a smaller representation of your design without the need to load tens of millions of instances into computer memory.

Once you have partitioned your design into reasonable sized blocks, you should call the expand_ouline command on each block to load the full netlist for that block. After the netlist is loaded, you can continue with this operation.

### What Next

There are several ways you might proceed after receiving this error.

If your design is reasonable small (a few million instances), you can immediately call the *expand_outline* command to obtain your full netlist. In the future, you might want to consider using the "flat design" flow instead of the "high capacity" flow in the task assistant. The "flat flow" will immediately read your full netlist, without requiring you to call *expand_outline*. If you are reading your design using a tcl script, you should consider using the *read_verilog* command instead of the *read_verilog_outline* command.

If your design is large, and has already been partitioned using the *commit_block* command, then you are ready to call the *expand_outline* command to obtain your full netlist.

If your design is large and has not yet been partitioned into hierarchical blocks, you should do that now. You should look at "hierarchy preparation" in the task assistant to aid you. Or you can just call *commit_block* if you already know what you want. After you have committed your blocks, you can call *expand_outline* to get a full netlist.

Feedback

## DPUI-017

(error) Block '%s' must be expanded before this operation.

**Description**

This command requires that the current block is a fully expanded design view. Your design has not yet been expanded into a full netlist.

In the "high-capacity" flow for design preparation, the tool first loads an "outline view" of your design. This outline view contains a small fraction of the total design data, and it is intended to be used during hierarchy exploration and partitioning. The advantage of using an outline view is that you can work with a smaller representation of your design without the need to load tens of millions of instances into computer memory.

Once you have partitioned your design into reasonable sized blocks, you should call the expand_ouline command on each block to load the full netlist for that block. After the netlist is loaded, you can continue with this operation.

**What Next**

There are several ways you might proceed after receiving this error.

If your design is reasonable small (a few million instances), you can immediately call the *expand_outline* command to obtain your full netlist. In the future, you might want to consider using the "flat design" flow instead of the "high capacity" flow in the task assistant. The "flat flow" will immediately read your full netlist, without requiring you to call *expand_outline*. If you are reading your design using a tcl script, you should consider using the *read_verilog* command instead of the *read_verilog_outline* command.

If your design is large, and has already been partitioned using the *commit_block* command, then you are ready to call the *expand_outline* command to obtain your full netlist.

If your design is large and has not yet been partitioned into hierarchical blocks, you should do that now. You should look at "hierarchy preparation" in the task assistant to aid you. Or you can just call *commit_block* if you already know what you want. After you have committed your blocks, you can call *expand_outline* to get a full netlist.

## DPUI-018

(error) Block '%s' is not a design view.

**Description**

This command requires that all the blocks be design views.

Feedback

There are three types of design views with different types of netlist abstraction, which is needed to increase tool capacity. A normal design view has the full netlist, an outline view has a limited netlist used for hierarchy/design exploration, and an abstract view has a special netlist for when this block is used as a sub-block in another block.

**What Next**

Use *change_view* command to change the block to the design view.

---

## DPUI-019

(error) Block '%s' must be expanded before this operation.

**Description**

This command requires that the given block is a fully expanded design view. Your design has not yet been expanded into a full netlist.

In the "high-capacity" flow for design preparation, the tool first loads an "outline view" of your design. This outline view contains a small fraction of the total design data, and it is intended to be used during hierarchy exploration and partitioning. The advantage of using an outline view is that you can work with a smaller representation of your design without the need to load tens of millions of instances into computer memory.

Once you have partitioned your design into reasonable sized blocks, you should call the expand_ouline command on each block to load the full netlist for that block. After the netlist is loaded, you can continue with this operation.

**What Next**

There are several ways you might proceed after receiving this error.

If your design is reasonable small (a few million instances), you can immediately call the *expand_outline* command to obtain your full netlist. In the future, you might want to consider using the "flat design" flow instead of the "high capacity" flow in the task assistant. The "flat flow" will immediately read your full netlist, without requiring you to call *expand_outline*. If you are reading your design using a tcl script, you should consider using the *read_verilog* command instead of the *read_verilog_outline* command.

If your design is large, and has already been partitioned using the *commit_block* command, then you are ready to call the *expand_outline* command to obtain your full netlist.

If your design is large and has not yet been partitioned into hierarchical blocks, you should do that now. You should look at "hierarchy preparation" in the task assistant to aid you. Or you can just call *commit_block* if you already know what you want. After you have committed your blocks, you can call *expand_outline* to get a full netlist.

Feedback

## DPUI-020

(error) Block '%s' is an abstract view. Please set constraints from its parent block where the abstract view is instantiated.

**Description**

This command requires that the current block cannot be an abstract view.

**What Next**

Since you have an abstract view of this block, you must also have a design view for this block (abstract views are created using *create_abstract* from design views). Use *open_block* to open the design view for this block to proceed.

## DPUI-021

(error) '%s' is not a pad cell.

**Description**

The command expects a pad cell. However, the specified object is not a pad cell.

**What Next**

Change the string to a valid pad cell name.

## DPUI-022

(error) '%s' is not a bump cell.

**Description**

The command expects a bump cell. However, the specified object is not a bump cell.

**What Next**

Change the string to a valid bump cell name.

## DPUI-023

(error) '%s' cannot be processed by set_bump_assignment.

**Description**

The assignment option of set_bump_assignment expect users to give one or more pairs of names. Each pair must contain two and only two names. The first one must be a pad cell name. The second must be a bump cell name. Please check and modify the string

Feedback

so that it contains one pad cell name followed by a bump cell name. The two names are separated by whitespaces only. If more than one pair is specified, each pair must be placed in curly brackets. All pairs are placed within a pair of outer curly brackets.

**What Next**

Check and modify the string.

---

## DPUI-024

(error) bump cell '%s' appears more than once.

**Description**

set_bump_assignment currently can only assign one pad cell to one bump cell.

**What Next**

Please check the information after the assignment option and make sure the bump cell only appears once.

---

## DPUI-025

(error) pad cell '%s' appears more than once.

**Description**

set_bump_assignment currently can only assign one pad cell to one bump cell.

**What Next**

Please check the information after the assignment option and make sure the pad cell only appears once.

---

## DPUI-026

(error) IO guide list cannot be processed correctly.

**Description**

Incorrect description of IO guide list is encountered.

**What Next**

The tool cannot understand values after -io_guide option. Please correct the values.

Feedback

## DPUI-027

(error) Incorrect netlist is encountered

**Description**

Errors are discovered when the netlist is loaded.

**What Next**

Please check the design database.

## DPUI-028

(error) Both flip-chip and non-flip-chip IO driver cells are found in the design.

**Description**

The design can have either flip-chip IO driver cells or non-flip-chip IO driver cells, but not both.

**What Next**

Please check the cell library and choose the right IO driver cells according to the design style. If the design is a flip-chip design, use only flip-chip IO driver cells. Otherwise, use non-flip-chip IO driver cells.

## DPUI-029

(error) No IO driver cell is found in the design.

**Description**

There is not a single IO driver cell in the design. IO placement cannot be performed.

**What Next**

Fix the design netlist.

## DPUI-030

(warning) %s is not a bump array.

**Description**

The specified string is not the name of a bump array

Feedback

**What Next**

Correct the name string or remove it from the bump array list.

---

## DPUI-031

(warning) bump array list cannot be processed correctly.

**Description**

Incorrect description of bump array list is encountered.

**What Next**

The tool cannot understand values after -bump_array option. Please correct the values.

---

## DPUI-032

(error) No bumps are specified in flipchip design.

**Description**

Current design contains flip-chip IO driver cells. However, no bump is specified for IO placement.

**What Next**

If the design is non-flip-chip, change the IO driver cells to non-flip-chip pads. If the design is flip-chip, use -bump_array option to specify target bump cells or use the -all option so that place_io command will search for bumps not in bump arrays. If there is no bump in the design, add bumps using command create_bump_array

---

## DPUI-033

(error) No target IO guides can be found.

**Description**

The command place_io will place IO driver cells in target IO guides. Currently, there IO guides are missing.

**What Next**

If you specified the target IO guides using -io_guide option, check the names of specified guides and make sure that the names are correct. If you did not specify target IO guide names, make sure that there are IO guides in the design. IO guides are created with the create_io_guide command. Alternatively, you can create IO guides using the create_io_ring command. Each IO ring is made of four IO guides.

Feedback

## DPUI-034

(error) cannot create new power cell of type %s in IO guide %s.

**Description**

The command place_io cannot create new power driver cells to satisfy power constraints.

**What Next**

Please check the power constraints to make sure that the power driver cell type is correct.

## DPUI-035

(error) power constraints of IO guide %s cannot be satisfied.

**Description**

The power constraint requirement set by the user cannot be met.

**What Next**

Please modify the IO signal constraint and/or IO power constraint of the specified IO guide.

## DPUI-036

(error) IO guide %s overflows.

**Description**

The total width of pads and spacing assigned to the specified IO guide exceeds its length.

**What Next**

Please modify the pad assignment or io constraints of the IO guide. Users can also check the orientations of pad reference cells. The orientation of reference cell should be the one as if the pad cell is placed along a bottom IO guide. If the reference cell orientation is not, users should set the reference_orientation attribute of the ref_block of the pad. The value is that, when the reference cell is placed with such an orientation, the cell is in the correct orientation placed along a bottom guide.

## DPUI-037

(error) The GUI window is not opened.

Feedback

**Description**

The GUI window is closed. The GUI window needs to be open in order for the current command to continue.

**What Next**

Please open the GUI window using command gui_start.

---

## DPUI-038

(error) %s is not an IO guide.

**Description**

The specified string is not the name of an IO guide.

**What Next**

Correct the name string or remove it from the list.

---

## DPUI-039

(error) Cannot store power constraint for I/O guide %s.

**Description**

The specified power constraints cannot be stored in the database.

**What Next**

The database is corrupted. You must re-create the design.

---

## DPUI-040

(error) bump arrays do not contain any bumps.

**Description**

No bump cell instance is found for the bump arrays in the design.

**What Next**

Delete the existing bump arrays and recreate new ones.

---

## DPUI-041

(error) Unsupported orientation, %s.

Feedback

**Description**

The given orientation is not using legal syntax. This command only takes orientations in the form R0, R90, R180, R270, MX, MXR90, MY, MYR90.

**What Next**

Use above syntax for orientations.

---

## DPUI-042

(error) Block '%s' does not have a design view.

**Description**

This command requires that all the blocks have a design view.

**What Next**

Create design views for all the blocks. Use expand_outline to create a design view from an outline view.

---

## DPUI-043

(error) %s is not a valid lib-cell name for a power pad.

**Description**

A lib cell name is expected.

**What Next**

Please check whether the lib cell name is correct and/or the lib cell is in the library.

---

## DPUI-044

(error) This following line cannot be processed: %s.

**Description**

The string specified is not in the right format.

**What Next**

Please revise the specified string using the correct format according to the manpage of this command.

Feedback

## DPUI-045

(error) cell type %s is not described in -reference_cell option.

**Description**

All pad cell types must be included in the -reference_cell option. The specified lib cell is not.

**What Next**

Please check whether the lib cell name is correct. If it is, add it to the list after the -reference_cell option.

## DPUI-046

(error) Design '%s' is a timing abstract view.

**Description**

This command requires that the current design cannot be a timing abstract view. You may want to be using a non-timing abstract view or a design view.

**What Next**

Change to use non-timing abstract view or design view of this design.

## DPUI-047

(error) string "%s" is skipped.

**Description**

Signal IO constraints must be described using the right formats. The string fraction specified in the error message is not in the right format. Therefore, it is removed from the constraint.

**What Next**

Please change the constraint description. Read the man page for the description of the right formats. Note that all elements must be placed in curly brackets.

## DPUI-048

(error) string "%s" cannot be processed.

Feedback

**Description**

The specified string in signal IO constraints is not in the right format and cannot be processed correctly.

**What Next**

Please change the constraint description. Read the man page for the description of the right formats.

---

## DPUI-049

(error) pad %s is assigned to IO guide %s.

**Description**

The specified pad cell is assigned to a different guide from the guide of the signal constraint. This pad cell is ignored.

**What Next**

Please remove the pad from the constraint or its current IO guide. You can use report_signal_io_constraints to check the exact constraint stored in the data based.

---

## DPUI-050

(error) pad %s is already in constraint.

**Description**

A pad cell can only be in an order-based signal io constraint once. The specified pad is in the constraint more than once. The second or later appearance is ignored.

**What Next**

Correct the signal io constraint. You can use report_signal_io_constraints to check the exact constraint stored in the data based for the IO guide.

---

## DPUI-051

(error) pitch value must be positive.

**Description**

The pitch value in a signal IO constraint must be positive and no less than the widths of respective pad cells.

Feedback

**What Next**

Correct the pitch value.

---

## DPUI-052

(error) pad cell %s is wider than its pitch value.

**Description**

Pitch value must be as large as the widths of respective pad cells. Otherwise the pad cells may overlap with each other.

**What Next**

Correct the pitch value or remove pad cells from those share the pitch value.

---

## DPUI-053

(error) negative spacing value is changed to zero.

**Description**

Spacing values must be positive. Any negative spacing values are changed to zero.

**What Next**

Correct the spacing values if needed.

---

## DPUI-054

(error) %s is not a valid spacing value.

**Description**

The command expects a non-negative spacing value but cannot find it.

**What Next**

Change the string to a valid spacing value.

---

## DPUI-055

(error) later absolute location value is used for pad %s.

**Description**

The command finds more than one absolute location value setting for the specific pad cells. The last one will be used.

Feedback

**What Next**

Modify the signal io constraint if needed.

---

## DPUI-056

(error) missing pad or location information.

**Description**

The command expects both a pad cell and a location. However, one or both is missing.

**What Next**

Please correct the wrong signal constraint description.

---

## DPUI-057

(error) The cell '%s' does not have any boundary.

**Description**

This command requires that all the cells have a boundary. The given cell does not have a boundary. That could be because the cell is a black box without any size, or it could be that the cell has no view (eg design view or abstract view).

**What Next**

Create the design view for the cell to give it a boundary. If you are running RTL Floorplanning flow, please run *compile* command to generate physical views for unmapped logic.

---

## DPUI-058

(error) %s.

**Description**

Errors are found during the processing of the command options.

**What Next**

Please check the manpage of the command to correct any errors related to option settings.

---

## DPUI-059

(error) Error found during file processing: %s.

Feedback

**Description**

Command cannot parse the constraint file successfully.

**What Next**

Please check the constraint file and fix any errors. Read manpage for correct data format.

---

## DPUI-060

(error) existing cell %s prevents the creation of bump array %s.

**Description**

The bumps within a bump array will have their names created based on the bump array name. Currently, there exists a cell whose name is identical to the name of a bump to be created.

**What Next**

Change the bump array name or rename the existing cell.

---

## DPUI-061

(error) bump array creation failed: %s.

**Description**

The bump array cannot be created due to the given error. There can be several potential reasons. For instance, a bump array of the same name may alreasy exist. The bounding box of the bump array may be too small to hold a single bump cell. In addition, the design data may be corrupted.

**What Next**

Please check the command option values and perform the command again.

---

## DPUI-062

(error) Module %s cannot be used because it has no ports.

**Description**

A power pad must have at least one feasible port. For pads that are not connected to bumps, any port is a feasible port. For pads that are connected to bumps, a feasible port must be labeled with an RDL connection flag.

Feedback

**What Next**

Change the power reference cell if it does not have a feasible port.

---

## DPUI-063

(error) The library %s is read only.

**Description**

The *create_physical_hierarchy* command needs to modify the library %s. If the library is read only, the *create_physical_hierarchy* command cannot be completed.

**What Next**

Please change the write permission of the library.

---

## DPUI-064

(warning) The commit_cell command is being deprecated and will be removed on 02/07/2013, to be replaced with the command commit_block. Please begin to migrate your scripts to use commit_block instead of commit_cell.

**Description**

The *commit_cell* command is being replaced with the new command *commit_block*.

**What Next**

Please change your script soon to switch to the new command name.

---

## DPUI-065

(warning) The uncommit_cell command is being deprecated and will soon be removed on 02/07/2013, to be replaced with the command uncommit_block. Please begin to migrate your scripts to use uncommit_block instead of uncommit_cell.

**Description**

The *uncommit_cell* command is being replaced with the new command *uncommit_block*.

**What Next**

Please change your script soon to switch to the new command name.

---

## DPUI-066

(error) the -file and -incremental options cannot be used together.

Feedback

**Description**

The two specified options cannot be used concurrently in command place_io.

**What Next**

Change the options.

---

## DPUI-067

(Error) push_down_objects does not support the top-action "keep" for object type %s.

**Description**

This option currently only accepts the top-action "remove" for the specified object_type.

**What Next**

Please do not attempt to use the top_action "keep" when specifying this object_type.

---

## DPUI-068

(Error) uncommit_block only accepts the -type options boundary and module.

**Description**

The -type option for uncommit_block only accepts "boundary" and "module".

**What Next**

Please do not attempt to use any other hierarchy types with this command.

---

## DPUI-069

(error) Unable to remove directory %s.

**Description**

This command attempted to remove the given directory and all its contents but was not able to do so.

**What Next**

Check that you have permission to remove all the files in the directory. Remove the directory manually.

---

## DPUI-070

(error) Cannot load rule %s.

Feedback

**Description**

The specified routing rule cannot be loaded.

**What Next**

Check whether the name of the rule is spelled correctly.

---

## DPUI-071

(error) Found blocks which cannot be edited.

**Description**

When a block has a design view and an abstract view, only one of the two can be changed (ie is editable), the other view cannot be changed (ie is non-editable). This message appears when you try to change the non-editable view.

For example, commands like shape_blocks and place_pins cannot work on the non-editable view.

**What Next**

Change the block view you are using to the editable view for the block using change_abstract. Alternately, you can use merge_abstract to put the design view and abstract view in sync and use create_abstract to recreate the abstract view. By default the abstract view is editable. If you want the design view to be editable, then use create_abstract -read_only.

---

## DPUI-072

(error) Found blocks and/or fixed hierBoundaries which are outside the core area.

**Description**

Option -place in command explore_logic_hierarchy requires that all blocks and hierBoundaries with the fixed intent have their boundaries inside the core area.

**What Next**

Move blocks and the hierBoundaries with fixed intent into the core area.

---

## DPUI-073

(error) Library %s:%s.%s that contains block design %s is READ-ONLY, but the -remove_design option was specified. This design cannot be uncommitted with removal of the design! Skipping this design.

Feedback

**Description**

The command has detected that a block specified for uncommit belongs to a library that is not opened for EDIT (READ-ONLY). Uncommit_block requires that the block's design library be opened for EDIT before it will uncommit the block with removal of the design.

**What Next**

Make sure you have opened the relevant libraries for EDIT before running uncommit_block, or run uncommit_block without specifying the -remove_design option.

---

## DPUI-074

(error) Block design %s is READ-ONLY, but uncommit_block was called using the -remove_design option. This design cannot be uncommitted with design removal if the design is READ-ONLY! Skipping this design.

**Description**

The command has detected that a block specified for uncommit is READ-ONLY, and the -remove_design option was also specified. Uncommit_block requires that the block's design be in EDIT mode before it will uncommit the block and remove the design.

**What Next**

Make sure that the design is not in READ_ONLY mode before running uncommit_block with design removal. Or call uncommit_block without the -remove_design option.

---

## DPUI-075

(error) Option -matching_type and option -all are mutual exclusive.

**Description**

Option -matching_type and option -all cannot be used concurrently.

**What Next**

If all pads and bumps are considered, do not use -matching_type. If a fraction of bumps and/or pads are considered, do nto use -all.

---

## DPUI-076

(error) IO constraints cannot be written as requested.

Feedback

**Description**

The specified options cannot be used to generate IO constraints. The locations of IO drivers in certain IO guides make it impossible to write IO constraints in the required format.

**What Next**

Please check the warning messages to find out the exact reason of errors.

---

## DPUI-077

(error) Corner pad is wrongly specified in signal IO constraints.

**Description**

Corner pad can only be the last pad in signal IO constraints. The specified corner pad is not the last one.

**What Next**

Remove the corner cell from the signal IO constraint or place it as the last cell in the IO guide constraint.

---

## DPUI-078

(warning) %s is not a valid lib-cell name for a filler pad.

**Description**

A lib cell name of a filler is expected.

**What Next**

Please check whether the lib cell name is correct and/or the lib cell is in the library.

---

## DPUI-079

(error) Block %s cannot be opened for edit because %s.

**Description**

The given block cannot be opened for edit. There are several possible reasons for this. First, the parent block of the given block may be not open for edit. In this case, you must open the parent block for edit. Second, only one of design/abstract view can be editable. When you have a block with a design view and an abstract view, only one of these two can be editable. This is necessary to maintain database consistency. The view you are using currently is the one which is not editable. Please refer to the man page of create_abstract

Feedback

for more details on this. Third, failed to open library for edit. This means you will need to open the libraries for edit manually using open_lib -ref_libs_for_edit. Fourth, failed to open design for edit. This means you will need to open the design for edit manually using open_block -edit.

**What Next**

Depending on what error you see, different things need to be done as described above.

---

## DPUI-080

(error) the extension bounding box is incorrect.

**Description**

The bounding box must be within the design area.

**What Next**

Please check and fix the values of the bounding box.

---

## DPUI-081

(error) No filler cell is specified.

**Description**

Users must specify at least one filler reference cell.

**What Next**

Please use -reference_cells option or -overlap_cells option or both.

---

## DPUI-082

(error) Cannot specify cells from different physical hierarchies to be in one macro array.

**Description**

You are getting this message because cells belong to different physical hierarchies are specified in one create_macro_array command call.

The tool requires that all cell in a macro array belong to the same physical hierarchy.

**What Next**

Please put cells of different physical hierarchies into different macro arrays.

Feedback

## DPUI-083

(error) There are non-fixed macros in design. Use the -floorplan option to place macros or fix all macros.

### Description

You are getting this message because the current design has non-fixed macros. If you want to place these macros then you need to use the -floorplan option; this option invokes the macro placement engine. If you already have a macro placement and want to fix all the macros, set the place.fix_hard_macros application option to true.

### What Next

Specify the -floorplan option to place the macros, or fix the macros by setting the place.fix_hard_macros application option to true.

## DPUI-084

(error) Could not parse preferred location: %s.

### Description

The preferred location could not be parsed. The expected format is a coordinate in the form of {x y}, where x and y are numbers ranging from 0 to 1. The coordinate expresses the preferred location inside the block to which the macro(s) belong. Coordinate {0 0} is corresponds to the lower left corner of that block's bounding box, while {1 1} corresponds to the upper right corner.

### What Next

Check the value set for the -preferred_location option.

## DPUI-085

(error) Unable to write to file %s.

### Description

The file specified by the -file option could not be opened or written to.

### What Next

Check the file name and write permissions.

## DPUI-086

(error) Block %s has an unknown view type, "%s" view type is expected.

Feedback

**Description**

The current block has a view type that is unrecognized by this command. The expected type for this command is given.

**What Next**

Use *open_block* to open up the block with the appropriate view type.

---

## DPUI-087

(error) Options %s requires option %s.

**Description**

The first options requires that the second option be used. Some possible reasons are that the first option does not make sense without the second option or that the first option will have no effect without the second option.

**What Next**

Look at manpage for this command for more information on command options.

---

## DPUI-088

(error) No preferred routing direction defined for routing layer %s

**Description**

There is no preferred routing direction defined for a routing layer. The checking is performed for all routing layers if max/min routing layers are not defined. If max/min routing layers are defined, the tool only check layers between max and min layers.

**What Next**

Please set preferred routing layer direction in order for the tool to proceed

Example: set_attribute [get_layers M1] routing_direction horizontal

set_ignored_layers -max_routing_layer METAL -min_routing_layer METAL3

---

## DPUI-089

(Error) No instance found of design %s

**Description**

The uncommit_block command did not find an instance of the specified design anywhere in the physical hierarchy of the current design.

Feedback

**What Next**

Please make sure that you specified the correct design name to be uncommitted.

---

## DPUI-090

(Error) User specified dimension is off finfet grid: %s

**Description**

The object location or size is not on the finfet grid. As a result, the object cannot be created. Specifically, the starting and end points of IO guides must be on the grid points. The four corners of IO rings must be on grid. Any spacing constraints must be multiples of finfet pitches.

**What Next**

Please modify input parameters as suggested by the message. For IO rings, users need to adjust different parameters if the bounding box of the ring is not on grid. If the boundary box is derived using an offset, the offset needs to be multiples of both horizontal and vertical pitch of finfet grid. If the bounding box is derived based on the chip boundary, the chip bound must be on grid. The corner height of IO rings should be multiples of both horizontal and vertical pitch of finfet grid. If the corner height is derived automatically from the IO pad dimensions, users need to provide a valid value explicitly.

Users can disable the finfet grid using set_app_options. Even there is no finfet grid, the placement of any component still needs to honor litho grid. If users still receive this message after disabling finfet grid, users need to adjust the parameters according to litho grid.

---

## DPUI-091

(Error) User specified dimension is off litho grid: %s

**Description**

The object location or size is not on the litho grid. As a result, the object cannot be created or the constraints cannot be accepted.

**What Next**

Please modify input parameters as suggested by the message.

---

## DPUI-092

(Error) Module %s appears to be a sparse outline module. Commit_block does not support sparse outline modules. This module will be skipped.

Feedback

### Description

A "sparse" outline module is one that is imported by read_verilog_outline and has no ports when unexpanded, but does have outline ports if expanded. Please read the man page for read_verilog_outline for information regarding "sparse" outlines.

### What Next

Please do not specify sparse outline modules for commit_block.

### See Also

- read_verilog_outline

---

## DPUI-093

(Error) the specified gradient tolerance is out of range.

### Description

This error message occurs when the specified gradient tolerance is greater than or less than the allowable limit. The gradient tolerance value must be >= 0 and <= 1.

### What Next

Supply a compatible gradient tolerance value or use the default value.

---

## DPUI-094

(Error) white space density is not specified for layer %s.

### Description

Value for the option '-white_space_density' must be layer name and density pairs.

### What Next

Add a density value after the layer name or remove the unpaired layer name.

---

## DPUI-095

(Error) the specified white space density is out of range.

### Description

This error message occurs when the specified white space density is greater than or less than the allowable limit. The density value must be >= 0 and <= 1.

Feedback

**What Next**

Supply a compatible density value or use the default value.

---

## DPUI-096

(Error) edge zone width is not specified for layer %s.

**Description**

Value for the option '-edge_zone_width' must be layer name and inner width pairs.

**What Next**

Add an inner width value after the layer name or remove the unpaired layer name.

---

## DPUI-097

(Error) the specified edge zone width is out of range.

**Description**

This error message occurs when the specified edge zone width is less than the allowable limit. The edge zone width value must be > 0.

**What Next**

Supply a compatible edge zone width value or use the default value.

---

## DPUI-098

(Error) outer zone width is not specified for layer %s.

**Description**

Value for the option '-outer_zone_width' must be layer name and outer width pairs.

**What Next**

Add an outer width value after the layer name or remove the unpaired layer name.

---

## DPUI-099

(Error) the specified outer zone width is out of range.

**Description**

This error message occurs when the specified outer zone width is less than the allowable limit. The outer zone width value must be > 0.

Feedback

**What Next**

Supply a compatible outer zone width value or use the default value.

---

## DPUI-100

(Error) gradient tolerance is not specified for layer %s.

**Description**

Value for the option '-gradient_tolerance' must be layer name and tolerance value pairs.

**What Next**

Add a tolerance value after the layer name or remove the unpaired layer name.

---

## DPUI-101

(error) Block actions %s and %s are mutually exclusive.

**Description**

The listed block actions are mutually exclusive. Only one of them can be specified.

**What Next**

Look at manpage for this command for more information on block_actions.

---

## DPUI-102

(error) Unsupported orientation, %s.

**Description**

The given orientation is not using legal syntax. This command only takes orientations in the form all, R0 (includes R0, R180, MX, MY) or R90 (includes R90, R270, MXR90, MYR90).

**What Next**

Use above syntax for orientations.

---

## DPUI-103

(error) No layer with the routing direction %s

**Description**

Both horizontal and vertical layers need to be existed

Feedback

**What Next**

Please set routing layer direction correctly in order for the tool to proceed

Example: set_attribute [get_layers M1] routing_direction horizontal

---

## DPUI-104

(error) uncommit_block candidate %s has a default site array but the parent block %s does not. Skipping this block for uncommit.

**Description**

While uncommitting blocks, the uncommit_block command detected that a block to be uncommitted possessed a default site array, while its parent did not. This is a scenario that is not supported in uncommit_block.

**What Next**

Make sure that if you are uncommitting a block that has a default site array, that the parent block also has a default site array that is compatible with the block being uncommitted (same site definition, and rows aligned, etc.).

---

## DPUI-105

(error) uncommit_block candidate %s has a default site array that is incompatible with a parent block %s. Skipping this block for uncommit.

**Description**

While uncommitting blocks, the uncommit_block command detected that a block to be uncommitted possessed a default site array that was in some way incompatible with the parent block (site definition, misaligned, etc).

**What Next**

Make sure that if you are uncommitting a block that has a default site array, that the parent block also has a default site array that is compatible with the block being uncommitted (same site definition, and rows aligned, etc.).

---

## DPUI-106

(error) Invalid constraint type %s. Ignored.

Feedback

**Description**

The type name you specified with the *-type* option is invalid. Valid type names include: PRECHECK, DEF, UPF, SDC, BUDGET, CLKNET, CTS_CONSTRAINT, BTM, FLOORPLAN.

**What Next**

Check the command line and specify the correct name of the type of constraints you want to load.

If you want to load more than one types of constraints, please use multiple *-type* options, one *-type* option for one type.

---

## DPUI-107

(error) No constraint mapping file is available for design %s.

**Description**

You get this message because you are trying to run *load_block_constraints* to load block level constraints for child blocks in the current design.

The tool needs the constraint mapping file to get the block level constraints in order to load into child blocks. Without the constraint mapping file, the command cannot do anything.

**What Next**

Please use *set_constraint_mapping_file* to load the constraint mapping file.

---

## DPUI-108

(error) Could not find a module instance of type %s in the calculated lowest physical block %s. Skipping this module type.

**Description**

In multi-physical level block analysis for commit_blocks, the preparation steps determined that a module instance existed in a block that was determined to be the lowest physical block that contained an instance of that type, but a later step failed to find an instance of the module type in that block.

**What Next**

This is likely a tool problem. Report this problem.

Feedback

## DPUI-109

(Warning) Block instances are bound to an abstract view, %s, but uncommit_block does not support uncommitting an abstract view! Skipping instances of this type

### Description

The commit_block encountered a scenario where a block type specified for uncommit existed as abstract bound references. Uncommit_block does not support the uncommitting of instances bound as abstracts. It is necessary to call change_abstract and change the view for these instances to design view so that uncommit can be performed on these instances.

### What Next

Use change_abstract to change the view type to design for instances of this type.

### See Also

- change_abstract

## DPUI-110

(error) No valid cells in cell list for -cell option.

### Description

There is no valid macros in the provided cell list.

### What Next

Please provide valid macro names in the cell list for -cell option.

## DPUI-111

(error) Invalid order type %s. Valid values are top_down or bottom_up.

### Description

The order type you specified with the *-run_order* option is invalid. Valid types include: top_down, bottom_up.

### What Next

Check the command line and specify the correct order type you want to run the blocks.

Feedback

## DPUI-112

(error) Unknown offset type for -offset_type option.

**Description**

Cannot recognize the specified value in -offset_type option.

**What Next**

Please choose between "fixed", "auto" and "scalable" for this option.

## DPUI-113

(error) Found nested module boundaries.

**Description**

Option -place in command explore_logic_hierarchy does not support nested module boundaries.

**What Next**

Remove the module boundaries so that there are no nested module boundaries.

## DPUI-114

(error) Invalid corner value for -anchor_corner option.

**Description**

The value for -anchor_corner option should be either among "bl", "tl", "tr" and "br" if block BBox is to be used for deriving the relative locations, or a positive numerical value no larger than the total corner count of the current design block.

**What Next**

Please provide a valid corner value for this command.

## DPUI-115

(Error) Block instance %s (reference block %s) cannot be uncommitted.

**Description**

During uncommit_block, the command determined that a block could not be uncommitted. A possible cause could be that the port interface of the block instance does not match the design master for the reference block.

Feedback

**What Next**

A workaround for this problem might be to close and then reload the design and then re-call uncommit_block.

---

## DPUI-116

(Warning) Timing constraints purged in block %s prior to uncommitting block instances in that block.

**Description**

During uncommit_block, the command removed timing constraints in a block that contained a block instance to be uncommitted. This is necessary because the major re-structuring of the owning block as a result of uncommitting block instances results in many constraints becoming obsolete or invalid.

**What Next**

Nothing is required except that constraints may need to be reloaded in the owning block after uncommit completes.

---

## DPUI-117

(Error) push_down_objects only supports the top_action (keep) for routing_corridors.

**Description**

This push_down_objects command currently only accepts the top_action "keep" for routing_corridor objects.

**What Next**

Please do not attempt to use any top_action other than "keep" when specifying routing_corridor objects.

---

## DPUI-118

(Error) push_down_objects only supports the block_action (copy) for routing_corridors.

**Description**

This push_down_objects command currently only accepts the block_action "copy" for routing_corridor objects.

Feedback

**What Next**

Please do not attempt to use any block_action other than "copy" when specifying routing_corridor objects.

---

## DPUI-119

(Warning) the top_action (keep) in push_down_objects for cells can only work for physical-only cells and ignore the rest.

**Description**

This push_down_objects command currently only accepts the top_action "keep" for pushing down physical-only cells. Any non-physical-only cells passed into the command will be ignored during this push-down session for cell push-down.

**What Next**

Just be aware that if the user uses the top_action "keep" in conjunction with cell push-down, that it will only push-down physical-only cells and ignore the rest.

---

## DPUI-120

(Warning) No technology information exists for target library %s! All committed blocks will have no physical information!

**Description**

During the command, commit_blocks, it was discovered that the target directory for the new committed block as no technology information. Without this technology information, the block can have no physical information in it. This can happen if the target library has been created without passing a technology file.

**What Next**

Be sure that any target library for a committed block was created with technology file information. If no physical information is needed at this stage, then this warning can disregarded.

---

## DPUI-121

(Error) This design does not have any hierarchical (uncommittable) block instances.

Feedback

**Description**

During the command, uncommit_blocks, it was discovered that the design did not contain any hierarchical physical blocks. All blocks to be uncommitted must have the "is_hierarchical" attribute set to true in order to be uncommittable.

**What Next**

Be sure that the block you wish to uncommit is truly a physical block that bears the "is_hierarchical" attribute.

---

## DPUI-122

(error) Invalid value %s. Valid values are globals, namespaces and procs.

**Description**

The setting entry you specified with the *-pass_settings* option is invalid. Valid values are one or more of: globals, namespaces and procs.

**What Next**

Check the command line and specify the correct setting value you want to use.

---

## DPUI-123

(Error) Failed to create voltage area %s.

**Description**

During the command, uncommit_blocks, when popping up block-level voltage areas to the top from blocks, the command failed to create the new voltage area in the top.

**What Next**

Make sure the the voltage areas in the blocks are correct, and if so, report this.

---

## DPUI-124

(Error) Failed to create Voltage Area shape with bbox {{%s %s}{%s %s}} for Voltage Area %s

**Description**

During the command, uncommit_blocks, when popping up block-level voltage areas to the top from blocks, the command failed to add a new voltage area shape for a voltage area that exists in the top cell.

Feedback

**What Next**

Make sure the the voltage area shapes in the blocks are correct, and if so, report this.

---

## DPUI-125

(Warning) Some blocks to be uncommitted are not supported for automatic UPF merging!

**Description**

During the command, uncommit_blocks, pre-uncommit analysis determined that some of the blocks specified for uncommit are not supported for automatic UPF merging. These blocks will be uncommitted, but they won't have voltage areas created for them and they won't have their UPF information merged with the UPF in the top.

**What Next**

Make sure the the UPF is correct for this design.

---

## DPUI-126

(Warning) Failed to successfully update UPF associations after uncommit!

**Description**

During the command, uncommit_blocks, post-uncommit analysis determined that some of the blocks uncommitted failed in automatic UPF merging.

**What Next**

Make sure the the UPF is correct for this design.

---

## DPUI-127

(Warning) The commit_block command has determined that the module instance %s does not have an associated module boundary that the command could use to determine an origin and/or shape for the committed module instance. Child member cells within the committed reference block will be unplaced. And the resulting block instance will also be unplaced in the top cell.

**Description**

During the command commit_blocks, the command determined that a module instance specified to be committed did not have a module boundary that the command could use to determine a resulting origin and shape of the committed block. Withouth this information, the command will leave child leaf cells unplaced in the reference block and the block boundary will be a square whose area is calculated based upon criteria such as number of

Feedback

cells instances, and hard macros and other physical blocks. In this case, the resulting top-cell block instance will also be unplaced.

If you want more deterministic commit_blocks results, please consider creating a module boundary for this module instance that the command can use to provide cell placement within the block, and shaping and placement of the top-level block instance.

**What Next**

Make sure that the results are ok based upon your flow. If not, then add a module boundary for this module instance.

**See Also**

- explore_logic_hierarchy
- set_cell_hierarchy_type

---

## DPUI-128

(Error) parent block %s has no existing rows or default site array!

**Description**

During the command uncommit_blocks, the command found that the parent block did not have any existing rows or a default site array. This is a problem because uncommit_blocks will not pop-up a default site array because it expects the parent block to already have a default site array.

**What Next**

Make sure that the parent block has rows or a default site array before uncommitting blocks.

---

## DPUI-129

(Error) parent block %s and uncommitting block %s have different site definitions!

**Description**

During the command uncommit_blocks, the command found that the parent block has a default site array and the block being uncommitted has a default site array, but their site definitions don't match.

**What Next**

Make sure that the parent block and the block being uncommitted have the same site definitions.

Feedback

## DPUI-130

(Error) Parent block %s has a different default row direction (%s) from uncommitted instance default default site array row direction (%s) for instance %s! Skipping propagation of this block default site array!

**Description**

During the command uncommit_blocks, the command found that the parent block has a default site array and the block being uncommitted has a default site array, but their row directions are different.

**What Next**

Make sure that the parent block and the block being uncommitted have the same row directions.

## DPUI-131

(Error) Parent block %s and uncommitting block %s have different default site array alternate_rows_flipped definitions!

**Description**

During the command uncommit_blocks, the command found that the parent block has a default site array and the block being uncommitted has a default site array, but their alternate_rows_flipped definitions are different.

**What Next**

Make sure that the parent block and the block being uncommitted have the same alternate_rows_flipped definititions.

## DPUI-132

(Error) Parent block %s and uncommitting block %s have different default site array row or site spacings!

**Description**

During the command uncommit_blocks, the command found that the parent block has a default site array and the block being uncommitted has a default site array, but their row and/or site spacings are different.

**What Next**

Make sure that the parent block and the block being uncommitted have the same row/site spacings.

Feedback

## DPUI-133

(error) Block (Design with physical block) with name %s already exists in current library which prevents commit_block from committing the module to that block. You may confirm this existence using the list_blocks command.

**Description**

The commit_block command detected that the current library already has a block with the specified name, therefore a new block with the same name can not be created and commit_block cannot be allowed to continue for this module. One way that this can happen is if the block is first committed, then uncommitted (without the -remove_design option) and then an attempt is made to run commit_block on the module name again.

**What Next**

Please specify a name which does not conflict with existing block names.

## DPUI-134

(Warning) The list of module names to be committed is empty. No blocks to commit.

**Description**

The commit_block command detected that the list of module names passed into the command to be committed was empty. Therefore there is nothing for the command to do.

**What Next**

Please specify one or more module names when calling commit_block. ~

## DPUI-135

(error) Block (Design with physical block) with name %s already exists in current library which prevents commit_block from committing the module to that block. You may confirm this existence using the list_blocks command.

**Description**

The commit_block command detected that the current library already has a block with the specified name, therefore a new block with the same name can not be created and commit_block cannot be allowed to continue for this module. One way that this can happen is if the block is first committed, then uncommitted (without the -remove_design option) and then an attempt is made to run commit_block on the module name again.

**What Next**

Please specify a name which does not conflict with existing block names. ~

Feedback

## DPUI-136

(error) Cannot find bump lib cell %s in current library.

**Description**

Tool cannot find user specified bump reference cell in opened libraries. Or the specified reference cell is not bump.

**What Next**

Users need to check whether the bump lib cell name is spelled correctly. Moreover, users can check whether the library of the bump lib cell is opened or not. Use open_lib to open the library if needed. Users can use get_lib_cell command to check whether the lib cell exists. Users may need to specify the library name when using get_lib_cell. If the lib cell exists, users need to check whether its design type is flip_chip_pad. Correct the design type if needed.

## DPUI-137

(error) Bump lib cell %s is not prepared correctly.

**Description**

Tool can find the specified bump lib cell. However, the lib cell data is corrupted.

**What Next**

User needs to recreate the bump lib cell and set all attributes correctly. Please use get_lib_cell command to check whether the lib cell exists. Users may need to specify the library name when using get_lib_cell.

## DPUI-138

(error) Current block is not editable for design planning.

**Description**

This command requires that the current block's editability is enabled for design planning.

**What Next**

Use *set_editability* command to change the current block's editability to enable it for design planning.

## DPUI-139

(Error) Option %s's value should be a positive value.

Feedback

**Description**

Option value should be a positive value.

**What Next**

Please set the correct option value.

---

## DPUI-140

(Error) Option %s's value should not be a negative value.

**Description**

Option value should not be a negative value.

**What Next**

Please set the correct option value.

---

## DPUI-141

(warning) Layer '%s' is not a routing layer.

**Description**

The specified layer is not a routing layer. The layer must be a routing layer.

**What Next**

Check the technology layer information.

---

## DPUI-142

(warning) No preferred routing direction defined for routing layer %s.

**Description**

There is no preferred routing direction defined for a routing layer. The checking is performed for all routing layers if max/min routing layers are not defined. If max/min routing layers are defined, the tool only check layers between max and min layers.

**What Next**

Please set preferred routing layer direction in order for the tool to proceed

Example: set_attribute [get_layers M1] routing_direction horizontal

set_ignored_layers -max_routing_layer METAL -min_routing_layer METAL3

Feedback

## DPUI-143

(error) %s can only work with %s.

**Description**

The first option value can only work with the second value.

**What Next**

Specify both two values to make it work.

## DPUI-174

(error) Unknown offset type for -offset_type option.

**Description**

Cannot recognize the specified value in -offset_type option.

**What Next**

Please choose between "fixed" and "scalable" for this option.

## DPUI-200

(error) Tracer data file for design %s incompatible with current settings: %s

**Description**

The given abstract design name was part of the *-include* option given to *compute_dff_connections*, but the stored tracer data file for the abstract design (if it exists) was incompatible with the current tracer settings. To force a re-trace of the design, add the design to the *-retrace_blocks* option of *compute_dff_connections*.

**What Next**

See the given incompatiblity reasons and change DFF tracer settings (and/or filter settings) to remove the incompatiblity.

Alternatively, add the design to the *-retrace_blocks* option of *compute_dff_connections* to force a re-trace with the current settings.

## DPUI-201

(error) Design %s has no abstract version: cannot be specified for %s.

Feedback

**Description**

The design passed to the indicated option of *compute_dff_connections* is not an abstract view design, and no abstract view version of it exists.

**See Also**

report_abstracts(2) create_abstracts(2)

---

## DPUI-202

(warning) DFF Tracer Filter file entries refer to MIB instance(s): %s

**Description**

While reading DFF Tracer Filter entries from a file using the *create_dff_trace_filters* command, one or more block references in the filter file referred to MIB (Multiply-Instantiated Block) instance names, rather than the MIB reference design name.

This could lead to unpredictable results during the DFF Tracer Filtering process: some pins could be filtered if the MIB instance is in design view, but then not be filtered at a different point in time if switched to abstract view.

**What Next**

If this was not intended, remove the filter patterns associated with the MIB instance name as block name (refer to the warning message for a list of these block names) and re-add them using the MIB reference design name as block name instead.

**See Also**

create_dff_trace_filters(2) write_dff_trace_filters(2) remove_dff_trace_filters(2) compute_dff_connections(2)

---

## DPUI-203

(error) compute_dff_connections cannot proceed when working design stack size > 1.

**Description**

An attempt was made to invoke *compute_dff_connections* with a working design stack size > 1. The DFF tracer can only be invoked when the working design stack size is equal to 1 (i.e. working with the top design).

**What Next**

Return back to the top of the working design stack with the command *set_working_design -pop -level 0*

Feedback

### See Also

set_working_design(2) set_working_design_stack(2) get_working_design_stack(2)

---

## DPUI-204

(error) Block %s is read only. This command needs blocks to be editable.

### Description

This command needs to save and modify the given block which is currently read only.

### What Next

Open the block as editable. One way to do this is when you open up the top level design use open_lib -ref_libs_for_edit option.

### See Also

- set_editability

---

## DPUI-205

(error) No valid DFF results available.

### Description

The *report_dff_connections* command was called without calling *compute_dff_connections* first. This command needs valid DFF results.

### What Next

Call the *compute_dff_connections* command first.

### See Also

- compute_dff_connections

---

## DPUI-206

(error) %s requested - only %s available.

### Description

The *report_dff_connections* command was called with the -max_reg or -max_gate option, requesting a value larger than available in the trace data.

Feedback

### What Next

Call the *compute_dff_connections* command first.

### See Also

- compute_dff_connections

---

## DPUI-207

(error) No valid DFF results available.

### Description

The *get_dff_connections* command was called without calling *compute_dff_connections* first. This command needs valid DFF results.

### What Next

Call the *compute_dff_connections* command first.

### See Also

- compute_dff_connections

---

## DPUI-208

(error) %s requested - only %s available.

### Description

The *get_dff_connections* command was called with the -max_reg or -max_gate option, requesting a value larger than available in the trace data. Either adjust the value of the option to match what is available from the current trace data, or re-run *compute_dff_connections* with appropriate parameters.

### What Next

Call the *compute_dff_connections* command first.

### See Also

- compute_dff_connections

---

## DPUI-209

(warning) %s is skipped because it is read_only.

Feedback

### Description

The indicated block was included as of a distributed processing operation. However, the block was marked as read_only, and the operation requires the block to be editable. The block was skipped for this operation.

### What Next

If you wanted the block to be processed in read_only mode, issue a command that can work with read_only blocks. Alternatively, modify the editability of the block using the set_editability *command.*

### See Also

- report_editability
- run_block_script
- set_editability

---

## DPUI-210

(error) Found reference block %s can not be edited.

### Description

This message appears when you try to edit the reference block in non-editable view.

### What Next

Change the block view you are using to the editable view for the reference block.

---

## DPUI-211

(error) Specified block instance is not defined.

### Description

The specified block instance is not defined.

### What Next

Check the specified block instance name.

---

## DPUI-250

(warning) User threshold is below 0.90. DFF connection data is unlikely to be accurate.

Feedback

### Description

This warning is issued if the user issues the load_dff_connections command and sets the -threshold *option below 0.90. The threshold option is use to allow loading of DFF connection files to succeed, even if there are some errors. This allows re-using of outdated connection files if some parts of the design have changed a small amount.*

It is not advised to rely on the connection results if the threshold is set below 0.90, but is allowed, if the user is willing to accept any incorrect information.

### What Next

Proceed with caution, or create a new DFF connection trace

---

## DPUI-251

(Error) Loading DFF Connections canceled - success rate %0.6f is below required threshold: %0.6f.

### Description

This error is issued if the user issues the load_dff_connections command and the required error threshold is not met. The default threshold is 1.0 (100% matching), but may be set as low as 0.50 (50% matching). If the calculated error rate while loading the file is such that (1 - error rate) is less than the threshold setting, this error message is issued and loading of the dff connections fails.

### What Next

Reduce the required threshold using the -threshold option to load_dff_connections, or create a new trace using create_dff_connections

---

## DPUI-252

(Warning) Loading DFF Connections - errors detected, but threshold %0.6f is above required threshold: %0.6f.

### Description

This warning is issued if the user issues the read_dff_connections command and errors are detected while loading, but the required error threshold is met. Loading succeeds.

### See Also

- write_dff_connections

Feedback

## DPUI-253

(Error) No DFF Connection files found matching specified criteria.

### Description

This message indicates that no DFF connection files were found that matched the user criteria. For *load_dff_connections*, this means using *-list* or *-report* options along with the *-tag* option. For *remove_dff_connections*, this means using wildcards with one or both of the *-filename* or *-tag* options.

### What Next

Check the values *-filename* and/or *-tag* settings.

## DPUI-254

(Error) DFF Connection file error: %s.

### Description

There was an error processing one or more DFF Connection file(s). Please see the detailed message for further details.

### See Also

- remove_dff_connection_files

## DPUI-255

(Error) Design contains unmapped instances. DFF tracing not supported.

### Description

The DFF feature does not support unmapped instances. The DFF tracer cannot readily identify unmapped instances as buffers or registers. Tracing a deisgn without buffers or registers causes the internal graph to essentially map the entire design, which causes high memory and CPU usage.

### What Next

Ensure all instances are mapped before trying to use DFF features. Or use the -override option to compute_dff_connections to allow it to proceed.

## DPUI-256

(Error) No bounds found in the design.

Feedback

**Description**

This command works on bounds to compute the connections.

**What Next**

Ensure that there are bounds in the design. Use command explore_logic_hierarchy to create bounds.

---

## DPUI-257

(Error) DFF Connections reading failed.

**Description**

DFF connections reading failed due to unrecoverable errors. This can happen because of intermediate netlist changes.

**What Next**

Use command compute_dff_connections to recompute the DFF connections.

**See Also**

- write_dff_connections

---

## DPUI-258

(Error) Incompatible DFF data found ... exiting without reading the data.

**Description**

DFF connections reading failed due to version mismatch.

**What Next**

Recreate the DFF data with command write_dff_connections.

**See Also**

- write_dff_connections

---

## DPUI-300

(warning) Use %s as the output script file name.

Feedback

**Description**

The user does not provide an output file name or the provided value is a directory. The tool then uses default output file name instead.

**What Next**

If the default script file name is all right, user can safely ignore this warning. Otherwise, please append the desired script file name to the output path name.

---

## DPUI-301

(warning) %s is not a directory. Use %s as the output directory instead.

**Description**

In block-based mode *write_shadow_eco*, the option *-output* is expecting a directory name. If it is provided with an existing file name instead, the tool will use the file's directory as the output directory and the file name is ignored.

**What Next**

User can safely ignore this warning if the tool's behavior is what user expects.

---

## DPUI-302

(warning) Option %s requires option %s.

**Description**

The first option requires the second option to be specified. The first option will be ignored for this command execution.

**What Next**

Can safely ignore this warning if first option is not desired.

---

## DPUI-303

(warning) There are %d invalid macros in -cell option.

**Description**

The cell list for -cell option should consist of only hard macro cells.

**What Next**

Please check for misspellings in the cell list.

Feedback

## DPUI-304

(Error) %s is a regular file.

**Description**

The changelist output directory option requires an empty directory name or a new directory name as its value.

**What Next**

Use an empty directory name or a new directory name as the changelist output directory.

## DPUI-305

(Error) Changelist output directory %s is not empty.

**Description**

The changelist output directory option requires an empty directory name or a new directory name as its value.

**What Next**

Use an empty directory name or a new directory name as the changelist output directory.

## DPUI-306

(Warning) No valid blocks are found. Option -output_dangling_removal_blocks is ignored.

**Description**

The list of blocks provided by user does not contain a valid block name.

**What Next**

Review the design and provide the correct list of blocks.

## DPUI-307

(Error) The valid attribute value for attribute %s can only be %s.

**Description**

The attribute value is incorrect.

**What Next**

Use correct attribute value.

Feedback

## DPUI-308

(Error) The attribute %s cannot be modified by command %s.

**Description**

The attribute cannot be set the this command.

**What Next**

Use correct command to set the attribute value.

## DPUI-309

(error) Invalid bounding box for IO ring.

**Description**

The tool is not able to derive a valid bounding box for the IO ring.

**What Next**

Please check the design and technology. The boundary of the die must be valid.

## DPUI-501

(error) From object '%s' must be an input port or an output pin.

**Description**

The starting point for a bus can only be an input port of your block or an output pin of a hierarchy or macro.

**What Next**

Please specify the correct ports or pins.

## DPUI-502

(error) From pin '%s' is not an output of a specified start cell.

**Description**

When you create buses, the start of the bus must come either from a block port or from an output pin of one of the declared "start cells". Start cells are declared by using the -start_end_cells option of the create_busplans command.

Feedback

### What Next

Please list the cell of this this pin when you specify -start_end_cells to the create_busplans command. You need only specify -start_end_cells once. You do not need to repeat the option on every call to create_busplans.

---

## DPUI-503

(error) Could not determine a bus from the given pins.

### Description

When you create buses, the bus must start and end at cells that were declared by the -start_end_cells option of the create_busplans command. In between the cells, the bus must only consist of the following types of elements: buffers, inverters, level shifters, isolation cells, flops, and hierarchy pins. If there are other elements along the bus's path (e.g. multiplexors) the bus cannot be connected.

### What Next

Make sure that you have listed the cell at the end of your intended bus when you specify -start_end_cells to the create_busplans command. You need only specify -start_end_cells once. You do not need to repeat the option on every call to create_busplans.

If there are unspported elements in the middle of your path, consider breaking the bus into multiple buses -- one before the element and one after.

---

## DPUI-504

(warning) Could not find path for %d bits of the bus.

### Description

When you create buses, the bus must start and end at cells that were declared by the -start_end_cells option of the create_busplans command. In between the cells, the bus must only consist of the following types of elements: buffers, inverters, level shifters, isolation cells, flops, and hierarchy pins. If there are other elements along the bus's path (e.g. multiplexors) the bus cannot be connected.

Some of the bits of the bus had no path from the start of the bus to an end cell.

### What Next

This may not be a serious problem. Perhaps some of the bits of your bus are simply not connected. That is OK. The bits have been dropped from your bus.

Feedback

Make sure that you have listed the cell at the end of your intended bus when you specify -start_end_cells to the create_busplans command. You need only specify -start_end_cells once. You do not need to repeat the option on every call to create_busplans.

If there are unspported elements in the middle of your path, consider breaking the bus into multiple buses -- one before the element and one after.

---

## DPUI-505

(error) Cannot reorder element '%s' because it would cause a loop

**Description**

When you reorder elements of a bus the fanouts of the reordered item stay attached to that item. So you cannot order an element A after element B if element B is currently after A. It would result in a loop.

**What Next**

Make sure that element B is not after element A when you attempt to put element A after B.

---

## DPUI-506

(error) Cannot reorder element '%s'. This will cause group order violation.

**Description**

When you reorder elements of a bus, you cannot move certain objects arbitrarily. For example, a register inside a block cannot move past the pin on the block. Similarly, a pin on a block cannot move past a top level register. This type of violation is happening for this element.

**What Next**

Determine what type of violation is happening and determine if you can achieve result in a different way.

---

## DPUI-507

(error) All bits of a bus must start from same hierarchy.

**Description**

When you are creating a busplan, all of the pins specified for -from must be on the same logical hierarchy or leaf cell. Or you must specify all top-level ports.

Feedback

**What Next**

If you are trying to make a bus that starts from many sibling cells, consider starting the bus at the common logical hierarchy that contains the leaf cells.

---

## DPUI-508

(error) Cannot create a new bus at pin %s because bus %s is already using that pin.

**Description**

When you create buses, each pin in the design can only belong to one bus. The given pin is already part of another bus.

**What Next**

If you use the -force option, the pin (and all fanouts of the pin) will be removed from the existing bus and added to your new bus.

---

## DPUI-509

(error) Busplan %s already exists.

**Description**

You already have a busplan with the given name. You are not allowed to have two busplans with the same name.

**What Next**

You can choose a different name or remove the existing plan with remove_busplans.

---

## DPUI-510

(error) Element '%s' of busplan '%s' already exists.

**Description**

You already have a busplan element with the given name. You are not allowed to have two elements with the same name.

**What Next**

You can choose a different name or remove the existing element with modify_busplan -remove.

Feedback

## DPUI-511

(error) Cannot calculate register / buffer spacing for net estimation rule %s.

### Description

In order to analyze register / buffer placement, the net estimation timing engine requires the setting of some attributes. Without this information, indirect computation of these values cannot be done.

### What Next

There are several ways to give the necessary information. Choose any of the following:

- Set up your timing scenario complete with parasitic parameters. And also make sure that a valid timing path passes through your bus. (Use report_timing through the bus source to see if the timing path exists.)
- Set up your timing scenario complete with parasitic parameters. And also set the "clock" or "sdc_stage_delay" parameter in the net_estimation_rule.
- Set the "ns_per_mm" parameter in your net_estimation_rule. And also make sure that a valid timing path passes through your bus.
- Set the "ns_per_mm" parameter in your busplan net_estimation_rule. And also set the "clock" or "sdc_stage_delay" parameter in the net_estimation_rule.
- Set the "register_spacing" and "buffer_spacing" parameters in the net_estimation_rule with the set_net_estimation_rule command.

### See Also

- set_net_estimation_rule

## DPUI-512

(warning) Cannot process block_budget parameters for busplan_bus '%s' (net_estimation_rule %s).

### Description

In order to completely process budgeted delays for a bus, it must be possible to compute the propagation speed of the bus. Without this information, the tool cannot figure out how much wire length to reserve for block_budget parameters.

The launch_block_budget and capture_block_budget parameters have been ignored.

Feedback

### What Next

There are a several ways to give the necessary information. Choose any of the following:

- Set up your timing scenario complete with parasitic parameters.
- Set the "ns_per_mm" parameter in your net_estimation_rule.
- Make sure that a valid timing path passes through your bus. (Use report_timing through the bus source to see if the timing path exists.)
- Set the "clock" or "sdc_stage_delay" parameter in the net_estimation_rule.

---

## DPUI-513

(error) The option %s requires objects of type %s. No such objects found.

### Description

The specified option requires objects of certain type. No objects of the correct type were specified.

### What Next

Please specify objects of the correct type.

---

## DPUI-514

(error) All bits of a bus must have the same clock period, found different clock periods on terms %s and %s.

### Description

When you are creating a busplan, all of the pins specified for -from must be have the same clock period (or not have a clock period).

### What Next

If you dont care about this, then you can use remove_sdc to remove all the constraints. Then all the clocks will be the same. Another way is to set the constraints such that all the pins specified from -from have same clock. Can use report_timing -through <pin> to see associated clock.

---

## DPUI-515

(warning) The bus %s has specified %s constraint but the net %s has a % constraint which is not consistent.

Feedback

### Description

The specified bus has a constraint which is not consistent with the given net which is part of the bus. Buses are associated with a net estimation rule which specifies certain constraints. For example the net estimation rule of a bus might specify that it is to be routed on layer M3 and M4. If a net in the bus is specified to be routed on M5 and M6 (with min_layer, max_layer constraints), then this contradicts the net estimation rule and may lead to problems when implementing this bus.

### What Next

Consider if the inconsistency will create a problem during implemenation. In above example, if M5/M6 has vastly different timing characteristics then M3/M4 that would be a problem. If so, then can change the net estimation rule to be consistent with the net constraint. Alternately can change the net constraint to be consistent with the net estimation rule.

---

## DPUI-516

(warning) Cannot compute register spacing for net estimation rule %s.

### Description

In order to perform register placement for topology plans, the net estimation timing engine requires the setting of some attributes. Without this information, indirect computation of these values cannot be done.

If register spacing cannot be computed due to missing information, this warning will be issued, and the internal spacing value of 1 meter will be used (essentially, no registers) in order to allow buffer-only flows to succeed.

### What Next

There are several ways to give the necessary information. Choose any of the following:

- Set up your timing scenario complete with parasitic parameters. And also set the "clock" or "sdc_stage_delay" parameter in the net_estimation_rule.
- Set the "ns_per_mm" parameter in your topology plan net_estimation_rule. And also set the "clock" or "sdc_stage_delay" parameter in the net_estimation_rule.
- Set the "register_spacing" parameter directly in the net_estimation_rule with the set_net_estimation_rule command.

### See Also

- optimize_topology_plans
- set_net_estimation_rule

Feedback

## DPUI-517

(warning) Cannot compute buffer spacing for net estimation rule %s.

### Description

In order to perform buffer placement for topology plans, the net estimation timing engine requires the setting of some attributes. Without this information, indirect computation of these values cannot be done.

If buffer spacing cannot be computed due to missing information, this warning will be issued, and the internal spacing value of 1 meter will be used (essentially, no registers) in order to allow register-only flows to succeed.

### What Next

There are several ways to give the necessary information. Choose any of the following:

- Set up your timing scenario complete with parasitic parameters. And also set the "clock" or "sdc_stage_delay" parameter in the net_estimation_rule.
- Set the "ns_per_mm" parameter in your topology plan net_estimation_rule. And also set the "clock" or "sdc_stage_delay" parameter in the net_estimation_rule.
- Set the "buffer_spacing" parameter directly in the net_estimation_rule with the set_net_estimation_rule command.

### See Also

- optimize_topology_plans
- set_net_estimation_rule

## DPUI-518

(Error) Net Estimation Rule parameter %s cannot be negative.

### Description

Some numeric (float) parameters for net estimation rules can only have values >= 0.0. These are: utilization, xtalk_fraction, ff_per_mm, ohms_per_mm, buffer_spacing, delay_derate, ns_per_mm, std_stage_delay and register_spacing.

### What Next

Assign a value >= 0.0 for this parameter.

Feedback

## DPUI-520

(error) Net '%s' is not part of a recognizable bus.

**Description**

When you create buses, the start of the bus must come either from a block port or from an output pin of one of the declared "start cells". for the create_budget_busplan command, the start cells are the budget cells as declared by set_budget_options.

The net you specify must be connected to a legal bus start, with only buffers in between.

**What Next**

Please declare the cell where you want the path to start as a start cell. If you believe you have done this, make sure that the net you have specifed is on a simple buffered path from the start cell or block port.

## DPUI-521

(warning) Cannot calulate ns_per_mm for busplan net_estimation_rule '%s'.

**Description**

In order to use busplans for segment budgets, it must be possible to calculate the ns_per_mm parameter for the busplan net_estimation_rule. This can be done manually be using the set_net_estimation_rule command.

If you want the value to be calculated automatically, you need to make sure that your corners and parasitic paramters are fully defined. This will allow extraction tools to characterize your library.

**What Next**

There are a few ways to give the necessary information.

- Set up your timing scenario complete with parasitic parameters.
- Set the "ns_per_mm" parameter in your busplan net_estimation_rule.

Please refer to the set_net_estimation_rule man page for more details.

## DPUI-522

(error) Cannot reorder element '%s'.

Feedback

**Description**

Reordering the given element will cause an illegal busplan. Most likely the illegality is that the previous element of the given element will be left as an end of the busplan. Ends of busplans can only be top level ports or pins on start end cells.

**What Next**

Try to change the busplan in a different way so that each change results in a legal busplan.

---

## DPUI-523

(error) Cell specified for parameter %s is not a physical block.

**Description**

The specified parameter requires a physical block (design) cell. The passed value does not refer to a physical block.

**What Next**

Specify a physical block for the parameter.

---

## DPUI-600

(warning) The option %s of command %s is deprecated. It will be completely removed in release %s. Please use %s instead.

**Description**

The option indicated is deprecated and should not be used in future.

**What Next**

Check the command man page to see correct command options.

---

## DPUI-601

(warning) The object %s is not appropriate for option %s.

**Description**

This option requires objects of a certain type, but the given object is not that type. This object will be ignored.

**What Next**

Check the command man page to see correct objects types for option.

Feedback

## DPUI-602

(warning) The variable %s failed to set to desired value %s.

**Description**

The tool was unable to set the given variable to the given value. Run will continue without this setting.

**What Next**

Try setting the variable to the value manually. Try renaming variable.

## DPUI-603

(warning) Duplicate reference module %s detected in option %s. Instance %s ignored.

**Description**

This command option requires unique reference modules. In other words, you can specify only 1 cell instance from an MIB (multiply instantiated block) group. You have specified 2 or more cell instances with the stated reference module. The stated instance will be ignored.

**What Next**

Specify only 1 cell instance in an MIB group. It does not matter which one.

## DPUI-604

(warning) The block %s is missing its reference lib.

**Description**

The specified block does not have a reference lib. This is likely because the reference lib was not added to design or it was previously closed. This block will be skipped.

**What Next**

Open the reference lib for block (open_lib) and/or add the reference lib (set_ref_lib) and rerun command.

## DPUI-605

(warning) IO guides have overlaps.

Feedback

**Description**

Two or more IO guides ovelap with each other.

**What Next**

Check the location and size of each IO guide in the design. Modify IO guides to remove overlaps.

---

## DPUI-606

(warning) treat non-flip-chip pad drivers in design as flip-chip pads since bumps are detected in the design.

**Description**

The IO driver cells in the design are of non-flip-chip style. However, they will be treated as flip-chip IO driver cells since the design has bump cells.

**What Next**

If the design is a flip-chip design, change IO driver cells to flip-chip driver cells. If the design is non-flip-chip, remove all bumps.

---

## DPUI-607

(warning) find IO driver cells with design_type attribute as pad and flip_chip_driver and treat all driver cells as flip-chip pads since bumps are detected in the design.

**Description**

Various types of IO drivers exist in the design. They will be treated as flip-chip IO driver cells since the design has bump cells.

**What Next**

Check all IO driver cells in the design. If they are flip-chip IO drivers, ignore this warning or change their design_type to flip_chip_driver.

---

## DPUI-608

(warning) find IO driver cells with design_type attribute as pad and flip_chip_driver and treat all driver cells as non-flip-chip pads since there is no bump found in the design.

**Description**

Various types of IO drivers exist in the design. They will be treated as non-flip-chip IO driver cells since the design has no bump.

Feedback

**What Next**

If the design is a flip-chip design but you want to place all pads without bumps, ignore this warning. Otherwise, create bumps before performing io placement. If the design is a non-flip-chip design, check all IO driver cells in the design. If they are non-flip-chip pads, ignore this warning or change their design_type to pad.

---

## DPUI-609

(warning) flip-chip pads are placed without bumps.

**Description**

Because there is no bump in the design, flip-chip pads are placed as non-flip-chip pads without consideration of bump-to-pad routing.

**What Next**

If the design is not a flip-chip design, check the pad cells. If the design is a flip-chip design and you want the io placer to consider bump-to-pad routing, please add bumps to the design. Otherwise, ignore this warning.

---

## DPUI-610

(warning) The orientation %s is not legal for cell %s.

**Description**

The given orientation conflicts with the set of legal orientations for the given cell. Legal orientations are gotten from the reference library of the cell. If the cell is a hard macro, then the given orientation will be ignored. If the cell is an IO, then the given orientation will be allowed and thus legal orientations could be violated.

**What Next**

Check if the orientation setting is correct and/or if the reference library orientations are correct.

---

## DPUI-611

(warning) The following string is ignored: %s.

**Description**

The command ignores the specified string since it has received enough information.

Feedback

**What Next**

Please check whether the command line is correct.

---

## DPUI-612

(warning) The string %s is not a pad cell and is ignored.

**Description**

The command ignores the specified string, which is not a pad cell name as it should be.

**What Next**

Please specify the right pad cell names. Only pad cell names can be accepted at the current location of signal IO constraint.

---

## DPUI-613

(warning) extra power reference cells ignored.

**Description**

At most two power reference cells can be specified in the power constraint of each IO guide. Additional reference cells are ignored.

**What Next**

Contact Synopsys if you need to specify more than two power reference cells. You can manually place power pads in IO guides.

---

## DPUI-614

(warning) bump overlap exists.

**Description**

There are overlapping bumps cells in the design. The overlap must be removed before IO placement

**What Next**

Move bumps or bump arrays to eliminate bump overlap.

---

## DPUI-615

(error) Object %s not in the top-level physical hierarchy of the current design.

Feedback

**Description**

The object should be in the top-level physical hierarchy of the current design. This command cannot manipulate constraints on objects in sub-blocks.

**What Next**

Change the current_design to the physical hierarchy directly enclosing the object.

---

## DPUI-616

(error) No constraints have been specified.

**Description**

The function of this command is to apply some pin placement constraints to certain objects, but no constraints were specified.

**What Next**

Please specify some constraints.

---

## DPUI-617

(warning) Block %s passed to option %s was not referenced by the current design. Block will be skipped.

**Description**

This command option requires blocks which are referenced by the curernt design. Either a version of a block with a label or view different from the one instantiated in the current design was specified, or the default expansion of block base names resulted in more than one version of a block being passed to this option.

This warning will NOT be generated if multiple versions of a given block were passed, and at least one version was referenced by the current design.

**What Next**

If you passed a specific block/label.view name, then ensure that it is referenced by the current design. If you used a block base name (such as block1), then ensure a version of this block is referenced in the current design.

---

## DPUI-619

(warning) %s.

Feedback

**Description**

Errors are found during the processing of the command options. If there is no other error, the command will still be completed.

**What Next**

Please check the result of the command. Correct any errors related to option settings.

---

## DPUI-620

(warning) Could not derive a preferred location for %s.

**Description**

The given macro's location could not be converted into a preferred location, either because it did not have a proper location or because the block it belongs to has no proper boundary assigned.

**What Next**

Place the macro and ensure that the block it belongs to has a boundary assigned.

---

## DPUI-621

(warning) Failed to identify the host option submit command %s, assuming it is a custom command.

**Description**

This command uses distributed processing and you have specified a host option which uses the given submit command. There are certain host option submit commands which are natively supported, such as bsub, qsub, sh, rsh, and ssh. The tool does not recognize your submit command as being one of these natively supported submit commands and thus it will treat it as a custom submit command.

**What Next**

Typically nothing needs to be done. However if the tool is unable to handle your custom submit command try using one of the supported submit commands listed above. Alternately, you can supply the correct protocol using set_host_options -submit_protocol <protocol>

---

## DPUI-622

(warning) Specified coordinate(s) %s is adjusted to %s to be on FinFET grid.

Feedback

**Description**

The specified coordinate(s) are adjusted to be on FinFET grid.

**What Next**

No action is needed if you want the coordinate(s) to be on FinFET grid.

If you don't want the tool to adjust the coordinate(s) to FinFET grid, please turn off the function by setting the following: *set_app_options -global {finfet.enable_grid false}*

Set the app option to true to restore the function.

---

## DPUI-623

(error) Maximum (%d) monitor gui instances reached. PIDs of instances: %d, %d. Use -kill option to terminate.

**Description**

This session has already launched the maximum number (2) of distributed processing Monitor Gui instances.

**What Next**

In order to launch a new instance, you must either manually close 1 or more existing instances, or use the -kill option to the *run_monitor_gui* command.

**See Also**

- run_monitor_gui

---

## DPUI-624

(error) The grid %s does not exist.

**Description**

An alignment grid that does not exist has been specified for a macro (or a set of macros).

**What Next**

Define the alignment grid and rerun the command.

---

## DPUI-625

(warning) The option %s is obsolete, please use %s instead.

Feedback

**Description**

The given option is obsolete and will be removed from the future release. Please change to use the new option or the new command instead, which has similar functionality.

**What Next**

Check the command man page to see correct options to use.

---

## DPUI-626

(error) The defined alignment point is outside macro %s.

**Description**

The alignment point defined by the command set_macro_constraints -alignment_point {x y} is outside the macro.

**What Next**

Please use an alignment point inside the macro.

---

## DPUI-627

(warning) Net %s does not connect to cell %s. The constraint is skipped. Please consider using topological constraints.

**Description**

The net and cell are not connected. The constraint is skipped. This case should be constrainted with topological constraints instead of physical pin constraints.

**What Next**

Please consider using topological constraints to constrain this case.

---

## DPUI-628

(warning) %s pitch of finfet grid is invalid. Litho grid pitch will be used.

**Description**

You are getting this message because the pitch of the finfet grid in the specified dimension is zero or smaller than zero. This is likely because it is defined so in the tech file.

When invalid finfet grid pitch is detected, design planning operations will use the litho grid pitch for the specified dimension.

Feedback

**What Next**

If you are ok with the tool using litho grid pitch, no action is needed.

If you want a different valid pitch to be used for the finfet grid, please check the tech file and make sure that the finfet grid is defined correctly.

---

## DPUI-629

(error) The option %s is not appropriate for %s.

**Description**

The request option is only valid for certain object type.

**What Next**

Check the command man page to see correct usages for option.

---

## DPUI-650

(error) There was a %s conflict between option %s and previous options. Previous setting: %s. Conflicting setting: %s.

**Description**

There was a conflict in the indicated setting between multiple host options. When multiple host options are specified for one command, they must agree on target applicatoin, working directory and max_cores settings. It an error to specify host options that have conflicting values for these settings.

**What Next**

Change your host options to agree using the set_host_options command, or choose a different list of host options.

**See Also**

set_host_options(2) report_host_options(2)

---

## DPUI-801

(error) Option value for %s should be %s.

**Description**

The checking is performed for command option. Option value specified should be correct value.

Feedback

**What Next**

Please set correct option value for the tool to proceed.

---

## DPUI-802

(error) Cannot find site def.

**Description**

The checking is performed for -site_def option. Option value is not specified for -site_def.

**What Next**

Please set correct site def name for the tool to proceed.

---

## DPUI-803

(warning) Option -site_def is not specified. Using default unit tile %s.

**Description**

The checking is performed for -site_def option. Option value is not specified for -site_def and use default unit tile.

---

## DPUI-804

(error) Value %s for option %s must be %s %s %s.

**Description**

The checking is performed for command option. Option value specified must be greater than or less than an allowable limit.

**What Next**

Please set correct option value for the tool to proceed.

---

## DPUI-805

(warning) Option -mode is not specified. Using default uniform mode.

**Description**

The checking is performed for -mode option. Option value is not specified for -mode and use default uniform mode.

Feedback

## DPUI-806

(warning) Option value for -direction should be same as prefered direction %s.

**Description**

The checking is performed for -direction option. Option value specified for -direction should be same as prefered direction.

**What Next**

Please set correct direction for the tool to proceed.

## DPUI-807

(error) Offset value in option -coord cannot exceed site def %s %s.

**Description**

The checking is performed for -coord option. Option value specified for -coord cannot exceed site def height or width.

**What Next**

Please set correct direction for the tool to proceed.

## DPUI-809

(warning) Direction is not specified. Using the layer preferred direction.

**Description**

You receive this warning because the direction is not specified in the command invoked, so the tool uses the layer preferred direction.

**What Next**

No action is required on your part unless you want to specify a direction. You can examine the design to see the layer preferred direction and the man page for the command that caused the warning for detailed information on specifying a direction value.

## DPUI-810

(error) Option -space is only used for uniform mode.

Feedback

**Description**

The checking is performed for -space option. Option value specified for -space is only used for uniform mode.

**What Next**

Please set correct option mode for the tool to proceed.

---

## DPUI-811

(warning) Space is not specified. Using pitch.

**Description**

You receive this warning because the space between the tracks is not provided. The tool uses the default value, which is the pitch value provided by the library.

**What Next**

No action is required on your part. You can see the man page for the command that caused the warning for detailed information on specifying optional and required parameters.

---

## DPUI-812

(error) Couldn't get the pitch value of the layer %s from the libray.

**Description**

You receive this error because the specified layer's pitch value cannot be fetched from the edit library.

**What Next**

Please check the technology information of the edit library.

---

## DPUI-813

(warning) Coordinate value is not specified. Using coordinate that is half of the space distance inside of the die area.

**Description**

You receive this warning because the value of the start of the first track is not specified. The tool attempts to use half of the space.

Feedback

**What Next**

No action is required on your part. You can see the man page for the command that caused the warning for detailed information on specifying optional and required parameters.

---

## DPUI-814

(error) Option value for -coord should be specified in non_uniform mode.

**Description**

The checking is performed for -coord option. Option value specified for -coord should be used for non_uniform mode.

**What Next**

Please set correct option mode for the tool to proceed.

---

## DPUI-817

(error) List size of option %s should be %s in %s mode.

**Description**

The checking is performed for option value consistency.

**What Next**

Please set correct option value for the tool to proceed.

---

## DPUI-820

(error) Target object %s should not be fixed.

**Description**

The checking is performed for target macro object. The target hard macro specified should not be fixed.

**What Next**

Please set correct option value for the tool to proceed.

Feedback

**See Also**

- set_macro_relative_location
- remove_macro_relative_location
- report_macro_relative_location

---

## DPUI-821

(error) Target orientation %s is not legal for macro cell %s.

**Description**

The checking is performed for target macro orientation. The given orientation conflicts with the set of legal orientations for the given cell. Legal orientations are gotten from the reference library of the cell or set by command set_macro_options.

**What Next**

Please set correct option value for the tool to proceed.

---

## DPUI-822

(error) Target object and anchor object are not in the same design.

**Description**

The checking is performed for target and anchor object. The two objects should in the same design.

**What Next**

Please set correct option value for the tool to proceed.

---

## DPUI-823

(Warning) Target orientation using default legal value %s for macro cell %s.

**Description**

The checking is performed for target macro orientation. Default legal orientation are gotten from the reference library of the cell or set by command set_macro_options.

Feedback

**See Also**

- set_macro_relative_location
- remove_macro_relative_location
- report_macro_relative_location

---

## DPUI-824

(Error) No legal target orientation found for macro %s.

**Description**

The checking is performed for target macro orientation. Default legal orientation are gotten from the reference library of the cell or set by command set_macro_options.

**What Next**

Please set the correct legal orientation for macro.

**See Also**

- set_macro_relative_location
- remove_macro_relative_location
- report_macro_relative_location

---

## DPUI-825

(Error) No hard macros, macro arrays or blocks found.

**Description**

The checking is performed for hard macros, macro arrays or blocks specified.

**What Next**

Please set correct hard macro, macro array edit group or block list.

---

## DPUI-826

(Error) Can not set std cell as anchor object.

**Description**

The checking is performed for anchor object. The anchor object should be IO pad cell, hard macro, block, port, pin.

Feedback

**What Next**

Please set the correct anchor object.

---

## DPUI-827

(Error) Anchored object corner should be bl, tl, tr, br for rectangle or a positive integer number from 1 to n for each corner of a shape

**Description**

The checking is performed for anchored object corner. The anchored object corner should be bl, tl, tr, br for rectangle or 1, 2, 3, 4, 5... for each corner of a shape. A rectilinear corner number is a positive integer that starts at one, and increments by one as you proceed around each edge in the shape. Given any rectilinear shape, the bottom corner of the left-most edge is the starting corner (corner number 1). You cannot specify a value of 0 for this option.

**What Next**

Please set the correct anchored object corner.

---

## DPUI-828

(Error) Scalable offset value should be in [-1 1]

**Description**

The checking is performed for scalable offset. The scalable offset value should be in [-1 1].

**What Next**

Please set the correct offset value.

---

## DPUI-829

(Error) Scale edge number should be a positive integer number from 1 to n.

**Description**

The checking is performed for scale edge number. The scale edge number should be 1, 2, 3... for each edge. A edge number is a positive integer that starts at 1, and increments by one as you proceed around each edge in the shape. Given any rectilinear shape, the lower leftmost vertical edge is the starting edge (edge number 1).

**What Next**

Please set the correct edge number.

Feedback

## DPUI-830

(Warning) Scale edge only takes effect with scalable offset type.

**Description**

The checking is performed for scale edge option. The scale edge takes effect with scalable offset type.

**What Next**

Please set the correct offset type.

## DPUI-831

(warning) The only supported orientation for macro array/group is R0.

**Description**

The given orientation is not using legal syntax for relative location constraint on macro array/group. This command only takes orientation for macro array/group in the form R0.

**What Next**

Use above syntax for orientations.

## DPUI-832

(Error) The target macro can not anchor to its macro array.

**Description**

When a macro was set to anchor its parent macro array, this setting is illegal.

**What Next**

Set the correct anchor object.

## DPUI-833

(warning) Target object %s is fixed.

**Description**

The checking is performed for target macro object. If the target macro is still fixed by the time macro placement is run, this constraint could not be honored.

Feedback

**What Next**

Please check the target object fixed attribute for the tool to proceed.

---

## DPUI-834

(error) Cannot load rule %s.

**Description**

The specified floorplan rule cannot be loaded.

**What Next**

Check whether the name of the rule is correct.

---

## DPUI-835

(error) Cannot load object type %s.

**Description**

The specified object type cannot be loaded.

**What Next**

Check whether the name of the object type is correct.

---

## DPUI-836

(error) all %s that specified are invalid.

**Description**

All the specified arguments are invalid.

**What Next**

Check whether the name of the arguments are correct.

---

## DPUI-837

(warning) Specified object %s is fixed.

**Description**

Specified object is fixed.

Feedback

**What Next**

Please check the specified object fixed attribute.

---

## DPUI-838

(warning) some pins remain dangling for power constraints.

.SH DESCRIPTION

The power constraint only describes pad pin connectivity for some pins. The other pins will remain unconnected.

**What Next**

Please describe pin connection for all pins if needed.

---

## DPUI-839

(warning) There are %d invalid macros in -cell option.

**Description**

The cell list for -cell option should consist of only macro cells.

**What Next**

Please check the specified cell list.

---

## DPUI-840

(Error) Targeted object corner should be bl, tl, tr, br for rectangle or a positive integer number from 1 to n for each corner of a shape

**Description**

The checking is performed for targeted object corner. The targeted object corner should be bl, tl, tr, br for rectangle or 1, 2, 3, 4, 5... for each corner of a shape. A rectilinear corner number is a positive integer that starts at one, and increments by one as you proceed around each edge in the shape. Given any rectilinear shape, the bottom corner of the left-most edge is the starting corner (corner number 1). You cannot specify a value of 0 for this option.

**What Next**

Please set the correct targeted object corner.

Feedback

## DPUI-841

(Error) Specified soft macro scale factor value is not reasonable.

**Description**

The checking is performed for soft macro scale factor.

**What Next**

Please set the correct option value.

## DPUI-842

(error) Option %s should be used if option %s is not specified.

**Description**

The two options shouldn't be not specified together.

**What Next**

Check the command options.

## DPUI-843

(error) Soft macro %s's relative location constraint is not derived since the soft macro is unplaced.

**Description**

Deriving relative location constraints for soft macros when some of them are unplaced will result in invalid constraints and hence the constraint derivation will be skipped.

**What Next**

Check the unplaced soft macros.

## DPUI-901

(information) Instance %s is referencing to %s view%s.

**Description**

You are getting this message because the command you called requires a block instance to reference to certain view types, and the specified instance is using a view that is not allowed by the command.

Feedback

**What Next**

The tool will switch the block instance to use an allowed view. If the allowed view is not available, the tool will create it for you.

---

## DPUI-902

(information) Elapsed time for %s excluding pending time: %s.

**Description**

You are getting this message because the command you called can use distributed processing. To accurately measure the elapsed time when using distributed processing it is necessary to remove time spent pending on the queue (ie the job is waiting to be run and not actually running). This message indicates the elapsed time after pending time is removed or in other words the elapsed time considering the longest running distributed job with no pending time.

**What Next**

No action is required.

---

## DPUI-903

(information) CPU time for %s : %s.

**Description**

You are getting this message because the command you called can use distributed processing. To accurately measure the CPU time when using distributed processing it is necessary to only consider the maximum CPU time of all the jobs running in parallel.

The reported CPU time includes the CPU time spent on the parent process as well as the maximum CPU time spent for distributed jobs.

**What Next**

No action is required.

---

## DPUI-904

(information) Peak memory usage for %s : %lu MB.

**Description**

You are getting this message because the command you called can use distributed processing. To accurately measure the peak memory when using distributed processing

Feedback

it is necessary to consider the peak memory of the parent process as well as the peak memory of all the distributed jobs.

The reported memory is the largest peak memory of all the distributed jobs as well as the parent process.

**What Next**

No action is required.

---

## DPUI-905

(Error) No valid hard placement placement blockages or macros specified

**Description**

This error message occurs when you use the command "replicate_route_blockages" without macros or placement blockages specified. Or user specified invalid objects like soft placement blockage or standard cells.

**What Next**

```
User must specifiy valid placement blockages or macros
```

---

## DPUI-906

(Error) Not a valid routing blockage layer.

**Description**

This error message occurs when you specify a metal layer which is not valid routing blockage layer to create routing blockage.

**What Next**

Specify a valid routing blockage layer.

---

## DPUI-907

(Warning) Cell %s is not a hard macro, skip it.

**Description**

This warning message occurs when you specify a object is not hard macro, but you use the command option "replicate_route_blockages -macros".

**What Next**

Specify a valid macro cell.

Feedback

## DPUI-908

(Error) Module with name '%s' already exists in parent design '%s'.

**Description**

This error message occurs when uncommit_block is trying to create a module with name (that is top module name of physical design for which uncommit_block is called) and module with same name already exists in parent design.

**What Next**

User has to remove existing module.

## DPUI-910

(warning) Set %s first, %s will be ignored.

**Description**

This error message occurs when you specify two conflict options simultaneously.

**What Next**

Specify one of these options.

## DPUI-911

(information) The constraint mapping file does not have the specified type(s) of constraint for block %s.

**Description**

You are getting this message from *load_block_constraints* command because the tool does not find any entry in the constraint mapping file for the specified block that contains information for the type(s) of constraint you want to load. So the command would not run this block to load any constraint.

**What Next**

If this is expected, no action is needed. If you think that the specified block should have the type(s) of constraint to load, please check the constraint mapping file. You can check the content of the constraint mapping file by calling command *report_constraint_mapping_file*.

Feedback

### See Also

- set_constraint_mapping_file
- report_constraint_mapping_file

---

## DPUI-912

(error) Design %s has unresolved reference %s. Command %s will be skipped for design %s.

### Description

Design that has unresolved reference(s) will not be uncommited.

---

## DPUI-913

(error) Design %s will be skipped for command %s. It is uneditable in the context of current top design.

### What Next

The editability of the design can be set by *set_editability* command.

### See Also

- set_editability
- report_editability

---

## DPUI-914

(Warning) Arguments passed to %s will be ignored since -from_existing_pins option was not specified concurrently

### Description

You are getting this message because write_pin_constraints command will only honor the list of arguments specified when -from_existing_pins option is used simultaneously. If -from_existing_pins is not specified, the command writes out all the pin constraints associated with the specified objects stored in design database and ignores the arguments. Please refer to the man page description of write_pin_constraints for more details.

### What Next

If this is expected, no action is needed.

Feedback

**See Also**

- write_pin_constraints

---

## DPUI-915

(warning) Keyword %s is specified as %s.

**Description**

Keyword for power constraints is wrongly spelt.

**What Next**

Please check the spelling of the keyowrds.

---

## DPUI-916

(warning) %s.

**Description**

Warnings are found during the processing of the command options.

**What Next**

Please check the manpage of the command to correct any errors related to option settings.

---

## DPUI-917

(warning) For guide %s and reference cell %s existing power constraints already have connectivity information defined.

**Description**

For the above mentioned IO guide and reference cell there are already exisitng power constraints with connectivity information.

**What Next**

Please check the constraints.

---

## DPUI-918

(error) Error found during file processing: %s.

Feedback

**Description**

Command cannot parse the pattern description file successfully.

**What Next**

Please check the description file and fix any errors. Read manpage for correct data format.

---

## DPUI-919

(error) Keyword %s is not found for pattern %s.

**Description**

Particular pattern is missing a keyword.

**What Next**

Please check if all parameters of specified pattern is present.

---

## DPUI-920

(error) Not support derive_origin type %s.

**Description**

Support derive_origin type: auto, bl, br, tl, tr.

**What Next**

Please check if derive_origin type is supported.

---

## DPUI-921

(error) Incorrect %s in %s option.

**Description**

The argument provided to the command is invalid.

**What Next**

Check the arguments to the command and try again.

---

## DPUI-922

(error) Routing directions for layer '%s' are missing.

Feedback

**Description**

It is not permitted that layers' routing directions are not provided by user and also not available in technology file.

**What Next**

Check the layers' routing directions and set these unknown directions.

---

## DPUI-924

(warning) The routing directions for layer '%s' are missing. Auto deriving '%s' routing direction for layer '%s'.

**Description**

There exist some routing layers whose routing directions are not provided by user and also not available in technology file. Therefore, the routing directions of all routing layers are automatically derived from bottom to top. These existing routing directions will be overridden.

**What Next**

Check the layers' routing directions and set these unknown directions by yourself.

---

## DPUI-930

(Warning) Option '-reuse_processes' is deprecated and will be removed in a future release. Please use the app option 'plan.distributed_run.reuse_rbs_workers' instead.

**Description**

Option '-reuse_processes' is deprecated. It will be removed in the coming release.

---

## DPUI-931

(error) Floorplan rules: %s, conflict with initialization floorplan's %s .

**Description**

When DCM policy is 'Error'. The Message shows which floorplan rules conflict with initialization floorplan's core offset or core area length. The command 'initialize_floorplan' will report error and return.

**What Next**

NA

Feedback

## DPUI-932

(warning) Floorplan rules: %s, conflict with initialization floorplan's %s .

**Description**

When DCM policy is 'Tolerate'. The Message shows which floorplan rules conflict with initialization floorplan's core offset or core area length. The command 'initialize_floorplan' will continue to run and use the core offset or core area length set by users as the final value.

**What Next**

NA

## DPUI-933

(Error) Design with Physical Blocks are not supported in Auto Partitioning

**Description**

Auto-partitioning does not take into consideration any physical block.

**What Next**

NA

## DPUI-934

(Error) Invalid value for app option %s

**Description**

App option must be set to a non-zero value

**What Next**

Please set the correct app option value. NA

## DPUI-935

(Error) Invalid value for app options %s and %s for a design with total cell count %d %s

**Description**

App options value are too small to accomodate all the cells in the design

Feedback

**What Next**

Please set the correct app option value. NA

---

## DPUI-936

(error) Either app_option %s or %s need to be specified for conducting the auto_partition

**Description**

Either of App option must be set to a non-zero value

**What Next**

Please set the correct app option value. NA

---

## DPUI-937

(error) Do nothing if only one pin is specified.

**Description**

Need specify more than one pin.

**What Next**

NA

---

## DPUI-938

(error) Can't find tech constraints for current design.

**Description**

Both of lib and version must be set correctly.

**What Next**

Please set the correct technology configuration.

---

## DPUI-940

(error) Can't get technology version, please use set_floorplan_tech_constraint to set.

**Description**

Technology version must be set.

Feedback

**What Next**

Please set the correct technology configuration.

---

## DPUI-941

(error) Can't get technology node, please use set_technology.

**Description**

technology node is unset.

**What Next**

Please set the correct technology node.

---

# DPWF

---

## DPWF-201

(Warning) Found %s. This information will not be transfered to IC Compiler.

**Description**

The *write_floorplan* command found data that is not supported in IC Compiler. This data will not be transferred to IC Compiler.

**What Next**

Verify that this data is not needed while working in IC Compiler and proceed with the flow.

---

## DPWF-202

(warning) %d objects ignored, as their types are not supported.

**Description**

-objects option only supports cells, pins, blockages, voltage areas, bounds, edit groups, and corridors. Objects of other types will be ignored.

**What Next**

Specify only objects of supported types.

---

## DPWF-203

(warning) Both macros and cells values are specified; macros will be ignored.

Feedback

**Description**

*-include* and *-exclude* options support both *macros* and *cells* values; when they are both specified, *cells* is used as more general.

**What Next**

Specify *cells* when you want both macros and standard cells; use *macros* for macro cells only.

---

## DPWF-204

(warning) Voltage area %s is not associated with any power domain, so it will be ignored.

**Description**

Voltage areas must be associated with power domains, or they will not be output by write_floorplan.

**What Next**

Check your upf specifications and make sure voltage areas are related to power domains.

---

## DPWF-205

(warning) Option %s is obsolete, please use %s instead..

**Description**

This message informs you that the option specified in the information message will be obsolete. You are advised to use the specified replacement option instead.

**What Next**

Use the replacement command instead.

---

## DPWF-206

(Warning) %s overrides setting for %s.

**Description**

The two options may have a potential conflict.

**What Next**

Pleases review the input options based on demand and solve the conflict.

Feedback

### DPWF-207

(warning) Shape Pattern won't support icc format in command write_floorplan.

**Description**

This message informs you that shape pattern in the design won't support icc format in command write_floorplan.

**What Next**

Use icc2 format instead.

## DPX

### DPX-001

(Information) Distributed multi-processing workers are started successfully after %s.

**Description**

Workers specified by *dpx_host_options* have started successfully.

### DPX-002

(Information) Distributed multi-processing flow status: %s %s.

**Description**

It shows the current status of distributed multi-processing flow.

### DPX-003

(Error) Distributed multi-processing task %d fails because of %s.

**Description**

Distributed multi-processing task fails because of the described error. Please check logs under work_dir/debug_log or work_dir/dpx_log for details. Frequent cause of this error includes crash in workers, dpx_host_options are not valid, jobs are killed because of timeout.

Feedback

## DPX-004

(Error) Failed to launch distributed multi-processing workers because dpx_host_options is not specified or -num_process value in dpx_host_options is not positive.

**Description**

Distributed multi-processing workers are specified by

```
set_host_options -name dpx_host_options -num_process ....
```

When they are not specified, *start_dpx_workers* fails.

**What Next**

```
start_dpx_workers(2)
```

## DPX-005

(Information) Distributed multi-processing flow finishes successfully %s.

**Description**

It shows the current status of distributed multi-processing flow.

## DPX-006

(Error) Distributed multi-processing flow fails %s.

**Description**

Distributed multi-processing flow fails. The detailed information can be found in previous error messages. To debug this, please check dpx_log and debug_log under work_dir.

## DPX-007

(Warning) Failed to launch distributed multi-processing workers after %s.

**Description**

Distributed multi-processing workers are specified by

```
set_host_options -name dpx_host_options -num_process ....
```

When they are not specified correctly, *start_dpx_workers* fails. One possible cause is that the timeout setting in dpx_host_options is too short. Please check logs in dpx_debug directory under work directory specified by start_dpx_workers command for details. Non-distributed flow is performed instead.

Feedback

### What Next

```
start_dpx_workers(2)
```

---

## DPX-008

(Information) Requesting distributed workers...

### Description

*start_dpx_workers* uses information specified by dpx_host_options to request workers.

---

## DPX-009

(Information) All distributed workers stopped.

### Description

*stop_dpx_workers* stops all distributed workers.

---

## DPX-010

(Error) Failed to get distributed workers because they are not reserved yet.

### Description

It is required to use *start_dpx_workers* to acquire all workers before *get_dpx_workers* is used.

### What Next

```
start_dpx_workers(2)
get_dpx_workers(2)
```

---

## DPX-011

(Error) Failed to get information of distributed workers.

### Description

Workers are not responding to query request. Please check workers' status.

### What Next

```
start_dpx_workers(2)
get_dpx_workers(2)
```

Feedback

## DPX-012

(Error) DPX is not enabled.

### Description

App option dpx.enable has to be set to true before start_dpx_workers command.

### What Next

```
start_dpx_workers(2)
get_dpx_workers(2)
```

## DPX-013

(Warning) Synchronization stage %d (%s) takes %lu seconds.

### Description

Synchronization between workers may take long time because of unbalanced work loads in workers.

## DPX-014

(Warning) Number of cores (%d) specified in submit_command of dpx_host_options is less than number of cores (%d) specified by -max_cores; runtime will degrade.

### Description

Number of cores used by DPX workers is equal to min(number of cores specified in -max_cores in dpx_host_options or global host option in master, cores specified in submit_command of dpx_host_options). For example,

set_host_options -name dpx_host_options -num_processes 2 -max_cores 4 -submit_command "qsub -pe mt 2"

Then every worker uses min(4, 2) = 2 cores. The reason why number of cores specifed in -max_cores in dpx_host_options is not always used is that farm/grid admin might kill job when CPU overutilization happens.

Our recommended usage is that the number of cores specified in submit_command should be equal or greater than the number of cores specifed in -max_cores.

### What Next

Please correct the core specification in either -max_cores or submit_command.

Feedback

## DPX-015

(Error) Task %d fails because of error in worker scripts.

**Description**

The given task fails because of errors in worker scripts.

**What Next**

Please check workers' log files under work_dir/debug_dir for script errors.

## DPX-016

(Error) %s; and please check in workers' logs under %s. Details:

**Description**

Workers crashed.

**What Next**

Please check workers' log files for stacktraces.

## DPX-017

(Error) %s; please check in workers' logs under %s. There might not be enough memory or CPU cores reserved for workers. Details:

**Description**

One of possible reasons is that there is not enough memory or CPU cores reserved for workers, and farm admin kills these jobs that over-utilize resources.

**What Next**

Please make sure that there is enough resource reserved for every worker (e.g., check dpx_host_options).

## DPX-018

(Warning) Either time.estimate_all_corners or extract.extract_all_corners is set to false, which causes some runtime improvement features in DPX to be turned off.

**Description**

When time.estimate_all_corners or extract.extract_all_corners is set to false, certain runtime improvement features in DPX cannot be turned on.

Feedback

**What Next**

Please revert values of time.estimate_all_corners and extract.extract_all_corners to their default values.

# DWS

## DWS-0000

(error) Can't find module to implement part %s

**Description**

Datapath generation was unable to find an implementation module for the named synthetic part.

## DWS-0001

(error) Unable to initialize synthetic library

**Description**

Synthetic part management was unable to start.

## DWS-0002

(error) User design contains synthetic operator that is not available in synthetic library: %s

**Description**

The design being compiled is using a synthetic operator that has been marked as disabled in the synthetic library.

The most likely cause is that the synthetic operator requires a license that was not available to the current compilation.

## DWS-0003

(error) User design contains synthetic module that is not available in synthetic library: %s

**Description**

The design being compiled is using a synthetic module that has been marked as disabled in the synthetic library.

Feedback

The most likely cause is that the synthetic module requires a license that was not available to the current compilation.

---

## DWS-0004

(error) No legal implementation found for %s

**Description**

The synthetic library does not contain an implementation that is legal for the current design context.

**What Next**

Check the parameter values used in that instance. Check that the library can support an instance using those parameters.

---

## DWS-0005

(error) Implementation failed for %s,%s

**Description**

No implementation in the synthetic library was usable for the part in the named design context.

**What Next**

Check that the library has an implementation for the part. If you are using a Synopsys library, this is an internal error. Contact Synopsys.

---

## DWS-0006

(warning) Found module name conflict during DW implementation: %s

**Description**

Unexpected conflicting module names were found during the compilation of the named part.

**What Next**

Module names are required to be unique. Rename conflicting module names.

---

## DWS-0007

(warning) Unable to rename module "%s" to "%s"

Feedback

**Description**

Synthetic part management was unable to rename a module. The most likely cause is a conflicting module name.

**What Next**

Module names are required to be unique. Rename conflicting module names.

If renaming module doesn't resolve the issue, contact Synopsys.

---

## DWS-0008

(warning) Illegal DW module suffix: "%s"

**Description**

Synthetic part management found an unexpected module name suffix. This may trigger later issues. It is not a serious issue in the local design context.

**What Next**

This is an internal error. Contact Synopsys.

---

## DWS-0009

(warning) QoR might be affected because can't get license for %s

**Description**

One or more licensed implementations for the part couldn't be used. An existing un-licensed implementation was used. That implementation might affect final QoR of the design.

**What Next**

Check that needed licenses are available.

---

## DWS-0010

(warning) %s '%s' not found in synthetic library.

**Description**

A command referencing a synthetic library was unable to find the named object.

Feedback

**What Next**

Check that the library definition is correct. If this is a Synopsys synthetic library, contact Synopsys.

---

## DWS-0011

(warning) Pruned implementation '%s' because its dependency is pruned

**Description**

An implementation object was pruned from the synthetic library due to a dependent object being pruned.

---

## DWS-0012

(warning) Pruned implementation '%s' of '%s' due to dont_use setting

**Description**

An implementation of a part was pruned from the synthetic library due to a dont_use command.

---

## DWS-0013

(warning) Pruned all basic implementations of '%s' due to dont_use setting

**Description**

All basic implementation of a synthetic library object were pruned due to dont_use commands.

---

## DWS-0014

(warning) Synthetic libraries have component dependency issue

**Description**

A dependency issue is preventing a complete synthetic library analysis.

**What Next**

Check that synthetic library are defined correctly. If the compilation uses a Synopsys synthetic library, contact Synopsys.

Feedback

## DWS-0015

(error) Implementation failed for %s,%s

**Description**

This component is only available in total power mode.

**What Next**

Enable total power mode for this compilation.

## DWS-0016

(error) %s

**Description**

Unable to read the required synthetic library

## DWS-0017

(error) %s

**Description**

User specified universal module name prefix for DesignWare is not valid.

## DWS-0100

(fatal) Pseudocell function %s doesn't have an implementation in the reference library. Check library dont_use settings.

**Description**

The datapath generators tried to use a library cell function that is not available in the libraries used for this compilation.

**What Next**

Check library cell dont_use settings. If that doesn't resolve the issue, this is an internal error. Contact Synopsys.

## DWS-0101

(error) No library cell resources are available to compile %s,%s.\n Check library dont_use settings.

Feedback

**Description**

DesignWare target library characterization didn't find any usable library cells. The most likely cause is incorrect library "dont_use" cell markings.

**What Next**

Ensure that "dont_use" setting in the current compilation haven't marked needed cells as "dont_use".

If that doesn't resolve the issue, this is an internal error. Contact Synopsys.

---

## DWS-0102

(error) No reference libraries were found; unable to generate synthetic parts

**Description**

The target libraries used for the current compilation do not have any usable cells for datapath generation. Check library dont_use settings.

**What Next**

Ensure that the current compilation contains the correct target libraries.

---

## DWS-0103

(error) Insufficient library cells to generate synthetic parts. Need either one of nand2/nor2 or an inverter and one of and/or

**Description**

Datapath generation needs a minimum subset of target library cells. This subset consists of either a nand2 or a nor2 gate, or an inverter plus either an and2 or or2 gate.

**What Next**

Ensure that the libraries used in the compilation contain the minimum required cell subset.

---

## DWS-0104

(error) Unexpected license problem during compile is found on synthetic part: %s

**Description**

The design being compiled is using a synthetic part but the license check on this part failed.

Feedback

All required license should have been checked out before compile. This error indicates some unexpected license problem is detected during synthetic part synthesis.

---

## DWS-0200

(error) Invalid implementation '%s' for cell '%s'.

**Description**

The command tried to set a module or implementation that isn't valid for the named cell.

**What Next**

The most likely cause for this issue is an incorrect synthetic library. This may be an internal error. Contact Synopsys.

---

## DWS-0201

(error) The cell '%s' is not a synthetic cell, so set_implementation was not applied to it.

**Description**

The set_implementation command can only be used on synthetic part cells.

---

## DWS-0202

(error) The cell '%s' is neither a synthetic cell nor a hierarchical cell, so %s was not applied to it.

**Description**

The command can only be used for synthetic part leaf cells, or for hierarchical cells that contain synthetic parts.

---

## DWS-0204

(information) Option '%s' may not take any effect depending on optimization opportunity and lib cell availability

**Description**

The named command option may not have any effect. The option depends on how the cell is optimized during compilation, and on the availability of certain target library cells.

Feedback

## DWS-0205

(warning) Conflicting datapath architecture options between '%s' and -mult_arch on '%s'. The '%s' option setting is ignored.

**Description**

Multiplier architecture generation options set on the named instance conflict. The named option will be ignored.

## DWS-0206

(warning) Conflicting datapath architecture options between '%s' and -booth_encoding on '%s'. The '%s' option setting is ignored

**Description**

Booth encoding generation options set on the named instance conflict. The named option will be ignored.

## DWS-0207

(warning) Cells '%s' that are extracted into a single block, in design '%s', have different datapath architecture options. All cells in this OP_OP cell are optimized using the architecture option settings '%s'

**Description**

Cells that are extracted into a single datapath block must use the same datapath architecture options.

## DWS-0208

(warning) The '%s' option setting could be ignored if total power mode is not on

**Description**

The named datapath architecture option can only be used in the total power mode. If total power mode is not on, the datapath generation will not be affected by ths option.

## DWS-0209

(warning) The option settings on '%s' has changed, either overwriting or appending.

Feedback

**Description**

The command has changed existing optimization options previously set on the named instance.

---

## DWS-0210

(warning) Datapath generation options '%s' can't be applied due to missing library cell

**Description**

The named datapath architecture option can only be used if the target library contains needed library cells.

An example is if the compilation tries to force the usage of Booth multiplier cells, and the libraries used in the compilation don't have Booth multiplier cells.

---

## DWS-0211

(warning) The forced implementation %s set by set_implementation was ignored for cell %s

**Description**

A set_implementation command was used to force the use of the named implementation. The specified implementation can't be used for this cell.

---

## DWS-0212

(error) Can not find synthetic cell matching '%s'.

**Description**

The set_synlib_dont_use command can only be used on synthetic part cells.

---

## DWS-0213

(error) Specified library '%s' is not a synthetic library.

**Description**

The synthetic library is expected but a non-synthetic library is given. The tool can't proceed.

Feedback

## DWS-0214

(error) Can't find specified synthetic library to report. Either the library is not loaded, or the name is mispelled.

**Description**

The tool can't find any match in loaded libraries with given name.

**What Next**

Check spelling to make sure it matches one of the loaded synthetic libraries. If the library is not loaded, use *open_lib* command to load it.

## DWS-0215

(warning) Area information not found for cell %s

**Description**

The area information for the cell is missing.

## DWS-0216

(information) Added key list '%s' to design '%s'.

**Description**

Indicates that the listed set of licenses have been associated with the specified design. Accessing the design will require that one of the listed licenses can be successfully checked out.

**What Next**

No action is required since this is just an information message.

## DWS-0217

(warning) Detected unbound synthetic operator '%s' on instance '%s'. This is unexpected.

**Description**

DesignWare synthesis engine found unbound synthetic operator during compile. It indicates a potenial flow problem in the tool.

**What Next**

Contact Synopsys.

Feedback

## DWS-0218

(warning) Cells '%s' that are extracted into a single block, in design '%s', have different datapath gating options. The OP_OP cell will be using the gating option settings '%s'.

**Description**

Cells that are extracted into a single datapath block must use the same datapath gating options.

## DWS-0219

(error) The %s implementation is only available in total power mode. To enable total power mode use set_qor_strategy -stage synthesis -metric total_power

**Description**

The command allows to read libraries only when total_power mode is enabled.

**What Next**

Low power DW implementations are enabled only in total power mode. This may be an internal error. Contact Synopsys.

## DWS-0220

(error) Cannot use generic library cell '%s' for synthesis of Synchronizers

**Description**

The library cells to be used to map Synchronizer designs have to be technology library cells. They cannot be generic library (GTECH) cells. The specified library cell will not be used for the synthesis of Synchronizers.

## DWS-0221

(error) Cannot use non-sequential library cell '%s' for synthesis of Synchronizers

**Description**

The library cells to be used to map Synchronizer designs have to be sequential technology library cells. They cannot be combinational (or any other kind of non-sequenital) library cells. The specified library cell will not be used for the synthesis of Synchronizers.

Feedback

## DWS-0222

(warning) Cannot use library cell '%s' with dont_use attribute set for synthesis of Synchronizers

**Description**

The library cells marked as "dont use" - i.e dont_use attribute set to be true will not to be used to map Synchronizer designs because the dont_use attribute takes precedence over the list passed to set_syncff_library. The specified library cell will not be used for the synthesis of Synchronizers.

## DWS-0223

(Error) architecture %s cannot be specified with this command.

**Description**

The circuit of pparch/apparch is built dynamically based on constraints. This architecture can not be specified with set_implementation.

## DWS-0225

(error) Cell name or cell list is missing.

**Description**

Rounding positions can only be set on cells, not globally.

## DWS-0226

(error) Internal rounding can not be set on '%s' because it is not of multiplier type.

**Description**

Internal rounding can only be used for multiplier-based synthetic or DW component cells.

## DWS-0227

(error) Incorrect value for rounding or internal rounding position, must be >= 0 and round_pos >= round_pos_int.

**Description**

Rounding position must be larger or equal to internal rounding position. Both positions must be >= 0.

Feedback

## DWS-0300

(error) No implementation is available for module %s

**Description**

The datapath generation system can't implement the named module. The most likely cause is a missing implementation in the synthetic library.

**What Next**

This is an internal error. Contact Synopsys.

## DWS-0301

(error) No implementation is available for operator %s

**Description**

The datapath generation system can't implement the named operator.

**What Next**

This is an internal error. Contact Synopsys.

## DWS-0302

(error) Datapath generation failed for %s

**Description**

Datapath generation failed for the named cell.

**What Next**

This is an internal error. Contact Synopsys.

## DWS-0303

(error) Datapath generation function is not supported: %s

**Description**

Datapath generation tried to use a function that is not yet implemented.

**What Next**

This is an internal error. Contact Synopsys.

Feedback

## DWS-0304

(error) Blocks with POP multipliers as a single node cannot be implemented: %s

**Description**

The graph describing a datapath block has an inconsistency that prevents datapath generation from continuing.

**What Next**

This is an internal error. Contact Synopsys.

## DWS-0305

(error) DFG hierarchical node type not supported: %d

**Description**

The graph describing a datapath block has an inconsistency that prevents datapath generation from continuing.

**What Next**

This is an internal error. Contact Synopsys.

## DWS-0306

(error) Unexpected DW node in graph

**Description**

The graph describing a datapath block has an inconsistency that prevents datapath generation from continuing.

**What Next**

This is an internal error. Contact Synopsys.

## DWS-0307

(error) Unexpected node type in graph: %d

**Description**

The graph describing a datapath block has an inconsistency that prevents datapath generation from continuing.

Feedback

### What Next

This is an internal error. Contact Synopsys.

---

## DWS-0310

(warning) Hybrid DesignWare library '%s' is already in use and can't be modified!

### Description

The hybrid DesignWare library has been successfully set up in current session, and user is trying to change that setting, which is not allowed.

### What Next

```
dw.hybrid.synopsys_root(3)
dw.hybrid.library_path(3)
dw.hybrid.library_version(3)
```

---

## DWS-0311

(error) Failed to setup hybrid DesignWare library '%s'.

### Description

The hybrid DesignWare library can't be successfully set up. There could be multiple reasons for this failure, such as file permission issue, concurrent lock issue, or simply because user specified illegal data.

### What Next

```
DWS-0313(n)
dw.hybrid.synopsys_root(3)
dw.hybrid.library_path(3)
dw.hybrid.library_version(3)
```

---

## DWS-0312

(error) The specified value '%s' for variable '%s' is not valid.

### Description

The specified value is not valid to use hybrid DesignWare library. Please check your input.

### What Next

```
DWS-0313(n)
dw.hybrid.synopsys_root(3)
dw.hybrid.library_path(3)
dw.hybrid.library_version(3)
```

Feedback

## DWS-0313

(error) %s

### Description

This is a generic error message in hybrid DesignWare library setup. It indicates the hybrid DesignWare library setup is failed. Please follow the instructions in the message and fix the problem.

### What Next

```
dw.hybrid.synopsys_root(3)
dw.hybrid.library_path(3)
dw.hybrid.library_version(3)
```

## DWS-0314

(information) Hybrid DesignWare library "%s" is in use.

### Description

This information message indicates that the synthetic libraries being used are from hybrid DesignWare library root, instead of the one from current image of the tool.

### What Next

```
dw.hybrid.synopsys_root(3)
dw.hybrid.library_path(3)
dw.hybrid.library_version(3)
```

## DWS-0315

(warning) The design "%s" contains synthetic operator or instance that was previously compiled with a different DesignWare version "%s".

### Description

The tool found that the specified design was compiled with a different DesignWare version than current. It may cause problem in datapath synthesis for some components. User should avoid using different versions of the tool for datapath synthesis in one design.

## DWS-0316

(error) It's too late to activate hybrid DesignWare library in this session.

Feedback

**Description**

User tried to use hybrid DesignWare library feature but it's too late to do so in current session.

The hybrid DesignWare library feature must be activated before any synthetic library reading commands are called, such as *elaborate*, *analyze*, *set_top_module*, *compile_fusion* etc.

**What Next**

For more details, refer to the DesignWare reference manual.

---

## DWS-0400

(error) Implementation of instance %s failed in module %s

**Description**

The implementation of the named instance, contained within the named module of a hierarchical static part failed.

**What Next**

This is an internal error. Contact Synopsys.

---

## DWS-0401

(error) Elaboration of module %s:%s in %s using parameters %s failed

**Description**

RTL elaboration failed on the named synthetic library module and implementation, using the named set of parameters, failed.

**What Next**

The likely cause is an inconsistency between RTL sources used in a synthetic library, and the synthetic library. If this is for a Synopsys library, contact Synopsys.

---

## DWS-0402

(error) Can't find module to implement part %s

**Description**

Hierarchical static part implementation was unable to find the needed module to implement the named contained synthetic part.

Feedback

**What Next**

This is an internal error. Contact Synopsys.

---

## DWS-0403

(error) Can't find specified module. Probably it has been ungrouped. Please try again with -no_autoungroup option.

**Description**

Hierarchical static part implementation was unable to find the needed module to implement the named contained synthetic part.

**What Next**

This is an internal error. Contact Synopsys.

---

## DWS-0500

(information) Couldn't locate model: %s and label: %s, training ML model

**Description**

specify the correct path to trained ml model and label.

**What Next**

For internal use, contact Synopsys.

---

## DWS-0501

(error) unable to read files %s and %s, using default flow

**Description**

trained ml model and label files not found.

**What Next**

For internal use, contact Synopsys.

---

## DWS-0502

(error) couldn't locate data file %s for training, exiting ML flow

**Description**

starting ML prediction

Feedback

**What Next**

For internal use, contact Synopsys.

---

## DWS-0503

(error) ML flow failed

**Description**

ML flow failed.

**What Next**

For internal use, contact Synopsys.

---

# ECO

---

## ECO-001

(error) Lib '%s' of reference lib cell '%s' is not a reference lib of lib '%s'.

**Description**

You receive this error message when you attempt to use a reference lib cell. However, its library is not part of the reference libary list on a library.

**What Next**

Use set_ref_libs to add the library.

---

## ECO-002

(Warning) Name of net %s is not same with the port(s) it is connected.

**Description**

Name of a net is not same with the port(s) it is connected.

**What Next**

Manually change the name of either the net or a port later.

---

## ECO-003

(error) Unable to find hierarchy %s; %s.

Feedback

**Description**

Unable to find the hierarchy.

**What Next**

Make sure the hierarchy exist.

---

## ECO-004

(Error) library cell '%s' is not a buffer.

**Description**

You recieve this error message, if the library cell matching the specified name is not a buffer library cell from the target library.

**What Next**

Check to make sure that the libray is set correctly and use the buffer.

**See Also**

- report_lib

---

## ECO-005

(Error) '%s' is a driving pin/port.

**Description**

This error message occurs if it is a driving pin/port.

**What Next**

specify load pin/port.

---

## ECO-006

(Error) Unable to find the hierarchy '%s'.

**Description**

This error message occurs if the name of hieararcy can not be found.

**What Next**

specify correct hierarchy.

Feedback

## ECO-007

(Error) All loads are not under the same connection.

**Description**

This error message occurs if any loads are connected to the different connections.

**What Next**

specify loads with the same connection

## ECO-008

(error) '%s' is not a driver pin/port.

**Description**

The specified pin/port is not a driver.

**What Next**

Specified the driver pin/port.

## ECO-009

(error) '%s' is not a load pin/port.

**Description**

The specified pin/port is not a load.

**What Next**

Specified the load pin/port.

## ECO-010

(error) pin_port:'%s' does not have no location

**Description**

There are no location for the pin or port. The location is required for this command.

**What Next**

Set the location

Feedback

## ECO-011

(warning) Reference change of instance '%s' from '%s' to '%s' is ignored.

**Description**

The reference of this instance is soft macro and this kind of reference change cannot be supported by change_link currently, so ignore it.

## ECO-012

(warning) Can't set location for cell instance "%s".

**Description**

This message is shown when the tool can't set the location of cell instance.

## ECO-013

(Error) Target module "%s" doesn't exist in golden.

**Description**

This message is shown by eco_netlist when the module in -compare_target_modules doesn't exist in golden block.

**What Next**

Check the target modules name and ensure it exists in golden block.

## ECO-014

(Error) The reference %s of instance %s in %s block cannot be resolved or is not in target module list.

**Description**

This message is shown by eco_netlist when the reference of module instance can not be resolved or is not in target module list when doing partial diff.

**What Next**

Make sure that all instances in both working and golden block can be resolve. If you are doing partial netlist diff and the reported reference module get changed or is not in working, make sure it exists in golden and is included in target module list.

Feedback

## ECO-015

(Warning) Not support adding buffer in primary Voltage Areas '%s' whose associating power domains have no hierarchy cells.

**Description**

This message is shown when there is a voltage area whose is_primary is true but all of its associating power domains have no hierarchy cells (e.g. all elements of power domain are leaf cells). If the net to buffer crosses such primary voltage area, the VA will be treated as a blocked region that no buffers will be added inside.

**What Next**

User can try to change such primary VA as a gas-station then run this buffering command again.

## ECO-016

(Error) Cell %s has no original information recorded.

**Description**

This message is shown by revert_cell_sizing when the cell is not resized by size_cell or has been reverted before.

**What Next**

Please remove it from the input list and run command again.

## ECO-017

(Info) Input and output routes are not merged after removing buffer %s.

**Description**

This message is shown by remove_buffers when the input and output routes of the removed buffer are not merged due to the following reasons.

- the routes are not aligned.
- the routes are not at same layer.
- the removed buffer has eco_legalized change status.

**What Next**

You should run route command to make the route complete.

Feedback

## ECO-018

(error) The design %s has no site row.

### Description

You receive this error message when the design has no site row, and the following commands does not support designs without site row: *add_spare_cells*.

### What Next

Create site rows before using these commands.

## ECO-019

(error) There is no enough placeable area to add new spare cells.

### Description

You receive this error message when there is no enough space in target placeable regions. The reason may be too many cell number specified or the placeable area of the specified regions is small.

When calculating 'placeable area', the existing cells, blockages and exclusive bounds will be considered.

### What Next

Specify less number of cells or specify larger placeable regions. If you use the option '-repetitive_window', specify larger window size.

## ECO-020

(warning) Skip to spread spare cells belonging to the target %s (%s) since there is no enough available space.

### Description

There is no enough available space in the target region to spread spare cells. The command skips to do spreading for the spare cells belonging to this target region.

### What Next

Check the utilization of target region.

### See Also

- spread_spare_cells

Feedback

## ECO-021

(error) %s.

## ECO-022

(error) Failed to get voltage area for cell (%s).

**Description**

Cannot get voltage area for the given cell.

**What Next**

Check the voltage area of the cell.

**See Also**

- spread_spare_cells
- get_voltage_areas

## ECO-023

(error) Failed to get library cell for cell (%s).

**Description**

Cannot get library cell for the given cell.

**What Next**

Check the library cell of the cell.

**See Also**

- spread_spare_cells
- get_lib_cells

## ECO-024

(error) The number of valid locations (%d) does not match with the number of cell to be spread (%d).

**Description**

The number of valid locations is not equal to the number of cell to be spread.

Feedback

**See Also**

- spread_spare_cells

---

## ECO-025

(Info) Routes are re-connected after removing buffer %s.

**Description**

This message is shown by remove_buffers when the input and output routes of removed buffer are re-connected.

**What Next**

No need to re-route to keep the route complete after removing buffer.

---

## ECO-026

(Error) The specified pin or port (%s) has already been connected to other virtual connection.

**Description**

This error only happens when the specified pin or port has already been connected to other virtual connection.

**What Next**

Please re-specify the pin or port to be connected.

---

## ECO-027

(Error) The specified virtual connection does not exist.

**Description**

This error only happens when the specified virtual connection does not exist.

**What Next**

Please specify the valid virtual connection name.

---

## ECO-028

(Error) The given pin or port (%s) is not connected to the specified virtual connection (%s).

Feedback

**Description**

This error only happens when the specified pin or port is not connected to the specified virtual connection.

**What Next**

Please input valid pin or port.

---

## ECO-029

(Error) The virtual connection (%s) already exists.

**Description**

This error only happens when the specified virtual connection already exists.

**What Next**

Please specify the new virtual connection name.

---

## ECO-030

(error) There is no unmapped eco cells to be placed

**Description**

There is no eco cells to be placed

**What Next**

Please check the eco cell's attributes: "is_fs_eco_add" as TRUE and "eco_change_status" is one of {create_cell, add_buffer, add_buffer_on_route, change_link, size_cell}.

**See Also**

- place_freeze_silicon

---

## ECO-031

(error) Cell %s is not mappable.

**Description**

This command only supports mapping eco cell added by freeze silicon eco and still not mapped. It must be leaf cell (attribute "is_hierarchical" is FALSE) and have attributes: "is_fs_eco_add" as TRUE and "eco_change_status" as one of {create_cell, add_buffer, add_buffer_on_route, change_link, size_cell}.

Feedback

### What Next

Specify correct eco cell and rerun the command.

### See Also

- place_freeze_silicon
- map_freeze_silicon

---

## ECO-032

(Error) Some eco cells has no corresponding spare cells to swap.

### Description

ECO lib cells and the lib cells of spare cells may have psc_type_id or bitmap, or neither. This command will map eco cells to spare cells based on these lib cell attributes. For eco cells whose lib cells having psc_type_id, they can be swapped with PSC fillers whose lib cells also having psc_type_id. This attribute is manually set by user for traditional PSC mapping. For eco cells whose lib cells having bitmap, they can be swapped with PSC fillers whose lib cells also having bitmap. This attribute is automatically set by derive_programmable_spare_cell_mapping_rules for advanced PSC mapping. For eco cells whose lib cells without psc_type_id and bitmap, they can be only swapped with non-PSC spare cells of same library cell name. This is logical spare cell based mapping. This error message occurs when 1. there is any eco cell whose lib cell has psc_type_id but there is no PSC filler whose lib cell has psc_type_id. There are three possible reasons: 1) psc_type_id is set on ECO lib cells but not set on PSC filler lib cells 2) PSC filler cell instances of these lib cells are not created by create_stdcell_fillers 3) attribute is_spare_cell is not set on PSC filler cell instances. 2. there is any eco cell whose lib cell has bitmap but there is no PSC filler whose lib cell has bitmap. There are three possible reasons: derive_programmable_spare_cell_mapping_rules has been applied on ECO lib cells but not on PSC filler lib cells. 2) PSC filler cell instances of these lib cells are not created by create_stdcell_fillers 3) attribute is_spare_cell is not set on PSC filler cell instances. 3. there is any eco cell with neither psc_type_id nor bitmap, but the design has no non-PSC spare cell.

### What Next

Firstly, please confirm which kind of mapping you are going to do. 1) logical spare cell based mapping 2) traditional PSC mapping 3) advanced PSC mapping Secondly, please read the user guide of corresponding mapping and make sure the flow is all correct.

Feedback

- create_cell
- create_stdcell_fillers
- check_freeze_silicon
- place_freeze_silicon
- derive_programmable_spare_cell_mapping_rules

---

## ECO-033

(Error) Can't find any unmapped eco cells in the design.

**Description**

This error message occurs when there are no any unmapped cell which it must have attributes: "is_fs_eco_add_cell" as TRUE and "eco_change_status" is one of {create_cell, add_buffer, add_buffer_on_route, change_link, size_cell}.

**What Next**

Use eco_netlist -freeze_silicon to get unmapped cells or set_attribute..

**See Also**

- eco_netlist
- set_attribute

---

## ECO-034

(Error) No spare cell found under the region: %s %s in the design.

**Description**

This error message occurs when there is no any spare cell under a region in the design.

**What Next**

add the spare cell by either design import, verilog eco, netlist editing or add_spare_cells.

---

## ECO-035

(Error) No %s spare cell found under the region: %s %s in the design.

Feedback

**Description**

This error message occurs when there is no any spare cell of a particular lib cell under a region in the design.

**What Next**

add the spare cell by either design import, verilog eco, netlist editing or add_spare_cells.

---

## ECO-036

(Error) %d %s spare cell is less than %d %s ecoCell under the region:%s %s.

**Description**

This error message occurs when there is no enough spare cell of a particular lib cell under a region in the design.

**What Next**

add enough spare cells by either design import, verilog eco, netlist editing or add_spare_cells.

---

## ECO-037

(Error) Option "%s" doesn't support collection input.

**Description**

This message is shown when the command option can't receive collection input.

**What Next**

Remove the collection input and try again.

---

## ECO-038

(Warning) Skip the gas station voltage Area %s.

**Description**

This Warning message occurs when the command found a voltage area which is gas station. And the gas station voltage area is not supported yet by this command.

**What Next**

None

Feedback

## ECO-039

(Error) No voltage area overlaps with the specified boundary.

**Description**

This error message occurs when there is no voltage area overlaps with the specified boundary.

**What Next**

Specify a new boundary that have voltage areas overlap with it.

## ECO-040

(Error) No voltage area supported in the specified voltage area list.

**Description**

This error message occurs when there is no voltage area supported in the specified voltage area list. This command does not support gas station.

**What Next**

Specify supported voltage areas.

## ECO-041

(Error) Failed to get the placeable area for the hierarchical cell %s.

**Description**

This error message occurs when the command failed to get the placealbe area for the specified hierarhcical cell to place new cells. This may happend because there is no voltage area or bound associated with the hierarchical cell.

**What Next**

Associate the hierarchical cell to a power domain and its voltage areas or specify another hierarchical cell.

## ECO-042

(error) The current design (%s) is not same as the design (%s) with virtual connection.

Feedback

**Description**

This error message occurs when the current design is not same as the design with virtual connection.

**What Next**

User may switch to the design with virtual connection and clean up the virtual connection. And then switch to the working design and build new virtual connection for this design.

---

## ECO-043

(error) No virtual connection matched the specified objects.

**Description**

This error message occurs when no virtual connection matched the specified objects.

---

## ECO-044

(error) Cannot map eco cell %s to spare cell %s, which is in different voltage area.

**Description**

Eco cell must be mapped to spare cell in same voltage area.

**What Next**

Specify spare cell in same voltage area and rerun the command.

**See Also**

- map_freeze_silicon

---

## ECO-045

(error) Cannot map eco cell %s to spare cell %s, whose reference lib cell is not compatible.

**Description**

Eco cell must be mapped to spare cell of a compatible lib cell, which means either:

1. Eco cell and spare cell are of same reference lib cell. In this scenario, user can specify only one eco cell and one spare cell in the mapping pair.
2. Spare cell is programmable spare cell (PSC) filler, whose PSC type is same as the PSC type of the eco cell. In this scenario, user can specify one or multiple adjacent

Feedback

PSC fillers with the same PSC type of eco cell(s) in the mapping pair. 3. Spare cell is programmable spare cell (PSC) filler and PSC mapping rule is defined. In this scenario, user can specify one or multiple PSC fillers in the mapping pair.

**What Next**

Specify a compatible spare cell and rerun the command.

**See Also**

- map_freeze_silicon

---

## ECO-046

(error) Cannot map multi eco cells %s to spare cell %s

**Description**

Cannot map multi eco cells to one spare cell, unless the spare cell is a programable spare cell (PSC) filler.

**What Next**

Map different eco cells to different spare cells, or specify a PSC filler.

**See Also**

- map_freeze_silicon

---

## ECO-047

(error) Cannot map eco cells %s to multiple spare cells %s

**Description**

Cannot map one eco cell to multiple spare cells. Note: this command also does not support merging programmable spare cell (PSC) fillers. So user cannot specify multiple PSC fillers to map one eco cell as well.

**What Next**

Specify one spare cell and rerun the command.

**See Also**

- map_freeze_silicon

Feedback

## ECO-048

(error) Strategy %s is invalid for %s, whose orientation is %s.

### Description

Strategy specified must match orientation of the spare cell. E.g. for a R90 spare cell, pack_top is valid while pack_right is invalid.

### What Next

Specify correct strategy or do not specify strategy (use default strategy). Then rerun the command.

### See Also

- map_freeze_silicon

## ECO-049

(error) Strategy %s is invalid for %s, which are not is_placed.

### Description

Such strategy is designed for eco cells which are already put near expected locations. Attribute is_placed of such eco cells must be true.

### What Next

Please move eco cells to expected locations before using this strategy. If they are already in expected locations but is_placed is not true , please try to set phsycial_status attribute as placed. Or you could specify other strategies or do not specify strategy (use default strategy). Then rerun the command.

### See Also

- map_freeze_silicon

## ECO-050

(error) Size of PSC filler %s that is specified to map eco cells %s is not enough.

### Description

Size of PSC filler must be enough for all eco cells mapping to it. When mapping rule is defined, this message means no enough PSC fillers including compatible (including splitting/merging) PSC Types. Space of PSC filler under PG straps cannot be used if eco

Feedback

cells are not allowed to use. When closest rule is used, it is possible that firstly placed eco cells will split PSC fillers into fragments that make rest eco cells fail to place.

**What Next**

Select larger PSC filler or map rest eco cells to other PSC fillers. Then rerun the command.

**See Also**

- map_freeze_silicon

---

## ECO-051

(error) Unused white space (length %s, psc_type_id %s) at location {%s} cannot be recovered to be programmable spare cell(s).

**Description**

You receive this error message when there is no valid programmable spare cell (PSC) filler lib cell found for recovering the unused white space left by PSC cells after PSC mapping or PSC recycling.

**What Next**

If this message is issued when the option *-lib_cells_for_filler_recovery* is specified, please specify small enough PSC filler lib cells with the same PSC type in the command option. Otherwise, add reference libraries which contain small enough PSC filler lib cells with the same PSC type.

**See Also**

- map_freeze_silicon
- recycle_programmable_spare_cells

---

## ECO-052

(error) Feasibility check of programmable spare cells mapping failed.

**Description**

You receive this error message when the programmable spare cells (PSC) are not enough for the mapping of eco cells with PSC type.

Feedback

### What Next

Run command "check_freeze_silicon" to get more detailed information of the PSC feasibility check failure and add enough PSC fillers.

### See Also

- place_freeze_silicon
- check_freeze_silicon

---

## ECO-053

(info) %d cells have been recycled to be PSC fillers successfully.

### Description

This info shows how many cells with attribute 'psc_filler_is_used = true' have been recycled.

---

## ECO-054

(error) Mapping engine failed to find enough nearby programmable spare cells (PSC) for mapping %d eco cells with psc_type_id %d under voltage area %s.

### Description

You receive this error message when the nearby programmable spare cells (PSC) are not enough for mapping eco cells under the voltage area. Some programmable spare cells may be far awary from the target eco cells.

### What Next

Consider re-designing the ECO to use only the nearby available PSC resources.

### See Also

- place_freeze_silicon

---

## ECO-055

(error) Failed to place %d eco cells to the matched programmable spare cells (PSC), psc_type_id %d and voltage area %s.

### Description

You receive this error message when command failed to place the eco cells to the matched programmable spare cells.

Feedback

**See Also**

- place_freeze_silicon

---

## ECO-056

(info) Totally %d cells have not been mapped due to the programmable spare cell recovery issue or the other issues reported in previous command log.

**Description**

This info shows how many eco cells have not been mapped to programmable spare cells (PSC) due to the issue that there is no valid PSC filler library cell to fill the unused white space of PSC cells or the other issues reported by ECO-069.

**What Next**

For ECO-051: please refer to the error message ECO-051 printed by command and prepare valid PSC filler library cells in command option or in the reference libraries. Then rerun command with these eco cells again.

For ECO-069: please check the failure reason and rerun command with these eco cells after fixing the issue.

You can filter the mapped cells by the attribute eco_change_status and then pass the left cells to the comand again. For mapped eco cells, the eco_change_status is set to eco_legalized.

**See Also**

- place_freeze_silicon

---

## ECO-057

(info) %d cells have not been recycled to be PSC fillers due to the recovery issue.

**Description**

This info shows how many cells have not been recycled to be PSC fillers due to the issue that there is no valid PSC filler library cell to fill and recover the white space after recycling.

**What Next**

Please reference the error message ECO-051 printed by command and prepare valid PSC filler library cells in command option or in the reference libraries. Then rerun command with these cells again.

Feedback

**See Also**

- recycle_programmable_spare_cells

---

## ECO-058

(info) %d eco cells without PSC type (programmable spare cell) have not been mapped successfully.

**Description**

This info shows how many eco cells have not been mapped successfully for non-PSC type.

**See Also**

- place_freeze_silicon

---

## ECO-059

(error) Could not find any valid spare cell for user input buffering location (%s, %s, layer %d).

**Description**

You receive this error message when there is no valid spare cell for the user input buffering location.

**See Also**

- add_buffer_on_route

---

## ECO-060

(Error) There is no cell to be connected in the specified cells.

**Description**

You receive this error message when you attempt to use connect_freeze_silicon_tie_cells to connect cells with tie connection to tie cells but there is no valid cell to be connected to tie cell in the specified cells. The valid cell must have pins connected to tie net, and should be placed. The cells inside the sub block are not supported.

**What Next**

Specify placed cells with tie connection in top block.

Feedback

**See Also**

- connect_freeze_silicon_tie_cells

---

## ECO-061

(Warning) There are %s cells ignored in the specified cells.

**Description**

You receive this error message when you attempt to use connect_freeze_silicon_tie_cells to connect cells with tie connection to tie cells, and there are some invalid cells in the specified cells, these cells will be skipped and other cells will be connected to tie cells. A valid cell must have pins connected to tie net, and should be placed. The cells inside the sub block are not supported.

**What Next**

Nothing.

**See Also**

- connect_freeze_silicon_tie_cells

---

## ECO-062

(Error) No enough tie %s cells in the voltage area %s.

**Description**

You receive this error message when you attempt to use connect_freeze_silicon_tie_cells to connect cells with tie connection to tie cells, but there are not enough tie cells in the voltage area.

**What Next**

Add more tie cells if possible or specify fewer cells to be connected.

**See Also**

- connect_freeze_silicon_tie_cells

---

## ECO-063

(Error) No enough tie %s cells surrounding the target cells in the voltage area %s

Feedback

### Description

You receive this error message when you attempt to use connect_freeze_silicon_tie_cells to connect cells with tie connection to tie cells but there are not enough tie cells surrounding the target cells in the voltage area. This may also be caused by max_fanout or max_wire_length constrains.

### What Next

Broaden the max_fanout limitation to allow a tie cell to drive more loads. If you specify the option max_wire_length, also broaden this limitation.

### See Also

- connect_freeze_silicon_tie_cells

---

## ECO-064

(warning) The boundary {%s} of cell instance "%s" is not set or invalid.

### Description

The boundary of the target cell instance is not set or invalid and this would affect the correctness of command. Please make sure the cell boundary is set correctly.

### What Next

Check the boundary of target cell instance and set it correctly.

### See Also

- check_freeze_silicon
- place_freeze_silicon
- map_freeze_silicon

---

## ECO-065

(warning) Fail to set name of net {%s} to match names of ports that connects this net.

### Description

The name of a net should be same with the ports that it connects. This message is shown when tool fail to achieve this.

Feedback

### What Next

Check ports that connects this net by all_connected. Check whether there is already another net whose name is same with the port that connects this net.

---

## ECO-066

(Error) Eco legalization failed due to physical unfriendly cells.

### Description

You receive this error message when you attempt to use place_eco_cells to do minimum physical impact legalization with the option max_displacement_threshold, but failed because there are physical unfriendly cells. Here, "physical unfriendly cells" mean cells that have displacement larger than the max_displacement_threshold value.

Minimum physical impact legalization is the combination of free site only legalization and incremental(push non-eco cell) legalization. The engine will first try to do free site only legalization for target cells, and do incremental legalization for cells that have displacement larger the the *displacement_threshold*. But if there are cells have displacement larger the the *max_displacement_threshold*, the command will fail. And the physical unfriendly cells will be stored in the collection named epl_max_displacement_cells.

### What Next

You can raise the value for the option *max_displacement_threshold*, or you can decide to reject the ECO changes for physical-unfriendly cells in collection epl_max_displacement_cells, and redo minimum physical impact legalization.

### See Also

- place_eco_cells

---

## ECO-067

(warning) The layout change of the desgin %s has not been saved and will be lost after closed.

### Description

You receive this error message when the design is closed before saving layout change. The layout editing recording for the design has been started by "record_layout_editing -start", but has not been saved by calling "record_layout_editing -stop" before closing the design. After that the design is closed, the recorded data will be lost.

Feedback

## ECO-068

(warning) The previous recording of layout editing has not been saved and will be lost.

**Description**

You receive this error message when you start new layout recording before saving previous layout recording. when the new layout recording starts, the previous recording will be lost.

## ECO-069

(error) No available layout editing need to be saved for the current design.

**Description**

You receive this error message when you call "record_layout_editing -stop" to save the layout change but actually there is no recording that has been started by "recrod_layout_editing -start".

## ECO-070

(error) Failed to open the file %s for write to output the change file%s.

**Description**

You receive this error message when you specified an invalid file name for "record_layout_editing -output" or "record_layout_editing -undo_output".

**What Next**

Specify a valid file name. previous recording will be lost.

## ECO-071

(Error) The pin or port (%s) is under the first common branch of route from the specified loads.

**Description**

If the pin or port is not part of specified loads and is uner the first common branch of route from the specified load, the buffer will not be able to added to drive the specific loads.

**What Next**

Please re-specify the pin or port to buffer the specific loads.

Feedback

## ECO-072

(error) Could not find a compatible spare cell within the specified maximum distance %s for cell %s.

### Description

You receive this warning message when there is no valid compatible spare cell found within the specified maximum distance for the eco cell.

### What Next

Increase the maximum distance to spare cell and rerun command again.

### See Also

- size_cell
- add_buffer_on_route

## ECO-073

(error) Cell sizing failed for cell %s due to the spare cell aware checking.

### Description

You receive this warning message when failed to do cell sizing due to the spare cell aware checking not passed.

### What Next

Increase the maximum distance to spare cell and rerun command again.

### See Also

- size_cell

## ECO-074

(error) Block partition between working design and golden design is inconsistent for %s.

### Description

This message is shown by eco_netlist when -by_block is used. The working design and golden design have block partition difference and the name of the different block is shown in the message.

Feedback

### What Next

Make sure the block patition is consistent between working design and golden design.

### See Also

- eco_netlist

---

## ECO-075

(warning) In the netlist change of instance %s, the target reference %s is not in the reference library list of working library %s.

### Description

The target reference of this netlist change is not in the reference library list of working library. When source back this change, it would encounter the issue that the reference could not be found.

### What Next

Before source back the change list generated by eco_netlist, please add the library of this reference to the reference library list.

### See Also

- eco_netlist

---

## ECO-076

(error) In %s, two different sub blocks ("%s" and "%s") have the same top module name "%s";

### Description

This message is shown by eco_netlist when -cross_physical_hierarchy is used. The working (or golden) have two sub blocks which have the same top module name. Currently eco_netlist does not support this kind scenario.

### What Next

Make sure in working (or golden) there are no two sub blocks which have the same top module name.

### See Also

- eco_netlist

Feedback

## ECO-077

(info) %d buffers (ideally %d) have been added on net %s.

### Description

This info shows how many buffers have been added on the net considering the spare cell aware. Some place of net may have no buffer added for there is no compatible spare cell within the max searching distance.

### See Also

- add_buffer_on_route

## ECO-079

(warning) Programmable spare cell %s (psc_type_id %s) is skipped due to PG stripe overlap on %s side in layer { %s}, which is not allowed to overlap with PG stripe on the specified side of layers.

### Description

You receive this warning message when detect programmable spare cell (PSC) which has PG stripe overlap but this kind of PSC has been set with the mapping rule that it is not allowded to overlap with PG stripe on some side of layers. So this kind of PSC cells will be ignored and skipped during the PSC mapping.

### What Next

Check the mapping rules and make sure the PG overlap status of programmable spare cell is consistent with the mapping rule set.

### See Also

- place_freeze_silicon
- report_programmable_spare_cell_mapping_rule

## ECO-080

(error) Cell (%s) is not placed, it should be placed when -map_spare_cells_only is used.

### Description

The target eco cells should be placed when the option -map_spare_cells_only is used.

Feedback

### What Next

For unplaced cells, run place_freeze_silicon -no_spare_cell_swapping first to do coarse placement. Or move the unplaced cell to target location and set its attribute physical_status as placed.

### See Also

- place_freeze_silicon
- set_attribute

---

## ECO-081

(warning) The supply net for cell %s is not updated, because %s.

### Description

This message is shown when the tool will not update supply net for a cell.

If "in gas-station but non-single rail" is reported as the reason, it means the cell has more than one power or ground pin, which is not supported to update supply net in gas station.

### What Next

If "in gas-station but non-single rail" is reported, specify single-rail reference when creating new cell in gas station.

---

## ECO-082

(Warning) no driver found for cell %s. Fail to update supply for eco buffer tree includes this cell.

### Description

This Warning message occurs if no driver found for the cell when updating supply nets for cells.

### What Next

Fix the connections for the cell.

### See Also

- eco_update_supply_net

Feedback

## ECO-083

(warning) Total %u cells specified by -cells are skipped to update supply nets.

### Description

This message is shown if some cells are skipped to updated supply nets when using "eco_update_supply_net -cells". This command only updates buffers in the top block that is added by timing eco commands. And for other type cells, the command will skip them and not update the supply nets.

### What Next

Specify supported cells.

### See Also

- eco_update_supply_net

## ECO-084

(info) No eco timing cell need to update supply net.

### Description

This information shows if no buffer need to update supply net. When "-cells" is specified, the message is issued if the supply nets for all supported buffers has already been updated in the specified cells; otherwise, the message is issued when the supply nets for all supported buffers has already been updated in the top block.

### What Next

Nothing

## ECO-085

(warning) Failed to update supply nets for the buffer tree driven by %s.

### Description

This message occurs when there is any mv violation during updating supply nets for the buffer tree. For example, the command failed to annotate supply on the buffer tree, or some buffers/inverters in the tree are invalid, either the lib cell type is wrong, or they cannot be even put there (logically and physically).

The cells that failed to update supply net will be added to the collection $ecoUpdateSupplyFailedCells.

Feedback

**What Next**

- Use *fix_mv_design -buffer* to fix any MV legality issues such as Power domain-Voltage area mismatch.
- Use *add_buffer_on_route -select_mv_buffers* to enable MV legality checks when inserting buffer.
- Please run *check_bufferability* to report information for supply assignment failure and additional details.
- Check if appropriate supplies are available in buffered power domain.

**See Also**

- eco_update_supply_net
- check_bufferability
- fix_mv_design
- add_buffer_on_route

---

## ECO-086

(warning) Failed to update supply net for cells in collection $%s.

**Description**

This message occurs when there is any cell that failed to update supply net due to mv violation. And the cells that failed to update supply net will be added to the collection $ecoUpdateSupplyFailedCells.

**See Also**

- eco_update_supply_net

---

## ECO-087

(error) Failed to update supply nets for all target cells.

**Description**

This message occurs when failed to update supply nets for all target cells due to mv violation. Here "target cells" means the cells specified by the option "-cells" or all timing cell cells that have no supply nets set yet. And the cells that failed to update supply nets will be added to the collection $ecoUpdateSupplyFailedCells.

Feedback

**See Also**

- eco_update_supply_net

## ECO-088

(info) Total %u cells have updated supply nets.

**Description**

This information shows how many cells are updated to set supply nets.

**What Next**

Nothing

## ECO-089

(Warning) no load found for cell %s. Fail to update supply for eco buffer tree includes this cell.

**Description**

This Warning message occurs if no load found for the cell when updating supply nets for cells.

**What Next**

Fix the connections for the cell.

**See Also**

- eco_update_supply_net

## ECO-090

(warning) Totally %s programmable spare cells are skipped due to the PG overlap rule violation under %s. The detail number is ( %s).

**Description**

You receive this warning message when detect programmable spare cells (PSC) which have PG overlap but no such kind of mapping rule is specified. This kind of PSC cells will be ignored and skipped during the PSC mapping.

Feedback

### What Next

Check the mapping rules and make sure the PG overlap status of programmable spare cell is consistent with the mapping rule set.

### See Also

- place_freeze_silicon
- report_programmable_spare_cell_mapping_rule

---

## ECO-091

(error) The programmable spare cells %s in one mapping pair are not adjacent and they cannot be merged together for mapping eco cells.

### Description

When specifiy multiple programmable spare cells for one mapping pair, these programmable spare cells must be adjacent and can be merged together for the mapping.

### What Next

Specify correct adjacent programmable spare cells for this mapping pair.

### See Also

- map_freeze_silicon

---

## ECO-092

(error) Programmable spare cells clustered within the bbox %s.

### Description

You receive this error message when the programmable spare cells clustered within the bbox so that many eco cells may have conflicts when they are mapped to the nearby spare cells. The mapping engine assumes the spare cells are distributed evenly.

### What Next

Spread spare cells more evenly or add more spare cells outside the bbox.

### See Also

- place_freeze_silicon

Feedback

## ECO-093

(info) Total %u target cells are found.

**Description**

This information shows how many target cells of this command. Definition of target cells is described in command man page.

## ECO-094

(warning) %s is not a target of this command, because %s.

**Description**

This object is not target of this command.

**What Next**

If this object is not expected to process, nothing need to do. If the reported reason means an issue, please fix it and re-run the command. Otherwise, please find commands support this object to process this object. Please see also man page of this command to find out what are its target objects.

## ECO-095

(warning) Meet issue at %s, because %s.

**Description**

Tool meets an issue at the reported object because the reported reason.

**What Next**

If this is not a influential problem, just ignore it. If this can be fixed, please fix it and re-run the command. Otherwise, please find commands support this object to process this command.

## ECO-096

(error) Failed to create bus guides for %d bus bundles: { %s }.

**Description**

You receive this error message when command failed to create bus guides for some of the input bus bundles.

Feedback

**What Next**

Please check the failed reason and setting, make sure there is enough resource to create the bus guides for these bus bundles.

---

## ECO-097

(error) Failed to set bus guide connection of %s for reason: %s.

**Description**

You receive this error message when command failed to set bus guide connection for the listed reason.

**What Next**

Check the reason listed and adjust the input options.

---

## ECO-098

(error) Cannot set bundle %s with partial preference, it has not be set with complete bus guide preference before.

**Description**

You receive this error message when try to set partial preference for the bundle listed which has not be set with complete bus guide preference before.

**What Next**

Please set complete guide preference for this bundle first.

---

## ECO-099

(error) Failed to do GCR resource setting for %s.

**Description**

You receive this error message when failed to do GCR resource setting for the bundle listed.

**What Next**

Please check the detail failed error messages.

---

## ECO-100

(Warning) Signoff ECO signatures were removed.

Feedback

### Description

You receive this warning message when you attempt to make ECO changes for design with signoff ECO signatures. If the design is not under recording mode, the design's signoff ECO signatures will be cleaned up with any ECO changes.

### What Next

Double check if the ECO changes are expected without enable signoff ECO change recording.

### See Also

- record_signoff_eco_changes

---

## ECO-101

(Warning) Singoff ECO logical recording is terminated due to functional ECO change.

### Description

You receive this warning message if you attempt to make functional ECO changes when you are recording the signoff ECO changes.

### What Next

Avoid to make functional ECO change when recording signoff ECO changes.

### See Also

- record_signoff_eco_changes

---

## ECO-102

(Error) Signature check between design and tcl file failed.

### Description

This check will be triggered by tcl command *record_signoff_eco_changes -start -input <tcl file>*. The tool will check the signoff ECO signature consistency between the tcl file and the current design. If the signatures are not consistent with each other, or there is no signature inside design or tcl file, the check will fail. The signoff eco changes recording is not started. And also the eco TCL file is not sourced. The signature check provide one extra layer protection to make sure the PT-ECO tcl file applied to the right design.

### What Next

Choose tcl file with consistent signatures as input.

Feedback

**See Also**

- record_signoff_eco_changes

---

## ECO-103

(Error) No signoff eco signature ininitalized in current design.

**Description**

This check will be triggered by tcl command *record_signoff_eco_changes -start -input <tcl file>*. The tool will check the signoff ECO signature consistency between the tcl file and the current design. If the signatures are not consistent with each other, or there is no signature inside design or tcl file, the check will fail. The signoff eco changes recording is not started. And also the eco TCL file is not sourced. The signature check provide one extra layer protection to make sure the PT-ECO tcl file applied to the right design.

**What Next**

Use *record_signoff_eco_changes -init* to initialize the signoff eco signature.

**See Also**

- record_signoff_eco_changes

---

## ECO-104

(error) Failed to get bus guide preference data of bundle %s for reason: %s.

**Description**

You receive this error message when failed to get some bus guide preference data for the listed reason.

**What Next**

Please check the reason listed.

---

## ECO-105

(error) There is one issue found when do GCR resource setting for bundle %s: %s.

**Description**

You receive this error message when failed to do GCR resource setting for the reason listed.

Feedback

**What Next**

Please check the failed reason.

---

## ECO-106

(warning) Bundle %s has no bus guide preference.

**Description**

You receive this warning message when try to remove the bus guide preference for the bundle which has not been set with bus guide preference.

---

## ECO-107

(error) There is one issue found when execute GCR operation: %s.

**Description**

You receive this error message when failed to execute GCR operation for the reason listed.

**What Next**

Please check the failed reason.

---

## ECO-108

(error) There is one issue found when route bus guides: %s.

**Description**

You receive this error message when failed to route bus guides for the reason listed.

**What Next**

Please check the failed reason.

---

## ECO-109

(warning) For bundle %s, the %s of layer %s is smaller than the minimal valid value. Use the minimal valid value %s instead.

**Description**

You receive this warning message when the specified setting of layer is smaller than the minimal valid value.

Feedback

## ECO-110

(error) Failed to initialize the bus buffer arrays for reason: %s.

**Description**

You receive this error message when the initialization of bus buffer arrays failed for the reason listed.

**What Next**

Please check the failed reason listed.

## ECO-111

(error) Failed to create bus buffer arrays in database for %s.

**Description**

You receive this error message when command failed to create bus buffer arrays in data base for some reason.

**What Next**

Please check the failed error messages printed previous.

## ECO-112

(error) Failed to %s for reason: %s.

**Description**

You receive this error message when command failed to do the operation in database for the reason listed

**What Next**

Please check the failed reason listed.

## ECO-113

(error) Failed to commit the changes of %s.

**Description**

You receive this error message when command failed to commit the changes of specified object or operation in database.

Feedback

**What Next**

Please check the failed reason;

---

## ECO-114

(Warning) Not support the route shape %s which is %s.

**Description**

Only horizontal and vertical route shapes are supported.

**What Next**

Change the route shape to horizontal and vertical route shapes.

---

## ECO-115

(Error) Found %s with bus guides %s.

**Description**

Only one net of bus to be processed by this command must have valid bus guides. Valid bus guides are route shapes created by route_bus_guides without -exploration option.

**What Next**

Run route_bus_guides to create valid bus guides before this command.

---

## ECO-116

(error) The inverter number from the driver to load are not even.

**Description**

This error occurs when tool detects that it will insert non-even inverters for the path from the driver to the load or tool cannot make this number even.

**What Next**

Please check the bufferable route shapes and use proper options to make it possible to insert even number of inverters from the driver to loads.

---

## ECO-117

(error) Cannot remove pattern %s, since it is referenced by %s.

Feedback

**Description**

The pattern cannot be removed because it is referenced by other objects.

**What Next**

Remove objects referencing this pattern before removing the pattern.

---

## ECO-118

(warning) The target location %s of clock bit net %s has conflit with the target location %s of one other clock bit net %s. Will skip adjusting the location of this clock bit net %s.

**Description**

You receive this warning message when trying to connect two clock bit nets to the same buffer of buffer array.

**What Next**

Please change the clock bit location to avoid conflict.

---

## ECO-119

(warning) Failed to derive the bus guide capacity. Set used capcity to be default value.

**Description**

You receive this warning message when command failed to calcluate the bus guide capacity from route width and buffer array pattern size.

---

## ECO-120

(warning) Set bus trunk width of bundle %s to be smaller than the minimal valid value. So the routes created are just for exploration and cannot be used to add bus buffer arrays.

**Description**

You receive this warning message when command sets small bus trunk width. Then the routes created are just for exploration and cannot be used to add bus buffer arrays.

---

## ECO-121

(error) Failed to do cell array snapping (cell location %s).

**Description**

You receive this error message when command failed to do cell array snapping.

Feedback

## ECO-122

(error) Failed to %s for reason: %s.

**Description**

You receive this error message when command failed to do the operation in database for the reason listed

**What Next**

Please check the failed reason listed.

## ECO-123

(warning) The attribute 'is_spare_cell' of programmble spare cell '%s' has not been set with true.

**Description**

You receive this warning message when command detects a programmable spare cell but its 'is_spare_cell' attribute is false not true. Then it will not be treated as a spare cell by ECO freeze-silicon commands.

**What Next**

Please set this cell's 'is_spare_cell' attribute to be true if it is a programmable spare cell.

## ECO-124

(warning) The attribute 'is_fs_eco_add' of ECO cell '%s' (eco_change_status is '%s') has not been set with true. It may be created by editing command not in Freeze-Silicon mode.

**Description**

You receive this warning message when command detects an ECO cell in Freeze-Silicon flow but its 'is_fs_eco_add' attribute is false not true. This ECO cell may be created by editing command not in Freeze-Silicon mode. Then it will not be treated as ECO cell by ECO Freeze-Silicon commands.

**What Next**

Please set this cell's 'is_fs_eco_add' attribute to be true if it is an ECO cell created in Freeze-Silicon flow. In Freeze-Silicon flow, the editing commands should be used in Freeze-Silicon mode.

Feedback

## ECO-125

(warning) Skip to connect pg net for the cell %s since no pg net found in its hierarchy.

### Description

This message is shown when there is no pg net in the hierarchy of the cell. After spare cell mapping, the engine tries to connect pg net for the eco cell, but failed since there is no existing pg net in the hierarchy of the cell. The engine only do pg connection for existing pg net, and do not create any pg net for connection.

### What Next

Do pg connection after netlist change or create needed pg nets before spare cell mapping.

### See Also

- place_freeze_silicon
- map_freeze_silicon
- connect_pg_net

## ECO-126

(Error) Eco legalization failed for free site only.

### Description

You receive this error message when you attempt to use place_eco_cells to do free site only legalization, but failed because there is no enough free sites to place cells. With free site only legalization, legalized cells will be treated as fixed and cannot be moved, so there may be high fragmentation caused by many fixed cells. And this situation will make it difficult for the legalizer to pack in the cells and can result in high displacements and long runtimes. Both *free_site_only* mode and *minimum_physical_impact* will call free site only legalization.

### What Next

Try to use *allow_move_other_cells* legalization mode by option *legalize_mode*.

### See Also

- place_eco_cells

## ECO-127

(Error) Not support derive terminal shape for %s %s.

Feedback

**Description**

This command can only derive terminal shape for block pin.

**What Next**

Create terminal shape manually. Then run this command again.

---

## ECO-128

(Error) Failed to derive terminal shape for %s, because %s.

**Description**

This command can only derive terminal shape for a block pin based on a unique obvious wire end inside its block. And this command can only derive terminal shape of one block pin for each block.

**What Next**

Modify wires inside that block to have a unique obvious wire end or create terminal shape manually. Then run this command again.

---

## ECO-129

(Info) Not support %s %s of net %s, it will be ignored.

**Description**

This command can only derive connection based on detail routes (manhattan path) of the specified net. Other shapes will be kept but ignored during deriving.

**What Next**

If you want this command use this shape, please convert it to a manhattan path and re-run this command.

---

## ECO-130

(Error) Failed to create %s %s.

**Description**

Tool meets an issue when creating an object.

**What Next**

Check why the object cannot be created. For example, user can try to create this object manually and see whether there is an error.

Feedback

## ECO-131

(error) Meet issue at %s, because %s.

**Description**

Tool meets an issue at the reported object because the reported reason.

**What Next**

If this is not a influential problem, just ignore it. If this can be fixed, please fix it and re-run the command. Otherwise, please find commands support this object to process this command.

## ECO-132

(Error) Failed to connect disjoint routes for %s, because %s.

**Description**

This command failed to connect disjoint routes.

**What Next**

Read the reason reported by this command. Connect not supported routes manually. Then run this command again.

## ECO-133

(error) Fail to get reference lib cell of '%s'.

**Description**

You receive this error message when you attempt to get the reference lib cell of the instance but failed.

## ECO-134

(Error) All spare cells under the region: %s %s in the design have trial mapped eco cell, so no available spare cell for %d input non-trial mapped eco cells.

**Description**

This error message occurs when there is no any available spare cell under a region in the design. The spare cells are not available since they have been trial mapped to eco cells before or set as is_eco_fs_dont_use true.

Feedback

**What Next**

add the spare cell by either design import, verilog eco, netlist editing or add_spare_cells.

---

## ECO-135

(Error) All spare cells of lib cell %s under the region: %s %s in the design have trial mapped eco cell, so no available spare cell for %d input non-trial mapped eco cells.

**Description**

This error message occurs when there is no any available spare cell of a particular lib cell under a region in the design. The spare cells are not available since they have been trial mapped to eco cells before or set as is_eco_fs_dont_use true.

**What Next**

add the spare cell by either design import, verilog eco, netlist editing or add_spare_cells.

---

## ECO-136

(Error) Total %d %s eco cells under the region:%s %s, %d of them have trial mapped spare cell, but other %d eco cells have no enough available spare cell (total %d).

**Description**

This error message occurs when there is no enough spare cell of a particular lib cell under a region in the design.

**What Next**

add the spare cell by either design import, verilog eco, netlist editing or add_spare_cells.

---

## ECO-137

(Error) The eco_change_status attribute of cell %s is not size_cell.

**Description**

This message is shown by revert_cell_sizing when the cell has no eco_change_status attribute or its value is not size_cell.

**What Next**

Please remove it from the input list and run command again.

Feedback

## ECO-138

(warning) Under voltage area %s, the width %s of %s with same reference lib cell %s (psc_type_id is %s) is not a multiple of the smallest lib cell width %s with the same psc_type_id. This would cause unrecoverable white space left after eco cell mapping.

### Description

You receive this warning message when command detects the width of some cells is not a multiple of the smallest lib cell width which would be used for the unused white space recovery. This would cause some errors (such as ECO-051: unrecoverable white space) during the eco cell mapping in command place_freeze_silicon or map_freeze_silicon.

### What Next

Please try to add a programmable spare cell (PSC) filler lib cell which has the same psc_type_id and a small with. The width of all the eco cells and programmable spare cell with same psc_type_id can be divisible by this small width.

## ECO-140

(Error) Failed to create logic equivalence change list for cell '%s' because its library cell '%s' has invalid function string.

### Description

This message is shown by create_freeze_silicon_leq_change_list when library cell of the cell to map has function string that can not be parsed successfully.

### What Next

Please check function string of the library cell.

### See Also

- create_freeze_silicon_leq_change_list

## ECO-141

(error) Failed to create logic equivalence change list for cell '%s' because we cannot get function string for its library cell '%s'.

### Description

This message is shown by create_freeze_silicon_leq_change_list when it's failed to get function string of the library cell.

Feedback

**What Next**

Please check function string of the library cell.

**See Also**

- create_freeze_silicon_leq_change_list

---

## ECO-142

(error) Failed to create logic equivalence change list for cell '%s' because its logic gate level exceeds max limitation.

**Description**

The maximum logic gate level create_freeze_silicon_leq_change_list supports is 2. We don't create logic equivalence change list for the cell whose logic gate level is greater than 2.

**See Also**

- create_freeze_silicon_leq_change_list

---

## ECO-143

(error) Failed to create logic equivalence change list for cell '%s' because it has multiple output pins.

**Description**

Multiple output pin is not supported by create_freeze_silicon_leq_change_list. The command will skip ECO cells that have more than one output pin.

**See Also**

- create_freeze_silicon_leq_change_list

---

## ECO-144

(error) Spare cell (%d) in the design is less than ECO cell (%d).

**Description**

Number of spare cell is not enough to perform logical equivalence change for all ECO cells in the design.

Feedback

**What Next**

Revert ECO changes.

---

## ECO-145

(Error) Failed to create logic equivalence change list for cell '%s' in max logic gate level.

**Description**

The maximum logic gate level create_freeze_silicon_leq_change_list supports is 2. This message means either spare cells is not enough to create logic equivalence change list for the cell or spare cell is enough but logic gate level of the replacement is greater than 2.

**See Also**

- create_freeze_silicon_leq_change_list

---

## ECO-146

(error) The programmable spare cells %s in one mapping pair are not of same direction (horizontal or vertical)

**Description**

When specifiy multiple programmable spare cells for one mapping pair, these programmable spare cells must be of same direction.

**What Next**

Specify correct programmable spare cells for this mapping pair.

**See Also**

- map_freeze_silicon

---

## ECO-147

(error) The lib cell %s with psc_type_id %s has a different height %s compared with the other same psc_type_id lib cells (height is %s).

**Description**

The command detects the same psc_type_id lib cells have different height sizes and this is not allowed. All the same psc_type_id lib cells shoud have the same height size.

Feedback

### What Next

Please set correct psc_type_id for the lib cells (the same type lib cells must have the same height size). If there already are PSC mapping rules set for this type, please clear all the mapping rules and set again. Finally re-try this command.

### See Also

- set_attribute
- remove_programmable_spare_cell_mapping_rule
- set_programmable_spare_cell_mapping_rule

---

## ECO-151

(warning) There is no available spare cell around the buffering location (%s, layer %d) within the maximum distance %s.

### Description

This message is shown when the tool could not find any available spare cell around the target buffering location within the maximum distance. And this would cause the subsequent spare cell mapping to be difficult to find a proper and nearby spare cell for mapping this new buffer eco cell in freeze-silicon flow.

### What Next

Please be careful about the spare cell mapping of this new buffer eco cell in the subsequent flow. Or undo the buffering of this location and choose a new buffering location which has available spare cell around.

### See Also

- add_buffer_on_route

---

## ECO-152

(warning) Skip net %s to find driver or load pins for reason: %s.

### Description

You receive this warning message when command failed the listed reason.

### What Next

Check the reason listed and specify the only driver or load for the net by the command set_bus_guide_connection.

Feedback

## ECO-153

(error) Failed to find bundles for bound %s.

**Description**

You receive this error message when command failed the listed reason.

**What Next**

Create bundle of the nets connected the cells attached to the bounds. For a bound, the command place_pipeline_bounds needs two bundles, one for input, and one for output.

**See Also**

- create_bundle

## ECO-154

(error) Failed to find driver pin or load pin for bundle %s.

**Description**

You receive this error message when command failed the listed reason.

**What Next**

Check the net connection of bundle and make sure the nets have driver and loads, and the owner cell of driver or load pins are placed.

## ECO-155

(error) %s.

**Description**

You receive this error message when command failed the listed reason.

## ECO-156

(error) Cell %s of the pin %s is not placed!

**Description**

You receive this error message when command failed the listed reason.

**What Next**

Make sure the cell is placed.

Feedback

## ECO-157

(error) The current design (%s) is not same as the design (%s) with pipeline bound info.

**Description**

This error message occurs when the current design is not same as the design with pipeline bound info.

**What Next**

User may switch to the design with pipeline bound info and clean up memory data with the command remove_pipeline_bounds_info. And then switch to the working design and place pipeline bounds with the command place_pipeline_bounds for this design.

## ECO-158

(error) Failed to find pipeline bound path created by place_pipeline_bounds from input %s.

**Description**

You receive this error message when command failed the listed reason.

**What Next**

Check the input.

## ECO-159

(error) Failed to %s for %d pipeline bound paths.

**Description**

You receive this error message when command failed to create bus guides or place bounds for some of pipeline bound paths.

**What Next**

Please check the failed reason, make sure there is enough resource to create the bus guides.

## ECO-160

(error) One move bound should connect to two bundles, one for input and one for output. But the bound %s is not, bundle number: input (%d), output(%d).

Feedback

**Description**

You receive this error message when command failed the listed reason.

**What Next**

For a bound, the command place_pipeline_bounds needs two bundles, one for input, and one for output. Check the bundle connection for cells attached to the bound.

---

## ECO-161

(error) The bundle %s connects more than two bounds.

**Description**

You receive this error message when command failed the listed reason.

**What Next**

The bundle should connect two bounds. Check the bundle connection to bounds.

---

## ECO-162

(error) Unused white space (length %s, height %s) at location {%s} cannot be recovered to be programmable spare cell(s).

**Description**

You receive this error message when there is no valid programmable spare cell (PSC) filler lib cell found for recovering the unused white space left by PSC cells after PSC mapping or PSC recycling.

**What Next**

If this message is issued when the option *-lib_cells_for_filler_recovery* is specified, please specify small enough and compatible PSC filler lib cells in the command option. Otherwise, add reference libraries which contain small enough and compatible PSC filler lib cells and they can be used to recover the empty space.

**See Also**

- place_freeze_silicon
- map_freeze_silicon
- recycle_programmable_spare_cells

Feedback

## ECO-163

(error) Mapping engine failed to find enough matched programmable spare cells (PSC) for mapping %d eco cells under voltage area %s.

### Description

You receive this error message when the matched programmable spare cells (PSC) are not enough for mapping eco cells under the voltage area. The programmable spare cells are less than target eco cells or some programmable spare cells are not mappable for the target eco cells.

### What Next

Consider re-designing the ECO to make sure there are enough available PSC resources.

### See Also

- place_freeze_silicon

## ECO-164

(error) Failed to place %d eco cells to the matched programmable spare cells (PSC) under voltage area %s.

### Description

You receive this error message when command failed to place the eco cells to the matched programmable spare cells.

### See Also

- place_freeze_silicon

## ECO-165

(error) Failed to create bus guides for %d pipeline bound paths, the driver bundles are: { %s }.

### Description

You receive this error message when command failed to create bus guides for some of the pipeline bound paths. The driver bundle is the first bundle on a pipeline bound path.

### What Next

Please check the failed reason and setting, make sure there is enough resource to create the bus guides for these pipeline bound paths.

Feedback

## ECO-166

(error) The inner length of %s is greater than even distance: %s.

**Description**

You receive this error message when the inner length is greater than even distance..

**What Next**

Please check the attribute inner_length of driver bundle or load bundle. And set the proper value.

**See Also**

- get_attribute

## ECO-167

(error) There are multiple %s as load for bound %s.

**Description**

You receive this error message when command failed the listed reason.

**What Next**

For pipeline path, one bound should only have one load, either bound or pin.

## ECO-168

(error) Failed to find load for bound %s.

**Description**

You receive this error message when command failed the listed reason.

**What Next**

For pipeline path, one bound should only have one load, either bound or pin.

## ECO-169

(error) %d eco cells (%s) are unmapped due to: %s.

**Description**

You receive this error message when detect eco cells are unmapped due to some reason.

Feedback

### What Next

Get the unmapped eco cells by the listed lib cells and check the failure reason.You can rerun place_freeze_silicon for these eco cells after fixing the issues.

### See Also

- place_freeze_silicon

---

## ECO-170

(warning) Skip to create_bus_guides for %d bounds { %s }.

### Description

You receive this error message when command failed to find valid bundles for bounds. Such bounds are skipped to create_bus_guides.

### What Next

For a bound, the command route_bus_guides needs two bundles, one for input, and one for output. Check the bundle connection for cells attached to the bound.

---

## ECO-171

(warning) The width %s of library cell %s (psc_type_id is %d) is not a multiple of the smallest lib cell width %s with the same psc_type_id or compatible psc_type_id. This would cause unrecoverable white space left after eco cell mapping.

### Description

You receive this warning message when command detects the width of one library cell with PSC type is not a multiple of the smallest library cell width with the same PSC type. This would cause unexpected issues during the PSC mapping, such as ECO-051: unrecoverable white space.

### What Next

Please try to add a small programmable spare cell (PSC) filler lib cell which has the same psc_type_id or compatible psc_type_id. The width of all the eco cells and programmable spare cell with same psc_type_id or compatible psc_type_id can be divisible by this small width.

Feedback

## ECO-172

(warning) The orientation (%s) set by mapping rule for PSC type id %d is none of the allowable orientation (%s) of library cell %s. Use the orientation set by mapping rule for this library cell instead.

### Description

You receive this warning message when command detects the orientation set by mapping rule is none of the allowable orientations of the library cell. Command will use the orientations set by maping rule for this library cell instead.

### What Next

Please make sure the orientation set by mapping rule is correct.

### See Also

- set_programmable_spare_cell_mapping_rule

## ECO-173

(error) The window size %s is smaller than the library cell size.

### Description

You receive this error message when the specified repetitive window size for add_spare_cells is smaller than the size of library cells.

### What Next

Specify window size which is larger than the max size of the specified library cells.

## ECO-174

(info) Total %d pipeline bound paths based on the input are skipped since the status is not qualified to apply the command.

### Description

You receive this error message when the path status is not qualified to apply the command.

### What Next

Please check the input to figure out the skipped paths with report_pipeline_bound_paths and find the reason.

Feedback

## ECO-175

(error) Failed to derive PSC mapping rules for all the %d input library cells.

### Description

You receive this error message when all the input lib cells are failed to derive PSC mapping rule. Please check the previous failure messages.

### What Next

Please check the previous failure messages and fix the issues reported.

### See Also

- derive_programmable_spare_cell_mapping_rules

## ECO-176

(info) Totally %d %s lib cells are failed to derive PSC mapping rules due to some issues reported in previous command log.

### Description

This info shows how many ECO/PSC library cells are failed to derive PSC mapping rules. Please check the previous command error messages.

### What Next

Please check the previous command error messages and fix the issues reported.

### See Also

- derive_programmable_spare_cell_mapping_rules

## ECO-177

(error) The width %s of library cell %s is not a multiple of the unit width %s and this would cause unexpected PSC mapping issues. Skipped the rule deriving for this library cell.

### Description

You receive this error message when command detects the width of one library cell is not a multiple of the unit width. The unit width is specified by command option or it is the smallest lib cell widthj in the input list. This would cause unexpected issues during the PSC mapping, such as ECO-051: unrecoverable white space.

Feedback

### What Next

Please try to specify a proper unit width or add a small programmable spare cell (PSC) filler lib cell to the input list. The width of all the input lib cells can be divisible by this small width.

### See Also

- derive_programmable_spare_cell_mapping_rules

---

## ECO-178

(error) Failed to check the physical information for library cell %s.

### Description

You receive this error message when command failed to check the physical information for this library cell which may have no physical data or have some error in the physical data, such as no frame view nor design view.

So the rule deriving for this library cell is failed.

### What Next

Please double check whether the specified library cell has physical information and it is valid for deriving PSC mapping rules.

### See Also

- derive_programmable_spare_cell_mapping_rules

---

## ECO-179

(Warning) Failed to derive voltage area at {%s}.

### Description

You receive this error message when command failed to derive voltage area at the reported location. This may cause tool fail in some voltage area specific features, e.g add_buffer_on_route may fail to use correct lib cell or to insert into correct hierarchy.

### What Next

Check the voltage area of reported location

---

## ECO-180

(warning) No valid bufferable locations can be found for the %s.

Feedback

**Description**

You receive this warning message when command failed to find any valid bufferable location for the specified bus.

It may be caused by: 1. The bus guide path is too short for buffering comparing with the repeat distance. 2. Could not find bufferable location along bus guide path, such as the bus guide path is too close to the blockages/macros.

**What Next**

Please re-specify suitable option value or modify the bus guide path if you still want to buffer the bus by this command.

---

## ECO-181

(error) Failed to derive PSC mapping rules for the following reason: %s.

**Description**

You receive this error message when command failed to derive the PSC mapping rule for the specified reason.

**What Next**

Please check the failed reason and fix the issues reported.

**See Also**

- derive_programmable_spare_cell_mapping_rules
- place_freeze_silicon

---

## ECO-182

(warning) There is no route on first net of driver bundle: %s.

**Description**

You receive this warning message when there is no route on first net of driver bundle. It will cause issue when you run the commmand place_pipeline_bounds for this pipeline bound path.

When you run route_bus_guides -bounds -by_route_file, the route is from the input file, however, the owner net of route for the pipeline bound path is not the first net of driver bundle. In long-hop flow, the command route_bus_guides keeps route with the first net of driver bundle and the command place_pipeline_bounds honors the route from first net of driver bundle to do bound placement.

Feedback

**What Next**

Please make sure the the owner net of route is first net of driver bundle for each pipeline bound path and run route_bus_guides again. You can change the owner net of route by modifying the input route file directly or by set_attribute and then dump out the route to file by write_routes.

```
For example,
set_attribute [get_shapes PATH*] owner [get_nets bus_12_7_net[0]]
set_attribute [get_vias VIA*] owner [get_nets bus_12_7_net[0]]
```

---

## ECO-183

(warning) The related pipeline bound path info will be clear since %s will be removed.

**Description**

You receive this warning message when command will remove bound or bundle. The related pipeline bound path info will be clear to avoid tool crash due to dirty data.

**What Next**

Please run route_bus_guides -bounds to re-generate pipeline bound path if needed.

---

## ECO-184

(info) Complete to check derived bound connection and pipeline bound paths before routing bus guide.

**Description**

You receive this message when route_bus_guides -check_only is used.

**What Next**

Please check the information and fix the issue if there is any. Otherwise, the command route_bus_guides will skip to build pipeline bound path and route for invalid bounds. After all issues are fixed, please run route_bus_guides without -check_only to create bus guides.

---

## ECO-185

(warning) bundle %s has no bus buffer array added, so skip the array writing for it.

**Description**

You receive this message when command finds the target bundle has no bus buffer array added, so this bundle will be ignored and skipped.

Feedback

### What Next

please make sure the target bundle has bus buffer array added, otherwise it will be ignored and skipped.

---

## ECO-186

(warning) There is no location to satisfy %s constraint for eco cell %s.

### Description

You receive this message when command cannot find the location to satisfy constraint.

### What Next

Please check design utilization and specified density threshold for density constraint. Please check the voltage area of eco cell for voltage area constraint.

---

## ECO-187

(warning) failed to find a proper reference lib cell (%s) for swapping the reference of ECO cell %s, which would have pin track alignment violation after PSC mapping.

### Description

You receive this warning message when there is no proper reference lib cell found for swapping the reference of ECO cell and this ECO cell would have pin track alignment violation after PSC mapping.

Normally the reference lib cell of ECO cell has a cell group (sharing timing data) defined and one proper lib cell in cell group can be selected to swap with the current reference of ECO cell considering the pin track alignment rule.

### What Next

Please check the cell group of ECO cell's reference lib cell and select a proper lib cell in cell group considering the pin track alignment rule. Finally use change_link command to change the ECO cell's reference to be the proper one.

### See Also

- place_freeze_silicon
- change_link

---

## ECO-188

(warning) failed to swap the reference lib cell from '%s' to '%s' on ECO cell %s.

Feedback

**Description**

You receive this warning message when command failed to swap the reference lib cell of ECO cell, which would have pin track alignment violation after PSC mapping.

Normally when the ECO cell has pin track alignment violation after PSC mapping, command would swap the reference lib cell of ECO cell to be proper one, which is selected from the same cell group.

**What Next**

Please check the ECO cell's reference lib cell and the new target reference. Make sure they are compatible for swapping. Finally use change_link command to change the ECO cell's reference lib cell.

**See Also**

- place_freeze_silicon
- change_link

---

## ECO-189

(error) The '%s' design '%s' has unmapped cells.

**Description**

The command "eco_netlist" should work on synthesised design.

You receive this error message when command finds that the golden or working design has unmapped cells.

**What Next**

The design should undergo synthesis. Make sure both the working and golden design are synthesised.

---

## ECO-190

(warning) %s for %d eco cells, the cells are {%s}

**Description**

You receive this warning message when failed to do reverting.

**What Next**

Please check the failed reason.

Feedback

**See Also**

- revert_eco_changes

---

## ECO-191

(warning) Additionally revert one eco cell (%s) due to overlap with input cell

**Description**

You receive this warning message when revert_eco_changes revert non input cell additionally.

**What Next**

After some input cell is reverted, if it is overlapped with some cell with eco_change_status eco_legalized, the command revert_eco_changes will do reclusively reverting for those overlapping eco cells until there is no overlapping eco cell.

**See Also**

- revert_eco_changes

---

## ECO-192

(warning) %s for %d eco cells, the cells are {%s}

**Description**

You receive this warning message when failed to do reverting.

**What Next**

Please check the failed reason.

**See Also**

- revert_eco_changes

---

## ECO-193

(warning) Do not support vertical design.

**Description**

You receive this warning message when the design is vertical.

Feedback

**See Also**

- report_eco_physical_changes

---

## ECO-194

(warning) Found non-Eco cells that are not legalized.

**Description**

You receive this warning message when there are non-Eco cells that not legalized in the design. And these cells are added to the collection with name ecoNonLegalCellsForSpaceCheck.

**See Also**

- report_cell_feasible_space

---

## ECO-195

(warning) Cutline {{%s} {%s}} is not vertical nor horizontal. Skipped.

**Description**

You receive this warning message when the cutline is not vertical nor horizontal. It will be skipped.

**See Also**

- add_group_repeaters

---

## ECO-196

(warning) Unable to find location to insert repeater groups.

**Description**

You receive this warning message when there is no valid locations based on user specified rule.

**See Also**

- add_group_repeaters

Feedback

## ECO-198

(error) Route has large open gap (> %s um) or multiple gaps.

### Description

You receive this warning message when route of the net(s) has large open gap, or multiple gaps.

### See Also

- add_group_repeaters

## ECO-199

(warning) failed to process the incomplete route segment %s of net %s for the reason: %s.

### Description

Command failed to process the target route for the specified reason. This route segment would be dangling or incomplete. If it is an incomplete route, this would cause the buffering failed.

### What Next

If buffering failed, please check the failure reason of this message and optimize the command options or net routes. If buffering successed, please ignore this warning message.

### See Also

- add_group_repeaters
- add_buffer_on_route

## ECO-200

(warning) failed to process the incomplete routes of net %s.

### Description

Command failed to process the incomplete routes of specified net. The buffering for this net would be failed.

### What Next

Please check the related error or warning messages printed for this net and follow the guidance of these messages.

Feedback

**See Also**

- add_group_repeaters
- add_buffer_on_route

---

## ECO-201

(error) Failed to create diode cell for load %s: %s.

**Description**

You receive this error message when command failed to create the diode cell for the specified load. Please check the failure reason listed.

**What Next**

Please check the listed failure reason of this load.

---

## ECO-202

(warning) Failed to place the %d diode cells to the proper location.

**Description**

You receive this warning message when command failed to place new created diode cells to the proper location. And these diode cells will be placed at the initial location (nearby or overlap with the target loads).

**What Next**

Please place these diode cells to the proper location again.

---

## ECO-203

(warning) Failed to place the diode cell %s of load %s to the proper location.

**Description**

You receive this warning message when command failed to place the created diode cell to the proper location. And this diode cell will be placed at the initial location (overlap with the target load).

**What Next**

Please place this diode cell to the proper location again.

Feedback

## ECO-204

(info) No valid location to insert repeater groups within 20 um of location {%s}.

### Description

You receive this warning message when there is no valid locations to place repeater group with the specified cutline.

### See Also

- add_group_repeaters

## ECO-205

(warning) Failed to find enough place for route cutting on path %s around coordinate %s.

### Description

You receive this warning message when failed to find enough place for route cutting in command add_group_repeaters when honor option -layer_cutting_spacing.

### What Next

Please reset layer cutting spacing.

### See Also

- add_group_repeaters

## ECO-206

(error) %s.

### Description

You receive this error message when command failed the listed reason.

## ECO-207

(error) Failed to derive long hop guidances for %d bundles {%s}.

### Description

You receive this error message when command failed to derive long hop guidances for some bundles.

Feedback

**What Next**

Please check the failed reason.

---

## ECO-208

(error) Failed to open file %s for write.

**Description**

You receive this error message when command failed to open file for write.

**What Next**

Please check the failed reason.

---

## ECO-209

(error) %s for bundle %s.

**Description**

You receive this error message when command failed the listed reason.

---

## ECO-210

(error) %s.

**Description**

You receive this error message when command failed the listed reason.

---

## ECO-211

(error) Driver list is empty or load list is empty or driver list and load list have different size.

**Description**

You receive this error message when cannot get drivers or loads from UTC or drivers and loads got from UTC have different size.

**What Next**

Check the start and the end node of the topology edge

Feedback

## ECO-212

(error) The pattern (%s) of the topology repeater (%s) not found.

**Description**

You receive this error message when the pattern of a topology repeater is not existed.

**What Next**

Check the pattern of the topology repeater

## ECO-213

(error) The lib cell (%s) of the pattern (%s) not found.

**Description**

You receive this error message when the lib cell of a cell array pattern is not existed.

**What Next**

Check the lib cell of the cell array pattern

## ECO-214

(error) The object of the topology node belonging to the topology edge (%s) is neither a pin nor a port.

**Description**

You receive this error message when an object of a topology node is neither a pin nor a port.

**What Next**

Check the objects field of the topology node.

## ECO-215

(error) The object of the topology node belonging to the topology edge (%s) is neither a driver nor a load.

**Description**

You receive this error message when an object of a topology node is neither a driver nor a load.

Feedback

### What Next

Check the objects field of the topology node.

---

## ECO-216

(error) Failed to set mask_shift attribute for cell %s.

### Description

This message is shown when tool failed to set mask_shift attribute for the specified cell which needs update the color shifting setting.

### What Next

Check whether the "mask_shift" attribute of this cell is setable or not.

### See Also

- place_freeze_silicon

---

## ECO-217

(error) Failed to find color shifting layer by name %s.

### Description

This message is shown when tool failed to find color shifting layer by name set via the app option "eco.freeze_silicon.color_shift_layers".

### What Next

Please check the layer name saved in the app option "eco.freeze_silicon.color_shift_layers" and set with correct color shifting layer names.

### See Also

- place_freeze_silicon

---

## ECO-218

(error) There are %d eco cells whose power intention need to be updated.

### Description

You receive this error message when there are some eco cells whose power intention need to be updated before the command place_eco_cells or place_freeze_silicon. These cells are added by "add_buffer_on_route -allow_physical_feedthrough_buffer", but their

Feedback

power intention are not updated by the command set_eco_power_intention. So the place command may place them to wrong locations if their power intention are not correct. These cells are saved in the collection $ecoAborPhysicalFeedthroughCells.

**What Next**

Run set_eco_power_intention for the cells in the collection $ecoAborPhysicalFeedthroughCells, and then run the place command again.

---

## ECO-219

(error) The cell %s is not associated with any topology repeaters.

**Description**

You receive this error message when a cell is on the netlist but not associated with any topology repeaters.

**What Next**

Associate the cell with a proper topology repeater before run place_interconnect_repeaters.

---

## ECO-220

(warning) Failed to connect to route for %d object: { %s }.

**Description**

You receive this warning message when command failed to connect to route for driver or load.

**What Next**

Please check the pin shape of object and route shapes. The object as driver or load can be port, macro pin and placed cell. For details please find message ECO-320.

**See Also**

- place_group_repeaters

---

## ECO-221

(Error) Failed to link %s block: %s.

Feedback

### Description

This message is shown by eco_netlist when failed to link the target block and this would cause wrong diff result.

### What Next

Check the link error messages printed and resolve the link issue before rerun.

### See Also

- eco_netlist

---

## ECO-222

(warning) net %s still drives %d loads which is larger than the user specified maximum fanout number %d.

### Description

You receive this warning message when command failed to add enough buffers for some reason (such as the expected location is not bufferable or the load number of some route segments is already equal or smaller than the max fanout number).

### What Next

Please check the net route segments or other messages printed.

### See Also

- split_fanout

---

## ECO-223

(Error) size_cell is skipped due to dont_use attribute on lib cell %s.

### Description

This message is shown when new library cell specified for size_cell has dont_use attribute.

### What Next

Check lib cell status and choose another lib cell for size_cell.

Feedback

## ECO-224

(Error) The option -repeater_groups cannot be used when the app option eco.placement.eco_enable_pipeline_register_placer is false.

### Description

This message is shown when the option -repeater_groups is used but the app option eco.placement.eco_enable_pipeline_register_placer is false.

### What Next

Please set_app_options -name eco.placement.eco_enable_pipeline_register_placer -value true if you want to use -repeater_groups.

### See Also

- place_group_repeaters

## ECO-225

(Error) Some nets (%ld out of %ld) do not have a net group ID. Find the collection of nets without group ID in %s.

### Description

This message is shown when add_gorup_repeaters -honor_user_group_id option is used, but some nets do not have net group ID.

### What Next

Run create_group_repeaters_guidance to create net group IDs, or set net attribute eco_net_group_id manually.

### See Also

- create_group_repeaters_guidance

## ECO-226

(Error) Failed to place cell %s\n.

### Description

This message is shown when implement_topology_repeaters fails to place a cell.

Feedback

### What Next

Check if the design has incomplete routes. If the design has incomplete routes, set app option eco.placement.itr_max_incomplete_route_distance.

---

## ECO-227

(warning) Failed to place %d repeaters for %d drivers in collection (%s), and failed cells are in collection (%s).

### Description

You receive this warning message when command failed to place some repeaters.

### What Next

Please check the failed repeaters by get_cells. Note that the driver can be port, macro pin and placed cell. So please check the failed drivers by query_objects, get_ports, get_pins and get_cells.

### See Also

- place_group_repeaters

---

## ECO-228

(warning) Some repeaters from path driver (%s) have same repeater group id. The cells belonging to the path are {%s}.

### Description

You receive this warning message when command skipped to place some repeaters.

### What Next

Please check the repeater group id for the cells and make sure the group id of cells on one path are different.

### See Also

- place_group_repeaters
- report_repeater_groups
- set_repeater_group

Feedback

## ECO-229

(warning) Failed to find intersection of cutline %s and route for cell {%s}.

**Description**

You receive this warning message when command failed to find intersection of cutline and route with specific cell.

**See Also**

- place_group_repeaters

## ECO-230

(error) Lib cell %s names of all registers in the same topology plan must be the same.

**Description**

You receive this error message when different lib cell input/output names of registers are found in the same topology plan.

## ECO-231

(error) The repeater group (%d) %s.

**Description**

You receive this error message when the repeater group has no cutline or invalid cutline.

**What Next**

Please set correct cutline for this group by set_repeater_group.

**See Also**

- place_group_repeaters
- set_repeater_group

## ECO-232

(error) Cutline {{%s} {%s}} is invalid.

**Description**

You receive this warning message when the cutline is not vertical nor horizontal. The valid format is {{x1 y} {x2 y}} or {{x y1} {x y2}}.

Feedback

### What Next

Please set correct cutline.

### See Also

- set_repeater_group

---

## ECO-233

(error) The cells in collection (%s) are invalid since they have no target input pin name (%s) and output pin name (%s).

### Description

You receive this warning message when the cell has no target pin name.

### What Next

Please double check the cells in collection. You can specify input pin name and output pin name by the option -lib_cell_input and -lib_cell_output if needed, or filter out invalid cells from input. The default value for -lib_cell_input is D. The default value for -lib_cell_output is Q.

### See Also

- place_group_repeaters
- set_repeater_group

---

## ECO-234

(warning) There is no repeater to be placed for the path driver (%s).

### Description

You receive this warning message when there is no repeater to be placed for the path driver.

### See Also

- place_group_repeaters

---

## ECO-235

(warning) There is no route on driver net (%s).

Feedback

**Description**

You receive this warning message when there is no route on driver net.

**What Next**

Please make sure there is route on driver net.

**See Also**

- place_group_repeaters

---

## ECO-236

(warning) There is no target load for path driver (%s).

**Description**

You receive this warning message when there is no target load for the path.

**What Next**

Please make sure there is target load (i.e. port, macro pin, placed cell) for the path.

**See Also**

- place_group_repeaters

---

## ECO-237

(warning) Some cell to be placed has no load for path driver (%s).

**Description**

You receive this warning message when there is some cell to be placed as end fanout since the cell has no load.

**What Next**

Please make sure the cell to be placed has target load (i.e. port, macro pin, placed cell).

**See Also**

- place_group_repeaters

---

## ECO-238

(warning) Failed to update power intention for %d new added buffers/inverters.

Feedback

### Description

You receive this warning message when command failed to update the power intention for the new added buffers or inverters.

### What Next

Please check the new added buffers/inverters and update the powner intention by manullay calling set_eco_powner_intention command.

### See Also

- add_buffer_on_route
- set_eco_power_intention

---

## ECO-239

(info) %s.

### See Also

- place_group_repeaters

---

## ECO-240

(error) The option -cells cannot be used when the app option eco.placement.eco_enable_virtual_connection is true.

### Description

You receive this warning message when the option -cells is used with the app option eco.placement.eco_enable_virtual_connection as true.

### What Next

You can set the app option eco.placement.eco_enable_virtual_connection as false if you need to specify -cells. Or you can specify -repeater_groups if you need to use virtual connection.

### See Also

- place_group_repeaters
- set_repeater_group

Feedback

## ECO-241

(warning) The distance based placement does not support multi-fanout path driver (%s).

### Description

You receive this warning message when the command applies distance based placement for multi-fanout path driver.

### What Next

Please apply cutline based placement for the path driver. You need to specify repeater group by set_repeater_group first. And then use place_group_repeaters -repeater_groups to apply cutline based placement.

### See Also

- place_group_repeaters
- set_repeater_group

## ECO-242

(warning) The cell (%s) has no driver or load (number of driver: %d, number of load: %d) based on connection from lib pin names (%s).

### Description

You receive this warning message when the command cannot identify driver or load of the cell.

### What Next

Please check the cell connectivity based on real connection from the specified pin names. Please make sure the cell has both driver and load.

### See Also

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

## ECO-243

(error) The cells in collection (%s) are invalid since they have no driver or load.

Feedback

**Description**

You receive this error message when some cells to be placed have no driver or load.

**What Next**

Please check ECO-242 for such cells. Make sure the cell to be placed has both driver and load. Or remove such cell from input.

**See Also**

- place_group_repeaters
- set_repeater_group

---

## ECO-244

(warning) The %s %s has no shape.

**Description**

You receive this warning message when the top port or macro pin has no shape.

**What Next**

Please make sure the top port or macro pin has shape.

**See Also**

- place_group_repeaters

---

## ECO-245

(error) Failed to flip ECO cell %s with orientation %s at placed location.

**Description**

This message is shown when tool failed to flip target ECO cell with speicified orientation. The ECO cell needs to be set with legal orientation at the location.

**What Next**

Check whether the orientation of this ECO cell is legal or not. If current orientation is not legal, may need manually set a legal orientation instead.

**See Also**

- place_freeze_silicon

Feedback

## ECO-246

(warning) Skip the path driver (%s) since the driver or load for the path has no shape.

### Description

You receive this warning message when the driver or load has no shape for path driver. This path driver will be skipped.

### What Next

Please double check ECO-244 and make sure the top port or macro pin has shape.

### See Also

- place_group_repeaters

## ECO-247

(error) Failed to add buffer for %d (out of %d) nets: { %s }

### Description

You receive this error message when command failed to add buffer for some input nets which are listed in the error message.

### What Next

Please double check the other reported error messages to find out the root cause.

### See Also

- add_buffer_on_route

## ECO-248

(error) Bundle %s: Some nets have different routing topology or not routed. Nets in the bundle are grouped into %ld groups based on their routes. Net group IDs are %s. Use net attribute eco_net_group_id to query net groups (e.g. get_nets -filter eco_net_group_id==0).

### Description

You receive this error message when the nets of specified bundle are not routed together.

### What Next

Please correct bundle routing, or use -nets option.

Feedback

## ECO-249

(error) Error of UTC transition for %s:\n%s

**Description**

You receive this error message when UTC tansition fails to provide some necessary information for placement or insertion.

**What Next**

Please double check you design based on the error informatin first

## ECO-250

(error) %d of %lu nets don't have route: { %s}

**Description**

You receive this error message when some, but not all, nets don't have route.

**What Next**

Please double check your design to see if you attach routes to all nets as expected.

**See Also**

- route_custom
- create_trunk

## ECO-251

(info) Place group repeaters successfully.

**Description**

You receive this info message when all input cells are placed successfully.

**See Also**

- place_group_repeaters

## ECO-252

(warning) Failed to place repeaters for repeater path which driver is %s.

Feedback

### Description

You receive this warning message when the command failed to place repeaters for one repeater path.

### See Also

- place_group_repeaters

---

## ECO-253

(warning) The cutline information %s for cell %s is not on valid route.

### Description

You receive this warning message when the cutline for cell is not on valid route.

### What Next

Please check the cutline and route information related to the cell.

### See Also

- place_group_repeaters
- set_repeater_group

---

## ECO-254

(warning) Failed to cut route for cell %s.

### Description

You receive this warning message when the command failed to cut route for cell.

### See Also

- place_group_repeaters

---

## ECO-255

(warning) gap (%s) between %s (%s) and nearest route is larger than placing distance (%s).

### Description

You receive this warning message when the route to nearest pin distance is larger than placing distance for driver or load.

Feedback

**See Also**

- place_group_repeaters

---

## ECO-256

(warning) The %s distance (%s) specified by command option is shorter than the gap (%s) between pin and route for %s (%s).

**Description**

You receive this warning message when the -first_distance or -last_distance specified is shorter than the gap between pin and route for driver or load.

**What Next**

Please check the option -first_distance, -last_distance and the route completeness.

**See Also**

- place_group_repeaters

---

## ECO-257

(warning) Cannot find cutline information for cell %s.

**Description**

You receive this warning message when the command cannot find cutline information for cell.

**What Next**

Please check repeater group info of cell.

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-258

(info) The app option about virtual connection is turned on. Please make sure the cells in repeater group keep in order.

Feedback

### Description

You receive this info message when the app option eco.placement.eco_enable_virtual_connection is true and user specifies place_group_repeaters -repeater_groups.

### See Also

- place_group_repeaters

---

## ECO-259

(error) The number (%d) of cells from repeater group (%d) is not consistent with the number (%d) of drivers from driver group (%s).

### Description

You receive this warning message when the number of cells is not consistent with the number of drivers.

### What Next

Please check the repeater group and make sure the number of drivers from driver group and cells from repeater group are same.

### See Also

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-260

(warning) The number of cells from repeater group (%d) is not consistent with the number of loads from load group (%s).

### Description

You receive this warning message when the number of cells is not consistent with the number of loads.

### What Next

Please check the repeater group and make sure the number of loads from load group and cells from repeater group are same.

Feedback

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-261

(warning) The number of path loads is less than the number of cells in group (%d), so skip these path loads.

**Description**

You receive this warning message when the number of path loads is less than the number of cells in group.

**What Next**

Please check the repeater group and make sure the number of path loads is an integral multiple of the number of cells in group.

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-262

(warning) The number of path loads is not an integral multiple of the number of cells in group (%d), so use path loads in order.

**Description**

You receive this warning message when the number of path loads is not an integral multiple of the number of cells in group.

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

Feedback

## ECO-263

(warning) Net %s is unbufferable in the voltage area region {%s} (VA shape %s) of voltage area %s, skip the buffering in this region.

### Description

You receive this warning message when the command detects the target voltage area region is unbufferable for the net to be buffered. Command will skip the buffering in this region for the net.

### What Next

Please check the MV information of this region for the net to be buffered.

### See Also

- add_buffer_on_route

## ECO-265

(warning) The pin shape {%s} of %s (%s) is projected to route %s {%s}.

### Description

You receive this warning message when the route is far away from driver or loads. The tool will project the closest pin shape to the route.

### See Also

- place_group_repeaters

## ECO-266

(Warning) The cells in collection %s which are not placed before cannot be unplaced by unplace_group_repeaters.

### Description

This message is shown the cells which are not placed before cannot be unplaced. Please note that only the cells added by add_group_repeaters or placed by place_group_repeaters can be unplaced by the command unplace_group_repeaters.

### What Next

Please double check the cell status.

Feedback

**See Also**

- place_group_repeaters
- add_group_repeaters

## ECO-267

(Error) Input and output routes are not merged after unplacing repeater %s since the routes are not aligned or not at the same layer.

**Description**

This message is shown by unplace_group_repeaters when the input and output routes of the unplaced repeaters are not merged due to the following reasons.

- the routes are not aligned.
- the routes are not at the same layer.

**What Next**

You should check the routes of the driver net and load net of the unplaced repeater.

## ECO-268

(Error) The cells in collection (%s) are invalid since they are placed before. Please apply the command unplace_group_repeaters to unplace them.

**Description**

This message is shown when the cells which are placed before cannot be placed again, where the cells are either added by add_group_repeaters or placed by placed_group_repeaters.

**What Next**

Please double check the cell status. The placed cells should be unplaced by unplace_group_repeaters first.

**See Also**

- place_group_repeaters
- add_group_repeaters

Feedback

## ECO-269

(error) Unable to check the current reference of cell '%s': %s.

### Description

You receive this error message when command is unable to check the current reference of cell is legal or not for the reported reason. Please check the reported reason and other printed messages for more details.

### What Next

Please check the reported reason. If root cause is that command is unable to identify the design technology, please check whether there are some wrong ECO app option settings for the variant aware support.

### See Also

- eco_change_legal_reference

## ECO-270

(error) Unable to find swappable variant reference for cell '%s': %s.

### Description

You receive this error message when command found the current reference of cell is illegal but unable to find a swappable variant reference for the reported reason.

### What Next

Please check the variant cell group definition for the specified cell's reference library cell.

### See Also

- eco_change_legal_reference

## ECO-271

(error) Candidate reference '%s' and reference (%s) of cell (%s) are not in the same variant cell group.

### Description

You receive this error message when command detects compatible issue between thecandidate reference and the current reference of cell. They do not belong to the same variant cell group.

Feedback

### What Next

Please check whether the current reference and the candidate reference are in the same variant cell group or not.

### See Also

- eco_change_legal_reference

---

## ECO-272

(Error) The mixed input cells are not supported, which includes the cells added by add_group_repeaters and the cells placed by place_group_repeaters.

### Description

This message is shown that the command unplace_group_repeaters cannot unplace the cells added by add_group_repeaters and the cells placed by place_group_repeaters together.

### What Next

Please double check the input cells.

### See Also

- place_group_repeaters
- add_group_repeaters

---

## ECO-273

(Error) There are no placed cells to be unplaced. Please double check the cell status.

### Description

Please note that only the cells added by add_group_repeaters or placed by place_group_repeaters can be unplaced by the command unplace_group_repeaters.

### What Next

Please double check the cell status.

### See Also

- place_group_repeaters
- add_group_repeaters

Feedback

## ECO-274

(Warning) You are deleting cell %s with eco_repeater_group_id %d.

**Description**

You receive this warning message when you are trying to delete a cell belonging to a repeater group.

**What Next**

Please double check if it is necessary to delete the cell. This may cause the following action failed.

**See Also**

- set_repeater_group
- report_repeater_groups
- place_group_repeaters

## ECO-275

(Error) Failed to traverse cutlines. The nets may have too many blockages.

**Description**

Cannot find locations to insert cell groups.

**What Next**

Remove blockages or find cutlines and use -repeater_group option.

**See Also**

- place_group_repeaters
- add_group_repeaters

## ECO-276

(Error) Unable to find free area for repeater on net (%s) at location (%s) within range {%s}.

**Description**

You recieve this message when there is not enough free space for repeater.

Feedback

### What Next

Check if the range is enough for repeater groups.

### See Also

- place_group_repeaters
- add_group_repeaters

---

## ECO-277

(Warning) You are trying to override cells of repeater group %d. Please use -override if you have to override cells.

### Description

You receive this warning message when you try to override cells without using -override optoin.

### What Next

Please make sure you have to override cells of the repeater group. Please use -override to override cells.

---

## ECO-278

(Error) Get 0 transparent cells from all supernets.

### Description

You receive this error message when no transparent cells are found from all supernets passed in.

### What Next

Please double check the definition of the supernets.

### See Also

- set_supernet_exceptions
- create_supernet

---

## ECO-279

(Error) %s has multiple(%lu) inputs.

Feedback

**Description**

You receive this error message because create_repeater_groups doesn't support multiple fan-in cases.

**What Next**

Please make sure all cells and loads have only one input.

---

## ECO-280

(warning) Unable to find any nearby route to connect %s. Extend the maximum searching distance to be %s.

**Description**

You receive this warning message when command is unable to find any nearby route to connect the reported driver/load with current maximum searching distance setting.

Command will automatically extend the searching distance to be specified value and try to search the nearby routes for connecting driver/load again.

**What Next**

If command still could not find any nearby route to connect driver/load, please check whether the net routes is too far awary from the specified driver/load.

**See Also**

- place_group_repeaters

---

## ECO-281

(info) Distance between repeaters has been adjusted to spread out evenly.

**Description**

You receive this warning message when the specified repeater distance cannot be met without some short distance near the load.

**What Next**

Use -disable_distance_adjustment to avoid automatic spreading of repeater groups.

**See Also**

- add_group_repeaters

Feedback

## ECO-282

(error) Cutline in repeater group is not a valid location {%s %s} (layer %s). It could be near a bus turn, crossing, or blocked by macro or placement blockages.

### Description

You receive this warning message when the specified cutline in a repeater group is near a bus turn, crossing, or blocked by macro or placement blockages.

### What Next

Move cutline away from corner and crossing. Check overlapped macro or placement blockages.

### See Also

- place_group_repeaters

## ECO-283

(warning) Skip the load group (%d) for group (%d) since the load group is not input group and the cell in group is unplaced.

### Description

You receive this warning message when the load group is skipped since it is not user-input group and the cell in group is unplaced.

### See Also

- place_group_repeaters

## ECO-284

(error) The repeater group (%d) %s.

### Description

You receive this error message when the repeater group has neither driver group nor path driver, or has neither load group nor path load.

### What Next

The repeater group should have driver group (or path drivers), and load group (or path loads) when virtual connection is on. You need to make the group virtual connection complete by set_repeater_group.

Feedback

**See Also**

- set_repeater_group
- place_group_repeaters

---

## ECO-285

(error) Bad cutline order for group (%d) and its driver group (%d).

**Description**

You receive this error message when the cutline order is not reasonable.

**What Next**

Please double check the group and its driver group to make sure the group relation is reasonable and as your expectation.

This is just a sanity check and there could be false alarm. Here is how the tool check. For example, if from the driver side, the group connectivity is g1 -> g2 -> g3 -> g4. For one group (such as g3), we will calculate the Manhattan's distance (dist1) between the center of cutline of a group (g3) and its driver group (g2), and the distance (dist2) between the center of cutline of a group (g3) and driver group of its driver group (g1). If dist1 > dist2, this message will be issued.

If you think it is false alarm, you can use the app option below to bypass the order check so that place_group_repeaters can continue. set_app_options -name eco.placement.eco_enable_cutline_order_check -value false

**See Also**

- set_repeater_group
- place_group_repeaters

---

## ECO-286

(warning) Bad cutline order for group (%d) and its driver group (%d).

**Description**

You receive this warning message when the cutline order is not reasonable.

**What Next**

Please double check the group and its driver group to make sure the group relation is reasonable and as your expectation.

Feedback

---

## ECO-287

(error) Net %s has no drivers or loads.

**Description**

You receive this error message when the net doesn't connect to any drivers or loads.

**What Next**

Please double check the net's connection.

**See Also**

- connect_net

---

## ECO-288

(error) Net %s has multiple drivers.

**Description**

You receive this error message when the net connects to multiple drivers. derive_bundles only support one-driver nets.

**What Next**

Please double check the net's connection.

---

## ECO-289

(warning) The repeater group (%d) %s.

**Description**

You receive this warning message when the repeater group has no info above.

**See Also**

- get_repeater_group_info
- set_repeater_group

Feedback

## ECO-290

(error) You are trying to create a new repeater group without specifying any cells.

**Description**

You receive this error message when you are trying to create a new repeater group without specifying any cells. You must specify cells when you create a new repeater group. A repeater group's cell list cannot be empty.

**What Next**

Please speciify cells when you create a new repeater group.

## ECO-291

(Error) The repeater group (group id: %d) you are trying to delete doesn't exist.

**Description**

You receive this error message when you are trying to delete an inexistent repeater group.

**See Also**

- set_repeater_group
- report_repeater_groups

## ECO-292

(warning) The number of %s is less than the number of cells in group (%d), so skip to set attribute about neighbors for cells in this group.

**Description**

You receive this warning message when the number of path drivers / path loads is less than the number of cells in group.

**What Next**

Please check the repeater group and make sure the number of path drivers / path loads is an integral multiple of the number of cells in group.

Feedback

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-293

(warning) The number of %s is not an integral multiple of the number of cells in group (%d), so use %s in order to set cell attribute about neighbors.

**Description**

You receive this warning message when the number of path drivers / path loads is not an integral multiple of the number of cells in group.

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-294

(warning) The number (%d) of cells from repeater group (%d) is not consistent with the number (%d) of drivers from driver group (%s), skip to set cell attribute about neighbors.

**Description**

You receive this warning message when the number of cells is not consistent with the number of drivers.

**What Next**

Please check the repeater group and make sure the number of drivers from driver group and cells from repeater group are same.

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

Feedback

## ECO-295

(error) The path line from point (%s) to point (%s) is not vertical or horizontal.

**Description**

You receive this error message when two adjacent turning points cannot make a vertical or horizontal path line.

**What Next**

Please check if you provide correct turning point list in correct order.

## ECO-296

(error) Location specified is not valid {%s}. It could be near a bus turn, crossing, or blocked by macro or placement blockages.

**Description**

You receive this warning message when the specified location is near a bus turn, crossing, or blocked by macro or placement blockages.

**What Next**

Move cutline away from corner and crossing. Check overlapped macro or placement blockages.

**See Also**

- place_group_repeaters

## ECO-297

(error) Failed to remove previously created route guidance objects of bundle net.

**Description**

You receive this error message when command failed to remove the previously created route guidance objects.

**What Next**

Please check whether the route guidances objects are editable or not.

## ECO-298

(error) Failed to load route guidances from bundle %s: %s.

Feedback

**Description**

You receive this error message when command failed to load previously created route guidance objects for the specified reason.

**What Next**

Please check whether the bundle has route guidance objects or not. And also check whgether there are dangling route guidance objects or not.

---

## ECO-299

(error) Failed to commit individual bit route creation for bundle %s: %s.

**Description**

You receive this error message when command failed to commit the individual bit route creation for the specified reason.

**What Next**

Please check the reported reason.

---

## ECO-300

(error) Failed to commit route guidance creation for bundle %s: Unable to create wire objects.

**Description**

You receive this error message when command failed to commit route guidance creation for the specified reason.

**What Next**

Please check the reported reason.

---

## ECO-301

(error) Unable to derive the load group location for bundle %s: %s.

**Description**

You receive this error message when command is unable to derive the leaf load group location for the specified reason.

**What Next**

Please check the reported failure reason and update the bundle path settings.

Feedback

## ECO-302

(warning) The load %s of load group %d has not been set with physical location. Ignore it when derive the load group location of bundle %s.

**Description**

You receive this warning message when command detects the leaf load of one load group has not been set with physical location. It would be caused by the bundle path settings or the bunlde load found is a hierarchical object.

Command will ignore this load when derive the load group location.

**What Next**

Please check the specified load and bundle path settings.

## ECO-303

(error) You are not allowed to set the driver group id to %d because the repeater group %d already has path drivers. Please use -driver_group_id $id -clear path_drivers together to remove path drivers from the current repeater group and set a driver group id it.

**Description**

You receive this error message when you are trying to set a driver group id to the current repeater group while the current repeater group has already been set path drivers. This action is not allowed because a driver group id and path drivers are mutually exclusive of a repeater group.

## ECO-304

(error) You are not allowed to set path drivers to the repeater group %d because it already has a driver group. Please use -path_drivers $drivers -clear driver_group_id together to remove the driver group id from the current repeater group and set path drivers to it.

**Description**

You receive this error message when you are trying to set the path drivers to the current repeater group which has already been set a driver group id. This action is not allowed because a driver group id and path drivers are mutually exclusive of a repeater group.

## ECO-305

(error) The size of the new cell list (%u) does not match the size of the current cell list (%u).

Feedback

### Description

You receive this error message when you are trying to override the cell list of the current repeater group, but the size of the new cell list is not the same as the size of the current cell list of the repeater group.

### What Next

Please input a cell list with the same size of the current cell list when you are trying to override the current cell list of the repeater group.

---

## ECO-306

(error) For repeater group (%d), the number (%d) of objects from driver group (%s) is not consistent with the number (%d) of output nets.

### Description

You receive this error message when the number of objects is not consistent with the number of output nets of objects.

### What Next

Please double check the input options -lib_cell_input and -lib_cell_output. The default value is D and Q. The tool will find net connection based on pin name specified by the two options. Please check the output net of objects from driver group and make sure the number of objects from driver group and output nets of objects are same.

### See Also

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-307

(error) Failed to get output net of %s (%s).

### Description

You receive this error message when the tool cannot get the output net of object.

### What Next

Please double check the input options -lib_cell_input and -lib_cell_output. The default value is D and Q. The tool will find net connection based on pin name specified by the two options. Please check the output net of object based on the specified lib pin name.

Feedback

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-308

(error) Failed to create repeater groups for %s.

**Description**

You receive this error message when the command failed to create repeater groups.

**What Next**

Please check the related error messages.

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-309

(warning) The options -lib_cell_input and -lib_cell_output are not specified, so the attribute pin_pair for each cell in this group is set based on default value D and Q.

**Description**

You receive this warning message when the command options -lib_cell_input and -lib_cell_output are not specified.

**What Next**

The pin_pair set on repeater is used to: 1. Find real connection of cell based on specified pin names when set_repeater_group -check_connection. 2. Find net connected to specified pin name to assign the split route when place_group_repeaters -repeater_groups.

Feedback

**See Also**

- set_repeater_group
- get_attribute

---

## ECO-310

(warning) The cell (%s) has no driver or load (number of driver: %d, number of load: %d).

**Description**

You receive this warning message when the command cannot identify driver or load of the cell.

**What Next**

Please make sure the cell has both driver and load. Please check the cell connectivity based on user-defined virtual connection. Check if the repeater group that the cell belongs to has driver group or path driver or path load. If missing, you can use set_repeater_group -path_drivers or -driver_group_id to specify drivers of this group, while use -path_loads to specify path loads. Noth that -path_drivers is only for the first group on the path and -path_loads is only for the last group on the path.

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECO-311

(error) Failed to find a track pattern for layer %s.

**Description**

You receive this error message when input track patterns does not cover a certain layer which is used by at least an input topology edge.

**What Next**

Please input track patterns to cover all layers used by input topology edges.

---

## ECO-312

(error) Provided more than one track pattern for layer %s.

Feedback

**Description**

You receive this error message when more than one track pattern for a certain layer has been found.

**What Next**

Please input only one track pattern for each layer.

---

## ECO-313

(error) Layer %s is neither horizontal nor vertical.

**Description**

You receive this error message when the layer in shape_layers of the topology edge is neither horizontal nor vertical. slot_topology_edges only support horizontal or vertical layers.

**What Next**

Please only use horizontal or vertical layers to create topology edges.

**See Also**

- create_topology_edge

---

## ECO-314

(error) Failed to find track patterns on the topology edge %s.

**Description**

You receive this error message when no track patterns are found on the topology edge.

**What Next**

Please set user track patterns to topology edges before slotting.

---

## ECO-315

(warning) Failed to place the %d buffer cells to the proper location.

**Description**

You receive this warning message when command failed to place new created buffer cells to the proper location. And these buffer cells will be placed at the initial location (nearby or overlap with the target cells).

Feedback

### What Next

Please place these buffer cells to the proper location again.

### See Also

- add_buffer

---

## ECO-316

(warning) Failed to place the buffer cell %s of terminal %s to the proper location.

### Description

You receive this warning message when command failed to place the created buffer cell to the proper location. And this buffer cell will be placed at the initial location (overlap with the target cell).

### What Next

Please place this buffer cell to the proper location again.

### See Also

- add_buffer

---

## ECO-317

(error) The topology repeater at {%s} does not project to any route%s.

### Description

You receive this error message when the command failed to find a line to intersects with routes on the layer and at the location where the topology repeater is.

### What Next

Please make sure there are routes on the layer and at the location where the topology repeater is.

---

## ECO-318

(warning) The cell (%s) is not supported since it is not macro cell or sequential cell or combo cell or repeater.

### Description

You receive this warning message when the command failed to get valid label for cell.

Feedback

### What Next

Please check the cell attribute. The command create_interconnect_groups only supports macro cell, sequential cell, combo cell and repeater based on backward path tracing from input loads. For valid cell, the label is like below. S is for sequential cell. R is for repeater. C is for combo gate. M is for hard or soft macro.

### See Also

- create_interconnect_groups

---

## ECO-319

(error) %s.

### Description

You receive this error message when command failed the listed reason.

### See Also

- set_repeater_group

---

## ECO-320

(warning) Failed to find any nearby route to connect %s in search region %s.

### Description

You receive this warning message when command is unable to find any nearby route to connect the reported driver/load in search region.

### What Next

Please check whether the net routes are too far awary from the specified driver/load. You can use the option -max_distance_for_incomplete_route to control the search distance.

### See Also

- place_group_repeaters

---

## ECO-322

(error) The specified load pins are not driven by the driver pin or net.

Feedback

### Description

You receive this error message when you use option -same_set_connection_only, while the specified load pins are not driven by the specified driver pin or net. If -same_net_connection_only is not specified. This message will only be an information message.

### What Next

Please specify load pins that are driven by the driver pin or net.

---

## ECO-323

(error) Unable to connect load %s to driver %s, route is incomplete.

### Description

You receive this error message when command is unable to find route to connect the reported load to the driver and the route is incomplete.

### What Next

Please make sure there is route to connect the driver and load.

### See Also

- place_group_repeaters
- add_group_repeaters

---

## ECO-324

(error) Failed to find any nearby route to connect %s in search region %s.

### Description

You receive this error message when command is unable to find any nearby route to connect the reported driver/load in search region.

### What Next

Please check whether the net routes are too far awary from the specified driver/load.

### See Also

- place_group_repeaters
- add_group_repeaters

Feedback

## ECO-325

(error) In the search region %s of %s, there is more than 1 open route of the same net.

### Description

You receive this error message when command finds more than 1 open route of the same net in the search region to connect the reported driver or load.

### What Next

Please make sure there is only 1 open route of the same net in the search region of the driver or load.

### See Also

- place_group_repeaters
- add_group_repeaters

## ECO-326

(error) Unable to connect %s and %s, via is not created correctly.

### Description

You receive this error message when command is unable to connect specified route, via, pin or port because they are created in different layers.

### What Next

Please make sure that the specified route, via, pin or port is created in the same layer.

### See Also

- place_group_repeaters
- add_group_repeaters

## ECO-328

(error) The net %s does not have a driver.

### Description

You receive this error message when an input net does not have a driver. Each input net should have one and only one driver.

Feedback

### What Next

Please make sure each input net has a driver.

### See Also

- connect_net

---

## ECO-329

(error) The net %s does not have loads.

### Description

You receive this error message when an input net does not have loads. Each input net should have at least one load.

### What Next

Please make sure each input net has loads.

### See Also

- connect_net

---

## ECO-330

(error) The net %s has multiple (%lu) drivers.

### Description

You receive this error message when an input net has more than one driver. Each input net should have only one driver.

### What Next

Please make sure each input net has one and only one driver.

### See Also

- disconnect_net

---

## ECO-331

(error) The cell %s of the pin %s is not placed.

Feedback

### Description

You receive this error message when a cell of a driver or load pin is not placed. When a pin on a standard cell, the cell should be placed.

### What Next

Please set the cell of a pin to be placed.

### See Also

- set_attribute

---

## ECO-332

(error) The %s %s does not have shapes.

### Description

You receive this error message when a pin or port of a net has no shapes.

### What Next

Please make sure each net pin or port have shapes.

### See Also

- create_shape
- set_object_shape

---

## ECO-333

(error) There are multiple (%d) drivers (%s) for load %s.

### Description

You receive this error message when an input supernet has more than one driver.

### What Next

Please make sure each input supernet has one and only one driver.

### See Also

- disconnect_net

Feedback

## ECO-334

(error) The cell %s cannot find the pin with the pin name %s.

**Description**

You receive this error message when a cell does not have the pin with a specific pin name.

**What Next**

Please use cells with library cells that have a pin with the pin name above.

**See Also**

- get_lib_cells
- create_cell

## ECO-335

(error) The cell %s does not have a library cell.

**Description**

You receive this error message when an input cell does not have a library cell.

**What Next**

Please make sure each cell has a library cell.

**See Also**

- get_lib_cells
- create_cell

## ECO-336

(error) There are no routes on the net %s.

**Description**

You receive this error message when an input net has no routes.

**What Next**

Please make sure each net is routed.

Feedback

### See Also

- route_custom
- create_trunk

---

## ECO-337

(Error) Some nets (%ld out of %ld) do not have a net group ID or the net group ID is not specified by option %s. Find the collection of nets in %s.

### Description

This message is shown when add_group_repeaters -first_distance_of_net_groups or -cutlines_of_net_groups is used, but some nets do not have net group ID, or some nets have net group ID but ID is not specified by the option.

### What Next

If the net does not have a net group ID, please run create_group_repeaters_guidance to create net group IDs, or set net attribute eco_net_group_id manually. If the net has net group ID, please specify the pair of group ID and first distance by the option -first_distance_of_net_group, or specify cutlines for each group ID by the option -cutlines_of_net_groups.

### See Also

- create_group_repeaters_guidance

---

## ECO-338

(error) Unable to find all nets for topology repeater at %s (total nets: %d, found nets: %d)

### Description

You receive this warning message when not all nets can be found by projecting the topology repeater location.

### What Next

Check and correct your topology plan.

### See Also

- implement_topology_repeaters

Feedback

## ECO-339

(error) One or more specified cutlines are not valid!

**Description**

You receive this warning message when the specified cutline(s) are not valid.

**What Next**

Please check cutline locations to make sure they intersect with the routes.

**See Also**

- add_group_repeaters

## ECO-340

(Error) The input net group ID %d is unused. No input net has such net group id.

**Description**

This message is shown when add_group_repeaters -first_distance_of_net_groups or -cutlines_of_net_groups is used, but the input net group ID is unused.

**What Next**

Remove such net group ID from input.

**See Also**

- add_group_repeaters

## ECO-341

(Error) The lib cell of cell (%s) cannot be found in -pin_mapping.

**Description**

This message is shown when create_repeater_groups -multi_bit -pin_mapping is used, but the lib cell of input cell is not specified in -pin_mapping.

**What Next**

Specify the lib cell of input cell in -pin_mapping.

**See Also**

- create_repeater_groups

Feedback

## ECO-342

(warning) Smart net grouping is on by defaul now. The option -smart_net_grouping is deprecated. Please use these options to control net groups if needed: -group_spacing, ignore_layers, and -exclude_pin__port.

### Description

This message is shown when -smart_net_grouping option is used in add_group_repeaters.

### What Next

Smart net grouping is on by default.

### See Also

- place_group_repeaters

## ECO-343

(error) Failed to get the location of net %s for add_buffer with -respect_voltage_areas option. The net will be ignored.

### Description

You receive this error message when failing to get the location of input pin, port or driver of net for add_buffer with -respect_voltage_areas option.

### What Next

Add buffer with -respect_voltage_areas option on leaf pin, leaf port or net with leaf driver.

### See Also

- add_buffer

## ECO-344

(error) Unsupported multiple fanout net %s for add_buffer with -respect_voltage_areas option. And there are lost loads or additional loads due to hier net change. The net will be ignored.

### Description

You receive this error message when trying to add buffer on unsupported multiple fanout net using add_buffer with -respect_voltage_areas option.

Feedback

**See Also**

- add_buffer

---

## ECO-345

(error) Failed to get voltage area according to the location (%s) of specified pin, port or driver of net %s. And the net will be ignored.

**Description**

You receive this error message when using add_buffer with -respect_voltage_areas option, which is based on the voltage area at the location of specified pin, port or driver of net. Since there is no voltage area at the location, voltage area aware add_buffer is not supported. And the net will be ignored.

**What Next**

Add buffer with -respect_voltage_areas option on pin, port or net in voltage area.

**See Also**

- add_buffer

---

## ECO-346

(error) Empty load detected. It might be due to unequal fanouts in the bus. It is not supported.

**Description**

You receive this error message when repeater paths do not have the same number of loads.

---

## ECO-347

(info) Unequal fanout loads detected for topology repeater %s. Treat it as a single-load path.

**Description**

You receive this error message when repeater paths do not have the same number of loads.

Feedback

## ECO-348

(warning) The location of net %s for add_buffer with -respect_voltage_areas option is outside of core area. Buffer's location will be updated from (%s) to (%s).

### Description

You receive this warning message when the location for add_buffer with -respect_voltage_areas option is outside of core area.

### What Next

Buffer's location will be projected into the core area.

### See Also

- add_buffer

## ECO-349

(error) Module net is not supported for add_buffer with -respect_voltage_areas option. And the net %s will be ignored.

### Description

You receive this error message when trying to add buffer on module pin, port or net with -respect_voltage_areas option.

### What Next

Add buffer with -respect_voltage_areas option on hierarchy pin, port or net.

### See Also

- add_buffer

## ECO-350

(error) Cannot find correct hier net for add_buffer with with -respect_voltage_areas option. And the net %s will be ignored.

### Description

You receive this error message when using add_buffer with -respect_voltage_areas option, but the correct hier net cannot be found base on buffer's location.

Feedback

### What Next

Add buffer with -respect_voltage_areas option on pin, port or net that correct hier net can be found base on buffer's location.

### See Also

- add_buffer

---

## ECO-351

(error) Net %s should have one ultimate leaf driver.

### Description

You receive this error message when using add_buffer with -respect_voltage_areas option to a flat net without leaf driver.

### What Next

Add buffer with -respect_voltage_areas option on a flat net with leaf driver.

### See Also

- add_buffer

---

## ECO-352

(Warning) There are %d cells in total with eco_change_status attribute eco_legalized. These cells will not be moved during place_eco_cells.

### Description

You receive this warning message when you try to issue command place_eco_cells with command option -legalize_mode allow_move_other_cells.

### What Next

If you would like to move these cells during place_eco_cells, please change these cells eco_change_status attribute to be eco_placed.

### See Also

- place_eco_cells

Feedback

## ECO-353

(error) Cannot specify block pin or net with block pin as driver for add_buffer with with -respect_voltage_areas option. And the net %s with block pin %s will be ignored.

### Description

You receive this error message when using add_buffer with -respect_voltage_areas option, and inputing block pin or net with block pin as driver.

### What Next

Add buffer with -respect_voltage_areas option on non-block pin.

### See Also

- add_buffer

## ECO-354

(Error) Cannot find valid hierarchy given input net %s.

### Description

You receive this warning message when you try to issue command add_buffer_on_route with command option -honor_net_hierarchy.

### What Next

Please make sure given net is in correct hierarchy.

### See Also

- add_buffer_on_route

## ECO-355

(Error) %s has no connected freeze layer objects on the highest frozen layer %s.

### Description

You receive this warning message when you try to disconnect net from the pin/port in freeze layer mode.

### See Also

- disconnect_net

Feedback

## ECO-356

(Error) One or more connected freeze layer objects on %s is user route or locked route.

### Description

You receive this warning message when you try to disconnect net from the pin/port in freeze layer mode.

### What Next

Check routes and vias connected to the pin/port to make sure they are not user route or locked.

### See Also

- disconnect_net
- get_shapes
- get_vias

## ECO-357

(Info) There are %ld shapes buried under frozen layers: %s

### Description

Reports freeze layer routes and vias that cannot be reconnected.

### See Also

- disconnect_net
- get_shapes
- get_vias

## ECO-358

(Error) %s.

### Description

You receive this error message when the sum of distances at branch exceeds the value of -last_distance.

Feedback

### What Next

Please check the route length of each route branch and change -last_distance. Make sure the value is smaller than each route branch or bigger than the total length of all route branches.

### See Also

- add_buffer_on_route

---

## ECO-359

(error) failed to process the route segments of net %s for the reason: %s.

### Description

Command failed to process the routes for the specified reason which would cause the buffering failed.

### What Next

Please check the failure reason of this message and optimize the command options or net routes. Please check the route topology and increase max search distance.

### See Also

- add_group_repeaters
- add_buffer_on_route

---

## ECO-360

(Error) Inconsistentcy between power domain %s of specified hierarchy %s and voltage area %s.

### Description

When specify both command option -honor_net_hierarchy and -respect_voltage_areas, power domain of specified hierarchy may not match with voltage area.

### What Next

Please try only use -honor_net_hierarchy or -respect_voltage_areas, or check if the power domain of specified net hierarchy matches with voltage area.

### See Also

- add_buffer_on_route

Feedback

## ECO-361

(Error) MV buffer selection is failed for net %s. No buffer is inserted.

### Description

You receive this error message when some specified/computed locations are not bufferable.

### What Next

Modify locations or change distance rule. Check bufferability using command check_bufferability.

### See Also

- check_bufferability

## ECO-362

(Error) Bus %d (net count = %d) is not fully connected.\n%s

### Description

The routes of these nets are not fully connected. The route traversal failed.

### What Next

Check if the routes are connected correctly. Instead of using detail route, try create_trunk to route nets before add_group_repeaters.

### See Also

- create_trunk
- create_trunk_pin_to_pin

## ECO-363

(Warning) Bus %d (net count = %d) has no location to insert.\n%s

### Description

The routes of these nets do not have location to insert.

### What Next

Check for blockages, macros, route corners, and existing placed repeaters that may block the area for insertion.

Feedback

## ECO-364

(Info) set app option %s to be %s.

**Description**

This message shows the value of one app option.

**What Next**

None.

## ECO-365

(Info) %s color shifting feature is auto-enabled in ECO PSC freeze-silicon flow.

**Description**

This message shows the mode of color shifting feature in ECO PSC freeze-silicon flow.

**What Next**

None.

## ECO-366

(error) unit width %s is not integral multiple of %s %s.

**Description**

In advanced PSC mapping of place_freeze_silicon, unit width is a base unit of PSC filler split and merge. By default, unit width is same as the smallest width of the lib cells processed by command derive_programmable_spare_cell_mapping_rules. It could be overwritten by command option -unit_width. To ensure advanced PSC mapping succeeds, unit width should follow 3 rules: 1. It should be integral multiple of site width. 2. It should be integral multiple of pitch. 3. It should be integral multiple of the width of one cycle of track pattern. You receive this error message when any of these rules are broken.

**What Next**

Please try to specify a proper unit width by derive_programmable_spare_cell_mapping_rules -unit_width width to meet above 3 conditions. Since the default value is derived from the smallest lib cell width, you may also need to double check if the lib cells passed to this command are all needed, and filter unexpected lib cells.

Feedback

**See Also**

- derive_programmable_spare_cell_mapping_rules
- report_site_defs
- report_tracks

---

## ECO-367

(error) First track offset is not specified and has no default value.

**Description**

For advanced PSC mapping, place_freeze_silicon needs to check color and track alignment for ECO cells and refilled PSC fillers based on the first track offset. You receive this error message when offset value is not specified and has no default value.

**What Next**

Please query the first track offset by report_tracks and set it by app option ecolm.freeze_silicon.psc_track_offset.

**See Also**

- derive_programmable_spare_cell_mapping_rules
- report_tracks

---

## ECO-368

(error) Input first track offset value %s is a negative value.

**Description**

For advanced PSC mapping, place_freeze_silicon needs to check color and track alignment for ECO cells and refilled PSC fillers based on the first track offset. It should be greater than or equal to 0. You receive this error message when you input a negative first track offset.

**What Next**

Please query the first track offset by report_tracks and set it correctly by app option ecolm.freeze_silicon.psc_track_offset.

Feedback

**See Also**

- derive_programmable_spare_cell_mapping_rules
- place_freeze_silicon
- report_tracks

---

## ECO-369

(warning) The specified first track offset %s is different from default value %s.

**Description**

For advanced PSC mapping, place_freeze_silicon needs to check color and track alignment for ECO cells and refilled PSC fillers based on the first track offset. If it is not set correctly, PSC mapping may cause legality violations. You receive this error message when you input a different first track offset from the default value and the default value will be overwritten.

**What Next**

Please query the first track offset by report_tracks and check if it is the same as the value of app option ecolm.freeze_silicon.psc_track_offset. If not, please correct your setting. Otherwise, you can ignore this message.

**See Also**

- derive_programmable_spare_cell_mapping_rules
- report_tracks

---

## ECO-370

(warning) PG layer is not specified. Use default layer %s.

**Description**

For advanced PSC mapping of place_freeze_silicon, PG layer must be set correctly for PG DRC check. You receive this warning message when PG layer is not specified. The command will use the default PG layer.

**What Next**

Please double check if the default PG layer is appropriate for this design. If not, please change it by command derive_programmable_spare_cell_mapping_rules -pg_layer $layer_name.

Feedback

**See Also**

- derive_programmable_spare_cell_mapping_rules
- place_freeze_silicon

---

## ECO-371

(error) Could not find default PG layer %s, please set correct layer by command option.

**Description**

For advanced PSC mapping of place_freeze_silicon, PG layer must be set correctly for PG DRC check. You receive this error message when default PG layer could not be found.

**What Next**

Please set PG layer by command derive_programmable_spare_cell_mapping_rules -pg_layer layer.

**See Also**

- derive_programmable_spare_cell_mapping_rules
- place_freeze_silicon

---

## ECO-372

(warning) Input PG layer %s is different from default layer %s.

**Description**

For advanced PSC mapping of place_freeze_silicon, PG layer must be set correctly for PG DRC check. You receive this warning message when you input a different PG layer from the default layer. Your input PG layer will overwrite the default layer.

**What Next**

Please double check if the input PG layer is appropriate for this design. If not, please change it by command derive_programmable_spare_cell_mapping_rules -pg_layer $layer_name.

**See Also**

- derive_programmable_spare_cell_mapping_rules

Feedback

## ECO-373

(warning) First track offset is not manually set, use default offset %s.

### Description

For advanced PSC mapping, place_freeze_silicon needs to check color and track alignment for ECO cells and refilled PSC fillers based on the first track offset. If it is not set correctly, PSC mapping may cause legality violations. You receive this warning message when the first track offset is not manually set. The command will try to use the default offset according to technology node.

### What Next

Please query the first track offset by report_tracks. If the default offset is different from it, please set the first track offset correctly by app option ecolm.freeze_silicon.psc_track_offset. Otherwise, you can ignore this message.

### See Also

- derive_programmable_spare_cell_mapping_rules
- place_freeze_silicon
- report_tracks

## ECO-374

(warning) The tech node of this design is not set.

### Description

You receive this warning message when design tech node is not set. Without setting tech node layer, PG checking layer will use default value, which may be different from real layer.

### What Next

You can set tech node by command set_technology.

### See Also

- derive_programmable_spare_cell_mapping_rules
- set_technology

Feedback

## ECO-375

(information) Do %s.

### Description

You receive this information message when you execute command place_freeze_silicon. The message indicates what freeze silicon ECO flow is being done. Logical spare cell mapping is based on reference lib cell. An eco cell can only be mapped with a logical spare cell with same reference lib cell name. Traditional PSC mapping is based on psc_type_id. An eco cell can be mapped to one or multiple abutted PSC fillers with same psc_type_id if total width of PSC fillers is larger than the eco cell. Advanced PSC mapping, which is for advanced nodes, will check not only cell size but also many advanced rules. Before place_freeze_silicon, you need to run derive_programmable_spare_cell_mapping_rules for both ECO cells and PSC fillers.

### See Also

- add_spare_cells
- create_stdcell_fillers
- derive_programmable_spare_cell_mapping_rules

## ECO-376

(error) No spare cell has same psc_group_id %d with eco cell.

### Description

You receive this error message when you do advanced PSC mapping. Lib cell attribute psc_group_id is for handling different VT/Channel. If the lib cell of an eco cell has psc_group_id, it can only be mapped to PSC filler spare cells whose lib cells have the same psc_group_id. If the lib cell of an eco cell has no psc_group_id, it can only be mapped to PSC filler spare cells whose lib cells do not have psc_group_id as well.

### What Next

Please check the psc_group_id setting for ECO lib cells and PSC filler lib cells.
You also need to check the ECO lib cells and PSC filler lib cells passed to derive_programmable_spare_cell_mapping_rules. Make sure ECO cells have compatible PSC fillers in terms of psc_group_id.

### See Also

- derive_programmable_spare_cell_mapping_rules

Feedback

## ECO-377

(warning) Skip mapping eco cell %s since its eco_change_status is eco_legalized.

**Description**

You receive this warning message when you execute command place_freeze_silicon. Eco cells will be skipped to do mapping if the eco_change_status attributes are eco_legalized.

**What Next**

Please set the attribute eco_change_status of eco cell to create_cell/add_buffer/change_link/size_cell/eco_placed/add_buffer_on_route if you want to map this eco cell.

## ECO-378

(error) No spare cell is spread successfully since there is no enough available space.

**Description**

The command skips to do spreading for all the spare cells belonging to each target region since every target region has no enough available space.

**What Next**

Check the utilization of all target regions.

**See Also**

- spread_spare_cells

## ECO-379

(Error) Failed to elevate net %s due to %s\n

**Description**

The net cannot be elevated.

**What Next**

Check the net.

## ECO-380

(Error) Frontside FIB insertion failed during %s\n

Feedback

**Description**

Frontside FIBs insertion failed.

---

## ECO-381

(Error) Port %s is not connected to net!\n

**Description**

Elevated port is not connected to any net.

---

## ECO-382

(Error) Port %s is not connected to signal elevation buffer or pin!\n

**Description**

The port is not a valid elevation port.

---

## ECO-383

(Error) Failed to eval tcl command for %s\n

**Description**

Command failed to execute.

---

## ECO-384

(Error) Port %s terminal creation failed due to pin %s does not have shape!\n

**Description**

Pin does not have a shape which caused port terminal creation failure.

**What Next**

Check the pin.

---

## ECO-385

(Warning) Net %s is skipped due to %s.

**Description**

The net is skipped in signal elevation.

Feedback

**What Next**

Check the net.

# ECOUI

## ECOUI-001

(error) Could not find parent cell for '%s'.

**Description**

You receive this error message when you attempt to create either a cell, net or port in an instance which does not already. This command will not create any new hierarchy except the new leaf object which is specified in the command.

**What Next**

Review the man page for the creation command being used, and try using current_instance to move to the instance within which you wish to create the new object. If you need to create levels of hierarchy, use the create_cell command to create each level one at a time.

## ECOUI-002

(error) Can't remove port '%s'; it's part of a bus.

**Description**

You receive this error message when you attempt to remove bus port.

**What Next**

choose the port without bus.

## ECOUI-003

(error) The pin '%s' connects to a PG/Tie net.

**Description**

remove_buffers doesn't support removing the buffer which connect to PG/Tie net

**What Next**

Please remove the buffer manually.

Feedback

## ECOUI-004

(error) Failed to create golden design from the Verilog file "%s".

**Description**

The specified Verilog file may have some issues and it could not be loaded to be the golden design. Use read_verilog command to check whether the Verilog file can be read successfully or not.

For complete netlist diff, sometime this issue would be caused by the multiple top modules in verilog file. Please check the top module of input verilog file.

**What Next**

Use read_verilog command to check whether the Verilog file content is correct or has some issues.

For complete netlist diff, if the input verilog file has multiple top modules, user can use option "-top_module" to sepcify a correct top module for eco_netlist.

**See Also**

- eco_netlist

## ECOUI-005

(error) Type "%s" is not valid.

**Description**

The command supports all blockage types same as create_placement_blockage.

**What Next**

Please refer to the blockage type defined in create_placement_blockage.

**See Also**

- add_spare_cells
- spread_spare_cells
- create_placement_blockage

## ECOUI-006

(Error) net '%s' should have one driver pin

Feedback

### Description

This error message occurs when the operating net has more than one driver pin or the net has no valid driver pin.

### What Next

*remove_buffers* and *add_buffer* cannot operate on nets having multiple driver pins.

### See Also

- remove_buffers
- add_buffer

---

## ECOUI-007

(Error) Error in argument '%s'. '%s'.

### Description

You recieved this error message because an option in the command has an incorrect value. Either the tool could not find the expected value for the argument or the number of arguments is invalid.

### What Next

Clarify the proper use of the option, see the man page of the command.

---

## ECOUI-008

(error) Unable to create %s '%s'. A %s already exists%s.

### Description

The specified operation failed because an object with the given name already exists.

### What Next

Choose a different name for this new object.

---

## ECOUI-009

(error) The app option eco.freeze_silicon.spreader_spacing (%f) is not valid.

### Description

The app option should be greater than or equal to 0. The unit is micron.

Feedback

### What Next

Please specify the valid value.

### See Also

- add_spare_cells
- spread_spare_cells

---

## ECOUI-010

(Error) library cell '%s' is not a buffer or an inverter.

### Description

You recieve this error message, if the library cell matching the specified name is not a buffer or inverter library cell from the target library.

### What Next

Check to make sure that the libray is set correctly and use the buffer or inverter.

### See Also

- add_buffer
- report_lib

---

## ECOUI-011

(Error) cell '%s' is not a buffer or an inverter.

### Description

You recieve this error message because the specified cell is not a buffer or an inverter.

### What Next

Select the cell that its library cell is a buffer or inverter.

### See Also

- add_buffer
- report_lib

Feedback

## ECOUI-012

(error) Unable to create %s '%s'. Measure side '%s' cannot be used with first buffer at '%s'.

**Description**

If creating pattern for horizontal route, first buffer must be at 'bottom' or 'top' and specify measure side 'left' or 'right'. If creating pattern for vertical route, must specify first buffer at 'left' or 'right' and specify measure side 'bottom' or 'top'. Other combination are not supported.

**What Next**

Specify supported combination.

## ECOUI-013

(Error) Error in argument '%s'. '%s'.

**Description**

You recieved this error message because an option in the command has an incorrect value. Either the tool could not find the expected value for the argument or the number of arguments is invalid.

**What Next**

Clarify the proper use of the option, see the man page of the command.

## ECOUI-014

(error) There are eco cells created by spare cell awared add_buffer_on_route or size_cell in design, which have psc_type_id but have not been completely trial mapped or real swapped.

**Description**

The command does not allow user to do place_freeze_silicon -no_spare_cell_swapping or -map_spare_cells_only unless all eco cells with psc_type_id created by spare cell awared add_buffer_on_route or size_cell are completely trial mapped or real swapped.

**What Next**

Please find out all eco cells with eco_change_status as add_buffer_on_route or size_cell and the attribute fs_psc_is_spread_in_slot as false. And apply place_freeze_silicon -no_spare_cell_swapping or -map_spare_cells_only on such cells first.

Feedback

**See Also**

- place_freeze_silicon
- get_attribute

---

## ECOUI-015

(error) The %s view is not supported by the command %s.

**Description**

You receive this error message when you attempt to run the command in the view which is not supported. This command has not supported this view yet.

**What Next**

Run this command in other views.

---

## ECOUI-016

(error) The input bus buffer array pattern %s for option %s is not square or rectangle array type and it is not supported by the command %s.

**Description**

You receive this error message when you specify a non square nor rectangle array type bus buffer array pattern for the option, but this command can only support square or rectangle array type pattern input.

**What Next**

Run this command with square or rectangle array type bus buffer array pattern.

---

## ECOUI-017

(error) Object in bundle %s is not net type, please specify net type bundles for option %s.

**Description**

You receive this error message when the input bundles contain objects which are not net type.

**What Next**

Specify the net type bundles for option and rerun the command again.

Feedback

## ECOUI-018

(error) Failed to set bus guide connection for %s.

**Description**

You receive this error message when command failed to set bus guide connection for the specified driver or some nets.

**What Next**

Check the previous error messages and find out why failed to set the bus guide connection for these nets. Then specify the correct options and run again.

## ECOUI-019

(error) input object %s of %s is not %s.

**Description**

You receive this error message when specify wrong type object for the option.

**What Next**

Specify the correct type object for the option.

## ECOUI-020

(Error) net '%s' does not have any loads.

**Description**

This error message occurs when the operating net has no load pin connected to it.

**What Next**

*add_buffer* will not buffer unconnected nets.

**See Also**

- add_buffer

## ECOUI-021

(Error) The lib cell %s is not tie-%s lib cell for the option %s.

Feedback

### Description

This error message occurs when there is invalid lib cell specified for the lib cell option. The specified lib cells must be tie-high lib cell for the option *-tie_high_lib_cell*. And the specified lib cells must be tie-low lib cell for the option *-tie_low_lib_cell*.

### What Next

Specify the correct lib cells.

### See Also

- connect_freeze_silicon_tie_cells

---

## ECOUI-022

(Error) The library cell %s is not of %s type.

### Description

This error message occurs when there is invalid library cell specified for the lib cell option. The specified lib cells must be the type as required by the option.

### What Next

Check the design_type of library cells and specify the library cells of the required type.

### See Also

- place_eco_cells

---

## ECOUI-023

(error) Pin %s has no connected net.

### Description

You receive this error message when the specified pin has no connected net and command cannot be executed successfully.

### What Next

Select valid pin for the option and run again.

---

## ECOUI-024

(error) Bundle %s has no net object.

Feedback

**Description**

You receive this error message when the specified bundle has no net object.

**What Next**

Specify valid bundles which must have net objects for the command option.

---

## ECOUI-025

(error) Driver pin %s and load pin %s do not belong to the same net.

**Description**

You receive this error message when the pins belong to different nets.

**What Next**

Specify correct pins for the options which must belong to the same net.

---

## ECOUI-026

(error) Failed to set bus guide preferences for %s bus bundles {%s}.

**Description**

You receive this error message when command failed to set bus guide preferences for the bundles listed.

**What Next**

Check the failure reason of the bundles listed.

---

## ECOUI-027

(error) Failed to add bus buffer arrays for %s.

**Description**

You receive this error message when command failed to add bus buffer arrays for the bundle listed.

**What Next**

Check the failure reason of the bundle listed.

---

## ECOUI-028

(error) Check multiple loads of %s failed for reason: %s.

Feedback

**Description**

You receive this error message when command failed to do multiple loads checking.

**What Next**

Check the failed reason listed.

---

## ECOUI-029

(error) Fail to get unit site info.

**Description**

Fail to get unit site info for this command.

**What Next**

Please check if there is site def and site row in design.

**See Also**

- get_site_defs
- get_site_rows

---

## ECOUI-030

(error) Check command option %s failed for reason: %s

**Description**

You receive this error message when command failed to check the specified command option.

**What Next**

Check the failed reason listed.

---

## ECOUI-031

(error) Fail to get via def.

**Description**

Fail to get necessary via def for this command.

**What Next**

Create via def or not remove via def.

Feedback

## ECOUI-033

(error) input cell %s already has a parent cell group %s.

### Description

You receive this error message when the input cell already has a parent cell group and command could not create cell group for this cell.

## ECOUI-034

(Error) Library cell '%s' is an inverter.

### Description

You recieve this message, if you have specified an inverter library cell for *buffer_lib_cell* option without specifying the *-inverter_pair* option.

### What Next

a) specify a library buffer cell.

b) specify -inverter_pair option along with inverter library cell.

### See Also

- add_buffer
- report_lib

## ECOUI-035

(error) There still are %s eco cells with psc_type_id created by spare cell awared add_buffer_on_route or size_cell not in the target list of command.

### Description

The command must do place_freeze_silicon -no_spare_cell_swapping or -map_spare_cells_only for all the eco cells which have psc_type_id and were created by spare cell awared add_buffer_one_route and size_cell at the same time.

### What Next

Please find out all eco cells with eco_change_status as add_buffer_on_route or size_cell and the attribute fs_psc_is_spread_in_slot as false. Then apply place_freeze_silicon -no_spare_cell_swapping or -map_spare_cells_only on such cells first.

Feedback

**See Also**

- place_freeze_silicon
- get_attribute

---

## ECOUI-036

(error) value for list '%s' cannot have %d elements.

**Description**

The value given for the list argument does not have the correct number of elements. Some commands have list arguments which require either a specific number or an even number of elements. The message will indicate which it is.

**What Next**

Supply a correct number of elements in the list.

**See Also**

- add_buffer

---

## ECOUI-037

(error) Could not find the block by name "%s" for option "%s".

**Description**

The specified block does not exist or the block name format is not correct. Please check whether the block exists. If the block exists, then check the option man page and use the correct block name format again.

**What Next**

Provide the block with correct name format for option.

**See Also**

- eco_netlist

---

## ECOUI-038

(error) Currently the spare cell aware add_buffer_on_route does not support %s.

Feedback

**Description**

Currently the specified option cannot be used in spare cell aware add_buffer_on_route.

**What Next**

Remove the specified option or disable spare cell aware feature by two methods: (1) Use option "-not_spare_cell_aware" to disable the spare cell aware feature in this command. (2) Use app option "eco.freeze_silicon.not_spare_cell_aware" to disable the spare cell aware feature for both add_buffer_one_route and size_cell in the whole freeze-silicon flow.

When command is not spare cell aware, please be careful about the spare cell mapping result of these new eco cells in the subsequent flow.

**See Also**

- add_buffer_on_route

---

## ECOUI-039

(error) Option "%s" can only be used in freeze-silicon mode.

**Description**

The specified option can only be used in freeze-silicon mode.

**What Next**

Remove the specified option or enable freeze-silicon mode.

**See Also**

- size_cell
- add_buffer_on_route

---

## ECOUI-040

(error) Failed to get the specified voltage areas.

**Description**

The value given for the voltage area list does not have the correct voltage area.

**What Next**

Supply correct voltage areas in the list.

Feedback

**See Also**

- spread_spare_cells

---

## ECOUI-041

(error) Cell %s is not spare cell.

**Description**

The given cell is not spare cell.

**What Next**

Specify a spare cell, or set the attribute "is_spare_cell" if you are sure the given cell is a spare cell. Then rerun the command.

**See Also**

- spread_spare_cells
- map_freeze_silicon

---

## ECOUI-042

(error) The target %s (%s) is outside the user specified boundary.

**Description**

The target region to spread spare cells is not within the user specified boundary.

**What Next**

Refine the boundary with the option -boundary to cover the target region. Or remove the spare cells belong to this target region from the given cell list. Or remove the target voltage area from the given voltage area list.

**See Also**

- spread_spare_cells

---

## ECOUI-043

(error) No placeable area for target %s (%s).

**Description**

There is no placeable area in the target region.

Feedback

**What Next**

Check the effective regions of target region.

**See Also**

- spread_spare_cells

---

## ECOUI-044

(error) There is no spare cell to be spread.

**Description**

There is no spare cell to be spread.

**What Next**

Please check the spare cells in top design or in any voltage area.

**See Also**

- spread_spare_cells

---

## ECOUI-045

(error) There is no eco cell to be placed.

**Description**

There is no eco cell to be spread.

**What Next**

Please specify eco cells to be placed.

**See Also**

- place_freeze_silicon

---

## ECOUI-046

(error) The spare cell aware feature is turned on, but there are completely trial mapped eco cells which have psc_type_id but have not been real swapped.

Feedback

**Description**

When the command runs with spare cell aware feature, it is not allowed that there are completely trial mapped eco cells (which have psc_type_id) in design.

**What Next**

Please find out all eco cells with the attribute fs_psc_is_spread_in_slot as true and apply place_freeze_silicon -map_spare_cells_only on such cells first.

Or turn off the spare cell awared feature by specifying option "-not_spare_cell_aware" for the command.

**See Also**

- add_buffer_on_route
- size_cell
- place_freeze_silicon
- get_attribute

---

## ECOUI-047

(error) Command failed to process %s. No change will be applied on it.

**Description**

Command failed when processing object and will not apply any change on it.

**What Next**

Fix the problem and re-run the command.

---

## ECOUI-048

(error) There are programmable spare cell mapping rules set and the option %s cannot be used with the mapping rules together.

**Description**

The command does not allow user to do place_freeze_silicon -no_spare_cell_swapping or -write_map_file when there are programmable spare cell (PSC) mapping rules set. Currently the trial mapping feature cannot be used with the PSC mapping rules together.

**What Next**

Please turn off this option or remove all the existing PSC mapping rules, then rerun place_freeze_silicon.

Feedback

**See Also**

- place_freeze_silicon
- report_programmable_spare_cell_mapping_rule
- remove_programmable_spare_cell_mapping_rule

## ECOUI-049

(error) In the input list of option "%s", there are two PSC types %u and %u have the same lib cell height.

**Description**

You receive this error message when you attempt to set two PSC types in the input list of this option, but they have the same lib cell height or there is no lib cell has been set with these PSC types.

**What Next**

Make sure there are lib cells have been set with these two PSC types and the input PSC types of this option must have different lib cell height.

**See Also**

- set_programmable_spare_cell_mapping_rule
- set_attribute

## ECOUI-050

(error) Invalid name for the option '%s'.

**Description**

You receive this error message when you specify an invalid name for the option. This command option requires a simple name without the hierarchy separator character.

**What Next**

Specify a name without the hierarchy separator character for this option.

## ECOUI-051

(error) Cannot instantiate current_design within itself.

Feedback

**Description**

The *add_spare_cells* command was used to try to create a cell in the current design that referenced the current design. This would create a cycle in the design hierarchy, which is not allowed.

**What Next**

Choose a different *reference* for the command.

---

## ECOUI-052

(error) Design '%s' is not in the reference library list.

**Description**

The referenced design must belong to the current library containing the current design, or a reference library of the current library.

**What Next**

Either choose a different library for the reference design, or add the desired library to the current design's library reference library list. refer to NDMUI-079 for more detail about design and its libarary

---

## ECOUI-053

(error) Invalid reference library cells for the option '%s'.

**Description**

You receive this error message when you specify invalid reference library cells for the option.

**What Next**

Specify valid reference library cells for this option.

---

## ECOUI-054

(error) Invalid instance numbers for the option '%s'.

**Description**

You receive this error message when you specify invalid instance numbers for the option.

**What Next**

Specify integers larger than one as the instance numbers for this option.

Feedback

## ECOUI-055

(error) Only logical hierarchical cell in the top block is valid for the option '%s'.

**Description**

You receive this error message when you specify an invalid cell name or the specified cell is not a logical hierarchical cell in top block for the option.

**What Next**

Specify logical hierarchical cell in top block for this option.

## ECOUI-056

(error) Only voltage areas in the top block is valid for the option '%s'.

**Description**

You receive this error message when you specify invalid voltage area names or the specified voltage areas are not in the top block for the option.

**What Next**

Specify voltage areas in the top block for this option.

## ECOUI-057

(error) The specified library cell "%s" is programmable spare cell (PSC) type, currently the spare cell aware feature of command does not support it.

**Description**

You receive this error message when you specify PSC type library cell for spare cell aware feature.

**What Next**

Use option "-not_spare_cell_aware" to turn off the spare cell aware feature or use non-PSC type library cell instead.

**See Also**

- size_cell
- add_buffer_on_route

Feedback

## ECOUI-058

(error) The PSC type %u and %u in the compatible type list have different lib cell height.

### Description

You receive this error message when you attempt to set compatible rule between two PSC types by using set_programmable_spare_cell_mapping_rule, but their lib cells have different height. The compatible PSC types must have the same lib cell height.

### What Next

Make sure the compatible types must have the same lib cell height, if you want to set compatible relationship between these PSC types.

### See Also

- set_programmable_spare_cell_mapping_rule

## ECOUI-059

(error) The lib cell height %s of %s type %u is not smaller than the height %s of target PSC type %u.

### Description

You receive this error message when you attempt to set split or merge rule for the target PSC type by using set_programmable_spare_cell_mapping_rule, but the lib cell height of split or merge type is not smaller than the target PSC type.

### What Next

Make sure the lib cell height of split or merge type is smaller than the height of target PSC type, if you want to set split or merge relationship for them.

### See Also

- set_programmable_spare_cell_mapping_rule

## ECOUI-060

(error) The pg stripe layers of type %u and type %u are not consistent.

### Description

You receive this error message when you attempt to set relationship between two types by using set_programmable_spare_cell_mapping_rule, but their pg stripe layer constrain are not consistent. When using the command set_programmable_spare_cell_mapping_rule

Feedback

with option "-compatible", "-multi_height_merge" or "-multi_height_split", the pg stripe layers of the types must be consistent.

**What Next**

Change the pg stripe layer constrain of the types to be consistent if you really want to set relationship between these types.

**See Also**

- set_programmable_spare_cell_mapping_rule

---

## ECOUI-061

(warning) Only support right side currently, ignore the value.

**Description**

You receive this error message when you attempt to specify the value "left" for the option "-side" of set_programmable_spare_cell_mapping_rule. Currently, this option only support "right".

**What Next**

Specify "right" for the option "-side" or just remove this option.

**See Also**

- set_programmable_spare_cell_mapping_rule

---

## ECOUI-062

(warning) The value %d for option '-size' is ignored since not support yet.

**Description**

You receive this error message when you attempt to specify the value for the option "-size" of set_programmable_spare_cell_mapping_rule. Currently, this option is not supported yet.

**What Next**

Just remove this option.

**See Also**

- set_programmable_spare_cell_mapping_rule

Feedback

## ECOUI-063

(error) Must specify at least 2 types for option '-compatible'.

### Description

You receive this error message when you attempt to specify less than 2 types for the option "-compatible" of the command set_programmable_spare_cell_mapping_rule.

### What Next

Specify more types for the option "-compatible".

### See Also

- set_programmable_spare_cell_mapping_rule

## ECOUI-064

(error) No enough information for creating mapping rule.

### Description

You receive this error message when you attempt to create psc mapping rule by using the command set_programmable_spare_cell_mapping_rule with the option "-psc_type_id" but missing other informations. When user specify the option "-psc_type_id", at least one of the following options need to be specified together: "-dont_overlap_pg_stripe_layer", "-partial_overlap_pg_stripe_layer", "-multi_height_merge", "-multi_height_split".

### What Next

Specify at least one of the above four options with "-psc_type_id".

### See Also

- set_programmable_spare_cell_mapping_rule

## ECOUI-065

(warning) No psc mapping rule is set for the type %u.

### Description

You receive this error message when you attempt to remove or report rules for a type which has no rule set.

Feedback

### What Next

Specify the type that has set rule.

### See Also

- remove_programmable_spare_cell_mapping_rule
- report_programmable_spare_cell_mapping_rule

---

## ECOUI-066

(error) Same PSC type %u in options '%s' and '%s'.

### Description

You receive this error message when you attempt to specify same PSC type in the two options of the command set_programmable_spare_cell_mapping_rule. These two options require different PSC types.

### What Next

Specify different types for the two options.

### See Also

- set_programmable_spare_cell_mapping_rule

---

## ECOUI-067

(error) The specified layers of type %u are not consistent with its convertable types.

### Description

You receive this error message when you attempt to specify inconsistent PG stripe layers using the command set_programmable_spare_cell_mapping_rule. The specified type has convertable types and some of these type are PG stripe aware for some layers, but the specified layers are not consistent with there layers.

### What Next

User report_programmable_spare_cell_mapping_rule to get the detal layers information and specify the consistent layers. If you really want to use the specified layers, please remove other related rules first.

Feedback

**See Also**

- set_programmable_spare_cell_mapping_rule
- report_programmable_spare_cell_mapping_rule

## ECOUI-068

(warning) The "%s" is not supported by the spare cell aware feature of command. The spare cell aware feature will be disabled automatically.

**Description**

You receive this warning message when you specify one option for the spare cell aware feature of command which is not supported. So the spare cell aware feature will be disabled automatically.

**What Next**

To avoid this warning message, use option "-not_spare_cell_aware" to disable the spare cell aware feature in this command or use app option "eco.freeze_silicon.not_spare_cell_aware" to disable the spare cell aware feature for both add_buffer_one_route and size_cell in the whole freeze-silicon flow.

Since the command is not spare cell aware, please be careful about the spare cell mapping result of these new eco cells in the subsequent flow.

**See Also**

- add_buffer_on_route

## ECOUI-069

(error) Window size should be greater than 0.

**Description**

You receive this error message when specify invalid window size for the option.

**What Next**

Specify the correct window size for the option.

## ECOUI-070

(error) There is no bound to be placed.

Feedback

**Description**

There is no bound to be placed.

**What Next**

Please check the command input.

---

## ECOUI-071

(error) The input value inner_length_ratio is not valid.

**Description**

The inner_length_ratio should be greater than or equal to 0, and less than 1.

**What Next**

Please input the valid value.

**See Also**

- set_attribute

---

## ECOUI-072

(warning) There are programmable spare cell mapping rules set, which are not supported by the spare cell aware feature of command. The spare cell aware feature will be disabled automatically.

**Description**

You receive this warning message when you set programmable spare cell (PSC) mapping rules previously and the input lib cells of command are also PSC type. Since the spare cell aware feature of command does not support these PSC mapping rules, it will be disabled automatically.

**What Next**

To avoid this warning message, use option "-not_spare_cell_aware" to disable the spare cell aware feature in this command or use app option "eco.freeze_silicon.not_spare_cell_aware" to disable the spare cell aware feature for both add_buffer_one_route and size_cell in the whole freeze-silicon flow.

**See Also**

- add_buffer_on_route
- size_cell

Feedback

## ECOUI-073

(error) The bitmap string '%s' is not valid.

### Description

The specified bitmap string is not valid for the option "-bit_map". And the valid bitmap should follow the rules: 1. the bitmap string can only have charactor '0', '1' and space. 2. The type bits of the contiguous base should have the different value. 3. Space will be internally filtered before bit map checking. 4. The size of bitmap string should be multiple of the specified base length.

### What Next

Please check the bitmap and specify the valid value.

### See Also

- place_freeze_silicon

## ECOUI-074

(error) The input value inner_length is not valid.

### Description

The inner_length should be greater than or equal to 0.

### What Next

Please input the valid value.

### See Also

- set_attribute

## ECOUI-075

(error) No pipeline bound path info matched the specified objects.

### Description

There is no bound path info matched the specified objects.

### What Next

Please check the input.

Feedback

## ECOUI-076

(error) Bound %s is not move bound.

**Description**

The command only supports move bound.

**What Next**

Please check the input.

## ECOUI-077

(error) The site row %s does not belong to the site array %s.

**Description**

You receive this error message when the specified site row does not belong to the specified site array. The site row specified in the option '-allowable_site_rows' should belong to the site array specified in the option '-site_array'.

**What Next**

Please check the site row name and site array name to make sure they are consistent.

**See Also**

- set_programmable_spare_cell_mapping_rule

## ECOUI-078

(error) Invalid value for option '-allowable_site_rows'.

**Description**

You receive this error message when the specified value for the option '-allowable_site_rows' is not valid. The valid format is {row_name incre_num} and incre_num should be greater than 0.

**What Next**

Please specify the right value for the option '-allowable_site_rows'.

**See Also**

- set_programmable_spare_cell_mapping_rule

Feedback

## ECOUI-079

(error) No site row matched the specified name %s.

### Description

You receive this error message when the specified site row name is not valid and no site row can be found to match the name in the option '-allowable_site_rows'.

### What Next

Please check the site row name and specify the correct site row name.

### See Also

- set_programmable_spare_cell_mapping_rule

## ECOUI-080

(error) No valid library cell found for the option '%s'.

### Description

You receive this error message when you specify invalid value for the option and command could not find the target library cells with this specified option value.

### What Next

Specify valid value for this option.

## ECOUI-081

(warning) Some of the input bundles belong to the paths of the input bounds and these bundles will be ingored: { %s }.

### Description

Some of the input bundles are long to the paths of the input bounds. Since they are duplicated with the bounds, these bundles will be ingored when do the bus guide routing.

### What Next

Please check the input bundles whether belong to the paths of the input bounds.

## ECOUI-082

(Error) Must specify at least one of these options '%s'.

Feedback

**Description**

User must specify at least one of these options.

**What Next**

Add at least one of the specified options to command and run again.

---

## ECOUI-083

(Error) There are %d capacity values specified for option "-capacity", but which needs %d capacity value(s) input.

**Description**

User must input correct number of capacity values. For "-bounds" and "-bundles", When only of them is specified, the "-capacity" option can only support one capacity value input. But when both of "-bounds" and "-bundles" are specfiied, user needs input two capacity values for the "-capacity" option, especially the first capacity value is set for "-bounds" and the second capacity value is set for "-bounds".

**What Next**

Please input correct number of capacity values for "-capacity" option and rerun command again.

---

## ECOUI-084

(Error) The location list is not specified correctly: %s.

**Description**

User must input correct location list for option, like {x1 y1 x2 y2 ...}. The value must be valid coordinate.

**What Next**

Please input correct location list for option and rerun again.

---

## ECOUI-085

(Error) Lib cell %s has %d %s, %s.

**Description**

This command can only support lib cell with single input pin and single output pin. If the lib cell has multiple input/output pins, must specify only one explicitly.

Feedback

**What Next**

Specify one input/output pin and re-run the command.

---

## ECOUI-086

(warning) Skip %d input cells to revert, the cells are {%s}

**Description**

Some input cells are skipped to revert since the attribute eco_change_status is not size_cell/add_buffer/add_buffer_on_route.

---

## ECOUI-088

(error) The %s pin is not specified correctly for %s cell %s.

**Description**

This option -lib_cell_input/-lib_cell_output is not correctly specified.

**What Next**

Please provide the specified pins of the cell.

---

## ECOUI-089

(error) Invalid value for option '%s', you can specify '%s' for this option.

**Description**

You receive this error message when you specify an invalid name for the option. This command option requires only two pattern.

**What Next**

Correct and re-run.

---

## ECOUI-090

(warning) Option '%s' is only effective in single-load nets or bundles.

**Description**

You get the warning when using this option in multi-load nets or bundles.

**What Next**

The command continues but the result may or may not honor the option.

Feedback

## ECOUI-091

(error) Option '%s' is not allowed in multi-load nets or bundles.

**Description**

You get the warning when using this option in multi-load nets or bundles.

**What Next**

Do no use the option with the specified nets or bundles, or use this option with single-load nets or bundles.

## ECOUI-092

(error) Cannot change_link on cell: '%s' because the design '%s' not compatible with current lib_cell '%s'.

**Description**

The *change_link* command was unable to change the lib_cell used for the specified cell. The new lib_cell either has a different port interface, or a different function from the current lib_cell.

The *change_link* command cannot be used to change the functionality or the connectivity of the net list.

**What Next**

Try using a different design when change_link for this cell.

## ECOUI-093

(error) Cannot change_link on cell '%s', the new reference design %s has a different port interface.

**Description**

The *change_link* command was unable to set the cell to the new reference the given design. The new reference design has a different port interface from the current design.

The *change_link* command cannot be used to change the connectivity of the net list.

**What Next**

Try using a different lib_cell when sizing this cell.

Feedback

## ECOUI-094

(error) Cannot change_link on cell '%s', it is an unresolved reference to '%s'.

**Description**

The *change_link* command was unable to set the cell to reference the new design. The cell's current reference is unresolved or unbound.

The *change_link* command cannot be used to change the connectivity of the net list.

**What Next**

Use the *link_design -force* command to resolve the cell's reference. Then use *change_link* to change the reference.

## ECOUI-095

(error) Value of option %s must be set to %s when %s .

**Description**

This message shows that some option must be set to certain value in certain condition.

**What Next**

Fix the command line.

## ECOUI-096

(error) Value of option %s must be %s the value of option %s.

**Description**

This message shows that some option must be in certain condition compared to the other option.

**What Next**

Fix the command line.

## ECOUI-097

(error) Please start GUI before using -preview option in add_group_repeaters.

**Description**

This message shows that preview option is used without starting GUI.

Feedback

**What Next**

Use command start_gui before using -preview option in add_group_repeaters.

---

## ECOUI-098

(error) There does not exist the %s pin named %s in cell %s.

**Description**

This option -lib_cell_input/-lib_cell_output is not correctly specified.

**What Next**

Please provide the correct pins of the cell.

---

## ECOUI-099

(error) Module with name '%s' not found in the library.

**Description**

A module with the specified name must already exist in the library. for the command to work properly.

**What Next**

Specify a design which already exists in the library.

---

## ECOUI-100

(error) Fail to find the core area.

**Description**

The The core area is not found in the design.

**What Next**

Specify a design with the core area.

---

## ECOUI-101

(error) Bidirectional pin/port:%s cannot be buffered.

**Description**

Bidirectional pin/port can not be buffered.

Feedback

### What Next

Choose the non-bidirectional pin to buffer.

---

## ECOUI-102

(error) The inverter %s is not paired.

### Description

This error occurs when tool detects that the inverters to be removed are not paired.

### What Next

Please check the inverters specified to remove are paired.

---

## ECOUI-103

(Warning) Not relinking cell '%s'.

### Description

This warning message occurs when the above cell is already linked with the specified target library cell.

### What Next

This is only a warning message.

However, the result is not what is expected, specify the reference library cell different from the current one.

### See Also

- size_cell

---

## ECOUI-104

(Error) No buffer(s) or inverter-pair(s) connected to net '%s'.

### Description

This error message occurs when the *remove_buffers* command is not able to find any buffer or inverter-pair for the given net.

### What Next

Report the buffer tree for the net using *report_cell* and *report_net* commands and see if there are any buffer or inverter-pairs associated with it.

Feedback

**See Also**

- remove_buffers

---

## ECOUI-105

(error) Can not change link for hierarchical instance %s.

**Description**

The change_link command can only work on leaf level instances. The reference of hierrachical instances can not be changed using change_link.

**What Next**

Please provide correct inputs to the command

---

## ECOUI-106

(Warning) Not relinking cell '%s'.

**Description**

This warning message occurs when the above cell is already linked with the specified target library cell.

**What Next**

This is only a warning message.

However, the result is not what is expected, specify the reference library cell different from the current one.

**See Also**

- size_cell
- change_link

---

## ECOUI-107

(Error) Hierarchy Deliminator is detected for '%s' for option: -%s.

**Description**

This error message occurs if the input name contains hiearchy delimiantor.

Feedback

**What Next**

specify the name without hiearchy deliminator.

**See Also**

- add_buffer

---

## ECOUI-108

(Error) No net connection for %s.

**Description**

This error message occurs if pin or port is not connected to the net.

**What Next**

specify the name with net connection.

**See Also**

- add_buffer

---

## ECOUI-109

(Error) The pin '%s' is PG.

**Description**

This error message occurs if PG pin is used

**What Next**

specify pin of the signal type.

**See Also**

- add_buffer

---

## ECOUI-110

(error) Input lib cell '%s' is not PSC filer.

**Description**

You receive this error message when you specify Non-PSC filler library cell for the option.

Feedback

**What Next**

Specify valid PSC filler reference library cells for this option. Make sure the library cells have correct attribute of psc_type_id.

---

## ECOUI-111

(error) Input cell '%s' in option '%s' cannot be recycled.

**Description**

This command only supports recycling spare cell which comes from PSC filler. It must have attribute "psc_filler_is_used" TRUE.

**What Next**

Specify valid cells for this option, you can check whether the cells have attribute 'psc_filler_is_used' set with true value or not.

---

## ECOUI-112

(error) There is no valid cell specified in option '%s'.

**Description**

You receive this error message when you use the option with no valid cell specified.

**What Next**

Specify valid cells for this option or run command without this option.

---

## ECOUI-113

(warning) This command does not check the polarity of the signal. Please ensure the inverters provided are in pair.

**Description**

Pay attention that this command will not check the polarity of the signal.

**What Next**

Please ensure that the number of inverters is even and they are in pair.

---

## ECOUI-114

(error) Failed to add diode cells for %s loads {%s}.

Feedback

**Description**

You receive this error message when command failed to add diode cells for the load listed.

**What Next**

Check the failure reason of the loads listed.

---

## ECOUI-115

(error) Input %s for option '%s' is invalid: %s.

**Description**

The input value for the list option is invalid. Please check the specified reason.

**What Next**

Please input correct value for the listed option and try again.

---

## ECOUI-116

(error) The block "%s" of "%s" is uneditable.

**Description**

This message shows that the hierarchical edit control of the specified block is false.

**What Next**

Check the editability of the related block.

---

## ECOUI-118

(Warning) %ld nets have no wire.

**Description**

You receive this error message when the net has no wire. These nets will be skipped. Use -verbose option to list net names.

**What Next**

Please check the route status of the net.

---

## ECOUI-119

(Warning) %ld nets have no repeater inserted.

Feedback

**Description**

You receive this error message after the add_group_repeaters command, there is no new repeater in some nets. Use -verbose option to list net names.

**What Next**

Please check the net that fails to insert the repeaters.

---

## ECOUI-120

(error) Failed to initialize Python.

**Description**

You receive this error message when something is wrong in Python.

**What Next**

Run it again.

---

## ECOUI-122

(Warning) Skip signal polarity checking for inverting repeaters.

**Description**

add_group_repeaters will not check polarity when inserting repeater groups.

---

## ECOUI-124

(error) The topology plan or the topology repeater (%s) does not belong to the current block and it is not supported by the command %s.

**Description**

You receive this error message when you try to run the command on a topology plan or a topology repeater not belonging to the current block.

**What Next**

Run this command with topology plans or topology repeaters belonging to the current block.

---

## ECOUI-130

(Error) The current design is not linked.

Feedback

**Description**

This error message occurs when the current design is not linked.

**What Next**

Please link the design first.

---

## ECOUI-131

(Warning) No repeater is added due to %s.

**Description**

You receive this error message after the add_group_repeaters command, there is no new repeater for the net group.

**What Next**

Please check the nets and the insertion rule that failed to insert the repeaters.

---

## ECOUI-135

(error) The provided shapes are invalid in layer %s.

**Description**

The tool cannot recognize the shapes information. Please double check.

**What Next**

Please correct the geometry list for each layer.

---

## ECOUI-136

(error) The repeater group (%d) is invalid.

**Description**

The tool cannot recognize the input group id.

**What Next**

Please double check if the input group id exists by report_repeater_groups.

Feedback

**See Also**

- place_group_repeaters
- set_repeater_group
- report_repeater_groups

---

## ECOUI-137

(error) Incorrect value format for option '%s', which should be '%s'.

**Description**

The value given for the list argument does not have the correct number of elements. Some commands have list arguments which require either a specific number or an even number of elements. The message will indicate which it is.

**What Next**

Please see the man page of the command and input a correct number of elements in the list.

---

## ECOUI-138

(error) Incorrect value found in option '%s': %s.

**Description**

The value given for this option is not correct for the specified reason.

**What Next**

Please check the specified error reason and input a correct value.

---

## ECOUI-139

(error) The lib cell of cell (%s) is not same as value (%s) by -lib_cell.

**Description**

The value given for this option is not correct for the specified reason.

**What Next**

The lib cell of cells by -cells should be same as value by -lib_cell.

Feedback

**See Also**

- add_eco_repeater

---

## ECOUI-140

(error) The lib cell %s doesn't have lib pin %s.

**Description**

The value given for this option is not correct for the specified reason.

**What Next**

The lib pin name specified by -pin_mapping should exist on the lib cell by -lib_cell.

**See Also**

- add_eco_repeater

---

## ECOUI-141

(error) The direction of lib pin %s of lib cell %s is not expected direction %s.

**Description**

The value given for this option is not correct for the specified reason.

**What Next**

The format of -pin_mapping should be { {inp1 outp1} {inp2 outp2}...}.

**See Also**

- add_eco_repeater

---

## ECOUI-142

(error) could not buffer for the input location %s, because %s.

**Description**

You receive this error message when command detects some error for the input buffering location.

**What Next**

Please check the failed reason reported. Then rerun with correct buffering location or other options again.

Feedback

**See Also**

- add_buffer_on_route

---

## ECOUI-143

(error) There is no reference lib cell defined in the option %s for voltage area %s.

**Description**

You receive this error message when command detects the target voltage area (VA) has no reference libaray cell defined in the specified option. This would cause MV violation when command adds buffer(s) in this VA and the default used reference library cell is not legal for this VA.

**What Next**

Please check the target voltage area and define proper reference library cells in the specified option for it.

**See Also**

- add_buffer_on_route

---

## ECOUI-144

(error) No voltage area region is bufferable for target net %s when honor MV-aware.

**Description**

You receive this error message when there is no bufferable voltage area region for target net considering MV-aware.

**What Next**

Please check the target net and its crossed voltage areas.

**See Also**

- add_buffer_on_route

---

## ECOUI-145

(error) Option '%s' cannot be used in freeze-silicon mode unless option '-not_spare_cell_aware' is turned on.

Feedback

**Description**

In freeze-silicon mode, command will enable spare cell aware feature by default.But the specified option has conflict with spare cell aware feature which needs voltage-area aware, so this option cannot be used in freeze-silicon mode.

If you still want to use this option in freeze-silicon mode, you can disable the spare cell aware by option '-not_spare_cell_aware". But be aware that the buffers added may not have corresponding spare cells nearby and would be moved far away from routes by place_freeze_silicon command followed.

**What Next**

Considering the case situation, not use this option or turn on "-not_spare_cell_aware" to allow using this option in freeze-silicon mode.

**See Also**

- add_buffer_on_route

---

## ECOUI-146

(Info) Do not treat lower layer routes as blockages.

**Description**

add_group_repeaters/place_group_repeaters will ignore lower layer routes and do not treat them as blockages.

---

## ECOUI-147

(Info) Disable automatic repeater distance adjustment to spread repeaters evenly.

**Description**

add_group_repeaters will not adjust distance between repeaters to avoid short distance to load.

---

## ECOUI-149

(error) The load number of {%s} is %d which is not equal to bunlde net number %d.

**Description**

You receive this error message when the load number in one sub path is not equal to the bundle net number.

Feedback

**What Next**

Please specify the load collection group with correct object number.

---

## ECOUI-150

(error) Input path point list of option '%s' have %d sub paths, but the load group number is only %d.

**Description**

You receive this error message when total load group number is not equal to sub path number. For multiple fanout scenario, each sub path should have the corresponding load collection group input.

**What Next**

Please specify correct load groups.

---

## ECOUI-151

(error) Cannot specify -clear when trying to create a new repeater group.

**Description**

You receive this error message when you are trying to clear path drivers, path loads or the driver group id while creating a new repeater group

**What Next**

Please specify -clear only for an existing repeater group

---

## ECOUI-152

(error) There is no base region on layer %s, in this case, you cannot create a user track pattern that track type of first track is S.

**Description**

You receive this error message when you try to create a user track pattern that track type of first track is S, on a layer without base region.

**What Next**

Please add base region on the layer before create the track pattern.

Feedback

## ECOUI-153

(error) There is base region %s on layer %s already, only 1 base region is allowed on a layer.

**Description**

You receive this error message when you try to add base region on a layer that contains base region already.

**What Next**

Please remove the existing base region on the layer before add a new base region.

## ECOUI-154

(error) There is %s %s on layer %s already, same name for base region or user track pattern is not allowed.

**Description**

You receive this error message when the name of the base region or the user track pattern that you try to create is exiting.

**What Next**

Please create the base region or user track pattern with a different name.

## ECOUI-155

(error) On layer %s, the direction of %s %s is %s, which is incompatible with the direction of current %s.

**Description**

You receive this error message when the direction of the base region or the user track pattern that you try to create is incompatible with the direction of existing base region or user track pattern on the layer.

**What Next**

Please create the base region or user track pattern with a compatible direction.

## ECOUI-156

(error) On layer %s, the first track's type of user track pattern %s is S, then user track pattern's offset, which is %s, must be larger than the offset of base region %s, which is %s.

Feedback

**Description**

You receive this error message when the offset of user track pattern that the first track's type is S, is not larger than the offset of the base region.

**What Next**

Please create the base region or user track pattern with a compatible offset.

---

## ECOUI-157

(error) On layer %s, the first track's type of user track pattern %s is P or G, then user track pattern's offset, which is %s, must be equal to the offset of base region %s, which is %s, plus zero or one or multiple times of base region's length, which is %s.

**Description**

You receive this error message when the offset of user track pattern that first track's type is P or G, is not equal to base region's offset plus zero or one or multiple times of base region's length.

**What Next**

Please create the base region or user track pattern with a compatible offset.

---

## ECOUI-158

(error) On layer %s, width of track pattern %s, which is %s, must be equal to one or multiple times of the length of base region %s, which is %s.

**Description**

You receive this error message when the width of user track pattern is not equal to one or multiple times of base region's length.

**What Next**

Please create the base region or user track pattern with a compatible width.

---

## ECOUI-159

(error) Failed to process input supernet bundle %s for the reason: %s.

**Description**

You receive this error message when command failed to process input supernet bundle. The supernet of bundle must be in current block only and does not contain any net segment in sub blocks.

Feedback

### What Next

Please check the failed reason and resolve it.

---

## ECOUI-160

(error) The track pattern (%s) is invalid.

### Description

The tool cannot recognize the input track pattern.

### What Next

Please double check if the input track pattern exists by report_user_track_pattern.

---

## ECOUI-162

(error) The lib cell (%s) specified by -lib_cell is not multi-bit buffer or inverter.

### Description

The input lib cell is not valid multi-bit buffer or inverter.

### What Next

The function id of multi-bit buffer is "a1.0(0)_a1.0(1)". The function id of multi-bit inverter is "Ia1.0(0)_Ia1.0(1)". You can query the function id by get_attribute [get_lib_cells $libCell] function_id. Please input the valid lib cell when -multi_bit is on.

### See Also

- add_eco_repeater
- get_attribute

---

## ECOUI-164

(warning) The value %s for option %s is larger than 20, in this case, the result will be unreliable.

### Description

You receive this warning message when specified value for option "-max_distance_for_incomplete_route" is larger than 20, in this case, the result will be unreliable.

Feedback

### What Next

Specify "-max_distance_for_incomplete_route" option with value smaller than 20 when needed.

### See Also

- add_buffer_on_route
- add_group_repeaters
- place_group_repeaters

---

## ECOUI-165

(warning) The value %s for app option eco.place.itr_max_incomplete_route_distance is larger than 20, in this case, the result will be unreliable.

### Description

You receive this warning message when specified value for app option eco.place.itr_max_incomplete_route_distance is larger than 20, in this case, the result will be unreliable.

### What Next

Specify eco.place.itr_max_incomplete_route_distance app option with value smaller than 20 when needed.

### See Also

- implement_topology_repeaters

---

## ECOUI-167

(Error) Dual-rail buffer is required when inserting buffers in secondary PG regions only.

---

## ECOUI-168

(Error) Option %s cannot be specified with -secondary_pg_region.

---

## ECOUI-185

(error) The PG net or the tie net is not allowed for this command.

Feedback

**Description**

The PG net or the tie net is not allowed for this command.

**What Next**

Run the command with correct data

---

## ECOUI-205

(error) Cell %s is not supported, because it is not a leaf level cell.

**Description**

This command can only work on leaf level cells.

**What Next**

Please provide correct inputs to the command

---

## ECOUI-206

(info) %s is specified more than one times

**Description**

The reported object is specified more than one times in option.

---

## ECOUI-207

(error) Both %s and %s has same output net.

**Description**

This command dose not support multiple driving situation.

**What Next**

Please provide correct inputs to the command

---

## ECOUI-208

(error) %s is to remove as first inverter of a pair, but not all of its loads are to remove.

**Description**

An inverter is to remove as first inverter of a pair, but not all of its loads are to remove. Such situation will cause rest loads be driven by inverted signal.

Feedback

**What Next**

Please provide correct inputs to the command

---

## ECOUI-209

(error) Not support buffer '%s' because it dose not has 2 pins.

**Description**

The command can only support buffer that have 2 pins. Buffers with more or less than 2 pins is not supported by this command.

The command doesn't know how to process the connections for cells that have other than 2 pins.

**What Next**

Manually using basic editing commands.

---

## ECOUI-210

(error) Unable to create %s '%s'; %s.

**Description**

The object cannot be created for the specified reason.

---

## ECOUI-211

(error) The net is not specified correctly.

**Description**

This command require that if the specified net exists, it should connecte with the cell. If the pin is specified, it should also connected with this pin.

**What Next**

Check the input of command.

---

## ECOUI-212

(error) This command does not support %s.

**Description**

This command not support this usage or situation.

Feedback

**What Next**

Use this command as its man page.

---

## ECOUI-213

(error) %s does not support %s.

**Description**

This command not support this usage or situation.

**What Next**

Change the situation or use another command.

---

## ECOUI-214

(warning) Timer is now invalid.

**Description**

Timer cannot be incrementally updated and is now invalid. It may take some time to rebuild the timer for the next command which requires it.

---

## ECOUI-215

(error) Line %s in %s is in error. This line will be skipped.

**Description**

This line with error will be skipped. Other lines in the file still will be executed.

**What Next**

Correct this line. Then re-run it through shell or as a line of a new file.

---

## ECOUI-216

(info) %s run in freeze-silicon mode.

**Description**

Detail behavior of freeze-silicon mode can be found in manpage of the command.

Feedback

## ECOUI-217

(error) %s can only run in freeze-silicon mode.

**Description**

This command must be run in freeze-silicon mode.

**What Next**

Set app option design.eco_freeze_silicon_mode true

## ECOUI-218

(error) Cell instances of same cell %s are with different %s in different hierarchy of same module.

**Description**

This command does not support this situation in module based editing

**What Next**

Make cell instances of same cell be same before using module based editing. Or you can use instance based editing instead.

## ECOUI-219

(error) Syntax error: too many fields are specified at line %s.

**Description**

Too many fields are specified at this line. Please read this command's man page for the right format of file.

**What Next**

Correct this line. Then re-run it through shell or as a line of a new file.

## ECOUI-220

(error) %s specified at line %s could not be found in design.

**Description**

Objects specified could not be found in design.

Feedback

**What Next**

Correct this line. Then re-run it through shell or as a line of a new file.

---

## ECOUI-221

(error) Invalid value %s for field %s specified at line %s.

**Description**

This value for this field is invalid. Please view this command's manpage to see the right format of file.

**What Next**

Correct this line. Then re-run it through shell or as a line of a new file.

---

## ECOUI-222

(error) Syntax error: required filed %s is not specified at line %s.

**Description**

The command could not find this required field at this line. Please read this command's man page for the right format of file.

**What Next**

Correct this line. Then re-run it through shell or as a line of a new file.

---

## ECOUI-223

(error) Syntax error: missing close-brace '}' at line %s.

**Description**

Braces must be balanced. Please read this command's man page for the right format of file.

**What Next**

Correct this line. Then re-run it through shell or as a line of a new file.

---

## ECOUI-224

(error) %s is specified more than one times %s, each %s can only be specified one time.

Feedback

**Description**

This object can only be specified one time.

**What Next**

Remove duplicated specified objects and rerun the command.

---

## ECOUI-225

(info) %s of %s specified mappings succeed%s.

**Description**

This info shows how many mappings succeed. Failed lines will be listed after this message, unless all lines are failed. It is a summary. Details of failed lines have been printed in front of this message.

**What Next**

Correct the failed mappings. Then re-run them through shell or as a line of a new file.

---

## ECOUI-226

(error) %s is not a programmable spare cell (PSC) filler.

**Description**

A programmable spare cell (PSC) filler must be with psc_type_id and its design type must be filler.

**What Next**

Correct and re-run.

---

## ECOUI-227

(error) Value of option %s must be set to %s when using option %s .

**Description**

This message shows that some option must be used with other option with certain values.

**What Next**

Fix the command line.

Feedback

## ECOUI-228

(error) Option -no_spare_cell_swapping and -map_spare_cells_only cannot be used in PSC (Programmable Spare Cells) eco flow (also known as gate array flow).

### Description

This error message occurs when there are eco cells with PSC type to be mapped while option -no_spare_cell_swapping or -map_spare_cells_only is turned on.

### What Next

Turn off -no_spare_cell_swapping and -map_spare_cells_only and run place_freeze_silicon again.

## ECOUI-230

(error) The attribute fs_dont_use of cell %s is true.

### Description

The spare cell with the attribute fs_dont_use as true cannot be used when mapping.

### What Next

Set the attribute fs_dont_use as false and do mapping again.

### See Also

- set_attribute
- map_freeze_silicon
- place_freeze_silicon

## ECOUI-231

(Error) Inverter cell '%s' cannot be used with option -on_route or -max_fanout.

### Description

Inverter cell cannot be used when -on_route or -max_fanout option is specified.

### What Next

Use a buffer cell instead, or remove -on_route or -max_fanout option.

Feedback

## ECOUI-232

(Error) Failed to turn on eco.placement.enable_new_advanced_filler_removal with advanced legalizer

**Description**

When advanced legalizer is enabled, place_eco_cells should have turned on app option eco.placement.enable_new_advanced_filler_removal automatically. Somehow it failed to set this app option true successfully. Hence, this error message is output.

**What Next**

Please double check if the app option place.legalize.enable_advanced_legalizer is set true, then turn on this feature manually as follows. set_app_options -name eco.placement.enable_new_advanced_filler_removal -value true

# EDC

## EDC-001

(Info) Policy for early data check '%s' is '%s'%s.

**Description**

This message informs the user about the configured policy for a failing early data check. Early data checks will fail if the data is incomplete, inconsistent or overconstrained. The policy defines what action should be taken when such a check fails. Possible policies are 'error', 'tolerate' and 'repair'. When the data is still dirty, checks can be configured as 'repair' or 'tolerate', while in the later stages, close to tape-out, the policy will typically be configured as 'error'.

**What Next**

Use command 'set_early_data_check_policy' to modify the policy (error, tolerate, repair) for specific checks.

## EDC-002

(Info) No further messages for early data check '%s' will be generated.

**Description**

This message informs the user that the number of early data check messages that were generated for this check has reached the tool-imposed maximum. No further messages for this check will be issued.

Feedback

**What Next**

Use command 'report_early_data_checks' or 'get_early_data_check_records' to inspect the records that were created for this check.

---

## EDC-003

(Info) No further records for early data check '%s' will be created.

**Description**

This message informs the user that the number of early data check records that were created for this check has reached the tool-imposed maximum. No further records for this check will be created. As a consequence, the early data check records that are in the data based do not reflect all failing objects.

**What Next**

Use command 'report_early_data_checks' or 'get_early_data_check_records' to inspect the records that were created for this check.

---

## EDC-004

(warning) Repair skipped for '%s' for object '%s' as it would cause loss of UPF data.

**Description**

Repaired skipped for early data check as it would cause UPF data loss as part of converting empty logic module to macro.

**What Next**

If you do not want to repair then change policy to 'tolerate'. If still repair is needed then enable early data check repair strategy before loading upf.

---

# ELAB

---

## ELAB-1

(error) %s Different registers '%s' and '%s' exist in the same always/process block. Relative placement register bank will not be supported.

Feedback

**Description**

This error message occurs when different registers exist in the same always/process block. The relative placement register bank coding style requires each always/process block to have only one register array.

**What Next**

Rewrite the RTL code to meet the coding style requirement and run the command again.

---

## ELAB-2

(error) %s Relative placement register bank group '%s' does not contain a latch/FlipFlop.

**Description**

This error message occurs when the relative placement register bank group does not contain a latch or flip-flop.

**What Next**

Remove the relative placement directive for the given always/process block.

---

## ELAB-3

(warning) %s Extraneous argument for system function/task %s ignored.

**Description**

If you provide more arguments than the compiler requires when you make a system function or task call, the compiler ignores the extraneous arguments.

**What Next**

This is a warning message only and requires no action on your part.

---

## ELAB-5

(warning) %s Encountered extra 'dc_script_begin' pragma.

**Description**

The *read* command or *elaborate* command issues this warning code when an extra 'dc_script_begin' is encountered in the vhdl design.

For e.g. -- pragma dc_script_begin -- set_dont_touch find (net, N1) false -- pragma dc_script_end -- pragma dc_script_begin <<-- extra 'dc_script_begin' pragma.

Feedback

**What Next**

Locate the extra 'dc_script_begin' in the vhdl design at the specified line number. Then either provide corresponding 'dc_script_end' pragma or remove it, as intended.

---

## ELAB-6

(warning) %s Encountered extra 'dc_script_end' pragma.

**Description**

The *read* command or *elaborate* command issues this warning code when an extra 'dc_script_end' is encountered in the vhdl design.

For e.g. -- pragma dc_script_begin -- set_dont_touch find (net, N1) false -- pragma dc_script_end -- pragma dc_script_end <<-- extra 'dc_script_end' pragma.

**What Next**

Locate the extra 'dc_script_end' in the vhdl design at the specified line number. Then either provide corresponding 'dc_script_begin' pragma or remove it, as intended.

---

## ELAB-7

(error) %s Disable Presto features in Verification Friendly DC Mode

**Description**

If you use multiple dimension array in Verication Friendly DC Mode, this error message will happen.

**What Next**

Rewrite RTL source codes or remove special Presto directives.

---

## ELAB-8

(warning) %s Disable Presto features in verification friendly mode.

**Description**

This warning message occurs when you use the enum directive and the label directive in verification friendly Design Compiler mode.

**What Next**

This is only a warning message. No action is required.

Feedback

However, if the result is not what you intended, rewrite the RTL source codes or remove the special Presto directives.

---

## ELAB-9

(warning) %s Manual resource sharing pragmas will be ignored.

**Description**

This warning message occurs when the *hdlin_disable_manual_resource_sharing* variable is set to true. All of the manual resource sharing pragmas are ignored. The default value of the variable is false.

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended, you can use manual resource sharing by setting the *hdlin_disable_manual_resource_sharing* variable to false.

---

## ELAB-012

(information) %s '%s' has non-canonical array bounds [%d:%d];\n\tusing C-style bounds [%d] would align with the external port names

**Description**

This information message issues when you

- declare an interface (or modport) array as a formal port of your design; and
- its bounds do *not* run from [0:*length*-1], (or in C-style: [*length*]); and
- the module's (or its hierarchical parent's) hdlin_interface_port_ABI was set to an odd number (low-order bit = 1).

If your view of this design remains exclusively inside SystemVerilog, the choice of bounds or direction, when used consistently, makes no difference. But if you require a Verilog-/netlist-level interaction with this design (e.g., to add constraint or power annotations, or to link with a Verilog testbench), you may find non-canonical bounds to be confusing and to increase the risk of human error.

**HOW AND WHY CANONICAL INDEX SETS ARE USED (an ABI oddity)**

Feedback

External port names exist in their own namespace/scope; they do not change how your SV indexing scheme works within the module's scope. External port names only determine how other designs link to your design and how you address the ports of your design cell in later stages of the work flow.

SystemVerilog elaboration introduces separate netlist-level ports for your interface/modport array's contents. Each element of the array adds another copy of its modport list into this design's port list. When by-name port connection syntax is used, list position no longer suffices to identify them; so each "[element].content" port needs a unique external port name, including its element index (or offset). In SV, a top design is *not obliged* to pass an interface array whose bounds are an exact match - only its length(s along corresponding dimensions) must be equal. This is the same rule as applies to bused data ports: widths must match; bounds needn't be identical.

Allowing for the fact that, during a top-down link, the reference cell's port names are unchangeable "givens", there are just three ways to align array element numbering across a named port connection:

- by writing the RTL to manually match the bounds on both sides of an interface array port connection;
- by letting the compiler choose a matching set of "canonical" bounds (hdlin_interface_port_ABI bit[0]=1, the default); or
- by requesting custom-elaboration of the down design for each different combination of array bounds needed by a caller. When hdlin_interface_port_ABI bit[0] is set to 0, these customized elaborations will align with each reference cell's interface array port indices by duplicating the down module's design and inventing a matching set of external port names for each unique instantiation. To *minimize distinct elaborations* (and avoid functional duplication of designs), all the reference cells to any design should agree on a single interface array numbering scheme via one of the first two options.

Note that when part-selects are used to connect a slice of an interface array to an array port, the slice's bounds are always canonical. This limits the flexibility of the manual-matching method and means that (on average) interface arrays declared with canonical (i.e. C-style) bounds need the minimum amount of net-name-translation across port connections.

**What Next**

This is an information-only message. No action is required. Some users may turn off bit[0] of hdlin_interface_port_ABI.

Feedback

**Should you change your RTL to use [0:length-1] indexing?**

If part-selections from an interface array are connected to down design ports and you need a high level of concordance between the internal and external names of ports, we strongly recommend that you make the RTL change (carefully and thoroughly!). Trying to keep an index set reversal in mind throughout the design cycle is asking for trouble. If you can adjust your indexing expressions to work with [0:*length*-1], you'll find that the netlist names correspond to your RTL-source references without translation; one source of later confusion will be eliminated.

**Should you just switch the ABI setting?**

If your interface arrays always use precisely the same bounds and you never need part selection syntax, you will find that setting hdlin_interface_port_ABI to 2 aligns your netlisted port indices with your non-canonical RTL indices. The setting must be applied when the SV source of the interface is analyzed or read and it affects each interface separately.

When refering to port or pin names of interface arrays in constraint annotations, SAIF, UPF, or other netlist-level parts of the flow, always use the indexing convention from the top design's reference cells. Notice that by-name connections may invent (formal port) names whose indices differ from the actual nets being connected. These are the names controlled by the ABI switch setting of the interface.

**See Also**

- suppress_message

---

## ELAB-21

(error) %s Unable to add '%s' to column %d and row %d of group '%s' because that location is already occupied.

**Description**

This error message occurs when the specified location is already occupied by other relative placement group.

**What Next**

Change the location for the given group.

---

## ELAB-22

(warning) %s Columns %d and rows %d of relative placement group '%s' are larger than the specified columns %d and rows %d. The actual size will be used when creating the relative placement group.

Feedback

**Description**

This error message occurs when the size of the relative placement group is larger than the specified size.

**What Next**

Change the size for the specified group and run the command again.

---

## ELAB-23

(error) %s Wrong format of relative placement directive '%s'.

**Description**

This error message occurs when the format of the specified relative placement directive is incorrect.

**What Next**

Change the format of the relative placement directive.

---

## ELAB-24

(error) %s switch hdlin_enable_relative_placement has an incorrect value of '%s'.

**Description**

This error message occurs when the *hdlin_enable_relative_placement* variable has an invalid value. The valid values are *none*, *mux*, *rb*, *mux;rb*, *rb;mux*.

**What Next**

Change the value of *hdlin_enable_relative_placement* to one of the values shown above.

---

## ELAB-28

(warning) %s SCALARED keywords are ignored.

**Description**

You receive this warning to let you know that for synthesis purposes, the compiler ignores the scalared keyword.

**What Next**

This is a warning only and requires no action on your part.

Feedback

## ELAB-30

(error) %s Relative placement group name '%s' does not match end group name '%s'.

**Description**

This error message occurs when the group name specified in the rp_group compiler directive is different from the group name specified in the rp_endgroup compiler directive.

**What Next**

Change the group name in rp_group and rp_endgroup, so the group name is the same in both compiler directives.

## ELAB-31

(warning) %s Relative placement register bank group '%s' does not exist.

**Description**

This warning message occurs when the specified relative placement register bank group does not exist.

**What Next**

This is only a warning message. No action is required.

However, to avoid this warning message, do not place this relative placement group in the hierarchy relative placement group.

## ELAB-32

(warning) %s cell '%s' in relative placement group '%s' has negative row/column '%d'/'%d'.

**Description**

This warning message occurs when the cell in the relative placement group has a negative row/column. The tool does not accept a negative row/column.

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended, fix the negative row/column and run the command again.

Feedback

## ELAB-33

(warning) %s SV Assertions are ignored for synthesis since %s is not set to true.

### Description

This warning message issues once for each module elaboration where the Presto HDL Compiler encounters a labelled assertion or assertion severity system task call that must be ignored due to the tcl environment variable setting cited in the message. Because SystemVerilog Assertions (SVA) allow synthesis' optimizers to recognize more "don't care" conditions than otherwise specified by the RTL, they are not applied by default but must be enabled - both as a product feature and also by certifying that individual assertions have proven to be unreachable prior to synthesizing this RTL.

### What Next

This is only a warning message. No action is required.

However, if you want the construct to be either exploited or ignored with no warnings, you must set *hdlin_enable_assertions* to true and also establish its assertion label (with lexical scope) as an element of the *confirmed_SVA()* environment array giving this a true or false value.

## ELAB-34

(warning) %s The configuration '%s' needs to be analyzed; module or interface '%s' will be elaborated but not configured

### Description

This warning message issues when the design of a module or interface should be configured, but the configuration description was either: not analyzed, not readable, or is missing from the indicated design library. Earlier warnings often may give more information.

This generally happens during down-stream linking when an unresolved reference requires a configured design. Configuration instructions are suffixed to the parameter string of some unresolved references when the elaboration of the parent design is configured.

### What Next

This is only a warning message. No action is required, but the result, if it can even be produced, will not embody the indicated configuration.

Check that the configuration's design library has been defined and is found at its specified -path in the file system. The analyzed intermediate file of a Verilog "config" must be accessible during elaboration of every design it might affect.

Feedback

## ELAB-35

(warning) %s %s %s already has a specific %s; others are ignored

### Description

This warning message issues in a Verilog configuration when an *instance* or *cell* clause is repeated (either literally, or effectively) with the same type of expansion clause - either a *liblist* or a *use*. Since only one can be implemented, the first, most-specific, occurence wins and other specifications for the same cell or instance are ignored.

### What Next

This is only a warning message. It is not issued when a more-specific selection clause overrides a less-specific one, only when multiple similarly-specific selections apply to one configuration choice. Review the cited configuration rule and remove duplicates.

## ELAB-36

(error) %s Missing analyzed description of '%s.%s:config'.

### Description

This error message issues once in each module which uses the cited hierarchical configuration when that config description is not analyzed (yet) by a compatible Verilog compiler, or the analyzed config cannot be found or read.

Without regard to whether the intended design cell is already loaded in memory or must still be elaborated sometime in the future, the reference you're constucting here (to that configured component, from this module) must include full instructions for the linker to find and elaborate it. The key library and template name information this requires only exists in the down-configuration description.

### What Next

This message is usually preceded by a "Missing File" warning during the attempt to obey a hierarchical configuration specification. If you mean to heed that warning and you arrange for the .pvl file to be found and read, you must re-link or re-elaborate the current (configured) module. The file containing the config description may need to be analyzed into the expected library using a compatible S/Verilog compiler, or the library identifier may need to be defined to the right file system path, or the file or library-directory must grant access permission for you to read the file.

## ELAB-65

(warning) %s Always block that has both a timing control statement as well as embedded event (@) expression is not supported by synthesis.

Feedback

**Description**

You receive this warning when an always block has both a timing control statement and an embedded event (@) expression, a situation that Synthesis does not support.

**What Next**

Change the always block description by removing either the timing control statement or the embedded event (@) expression. Then invoke the compiler again.

---

## ELAB-66

(warning) %s The event depends on both edge and nonedge expressions, which synthesis does not support.

**Description**

You receive this warning message because you have assigned to an event both edge and nonedge expressions, which Synthesis does not support.

**What Next**

Modify your description so that the event depends on either an edge expression or a nonedge expression, but not both.

---

## ELAB-67

(warning) %s Only simple variables are allowed in the sensitivity list for synthesis.

**Description**

You receive this warning because you have not included simple variables in the sensitivity list. Synthesis supports only simple variables in the sensitivity list.

**What Next**

Use simple variables in the sensitivity list. Then invoke the compiler again.

---

## ELAB-68

(warning) %s The event depends on two edges of the same variable, which synthesis does not support.

**Description**

You receive this warning because you have assigned to an event two edges of the same variable, which synthesis does not support.

Feedback

**What Next**

Modify your description so that the event depends on only one edge of the variable. Then invoke the compiler again.

---

## ELAB-69

(warning) %s In the event expression with 'posedge' or 'negedge' qualifier, synthesis allows only simple variables.

**Description**

You receive this warning to let you know that synthesis allows only simple variables in an event expression with a 'posedge' or 'negedge' qualifier. If the event expression in your description contains no simple variables, you receive this warning.

**What Next**

Modify your description to include only simple variables in the event expression.

---

## ELAB-90

(error) %s Always block that has both a timing control statement as well as embedded event (@) expression is not supported by synthesis.

**Description**

You receive this error message when an always block has both a timing control statement and embedded event (@) expression, which synthesis does not support.

**What Next**

Change the always block description by removing either the timing control statement or the embedded event (@) expression. Then invoke the compiler again.

---

## ELAB-91

(error) %s The event depends on both edge and nonedge expressions, which synthesis does not support.

**Description**

You receive this error message because you have assigned to an event both edge and nonedge expressions, which Synthesis does not support.

Feedback

**What Next**

Modify your description so that the event depends on either an edge expression or a nonedge expression, but not both.

---

## ELAB-92

(warning) %s Only simple variables are allowed in the sensitivity list for synthesis.

**Description**

You receive this warning message because you have not included simple variables in the sensitivity list. Synthesis supports only simple variables in the sensitivity list.

**What Next**

Use simple variables in the sensitivity list. Then invoke the compiler again.

---

## ELAB-93

(error) %s Events that depend on two edges of the same variable are not supported by synthesis.

**Description**

You receive this error message because you have put in the event expression both 'posedge' and 'negedge' of the same variable. Synthesis supports only one edge of a variable in the event expression.

**What Next**

Review your design description and decide which edge you want to use. Then invoke the *elaborate* command again.

---

## ELAB-94

(error) %s In the event expression with 'posedge' or 'negedge' qualifier, synthesis allows only simple variables.

**Description**

You receive this error message because you did not specify simple variables only under a 'posedge' or 'negedge' qualifier in the event expression. Synthesis supports only simple variables under those qualifiers.

Feedback

### What Next

Review your design description and make the appropriate changes, using only simple variables under 'posedge' or 'negedge'. Then invoke the compiler again.

---

## ELAB-95

(error) %s Unsupported expressions appear in the sensitivity list.

### Description

You receive this error message because unsupported expressions appear in the sensitivity list with posedge or negedge. Only simple variables or variables indexed by a constant or a constant expression as an offset are allowed in the sensitivity list with posedge or negedge, by synthesis policy. For example:

```
parameter p=5;
 always @(posedge a[p+2])
```

### What Next

Change the expression following posedge or negedge so it conforms to the above synthesis policy.

---

## ELAB-100

(warning) %s Variable '%s' is a legacy of HDL Compiler. For Presto HDL compiler, please use '%s' instead.

### Description

This is an old HDLC variable.

---

## ELAB-101

(error) %s %s in constant function is illegal.

### Description

Illegal action inside constant function.

---

## ELAB-102

(warning) %s %s in the constant function will be ignored.

Feedback

### Description

This warning message advises you that the action inside the constant function will be ignored.

### What Next

This is only a warning message. No action is required.

---

## ELAB-103

(error) %s Try to get value of parameter before the declaration of the parameter.

### Description

Try to get value of parameter before the declaration of the parameter!.

---

## ELAB-104

(error) %s Symbol '%s' is not included in modport.

### Description

This error issues where a port connection, whose type is <interface>.<modport>, is used to access contents (the cited symbol name) of an interface instance that has not been properly connected by the actual modport. The interface declaration did not declare this symbol as accessible via the connected modport. The cited symbol need not appear explicitly on the cited source line; it may be a symbol accessed from the interface scope via a global variable reference within some interface function or task called directly or indirectly on the cited source line.

To appreciate why this is undesireable during logic synthesis, please recognize that the interface content is typically a net or cell instantiated remotely by the parent design who must then connect it to an instance of this design. Remote signals are conveyed into or out of the present module context via physical port connections. The modport in question selects a subset of the interface's contents and presents them each with a definite port direction and in a definite positional order. This is what allows a physically coherent linkage to be established across the hierarchical boundary.

### What Next

Interface-port connections built (for simulation purposes) around function calls that implement a "data abstraction" must be rendered synthesizable by declaring a suitable modport that gives port directions to the entire range of communication signals the module will finally need.

Additional signals needed by the down-design clients of an interface must be added explicitly to the modport(s) being connected to those instances.

Feedback

### See Also

- ELAB-398

---

## ELAB-105

(error) %s The name '%s' is not a modport of the interface instance actually provided on port '%s'.

### Description

This issues during the elaboration of an module or interface one of whose formal ports requires a modport with the specified name to be supplied as the actual port of the instantiation. The actual interface provided on the indicated port did not satisfy that expectation. Either an interface instance was provided with no such modport defined, or a modport of a different name was passed by mistake.

### What Next

Check the spelling of the modport name vs the modports declared by the interface type of the instance being provided on this port.

---

## ELAB-106

(warning) %s A symbol named '%s' is already defined differently in the receiving scope.

### Description

This warning message occurs in SystemVerilog contexts when a problem arises merging two copies of a well-known scope. It indicates that two or more reuses of a common definition are not in perfect agreement about its authorship or meaning.

SystemVerilog modules and interfaces share access to global "compilation unit" scopes such as $unit (formerly known as $root) and to SV package scopes. When they are separately analyzed, each module's or interface's .pvl file, and each package's .pvk file holds a replica of selected entities within these scopes. Package imports, interface instantiations, and type parameterizations expect to share these common definitions. As the separate parts are recombined, the SystemVerilog compiler applies a "trust-but-verify" protocol before accepting the equivalence of a foreign definition to its local homograph. If the declaration, scope, and provenance (such as source code location) of the two symbols match up perfectly, they can become identified with each other. When this protocol fails, compilation proceeds by accepting both homographs.

The message is only a warning, because both definitions survive after the merger and continue to support all their existing referents. References to the foreign definition that arrive alongside it continue to refer to the foreign definition. References to the name in the receiving scope are bound to its lexically local definition. However, future mergers

Feedback

of the receiving scope with any others can cause multiple repeats of the warning. Also, the existence of two meanings for one name might make some compiler output ambiguous. The presence of type homographs can result in strict datatype mismatches and unexpected results from type comparison operations.

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended, locate the relevant declaration(s) of this name. If the name is not one you declared (for example, it looks like it might be a compiler temporary), it usually belongs to a struct or enum type declaration that you might know by one or more typedef'ed names. The internal name for a struct or enum type becomes visible in instantiation reports when the type is passed as a type parameter; experiments using that feature can help to locate these.

The location information in this report might point either to the semantic action that merges scopes, or to one of the homograph declarations. Merge actions can occur deeply nested in the actual receiving scope, so be sure to consider the name's definition in all parent scopes of the reported line number. If the declaration sites are not all within the source file currently being analyzed or read, consider how they come to be included in this compilation. There must be only one lexical occurrence of the declaration of any strong data type. Function, task, and named block declarations must be reproduced verbatim, and ideally should be acquired by file inclusion or package reference.

The problem may be related to `include file revisions, to `include'ing one file into several scopes, or to an attempt to pass a type parameter or refer to a package between incompatible compilations of the same application.

Check that files `included by both compilation units are the same version of the same file, and that they use the same basename for the file, even if the directory paths differ. Some matching criteria are sensitive to line location and token sequencing. Note that macro expansion outcomes can differ due to the `define namespace of separate analyze commands, or the prevailing `defines at different points of inclusion. One file, analyzed with different releases of the shell tool, may be incompatible with itself; although analyses done on distinct hosts or even operating systems with the same release level of dc_shell should be interchangeable. ELAB-106 is extra sensitive to many subtle kinds of miscoordination between separately compiled components. If you are integrating subprojects for the first time, you will need to establish uniform ways of preparing any infrastructure they share.

**Description**

Multiple sequential assignment.

Feedback

## ELAB-113

(error) %s Non-standard synchronous coding style not supported.

**Description**

Non-standard synchronous coding style not supported.

## ELAB-114

(warning) %s Variable %s has an invalid value: %s.

## ELAB-115

(error) %s RTL Netlist found.

**Description**

RTL Netlist found.

## ELAB-116

(warning) %s Variable %s is not supported in Incremental Mode.

## ELAB-117

(error) %s Array of GTECH_* instances is not supported yet.

**Description**

Array of GTECH_* instances is not supported yet.

## ELAB-118

(error) %s Unsupported resource : %s .

## ELAB-119

(error) %s Array length should be positive integer.

**Description**

This message issues because you have provided a zero or negative value when specifying an array length.

Feedback

### Examples

When you try to convert an integer to an array type in VHDL, you might write

```
...
   CONV_UNSIGNED(A, 0)
   ...
```

which requests an empty vector of bits - the zero here is not correct. Or in SystemVerilog you might use a C-style declaration to declare

```
byte lcd_text[N];
   ...
```

which can provoke this error if N = -42.

### What Next

Correct the values of the array length in your design.

---

## ELAB-120

(warning) %s %s does not exist, resource declaration will be ignored.

### Description

This warning message will happen when the operator does not have the operator label in resouce declaration, or the opearator is optimized away. Then the resource declaration will be ignored.

### What Next

If the user wants to use resouce declaration, please add the operator label for the operator.

---

## ELAB-123

(information) %s Port .%s()'s array bounds [%d:%d] were translated to [%d:%d] by renaming at the module boundary

### Description

This information message issues when you

declare

its

the choice of bounds or direction, makes no difference (only the length along each axis is important). But if your workflow uses a Verilog-/netlist-level interaction with this design

Feedback

(e.g., to add constraint or power annotations, or to link with a Verilog testbench), you may need to address this design's ports using the translated indices that were taken from the actual port expression.

**What Next**

This is an information-only message. No action is required. Some users may turn on bit[0] of hdlin_interface_port_ABI, or alter the formal port's array bounds.

**See Also**

- suppress_message
- ELAB-012

---

## ELAB-130

(warning) %s The initial value for signal '%s' is not supported for synthesis. Presto ignores it.

**Description**

You receive this warning message if the signal is assigned an initial value when it is declared. Presto VHDL ignores initial values for signals. If the only assignment to a signal is from the initial value declaration, the signal will be treated as an undriven net for synthesis. Any nets that remain undriven will be tied to zero during optimization. This will cause a simulation-synthesis mismatch if the initial value is not zero.

**What Next**

You may ignore this warning, if the declaration initialization is not the only assignment to this signal. However, if the declaration initialization is the only assignment to this signal, then either a second assignment to the signal should be added, or a constant should be used instead. Leaving the declaration initialization as the only the assignment to the signal will likely cause a simulation-synthesis mismatch.

---

## ELAB-160

(error) %s Redeclaration of port '%s' is not allowed.

**Description**

You receive this message because, during *analyze* or *read* command activity, the Presto HDL Compiler has detected that the same port is declared twice inside the same function, task, or module. Following is an example that illustrates this type of error:

```
function f;
   input a;
```

Feedback

```
  input a;      // redeclaration of already declared port
   ...
endfunction;
```

### What Next

Remove or rename as appropriate one of these ports.

---

## ELAB-161

(error) %s Forml port .%s()'s width [%d] does not match the corresponding actual axis' width [%d]

### Description

This message issues when you declare an interface (or modport) array as a formal port of your design and its shape does *not* conform with the shape of the actual port_expression at one of its instantiation sites.

### What Next

This message prevents elaboration from resolving a reference cell of the parent design being linked. The HDL source of either the instantiating design or the design's definition must be adjusted so that the interface/modport array shapes of the formal and actual ports conform when connected. Consider using parameters in the formal array bounds that can be overridden to match each instantiation site. Re-analyze any edited source before re-elaborating or re-linking.

### See Also

- ELAB-012

---

## ELAB-162

(warning) %s Formal port .%s()'s width [%d] does not match the corresponding actual axis' width [%d]

### Description

This DC Explorer message issues when you declare an interface (or modport) array as a formal port of your design and its shape does *not* conform with the shape of the actual port_expression at one of its instantiation sites. This elaboration and/or linkage has been allowed to proceed by forming random connections unrelated to your intended logic. It is not guaranteed to reach completion and its results, if any, are not suitable for tape-out.

Feedback

### What Next

The HDL source of either the instantiating design or the design's definition must be adjusted so that the interface/modport array shapes of the formal and actual ports conform when connected. Consider using parameters in the formal array bounds that can be overridden to match each instantiation site. Re-analyze any edited source before re-elaborating or re-linking.

### See Also

- ELAB-123

---

## ELAB-163

(error) %s %s port .%s() has more dimensions than the corresponding %s port

### Description

This message issues when

you

declares

the

minus

does

### What Next

This message prevents elaboration from resolving a reference cell or cell array of the parent design being linked. The HDL source of either the instantiating design or the design's definition must be adjusted so that the interface/modport array shapes of the formal and actual ports conform when connected. Check that the shape of the array of instances conforms to the leading axes of this port if the port will be distributed across instance array elements. Consider using parameters in the formal array bounds that can be overridden to match each instantiation site. Re-analyze any edited source before re-elaborating or re-linking.

### See Also

- ELAB-209

Feedback

## ELAB-164

(warning) %s %s port .%s() has more dimensions than the corresponding %s port

### Description

This DC Explorer serious warning message issues when

you

declares

the

minus

does

If the actual array has more dimensions, the formal will only connect with the leading element of each of the excess trailing axes. If the formal has more dimensions, something happens which is too horrible to describe; fix this quickly before you have to explain it...

### What Next

This message tries not to prevent elaboration from resolving a reference cell or cell array of the parent design being linked, it does this by a technically unsound process called "making stuff up", said to be the elixir of life for DC Explorer, and yet it signals corruption of the design result. The HDL source of either the instantiating design or the design's definition must be adjusted so that the interface/modport array shapes of the formal and actual ports conform when connected. Check that the shape of the array of instances conforms to the leading axes of this port if the port will be distributed across instance array elements. Consider using parameters in the formal array bounds that can be overridden to match each instantiation site. Re-analyze any edited source before re-elaborating or re-linking. Discard any results incorporating the design which produced this warning.

## ELAB-165

(warning) 'default' is used as HDL library and it will be replaced by the value of 'hdlin.hdl_library.default_name'.

Feedback

**Description**

When user specifies HDL library name as default, this message will come out.

---

## ELAB-166

(error) '%s' is a reserved library name.

**Description**

The specified library name is a reserved name, and cannot be used to define a new HDL library name. Please choose a different name to resolve this issue.

---

## ELAB-182

(error) %s Task call %s should not have parentheses unless it has a parameter.

**Description**

You receive this error message because the task declaration you wrote has an empty parameter list.

The following example shows a task declaration that would generate this error:

```
task foo();
   ...
   endtask
```

The correct task declaration is

```
task foo;
   ...
   endtask
```

**What Next**

Rewrite the task declaration as shown in the example, removing the parentheses.

---

## ELAB-189

(error) Current NDM library is not defined.

**Description**

This error message issues when current NDM library is not defined. For example:

```
analyze -f verilog top.v
elaborate top
```

Feedback

Presto will create default template library to save the analyzed result. Presto does not create current NDM library.

**What Next**

Create NDM library before analyzing. For example:

```
create_lib my_work
analyze -f verilog top.v
elaborate top
```

## ELAB-190

(warning) %s Constructs from STD.TEXTIO are not supported for synthesis, they will be ignored. %s

**Description**

You receive this warning from the *read* command or the *elaborate* command, either of which issues this message when constructs from STD.TEXTIO package are in use. The details of the error appear in the message.

**What Next**

To avoid receiving this warning message in the future, remove the constructs from STD.TEXTIO package. This warning message can be safely ignored.

## ELAB-191

(error) %s Constructs from STD.TEXTIO package are not supported. %s

**Description**

You receive this error from the *read* command or the *elaborate* command, either of which issues this message when constructs from STD.TEXTIO package are in use. The details of the error appear in the message.

**What Next**

To avoid receiving this error message in the future, remove the constructs from STD.TEXTIO package.

## ELAB-192

(warning) %s There are nonblocking assignments inside TASK that set output/inout port '%s'; this may introduce simulation mismatch.

Feedback

### Description

This warning message occurs when TASK has nonblocking assignments that set the output or inout ports. This may introduce simulation mismatch, for example:

```
module ShiftR (Out, In);
output Out;
input In;
reg Out;
always@(In)
     tShift(Out, In );
task tShift(output Q, input D);
      Q <= D ;
endtask
endmodule
```

### What Next

This is only a warning message. No action is required.

However, to avoid receiving this warning message, do not set the output or inout port of TASK using a nonblocking assignment. You can change the output or inout port as a global variable. The above example can be rewritten as follows:

```
module ShiftR (Out, In);
output Out;
input In;
reg Out;
always@(In)
     tShift(In);
task tShift(input D);
      Q <= D ;
endtask
endmodule
```

---

## ELAB-193

(information) Elaborating HDL template %s:%s %s.

### Description

This informational message issues when a new elaboration of an HDL template commences indirectly via the link step of another command (typically an *elaborate* or *link* of some parent design). The message indicates the logical library and template names of the new module or entity and gives other details of the circumstances that require the subsequent elaboration effort.

Feedback

### What Next

This is only an information message. Next comes any log output produced by the elaboration work described. Consider the details given in the ELAB-193 message as an audit trail of the flow leading to any upcoming messages.

---

## ELAB-194

(error) elaborate cannot write designs to a template library: %s.

### Description

This error message issues when command *elaborate* attempts to write a design to a template library. For example:

```
create_lib my_work_lib
analyze -f verilog -library top_lib top.v
elaborate -library top_lib top
```

"top_lib" is a template library, elaborate can't write a design into it.

### What Next

Either use -ref_libs instead, for example, elaborate -ref_libs top_lib top. Or do not specifiy library, such as: elaborate top.

---

## ELAB-195

(warning) %s Missing design or template for '%s' to glob .* port-names;\n\t... ignoring .* due to 'link_allow_design_mismatch'.

### Description

This DC Explorer warning message issues when elaboration of a .* (wildcard globbing) port connection requires either DC Link to find loaded instances of the down design, or Presto HDL Compiler to find an analyzed intermediate (template) file. The spelling of the down design's port names is needed to link them with the corresponding signals in the design being elaborated. Absent any information about the down design, an unresolved (black box) reference has been produced with no port connections corresponding to your .* globbing request. Note that this will usually be bad logic; it has been synthesized only so that Design Exploration may proceed.

### What Next

Ensure that the module or interface is analyzed before next running the elaborate command. If elaboration is proceeding bottom-up, pre-load the .ddc designs that will be linkage candidates for the current instantiation reference. All designs produced under this

Feedback

warning contain bad logic and must be re-elaborated to achieve standard SystemVerilog semantics.

### See Also

- ELAB-197

---

## ELAB-196

(warning) %s Connecting local definition '%s' to non-optional formal port '%s' of '%s';\n \tNon-standard extension 'link_allow_pin_name_synonym' permits forming this bad logic

### Description

This warning message issues when DC Explorer allows a ".*" port connection between a non-optional formal port and an actual definition with a synonymous spelling if no identically declared name was found in the instantiating design. Note that such connection requests cannot trigger a package wildcard import, nor declare implicit wires, nor can they reach elements of $unit not used elsewhere in the instantiating design.

### What Next

Ensure that the (down design ) module or interface that you've analyzed or loaded is well-matched to the current version of the design you're elaborating. If elaboration is proceeding bottom-up, with only .ddc files, remove obsolete designs that still expect a port no longer provided by this instantiation site. Consider explicitly naming each port in this connection, .* entails some risk of miscoordination that can be easily caught by a (redundant) copy of the intended port list. In all cases, the design must be re-elaborated to produce verifiable standard logic.

### See Also

- ELAB-198

---

## ELAB-197

(error) %s No module or interface '%s' has been loaded and/or analyzed.

### Description

This error message issues when elaboration of a .* (wildcard) port connection requires either DC Link to find loaded instances of the down design or Presto HDL Compiler to find an analyzed intermediate file. Information about the down design's port names is needed to establish connections to the corresponding signals in the design being elaborated.

Feedback

### What Next

Ensure that the module or interface is analyzed before running the command. If elaboration is proceeding bottom-up, pre-load the .ddc designs that will be linkage candidates for the current instantiation reference.

---

## ELAB-198

(error) %s No local definition matches the formal port '%s' of '%s'

### Description

This error message issues when a ".*" port connection to the cited formal port cannot be completed due to lack of an identically declared name in the instantiating design. Note that such connection requests cannot trigger a package wildcard import, nor declare implicit wires, nor can they reach elements of $unit not used elsewhere in the instantiating design.

### What Next

Ensure that the (down design ) module or interface that you've analyzed or loaded is well-matched to the current version of the design you're elaborating. If elaboration is proceeding bottom-up, with only .ddc files, remove obsolete designs that still expect a port no longer provided by this instantiation site. Consider explicitly naming each port in this connection, .* entails some risk of miscoordination that can be easily caught by a (redundant) copy of the intended port list.

---

## ELAB-199

(warning) %s No local definition matches the non-optional formal port '%s' of '%s';\n \t'link_allow_design_mismatch' is a non-standard extension which treats this port as optional

### Description

This DC Explorer warning message issues when a ".*" port connection to the cited, non-optional, formal port is given access to that port's default value or is disconnected due to the lack of an identically declared name in the instantiating design. This violates the IEEE-1800-2009 SystemVerilog standard; it is done here at your request for exploratory purposes only. Connections formed this way are not made by standard-conforming products.

Note that ".*" connection requests cannot trigger a package wildcard import, nor declare implicit wires, nor can they reach elements of $unit not used elsewhere in the instantiating design.

Feedback

### What Next

Ensure that the (down design) module or interface that you've analyzed or loaded is well-matched to the current version of the design you're elaborating. If elaboration is proceeding bottom-up, with only .ddc files, remove obsolete designs that still expect a port no longer provided by this instantiation site. Consider explicitly naming each port in this connection, .* entails some risk of miscoordination that can be easily caught by a (redundant) copy of the intended port list. In all cases, the design in which the warning was issued must be re-elaborated to produce verifiable standard logic.

### See Also

- ELAB-198

---

## ELAB-201

(warning) %s Unconnected output '%s' in function call tied to ground.

### Description

Presto has found that the named output is not driven by any logic for this instance of function call. Sometimes this represents an issue in your design and sometimes it doesn't. You should review your source code to ensure that this will not translate into incorrect outputs.

Presto has grounded the logic that may depend on these function outputs.

An example of this situation happens in the following code:

```
procedure elab_201_example(in1: in std_logic;
                           out1: out std_logic;
                           undriven_out : out std_logic_vector)
begin
    out1 := '0';
end procedure elab_201_example;
```

---

## ELAB-202

(warning) %s In IEEE function CONV_INTEGER, the unsigned input signal contains more than 31 bits.

### Description

You receive this warning message when the unsigned input of the CONV_INTEGER function contains more than 31 bits, which can cause overflow when converted to integer type.

Feedback

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, modify your VHDL source code to resolve this issue.

---

## ELAB-207

(error) %s Malformed specify block in Verilog source code.

### Description

You receive this error message because your Verilog source code contains an invalid use of a specify block.

The following example, containing two specify blocks in the same module (an invalid instance), illustrates this type of error.

```
module m;
      ...
      specify
       ...
      endspecify
      ...
      specify
       ...
      endspecify
      ...
   endmodule;
```

### What Next

Modify your Verilog source code to remove the inavlid usage.

---

## ELAB-208

(error) %s Instance array's %d%s axis has length %d, but the corresponding axis of its actual port '%s' has length %d.

### Description

This error message occurs when the (leading) dimensions of an actual interface array port do not conform to the (trailing) dimensions of the instance array over which that port connection should be distributed.

Distribution of array ports with unpacked dimensions begins at the first instance dimension whose length matches the leading dimension of the array port. Subsequent contiguous dimensions of both arrays must match each other.

Feedback

### What Next

If the mismatch has occurred because a coincidental length match between leading dimensions which should instead replicate the array port, switch to using a generate loop to cause this replication. Otherwise, modify your SystemVerilog source code to make distributed unpacked dimensions match.

---

## ELAB-209

(error) %s Instance array has %d dimensions, only %d of which match(es) its actual interface array port '%s'.

### Description

This error message occurs on a source line where an instance array has more unpacked dimensions than one of its interface array ports, but where the axes whose lengths match do not include the last (fastest varying) dimension(s) of the instance array.

Distribution of array ports with unpacked dimensions begins at the first instance dimension whose length matches the leading dimension of the array port. Subsequent contiguous dimensions of both arrays must match each other.

### What Next

If the mismatch has occurred because a coincidental length match between leading dimensions which should instead replicate the array port, switch to using a generate loop to cause this replication. Otherwise, modify your SystemVerilog source code to make the unpacked dimensions of a distributed port match those of the array instance.

---

## ELAB-210

(Error) %s integer overflow occurs.

### Description

You receive this error message because there is an integer overflow in an arithmetic operation.

For example, the following code causes the error message because the operation 2**32 overflows in the range of integers.

```
module M (a,d);
input [31:0] a;
output [31:0] d;
reg [31:0] d;

always begin
  d = 2**32 - a;
  $display ("d = %d\n", d);
```

Feedback

```
end

endmodule
```

Another possible integer overflow case is introduced by verilog shifter. By verilog language standard, the right operand of a shifter is always treated as an unsigned number.
The constant '-1' (32'b11111111111111111111111111111111) in the following example is interpreted as unsigned number, which causes the integer overflow.

```
module m (input [1:0] in1, output [1:0] out1);
assign out1 = (in1 << -1);
endmodule
```

### What Next

Check the operand of the operator, on the line indicated by the error message, to ensure that the result is within integer range, or use a Verilog number vector to represent a large value.

---

## ELAB-211

(Error) %s Conversion to bit-stream types larger than 64 bits is not supported.

### Description

You receive this error message because there is an unsupported conversion from real type expression to bit-stream type with size of larger than 64 bits.

For example, the following code causes the error message because there is casting from real type expression to bit-stream type with size of 71 (>64) bits.

```
typedef logic [70:0] t;

module M (output logic [31:0][1:0]);
 int i;
 always_comb
   begin
     i =3;
     o2 =  t' (i + real'(1) );
   end
endmodule
```

---

## ELAB-229

(error) %s 0-repeat concat not supported in generate expressions.

### Description

This error message occurs because an expression in generate block contains a 0-repeat concat operation that Presto HDL Compiler does not support.

Feedback

### What Next

Rewrite your source code to remove the occurance of 0-repeat concats and try again.

---

## ELAB-230

(error) %s Multiple blocks have been named '%s' in a scope.

### Description

You get this error when two (or more) blocks with the same name are declared in the same local scope.

### What Next

Change the relevant code to conform to the IEEE Std 1364.

---

## ELAB-231

(error) %s %s declaration redeclares symbol '%s'.

### Description

You see this message because you have assigned a function or task declaration to a symbol that has already been defined.

In the following example, which demonstrates such a situation, the symbol *f* is declared twice: first as a register and then as a function:

```
reg f;          // initial declaration of 'f'

   function f;     // illegal redeclaration of 'f'
   ...
   endfunction
```

The example elicits the VER-106 message.

### What Next

Rename either the function declaration or the other declaration and all corresponding uses of the symbol.

---

## ELAB-233

(error) %s Unsupported %d levels of cross module reference when declaring hierarchical reference '%s'.

Feedback

### Description

You receive this error message because unsupported levels of cross module reference appear when declaring hierarchical reference. For example:

```
assign a.b.c = i_1;
```

### What Next

Reduce cross-module references by adding explicit ports to carry signals between modules.

---

## ELAB-255

(error) %s Internal error in %s at line %d.

### Description

You receive this error message because an internal compiler error has occurred, related to the indicated position in the source code.

The nature of this error prevents availability of more specific information about it.

### What Next

Please file a star against Presto with your testcase if it's possible.

---

## ELAB-256

(error) %s %s call violation: %s.

### Description

You receive this error because the RTL power constructs were used incorrectly. The RTL power constructs include power, isolate and retain calls. The reason can be incorrect number of parameters, unsupported parameter types, width mismatch or the wrong place to call the functions.

### What Next

For details on how to use RTL power constructs, please refer to the Power Compiler User Guide, chapter "Implementing Multivoltage Designs Using RTL Isolation and Power Constructs", and section "Multivoltage Elements: $isolate and $power".

---

## ELAB-275

(error) %s You must specify a named block with infer_mux when used outside a case statement.

Feedback

### Description

You receive this error message because you have used the Synopsys *infer_mux* pragma outside of a *case* statement without specifying the label of a named block on which MUX inference is to be applied.

### What Next

Using *infer_mux*, specify the label of the named block on which you want to apply MUX inference. Then invoke the compiler again.

---

## ELAB-276

(warning) %s All symbols and listed symbols are designated as %s set/reset in block '%s'; using the all designation.

### Description

The warning occurs because you have specified incompatible conditions, which the compiler has to resolve:

- You have explicitly marked a symbol as a set or reset signal in a list of symbols annotated with the Synopsys set/reset pragma.
- You have implicitly marked the symbol as a set or reset signal using the Synopsys pragma that applies set/reset inferencing to all symbols.

Under these circumstances, the compiler uses set/reset inferencing on all symbols (not just the listed symbols), and this warning informs you of that fact.

### What Next

This warning is for your information and requires no action on your part.

---

## ELAB-277

(warning) %s More than one multibit pragma specified for symbol '%s'; using '%s'.

### Description

You receive this warning message from the *elaborate* or *read* command if there are two multibit pragmas on one variable. The message informs you about which pragma is being used.

### What Next

Remove the pragma you do not want to use, and reexecute the command.

Feedback

## ELAB-278

(warning) %s The pragma '%s' for object '%s' will be ignored because the object could not be found.

### Description

You receive this warning because you tried to place a pragma on an object that does not exist.

### What Next

Inspect your design and make sure it is correct and that there are no errors in the spelling of objects and other components.

## ELAB-279

(warning) %s More than one fsm_complete pragma specified for symbol '%s'.

### Description

You receive this warning message from the *elaborate* or *read* command if there are two fsm_complete pragmas on one variable. The message informs you about which pragma is being used.

### What Next

Remove the pragma you do not want to use, and reexecute the command.

## ELAB-280

(warning) %s Signal on port %d renamed from '%s' to '%s' in '%s'.

### Description

You receive this warning when the name of a signal on a port, such as on the second port in the following example,

```
module test(x, \\x[0] );
        input [0:0] x;
        output \\x[0] ;
        assign \\x[0] = x[0];
     endmodule
```

is different in the output netlist than it would usually be, because of a name conflict, such as a conflict with the name of a component of a bus.

In this example, the output signal on the second port will be renamed from "x[0]" to "x[0]1".

Feedback

## ELAB-281

(error) %s Default branch isn't the last branch in the case statement.

**Description**

You receive this error message because you have specified a default branch that is not the last branch in the *case* statement, which is must be.

**What Next**

Review your design and make sure the default branch you specify is the last branch in the *case* statement.

## ELAB-282

(warning) %s Parameter range specification is only meaningful to synthesis, not simulation, which might result in different behavior.

**Description**

Providing a range (size) for a parameter is only used during synthesis. You might see different behavior between synthesis and simulation if you have explicitly sized parameters.

**What Next**

Review your design description and make appropriate changes.

## ELAB-283

(warning) %s Function '%s' is mapped to module '%s' but body is not empty and will be ignored.

**Description**

You receive this warning because you specified a function whose body contains code. When you use the *map_to_module* pragma, because calls to that function are mapped to the specified module, the body of the function is not used. This warning lets you know that your design has such a function and its body contains code and will be ignored.

**What Next**

This warning is informational only and requires no action on your part.

## ELAB-284

(error) %s Return port name '%s' conflicts with names of function input parameters.

Feedback

### Description

You receive this error message because a function description in your design contains an output port that has the same name as one of the input ports, an invalid condition. This occurred in connection with your use of the *map_to_module* or *map_to_operator* pragmas. Following is an example of a description that would elicit this error message. The *return_port_name* is specified as *o* and so is one of the input ports.

```
function f;
          // synopsys map_to_module ADDER
          // synopsys return_port_name "o"
        input o;
        input p;
endfunction
```

### What Next

Change the name of the port whose name duplicates the name of another port. Then invoke the command again.

---

## ELAB-285

(error) %s Conversion function on formal port is not supported.

### Description

You receive this error message because conversion function is called with formal port as argument while port mapping, which is not supported.

```
begin
        U1 : TEST_E
            port map ( Cone(A) => Ctwo(TA), Z => TZ );
```

### What Next

Remove the conversion functions on port formals and try again

---

## ELAB-286

(error) %s Type conversion on formal port is not supported.

### Description

You receive this error message because port formals have Type conversion on them, while port mapping which is not supported by Presto.

### What Next

Remove the type conversion on formal port and try again.

Feedback

## ELAB-287

(error) %s Incorrect specification of port formals.

**Description**

You receive this error message because a syntax error is detected on port formals during port mapping.

**What Next**

Please check the correct syntax of specifying port formals during port mapping and try again.

## ELAB-288

(error) %s synthesis_on and synthesis_off directives are not used in pair within current design unit.

**Description**

You receive this error message because either synthesis_on or synthesis_off is missed within current design unit.

**What Next**

Please follow the error message to complete the synthesis_off/on pair and try again.

## ELAB-289

(error) %s A synthesis_off or translate_off object has been used in an expression.

**Description**

You receive this error message because a synthesis_off or translate_off object has been used in an expression.

**What Next**

Please follow the error message to check if the synthesis_off/on translate_on/off pragma has been put at a wrong place.

## ELAB-290

(error) %s The synthesis_on/synthesis_off or translate_on/translate_off attribute is inconsistent on arg #%d.

Feedback

### Description

You receive this warning message because the synthesis_on/synthesis_off or translate_on/translate_off is inconsistent between the formal and actual argument.

### What Next

Please follow the warning message to check if the synthesis_off/on translate_on/off pragma is put at a wrong place or is missing.

---

## ELAB-291

(error) %s Received the reserved word 'all' while expecting signal names in the sensitivity list.

### Description

You receive this error message because the reserved word "all", instead of a signal name, appeared in the sensitivity list.

### What Next

Use of the reserved word "all" in sensitivity list is a VHDL 2008 only feature. If this usage is intended, please set hdlin.vhdl.standard to 2008.

---

## ELAB-292

(warning) %s '%s' is being read, but does not appear in the sensitivity list of the block.

### Description

You should not receive this warning by default. If you do receive this warning, it may or may not be accurate; please evaluate your RTL code accordingly. If you wish to remove this warning from your DC sessions, please contact Synopsys support.

You receive this warning message if not all the signals that are read appear in the sensitivity list of the block. This may result in simulation-synthesis mismatches.

Consider the following example:

For Verilog:

```
always @(in1)
   myout = in1 | in2 ;
```

For VHDL:

```
entity e is
   port(in1, in2: in bit; myout: out bit);
end;
```

Feedback

```
architecture a of e is
begin
   process(in1) begin
      myout <= in1 or in2;
   end process;
end;
```

This example will result in an OR gate whose inputs are *in1* and *in2*, and whose output is *myout*. The output of the OR gate will potentially change whenever *in1* or *in2* changes. However, in simulations of the original description, *myout* will change only when *in1* changes, because *in1* is the only signal to appear in the sensitivity list of the block.

**What Next**

Add the signal specified in the warning to the sensitivity list of the block.

---

## ELAB-293

(warning) %s Variable %s is read before being assigned; the synthesized result may not match simulations.

**Description**

You receive this warning message because a variable that is local to a function or task was read before being assigned. When the *hdlin_infer_function_local_latches* variable is set to *false*, the Presto HDL Compiler does not preserve variable values across separate calls to a task or function, unlike a simulator. Any bits of the variable that are not assigned before being used are given the value 0. No latches are inferred for variables local to a subprogram.

When the *hdlin_infer_function_local_latches* variable is set to *true*, the compiler matches the simulator's behavior. This may result in additional latches in your design.

**What Next**

If you intended to use a value set during a previous call, set *hdlin_infer_function_local_latches* to *true* in order to preserve the value across calls.

If you did not intend to use a value across calls, check your design to verify that you assigned all local variables before using them.

---

## ELAB-294

(warning) %s Floating pin '%s' connected to ground.

Feedback

### Description

You receive this warning message when a previously unconnected pin has been connected to ground. This message reminds you to check whether the behavior resulting from connecting the pin to ground conforms to your expectations.

### What Next

Verify that connecting the specified pin to ground results in the desired behavior.

---

## ELAB-295

(error) %s Number of actual arguments in task or function call does not match the number of formals.

### Description

You receive this error message because the number of actual arguments in a function or task call does not match the number of formal arguments expected by the corresponding function or task.

### What Next

Identify the offending parameters and add or remove them accordingly. See the function or task definition to determine which parameters are required.

---

## ELAB-296

(error) %s Index bounds '%s' for vector '%s' are wrong.

### Description

You receive this error message because the bounds of a vector declaration are not an integer type or sized parameter value is overflow. The following example shows the compiler attempting to use a real number as a vector bound.

```
...
   reg [3.0:0] x;      // error: "3.0" is not a valid array bound
   ...
```

The following example shows the compiler attempting to override sized parameter, the new value is overflow for the given size.

```
module test (a, b, c);
   parameter WIDTH = 8;
   input [WIDTH-1:0] a, b;
   output [WIDTH-1:0] c;
   bottom  #(.W(WIDTH)) U1 (a, b ,c ); // W has 3 bits, but 8 need 4
 bits.
   endmodule
```

Feedback

```
module bottom (a, b, c);
parameter [2:0] W = 4;
input [W-1:0] a, b;
output [W-1: 0] c;
assign c = a + b;
endmodule
```

**What Next**

Modify each part select so that it uses only integer bounds. In the example, you would replace "3.0" with "3". Modify sized parameter definiton or new parameter value.

---

## ELAB-297

(error) %s '%s' is a task and not a function.

**Description**

You receive this error message because a function call is attempting to enable a task. A function call can only enable functions. The symbol a function call refers to must be defined by a function declaration.

A function returns a value; thus, a function call must be used as an expression.

**What Next**

Check that you did not attempt to enable a task. If you did not, either change the function call to a task, or rewrite the task to a function.

---

## ELAB-298

(error) %s Array index out of bounds %s.

**Description**

You receive this error message because the index used to access the array is not within the range of valid indices defined by the array declaration.

In the following example, the valid array indices must be in the range 0:1 because of the way the array is declared. Attempting to access location 2 outside the valid range, as in the following example, results in this error.

```
reg [1:0] a;
   ...
   a[2] = 1'b1;         // error: index out of bounds
```

Feedback

### What Next

Modify the array index so that it is within the valid index range given by the array declaration.

---

## ELAB-299

(error) %s Array index out of bounds %s.

### Description

You receive this error message because the index used to access the array is not within the range of valid indices defined by the array declaration. In the following example, the array index must be within the range 0:1 because of the way the array is declared. Attempting to access location 2, which is outside the valid range, results in this error message.

```
reg [1:0] a;
   ...
   x = a[2];         // error: index out of bounds
```

### What Next

Modify the array index so that it is within the valid index range given by the array declaration.

---

## ELAB-300

(error) %s Cannot test variable '%s' because it was not in the event expression or with wrong polarity.

### Description

You receive this error message when the outermost if statement in the always block tests some other variable that does not appear in a *posedge* or *negedge* expression or with wrong polarity. When an always block's sensitivity list contains more than one *posedge* or *negedge* expression, the Presto HDL Compiler assumes that one expression represents the clock, and any remaining expressions represent asynchronous sets or resets. For each set or reset condition, the always block should contain an if statement that tests it.

### What Next

Modify your rtl to meet the above requirements. See the *HDL Compiler for Verilog Reference Manual* or the *VHDL Compiler Reference Manual* for information on how the compiler infers flip-flops.

Feedback

## ELAB-301

(warning) %s Only constant-valued subscripts are checked in the sensitivity list; other subscripted expressions are ignored.

### Description

You should not receive this warning by default. If you do receive this warning, it may or may not be accurate; please evaluate your RTL code accordingly. If you wish to remove this warning from your DC sessions, please contact Synopsys support.

You receive this warning message because Presto HDL Compiler does not perform sensitivity list checking on variable subscripts.

Sensitivity list checking verifies that all signals read by a combinational always block are in its sensitivity list.

### What Next

Remove the variable subscript from the sensitivity list.

## ELAB-302

(error) %s The statements in this 'always' block are outside the scope of the synthesis policy. Only an 'if' statement is allowed at the top level in this always block.

### Description

You receive this error message when the statement at the top level of the always block is not an if statement.

### What Next

See the *HDL Compiler for Verilog Reference Manual* and the *VHDL Compiler Reference Manual* for ways to infer flip-flops and latches from always blocks with an if statement.

## ELAB-303

(error) %s The expression in the reset condition of the 'if' statement in this 'always' block can only be a simple identifier or its negation.

### Description

You receive this error message when the reset condition of the *if* statement is not a simple identifier or a negation of the simple identifier. Presto HDL Compiler only supports an identifier or its negation as the reset condition.

Feedback

### What Next

Modify the reset condition so that it is either a simple identifier or a negation of the simple identifier. The following example shows how to modify the RTL code.

Original RTL code:

```
if (~reset || jt_cbits[6]) ec_mode <= 1'b0;
        else ec_mode <= 1'b1;
```

Modified RTL code:

```
if (~reset) ec_mode <= 1'b0;
        else if (jt_cbits[6]) ec_mode <= 1'b0;
        else ec_mode <= 1'b1;
```

---

## ELAB-304

(warning) %s Case or if statement, or ?: operator has an infer_mux attribute and a default branch or incomplete mapping. This might cause nonoptimal logic if a MUX is inferred. %s.

### Description

This warning message occurs when MUX inference has been requested for a case statement, if statement, or ?: operator.

You receive this warning when a case statement does not have all of the values of the case variable explicitly enumerated. Instead, a default branch is used (explicitly or implicitly) to represent several of them together as shown in the following example:

```
case(c) // synopsys infer_mux
  2'b00: out = in1 ;
  2'b11: out = in2;
  default: out = in2;
endcase
```

A MUX_OP is not the optimal hardware for this representation. You will not receive this warning if you delete the default branch and explicitly add labels for 2'b10 and 2'b01.

You also receive this warning when an if statement has a final else branch, or the control variable is not compared against all possible values, as in the following example:

```
if (sel == 2'b00) // synopsys infer_mux
  dout <= a;
else if (sel == 2'b11)
  dout <= b;
else
  dout <= in2;
```

Feedback

You will not receive the warning if you change this code as shown below:

```
if (sel == 2'b00) // synopsys infer_mux
  dout <= a;
else if (sel == 2'b11)
  dout <= b;
else if (sel == 2'b10)
  dout <= in2;
else if (sel == 2'b01)
  dout <= in2;
```

In the current version this message always occurs for the ?: operator. Change this operator to a case statement to avoid the warning message.

You may receive many ELAB-304 warning messages when you set the *hdlin_infer_mux* variable to *all* because this is equivalent to using the infer_mux pragma or attribute in any case or if statement, or ?: operator.

**What Next**

To avoid this warning message, remove the infer_mux pragma, or recode by a case or if statement where all possible values are enumerated.

---

## ELAB-305

(error) %s Clock %s used as data.

**Description**

You receive this error message because Presto HDL Compiler does not allow clock signals to be used for purposes other than clocking.

**What Next**

Remove the unsupported code from your design.

---

## ELAB-306

(error) %s Illegal use of tristate value.

**Description**

You receive this error message when a tristate value is used in an expression in a way that Presto does not support, as in the following example.

```
out = in & 1'bz
```

This error is also issued when a variable assigned to a tristate value is used in an expression, as in the following example.

Feedback

```
if(c) tmp = 1'bz;
else tmp = in1 ;

out = tmp & in2
```

**What Next**

Remove the unsupported portion of code.

---

## ELAB-307

(error) %s Case labels are not parallel in %s at line %d. A MUX_OP cannot be inferred.

**Description**

You receive this error message because Presto HDL Compiler does not infer a MUX_OP for the case statements that are not parallel. A case is parallel when all its branches are mutually exclusive.

**What Next**

Remove the "infer_mux" pragma from this case statement, or if the branches really will be mutually exclusive, prepend a "unique" qualifier to the case statement in SystemVerilog or add a "parallel_case" pragma in traditional Verilog.

---

## ELAB-308

(warning) %s Mismatch between simulation and synthesis may occur due to three-state value.

**Description**

You receive this warning message when the design contains a variable that is conditionally assigned to a three-state value, and the variable is read in the same always block in which it is conditionally assigned. Reading such a variable in the HDL source code generates logic that uses the output of a three-state buffer, which may cause a mismatch between simulations and synthesis.

In the following example, *tmp* is assigned to a three-state value and assigned to out when both *c* and *in1* are false.

```
if(c)
      tmp = 1'bz ;
   else if (in1)
      tmp = in2 ;

   out = tmp ;
```

Feedback

### What Next

Modify the code so that the design does not read a variable that is not conditionally assigned to *z*.

---

## ELAB-309

(information) %s Cannot infer a MUX_OP in %s at line %d.

### Description

The tool issues this message if a MUX_OP cannot be inferred for an if or case statement.

### What Next

Contact Synopsys support.

---

## ELAB-310

(warning) %s Comparison against '?', 'x', or 'z' values is always false. It may cause simulation/synthesis mismatch.

### Description

You receive this warning when any operand in a comparison expression has *x or z values. The result of such expressions are always determined to be false, and the corresponding branch is never executed.*

In the following example, 'then-branch' of the if-conditional is never executed.

```
if(2'b0x) begin
      out = in1;       /* Will never fire */
   end
   else begin
      out = in2;       /* Will always fire */
   end
```

In the following example, the case branch condition that contains *x* or *z* values are never reached.

```
case(c)
     1'bx : out = in1 ;  /* Will never fire */
     1'b0 : out = in2 ;
   endcase
```

### What Next

Rewrite the design to eliminate the occurance of *x* or *z* from conditional expressions, or convert the case into a casex or casez statement.

Feedback

## ELAB-311

(warning) %s DEFAULT branch of CASE statement cannot be reached.

### Description

You receive this warning message when you execute the *read* or *elaborate* command and your design contains a case statement in which the default branch can never be executed. This warning is issued when the compiler detects that at least one of the other branches will always be executed.

```
case(c)
     1'b1 : out = in1 ;
     1'b0 : out = in2 ;
     default: out = in2 ;
   endcase
```

### What Next

Verify that your case statement is written as you intended. If so, delete the default branch.

## ELAB-312

(warning) %s Out of bounds bit select %s.

### Description

You receive this warning message when you apply a subscript to a bit vector, and the bit vector attempts to access a bit that is out of range of the vector.

### What Next

Modify the subscript so that it attempts to access a bit that is within range of the vector.

## ELAB-313

(error) %s Repetition multiplier in a concatenation is not constant expression.

### Description

You receive this error message because you have specified a repetition multiplier in a concatenation that is not a constant expression, which is not allowed. The repetition multiplier in a concatenation must be a constant. For example, {i{x}} is not allowed if *i* is a varying expression.

### What Next

Review your design and make appropriate corrections.

Feedback

## ELAB-314

(warning) %s Case branch %s is unreachable.

### Description

You receive this warning message when one or more branches in a case statement are unreachable due to stronger branch conditions in earlier branches.

For example, in the following Verilog code the first branch of the case statement is always taken. As a result, all subsequent case branches are unreachable.

```
module m (a, b, y);
 input a, b;
 output reg y;

 reg t0, t1;

 always begin
  case (1'b1)
    1'b1: y = a;
    b: y = ~a;
    default: y = b;
  endcase
 end

endmodule // m
```

### What Next

Dead case branches might indicate a design error. Examine the case statement and verify that the unreachable branches are intentional.

## ELAB-315

(error) %s A statement in your design description tried to read a three-state value.

### Description

You receive this error message because a statement in your source code tried unsuccessfully to read a *Z* value. Synthesis does not support *Z* values.

### What Next

Rewrite your description to change or eliminate the value or values in question.

Feedback

## ELAB-316

(error) %s A statement in your design description tried to read an 'x', '?', or three-state value.

### Description

You receive this error message because a statement in your source code tried unsuccessfully to read an *x*, *?*, or *Z* value. Synthesis does not support these values.

### What Next

Rewrite your description to change or eliminate the value or values in question.

## ELAB-317

(error) %s A statement in your design description tried to read an 'x', '?', or three-state value in a case expression.

### Description

You receive this error message because a statement in your source code tried unsuccessfully to read an *x*, *?*, or *Z* value in a case expression. Synthesis does not support these values in a case expression.

### What Next

Rewrite your description to change or eliminate the value or values in question.

## ELAB-318

(error) %s Unable to read from modfile %s: %s

### Description

You receive this error message because your intermediate file could not be read, a situation that might be caused by restricted directory permission or by disk corruption.

### What Next

Change the directory permission to allow access. Then invoke the *analyze* command again to analyze the corrupted module file and attain a modfile that is not corrupted.

## ELAB-319

(information) %s Reading module %s from file %s.

Feedback

**Description**

Reading module from the corresponding .pvl file.

**What Next**

No action is necessary.

---

## ELAB-320

(warning) %s File %s not found, or does not contain a usable description of %s.

**Description**

This warning issues when the intermediate files (.mr, .pvl, .syn, etc.) corresponding to the given module, interface, checker, or config could not be found or, if present, were not usable for (this stage of) elaboration. It may be optional in this context, but probably should be provided.

**What Next**

This is only a warning. To avoid it, reanalyze the RTL description source (with the same DC release as issued this message). For warnings arising through .* wildcard port connections, loading the referenced design will also satisfy this requirement.

---

## ELAB-321

(error) %s Number of ports on reference design '%s' is inconsistent with specified instance '%s'.

**Description**

You receive this error message because the number of ports on reference design is inconsistent with specified instance.

**What Next**

Rewrite your description to make the number of ports on reference design is consistent with specified instance.

---

## ELAB-322

(error) %s Width of port '%s' on reference design '%s' is inconsistent with specified instance '%s'.

Feedback

**Description**

You receive this error message because the width of port on reference design is inconsistent with specified instance.

**What Next**

Rewrite your description to make the width of port on reference design is consistent with specified instance.

---

## ELAB-323

(error) %s Too many ports found on gate instantiation

**Description**

Too many ports found on gate instantiation

**What Next**

Check that the correct number of ports has been specified on the gate instantiation.

---

## ELAB-324

(error) %s Too many ports passed to instance %s

**Description**

Too many ports passed to instance

**What Next**

Check that the correct number of ports has been passed to the instance listed above.

---

## ELAB-325

(error) %s Unknown port %s in instance %s in module %s

**Description**

Unknown port in instance in module

**What Next**

Check that the offending port listed above has been specified correctly.

---

## ELAB-326

(error) %s module data file %s revision mismatch: Expected %d, got %d

Feedback

**Description**

module data file revision mismatch.

**What Next**

analyze the rtl file again using new version.

---

## ELAB-327

(error) %s Cannot resolve pin %s on cell %s:%s.

**Description**

Cannot resolve pin on cell.

**What Next**

modify rtl source to make sure the module instanitation agree with submodule declaration.

---

## ELAB-328

(error) %s Replication constant contains 'x' or 'z'.

**Description**

The repeat count of this replication operator is a constant expression that contains 'x' or 'z'. It is unusable for elaborate-time replication of the data or assignment pattern. The following example will trigger this error:

```
x = { 3'bx11 { y } };
```

**What Next**

Replace the replication constant by a constant expression resolvable to 0s and 1s. Or, if this constant was meant to produce 'x' or 'z' data values in the result, insert a comma after the constant so that it parses as a list element and not as a replication operator.

---

## ELAB-329

(warning) %s A 'disable' statement for block '%s' appears outside the block and is being ignored.

Feedback

### Description

You receive this warning message because a disable statement appears outside of the block it attempts to disable, as in the following example:

```
always begin
      begin : block_a
         y = 1'b1;
      end
      disable block_a;
   end
```

A disable statement must appear with the block to be disabled; otherwise, the disable statement has no effect and is ignored.

### What Next

Examine your code to verify the block you want to disable, and revise the code so that the disable statement appears inside the block to be disabled.

---

## ELAB-330

(error) %s Attempt to disable block '%s' out of function scope is not supported.

### Description

You receive this error message when a disable statement inside a function refers to a block that is either outside the function or that does not contain the disable statement. The Presto HDL Compiler for Verilog supports only disable statements that refer to a block inside the current function.

### What Next

Change the design so that all disable statements are within the block they disable, and that all disable statements refer to blocks within the same function or task.

---

## ELAB-331

(error) %s Attempt to disable block '%s' out of task scope is not supported.

### Description

You receive this error message when a disable statement inside a task refers to a block that is either outside the task or that does not contain the disable statement. The Presto HDL Compiler of Verilog supports only disable statements that refer to a block inside the current task.

Feedback

### What Next

Change the design so that all disable statements are within the block they disable, and that all disable statements refer to blocks within the same function or task.

---

## ELAB-332

(warning) %s Concatenations cannot have unsized numbers; assuming 32 bits.

### Description

You receive this warning message when a concatenation contains an unsized constant. The compiler cannot calculate the correct size of the concatentation. The size is assumed to be 32 bits.

This construction is disallowed by the IEEE Verilog standard, but is permitted by the compiler for backward compatibility.

The following two concatenations will trigger this warning:

```
x = { 0, a };
  z = { b, 'hf, c };
```

### What Next

Avoid this style. Use an explicit size on all constants within concatenations.

---

## ELAB-333

(warning) %s This SV Assertion is ignored for synthesis since %s is not set to true.

### Description

This warning message issues when the Presto HDL Compiler finds a labelled assertion or assertion severity system task call whose usage is not confirmed by the tcl environment variable setting cited in the message. Because SystemVerilog Assertions (SVA) can lead synthesis to using a larger set of "don't care" conditions during optimization, you must separately certify that these assertions have proven to be unreachable prior to synthesizing this RTL.

### What Next

This is only a warning message. No action is required.

However, if you do not want the construct to be ignored, you must set hdlin_enable_assertions to true and also set an element of the confirmed_SVA environment array to true whose element name identifies the label and lexical scope of the applicable assertion. The most specific form of its element name is used in the warning message when hdlin_enable_assertions is already true.

Feedback

The recommended way to confirm assertions is to assemble a separate tcl file to source into your dc_shell before elaborating the design elements which use SVA. This same file should then be sourced into fm_shell when formally verifying the results of this elaboration.

## ELAB-334

(error) %s Part-select direction does not match declared direction of symbol '%s' (declared [%d:%d], part-select is [%d:%d]).

### Description

You receive this error message when a part-select statement on a variable conflicts with the variable's declaration. If the variable is declared with the left bound greater than the right bound, then the part-select must also use a left bound greater than a right bound, and vice versa.

For example, the following code will trigger this error because the part-select 'x[1:2]' does not match the declared direction of 'x'.

```
module test(x, y);
        input  [2:0] x;
        output [1:0] y;

    assign y = x[1:2];

    endmodule
```

### What Next

Correct the part-select statement so that the bounds are compatible with the variable's declaration.

## ELAB-335

(warning) %s 'Case' statement is full and has only one nontrivial branch; it will be inlined.

### Description

You receive this warning message because a case statement in the design either is marked as a full case by the user, or is proved to be a full case by the compiler, and has only one useful branch. Because in a the full case, at least one branch must execute, the single branch of the case statement will always be executed. The compiler has detected this situation and will skip generating logic to test the case condition, executing the code in the body as if it were not surrounded by the case statement.

Feedback

Most commonly, this message arises when case statements have one normal branch, and a default branch that only assigns variables to 'bx. For example:

```
module test(a,y);

       input  a;
       output y;
       reg        y;

       always
          case (a)
            1'b1: y = 1'b1;
            default: y = 1'bx;
          endcase
    endmodule
```

In this case, the presence of the default branch means that the case statement is full (that is, one branch will always be taken.) Then, Because the default branch only assigns variables to 1'bx, it can be optimized away, and the resulting single-branch case can be simplified to unconditionally assign y = 1'b1.

In the next example, the // synopsys full_case directive tells the compiler that all possible values of *x* are handled in the case statement. However, there is only one branch. The compiler concludes that *a* must always be 1. Thus, the branch will always be executed.

```
module test(a,y);

       input  a;
       output y;
       reg        y;

       always
          case (a) // synopsys full_case
            1'b1: y = 1'b1;
          endcase
    endmodule
```

This second example is an uncommon coding style. The compiler issues this warning to remind you to verify that the case statement is as you intended it.

**What Next**

Verify that the case statement implements the behavior you intended.

---

## ELAB-336

(error) %s Presto does not support processes with multiple event statements.

Feedback

### Description

You receive this error message because Presto Compiler does not support multiple event statements in the same process.

### What Next

Change the source code to remove the use of multiple event in the same process.

---

## ELAB-337

(warning) %s Assignment to supply0/1 variable '%s' is ignored.

### Description

You receive this warning message if you attempt to make an assignment to a variable declared as 'supply0' or 'supply1'. These variables always have values of 0 and 1, respectively; any assignments you attempt are ignored.

### What Next

Remove the specified assignment, then reexecute the command.

---

## ELAB-338

(warning) %s Module '%s' contains a supply%d variable '%s'. Replacing with wire driven by a continuous assignment to %d.

### Description

You receive this warning message when a supply0 or supply1 variable appears in your design.

### What Next

This is an informational message only. No action is required on your part.

---

## ELAB-339

(warning) %s Symbol '%s', declared as an enum, may be assigned non-enum values.

### Description

A variable declared using the 'synopsys enum' pragma may be assigned to a value that is not a member of the enum. An enumerated type declaration represents an assertion by the user that a variable can only be assigned a certain set of values; if the design assigns a value that is not part of the user-declared enum, results may be unpredictable.

Feedback

The compiler is not always able to determine conclusively when an expression will evaluate to a value listed in the enum. For example, the compiler cannot determine the possible values of input ports. Another case occurs when a symbol declared as an enum is assigned the result of an arithmetic or logical expression that cannot be evaluated to a constant at compile time.

In the following example, the expression 'current_state + 2'b01' will trigger this error. By examining the code, you can determine that the expression evaluates to a value that is contained in the enumerated type, except when 'current_state' is equal to 'last_state'. Since it is only executed when 'current_state' is not 'last_state', it would be safe to leave this code as is.

```
module test (clock);

      input clock;

      parameter [1:0] /* synopsys enum states */ first_state = 2'b00,
        second_state = 2'b01, last_state = 2'b10;

      reg [1:0] /* synopsys enum states */ current_state, next_state;

      always @(posedge clock) begin
         if (current_state == last_state)
           next_state = first_state;
         else
           next_state = current_state + 2'b01;
      end
    endmodule
```

However, if the 'always' block were replaced with:

```
assign next_state = current_state + 2'b01;  // result is 2'b11 when
                                                 // current_state ==
 last_state
```

then 'next_state' could be assigned 2'b11. This contradicts the user-declared enum, and could have unpredictable results and cause simulation/synthesis mismatches.

**What Next**

If you receive this warning, make certain that the symbol is ONLY assigned a values that are listed in the enumerated type declaration.

If the variable is assigned to the value of an input port, make sure that the port will only be assigned to values within the enum. If that is the case, declare the port as a member of the same enumerated type using the 'synopsys enum' pragma.

If the variable is assigned to an expression result, make sure that expression can never evaluate to a non-enum value.

Feedback

If you cannot determine that the value assigned will be a member of the declared enumerated type, you must remove the enum declaration from the variable.

## ELAB-340

(warning) %s Enumerated type '%s' is not compatible with type of symbol '%s'.

### Description

You receive this error message because the specified enumerated type is not compatible with the specified symbol type. This error occurs at elaboration when parameters in the size specifications are resolved.

In the following example, the variable *current_state* has bounds of [0:SIZE], which resolves to [0:3], but the enumerated type states has bounds of [0:SIZE2], which resolves to [0:2].

```
parameter SIZE = 3;
   parameter SIZE2 = 2;

   parameter [0:SIZE] /* synopsys enum states */ state1 = 4'd0, state2 =
 4'd1;
   reg [0:SIZE2] /* synopsys enum states */ current_state;
```

### What Next

If it is a typo, modify the design so that the symbol and the enumerated type share the same type.

If user intends to let the symbol and the enumerated type have different type, the user have to make sure that the synthesis behavior is what the user wants.

## ELAB-341

(error) %s The number of enum encodings given does not match the number of literals.

### Description

You receive this error message when, in an enumerated type declaration, there is a different number of literals and encodings.

### What Next

Fix the design so that the number of encodings and literals is the same.

## ELAB-342

(error) %s Expression involving %s operator cannot have a real operand.

Feedback

### Description

You receive this error message because the specified operator does not support real operands. Real operands are not supported for synthesis.

### What Next

If your design is intended for synthesis only, remove real operands from the design.

---

## ELAB-343

(error) %s Source file for '%s' was not analyzed by this release of the compiler; re-analyze it.

### Description

Your *read, analyze,* or *elaborate* command requires data about the specified entity, module, or package that was stored by a previous *analyze* command. A file of such data was found, but it had been produced by an incompatible version of the Presto HDL compiler. The file cannot be read in its current version.

### What Next

Reanalyze all design source files needed for this compilation using *this release* of Design Compiler - on any platform. Or adjust your working directory settings to use the environment that contains the properly analyzed sources.

When the analyzed data files are in synch with the compiler release you are using, reexecute the failed command.

---

## ELAB-344

(error) %s File '%s' does not contain an analyzed design.

### Description

You receive this error message when you execute the *read* or *elaborate* command and specify a file that does not contain an analyzed design. The compiler was expecting a file that is an analyzed design. The Presto HDL Compiler stores pre-analyzed designs in disk files.

### What Next

Re-analyze the module or entity you are elaborating or reading and specify a file that contains an analyzed design.

Feedback

## ELAB-345

(error) %s Symbol '%s' is a function that is being called as a task.

**Description**

You receive this error message when a function in your design is being called as a task. A task call is a stand-alone statement, whereas a function call generates a value.

**What Next**

Modify the design so that the function is called only in places where an expression is expected.

## ELAB-346

(error) %s Variable '%s' must be non-negative.

**Description**

You receive this error message when a variable that controls the Presto HDL Compiler has a negative value. Only non-negative values are supported.

**What Next**

Identify the variable that has a negative value and change it to a non-negative value. See the manual page of the variable for valid values.

## ELAB-347

(warning) %s Division by 0 evaluates to 'x'.

**Description**

You receive this warning message because an expression contains a division by 0, which evaluates to 'x' in Verilog.

**What Next**

Verify that you intended to write an expression with 0 as the divisor.

## ELAB-348

(error) %s Incorrect datatype for variable '%s'.

Feedback

### Description

You receive this error message when a variable that controls the behavior of the Presto HDL Compiler has a value that is the wrong datatype. This occurs when a non-numeric value is assigned to a variable that should contain a string, or when a variable that should be *true* or *false* has a numeric value, or contains another string.

### What Next

Use the correct datatype in interactive use, and correct any scripts that set the variable. To determine what type of value the variable should have, see the manual page of the appropriate variable.

---

## ELAB-349

(warning) %s Potential simulation-synthesis mismatch if index exceeds size of array '%s'.

### Description

You receive this warning message if the bit-width of the index expression is larger than the bit-width of the array bounds, or if an array has bounds that cannot be expressed as [0 : 2^n-1] or vice versa.

An array in the program is indexed by an expression that can evaluate to an out-of-bounds index, and the compiler cannot determine if the index will evaluate to a legal subscript.

If the index does evaluate to an out-of-bounds value, the synthesized result may not match Verilog simulations. Assigning to, or reading from, an out-of-bounds location may have unpredictable results.

For example, in the following Verilog module, a register is indexed by the input port 'addr'. If 'addr' ever has the value 3'd7, then the register will be accessed out-of-bounds, but the correct logic can be generated.

```
module test(addr, data, write);
  input [2:0] addr;
  input data, write;
  reg [6:0] mem;

always @(addr or data or write)
  if (write)
    mem[addr] = data;

endmodule
```

For example, in the following Verilog module, a register is indexed by the input port 'addr'. If 'addr' ever is more than the value 4'd6, then the register will be accessed out-of-bounds, and the bad logic will be generated. When 'addr' ever has the value 4'd8, it will access mem[0], not mem[8].

Feedback

```
module test(addr, data, write);
  input [3:0] addr;
  input data, write;
  reg [6:0] mem;

always @(addr or data or write)
  if (write)
    mem[addr] = data;

endmodule
```

### What Next

Verify that the index expression cannot evaluate to an out-of-bounds value.

---

## ELAB-350

(error) %s Can't resolve constant expression for symbol '%s'.

### Description

In certain circumstances, the Presto HDL compiler may not evaluate constant expressions with operands larger than 32 bits. To work around this problem, pre-compute such expressions in your design, or use HDL Compiler to elaborate that design. This problem will be fixed in an upcoming release.

### What Next

Either pre-compute the value, or use HDL Compiler on this design.

---

## ELAB-351

(warning) %s Comparison against 'unknown' value is always false; may cause simulation/ synthesis mismatch.

### Description

You receive this message because the result of a comparison, by definition, can produce only one result. In the following example, the body of the first IF statement always executes, and the body of the second IF statement never executes. All comparisons against the uninitialized value *U* fail because the result of an equality comparison against *U* is always false, and the result of a disequality comparison against *U* is always true.

```
IF(A2 /= "U") THEN
      ONE_2 <= '1';              -- SHOULD ALWAYS FIRE
    END IF;

    IF(A2 = "U") THEN
      ZERO_2 <= '1';             -- SHOULD NEVER FIRE
    END IF;
```

Feedback

### What Next

Ensure that you intended to compare against *U*; and, if not, correct the comparison.

---

## ELAB-352

(error) %s Operator '%s' not found in synthetic library.

### Description

You receive this message because the operator defined by a *map_to_operator* attribute is not described in any of the synthetic libraries in the *synthetic_library* variable (and is not found in *standard.sldb*).

### What Next

To use the synthetic library operator, ensure that it can be found in the files defined by the *synthetic_library* variable.

---

## ELAB-353

(error) %s Width of the actual at the port '%s' does not match. %s

### Description

You receive this message because a temporary signal/variable does not have a proper bit width.

The following example shows that a *temp_out* signal connected to a *Y* port is too wide or too narrow when represented in hardware.

```
architecture A of E is
component C1
   port (A : integer range 0 to 15;
         Y : integer range 0 to 15);
end component;
signal temp_in : integer range 0 to 15;
signal temp_out : integer range 0 to 31;
begin
U1: C1 port map (A => temp_in, Y => temp_out);
end A;
```

### What Next

Define a temporary signal/variable with the proper bit width. The following example is a modification of the one above to provide a proper bit width for the *temp_out* signal.

```
architecture A of E is
component C1
   port (A : integer range 0 to 15;
```

Feedback

```
         Y : integer range 0 to 15);
end component;
signal temp_in : integer range 0 to 15;
signal temp_out : integer range 0 to 31;
signal temp : integer range 0 to 15;
begin
temp_out <= temp;
U1: C1 port map (A => temp_in, Y => temp);
end A;
```

## ELAB-354

(error) %s Cannot read architecture file %s: %s.

### Description

You receive this message because during a read or elaborate command, the Presto HDL compiler cannot open or read a file describing the source language (and, for VHDL, the architecture) of the module or entity being elaborated.

You also receive this message if the module or entity has not yet been analyzed or if the module or entity name is misspelled.

### What Next

Ensure that the module or entity being elaborated has already been analyzed, and that the entity or module name is correctly specified.

## ELAB-355

(information) %s Elaborating module '%s'.

### Description

You automatically receive this message for each module elaborated during a read or elaborate command.

### What Next

No action is necessary.

## ELAB-356

(error) %s No modules exist in the analyzed file.

Feedback

**Description**

You receive this message because the Presto HDL compiler finds no modules or entities in the file being read from the *read* command using a *verilog* or *vhdl* format. The error is reported by the *read* command.

**What Next**

Ensure that the file being read contains at least one module or entity.

---

## ELAB-357

(error) %s Module '%s' cannot be found for elaboration.

**Description**

You receive this message because the Presto HDL compiler cannot find the module to be elaborated. The error is reported by the *elaborate* command.

**What Next**

Ensure that the module to be elaborated has been analyzed.

---

## ELAB-358

(error) %s Mismatching number of connections in module/component instantiation.

**Description**

The number of port connections of the module/component instantiation does not match the number of ports in the module/component declaration. Either you specified too many or not enough connections to the module/component.

**What Next**

Check against the module/component declarations to find out which ports are unconnected or whether you specified too many connections.

---

## ELAB-359

(error) %s The procedure/task %s cannot be mapped to %s because it has an inout port (%s).

**Description**

HDL Compiler issues this error when, during the activity of the *read* command or *elaborate* command, the compiler encounters a procedure or task that has a map-to-entity or map-

Feedback

to-operator or map_to_module directive and also has an inout port or signal port. HDL Compiler does not support inout or signal ports on mapped procedures.

**What Next**

Remove the inout port from the mapped function or procedure, and issue the command again.

---

## ELAB-360

(error) %s The REAL data type is not supported for synthesis.

**Description**

HDL Compiler does not support the use of the REAL data type when synthesizing VHDL.

**What Next**

Rewrite your design so that it does not use the REAL data type.

---

## ELAB-361

(error) %s Unable to open standard synthetic libraries; check for correct installation.

**Description**

The Presto HDL Compiler could not open the standard synthetic library file, standard.sldb, or the standard GTECH library, gtech.db. This probably indicates that Design Compiler is not installed correctly.

**What Next**

Verify the successful completion of the the installation of Design Compiler.

---

## ELAB-362

(error) %s Cannot find port '%s' on synthetic operator '%s'.

**Description**

This error message occurs when the Presto HDL Compiler cannot find a port it expected to find on a synthetic operator. This usually indicates that a function that uses the map_to_operator pragma has incorrect parameter names for the synthetic operator to which it is mapped.

**What Next**

Verify that any functions mapped to synthetic operators use the correct port (parameter) names.

Feedback

## ELAB-363

(error) %s Incorrect value for hdlin_infer_mux: '%s'; allowed values are 'all', 'default', or 'none'.

### Description

This error message occurs when an incorrect value is set for the *hdlin_infer_mux* variable. Allowed values for *all*, *none*, and *default*.

When *all* is the value, HDL Compiler attempts to infer a MUX_OP for a signal or variable assigned in a case statement.

When *none* is the value, HDL Compiler does not attempt to infer any MUX_OPs for a Verilog or VHDL design.

When *default* (the default value) is the value, HDL Compiler attempts to infer a MUX_OP for a signal or variable assigned in a case statement or if statement, if the statement is either marked with the *infer_mux* directive, or is in a process associated with the *infer_mux* attribute or directive. A MUX_OP cannot be inferred if it violates the *hdlin_mux_size_limit* variable.

For details, see the *HDL Compiler for Verilog User Guide* or the *HDL Compiler for VHDL User Guide*.

To determine the current value of this variable, use the *printvar hdlin_infer_mux* command. For a list of HDL variables and their current values, use *print_variable_group hdl*.

### What Next

Set *hdlin_infer_mux* to a value of *all*, *default*, or *none*.

## ELAB-364

(warning) %s Replication constant {%d{...}} is non-standard.

### Description

You get this message when elaborating a Verilog-1995 or Verilog-2001 module and a zero replication constant is encountered and the application option *hdlin.verilog.v2005_replication_semantics* has been disabled.

A replication constant in a Verilog or SystemVerilog concatenation, such as {P{expression}}, can be a positive number or 0. In early versions of Verilog before 2005, it was non-standard for it to be 0, but most tools would implement {0{expression}} as 1'b0 instead of issuing an error. Verilog-2005 implements {0{expression}} as empty, but permits such empty replication results only within an otherwise non-empty concatenation.

Feedback

In Fusion Compiler that old behavior on zero replication constants in Verilog-1995 and Verilog-2001 can still be obtained by overriding

```
set_app_options -name hdlin.verilog.v2005_replication_semantics -value
 false
```

The setting of hdlin.verilog.standard at the time the Verilog source is analyzed determines whether the old implementation of the replication operator can be used when elaborating zero replications. If the module was analyzed as Verilog-2005, then overriding the above variable has no effect.

**What Next**

Make sure you intend to use a zero replication constant, and, if so, make sure you intend to use the old behavior. A risk of doing so is that it might be a mismatch with your simulator, because most tools use the Verilog-2005 semantics for this by default. If you don't want the old behavior, find where the application variable has been disabled in your script and undo it. If you need consultation about migrating legacy codes to current standards, contact Synopsys.

---

## ELAB-365

(warning) %s Net '%s' or a directly connected net is driven by more than one process or block.

**Description**

You receive this warning when a 'reg' variable is driven by more than one always block or a 'wire' variable is driven by more than one continuous assignment and you have also set the variable *hdlin_prohibit_nontri_multiple_drivers* to *false*.

*Note*: This warning is issued because an invalid design could result.

In simulation, if a 'reg' variable is driven by more than one always block, the definition, in effect, depends on which block executed most recently. In synthesis, since all blocks are concurrently executing at all times, this is not the case, and invalid designs can result if the drivers are simply shorted together. However, when the *hdlin_prohibit_nontri_multiple_drivers* variable is set to *false*, multiple drivers of 'reg' variables are permitted.

A multiple-driven 'wire' variable is prohibited by the Verilog standard. Although some simulators permit this behavior, HDL Compiler issues the ELAB-366 error if it occurs. However, when *hdlin_prohibit_nontri_multiple_drivers* is set to *false*, multiple drivers are permitted. *Note* that this variable setting might cause the generation of invalid designs.

The compiler permits multiple drivers on nets declared as 'tri', although it issues a warning if all the drivers are not three-state devices.

Feedback

### What Next

An invalid design might result when this warning is issued. Multiple driver nets are only generated because the *hdlin_prohibit_nontri_multiple_drivers* variable is set to *false*.

Consider modifying your design, to avoid driving a variable from more than one always block or continuous assignment.

---

## ELAB-366

(error) %s Net '%s' or a directly connected net is driven by more than one source, and not all drivers are three-state.

### Description

You receive this error message when a 'reg' variable is driven by more than one always block or a 'wire' variable is driven by more than one continuous assignment or input port and not all of the drivers are three-state.

In simulation, if a 'reg' variable is driven by more than one always block, the definition, in effect, depends on which block executed most recently. In synthesis, since all blocks are concurrently executing at all times, this behavior is not possible, and invalid designs can result if the drivers are simply shorted together. Therefore, HDL Compiler issues an error if any bits of any variable are driven by more than one process.

A multiply-driven net declared as 'wire' is not supported in synthesis and Presto HDL Compiler issues the ELAB-366 error if it occurs. If you want the compiler to permit such behavior, set the *hdlin_prohibit_nontri_multiple_drivers* variable to *false*. *Note* that this variable setting might cause the generation of invalid designs.

The compiler permits multiple drivers on nets declared as 'tri', although it issues a warning if all the drivers are not three-state devices.

### COMMON ISSUES

Sharing the same loop index variable between processes is a common source of this error. At the end of each process or always block, the loop index variable is driven by the last value it had during the loop.

```
integer i;
  always begin
    if (c)
      for (i = 0; i < N; i = i + 1)
        x[i] = ~x[i];
  end
  always begin
    if (c)
      for (i = 0; i < N; i = i + 1)
        y[i] = ~y[i];
  end
```

Feedback

To avoid this situation, use different variables in the different always blocks or declare the loop index variables locally, as in the following example.

```
always begin: x_block
    integer i;
    if (c)
      for (i = 0; i < N; i = i + 1)
        x[i] = ~x[i];
  end
  always begin: y_block
    integer i;
    if (c)
      for (i = 0; i < N; i = i + 1)
        y[i] = ~y[i];
  end
```

In some cases the compiler can determine that the variable *i* is never read before being assigned in the block, and in those cases the error is not issued.

Previous versions of HDL Compiler treated loop variables as a special case and did not allow them to be read after the loop. However, the Presto HDL Compiler treats loop variables as full-fledged program variables, which can lead to this situation.

**What Next**

Modify your design to avoid driving a variable from more than one always block or continuous assignment. Or if all drivers of the variable are three-state devices, change the declaration of the variable to 'tri', which permits multiple drivers.

Another alternative is to set *hdlin_prohibit_nontri_multiple_drivers* to *false*. *Note* that this setting might allow the generation of invalid designs to be generated. For that reason, it is not recommended.

---

## ELAB-367

(error) %s Clock expression must be one bit wide.

**Description**

An expression you use as a clock signal must be one bit wide. If you use an expression that is wider than one bit, you receive this error message. In Verilog, you specify the clock using an event statement, such as "@(posedge clock)". In VHDL, you specify a clock event using "if (clock'event and clock = '1')".

**What Next**

Modify your design so that all clock expressions are one bit wide.

Feedback

## ELAB-368

(error) %s Net '%s', or a directly connected net, is driven by more than one source, and at least one source is a constant net.

### Description

You receive this error when a 'reg' variable is driven by more than one always block, or a 'wire' variable is driven by more than one continuous assignment or input port, and at least one of the drivers is a constant. This is an error because an invalid design results when the output of a gate is connected directly to the Logic0 or Logic1 nets.

In simulation, if a 'reg' variable is driven by more than one always block, the definition, in effect, depends on which of the blocks executed most recently. In synthesis, since all blocks are concurrently executing at all times, this behavior is not possible, and invalid designs can result if the drivers are simply shorted together. Therefore, HDL Compiler issues an error if any bits of any variable are driven by more than one process.

A multiply-driven 'wire' variable is prohibited by the Verilog standard. Although some simulators permit this behavior, HDL Compiler issues the ELAB-366 or ELAB-368 error in this situation. If you wish to permit this behavior, you may set *hdlin_prohibit_nontri_multiple_drivers* to *false*. *Note* that this variable setting may cause the generation of invalid designs.

Ordinarily, multiple drivers are permitted on nets declared as 'tri'; however, constant nets are an exception to this rule because the implementation would result in an invalid design.

### COMMON ISSUES

A common source of this error message is sharing the same loop index variable between processes. At the end of each process or always block, the loop index variable is driven by the last value it had during the loop.

```
integer i;
  always begin
    if (c)
      for (i = 0; i < N; i = i + 1)
        x[i] = ~x[i];
  end
  always begin
    if (c)
      for (i = 0; i < N; i = i + 1)
        y[i] = ~y[i];
  end
```

To avoid this situation, either use different variables in the different always blocks, or declare the loop index variables locally, as in the following example.

```
always begin
    integer i;
```

Feedback

```
    if (c)
      for (i = 0; i < N; i = i + 1)
        x[i] = ~x[i];
  end
  always begin
    integer i;
    if (c)
      for (i = 0; i < N; i = i + 1)
        y[i] = ~y[i];
  end
```

In some cases the compiler can determine that the variable *i* is never read before being assigned in the block, and in those cases the error is not issued.

Previous versions of HDL Compiler treated loop variables as a special case, and did not allow them to be read after the loop; however, the Presto HDL Compiler treats loop variables as full-fledged program variables, which can lead to this situation.

**What Next**

Modify your design to avoid driving a variable from more than one always block or continuous assignment.

When none of the drivers is a constant net, another alternative is to set *hdlin_prohibit_nontri_multiple_drivers* to *false*. However, when one of the drivers is a constant net, an error is always generated, because the result would be an invalid design.

---

## ELAB-369

(error) %s The width of port %s on instance %s of design %s is inconsistent with other instantiations of the same design.

**Description**

You receive this error message when a module is instantiated in your design more than once, but the width of the ports is inconsistent among all of the instances.

In the following example, the module named *foo* is instantiated twice, but the ports named *a* and *b* have different widths, causing the error message.

```
module E (a, b, out1, out2);
input [2:0] a;
input [3:0] b;
output [3:0] out1, out2;

foo U1 (a, out1);
foo U2 (b, out2);
endmodule
```

Feedback

The instance for which this error is reported may not be the actual instance that uses the wrong width. Since the design is not yet linked, the compiler cannot check which of the instances is correct and can only report the inconsistency.

In the example above, the error is reported for instance U2, because instance U1 has already been seen and uses a different width. As the first in the list, the module named *foo* might require a 3-bit port, a 4-bit port, or another size. Errors that affect all instances equally are checked during linking instead of during elaboration.

**What Next**

Correct the width of the ports so that they are consistent, and then invoke the compiler again.

---

## ELAB-370

(warning) %s No MUX_OP inferred for the case because it might lose the benefit of resource sharing.

**Description**

You receive this warning message because the compiler did not infer the MUX_OP you specified for the case statement, because the case statement would lose the benefit of resource sharing.

**What Next**

This is a only a warning and requires no action on your part.

---

## ELAB-371

(warning) %s Pragmas has been removed in compiling.

**Description**

The tool issues this warning when pragmas are removed in the specified location during compilation, usually in rewriting intermediate language code.

For example, when inferring carryin for the following statement, one of the two adders will be removed, along with the label pragma associated with that adder.

```
a = a1 + //synopsys label adder1
    a2 + //synopsys label adder2
    cin;
```

**What Next**

No action is required on your part. However, if you want to avoid the removal of pragmas, change your Verilog code.

Feedback

## ELAB-372

(warning) %s Unsupported use of user-encoded enumeration type as array index.

### Description

This warning message occurs because synthesis does not support user-encoded enumeration types used as an array index. A user-encoded enumeration type is one that has an associated ENUM_ENCODING attribute.

During synthesis, enumeration values are implemented by choosing a binary encoding. VHDL requires that the meaning of an enumeration value used as an index is the position of the enumeration value in the enumeration type definition. Since the encoded value and the position are usually different values, correct synthesis requires the insertion of inefficient decoding logic.

### Examples

The following declaration of A1 is not supported because the index type ENUM1 is a user-encoded enumerated type:

```
...
attribute ENUM_ENCODING : string;
attribute ENUM_ENCODING : string;
type ENUM1 is (M1, M2, M3, M4);
attribute ENUM_ENCODING of
    ENUM1 : type is "0010 1000 1001 1111";

type A1 is array (ENUM1 range <>) of BOOLEAN;
 ...
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, rewrite the source code so that it does not use arrays with user-encoded enumeration types as an index. The tool allows the use of the enumeration type with default encoding as an array index type.

## ELAB-373

(warning) %s Potential overflow which may cause synthesis and simulation mismatch in operator '%s'.

### Description

This warning message occurs when the tool detects a potential overflow in an operator (such as exponent or abs) of the expression.

Feedback

For example, in the following expression if *tmp* is less than zero, there will be an integer overflow.

```
2 ** (31 - tmp)
```

In the following expression, if *tmp* is the minimum integer, there will be an integer overflow.

```
abs(tmp)
```

**What Next**

This is a warning message only. No action is required on your part. However, it is good practice to remove the overflow exponent or abs from the expression.

---

## ELAB-374

(information) %s Inferred unloaded sequential element for %s.

**Description**

You receive this message when the Presto HDL Compiler infers a sequential element that is not required for proper functioning of the design being elaborated, but whose inference was requested by the user.

An RTL-level design description in Verilog or VHDL may contain variables that ordinarily would create a sequential cell (either because they are assigned under a clock edge, or because they are conditionally assigned) but whose values are never read, or whose values are not used in computing any output of the design. Because the their values are not used (that is, they have no loads, or no path to the the outputs), by default HDL Compiler (Presto) will not create sequential cells for these variables.

In some circumstances designers wish to retain these sequential cells. Unloaded sequential cells can be inferred by two methods. First, if hdlin_preserve_sequential is TRUE, then a sequential cell will be inferred for any variable that is conditionally assigned or assigned under a clock, regardless of whether its value is used or not. Second, if hdlin_preserve_sequential is not set, but some variables are marked with the "preserve_sequential" pragma, only those variables will receive sequential cells even if they have no loads.

**What Next**

Examine the set of variables for which unloaded sequential cells are inferred.

If you do not want any unloaded sequential cells, make sure that hdlin_preserve_sequential is "none" and no pragmas appear in your HDL source files.

If you do intend to infer some unloaded sequential cells, but some unwanted cells also appear, and the variable hdlin_preserve_sequential is not "none", consider using the pragma method for finer control over the inference.

Feedback

Otherwise, no action is required on your part.

## ELAB-375

(error) %s Could not resolve hierarchical reference '%s'.

**Description**

You receive this message when the object referred to by a hierarchical identifier could not be found.

**What Next**

Find the object that the hierarchical identifier was meant to refer to and fix the hierarchical name to correctly refer to this object.

## ELAB-376

(Error) %s elaborating interface '%s'.

**Description**

This error message occurs if you attempt to elaborate a SystemVerilog interface, because that is not supported in synthesis.

**What Next**

Refer to the SystemVerilog User Guide for recommended use models.

## ELAB-377

(warning) %s The resolution function '%s' is not marked with a resolution method directive. It is being ignored.

**Description**

The tool issues this warning message if any function that is used as a resolution function is not marked with one of the following resolution method directives:

```
-- synopsys resolution_method wired_and
-- synopsys resolution_method wired_or
-- synopsys resolution_method wired_three_state
```

The tool does not support arbitrary resolution functions. Only *wired_and*, *wired_or*, and *three_state* functions are allowed. The tool requires that all resolution functions are marked with one of the resolution method directives indicating the kind of resolution being performed.

Feedback

This resolution function will be ignored.

**What Next**

This is a warning message only. No action is required on your part. However, if you do not want the resolution function to be ignored, add one of the following resolution method directives to the resolution function:

```
-- synopsys resolution_method wired_and
-- synopsys resolution_method wired_or
-- synopsys resolution_method wired_three_state
```

---

## ELAB-378

(error) %s The content '%s' is not defined in interface %s's instance '%s'.

**Description**

This error message issues when you attempt to hierarchically access the content of the interface via its instance name, but the content is not defined in the interface. The following example contains two causes of this error message:

```
interface simple_bus;
  logic a;
  modport mp( output a );
endinterface;

module top(input i, output logic o);
   bottom     forward(  sb.mp ); // A modport isn't
 hierarchically-accessible content
  simple_bus  sb();              // Adds the instance's modport to this
 scope.
   assign o =       i & sb.b;    // Error: "b" is not defined in the
 interface
   bottom     backward( sb.mp ); // OK to refer to a known-instance's
 modport
endmodule
```

All forward references to an instance are presumed to be "hierarchical"; they may only refer to content found in some upcoming instance. When you connect an interface instance, or one of its modports to an interface port, the interface's instance must be instantiated before it can be connected to the down-design. Such interface.modport references are not "hierarchical", even though they use the same "." notation; the modport is not "content". By the same token, a port expression that is a forward reference to the whole interface instance will be read as an implicit wire, and the instance name will thus be defined-already come the instantiation.

Feedback

### What Next

Access the correct interface content or else add the content definition into the cited interface declaration, reanalyze the interface definition, and re-elaborate the module that instantiates it. If, instead, you are trying to connect an interface port: relocate the interface instantiation statement prior to this reference within in the same scope.

---

## ELAB-379

(Error) %s value of double type is not supported in synthesis.

### Description

You receive this error message because you are attempting to synthesize a real, float, or double data type, which synthesis does not support.

### What Next

Do not use real, float, or double data types for synthesis. Correct the data type and run the command again.

---

## ELAB-380

(Error) %s name of port %s is inconsistent with module definition or other instances.

### Description

You receive this error message because the specified port name is inconsistent with module definition or other module instances having the named port connection. One of the ports is an interface or modport instance in the module instantiation.

In the following example, the foo module is instantiated with a named port connection. It uses the named ports a, o, and ifc, where ifc is an interface instance. However, a is not in the port list of the foo module, so the error message occurs.

```
interface ifc;
logic x,y;
endinterface

module E (a, out1);
input [2:0] a;
output [3:0] out1;
iface ifc();
foo U1 (.a(a), .o(out1), .ifc(ifc));
endmodule

module foo(input [2:0] i, output [3:0] o, iface ifc);
 ...
endmodule
```

Feedback

### What Next

Correct the names of the ports so that they are consistent, and then invoke the compiler again.

---

## ELAB-381

(error) %s The formal %s port '%s' is connected to an incompatible %s.

### Description

This error message issues during the specialization of a module or interface that is done to accomodate its interface ports. The interface type name or modport name of the incoming interface instance (if any) is not compatible with the declaration of the corresponding (cited) formal port. Here are some sample cases of this mismatch:

- Connecting an interface port or instance to a wire or variable port
- Connecting a wire or variable to an interface/modport port
- Connecting an interface port or instance instantiated from one template to an interface port declared with a different interface template name.
- Connecting one modport of an interface instance to a different modport (by name)

In the following example, the module named foo is instantiated with the ports named a, out1, and ifc. The ifc port is an interface instance that is connected to the output port named o2. However, the o2 port is not a compatible interface port. This causes the error message.

```
interface iface;
  logic x,y;
  modport MP(input x, output y);
endinterface

module E (a, out1);
  input [2:0] a;
  output [3:0] out1;
  iface ifc();
  foo U1 (ifc.MP);
  ...
endmodule

module foo(output o2);
 ...
endmodule
```

Another example that results in the error message is when you attempt to connect a modport of an interface instance to a different modport port.

Feedback

```
interface iface;
  wire x,y;
  modport MP1(input x, output y);
  modport MP2(input x, output y);
endinterface

module E (a, out1);
  input [2:0] a;
  output [3:0] out1;
  iface ifc();
  foo U1 (ifc.MP1);
 ...
endmodule

module foo(iface.MP2 ifc);
  ...
endmodule
```

**What Next**

The immediately preceding HDL-193 ("Building ...") indicates one design's reference cells which are incompatible with the cited port. Correct the ports in the module instantiation and/or the module definition so that they agree on what is being connected. Re-analyze the changed RTL and re-link the design.

---

## ELAB-382

(error) %s Module %s was not elaborated because it contains the generic interface as port.

**Description**

You receive this error message because you are elaborating a module with generic interface as port.

**What Next**

Specify the interface in elaboration or elaborate the upper designs containing instantiations of this module.

---

## ELAB-383

(error) %s Too many elements in assignment pattern expression list

**Description**

The elements listed in an aggregate expression must be in one-to-one correspondence with the members of the structure type or the elements of the array type into which the aggregate expression is being assigned, aggregated, or cast.

Feedback

### Examples

In the following example, structures of type *shoe* have just two members. Since *shoe* is not declared to be a *packed* structure, lists enclosed within curly braces that are assigned to *shoe*s are interpreted according to the rules for aggregate expressions. Thus, lists longer than than two elements are rejected, even if they would be valid as (packed array) concatenations.

```
typedef struct {
  logic [3:0]heel;
  logic [3:0]toe;
} shoe;

shoe left, right;
shortint tongue;

left = { right.toe, 4'b1111, tongue };      // Shoe is too small
right= { 1'b1, left.heel[2:0], left.toe };  // Not a Verilog concat
```

### What Next

Check for a mismatch between the structure declaration and its uses, due to incompatible versions of two source files.

If concatenation was intended where an unpacked aggregate expression is now parsed, consider changing the structure declaration to *packed*, or regrouping the elements to correspond to the structure members as declared.

---

## ELAB-384

(error) %s Too few elements in assignment pattern expression list

### Description

The elements listed in an aggregate expression must be in one-to-one correspondence with the members of the structure type or the elements of the array type into which the aggregate expression is being assigned, aggregated, or cast.

### Examples

In the following example, structures of type *shoe* have just two members. Since *shoe* is not declared to be a *packed* structure, lists enclosed within curly braces that are assigned to *shoe*s are interpreted according to the rules for aggregate expressions. Thus, lists with less than two elements are rejected, even if they would be valid as (packed array) concatenations.

```
typedef struct {
  bit [3:0] sole;
  bit [3:0] tongue;
} shoe;
```

Feedback

```
shoe left, right;
byte heel;

left = { right.sole }; // Shoe is too big
right= { heel };       // Not a Verilog concat
```

**What Next**

Check for a mismatch between the structure declaration and its uses, due to incompatible versions of two source files.

If concatenation was intended where an aggregate expression is now parsed, check that the structure declaration is *packed*, or try decomposing and regrouping the listed elements to correspond to the structure members as declared.

---

## ELAB-385

(Error) %s A design template for '%s' cannot be found.

**Description**

This error message occurs because the SystemVerilog compiler cannot find an analyzed template needed to inline an instance of a module or interface. Interface and module instantiations are syntactically indistinguishable. When an instance_name forms the root of a hierarchical reference (XMR), or appears as the actual port of another instance, it is presumed to be a templated design. Its content will be copied in-line into the instantiating design.

Unknown identifiers used in place of port directions or user-defined data types are assumed to be interface types; so this error can issue for certain cases that previously would have been cited as syntax errors. Similarly unknown identifiers used as the roots of cross-module-references (XMRs) were previously reported as syntax errors, but now are assumed to be instances of templated modules or interfaces intended to be fully inlined so as to expose their hierarchically referenced content inside the parent design.

**What Next**

Ensure that the interface or module has been analyzed and the intermediate files are in the working directory or the library search path, and then re-elaborate the design which failed.

Check the identifier for typographical errors, or for mistaken usage. For example, the actual interface instance name should not be used as the interface type name when declaring a formal port to receive it. Instead, use the interface type identifier from which that instance was instantiated in the parent design. Conversely the interface or module name should not be used as the root of a hierarchical reference into one of its instances; use the instance name instead.

Feedback

## ELAB-386

(error) %s Name clash on net '%s'.

### Description

You receive this error message because your two names in your design cause a name clash in the netlist. The name clash can be between to same named objects or two similar named objects in conjunction with a naming style.

Eg. when choosing net naming style "%n_%d" the following declarations can create a name clash:

```
// net naming style set to "%s_%d"

  // nameclash regarding r_0:
  reg r_0;
  reg [0:3] r;  // will result in r_0, r_1, r_2 and r_3
```

### What Next

Ensure that all object names in your design are unamibiguous, considering the naming style you are using.

## ELAB-387

(error) %s The '%s' attribute is supported only if that attribute is used in conformance with the style described in the Synopsys manual for the VHDL Compiler.

### Description

You receive this error message when an attribute usage is not in conformance with the style described in the Synopsys manual for the VHDL Compiler.

You might have used the attribute as the RHS expression of blocking assignment, non-blocking assignment, or, in the return expression of function, etc.

### What Next

See the *HDL Compiler for VHDL Reference Manual* for ways to use the attributes.

## ELAB-388

(warning) %s X and/or Z bits occur in an actual parameter to the '%s' design template.

### Description

This warning message occurs when you create an instance of a parameterized subdesign using a constant value that contains X or Z bits.

Feedback

In classical synthesis, these bits are zeroed to form ordinary integer or string constants. However, in the current operating mode, the full four-state parameter value is used as written when the subdesign is elaborated. If the subdesign uses it as a casex or casez statement label, there may be a mismatch between synthesis and simulation results.

Don't care bits in parameters do not indicate wildcard matching within the design libraries.

**What Next**

Convert the casex item into a literal or convert the casex statement into a case statement.

For more information, see the *-parameters* option on the *elaborate* command man page.

---

## ELAB-389

(warning) %s X and Z bits in parameters of subdesign '%s' are set to zero.

**Description**

You are creating an instance of a parameterized subdesign using a constant value which contains x or z bits. In classical synthesis coding styles, parameters are integer or string constants. In the current operating mode, 4-state parameter values are being cast to 2-state values (by setting x and z bits to zero) before the subdesign is elaborated. If the subdesign uses this parameter as a casex or casez statement label, there may be a mismatch between synthesis and simulation results.

Don't-care bits in parameters do not indicate wildcard matching within the design libraries.

**What Next**

Try to convert the casex item into a literal or convert the casex statement into a case statement.

---

## ELAB-390

(warning) %s Variable or function call in casex item is a potential simulation/synthesis mismatch.

**Description**

You receive this warning message when a variable or function call is used in a casex item. Even if an x bit is assigned to a variable or returned by a function call, the value of the case item will not match both 0 and 1, as it would for an x bit in a literal in a casex item. For example:

```
b = 2'b1x ;
   casex (a)
     b : ... // in this case, 2'b1x only matches 2'b10
   endcase
```

Feedback

A full example:

```
module m( o1 , o2 );
output o1, o2 ;
reg o1, o2 ;

  function f ;
  input [1:0] R ;
  casex (2'b11)
    R : f = 1'b0 ;
    default : f = 1'b1 ;
  endcase
  endfunction

  always begin
   o1 = f(2'b1x) ;
  end

  reg [1:0] R;
  always begin
   R = 2'b1x;
   casex (2'b11)
     R : o2 = 1'b0 ;
     default: o2 = 1'b1 ;
   endcase
  end

endmodule
```

**What Next**

Convert the casex item into a literal or convert the casex statement into a case statement.

---

## ELAB-391

(warning) %s Variable %s may be read before being assigned; the synthesized result may not match simulations.

**Description**

You receive this warning message because a variable that is local to a function or task may be read before being assigned. When the *hdlin_infer_function_local_latches* variable is set to *false*, the Presto HDL Compiler does not preserve variable values across separate calls to a task or function, unlike a simulator. Any bits of the variable that are not assigned before being used are given the value 0. No latches are inferred for variables local to a subprogram.

When the *hdlin_infer_function_local_latches* variable is set to *true*, the compiler matches the simulator's behavior. This may result in additional latches in your design.

Feedback

**What Next**

If you intended to use a value set during a previous call, set *hdlin_infer_function_local_latches* to *true* in order to preserve the value across calls.

If you did not intend to use a value across calls, check your design to verify that you assigned all local variables before using them.

---

## ELAB-392

(warning) %s Value of function %s may be used before being assigned; the synthesized result may not match simulations.

**Description**

You should not receive this warning by default. If you do receive this warning, it may or may not be accurate; please evaluate your RTL code accordingly. If you wish to remove this warning from your DC sessions, please contact Synopsys support.

A Verilog function definition implicitly declares a variable, internal to the function, with the same name as the function. You receive this warning message when the function may return without the variable having been assigned or when the variable may be read by the function body before the variable is assigned.

When the *hdlin_infer_function_local_latches* variable is set to *false*, the Presto HDL Compiler does not preserve variable values across separate calls to a task or function, unlike a simulator. Any bits of the variable that are not assigned before being used are given the value 0. No latches are inferred for variables local to a subprogram.

When the variable *hdlin_infer_function_local_latches* is set to *true*, the compiler matches the simulator's behavior. This may result in additional latches in your design.

**What Next**

If you intended to use a return value set during a previous call, set *hdlin_infer_function_local_latches* to *true* in order to preserve the value across calls.

If you did not intend to use a return value across calls, check your design to verify that a meaningful value is returned by the function.

---

## ELAB-393

(warning) %s Value of function '%s' is used before being assigned; the synthesized result may not match simulations.

Feedback

### Description

A Verilog function definition implicitly declares a variable, internal to the function, with the same name as the function. You receive this warning message when the function returns without the variable having been assigned or when the variable is read by the function body before the variable is assigned.

When the variable *hdlin_infer_function_local_latches* is set to *false*, the Presto HDL Compiler does not preserve variable values across separate calls to a task or function, unlike a simulator. Any bits of the variable that are not assigned before being used will be given the value 0. No latches will be inferred for variables local to a subprogram.

When the variable *hdlin_infer_function_local_latches* is set to *true*, the compiler will match the simulator's behavior. This might result in additional latches in your design.

### What Next

If you intended to use a return value set during a previous call, set *hdlin_infer_function_local_latches* to *true* in order to preserve the value across calls.

If you did not intend to use a return value across calls, check your design to verify that a meaningful value is returned by the function.

---

## ELAB-394

(error) %s Specified resoure sharing (label %s) is not realizable. There is conflict among the operations.

### Description

You receive this error message when the specified resource sharing is not realizable. For example:

module ppf (cond, cond2, a,b, c, d, z, y); input cond, cond2; input [3:0] a, b, c, d; output [3:0] z, y; reg [3:0] z, y;

always @(a or b or c or d) begin : b1 /* synopsys resource r0 : ops = "a0 a1", map_to_module = "DW01_add", implementation = "rpl", add_ops="false";*/

if (cond) begin z = a + /* synopsys label a0 */ b; y = c + /* synopsys label a1 */ d; end else z = a + c; end

endmodule

Resoure r0 can not be shared by a0 and a1.

### What Next

Modify resource sharing pragma, make sure the specified resources can be shared.

Feedback

## ELAB-395

(warning) %s Latch inferred in design %s read with 'hdlin_check_no_latch'

**Description**

The variable hdlin_check_no_latch directs the read command to ensure no latch is inferred in the HDL file.

**What Next**

Check whether the value of hdlin_check_no_latch is correct or HDL file contains error hence latches are inferred unexpectedly.

## ELAB-396

(warning) %s Floating net '%s' connected to ground.

**Description**

You receive this warning message when a previously unconnected net has been connected to ground. This message reminds you to check whether the behavior resulting from connecting the net to ground conforms to your expectations.

**What Next**

Verify that connecting the specified net to ground results in the desired behavior.

## ELAB-397

(error) %s The module or interface '%s' needs to be analyzed.

**Description**

This error message occurs when the Presto HDL Compiler fails to read the intermediate file after analyzing.

**What Next**

Ensure that the module or interface is analyzed before running the command.

## ELAB-398

(error) %s The content '%s' is not provided via interface %s's modport %s, which is connected to '%s'.

Feedback

### Description

This error message occurs when attempting to access the content of an interface's modport through a port connection, but the content is not provided by the modport you received. The interface either never defined content with that name, or the actual modport that was connected did not list it among the accessible names. The following example results in this error message:

```
interface simple_bus;
logic a,b,c;
modport M(b,c);
endinterface;

module middle(i, o, sb);
input i;
output o;
simple_bus.M sb;
assign o = i & sb.a;   // a is not accessible via this interface's M
 modport

endmodule
```

### What Next

Correct the interface content access or add the content definition in the corresponding interface and run the command again.

### See Also

- ELAB-104

---

## ELAB-399

(error) %s Type query %s on undefined expression or type.

### Description

You receive this error message because the tool detected an error when querying on an undefined expression or type.

In the example below, the argument of $bits is undefined, which causes the error message to be issued.

```
module top(i, o);
input [$bits(t)-1:0] i;
output [$bits(t)-1:0] o;
endmodule
```

Feedback

### What Next

Correct the query argument and run the command again.

---

## ELAB-400

(error) %s Type query %s requires an array reference as the first argument.

### Description

This error message occurs when you attempt an array query on a non-array type.

In the following example, the $left argument does not have an array type, so the error message is issued.

```
typedef logic t;

module top(i, o);
input [$left(t)-1:0] i;
output [$left(t)-1:0] o;
endmodule
```

### What Next

Correct the query argument and run the command again.

---

## ELAB-401

(warning) %s Comparisons to don't-care or to unknown literals are always treated as being false. This may cause simulation to disagree with synthesis.

### Description

This warning message occurs because comparisons in hardware are inherently different than in the simulator. Digital hardware comparators can only distinguish between ones and zeros. As a result, it does not make sense to synthesize comparisons to three-state, don't-care, or unknown literals. Since signals are assumed to carry a value of one or zero, equality tests to non-one or zero values always return false in synthesis.

### What Next

This is only a warning message. No action is required.

If the comparison was used only for simulation purposes you do not need to modify your HDL. For example, if you want to print a message when an input port is in the high-impedance state, it is acceptable to compare its value to z.

If you are using the comparison to affect the state of your circuit, you should consider recoding your HDL. For example, if you need a four-state state machine, do not declare a

Feedback

single-bit variable and use 0, 1, x, and z as your states. In hardware, each bit only holds two useful states: 1 and 0.

## ELAB-402

(information) %s Unsigned 0-extension of a signed quantity

### Description

This informational message issues because arithmetic used in your design implicitly used an unfortunate, but standardized, difference between Verilog 95 and many other languages, including ANSI C/C++. In IEEE-1800-2009 Verilog/SystemVerilog and all its predecessor standards, a signed quantity used in an unsigned context becomes unsigned, and any bit-width extension it may require is done via zero-extension, not sign-extension (i.e.the sign bit does not fanout to the extension bits) as other languages and common sense would have it.

ELAB-402 is not reported if $unsigned() or unsigned'() casts are used to explicitly discard signedness from an operand, if the leading bit of the operand is already 0, or if no extension is necessary for such an operand. It is reported if there appears to be a possibility that zero-extension bits of a signed operand will be used by some downstream operation or storage location. It issues in addition to the VER-318 warning about the same coercion to indicate that the arithmetic outcome has probably changed from what a C programmer would have gotten.

### What Next

This is only an informational message. No action is required.

Verilog context-determined typing is tricky and, in our opinion, poorly documented in the IEEE standards. Simply inserting casts may not be the proper response to this information message. Consider other ways to decompose the cited expression, or case comparison, that do not rely upon implicit type coercion.

### See Also

- VER-318

## ELAB-403

(warning) %s Presto uses shift to implement signed division.

### Description

You receive this warning message when Presto HDL Compiler uses shift to implement signed division. The result does not match the simulation result, but it is the same behavior as the HDL Compiler and Formality.

Feedback

If you want to match simulation behavior, set the *hdlin_signed_division_use_shift* variable to *false*, which is the default value.

**What Next**

This is only a warning message. No action is required.

However, you can perform the verification and change the value of the *hdlin_signed_division_use_shift* variable to *false* to match the simulation result.

---

## ELAB-404

(error) %s Unpacked type used as index.

**Description**

You receive this error message when an unpacked type is used as an index for a subscription or a vector part-select.

**What Next**

Change the type of index expression or cast it to packed types and run the command again.

---

## ELAB-405

(warning) %s Net %s or a directly connected net may be driven by more than one process or block.

**Description**

You receive this warning message when a reg variable is driven by more than one always block, or a wire variable could be driven by more than one continuous assignment, and you have also set the *hdlin_prohibit_nontri_multiple_drivers* variable to *false*.

This warning message is issued because an invalid design could result.

In the following example, the assignment in the module could cause multidriven issues for wire t.

```
module M(input i, output o);
wire t = i;
assign t = o;
 ...
endmodule
```

The compiler permits multiple drivers on nets declared as *tri*, but it issues a warning if one of the drivers is not a three-state device.

Feedback

### What Next

This is only a warning message.

An invalid design may result when this warning is issued. Multiple driver nets are only generated because the *hdlin_prohibit_nontri_multiple_drivers* variable is set to *false*.

Consider modifying the design to avoid driving a variable from more than one always block or continuous assignment.

---

## ELAB-406

(warning) %s The binding of %s is ignored.

### Description

You receive this message from the *elaborate* or *read* command when the compiler eliminates binding of the specified signal. The bindings are usually made by assignments. The reason for the elimination is that there is no reference to the specified signal before the next binding.

For example:

```
always @* begin
  t = 1;
  t = 2;
end
```

The binding of the first assignment to t is overwritten by the second assignment. The message warns you that the first assignment is eliminated.

The following is another example:

```
module M (input i, output o);
reg t;
always @* begin
  t = 1;
end
endmodule
```

The binding of t is not used anywhere else, so you are warned when it is eliminated.

### What Next

This is only a warning message.

However, if the elimination is unexpected, modify the code and run the tool again.

Feedback

## ELAB-407

(error) %s All edge events in a single process must depend on the same signal.

**Description**

This error message occurs when a process contains more than one event wait (in VHDL), or when an always block contains more than one edge expression (in Verilog or SystemVerilog). All of the waits must be for an edge on the same signal.

**What Next**

Recode the design so that all event waits depend on the same variable.

## ELAB-408

(error) %s Only some paths through the process contain event waits; waits must occur on all or no paths through a process.

**Description**

This error message occurs when a process contains any event wait (in VHDL), or when an always block contains any edge expression (in Verilog or SystemVerilog). All paths through that block must reach at least one event wait. It must be impossible to execute the process or block without triggering a wait.

**What Next**

Recode the design so that all paths reach an event wait.

## ELAB-409

(error) %s Edge expression being tested is not a simple edge.

**Description**

This error message occurs when a process contains any event wait (in VHDL), or when an always block contains any edge expression (in Verilog or SystemVerilog). The event the system is waiting for must be a simple edge expression.

**What Next**

Recode the design so that all event waits are for simple edge expressions.

## ELAB-410

(error) %s Processes with both 'wait' statements and 'if' statements that test events are not currently supported.

Feedback

### Description

This error message occurs when a process contains an event wait, and an if statement in the same process contains an event as part of the condition. This process type is not supported by Presto.

### What Next

Recode the design so that it contains only event waits or an if statement that tests an event condition.

---

## ELAB-411

(error) %s Processes or always blocks with multiple events are disallowed when hdlin_allow_multiple_waits is false.

### Description

This error message occurs when the Presto HDL Compiler encounters a process containing more than one event wait when reading or elaborating a Verilog or VHDL design.

Presto supports the read and elaborate processes, except when the *hdlin_allow_multiple_waits* variable is set to false. The default value is true.

The most common reason for setting *hdlin_allow_multiple_waits* to false is as part of a range of settings that ensure that designs can be elaborated by the Formality RTL readers.

### What Next

Either set *hdlin_allow_multiple_waits* to true, or recode the design so that it contains only a single event wait or an if statement that tests an event condition.

---

## ELAB-412

(error) %s Wait or event statements that do not depend on edge events are not supported.

### Description

This error message occurs when the design being read or elaborated contains a process with a wait statement that does not depend on an edge event, or an always block that does not depend on a posedge or negedge expression.

This error also occurs when SystemVerilog designs contain special-form always blocks, such as always_comb or always_ff, and also contain a sensitivity list. Designs containing any of these statements are not supported.

Feedback

### What Next

Recode the design so that it contains only event waits.

---

## ELAB-413

(error) %s Processes containing more than one 'if' statement that tests an event expression are not supported.

### Description

This error message occurs because a process that contains more than one if statement that tests an event expression is not supported.

### What Next

Recode the design so that each process contains no more than one if statement that tests an event expression in each process.

---

## ELAB-414

(warning) %s Ignoring %s - too complex for synthesis to utilize.

### Description

This warning message issues when the Presto HDL Compiler finds a labelled assertion or assertion severity system task call whose logical structure lies outside the current synthesis subset.

- Generally, the asserted expression should compare only one variable or signal to a compile-time constant, or else
- It should make a $onehot or $onehot0 claim about a collection of signal wires.
- It must not have any statements in its action_block.
- It should use bitwise NOT (~) of the complete argument, rather than reduction NOT (!) of each bit when forming a $onehot() argument to assert a one-cold relationship.

  Consult the SystemVerilog User Guide for the exact definition of the subset currently supported by this release.

### What Next

This is only a warning message. No action is required.

However, if you do not want the construct to be ignored, you must simplify it, perhaps into several separate relations.

Feedback

## ELAB-415

(error) %s Processes containing nested 'if' statement that tests an event expression are not supported.

**Description**

This error message occurs because a process that contains nested if statement that tests an event expression is not supported.

**What Next**

Recode the design so that processes contain no nested if statement that tests an event expression.

## ELAB-420

(warning) %s Invalid symbol '%s' or expression in a signal name list of a pragma or assertion. It is being ignored.

**Description**

This warning message occurs when the Presto HDL Compiler finds an invalid symbol or expression in the list of signal names submitted to a Verilog or VHDL compiler pragma or in a SystemVerilog assertion. This can be caused by one of the following:

- The type of the signal or expression is invalid for the pragma or asserted condition.
- If the signal or its expression is an array, its index or bounds should be a constant expression. No function call is allowed, including a constant function call.
- The type of the signal or the expression accessing it cannot involve a union type.
- For one_hot and one_cold pragmas or $onehot and $onehot0 system functions, the signal name list can only contain signals that are ports.

**What Next**

This is only a warning message. No action is required.

However, if you do not want the symbol and/or its expression to be ignored in this context, correct the symbol name and/or its expression and analyze the RTL again.

## ELAB-421

(warning) %s The value of type %s assigned to the '%s' attribute will be converted to %s

Feedback

### Description

This warning issues when the built-in, declared, or implied type for this attribute's data differs from the type of expression in this setting. Sensible arithmetic conversions occur, possibly involving numeric formatting. Packed data types are treated as arithmetic bit vectors.

### What Next

This is only a warning message. No action is required, but the final attribute value should be checked for range overflow or sign change issues.

To repair this warning, the declaration of the attribute and this usage must be brought into type-agreement. For DC's built-in attributes, your value setting must change. For attributes you've added via (* attr=value *) syntax, all value expressions for an attribute (across all modules presented to the compiler in a single read command) must have data types compatible within the small set of possible attribute types. Unpacked array dimensions need not be the same for these purposes.

---

## ELAB-422

(warning) %s Unsupported expression type for '%s' attribute; this setting is ignored

### Description

This warning issues when no attribute type exists to represent the value provided, or no conversion exists from the given expression type to the previously known type of this attribute.

### What Next

This is only a warning message; no action is required. Review Verilog/SystemVerilog type representations and the attribute value expectations of any cooperating tools or DC commands. Choose simpler data types in order to lower the complexity of data format conversion efforts.

To repair this warning, the declaration of the attribute and this usage must be brought into type-agreement. For DC's built-in attributes, your value setting must change. For attributes you've added via (* attr=value *) syntax, all value expressions for an attribute (across all modules presented to the compiler in a single read command) must have data types compatible within the small set of possible attribute types. Unpacked array dimensions need not be the same for these purposes.

---

## ELAB-425

(error) %s Found expression without known width in context that requires one

Feedback

### Description

You receive this error when you use an expression that cannot have a width or whose width cannot be determined in a context that requires an expression with a well-defined width.

An example from SystemVerilog:

```
interface IFC;
    logic a, b;
    assign b = a;
    modport mp(output a, input b);
  endinterface

  module test(output out, input in);
    IFC ifc();
    bot bot(ifc.mp, out, in);
  endmodule

  module bot (IFC.mp ifc, output out, input in);
    assign out = ifc; // Error -- intended ifc.b, not just ifc
    assign ifc.a = in;
  endmodule
```

### What Next

Make sure that you have not written an expression without a well-defined width.

---

## ELAB-433

(warning) %s This SV Assertion is treated as confirmed for synthesis although %s has not been set to true.

### Description

This warning message issues when the Presto HDL Compiler finds a labelled assertion or assertion severity system task call whose usage is neither confirmed nor disconfirmed by the tcl environment variable setting cited in the message, but a blanket confirmation of all such assertions has been made and hdlin_enable_assertions is true. Because SystemVerilog Assertions (SVA) can lead synthesis to using a larger set of "don't care" conditions during optimization, you should separately certify that this assertion has proven to be unreachable prior to a final synthesis of this RTL.

### What Next

This is only a warning message. No action is required.

If you ultimately do want this construct to be used in a final synthesis, you should set an element of the confirmed_SVA environment array to true whose element name identifies

Feedback

the label and lexical scope of the applicable assertion. The most specific form of its element name is used in this warning message.

The recommended way to confirm assertions is to assemble a separate tcl file to source into your dc_shell before elaborating the design elements which use SVA. This same file should then be sourced into fm_shell when formally verifying the results of this elaboration.

---

## ELAB-434

(warning) %s The assertion %s would currently be too complex for synthesis to utilize.

**Description**

This warning message issues when the Presto HDL Compiler finds a labelled assertion or assertion severity system task call whose logical structure lies outside the current synthesis subset when a blanket confirmation has been issued.

- Generally, the asserted expression should compare only one variable or signal to a compile-time constant, or else
- It should make a $onehot or $onehot0 claim about a collection of signal wires.
- It must not have any statements in its action_block.
- It should use bitwise NOT (~) of the complete argument, rather than reduction NOT (!) of each bit when forming a $onehot() argument to assert a one-cold relationship.

  Consult the SystemVerilog User Guide for the exact definition of the subset currently supported by this release.

**What Next**

This is only a warning message. No action is required.

However, if you do not want the construct to be ignored, you must simplify it, perhaps into several separate relations.

---

## ELAB-463

(warning) %s Incorrect value for hdlin_infer_mux: '%s'; allowed values are 'all', 'default', or 'none'. Using 'default'.

**Description**

This warning message occurs when an incorrect value is set for the *hdlin_infer_mux* variable. Allowed values for *all*, *none*, and *default*.

When *all* is the value, HDL Compiler attempts to infer a MUX_OP for a signal or variable assigned in a case statement.

Feedback

When *none* is the value, HDL Compiler does not attempt to infer any MUX_OPs for a Verilog or VHDL design.

When *default* (the default value) is the value, HDL Compiler attempts to infer a MUX_OP for a signal or variable assigned in a case statement or if statement, if the statement is either marked with the *infer_mux* directive, or is in a process associated with the *infer_mux* attribute or directive. A MUX_OP cannot be inferred if it violates the *hdlin_mux_size_limit* variable.

For details, see the *HDL Compiler for Verilog User Guide* or the *HDL Compiler for VHDL User Guide*.

To determine the current value of this variable, use the *printvar hdlin_infer_mux* command. For a list of HDL variables and their current values, use *print_variable_group hdl*.

**What Next**

Set *hdlin_infer_mux* to a value of *all*, *default*, or *none*.

---

## ELAB-468

(warning) %s Port '%s' of design '%s' matches a local name whose type differs from this structured instance;\n\tit cannot be distributed; so it will be treated as '.%s'

**Description**

This warning issues when a structure of instances has used .* port name globbing to form a connection with a variable (or net) whose type does not match the structure of instances'. Since ports are only distributed one-bit-per structural instance, this port will have to be replicated. If that is the intended connection, it should be specified as suggested in the message text.

In the following example, the module named *foo* is twice instantiated with the 3-bit wide shape of 'a', but the port named *clk* is just one bit wide (doesn't match a's shape) which provokes the warning message in the case where the connection is formed by port globbing.

```
module foo(input clk, a,b, output out );
 ...
endmodule
module E (clk, a, b, out);
  input clk;
  input [2:0] a;
  input [2:0] b;
  output [2:0] out;

  foo WARN<$type(a)> (.*);       // warning that clk isn't 3-bits wide
  foo GOOD<$type(a)> (.clk, .*); // explicit fanout of 1-bit clk
endmodule
```

Feedback

### What Next

Correct the type of the cited variable, so it will (implicitly) distribute over the instances; rename objects so they connect better when port globbing (or pin synonyms) are in use; or explicitly connect this port without <distribution> brackets to indicate that it should be replicated.

### See Also

- remove_pin_name_synonym
- report_pin_name_synonym
- set_pin_name_synonym

---

## ELAB-469

(warning) %s The width of port %s on instance %s of design %s is inconsistent with other instantiations of the same design.

### Description

You receive this warning message when a module is instantiated in your design more than once, but the width of the ports is inconsistent among all of the instances.

In the following example, the module named *foo* is instantiated twice, but the ports named *a* and *b* have different widths, causing the warning message.

```
module E (a, b, out1, out2);
input [2:0] a;
input [3:0] b;
output [3:0] out1, out2;

foo U1 (a, out1);
foo U2 (b, out2);
endmodule
```

The instance for which this warning is reported may not be the actual instance that uses the wrong width. Since the design is not yet linked, the compiler cannot check which of the instances is correct and can only report the inconsistency.

In the example above, the warning is reported for instance U2, because instance U1 has already been seen and uses a different width. As the first in the list, the module named *foo* might require a 3-bit port, a 4-bit port, or another size. Errors that affect all instances equally are checked during linking instead of during elaboration.

### What Next

Correct the width of the ports so that they are consistent, and then invoke the compiler again.

Feedback

## ELAB-490

(error) %s Variable or function call in casex item is a potential simulation/synthesis mismatch.

### Description

You receive this error message in verification friendly mode when a variable or function call is used in a casex item. Even if an x bit is assigned to a variable or returned by a function call, the value of the case item will not match both 0 and 1, as it would for an x bit in a literal in a casex item. For example:

```
b = 2'b1x ;
   casex (a)
     b : ... // in this case, 2'b1x only matches 2'b10
   endcase
```

A full example:

```
module m( o1 , o2 );
output o1, o2 ;
reg o1, o2 ;

  function f ;
  input [1:0] R ;
  casex (2'b11)
    R : f = 1'b0 ;
    default : f = 1'b1 ;
  endcase
  endfunction

  always begin
   o1 = f(2'b1x) ;
  end

  reg [1:0] R;
  always begin
   R = 2'b1x;
   casex (2'b11)
     R : o2 = 1'b0 ;
     default: o2 = 1'b1 ;
   endcase
  end

endmodule
```

### What Next

Convert the casex item into a literal or convert the casex statement into a case statement.

Feedback

## ELAB-491

(warning) %s Embedded configuration statements are not supported for synthesis. They are ignored.

### Description

This warning is issued when the design on which the *elaborate* or *read* command is invoked includes embedded configuration statement. Embedded configuration statements are not supported, and is ignored.

### What Next

Rewrite the design using configuration blocks and try again.

## ELAB-492

(warning) %s Direct configuration instantiations are not supported for synthesis. They are ignored and treated as direct entity instantiations.

### Description

This warning message occurs when the design on which the *elaborate* or *read* command is invoked includes a direct configuration instantiation. These configuration instantiation statements are not supported, and are ignored; that is, they will be treated as direct entity instantiations.

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, rewrite the design using a standalone nested configuration and a component to be configured.

## ELAB-495

(error) %s Variable or function call in case-inside item is a potential simulation/synthesis mismatch.

### Description

You receive this error message in when a variable or function call is used in a case-inside item. Even if an x bit is assigned to a variable or returned by a function call, the value of the case-inside item will not match both 0 and 1, as it would for an x bit in a literal in a case-inside item. For example:

```
b = 2'b1x ;
   case (a) inside
```

Feedback

```
    b : ... // in this case, 2'b1x only matches 2'b10
  endcase
```

A full example:

```
module m( o1 , o2 );
output o1, o2 ;
reg o1, o2 ;

  function f ;
  input [1:0] R ;
  case (2'b11) inside
    R : f = 1'b0 ;
    default : f = 1'b1 ;
  endcase
  endfunction

  always begin
   o1 = f(2'b1x) ;
  end

  reg [1:0] R;
  always begin
   R = 2'b1x;
   case (2'b11) inside
     R : o2 = 1'b0 ;
     default: o2 = 1'b1 ;
   endcase
  end

endmodule
```

**What Next**

Convert the case-inside item into a literal or convert the case-inside statement into a case statement.

---

## ELAB-496

(warning) %s Case statement can not be optimized using boolean optimization, because its branch number(%d) is greater than the max number of branches. You can change the public variable hdlin_optimize_pla_max_branch setting for using boolean optimization, but runtime and QoR may be hit.

**Description**

This warning message occurs when the number of branches of a case statement is greater than the max number of branches which is set by the public variable hdlin_optimize_pla_max_branch. This makes case statement optimization not use boolean optimization.

Feedback

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended and you want to try boolean optimization, you can increase the setting value for the public variable hdlin_optimize_pla_max_branch. This may increase runtime, the worse case may hang elaboration; QoR also is impacted.

If the case statement has a lot of dont_care values, increasing the max number of branches threshold and using boolean optimization, another story may happen.

---

## ELAB-500

(warning) %s No Design Compiler license, Presto optimization: %s can not be enabled.

**Description**

Presto advanced optimizations need check Design Compiler (DC) license. If no DC license, the optimizations will not be enabled and this warning message will be generated.

**What Next**

Get DC license.

---

## ELAB-501

(error) %s defparam assignment for %s was ignored.

**Description**

Defparam assignment to task, function or block parameters are ignored for synthesis.

**What Next**

Recode the design using named parameter assignments and try again.

---

## ELAB-502

(warning) %s Label '%s' does not refer to a unique operation.

**Description**

When pragma label is added into RTL file, if the pragma label can't refer a unique operation, this warning message will happen.

**What Next**

Go to RTL source file and check whether the label is correct or not.

Feedback

## ELAB-510

(information) %s Presto preserved an unloaded net '%s'.

**Description**

You receive this information message when Presto HDL Compiler preserves a net that may not be driving any loads.

**What Next**

Check your design for possible misconfiguration of port directions or port connections and try again. You may ignore this information if the connections are part of the required design specifications.

## ELAB-600

(error) %s Pre-analyzed files for module '%s' not found.

**Description**

You receive this message because the Presto HDL compiler cannot find the pre-analyzed files for the given module during elaboration.

**What Next**

Ensure that the module to be elaborated has been analyzed with the variable hdlin_sv_ieee_assignment_patterns set to a value of 2 or higher.

## ELAB-601

(error) %s %s is not supported for %s.

**Description**

The combination of array of instances and assignment patterns on ports on a module instantiation is not supported for synthesis.

**What Next**

Please recode to remove either the array of instances, or the assignment pattern on the ports construct and try again.

## ELAB-602

(error) %s %s is not supported for %s.

Feedback

### Description

This error is issued for unsupported features in Unified Compile flow.

---

## ELAB-747

(warning) %s The body of module '%s' is being discarded, because the module name is %s.

### Description

This warning message issues when an instance of a module with a non-empty body and its name in overridden hdlin.elaborate.black_box or not in overridden hdlin.elaborate.black_box_all_excepted is encountered during elaboration. The body will be discarded, except for port declarations.

### What Next

If the body of this module should not be ignored, remove the module name from hdlin.elaborate.black_box or add it to hdlin.elaborate.black_box_all_except.

---

## ELAB-749

(Error) %s The module '%s' is %s.

### Description

This error message issues when an instance of a module with a non-empty body is encountered during elaboration and its name is in the values of both application options hdlin.elaborate.black_box and hdlin.elaborate.black_box_all_except.

### What Next

If the body of this module should be discarded during elaboration, remove the module name from hdlin.elaborate.black_box_all_except. If it shouldn't be discarded during elaboration, remove the module name from hdlin.elaborate.black_box.

---

## ELAB-781

(warning) %s Formal %s, named '%s', misconnects with %s.

### Description

This warning message issues during the specialization of a module or interface that is done to accomodate its interface ports. The interface type name or the modport name of the incoming interface instance is not compatible with the declaration of the corresponding (cited) formal port. For the purposes of Design Exploration, the formal port is being

Feedback

synthesized to match the reference cell's expectations, but is left unconnected within the present module. This is Bad Logic in that it appears to permit:

- Connecting an interface port or instance to a wire or variable port
- Connecting a wire or variable to an interface/modport port
- Connecting an interface port or instance instantiated from one template to an interface port declared with a different interface template name.
- Connecting one modport of an interface instance to a different modport (by name)

### What Next

The immediately preceding HDL-193 ("Building ...") indicates one design's reference cells which are incompatible with the cited port. Correct the ports in the module instantiation and/or the module definition so that they agree on what is being connected. Re-analyze the changed RTL and re-link the design.

### See Also

- ELAB-381

---

## ELAB-800

(error) %s The loop variable is not initialized to a constant.

### Description

You receive this error message when your loop variable is not initialized to a constant, as required by Presto synthesis. The following example results in the error message.

```
for(i = non_constant ; i< 64 ; i = i+1)
 begin
   loop_body
 end
```

### What Next

Rewrite the loop so that the loop variable is initialized to a constant. The previous example can be rewritten as follows if non_constant is positive:

```
for (j = 0; j<64; j = j+1)
 begin
   i = j + non_constant;
   if ( i < 64 )
      loop_body
 end
```

Feedback

## ELAB-801

(warning) %s BDD result may not be complete.

### Description

You receive this error message because the BDD memory limit has been reached. The BDD result may not be complete, so the QOR (Quality of Results) may be worse than expected. The default BDD memory limit is 6M.

### What Next

Use the hidden variable *hdlin_bdd_memory_limit* to increase the memory limit.

## ELAB-802

(warning) %s The port default value in entity declaration for port '%s' is not supported. Presto ignores it.

### Description

You receive this warning message because port default values in entity declaration are ignored by Presto VHDL.

In the following example, the port default values '1' and 'Z' for the ports A and Z will be ignored:

```
entity test is
  port (A: in std_logic := '1';
        EN: in std_logic;
        Z: out std_logic := 'Z'
       );
end;
```

### What Next

Verify if it implements the behavior you intended after ignoring the port default values, and modify your code if needed.

## ELAB-803

(warning) %s There is a name conflict between the instance '%s' and an existing cell. The name of the instance is being renamed to '%s'.

Feedback

### Description

This warning message occurs when you specify an instance name of a module instantiation that has already been used by another existing cell. The message may be caused by the following circumstances:

- There is a name conflict between your instance name and another instance name generated in FOR-GENERATE statement. In this case, if the original instance name in the FOR-GENERATE statement is *mod_name*, the tool may generate a series of instance names based on it in the form: *mod_name*, *mod_name_1*, *mod_name_2*, etc.
- There is a name conflict between your instance name and another instance name in your code.

### What Next

If you want the instance name to be renamed to the new name indicated in the warning message, no action is required on your part. However, if you want to keep the instance name unchanged, you can resolve the conflict by modifying the name of the conflicting instance name in your code, and then run the tool again.

---

## ELAB-804

(error) %s error found for parameters value near token '%s'.

### Description

This error message occurs when there is an error in the parameter value list given by the module or component instantiation or by the *elaborate* command.

Presto VHDL adds support for the following types:

```
integer
bit
bit_vector
std_ulogic
std_ulogic_vector
std_logic
std_logic_vector
signed
unsigned
```

Presto Verilog adds support for parameters with Verilog numbers and strings.

Presto SVerilog adds support for parameters with Verilog numbers, strings, and type parameters.

The parameter specification is a list of values separated by commas, based on parameter order (for example, "3,4,5") or parameter names (for example, "N=>8,M=>16").

Feedback

### What Next

Correct the error in the parameter value list and run the command again. See the man page for the *elaborate* command for information on the accepted parameter list syntax.

---

## ELAB-805

(error) %s The value '%s' is out of the range of the parameter that it overrides.

### Description

This error message occurs because a generic parameter in an entity instantiation has been overridden with a value that is out of the declared range of that parameter.

### What Next

Specify a value inside the declared range or modify the entity to accept a larger range. Correcting this issue is critical because in most cases, out of range values would be truncated, thus inferring non-attended logic.

---

## ELAB-810

(warning) %s The name of the register or instance '%s' will be changed to its hierarchial form name, e.g. from '%s' to '%s', in next release. Similar changes may only warn once.

### Description

You should not receive this warning by default. If you do receive this warning, it may or may not be accurate; please evaluate your RTL code accordingly. If you wish to remove this warning from your DC sessions, please contact Synopsys support.

You receive this warning because the mentioned register or instance is embadded in one or more hierarchically nested block(s), but is named with a flat name without the hierarchical path attached. The name will be changed into its hierarchical form with the hierarchial path attached in next release.

### What Next

If you are satisfied with the flat name, no further action on your part is required.

If you want to use the hierarchical naming style for register or instance in this release, you can set the *hdlin_enable_hier_naming* variable (default value is *false*) to *true*.

---

## ELAB-820

(error) %s This use of clock'event specification not supported

Feedback

### Description

This error occurs if you use more than one *if clock'event* expression in a process or if you embed the *clock'event* expression inside a subprogram or loop.

The following example shows a positive- and negative-edge trigger in the same process.

```
entity test is
  port(clock, a: in bit; z1, z2: out bit);
end;

architecture a of test is
begin
  process (clock)
  begin
    if(clock'event and clock = '1') then
      z1 <= a;
    end if;

    if(clock'event and clock = '0') then -- ERROR
      z2 <= a;
    end if;
  end process;
end;
```

### What Next

Restructure your code to have a single "if clock'event" construct at the start of the process.

The previous example can be fixed by splitting the process into two processes.

```
entity test is
  port(clock, a: in bit; z1, z2: out bit);
end;

architecture a of test is
begin
  process (clock)
  begin
    if(clock'event and clock = '1') then
      z1 <= a;
    end if;
  end process;

  process (clock)
  begin
    if(clock'event and clock = '0') then
      z2 <= a;
    end if;
  end process;
end;
```

Feedback

## ELAB-832

(warning) %s Undriven register '%s' is connected to primary output '%s'.

### Description

This warning message occurs when Presto determines that the listed register is not driven in the source code. The cause might be an issue in your design. Review your source code to ensure that this will not translate to incorrect outputs.

Normally, Presto grounds undriven registers, but the listed register will not be grounded because it is connected to a primary output.

An example of this situation happens in the following code:

```
module example(input [1:0] x, input y, output reg [1:0] z);
  always @* begin
    z[2*x]= y;
  end
endmodule
```

For z[1], Presto normally creates the register z_reg[1], but it can never be assigned because 2*x will never be 1. Therefore, z_reg[1] is an undriven register and it is not created. The output z[1] is also undriven.

### What Next

Modify your code to drive the listed register properly.

## ELAB-833

(warning) %s Register '%s' is undriven.

### Description

This warning message occurs when Presto determines that the listed register is not driven in the source code. The cause might be an issue in your design. Review your source code to ensure that this will not translate to incorrect outputs.

An example of this situation happens in the following code:

```
module example(input [1:0] x, input y, output reg z);
  reg [1:0] t;
  always @* begin
    t[2*x]= y;
    z= &t;
  end
endmodule
```

Feedback

For t[1], Presto normally creates the register t_reg[1], but it can never be assigned because 2*x will never be 1. Therefore, t_reg[1] is an undriven register and it is not created.

Note that Presto grounds automatically undriven registers that are not connected to primary outputs. In the example Presto handles t[1] as constant 0 because it is not directly connected to output z. The output z is 0.

For undriven registers connected to primary outputs, Presto issues a warning with the ELAB-832 message.

**What Next**

Modify your code to drive the listed register properly.

**See Also**

- ELAB-832

---

## ELAB-834

(error) %s The type of port '%s' is an unconstrained multidimensional array.

**Description**

This error message occurs because HDL Compiler does not support multidimensional arrays.

**What Next**

Specify the full dimensions of the array and run the command again.

---

## ELAB-840

(error) %s Invalid null range operand in expression.

**Description**

This error message occurs because one of the operands of a VHDL expression is a null range. Null range can only be legal in concat or repeat concat operations.

**What Next**

Fix your VHDL source to avoid null ranges in expressions.

---

## ELAB-900

(error) %s Loop exceeded maximum iteration limit.

Feedback

### Description

You receive this error message when your loop runs on forever, or is designed to run some number of times greater than the iteration limit. When the compiler processes loops, the loop condition must fail at some point.

### What Next

Set the *hdlin.elaborate.maximum_while_loop_iterations* variable to a higher number.

---

## ELAB-901

(error) %s Function call stack exceeded maximum depth.

### Description

This error message occurs when the depth of the function call stack exceeds the maximum depth currently supported by Presto to prevent runaway function call chains.

The most probable cause of this error is that your design has an infinite recursion.

Note that this message may be shown for recursive functions that finish in simulation, but are infinite in synthesis. One example of infinite recursion, and thus unsupported, is this design:

```
module fact (input [3:0] n, output [40:0] z);

  function [40:0] f;
  input [3:0] k;
  begin
    if (k==0)
      f = 1;
    else
      f = k * f(k-1);
  end
  endfunction

  assign z = f(n);
endmodule
```

This example will not finish in synthesis because the terminating condition depends on a port and therefore is never a proper constant.

### What Next

Check your design for an infinite recursion and then run the command again.

---

## ELAB-902

(warning) %s In the call to '%s', the '%%%c' format specifier is not supported.

Feedback

### Description

You receive this warning message when you execute the *elaborate* or the *read* command with a format specifier that is not supported. The following specifiers are supported, and the rest are ignored:

`%b, %d, %h, %c, %o, %s.`

### What Next

Reexecute the *elaborate* or *read* command with a format specifier that is supported.

---

## ELAB-903

(warning) %s Insufficient pins supplied to array of modules for instance '%s' of design '%s'.

### Description

You receive this warning message when the wires you specify for a given port do not meet the following requirements:

1) Wires must match the width of the port on the module.

2) The wires must be an integer multiple of the width of the port.

### What Next

Respecify the wires so that they meet the above requirements.

---

## ELAB-904

(error) %s When instantiating '%s' array of modules, the implementation design '%s' must be available.

### Description

You receive this error message when you execute the *elaborate* or *read* command and specify an array of modules that contain a black box.

Because of the strict nature of the port connections for instantiating an array of modules, the design to be instantiated cannot be a black box; you must provide the complete design.

### What Next

Verify that the implementation design is available. Also check to see that there is not a typo in the name of the module to be instantiated.

Feedback

## ELAB-906

(error) %s Too many parameters passed to module instance %s.

**Description**

You receive this message because the list of parameter override values exceeds the number of parameters declared in the module. This is a list of parameter override values that can be supplied when instantiating a module.

**What Next**

Ensure that the number of parameters passed to a module instance matches the number of parameters declared in the module.

## ELAB-908

(error) %s Exponentiation is only supported if the base is a power of 2 or the exponent is 2.

**Description**

You receive this error message because one of these situations exist. Either

1. The base of an exponentiation expression is variable and the exponent is not 2.

or

1. The exponent is not 2.

**What Next**

Correct the expression so that its base is constant or its exponent is not 2.

## ELAB-909

(warning) %s Case statement is not a full case.

**Description**

You receive this warning message because you used the "// synopsys full_case" directive for this case statement and you set the *hdlin_check_user_full_case* variable to *true*. However, the case statement is not a full case statement.

**What Next**

No action is necessary on your part. However, you can verify that the case statement implements the behavior you intended, try to make the case statement full, or set the *hdlin_check_user_full_case* variable to *false*.

Feedback

## ELAB-910

(warning) %s Case statement is not a parallel case.

**Description**

You receive this warning message because you used the "// synopsys parallel_case" directive for this case statement and you set the *hdlin_check_user_parallel_case* variable to *true*. However, this case statement is not parallel. A case is parallel when all of its branches are mutually exclusive.

**What Next**

Try to make the case statement parallel, or set the *hdlin_check_user_parallel_case* variable to *false*.

## ELAB-911

(error) %s Can not find return port name of type function '%s'.

**Description**

You receive this error message because this type function does not have the required return port name.

**What Next**

Define a return port name for the type function by using -- pragma *return_port_name*.

## ELAB-912

(error) %s Negative exponent.

**Description**

You receive this error message when the tool detects a negative exponent.

The exponent might be entered directly or might be the result of an expression. For example, the expression (2**(M-N)) has a negative exponent when both M and N are constant, and N is larger than M.

**What Next**

Remove the negative exponent from the expression.

## ELAB-913

(error) %s Divide by zero.

Feedback

### Description

You receive this error message when the tool detects division by a constant value, which is zero in a VHDL file.

The zero might be entered directly or it might be the result of an expression. For example, the expression (WIDTH/(M-N)) divides by zero if both M and N are equal constants.

### What Next

Remove the division by zero from the expression.

---

## ELAB-914

(error) %s Direction ('to' or 'downto') does not agree with 'first' and 'last' values in range.

### Description

You receive this error message because you specified a direction that conflicts with the position in the range.

- Use the keyword *downto* when the first value in the range is greater than the last value.
- Use the keyword *to* when the first value in the range is less than the last value.

### What Next

Rewrite your descriptions using *downto* and *to* as described above. In the following example, the direction is *downto*, because 15 is greater than 0.

```
VHDL:
   signal my_bus : bit_vector ( 15 to 0 );
```

---

## ELAB-915

(error) %s Expected value but was supplied unknown

### Description

You receive this error message because a case statement contains "unknown" instead of a value.

For example, the tool issues the message if an enumeration literal with a U encoding is supplied to a case statement.

### What Next

Change the case choice to avoid an unknown value.

Feedback

## ELAB-916

(error) %s Can not find definition for %s .

### Description

You receive this error message if the declared function, operator, or procedure cannot be found in the VHDL libraries or packages.

### What Next

Include the correct library or package.

## ELAB-917

(error) %s Type of port '%s' is unconstrained.

### Description

This error message issues when you elaborate an entity (in which the given port's data_type is unconstrained) either as a topmost design or for an instantiation that does not connect it to a constrained-type data object. This can happen when you use read_vhdl, where every entity is elaborated separately (as a topmost design) prior to linking. Some actual port connection must provide the constraining type information.

### What Next

Use analyze and elaborate instead of read_vhdl. Only elaborate entities whose ports' data_types are constrained. Add constrained bounds to this port's type declaration.

## ELAB-918

(warning) %s Physical types are not supported. Presto ignores it.

### Description

You receive this warning message because physical types are not supported by Presto VHDL. Presto ignores physical types.

### What Next

No action is required on your part. Use caution when physical types are used.

## ELAB-919

(error) %s Unsupported range type used in array declaration.

Feedback

**Description**

You receive this error message because the range type you specified in the array declaration is not supported. For example, std_logic is not supported as the range of an array.

**What Next**

Rewrite the array declaration using a supported range type.

---

## ELAB-920

(warning) %s OPS entry '%s' is already included in another resource. Entry ignored.

**Description**

You receive this warning message because during *elaborate* or *read* command activity, the compiler detected a label that appears in the ops list of more than one resource, which is invalid.

The following example shows the invalid entry:

```
synopsys resource r0 : ops = "op1 op2";    //op2 appears twice
synopsys resource r1 : ops = "op2 op3";
```

**What Next**

Correct your code so that each label appears in the ops list of only one resource.

---

## ELAB-921

(error) %s Built-in %s currently is not supported yet.

**Description**

The built-in used is not supported yet. Changes to VHDL sources may be needed.

**What Next**

Change your VHDL source file to avoid using the built-in.

---

## ELAB-922

(error) %s Constant value required.

**Description**

This error message occurs because an expression in the indicated line of your RTL description does not evaluate to a constant value, as required by the language.

Feedback

In the example below, the expression in the generate case statement is required to evaluate to a constant value at elaboration time. The use of an input port in that expression violates this requirement.

```
module m (a);
    input a;

    generate
      case (a)         // error: not constant
      ...
    endgenerate
  endmodule
```

**What Next**

Change your source file to use a constant value and run the command again.

---

## ELAB-923

(error) %s Potential glitch on net '%s': A signal/variable can't be synchronously and asynchronously assigned within the same process.

**Description**

This error is issued when the design on which the *elaborate* or *read* command is invoked is not supported for synthesis because there is a potential glitch on a net. This is caused by the order in which multiple sequential statements that assign to the same net are executed.

In the following example, the if statements are executed sequentially.

```
architecture RTL of E is
begin
  process (CLK, RST)
  begin
    if (CLK'event and CLK ='1') then
      Q <= D;
    end if;
    if (RST = '1') then
      Q <= '0';
    end if;
  end process;
end RTL;
```

In the event that the conditions on both if statements evaluate to TRUE, Q will momentarily be assigned the value of D before being assigned '0', resulting in a possible glitch.

To avoid this situation, if a D flip-flop with an asynchronous reset is desired, the rtl can be rewritten as shown.

Feedback

```
architecture RTL of E is
begin
  process (CLK, RST)
  begin
    if (RESET = '1') then
      Q <= '0';
    elsif (CLK'event and CLK ='1') then
      Q <= D;
    end if;
  end process;
end RTL;
```

**What Next**

Modify the design to avoid a potential glitch on a net and ensure that the design accurately specifies the desired functionality. Invoke the compiler again.

---

## ELAB-924

(warning) %s Signal assignment delays are not supported for synthesis. They are ignored.

**Description**

This warning is issued when a signal assignment statement in the design on which the *elaborate* or *read* command is invoked includes delay information. The delay is not supported and is ignored.

**What Next**

No modification is required. Ensure the delay that is ignored is not integral to the functionality of the design.

---

## ELAB-925

(error) %s Attribute %s is not supported for synthesis.

**Description**

This error is issued when the compiler encounters an attribute that is not supported for synthesis in the design on which the *elaborate* or *read* command is invoked.

**What Next**

Remove the attribute that is causing the error and rerun the compiler.

---

## ELAB-926

(error) %s %s types are not supported for synthesis.

Feedback

### Description

This error is issued when the compiler encounters a physical, access, or file type in the design on which the *elaborate* or *read* command is invoked. These types are not supported for synthesis.

### What Next

Avoid using unsupported types in the design.

---

## ELAB-927

(error) %s cannot find architecture %s of entity %s in library %s.

### Description

This error message occurs when the compiler is unable to find a specific entity or architecture pair in a library.

### What Next

Ensure that all entity and architecture names are specified correctly. Remove any special characters that may be problematic.

---

## ELAB-928

(error) %s An if statement containing a clock event has an illegal else branch and is not supported for synthesis.

### Description

This error occurs when a value is assigned on the "else" part of an "if clock'event".

An example of RTL that is not synthesizable because an assignment does not depend on a clock edge is shown:

```
entity test is
  port(clock, a, b: in bit; z: out bit);
end;

architecture a of test is
begin
  process (clock, a, b)
  begin
    if(clock'event and clock = '1') then
      z <= a;
    else
      z <= b; -- ERROR
    end if;
```

Feedback

```
  end process;
end;
```

The following example shows RTL that is not synthesizable because assignments occur on multiple clock edges:

```
entity test is
  port(clock, a, b: in bit; z: out bit);
end;

architecture a of test is
begin
  process (clock, a, b)
  begin
    if(clock'event and clock = '1') then
      z <= a;
    elsif(clock'event and clock = '0') then
      z <= b; -- ERROR
    end if;
  end process;
end;
```

A variable can receive both asynchronous and synchronous assignments, but the asynchronous assignment must take precedence. That is, there must be a Boolean condition that enables the asynchronous part and disables the synchronous part.

**What Next**

Use an "if" statement to ensure that either that the asynchronous or synchronous assignments fire in any execution of the process. Make sure that the condition controlling this "if" (the asynchronous reset condition) is level sensitive, not edge sensitive.

---

## ELAB-929

(error) %s Illegal use of unpacked type %s.

**Description**

This error message occurs because the RTL code uses an unpacked type in a location where unpacked types are illegal, as shown in the following example.

```
struct {int i;} ctrl;   // unpacked structure
  ...
  y = ctrl ? a:b;  // error: control expression not allowed to be of
 unpacked type
```

**What Next**

Change the unpacked type to a packed type and run the command again.

Feedback

## ELAB-930

(error) %s Incompatible types %s.

### Description

This error message occurs because the language standard requires the equivalence of two types in the indicated context, but the actual provided types are not equivalent, as shown in the example below.

```
// two non equivalent structures
  struct {int i;} a;
  struct {char c;} b;
  ...
  y = c ? a : b;  // error: types of both conditional branches must be
 equivalent
```

The precise rules for type compatibility are given in section 5.8 of the *SystemVerilog LRM*. Incompatibility can arise due to differences in vector widths, packed versus unpacked dimensions, unpacked structures that come from different declaration sites, or other inconsistencies between two data types where they are required to correspond.

### What Next

The end of the error message indicates the kind of construction that requires the type equivalence, which is usually an assignment, an aggregate construction, or a relational operator.

Identify the part of the cited line that corresponds to the indicated language feature. Determine the source of the two types that are involved. Correct the data accesses or their type declarations so that equivalent types are used and run the command again.

## ELAB-931

(warning) %s implicit truncation caused by range overflow.

### Description

This warning message occurs when a value is truncated by the CONV_SIGNED or CONV_UNSIGNED function, because the value overflows the range specified by SIZE.

### What Next

This is a warning message only. No action is required on your part. However, be aware that some information may be lost because of the truncation.

Feedback

## ELAB-932

(Error) %s %s type as range type is not supported.

**Description**

You receive this error message because the range type you specified in the array declaration or loop parameter is not supported. For example, std_logic/bit/boolean is not supported as the range of an array. or std_logic/bit/boolean is not supported as the discrete range in the loop parameter.

**What Next**

Rewrite the array declaration or loop parameter range using a supported range type.

## ELAB-933

(warning) %s REM operator is synthesized differently in this version of HDL Compiler.

**Description**

This warning message occurs when a REM operator with a potentially negative first operand is encountered.

Previous versions of HDL Compiler synthesized the REM operation as a MOD operation, resulting in a potential synthesis and simulation mismatch.

The Presto engine within HDL Compiler handles a REM operation with a negative first operand correctly and does not translate it as a MOD operation. Therefore, Presto HDL Compiler does not produce the same result as previous versions of HDL Compiler.

**What Next**

This is a warning message only. No action is required on your part.

If a REM operation is intended, be aware that the synthesis results may differ from that of older versions of HDL Compiler. However, if a MOD operation is intended, modify the source code to use a MOD operator.

To suppress further instances of this warning, add ELAB-933 to the list of error codes specified by the suppress_errors variable.

## ELAB-934

(error) %s Architecture '%s' of design '%s' cannot be found.

**Description**

This error occurs when the specified architecture for a design cannot be found.

Feedback

**What Next**

Ensure the desired architecture exists and has been specified correctly.

---

## ELAB-935

(warning) %s the direction (to or downto) does not agree with the values first and last in the range.

**Description**

This warning message occurs when you specify a direction that conflicts with the position in the range.

- Use the keyword *downto* when the first value in the range is greater than the last value.
- Use the keyword *to* when the first value in the range is less than the last value.

**What Next**

This is a warning message only. No action is required.

Ignore the warning message if the code is unreachable. However, if the code does not reflect the design you intended, make the necessary corrections and rerun the command.

---

## ELAB-936

(warning) %s Attribute %s is not supported for synthesis and will be ignored.

**Description**

This warning is issued when the compiler encounters an attribute that is not supported in the design on which the *elaborate* or *read* command is invoked.

**What Next**

No user action is required. However, be aware that the attribute will be ignored.

---

## ELAB-937

(error) %s Constant expression too complex.

**Description**

You are receiving this error message because in a context requiring a constant expression you are using an expression that is not constant or too complex to be handeled by the compiler. This can be a restriction of the language or the compiler.

Feedback

Example:

```
module (in);
  input [0:3] in;
  parameter p = 2;

  generate
    if (in[p])    // error: in[p] is not a constant expression
      ...
  end generate
```

**What Next**

Simplify the constant expression so the compiler can determine the value at compile time.

---

## ELAB-938

(error) %s An order based parameter was specified after a name based parameter for the module instance %s.

**Description**

This error happens when the argument to the elaborate command includes a combination of order-based and name-based parameter values, and all the order-based parameters are not specified before name-based parameters.

**What Next**

Modify the arguments to the elaborate command so that all order-based parameters occur before name-based parameters.

---

## ELAB-939

(error) %s The system function '%s' is not supported for synthesis.

**Description**

This error message occurs when a system function called in the design is not implemented for synthesis.

**What Next**

Remove the specified system function call in your design and reread or reanalyze it.

---

## ELAB-940

(warning) %s real types are ignored.

Feedback

**Description**

This warning message occurs when a real type is encountered in the design. Real types are not supported by the compiler and are ignored.

**What Next**

This is a warning message only. No action is required.

However, be aware the portion of the design that involves real types will not be implemented.

---

## ELAB-941

(error) %s attribute %s of prefix %s cannot be found.

**Description**

This error message occurs when the attribute specification of the named attribute in the attribute reference is nonexistent or is defined in an invalid scope.

**What Next**

Ensure that the attribute specification of the desired attribute is defined in the current scope and then rerun the command.

---

## ELAB-942

(Error) %s %s of physical types are not supported in synthesis.

**Description**

You receive this error message because physical types are not supported by Presto VHDL as procedure or function parameters, entity or block ports types, etc.

**What Next**

Remove the procedure or function parameters, or the entity or block ports that are assuming physical types and rerun the command.

---

## ELAB-943

(warning) %s Generic %s does not have a default value.

**Description**

You receive this warning message because the generic default value is not specified.

Feedback

### What Next

Set the default value for the given generic and run the command again.

---

## ELAB-944

(warning) %s Non-standard coding style used to implement a sequential element.

### Description

You receive this warning message when the design contains a non-standard coding style to describe a sequential element. Non-standard coding styles can lead to problems during simulation and may not be supported by other tools.

The following example contains a non-standard coding style to infer a sequential element with asynchronous reset. Two separate if statements are used to describe the synchronous part and the asynchronous reset. This can cause a problem during simulation.

```
entity e is
 port (d: in bit;
       q: out bit;
       clk: in bit;
       r: in bit
      );
end;

architecture a of e is
 signal t: bit;
begin

 p: process (clk) is
 begin
  if (clk'event and clk = '1') then
    t <= d;
  end if;
  if (r = '1') then
    t <= '0';
  end if;
 end process;

 q <= t;

end;
```

The next example shows a standard way to describe the sequential element:

```
entity e is
 port (d: in bit;
       q: out bit;
       clk: in bit;
```

Feedback

```
       r: in bit
      );
end;

architecture a of e is
 signal t: bit;
begin

 p: process (clk) is
 begin
  if (r = '1') then
    t <= '0';
  else if (clk'event and clk = '1') then
    t <= d;
  end if;
 end process;

 q <= t;

end;
```

**What Next**

This is only a warning message. No action is required.

If you are willing to accept potential simulation problems, you can leave the code unchanged.

If you want to avoid possible simulation problems, refer to the *HDL Compiler (Presto Verilog) Reference Manual* or *HDL Compiler (Presto VHDL) Reference Manual* for the recommended coding style.

---

## ELAB-945

(error) %s Attribute not supported with index value different from '1'.

**Description**

You receive this error because the VHDL attribute is used with an index value different from '1'. The attribute is only supported for index value '1'.

**What Next**

Rewrite your VHDL code so it doesn't use the attribute with an index value different from '1'.

---

## ELAB-946

(error) %s Assignment to %s overflows declared bounds.

Feedback

### Description

This error message occurs when a variable is assigned a value whose size is larger than the declared bounds of the variable.

### What Next

Fix the offending assignment and try again.

---

## ELAB-949

(error) %s The content '%s' cannot be selected out of interface or modport array '%s'.

### Description

This error message occurs when the dot (.) operator tries to select content across all elements of an interface or modport array. The type and data access methods of IEEE-1800 do not support this as of the 2012 edition.

In the actual port list of a down-instance, a dot like this *can specify a modport* across an entire array of interfaces, but only if the interface port identifier being modified does not *already* have a modport specified. That can come from either its formal port declaration, or from the actual interface instance connected to it.

### Examples

```
interface simple_bus;
  logic a,b,c;
  modport M(b,c);
endinterface;

module middle(i, o, sb);
  input i;
  output o;
  simple_bus.M sb[3];
  bottom B1( sb.M     // sb's modport M has already been specified.
           , sb.b );  // Discontinuous slice of array sb[0:2].b
endmodule
```

### What Next

If this is a redundant modport specification, omit it. If you are attempting to scatter/gather distributed content, generate a for loop of continuous assignments from/to a temporary variable to make the scatter/gather activity explicit.

### See Also

- ELAB-398

Feedback

## ELAB-950

(error) %s out of bounds index [%d] into scope array '%s'.

### Description

This error message occurs when the index value specified is not within the declared range of the scope array. For example:

```
generate
  genvar i;
  for (i=3; i>0; i=i-1) begin : forlbl
    always @(posedge clk) begin : alwlbl
        reg tmp;
        o[i] = tmp;
        forlbl[i+1].alwlbl.tmp = b[i] & a[i];  // Error on accessing
 forlbl[4]
    end
  end
 endgenerate
```

### What Next

Rewrite your design to change or eliminate the illegal access and run the command again.

## ELAB-951

(error) %s Indexed access to %s not allowed.

### Description

This error message occurs when an indexed access is made into a scope that does not support indexed operation.

### What Next

Rewrite your design to change or eliminate the illegal access and try again.

## ELAB-952

(error) %s The genvar '%s' has been assigned the value '%s' repeatedly.

### Description

This error message occurs when the same *genvar* variable is assigned more than one time. According to the Verilog LRM this is illegal. Only one assignment to each *genvar* variable is allowed.

Feedback

### What Next

Rewrite the Verilog RTL code so that there is only one assignment to each *genvar* variable.

---

## ELAB-953

(error) %s Array of scopes '%s' cannot be referenced without an index.

### Description

This error message occurs when your Verilog RTL code contains a hierarchical reference to an object inside a generate loop scope. The hierarchical reference must specify which iteration of the for loop it refers to. This is accomplished by subscripting the for loop scope name with the value of the *genvar* variable specific to this loop iteration, as shown in the following example:

```
module m (y);
  output [0:3] y;
  genvar i;

  generate
    for (i=0; i<4; i=i+1) begin : blk
      wire t;
    end
  endgenerate

  assign y = blk[1].t;    // subscript 'blk' with genvar value '1'
endmodule
```

### What Next

Rewrite your Verilog RTL code so that the hierarchical name uses subscripts to access specific generate loop iterations.

---

## ELAB-954

(warning) %s Nonstandard generate block outside of generate conditional or generate loop.

### Description

This warning message occurs because the Verilog standard no longer permits generate blocks that do not belong to the branches of a generate conditional or a generate loop.

Presto Verilog still handles singleton generate blocks for backward compatibility, but other tools may not.

Feedback

The following example shows a singleton generate block that causes this warning message:

```
module m ();

   begin : blk    // deprecated singleton generate block
   end

  end
```

**What Next**

This is only a warning message.

You can eliminate this warning message by using a generate block that is associated with a generate conditional or a generate loop.

---

## ELAB-955

(warning) %s State register '%s': changing state encoding from gray to binary.

**Description**

This warning message indicates that the requested FSM encoding style "gray" cannot be implemented because the number of states is not a power of 2. In this case the encoding is changed to binary.

**What Next**

This is only a warning message. The state machine will still be implemented, but with binary encoding.

---

## ELAB-956

(Warning) %s Unknown FSM encoding '%s' requested.

**Description**

You are receiving this warning message because you set the Presto option "hdlin_force_fsm_encoding" to an unknown value. The permitted values are: one_hot, binary, gray, none.

In case of an unknown value, the value 'none' is assumed.

**What Next**

Change the value of the option "hdlin_force_fsm_encoding" to one of the permitted values.

Feedback

## ELAB-957

(Error) %s Generate construct not inside generate region.

**Description**

You are receiving this error message because the Verilog standard requires that generate constructs must occur inside a generate region (generate regions are indicated by the keywords 'generate...endgenerate'). The generate construct at the indicated source location is not inside a generate region.

**What Next**

Add a generate region, by surrounding generate constructs with the keywords 'generate...endgenerate'.

## ELAB-958

(Error) %s Generate loop requires named begin block.

**Description**

You are receiving this error message because the Verilog 2001 standard requires that loop generate constructs contain a named begin block. Your RTL either does not contain a begin block or the begin block is not named. Please note that the 2005 update of the Verilog standard all

**What Next**

Add a named block to the loop generate construct.

## ELAB-959

(error) %s Illegal value assigned to a genvar variable.

**Description**

This error message occurs when any bit of of a genvar variable is set to an X or Z. Genvar values with X or Z are not supported in Synthesis.

**What Next**

Rewrite the Verilog RTL code such that genvar variables are assigned legal values and try again.

## ELAB-960

(error) %s Constant value not supported in given context.

Feedback

**Description**

This error message occurs when any bit of a constant value is an X or Z, and the context in which it is used does not allow for such values in the constant.

**What Next**

Rewrite the Verilog RTL code such that the constant value does not evalutate to bits with X or Z, and try again.

---

## ELAB-961

(error) %s Constant expression ( %s ) not supported in given context.

**Description**

This error message occurs the reported operation is not supported in evaluation context.

**What Next**

Rewrite the Verilog RTL code such that the reported operation does not happen in the given context, and try again.

---

## ELAB-968

(error) %s The width=%s of the indexed part-select is less than 1.

**Description**

You receive this message because the width of the indexed part-select is not at least 1.

**What Next**

Modify code to resolve this issue.

---

## ELAB-971

(error) %s Assignment of NULL waveforms not supported.

**Description**

You receive this error when you assign a null waveform to a signal. This is not supported by the tool.

**What Next**

Make sure you do not have any such statements in your code. Assign a proper (non-null) value to the signal.

Feedback

## ELAB-972

(error) %s Construct %s.%s not supported

**Description**

This error is seen if the package/Unit definition is not present.

**What Next**

In case of Package definition missing you must replace the code that makes use of this package by one that uses packages that have already been defined.

## ELAB-973

(error) %s Only selected types are supported for generics.

**Description**

Currently only the following types are supported for generics:

Integer, std_logic_vector, std_logic, bit, bit_vector.

**What Next**

Change the source code to remove the usage of the generics types that are not supported.

## ELAB-974

(warning) %s Netlist for always_comb block contains a latch%s.

**Description**

This warning message occurs during *read* or *elaborate* command activity to advise you that a latch is inferred for an always_comb block.

**What Next**

This is only a warning message. You can eliminate this warning message by following the instructions below.

If combinational logic is intended, you can rewrite the always_comb block.

If combinational logic is not intended, you can remove the always_comb keyword.

## ELAB-975

(warning) %s Netlist for always_latch block does not contain a latch.

Feedback

**Description**

This warning message occurs during *read* or *elaborate* command activity to advise you that the netlist for an always_latch block does not contain a latch. This may be because the always_latch block represents combinational logic or because all latches could be optimized away.

**What Next**

This is only a warning message. You can eliminate this warning message by following the instructions below.

If latched logic is intended, determine whether the body of the always_latch block represents latched logic. If it does not, then a design problem in the always_latch block has been detected. However, if the always_latch block does represent latched logic, then a coding simplification opportunity may have been detected.

If latched logic is not intended, you can replace the always_latch keyword.

---

## ELAB-976

(warning) %s Netlist for always_ff block does not contain a flip-flop.

**Description**

This warning message occurs during *read* or *elaborate* command activity to advise you that the netlist for an always_ff block does not contain a flip-flop. This may be because the always_ff block does not actually represent sequential logic or because all of the flip-flops could be optimized away.

**What Next**

This is only a warning message. You can eliminate this warning message by following the instructions below.

If sequential logic is intended, determine whether the body of the always_ff block represents sequential logic. If not, then a design problem in the always_ff block has been detected. However, if the always_ff block does represent sequential logic, then a coding simplification opportunity may have been detected.

If sequential logic is not intended, you can replace the always_latch keyword.

---

## ELAB-977

(warning) %s Netlist for always_latch block contains a flip-flop.

Feedback

**Description**

This warning message occurs during *read* or *elaborate* command activity to advise you that a flip-flop is inferred for an always_latch block.

**What Next**

This is only a warning message. You can eliminate this warning message by following the instructions below.

If latched logic is intended, you can rewrite the always_latch block.

If latched logic is not intended, you can replace the always_latch keyword. Complete your changes and run the command again.

---

## ELAB-978

(warning) %s Netlist for always_ff block contains a latch.

**Description**

This warning message occurs during *read* or *elaborate* command activity to advise you that a latch is inferred for an always_ff block.

**What Next**

This is only a warning message. You can eliminate this warning message by following the instructions below.

If sequential logic is intended, you can rewrite the always_ff block.

If sequential logic is not intended, you can replace the always_ff keyword.

---

## ELAB-979

(warning) %s Netlist for always_comb block contains a flip-flop.

**Description**

This warning message occurs during *read* or *elaborate* command activity to advise you that a flip-flop is inferred for an always_comb block.

**What Next**

This is only a warning message. You can eliminate the warning message by following the instructions below.

If combinational logic is intended, you can rewrite the always_comb block.

If combinational logic is not intended, you can remove the always_comb keyword.

Feedback

## ELAB-980

(error) %s Real type signal is not supported.

### Description

This error message occurs because the Presto HDL Compiler does not support the real type signal. Currently, only the real type constant is supported.

### What Next

Declare a real type constant instead of the real type signal, and run the command again.

## ELAB-981

(error) %s Real type variable is not supported.

### Description

This error message occurs because the Presto HDL Compiler does not support the real type variable. Currently, only the real type constant is supported.

### What Next

Declare a real type constant instead of the real type variable, and run the command again.

## ELAB-982

(warning) %s Netlist for always_comb block is empty.

### Description

This warning message occurs during *read* or *elaborate* command activity to advise you that no logic is inferred for an always_comb block, because none of the signals driven from that block are needed to compute the outputs of the module. For example:

```
module test(input  logic in,
              output logic out);
  logic tmp;
  assign out = in ;
  always_comb begin
      tmp = in;
  end
  endmodule
```

Feedback

### What Next

If combinational logic is intended, determine whether the body of the always_comb block represents combinational logic. If not, then a design problem in the always_comb block has been detected.

However, if the always_comb block does represent combinational logic, then either the signals driven by this block are not connected as intended or a coding simplification opportunity has been detected and the always_comb block can be removed.

---

## ELAB-983

(warning) %s Netlist for always_latch block is empty.

### Description

This warning message occurs during *read* or *elaborate* command activity to advise you that no logic is inferred for an always_latch block, because none of the signals driven from that block are needed to compute the outputs of the module. For example:

```
module test(input  logic clk,
            input  logic in,
            output logic out);
  logic tmp;
  always_latch begin
    if(clk)
      tmp <= in;
  end
  endmodule
```

### What Next

If latched logic is intended, determine whether the body of the always_latch block represents latched logic. If not, then a design problem in the always_latch block has been detected.

However, if the always_latch block does represent latched logic, then either the signals driven by this block are not connected as intended or a coding simplification opportunity has been detected and the always_latch block can be removed.

---

## ELAB-984

(warning) %s Netlist for always_ff block is empty.

Feedback

### Description

This warning message occurs during *read* or *elaborate* command activity to advise you that no logic is inferred for an always_ff block, because none of the signals driven from that block are needed to compute the outputs of the module. For example:

```
module test(input  logic clk,
              input  logic in,
              output logic out);
  logic tmp;
  always_ff @(posedge clk) begin
      tmp <= in;
  end
  endmodule
```

### What Next

If sequential logic is intended, determine whether the body of the always_ff block represents sequential logic. If not, then a design problem in the always_ff block has been detected.

However, if the always_ff block does represent sequential logic, then either the signals driven by this block are not connected as intended or a coding simplification opportunity has been detected and the always_ff block can be removed.

---

## ELAB-985

(warning) %s Netlist for always block is empty.

### Description

This warning message occurs during *read* or *elaborate* command activity to advise you that no logic is inferred for a SystemVerilog always block with an implicit or explicit sensitivity list, because none of the signals driven from that block are needed to compute the outputs of the module. For example:

```
module test(input  logic in,
              output logic out);
  logic tmp;
  assign out = in ;
  always @* begin
      tmp = in;
  end
  endmodule
```

### What Next

Either the signals driven by this block are not connected as intended or a coding simplification opportunity has been detected and the always block can be removed.

Feedback

## ELAB-989

(error) %s Packed union members must be of the same size.

### Description

You receive this error message because a packed union has been declared with members of different sizes. The *Language Reference Manual* (LRM) specifies that "A packed union shall contain members that must be packed structures, or packed arrays or integer data types all of the same size".

For example:

```
module test #(parameter OFFSET_BITSIZE = 16,
                parameter PAGE_BITSIZE = 16);
    union packed {
      int numeric;
      struct packed {
        bit [OFFSET_BITSIZE-1:0] offset;
        bit [PAGE_BITSIZE-1:0] page;
      } vaddress;
    } one_union;
  endmodule
```

If the module test is going to be instantiated with parameter values other than the defaults, they must add 32, in order for the bit width of the packed structure vaddress to be of the same size than the integer numeric (32).

### What Next

Modify your source file so that all union members have the same bit width.

## ELAB-990

(error) %s Expression width of .%s(<distributed port>) does not equal the number of instances here.

### Description

You receive this message because a distributed port expression, such as .p(<expr>), does not have the same number of bits as the type model declared for this structured instantiation. In the error message, portnames are given if available; "p#" positional indices are used otherwise. Note that all ports found by a ".*" request must connect via the port distribution (not the port replication) rule for structured instances.

### What Next

Modify code so that the given distributed port expression has the same number of bits as the declared type of the structure of instances. All signals that replicate (i.e. fanout) to

Feedback

all instances must connect without angle brackets (<>), or .* globbing. Replication is not usually appropriate for output direction ports, as the instances will then become multiple drivers of the replicated net.

---

## ELAB-991

(warning) %s The type of .%s(<distributed port expression>) does not match the declared <type> of this structured instance.

### Description

You receive this message because a distributed port expression, such as .p(<expr>) in a structure of instances, does not have the declared type for the structure of instances. For example, the type declared for the structure of instances might be a packed structure, while the type of the distributed port expression might be a simple bit-vector type of the same length.

### What Next

If the expression bit width of each distributed port matches the number of instances, they will be distributed anyway. However, as a precaution, you should examine the RTL code to make sure that the distributed port expression's type is actually intended to align with the instance structure in a bit-streamed order. If so, consider using an explicit cast of the port expression to clarify that this is what you intend.

---

## ELAB-992

(error) %s The lhs width=%d does not match the rhs width=%d of the assignment statement.

### Description

You receive this message because the assignment statement has a width mismatch problem.

### What Next

Modify code to resolve this issue.

---

## ELAB-993

(warning) %s Synthesis/simulation mismatch for multiplier.

### Description

You receive this error message because the multiplier is optimized assuming no result truncation. Verilog/VHDL semantics require result truncation to be taken into account. In

Feedback

most cases assuming no result truncation results result in the intended behaviour and better QOR. If the design relies on multiplier truncation, this message indicates bad logic. When you see this message, there may be a synthesis/simulation mismatch.

Strict Verilog/VHDL semantics can be forced by setting the following option:

```
set hdlin_idxopt_optimize_mul false
```

This will resolve the synthesis/simulation mismatch, but can result in QOR degradation.

**What Next**

Modify code to reolve this issue.

---

## ELAB-994

(warning) %s Found an unknown pragma '%s'; it will be ignored.

**Description**

You receive this warning message from the *elaborate* or *read* command, if there is an unknown pragma. The unknown pragma will be ignored.

**What Next**

Check the spelling of the unknown pragma and correct it if necessary; otherwise consider to remove the unknown pragma.

---

## ELAB-995

(error) %s Real to integer conversion is not supported.

**Description**

This error message occurs because the Presto HDL Compiler does not support the real to integer conversion currently.

**What Next**

Modify the code to remove the error source.

---

## ELAB-996

(error) %s WAIT statement inside FOR loop is not supported.

**Description**

This error message occurs because the Presto HDL Compiler does not support WAIT statements inside FOR loops.

Feedback

**What Next**

Modify the code to remove the error source.

---

## ELAB-997

(error) %s Multidimensional part-select is not supported.

**Description**

This error message occurs because the Presto HDL Compiler does not support part-select operators (+: and -:) with multidimensional arrays.

**What Next**

Modify the code to remove the error source.

---

## ELAB-998

(error) %s The rhs width does not match the lhs width of the logical operator statement.

**Description**

You receive this message because the logical operator statement has a width mismatch problem.

**What Next**

Modify code to resolve this issue.

---

## ELAB-999

(error) %s Width of actual parameter does not match the formal parameter '%s'.

**Description**

You received this error message because width of the actual parameter does not match the mismatch the actual parameter, given by module/component instantiation or by elaborate command.

**What Next**

Modify formal or actual parameter type to match the width.

---

## ELAB-1000

(error) %s Overflow in a conversion of a real type number: %s.

Feedback

**Description**

You receive this message because there is an overflow in a conversion of a real type number.

**What Next**

Modify code to resolve this issue.

---

## ELAB-1001

(error) %s Overflow in a real type number or calculation.

**Description**

You receive this message because there is an overflow in a real type number or calculation. The number/result is greater than REAL'HIGH = 1.0e+38 or smaller than REAL'LOW = -1.0e+38.

**What Next**

Modify code to resolve this issue.

---

## ELAB-1002

(warning) %s Real types with ranges are not supported and will be ignored.

**Description**

This warning message occurs when there is a real type with a range defined. This is not supported. A real type without ranges will be used.

**What Next**

This is a warning message only. No action is required.

However, be aware that the portion of the design that involves real types with ranges could behave differently.

---

## ELAB-1003

(error) %s The operator (%s) specified by pragma map_to_operator does not define type function and make the width big (%d) for VHDL design.

**Description**

This error message occurs when the operator that is specified by the map_to_operator pragma does not define the type function. This makes the width of the operator exceed the supported range for VHDL design.

Feedback

**What Next**

Define the type function for the operator when the map_to_operator pragma is used.

---

## ELAB-1004

(error) %s In VHDL, element width=%d does not match width=%d of the element subtype.

**Description**

You receive this message because VHDL element has a width mismatch problem. This can happen in assigment statement, array aggregate, or etc.

**What Next**

Modify code to resolve this issue.

---

## ELAB-1010

(error) %s Complex usage of multiple events statements is not supported.

**Description**

This error message occurs because the Presto HDL Compiler does not support complex multiple events in an verilog always block or a VHDL process.

**What Next**

Modify the code to have only one event per always or process.

---

## ELAB-1011

(warning) %s Comparison operator always returns '%s' when comparing values with different widths.

**Description**

This warning message occurs when the tool detects that there is a comparison with values of different width which evaluates always as unequal.

This can result in never reached statements within a comparison branch.

**What Next**

Resolve the potential problem.

Feedback

## ELAB-1012

(error) %s The width (%d %s) is too big.

**Description**

This error message occurs when the tool detects a width that exceeds the supported range.

**What Next**

Decrease the used width and run the command again.

## ELAB-1013

(error) %s PORT/GENERIC declaration in BLOCK header is not supported.

**Description**

Declaration and use of generics and ports in a block header is not supported.

**What Next**

Remove port and generic declarations from the block header and adapt the block statements if necessary.

## ELAB-1014

(warning) %s The lhs width=%s does not match the rhs width=%s of the comparison.

**Description**

This warning message occurs when the tool detects that there is a comparison with values of different widths.

**What Next**

Correct the widths so that they are the same and run the command again.

## ELAB-1015

(warning) %s Ignoring SystemVerilog checker '%s' instantiation: '%s'.

**Description**

This warning message occurs when the SystemVerilog *checker* construct and its instantiations are ignored.

Feedback

### What Next

This is only a warning message. No action is required.

---

## ELAB-1016

(error) %s Port name '%s' is not declared by this module or interface.

### Description

This error message occurs when a port name used in a module or interface instantiation or used in an *elaborate -parameter* command argument is not declared as a port by that module or interface.

In the following example, the foo module is instantiated with a named port connection. It uses the named ports a, o, and state. However, state is not in the port list definition of the foo module, so the error message occurs.

```
module E (a, out1, state);
input [2:0] a;
output [3:0] out1;
output state;
foo U1 (.a(a), .o(out1), .state(state));
endmodule

module foo(input [2:0] i, output [3:0] o, output status);
 ...
endmodule
```

### What Next

Correct the names of the ports so that they are consistent with the module definition, and then invoke the compiler again.

### See Also

- set_pin_name_synonym

---

## ELAB-1017

(information) %s Verification priority is set to '%s' for module '%s'.

### Description

This information message indicates that the named module is synthesized with verification priority.

### What Next

This is an information-only message. No action is required.

Feedback

See the *set_verification_priority* command man page for details.

## ELAB-1018

(warning) %s Out of range comparison is always %s.

**Description**

This warning message occurs when the tool detects that there is a comparison with a constant value that is out of the range of the other compared type.

This can result in never or always reached statements within a comparison branch.

**What Next**

Resolve the potential problem.

## ELAB-1019

(error) did not find pre-elaborated design : %s.

**Description**

This error message occurs when the tool detects that pre elaborated design is missing.

This can cause crash in tool.

## ELAB-1060

(error) %s Symbol '%s' results in multiple objects.

**Description**

The named symbol results in creation of objects that conficts with each other. The most likely cause of this error is importing of symbols from interfaces or classes into a module. During the import phase, homographs are created that in most cases can be automatically resolved, however in some cases such as this, automatic resolution is not possible.

**What Next**

Look for ELAB-106 warnings for the symbol in question, and rename or resolve the homographs.

**See Also**

- ELAB-106

Feedback

## ELAB-1090

(error) %s HDL Compiler has run out of memory.

**Description**

This error message occurs when HDL Compiler runs out of memory while trying to process the design. This can happen when you try to read or elaborate a design that is too large to be compiled with less than 4 GB.

**What Next**

Try reading or elaborating the design on a 64bit version of the tool.

## ELAB-1093

(error) The elaboration process reaches its limits while building the design %s.

**Description**

This error message occurs when HDL Compiler runs into a process limit when building a design module. This can happen if a design module is too large due to a large number of RTL constructs, such as always blocks and generate loops.

**What Next**

Try recoding the RTL design or break the design up into smaller modules.

## ELAB-1094

(error) %s State register '%s': has attribute FSM_COMPLETE which value is TRUE, but it defines unreachable states.

**Description**

This error message indicates that the requested FSM has attribute: FSM_COMPLETE, the attribute value is TRUE. FSM defines unreachable states.

**What Next**

First solution: FSM adds default state

Second solution: FSM defines all of the states.

Third solution: FSM remove attribute FSM_COMPLETE

Fourth solution: FSM set attribute value as FALSE.

Feedback

## ELAB-1095

(error) %s State register '%s' specifies Hamming2 encoding, its default state can't be uniquely determined, a strict RTL coding style must be enforced.

### Description

This error message indicates that When Hamming2 encoding is specified, a strict RTL coding style must be enforced for Presto to uniquely determine the default state and pass it to compile. No conditional statements are allowed in "default:" branch of case statement in Verilog or "when others" branch in VHDL, only simple assigments are allowed.

For example:

```
type state_values is (s0, s1, s2, s3, s4);
  signal state, next_state: state_values;

  when others =>
      out1 <= "000";
      next_state <= s3; // default state is s3
```

Complex "when others"/"default" case:

```
type state_values is (s0, s1, s2, s3, s4);
  signal state, next_state: state_values;

  when others =>
      if (in1)
         next_state <= s3;
          // default state can't be uniquely determined. Presto will
 issue an error
      else
         next_state <= s1;
```

### What Next

Use simple assigments when Hamming2 encoding is specified.

## ELAB-1096

(error) %s failsafe FSM pragma '%s' exists, switch hdlin_failsafe_fsm is not enabled.

### Description

You receive this error message if failsafe FSM pragma is used, the switch hdlin_failsafe_fsm is not enabled.

### What Next

Turn on the switch: hdlin_failsafe_fsm.

Feedback

## ELAB-1097

(warning) %s When switch hdlin_failsafe_fsm is enabled, no failsafe FSM pragma is used.

**Description**

You receive this warning message when switch hdlin_failsafe_fsm is enabled, no failsafe FSM pragma is used.

**What Next**

Turn off the switch: hdlin_failsafe_fsm.

## ELAB-1098

(warn) %s Pragma fsm_syn_encoding '%s' is defined multiple time, the latest value '%s' will override the previous value '%s'.

**Description**

This warning message indicates that pragma fsm_syn_encoding is defined multipe time, the latest value will override the previous value.

**What Next**

Check the RTL source codes to remove the redundant definitons.

## ELAB-1099

(warn) %s Pragma fsm_syn_encoding is obsolete, please use SSF(Synopsys Safe Format) way to implement it.

**Description**

This warning message indicates that pragma fsm_syn_encoding in the RTL file does not do anything, please use SSF way to implement it.

**What Next**

Check the RTL source codes to remove the pragma.

## ELAB-1500

(information) Running Presto elaboration using a maximum of %d cores.

Feedback

### Description

This inforamtion message occurs during *read* or *elaborate* command activity to advise you that the tool is running in multicore mode. You can specify the maximum number of CPU cores to be used with the *set_host_options* command.

### What Next

This is an information message only. No action is required.

### See Also

- set_host_options

---

## ELAB-1800

(information) Filelist %s regenerated as %s.

### Description

This inforamtion message occurs during *write_active_rtl_file_list* command when used with the option *-prune_filelist*.

### What Next

This is an information message only. No action is required.

---

## ELAB-1991

(warning) %s The concat with unpacked operand(s) is detected in instance port expression; make sure it can match the corresponding submodule port declaration in RTL.

### Description

You receive this message because a concat with unpacked operand(s) is detected in instance port expression, such as *.A({a, b[3:2], c})* in the following sample test case:

```
module top (
    input  logic a,
    input  logic b[3:2],
    input  logic c,
    output logic d
);

sub sub(.A({a, b[3:2], c}), .B(d));

endmodule

module sub(
    input  logic A[3:0],
```

Feedback

```
    output logic B
);
  ...
endmodule
```

where, the *b[3:2]* in the port expression *{a, b[3:2], c}* is an unpacked array.

**What Next**

If the bit width of the port expression matches the corresponding port declaration in the submodule, it will be connected anyway. However, as a precaution, you should examine the RTL code to make sure the connection is as expected. For example, in the corresponding port declaration, the port should also be declared as an unpacked array, instead of a packed array such as an integer or bit-vector.

---

## ELAB-2000

(error) %s Incorrect value for hdlin_infer_ram: '%s'; possible values are 'all', 'default', or 'none'.

**Description**

Allowed values for the *hdlin_infer_ram* variable are *all*, *none*, and *default*. When *all* is the value, HDL Compiler attempts to infer a RAM_OP for a 2-dimensional register. When *none* (the default value) is the value, HDL Compiler does not attempt to infer any RAM_OPs for a Verilog or VHDL design.

When *default* is the value, HDL Compiler attempts to infer a RAM_OP for a 2-dimensional register, only if the register is marked with the *infer_ram* directive,

For details, see the *HDL Compiler for Verilog Reference Manual* or the *VHDL Compiler Reference Manual*.

To determine the current value of this variable, type *list hdlin_infer_ram*. For a list of hdl variables and their current values, type *list -variables hdl*.

**What Next**

Set *hdlin_infer_ram* to one of the values *all*, *default*, or *none*.

---

## ELAB-2001

(warning) %s Ignored infer_ram pragma value '%s' on register '%s'.

**Description**

You receive this message because, during *elaborate* or *read* command activity, the compiler has detected invalid synopsys infer_ram pragma value on the memory element.

Feedback

Currently supported values are none, auto, distrubuted and no_rw_check. These values specify the implementation of memory.

For details, see the *HDL Compiler for Verilog Reference Manual* or the *VHDL Compiler Reference Manual*.

---

## ELAB-2002

(warning) %s The design '%s' has no parameters. The parameters '%s' has been ignored.

### Description

You receive this message because, during *elaborate* or *read* command activity, the compiler has detected that cell has be instantiated with the parameter. But the down design to which this cell is linked does not take any parameters.

---

## ELAB-2004

(warning) %s Signal %s has %s attribute, but is %s. A possible mismatch of attribute and behavior.

### Description

You receive this warning message because one_hot signal is used in an active low situation while one_hot attribute indicates the signal should be active high, or a one_cold signal is used in an active high situation while one_cold attribute indicates the signal should be active low.

This warning reminds the designer to keep the attribute of the signal consistent with the behavior of the signal.

### What Next

This is a only a warning and requires no action on your part.

---

## ELAB-2008

(information) %s Complex logic will not be considered for set/reset inference.

### Description

You receive this information when, during *elaborate* or *read* command activity, some possible set/reset logics have been excluded from consideration for set/reset inference, because they were estimated to be too complex, for example, because they were driven by another instance.

Feedback

If the hdlin.elaborate.infer_complex_set_reset is set to TRUE, if the control logic is complex and that drives the data pin of register to zero, the control logic gets moved to the reset line;and any control logic that drives the data pin to one, gets moved to the set line. And if hdlin.elaborate.infer_complex_set_reset is set to FALSE (default), no complex control logic gets moved to the set/reset lines and it will stay on the data line.

Usually excluding these complex possibilities leads both to better quality of result and to better runtime. Hence this message is not a warning, but only informational. Occasionally, however, the designer knows reasons why it would be good for the compiler to consider additional, more complex, possibilities. When this is so, it can be communicated to the compiler by overriding to true the default value of the hdlin.elaborate.infer_complex_set_reset variable.

---

## ELAB-2010

(error) %s Size mismatch in the assignment.

**Description**

This error message occurs when right hand side of the assignment is not the same as left hand size.

**What Next**

Fix the offending assignment and try again.

---

## ELAB-2015

(warning) %s illegal tristate driver '%s' on the wired types. may cause simulation/synthesis mismatch.

**Description**

You receive this message because Output of the tristate is used to drive more than one wired net. These nets may be driven directly by the tristate, or might be driven indirectly through another wired net.

**What Next**

Check the assignments on wired type, to fix the error

---

## ELAB-2016

(error) %s Found illegal tristate driver/drivers on the wired types.

Feedback

### Description

You receive this message because Output of the tristate is used to drive more than one wired net. These nets may be driven directly by the tristate, or might be driven indirectly through another wired net. To overide this error message set hdlin_error_illegal_driver_on_wired_type to FALSE. Overring this error might cause

### What Next

To overide this error message set hdlin_error_illegal_driver_on_wired_type to FALSE. Overring this error might cause simulation/synthesis mismatch.

---

## ELAB-2017

(warning) %s Ignoring 'infer_onehot_mux' pragma because case not marked %s.

### Description

You receive this message because the case statement marked as "infer_onehot_mux" is not marked as "full_case" or "parallel_case". Both pragmas "full_case" and "parallel_case" are required for the "infer_onehot_mux" pragma to be honored by the compiler.

### What Next

Make sure the case statement is really "full" and "parallel", then add the "full_case" and "parallel_case" pragmas to the "infer_onehot_mux" pragma.

---

## ELAB-2018

(error) %s Conflicting pragmas '%s' and '%s' cannot be applied simultaneously.

### Description

You receive this message because you applied to conflicting pragmas simultaneously. The pragmas are either conflicting or the tool does not support the application of both pragmas.

### What Next

Keep the pragma that was intended to be used and remove the conflicting other pragma.

---

## ELAB-2020

(error) %s %s.

### Description

This error message occurs when Presto VHDL detects the following semantic error when running the *analyze* command.

Feedback

**What Next**

Fix the error and reanalyze this file.

---

## ELAB-2024

(warning) %s Clock %s used as data.

**Description**

You receive this warning message because Presto HDL Compiler detected clock signals used for purposes other than clocking.

**What Next**

Modify the design to avoid using clock for purposes other than clocking.

---

## ELAB-2025

(error) %s Call to impure function '%s' is not supported.

**Description**

You receive this error message because Presto VHDL does not support calls to Impure functions.

---

## ELAB-2026

(warning) %s Impure function %s is used in your design.

**Description**

This warning message occurs because HDL Compiler detected an impure function in your design. Impure functions cause side effects that can lead to nondeterministic behavior, and can cause synthesis simulation mismatches.

**WHAT NEXT.**

This is only a warning message. No action is required.

However, to avoid this message, check your design for the given impure function.

---

## ELAB-2028

(error) %s Default value of the sized parameter '%s' has been overridden with an expression whose self-determined type is not as wide as the parameter.

Feedback

### Description

You receive this warning message when the default value of a sized parameter '%s' has been overridden with an expression whose self-determined type is not as wide as the parameter.

In synthesis the expression used in a parameter override is evaluated in a self-determined context, so in the following example, parameter P in the instantiation "bot1" is overridden with an expression that is evaluated with 1-bit width precision.

But in simulation, because the width of the sized parameter P in the module BOT is 2, the expression would be evaluated with 2-bit width precision. As in this example, the difference in precision can lead to different results between simulation and synthesis.

```
`define E 1'b1 + 1'b1
module TOP (output test_bit);
  wire [1:0] w1, w2;
  assign test_bit = (w1 == w2);
  BOT#(.P(`E)) bot1(w1);
  BOT bot2(w2);
endmodule

module BOT #(parameter [1:0] P = `E) (output [1:0] o);
  assign o = P;
endmodule
```

### What Next

Either reduce the size of the parameter or override the parameter with an expression whose self-determined type is as least as wide as the parameter.

---

## ELAB-2029

(warning) %s Default value of the sized parameter '%s' has been overridden with an expression whose self-determined type is not as wide as the parameter.

### Description

You receive this warning message when the default value of a sized parameter '%s' has been overridden with an expression whose self-determined type is not as wide as the parameter.

In synthesis the expression used in a parameter override is evaluated in a self-determined context, so in the following example, parameter P in the instantiation "bot1" is overridden with an expression that is evaluated with 1-bit width precision.

But in simulation, because the width of the sized parameter P in the module BOT is 2, the expression would be evaluated with 2-bit width precision. As in this example, the difference in precision can lead to different results between simulation and synthesis.

Feedback

```
`define E 1'b1 + 1'b1
module TOP (output test_bit);
  wire [1:0] w1, w2;
  assign test_bit = (w1 == w2);
  BOT#(.P(`E)) bot1(w1);
  BOT bot2(w2);
endmodule

module BOT #(parameter [1:0] P = `E) (output [1:0] o);
  assign o = P;
endmodule
```

### What Next

Either reduce the size of the parameter or override the parameter with an expression whose self-determined type is as least as wide as the parameter.

---

## ELAB-2030

(warning) %s DC runtime and Memory usage might increase significantly with (hdlin_mux_size_limit = %d) > 32.

### Description

Adding the infer_mux pragma in RTL and setting hdlin_mux_size_limit to a value greater than 32 will impact DC runtime and memory usage significantly.

### What Next

Make sure you really need to use hdlin_mux_size_limit > 32.

---

## ELAB-2031

(information) %s Pruning inferred sequential element for %s.

### Description

You receive this message when HDL Compiler detects that a sequential element that has alrady been inferred is not actually required for proper functioning of the design being elaborated, and the inference has not been explicitly requested by the user, so the sequential element is removed.

An RTL-level design description in Verilog or VHDL may contain variables for which a sequential cell would ordinarily be inferred (either because they are assigned under a clock edge, or because they are conditionally assigned) but whose values are never read, or whose values are not used in computing any output of the design. Because their values are not used (that is, they have no loads, or no path to the outputs), by default HDL Compiler will attempt not to infer sequential cells for these variables.

Feedback

But if it does infer them, it will then try to prune them before the end of elaborate.

In some circumstances designers wish to retain these sequential cells. Unloaded sequential cells can be inferred by two methods. First, if hdlin_preserve_sequential is "all", then a sequential cell will be inferred for any variable that is conditionally assigned or assigned under a clock, regardless of whether its value is used or not. Second, if hdlin_preserve_sequential is not set, but some variables are marked with the "preserve_sequential" pragma, only those variables will receive sequential cells even if they have no loads.

**What Next**

Examine the set of variables for which unloaded sequential cells are inferred.

If you do intend to infer some of unloaded sequential cells, try setting the the variable hdlin_preserve_sequential to "ff", "latch", or "ff+latch". Or consider using the pragma method for finer control over the inference.

Otherwise, no action is required on your part.

---

## ELAB-2032

(error) %s Generic %s does not have a default value.

**Description**

You receive this error message because the generic default value is not specified.

**What Next**

Set the default value for the given generic and run the command again.

---

## ELAB-2040

(error) %s Processes containing both positive edge and negative edge event expressions are not supported.

**Description**

This error occurs if you use both positive-edge and negative-edge triggers in multiple clock'event statements in the same process.

An example is shown below.

```
entity test is
  port(clock, a: in bit; z1, z2: out bit);
end;

architecture a of test is
begin
```

Feedback

```
  process (clock)
  begin
    if(clock'event and clock = '1') then
      z1 <= a;
    end if;

    if(clock'event and clock = '0') then -- ERROR
      z2 <= a;
    end if;
  end process;
end;
```

## ELAB-2041

(error) %s Module or interface %s was not elaborated because no default or override values were provided for parameter(s) '%s'.

### Description

This error occurs when default values for the parameters are omitted in the module definition and no overriding paramter values are specified during the module instantiation.

### What Next

Explicitly provide values for the parameters reported in the message at all instantiations of the module.

## ELAB-2050

(error) %s $fatal(%s) output: %s

### Description

User $fatal elaboration system task message. 'finish_number' can be one of 0, 1 or 2 and will be printed as $fatal(finish_number) in the message, but the tool does no further processing with finish_number. After outputting message, the tool will stop elaboration of the current module.

## ELAB-2051

(error) %s $error output: %s

### Description

User $error elaboration system task message.

Feedback

## ELAB-2052

(warning) %s $warning output: %s

**Description**

User $warning elaboration system task message.

## ELAB-2053

(info) %s $info output: %s

**Description**

User $info elaboration system task message.

## ELAB-2054

(error) Cannot explicitly elaborate '%s'; it has the same name as a DesignWare entity.

**Description**

User elaboration of Synopsys DesignWare entities is not permitted.

## ELAB-2057

(info) Loop optimization is performed.

**Description**

CDFG loop optimization is performed on some loops in the module.

## ELAB-2079

(warning) %s Default value of the parameter '%s' has been overridden with an expression that will be a simulation-synthesis mismatch if the parameter is sized to '%d' bits or more.

**Description**

You receive this warning message when the default value of a parameter has been overridden with an expression that will be a simulation-synthesis mismatch if the parameter is sized at or beyond the size reported in the message.

In synthesis the expression used in a parameter override is evaluated in a self-determined context, so in the following example, parameter P in the instantiation "bot1" is overridden with an expression that is evaluated with 1-bit width precision.

Feedback

But in simulation, because the width of the sized parameter P in the module BOT is 2, the expression would be evaluated with 2-bit width precision. As in this example, the difference in precision can lead to different results between simulation and synthesis.

```
`define E 1'b1 + 1'b1
module TOP (output test_bit);
  wire [1:0] w1, w2;
  assign test_bit = (w1 == w2);
  BOT#(.P(`E)) bot1(w1);
  BOT bot2(w2);
endmodule

module BOT #(parameter [1:0] P = `E) (output [1:0] o);
  assign o = P;
endmodule
```

### What Next

Assign the expression to a local parameter of the expected size and override the parameter with the local parameter instead.

```
`define E 1'b1 + 1'b1
module TOP (output test_bit);
  wire [1:0] w1, w2;
  assign test_bit = (w1 == w2);
  localparam [1:0] P_val = `E;
  BOT#(.P(P_val)) bot1(w1);
  BOT bot2(w2);
endmodule

module BOT #(parameter [1:0] P = `E) (output [1:0] o);
  assign o = P;
endmodule
```

---

## ELAB-2080

(error) %s Default value of the parameter '%s' has been overridden with an expression that will be a simulation-synthesis mismatch if the parameter is sized to '%d' bits or more.

### Description

You receive this error message when the default value of a parameter has been overridden with an expression that will be a simulation-synthesis mismatch if the parameter is sized at or beyond the size reported in the message.

In synthesis the expression used in a parameter override is evaluated in a self-determined context, so in the following example, parameter P in the instantiation "bot1" is overridden with an expression that is evaluated with 1-bit width precision.

Feedback

But in simulation, because the width of the sized parameter P in the module BOT is 2, the expression would be evaluated with 2-bit width precision. As in this example, the difference in precision can lead to different results between simulation and synthesis.

```
`define E 1'b1 + 1'b1
module TOP (output test_bit);
  wire [1:0] w1, w2;
  assign test_bit = (w1 == w2);
  BOT#(.P(`E)) bot1(w1);
  BOT bot2(w2);
endmodule

module BOT #(parameter [1:0] P = `E) (output [1:0] o);
  assign o = P;
endmodule
```

### What Next

Assign the expression to a local parameter of the expected size and override the parameter with the local parameter instead.

```
`define E 1'b1 + 1'b1
module TOP (output test_bit);
  wire [1:0] w1, w2;
  assign test_bit = (w1 == w2);
  localparam [1:0] P_val = `E;
  BOT#(.P(P_val)) bot1(w1);
  BOT bot2(w2);
endmodule

module BOT #(parameter [1:0] P = `E) (output [1:0] o);
  assign o = P;
endmodule
```

---

## ELAB-2081

(error) %s Module ' %s ' is found in both enable_sync_set_reset and enable_sync_set_reset_all_except. Conflicting assignment.

### Description

This error message issues when the module in the values of both application options hdlin.elaborate.enable_sync_set_reset and hdlin.elaborate.enable_sync_set_reset_all_except.

### What Next

To enable FLIP FLOP synchronous set/reset inference on the module, remove the module name from hdlin.elaborate.enable_sync_set_reset_all_except. To disable FLIP FLOP synchronous set/reset inference on the module, remove the module name from hdlin.elaborate.enable_sync_set_reset.

Feedback

## ELAB-2082

(error) enable_sync_set_reset and enable_sync_set_reset_all_except cannot be used when always_ff_sync_set_reset is set to true.

**Description**

You receive this warning enable_sync_set_reset and enable_sync_set_reset_all_except are used when always_ff_sync_set_reset is set to true.

Scenario 1: To disable FLIP FLOP synchronous set/reset inference on all module, set always_ff_sync_set_reset to FALSE.

Scenario 2: To enable FLIP FLOP synchronous set/reset inference on all module, set always_ff_sync_set_reset to TRUE.

Scenario 3: To use per module FLIP FLOP synchronous set/reset inference, set always_ff_sync_set_reset to FALSE and list the modules using enable_sync_set_reset/ enable_sync_set_reset_all_except.

**What Next**

To use module level FF SYNC SET/RESET inference, set always_ff_sync_set_reset to false and use enable_sync_set_reset/enable_sync_set_reset_all_except.

## ELAB-2083

(error) %s first argument of $pow should be or evaluate to a integer constant '2' or a real constant '2.0'.

**Description**

$pow accepts only '2' or '2.0' as base. Parameter substitution is also accepted. For example: $pow(2,3);

localparam P = 2.0 $pow(P,3);

**What Next**

Specify base as '2' or '2.0'.

## ELAB-2084

(warning) %s For svf checksum calculation , the original file %s not found

**Description**

elaborate generates svf file for formality ECO flow and as a part of that includes checksum for the RTL files. However if the RTL file is moved since it was analyzed or analyze

Feedback

happened in different directory, in some cases elaborate may not be able to find that file for checksum calculation.

# EMS

## EMS-001

(Error) No database specified to save.

**Description**

There is no database specified nor current EMS database available. No database to be saved.

**What Next**

Either use -database flag or set_current_ems_database command to specify a database to be saved.

## EMS-002

(Error) File '%s' already exists. Use -overwrite flag to force writing of messages database.

**Description**

The specified filename already exists.

**What Next**

Either to specify a new filename or use -overwrite flag to force writing of messages database.

## EMS-003

(Error) File '%s' does not exist.

**Description**

The specified filename does not exist .

**What Next**

To check or provide a valid filename.

Feedback

## EMS-004

(Error) Illegal EMS filename. Filename needs to have suffix of '.ems'.

**Description**

The specified filename does not meet EMS database naming convention.

**What Next**

Specify a new filename with suffix of '.ems'.

## EMS-005

(Error) No database specified. No current EMS DB, no database will be closed

**Description**

Neither database specified nor current EMS DB exists.

**What Next**

Specify a database collection after 'close_ems_database' or set_current_ems_database for the database to be closed.

## EMS-006

(Error) No db or command option is specified.

**Description**

When 'set_current_ems_database' no db or command option is specified.

**What Next**

Specify a database or command option .

## EMS-007

(Error) No current DB exists.

**Description**

When'set_current_ems_database -reset', but no current DB exists.

**What Next**

No action needed. No need to reset since no current DB exists.

Feedback

## EMS-008

(Error) '%s" is not current DB, cannot be reset.

**Description**

When'set_current_ems_database -reset db', db is not current DB cannot reset.

**What Next**

check and provide current DB name or remove db list. By default -reset will reset current DB.

## EMS-009

(Error) No EMS Current DB, no message will be get.

**Description**

When'get_ems_message', no current DB exists.

**What Next**

To make sure current DB exists so get_ems_message returns its message.

## EMS-010

(error) %s

**Description**

The specified error happend during command action.

**What Next**

Check the specified error before continue.

## EMS-011

(warning) %s

**Description**

The specified warning happend during command action.

**What Next**

Check the specified warning before continue.

Feedback

## EMS-012

(info) %s

**Description**

The command action returned the specified information message.

**What Next**

n/a.

## EMS-013

(info) %s successfully

**Description**

This message tell command progress, the specified step completed successfully.

**What Next**

n/a.

## EMS-014

(Error) Cannot specify '-of_objects' with '-database'.

**Description**

When'get_ems_messages' specifies '-of_objects' with '-database'.

**What Next**

To psecify with -of_objects.

## EMS-015

(Error) message parameter '%s' not found!

**Description**

When open_ems_database, the paramter stored in the database is not currently defined by the rule. To GUI display this database will encounter ambiguous result.

**What Next**

To make sure the rule currently defined is consistent with the database stored.

Feedback

## EMS-016

(Error) parameter '%s' was not found in rule '%s'.

**Description**

When open_ems_database, the parameter currently defined with the rule doesnt exist in the database. To GUI display this database will encounter ambiguous result.

**What Next**

To make sure the rule currently defined is consistent with the database stored.

## EMS-017

(Error) parameter '%s' was used, but not set in message of type '%s'.

**Description**

The parameter defined in the rule but its correspondent instance doesnt exist. This will cause derive_ems_message failed.

**What Next**

To provide needed instance for the rule when you want to generate its message.

## EMS-018

(Error) no rule name entered.

**Description**

When 'create_ems_rule' the required string object of the option -name is missing.

**What Next**

To provide the required information in order to complete the command.

## EMS-019

(Error) 'create_ems_rule' cannot create non-USER rules.

**Description**

When 'create_ems_rule' trying to create a rule which not having the prefix of 'USER', this error message will be issued. 'create_ems_rule' commands only creates 'USER-xxx' rules. 'USER' is selected and limited for end users.

Feedback

**What Next**

Please change your rule name to have prefix of 'USER' if you want to create non-Synopsys rule. All Synopsys internal rules need to be registered and defined under 'nwtn/doc/EMS'.

---

## EMS-020

(Error) no rule message entered.

**Description**

When 'create_ems_rule' no string object provided for option of '-message'.

**What Next**

To provide a string of message for the rule.

---

## EMS-021

(Error) no parameter name or type entered.

**Description**

When'create_ems_rule', either object of -parameter_name or -parameter_type was not provided. For multiple entries use curly bracket {} or double quote "". No bracket or quote needed for single entry.

**What Next**

To provide complete and consistent information for parameter name and type in order to complete the command.

---

## EMS-022

(Error) illegal 'severity' entry- need to be 'info', 'warn' or 'err'.

**Description**

When 'create_ems_rule' a 'string' object provided for -severity is an illegal entry. The severity for EMS ruless is either 'information', 'warning' or 'error'.

**What Next**

To make sure legal entry entered for -severity. The entry is case insensitive and accepts shorter wording such as 'warn', 'info' or , 'err'.

Feedback

## EMS-023

(Error) illegal 'parameter_type' entry - need to be S, I, F or D.

**Description**

When 'create_ems_rule' the 'string' object entered for -parameter_type is illegal. The entry should be either 'string' 'integer', 'float' or 'double'.

**What Next**

To make sure the information is provided correctly. The entry is case insensitive. It also accepts one alphabet entry such as : 'I', 'S', 'd', 'f'.

## EMS-024

(Error) parameter_name and parameter_type entered inconsistently.

**Description**

When 'create_ems_rule' the number of parameter_name entered inconsistently with the number of parameter_type entered, this error message will be issued.

**What Next**

Check if the name or type of any parameter is missing. Provide complete info and complete the command.

## EMS-025

(Error) rule create failed!.

**Description**

Both rule and message need to be created successfully, otherwise 'create_ems_rule' will be failed .

**What Next**

To follow error messages provided to fix failure.

## EMS-026

(Warning) rule '%s' already exists.

Feedback

**Description**

When 'create_ems_rule' trying to create a rule which already defined, this warning message will be issued. No rule will be created.

**What Next**

No need to redefine the issue, it's already exist.

---

## EMS-027

(Warning) rule '%s' already exists but defined differently.

**Description**

When 'create_ems_rule' trying to create a rule which name already exist. However it was defined differently.

**What Next**

To use different rule ID in case you want to complete rule creation. To avoid confusing, no duplication of rule name is allowed.

---

## EMS-028

(Error) rule '%s' does not exist.

**Description**

When'derive_ems_message' or 'open_ems_database' trying to generate or assemble a rule which does not currenly exist. 'derive_ems_message' or 'open_ems_database' command will fail.

**What Next**

To create a rule which is consistent with the message tried to generate/assemble.

---

## EMS-029

(Error) no instance enetered.

**Description**

When 'derive_ems_message', no instance entered. Instance entered through a nameless option, just follows after the rule name. For example derive_ems_message -rule USER-001 {pin1 12}

Feedback

**What Next**

To provide instance(s) which needed for derive_ems_message.

---

## EMS-030

(Error) instance '%s' is not a '%s' number .

**Description**

When 'derive_ems_message' a 'string' instance was mistakenly provided for an integer or float/dobule parameter.

**What Next**

To check and make sure the parameter type is consistent with the instance provided. For a 'string' parameter, if an integer or float/double instance was entered, no error message will be issued. Still users need to check the consistency between parameter type and its correspondent instance provided.

---

## EMS-031

(Warning) '-name' option needs to be used with '-current' option .

**Description**

When 'create_ems_database' if users specify database name by using 'name' option need to use '-current' otpion. The intention is to make this specified database as users current one and ready for writing message to it.

**What Next**

To add '-current' to continue.

---

## EMS-032

(Error) file '%s" already exists. It cannot be created.

**Description**

When 'create_ems_database' if users specify a database name which already a file exists, create_ems_database will return with this Error message.

**What Next**

To specify a different name or delete the file with the same name under working directory to continue.

Feedback

## EMS-033

(Error) Filename "%s" is invalid.

**Description**

Only alpha-numeric([a-z] [A-Z] [0-9]) and underscore("_") characters are allowed. Character "." is allowed only as part of file-extension ".ems".

**What Next**

Specify a different name for the file which meets the above specified constraints.

## EMS-034

(Warning) Overwriting the already existing file "%s".

**Description**

If a file by the same name already exists, it will be overwritten.

**What Next**

If above is not the intended behavior, then provide a different filename.

## EMS-035

(Error) "%s" is not a valid check name.

**Description**

Check provided is not a pre-defined check or an user-defined check.

**What Next**

Run the command "get_design_checks" to obtain the collection of all valid check names.

## EMS-036

(Warning) No current EMS database present.

**Description**

There is no EMS database which is "current" or active.

**What Next**

Use one of the commands "open_ems_database", "set_current_ems_database" or "create_ems_database" to make an EMS database "current".

Feedback

## EMS-037

(Warning) No current EMS database present, ignoring "-merge" option.

### Description

There is no EMS database which is "current" or active. Hence cannot merge the newly opened EMS database with current EMS database.

### What Next

If needed, firstly, use one of the commands "open_ems_database", "set_current_ems_database" or "create_ems_database" to make an EMS database "current". Then open the EMS database which needs merging from the current EMS database.

## EMS-038

(Warning) Skipping merge since current EMS database and EMS database opened are same.

### Description

The current EMS database and the EMS database opened are same. So its redundant to merge them. Hence the merge operation is skipped and the only the EMS database is opened.

### What Next

Set the current EMS database to the right EMS database which you want to merge with opened database.

## EMS-039

(Error) More than one EMS database name is provided.

### Description

"-name" option of report_ems_database command expects only one EMS database name. If more than one EMS database is provided then it is invalid.

### What Next

Provide only one EMS database name. Make sure there are no whitespaces in the EMS database name provided.

Feedback

## EMS-040

(Warning) EMS database "%s" already exists, over-writing it.

**Description**

The command executed creates an EMS database even if one exists by the same name(over-writes the existing EMS database).

**What Next**

Use "-ems_database" to provide a new EMS database name if you do not want to overwrite the existing EMS database.

## EMS-100

(Error) Name of EMS rule provided is empty.

**Description**

EMS rule name should be a non-empty string. The provided name does not contain any characters or only comprises of whitespace characters.

**What Next**

Provide a valid EMS rule name.

## EMS-101

(Error) Name of EMS rule %s, does not obey regular expression [A-Z]+[-][0-9]+

**Description**

EMS rule name provided is invalid. It should contain only upper-case alphabets follwed by a hyphen character and then followed by numerals.

**What Next**

Provide a valid EMS rule name.

## EMS-102

(Error) An EMS rule by name %s, already exists.

**Description**

An EMS rule already exists by the given name and hence cannot create the rule.

Feedback

**What Next**

Provide a different name for the EMS rule to be created.

---

## EMS-103

(Error) Severity of EMS rule provided is empty.

**Description**

The severity provided for EMS rule should be non-empty and should be one of valid severity strings.

**What Next**

Provide a valid severity string.

---

## EMS-104

(Error) Severity of EMS rule provided is invalid.

**Description**

The severity provided for EMS rule should be one of valid severity strings.

**What Next**

Provide a valid severity string.

---

## EMS-105

(Error) Message-template of EMS rule provided is empty.

**Description**

The message-template for EMS rule should be a non-empty string. It may or may not contain EMS parameters.

**What Next**

Provide a valid message-template string.

---

## EMS-106

(Error) Unescaped but stray percent(%) character is found.

Feedback

**Description**

Percent character is used to indicate the start of EMS parameter or can be a literal. If a literal then it needs to be escaped with one more percent character. But in this case it does not fall into any of these categories.

**What Next**

Correct the message-template either by providing a parameter name after percent character or by escaping the percent character.

---

## EMS-107

(Error) Invalid parameter name; it can contain only alphanumeric or underscore characters.

**Description**

EMS parameter name can contain only alphanumeric and underscore characters. string "tcl" is a reserved word and it also cannot be used as a parameter name.

**What Next**

Provide a valid parameter name

---

## EMS-108

(Error) "tcl" is a reserved word; it cannot be a parameter name.

**Description**

EMS parameter name can contain only alphanumeric and underscore characters. But string "tcl" is a reserved word and it cannot be used as a parameter name.

**What Next**

Provide a valid parameter name

---

## EMS-109

(Error) Nested tcl{} is not allowed.

**Description**

One cannot specify construct tcl{} inside a tcl{} construct. Nesting is not allowed.

Feedback

**What Next**

Remove the nested tcl{} construct and try saving results of tcl commands into variables and then using them in message-template.

---

## EMS-110

(Error) Failed to parse parameter in message-template of EMS rule.

**Description**

EMS has failed to parse the parameter in the message-template. The reason could be invalid parameter name or corrupt message -template string.

**What Next**

Try to remove parameters one at a time from message-template to identify the culprit parameter.

---

## EMS-111

(Error) Construct tcl{} does not contain any tcl commands inside its curly-braces.

**Description**

Construct tcl{} has empty content or contains only whitespace characters, which is invalid.

**What Next**

Provide a tcl command inside the tcl{} construct

---

## EMS-112

(Warning) There are EMS parameters with undefined type; assuming string type for them.

**Description**

By default EMS parameter names are assigned string type.

**What Next**

If you do not want the parameter to have string type, use edit_ems_rule command to re-define the type of parameter.

---

## EMS-113

(Error) Value for parameters option is empty.

Feedback

**Description**

Empty string provided for option parameters.

**What Next**

Do not use parameters option if you do not have any parameters or provide a valid definition of parameter properties

---

## EMS-114

(Error) Properties for one or more EMS parameters are not specified.

**Description**

Properties for EMS parameters are not defined.

**What Next**

Provide definition for properties of EMS parameters

---

## EMS-115

(Error) One or more parameter properties are not specified, using format name:value.

**Description**

Properties for EMS parameters are not defined using correct format.

**What Next**

Provide definition for properties of EMS parameters using correct syntax.

---

## EMS-116

(Error) Invalid value %s, provided for type-property of parameter.

**Description**

Value provided for type-property of parameter is not valid. It should be one of int, float, double or string.

**What Next**

Provide a valid value for type-property of parameter.

---

## EMS-117

(Error) Invalid parameter property %s.

Feedback

**Description**

The property name provided for EMS parameter is not valid.

**What Next**

Provide a valid value for type-property of parameter which is either name or command or type.

---

## EMS-118

(Error) Name-property of EMS parameter is missing which is mandatory.

**Description**

Name property of EMS parameter is mandatory. It is needed to associate the property definitions with the right parameter.

**What Next**

Provide the name-property along with other property definitions for EMS parameter

---

## EMS-119

(Warning) Parameter %s is not used in message-template; ignoring it.

**Description**

Parameter properties are defined but it is not used in the message template of EMS rule.

**What Next**

Check if the parameter is missed from message-template by oversight.

---

## EMS-120

(Error) Failed to create user-defined rule %s.

**Description**

EMS could not create the user-defined rule.

**What Next**

Verify whether the parameter names are correct.

---

## EMS-121

(Error) Built-in rule %s cannot be edited.

Feedback

**Description**

Only user-defined rules, which have not been frozen, can be edited.

**What Next**

Create a user-defined rule to meet the requirements.

---

## EMS-122

(Error) EMS rule %s which already has an associated EMS message, cannot be edited.

**Description**

Only user-defined rules, which have not been frozen, can be edited.

**What Next**

Create a new user-defined rule to meet the requirements.

---

## EMS-123

(Error) Rule by name %s does not exist; so cannot edit it.

**Description**

Only user-defined rules which are already created can be edited.

**What Next**

Create the user-defined rule first and then edit it, if needed.

---

## EMS-124

(Error) Options -pattern and -all are mutually exclusive.

**Description**

Only one of options -pattern and -all can be used at a time.

**What Next**

Use either option -pattern or -all.

---

## EMS-125

(Error) Failed to report user-defined rules.

Feedback

**Description**

Reporting of user-defined rules failed.

---

## EMS-126

(Error) Failed to get parameters for rule %s.

**Description**

While reporting the user-defined rule/s, parameter information could not be retrieved.

---

## EMS-127

(Error) Failed to get parameter %s for rule %s.

**Description**

While reporting the user-defined rule/s, parameter information could not be retrieved.

---

## EMS-128

(Error) Filename provided is empty.

**Description**

Filename provided is empty.

---

## EMS-129

(Error) Failed to open file %s.

**Description**

Failed to open the given file.

---

## EMS-130

(Error) Failed to write user-defined rules.

**Description**

Failed to write user-defined rules.

Feedback

## EMS-131

(Error) Rule %s is either invalid or disabled.

**Description**

Rule is either invalid or disabled.

## EMS-132

(Error) Failed to create EMS message.

**Description**

Failed to create EMS message.

## EMS-133

(Error) Option parameters does not contain valid information.

**Description**

Option parameters does not contain valid information.

## EMS-134

(Error) Parameter option should be provided with parameter_name:parameter_value pairs.

**Description**

Parameter name and value for the parameters should be provided.

## EMS-135

(Error) Failed to add parameter %s to EMS message of rule %s.

**Description**

Parameter value information could not be added to EMS message.

## EMS-136

(Error) Rule by name %s does not exist.

**Description**

Given rule name does not exist.

Feedback

## EMS-137

(Error) Failed to create EMS message for built-in rule.

**Description**

Only messages for user-defined rules can be created using command create_ems_message.

## EMS-138

(Error) Expecting %s type for parameter %s.

**Description**

There is a mismatch in type of parameter provided during EMS rule creation/edit and during EMS message creation.

## EMS-139

(Error) Failed to edit rule %s.

**Description**

Rule provided could not be edited.

## EMS-140

(Error) Setting 'severity' attribute for user-defined EMS rule which is frozen, is not allowed.

**Description**

If EMS rule is defined by user using 'create_ems_rule' command then such rule becomes user-defined rule. If an EMS message is instantiated/created for this rule then that EMS rule is considered 'frozen'. 'severity' attribute can be set for user-defined rules which are not frozen. Valid values for 'severity' attribute are "error", "warn", "warning", "info" and "information". These values can be in upper-case or lower-case or a mix of both.

## EMS-141

(Error) Setting 'severity' attribute for built-in EMS rule is not allowed.

**Description**

If EMS rule is defined by the tool then such rule is considered built-in EMS rule. For such EMS rules, setting 'severity' attribute is not allowed.

Feedback

## EMS-142

(Warning) Failed to remove EMS rules.

**Description**

If an EMS rule cannot be removed the there can be multiple reasons. The EMS rule could be built-in or EMS is not enabled or the given EMS rule does not exist.

## EMS-143

(Error) Failed to report EMS rules.

**Description**

If an EMS rule cannot be reported then the EMS rule might be disabled or it might not exist.

## EMS-144

(Warning) Failed to remove EMS rule %s since it has EMS messages instantiated.

**Description**

The EMS rule could not be removed since there are EMS messages already created for the EMS rule. Removal of such EMS rules will make associated EMS messages invalid and might lead to poblems reading the EMS databases containing such messages.

## EMS-145

(Warning) Using -force option to remove EMS rules which might have EMS messages instantiated.

**Description**

If -force option is used then EMS rules which have EMS messages are removed. This might result in failure to open EMS databases on disk which have the EMS messages corresponding to removed EMS rules. It is recommended to avoid using -force option.

## EMS-146

(Warning) EMS rule by name %s already exists; Ignoring the new definition.

Feedback

**Description**

While opening the EMS database if an EMS rule definition is encountered which has the same name as already existing one in memory then the newly encountered EMS rule is ignored. Any messages instantiated for this ignored rule present in the EMS database will also be ignored.

---

## EMS-147

(Error) Failed to open EMS database %s

**Description**

EMS database could not be opened since it is corrupted or has outdated or invalid data.

---

## EMS-148

(Error) Since '%s' is a built-in check name, it cannot be used to define a new check.

**Description**

A built-in check by same name as provided already exists. It cannot be re-used. Please use a different check name to define a new check.

---

## EMS-149

(Warning) Option '-reset' is made obsolete and it will be ignored.

**Description**

Since user is not allowed to reuse built-in check names while creating new checks, the -reset option loses its meaning and hence has become defunct. Currently this option is ignored. Please change your scripts to remove this option.

---

## EMS-150

(Warning) EMS rule by name %s already exists; Ignoring the new definition.

**Description**

While opening the EMS database if an EMS rule definition is encountered which has the same name as already existing one in memory then the newly encountered EMS rule is ignored. Any messages instantiated for this ignored rule present in the EMS database will also be ignored.

Feedback

# EMX

## EMX-0001

(info) Early Mux Extraction engine extracted '%lu' SelectOps in module '%s'.

### Description

This message signifies how many SelectOps were extracted in a given module in a design by the Early Mux Extraction engine. This engine looks at mux structures represented with AND/OR gates in the netlist and builds SelectOps from those structures. The 'report_mux_stats' command gives additional information about the number of such extracted SelectOps in the whole design.

# EOPT

## EOPT-001

(Error) Please use M-2017.06-SP3-1 and beyond PrimeTime executable.

### Description

This message indicates that you are using an old version PrimeTime.

### What Next

User needs to specify a new version PrimeTime.

### See Also

- set_pt_options

## EOPT-002

(Error) PrimeTime executable does not exist or file specified is not an executable: %s.

### Description

This message indicates that you specify a bad PrimeTime exectuable.

### What Next

User needs to specify the right PrimeTime executable.

Feedback

**See Also**

- set_pt_options

---

## EOPT-003

(Error) pre link script %s does not exist

**Description**

This message indicates that you give a bad pre link script file.

**What Next**

User needs to specify a good pre link script file.

**See Also**

- set_pt_options

---

## EOPT-004

(Error) post link script %s does not exist

**Description**

This message indicates that you give a bad post link script file.

**What Next**

User needs to specify a good post link script file.

**See Also**

- set_pt_options

---

## EOPT-005

(Error) no write permission on working directory.

**Description**

This message indicates that you give a working directory that you have no permission.

**What Next**

User needs to specify a working directory with write permission.

Feedback

**See Also**

- set_pt_options

---

## EOPT-006

(Error) Invalid optimization type: %s.

**Description**

This message indicates that you give a bad fixing type in eco_opt.

**What Next**

User needs to specify the available ECO fixing types.

**See Also**

- eco_opt

---

## EOPT-007

(Error) eco_script file %s does not exist

**Description**

This message indicates that you give a user file that does not exist.

**What Next**

User needs to specify an valid file name.

**See Also**

- eco_opt

---

## EOPT-008

(Error) : Please use set_starrc_options command to set config file in order to run StarRC in ECO fusion. For other PrimeTime based analysis without StarRC, please set app_option extract.starrc_mode to false.

**Description**

This message indicates that you need to run a command to set up StarRC settings.

**What Next**

User needs to set up the StarRC config file.

Feedback

**See Also**

- set_starrc_options
- eco_opt
- check_pt_qor

---

## EOPT-009

(Error) : The -punch_port option works only for the max_transition, DRC and noise fixing type.

**Description**

This message indicates that you used -punch_port option for fixing types other than max_transition, DRC and noise.

**What Next**

User needs to use this option along with max_transition DRC or noise fixing.

**See Also**

- set_starrc_options
- eco_opt
- check_pt_qor

---

## EOPT-010

(Error) : '%s' is not a valid option for the '%s' type.

**Description**

This message indicates that you run check_pt_qor -type with invalid option(s).

**What Next**

User needs to use the right options to run check_pt_qor.

**See Also**

- set_starrc_options
- eco_opt
- check_pt_qor

Feedback

## EOPT-011

(Error) : '%d' errors encountered.

### Description

This message indicates that errors are encountered during changelist implentation.

### What Next

User can examine the changelist output txt file for more details.

### See Also

- eco_opt
- check_pt_qor

## EOPT-012

(warning) : The following hold buffers have been automatically selected for hold-fixing: '%s' .

### Description

Tool has identified the list of buffers used for hold_fixing in addition to what is defined with set_lib_cell_purpose.

### What Next

User can override the tool generated list with eco_opt -hold_fix_buffers.

### See Also

- eco_opt

# EPL

## EPL-001

(Error) Cell %s (%d) is not placed!

### Description

This error only happens when the non eco cell connected to eco cell is not placed.

Feedback

**See Also**

- check_legality

---

## EPL-002

(Warning) There is no ECO cell to be placed.

**Description**

There is no ECO cell to be placed. Maybe all input cells are unsupported cell if -cells is used.

---

## EPL-003

(Warning) %d Cells are not supported and have been skipped silently!

**Description**

This warning means there are %d unsupported cells in input cell list or unplaced cells. And they have been filtered out silently.

In general, user do not count the following cells as ECO cells. hierarchical cell, fixed cell, macro cell, filler cell, io_pad cell, spare cell, physical only cell, cell without signal nets connection. (The cells only connect to tie nets are more like spare cells.)

**See Also**

- get_attribute

---

## EPL-004

(Warning) The connection of net (%s) is ignored for exceeding the fanout limit (%d).

**Description**

This warning means the net connection is ignored since its fanout exceeds the maximum fanout.

**What Next**

The default fanout limit is 100. You can use -max_fanout to specify the fanout limit as you need.

Feedback

## EPL-005

(Info) The current maximum fanout to ignore high fanout net connection of ECO cells is %d.

### Description

This message shows the current maximum fanout value.

### What Next

The default fanout limit is 100. You can use -max_fanout to specify the fanout limit as you need.

## EPL-006

(Warning) %d Cells have no connectivity and have been ignored silently!

### Description

This warning means %d cells in input cell list or unplaced cells have no connectivity or its all connections are ignored due to the option -max_fanout or -ignore_pin_connection. They have been filtered out silently and will not be placed.

## EPL-007

(Error) The reference pin name %s is invalid!

### Description

This error only happens when the reference pin name is invalid.

### What Next

Please specify the valid reference pin name for -ignore_pin_connection.

### See Also

- get_pins

## EPL-008

(error) Design has no site rows.

### Description

There are no site rows defined for the design. Site rows are required for this command.

Feedback

**What Next**

Define the site rows.

---

## EPL-009

(error) Cells in relative placement groups are not provided together.

**Description**

This message occurs when the cells in the relative placement groups are not provided together for legalization. The relative placement group need to be moved as a whole unit and cells in the group should not be legalized individually.

**What Next**

Please provide all cells of the relative placement groups for legalization. If you really want to legalize individual cells only, then please remove the relative placement group.

---

## EPL-010

(error) Skip to legalize cells in relative placement group %s.

**Description**

This message occurs when the cells in the relative placement group are not provided together for legalization. The relative placement group need to be moved as a whole unit and cells in the group should not be legalized individually.

**What Next**

Please provide all cells of the relative placement group for legalization. If you really want to legalize individual cells only, then please remove the relative placement group.

---

## EPL-011

(error) The ECO cell (%s) is a filler cell of the specified reference by option -remove_filler_references.

**Description**

This message occurs when any eco cell is a filler cell of the specified reference by option -remove_filler_references. It may lead to unexpected result (i.e. crash) since the eco cell may be removed when legalization since the reference is specified by option -remove_filler_references.

Feedback

**What Next**

Please remove the eco cell from input or remove the reference in option -remove_filler_references.

---

## EPL-020

(Error) There is unplaced eco cell in the given list when the option -legalize_only is used with -cells.

**Description**

When the option -legalize_only is used with -cells, it expects all the eco cells have been already placed. The option allows only doing legalization.

**What Next**

Use place_eco_cells -unplace to place the eco cells.

**See Also**

- get_attribute

---

## EPL-021

(warning) Skip to legalize the cell (%s) since it is not placed.

**Description**

When the option -legalize_only is used with -eco_changed_cells, the command will skip the cells that is not placed (attribute is_placed == false). The command should not legalize the unplaced cells.

**What Next**

Use place_eco_cells -unplaced(-cells) to place and legalize the cell.

**See Also**

- get_attribute

---

## EPL-022

(Warning) There is no ECO cell to be legalized.

**Description**

There is no ECO cell to be legalized.

Feedback

### What Next

Please check the given cells. Maybe all input cells are unsupported cell.

---

## EPL-023

(Error) Cannot find user specified net weight.

### Description

When the option -user_specified_net_weight is used, the tool expects user already set net weight for individual net before place_eco_cells.

### What Next

Please use the command set_place_eco_cells_net_weight to set net weight for individual net as user-defined net weight priority.

### See Also

- set_eco_placement_net_weight

---

## EPL-024

(Warning) %d Cells are not supported for legalization and have been skipped silently!

### Description

This warning means there are %d unsupported cells in input cell list for legalization. And they have been skipped silently.

In general, we do not support the following cells to do eco legalization. hierarchical cell, fixed cell, macro cell, pad cell.

### See Also

- get_attribute
- legalize_placement

---

## EPL-025

(Warning) Cell %s is not in top level design and has been skipped silently!

### Description

This warning means the given cell is in sub block and has been skipped silently. The command only works for cells in top level design.

Feedback

### EPL-026

(Error) Cannot find user specified net weight data in memory.

**Description**

This message occurs when there is no user specified net weight data in memory.

**What Next**

Please use the command set_place_eco_cells_net_weight to set net weight for individual net as user-defined net weight priority.

**See Also**

- set_eco_placement_net_weight

## ERRDM

### ERRDM-001

(error) Failed to open error data which is not for the current design.

**Description**

An attempt was made to open an error data which is not associated with the current design.

**What Next**

Select an error data file which is associated with the current design.

### ERRDM-002

(error) Failed to open error data which does not exist.

**Description**

An attempt was made to open an error data file which does not exist.

**What Next**

Select an existing error data file which is associated with the current design.

### ERRDM-003

(error) Could not create the error data file.

Feedback

**Description**

The error data file could not be created.

**What Next**

Check for inadequate write permissions on the disk or a possible collision with existing filenames.

---

## ERRDM-004

(error) Invalid file format.

**Description**

An invalid file format was specified for the error data file.

**What Next**

Provide a valid file format.

---

## ERRDM-005

(error) Corrupt error data.

**Description**

A syntax error was encountered while reading a corrupt error data file.

---

## ERRDM-006

(error) The error data has unsaved changes.

**Description**

An attempt was made to close an error data file which has unsaved changes.

**What Next**

Use the -force option to force closure without saving changes, discarding any pending changes. For exported error data files, you may also use the -save option to first save the unsaved changes. For standard error data attached to a design block, first save the block with save_block, then close the error data.

---

## ERRDM-007

(error) The error data %s is open.

Feedback

**Description**

An attempt was made to remove an error data file which has not been closed.

**What Next**

Close the error data before removing it.

---

## ERRDM-008

(error) An error type with the given name already exists.

**Description**

An attempt was made to create an error type with an existing name. Error type names must be unique.

**What Next**

Specify a unique name for the new error type.

---

## ERRDM-009

(error) The error class was missing or was invalid.

**Description**

An attempt was made to create an error type without specifying a valid error class.

**What Next**

Specify a valid error class.

---

## ERRDM-010

(error) Invalid error type.

**Description**

An attempt was made to create an error for an invalid error type.

**What Next**

Specify a valid error type.

---

## ERRDM-011

(error) Invalid error specification.

Feedback

**Description**

An attempt was made to create an error with invalid parameters.

**What Next**

Specify a valid parameters.

---

## ERRDM-012

(error) An error data file with the given name already exists.

**Description**

An attempt was made to create an error data file with an existing name. Error file names must be unique.

**What Next**

Specify a unique name for the new error data file.

---

## ERRDM-013

(error) The given error data file is read-only.

**Description**

An attempt was made to edit an error data file which was open in read-only mode.

**What Next**

Open the error data file in read-write mode.

---

## ERRDM-014

(error) For a top level 3DIC design, you cannot create drc errors with layers.

**Description**

create_drc_error command cannot be used to specify layers for a top level 3DIC design.

---

## ERRDM-032

(error) For a top level 3DIC design, you cannot create drc errors with layers.

**Description**

create_drc_error_shapes command cannot be used to specify layers for a top level 3DIC design.

Feedback

## ERRDM-033

(error) At least one of options '-polygons', '-polylines', '-points' or '-endpoints' for create_drc_error_shapes should be specified.

**Description**

create_drc_error_shapes command requires at least one of options: '-polygons', '-polylines', '-points' or '-endpoints' to be specified.

## ERRDM-034

(warning) There must be two coordinates given for each endpoint shape.

**Description**

There must be two coordinates given for each endpoint shape.

## ERRDM-035

(error) ERRDM_LOCK_FAIL_ACTION `%s' not one of: `off', `complain', or `die'. Turning off.

**Description**

This is an internal error. Please report to Synopsys.

**What Next**

Internal error, please report to Synopsys.

## ERRDM-036

(info) lock check failed!.

**Description**

This is an internal message. Please report to Synopsys.

**What Next**

Internal message, please report to Synopsys.

## ERRDM-037

(error) %s cannot be saved independent of the associated block.

Feedback

**Description**

Error data that are attached to a block cannot be saved independent of saving the block.

**What Next**

To save changes to the given error data, call save_block to save the block. Alternatively, you may export the error data to a file using the command write_drc_error_data.

---

## ERRDM-038

(warning) option '-readonly' and '-readwrite' will be ignored when opening error data which is attached with current block.

**Description**

option '-readonly' and '-readwrite' will be ignored when opening error data which is attached with current block.

---

## ERRDM-039

(error) Use '-endpoints' option with two point coordinates to specify two endpoints for an open error.

**Description**

Open error accepts only '-endpoints' option with two point coordinates to describe open error shape.

---

## ERRDM-040

(error) Saving to the given version %s is not supported. %s

**Description**

Provide a version string in the supported range.

---

## ERRDM-041

(error) The drc error data schema version string %s is invalid.

**Description**

Provide a properly formed version string, <major version number>.<minor version number>, "1.6", for example.

Feedback

## ERRDM-042

(error) The design schema version string %s is invalid.

**Description**

Provide a properly formed version string, <major version number>.<minor version number>, "1.090", for example.

## ERRDM-043

(error) The error data %s is closed.

**Description**

An attempt was made to edit or access data of an error data file which has not been opened.

**What Next**

Open the error data before editing or accessing its types and violations.

**See Also**

- open_drc_error_data

## ERRDM-044

(error) Unopened error data %s cannot be saved.

**Description**

An attempt was made to save an error data file which has not been opened.

**What Next**

Check the error data file input to make sure you specified the correct one.

**See Also**

- open_drc_error_data

## ERRDM-045

(information) Incrementing open_count of error data '%s'.

Feedback

### Description

open_drc_error_data was called for an already opened error data. A reference count was added to the error data. Use close_drc_error_data to decrement the reference count. When the reference count drops to zero, the error data will be closed.

### See Also

- close_drc_error_data

# EX

## EX-78

(Warning) Two Overlapping rectangles with different cap_levels and same picture levels Layer %s overlaps with %s Suggested Fix in Transistor Level: Use Boolean Not in runset to remove the overlap r1=%s r2=%s

### Description

Detected short between two rectagles with the same picture level and different capcap_level. This may cause accuracy issues.

### What Next

Use boolean operation NOT in runset to remove the overlap.

## EX-80

(Information) Can not find via model matching with the via: (%d %d), (%d %d) on level %d. Via coverage checking is not performed on the via.

### Description

Missing via model information.

### What Next

Check via coverage model in the runset.

## EX-81

(Information) Via coverage code is not found for model index %d via: (%d %d), (%d %d) on level %d

Feedback

**Description**

Via coverage code is not present in the model for given via.

**What Next**

Check via coverage model.

---

## EX-82

(Warning) Probe text id %d at (%.4f %.4f) is not on any shapes on layer %s, ignored.

**Description**

Probe text is not on any shapes on that layer, ignored.

**What Next**

Adjust probe coordinates.

---

## EX-83

(Warning) Text not touching any polygons %d

**Description**

Text doesn't touch any polygon.

**What Next**

Adjust text coordinates.

---

## EX-85

(Warning) The user defined subckt in %s will be skipped because its corresponding cell %s is not available in HN.

**Description**

StarRC will not merge subckt model of cell into final netlist as the cell is not used.

**What Next**

Check if the cell name used in 2D_BUMP_SUBCKT_FILE is correct.

---

## EX-86

(Warning) Instance "%s" port number is not 1.

Feedback

**Description**

Instance of BUMP cell has more than 1 port. The final netlist will have problem after StarRC replacing the instance with its subckt.

**What Next**

Check if the BUMP cell has correct port definition in input data.

---

## EX-87

(Warning) Cannot found bump Port of instance: %s

**Description**

StarRC failed to find port of the BUMP instance for subckt replacement.

**What Next**

Contact the Synopsys Support Center.

---

## EX-94

(Fatal) INTERNAL Error: Detected negative resistance: %g between nodes %ld and %ld in net %d.

**Description**

An unexpected result in an internal sanity check.

**What Next**

Contact the Synopsys Support Center.

---

## EX-96

(Fatal) Reluctance matrix is too large to invert; suggest to use NETLIST_INDUCTANCE: NO

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## EX-97

(Warning) Extrapolation on RPSQ_VS_WIDTH_AND_SPACING is used, result might be inaccurate.

**Description**

StarRC invoked extrapolation functionality when RPSQ_VS_WIDTH_AND_SPACING table look up is out of bound and EXTRAPOLATE_YES is set.

**What Next**

Contact the Synopsys Support Center.

## EX-98

(Warning) Extrapolation on RPSQ_VS_WIDTH_AND_SPACING is enabled, but only one value in the table, boundary value is used. result might be inaccurate.

**Description**

StarRC invoked extrapolation functionality when RPSQ_VS_WIDTH_AND_SPACING table look up is out of bound and EXTRAPOLATE_YES is set.

**What Next**

Contact the Synopsys Support Center.

## EX-113

(Warning) there are still %d opens not reported for net %s!

**Description**

There are opens not report for some nets.

**What Next**

Double check opens.sum file to make sure the opens are as expected or rerun StarRC. Contact the Synopsys Support Center if the error message persists.

## EX-114

(Fatal) Incompatible command provided: 3D_IC and an undocumented option

Feedback

**Description**

Two incompatible StarRC commands have been provided. One of them is 3D_IC, the other is an undocumented command.

**What Next**

Check that your StarRC comand file does not contain any undocummented commands that is not really needed. Contact the Synopsys Support Center if the error message persists.

---

## EX-115

(Warning) The maximum number of regions for calculating effective density must be less than 6. Skipping extra regions.

**Description**

The DENSITY_BOX_WEIGHTING_FACTOR command in the nxtgrd file contains more than 5 density box entries. In this case, StarRC extraction only considers the first five entries for computing density.

**What Next**

Update the DENSITY_BOX_WEIGHTING_FACTOR commands in the nxtgrd file so that the number of density box entries is 5 or less.

---

## EX-116

(Warning) The requested size of the region for effective density calculation is too large: %g um. Setting it to the maximum limit of: %g um.

**Description**

The DENSITY_BOX_WEIGHTING_FACTOR command in the nxtgrd file contains a density box size larger than 500 microns. In this case, StarRC extraction will limit the density box size to a maximum of 500 microns.

**What Next**

Update the DENSITY_BOX_WEIGHTING_FACTOR commands in the nxtgrd file so that the density box size is 500 microns or less.

---

## EX-117

(Warning) The requested size of the region for effective density calculation is too small: %g um. Setting it to the minimum limit of: %g um

Feedback

**Description**

The DENSITY_BOX_WEIGHTING_FACTOR command in the nxtgrd file contains a density box size smaller than 6 microns. In this case, StarRC extraction will limit the density box size to a minimum of 6 microns.

**What Next**

Update the DENSITY_BOX_WEIGHTING_FACTOR commands in the nxtgrd file so that the density box size is 6 microns or more.

---

## EX-126

(Fatal) Secondary corner process variation tables are not consistent with primary corner.

**Description**

Multi-corner nxtgrd files are not compatible with each other.

**What Next**

Please make sure that nxtgrd files from foundry are all valid and original.

---

## EX-127

(Fatal) Inconsistent thickness variation tables detected. All corner ITFs must have same resistive and capactive thickness variation tables specified for a given metal layer,

**Description**

Different types of resistive or capacitive thickness variation tables are found in multi-corner nxtgrd files. These tables can have different values but should all have the same type.

**What Next**

Please check with foundry and make sure that the multi-corner nxtgrd files are valid and original.

---

## EX-128

(Fatal) corrupt grd file, SPLNCV information incomplete

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## EX-129

(Fatal) corrupt grd file, SPLNCV information incomplete

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## EX-130

(Fatal) corrupt grd file, PLLAYERMAP information incomplete

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## EX-131

(Fatal) Nxtgrd file inconsistency, technology information incomplete

**Description**

Temperature coefficients from nxtgrd file are not valid.

**What Next**

Please check with foundry and make sure that the nxtgrd file is valid and original.

## EX-132

(Fatal) xTractor found an inconsistency in reading the data from the TCAD_GRD_FILE. Please use the correct xTractor version compatible with the provided TCAD_GRD_FILE.

**Description**

The nxtgrd file is not compatible for the current StarRC.

**What Next**

Please check with foundry and make sure that the nxtgrd file is valid and original.

Feedback

## EX-133

(Warning) IGNORE_GATE_CHANNEL_CAPACITANCE forced to %s to ensure consistency with NXTGRD

**Description**

IGNORE_GATE_CHANNEL_CAPACITANCE is reset to be compatible with the nxtgrd file.

**What Next**

Please check with foundry and make sure that the nxtgrd file is valid and original.

## EX-135

(Information) Reading binary grd file %s ...

**Description**

Reading binary nxtgrd file.

**What Next**

Please refer to StarRC manual.

## EX-136

(Information) Reading ascii grd file %s ...

**Description**

Reading ascii nxtgrd file.

**What Next**

Please refer to StarRC manual.

## EX-138

(Fatal) Unknown sensitivity type %s in GRD file

**Description**

Sensitivity type must be one of the following: T, THICKNESS, W, WIDTH, RPV, RHO, ER. Other sensitivity types are not supported.

Feedback

**What Next**

Please make sure that the nxtgrd files are all valid, original and consistent. Please refer to StarRC manual on SENSITIVITY and VARIATION_PARAMETER.

---

## EX-139

(Fatal) temperature_sensitivity:yes is not supported for different global temperatures for different layers %f %f

**Description**

Temperature sensitivity is not supported for a technology with multiple global temperatures on different layers.

**What Next**

Please make sure that the nxtgrd file is valid and original. Please make sure that StarRC commands are compatible with the nxtgrd file. Please refer to StarRC manual on TEMPERATURE_SENSITIVITY.

---

## EX-141

(Warning) No global temperature is found in grd, will use default temperature 25 degrees

**Description**

Default global temperature 25 Celsius degrees is used since there is no defined global temperature in nxtgrd file.

**What Next**

Please refer to StarRC manual on GLOBAL_TEMPERATURE.

---

## EX-143

(Fatal) nxtgrd file is corrupted

**Description**

The nxtgrd file may be corrupted.

**What Next**

Please make sure that the nxtgrd file is valid and original. Please make sure that you have enough disk space.

Feedback

## EX-144

(Fatal) inconsistent layer information in nxtgrd file

**Description**

The nxtgrd file may be corrupted with inconsistent layer information.

**What Next**

Please make sure that the nxtgrd file is valid and original. Please make sure that you have enough disk space.

## EX-150

(Fatal) Inconsistent bottom thickness information

**Description**

The nxtgrd file may be corrupted with inconsistent bottom thickness variation information.

**What Next**

Please make sure that the nxtgrd file is valid and original. Please make sure that you have enough disk space.

## EX-153

(Warning) Version mismatch between extractor engine and .nxtgrd (tcad) file for THICKNESS_VS_DENSITY effect. Skipping this effect, you have to re-run the process characterization step using the new format for the THICKNESS_VS_DENSITY command with a newer grdgenxo. The re-characterization process is extremely fast since new tables are processed only.

**Description**

The version of the nxtgrd file is too old. Process effects defined in THICKNESS_VS_DENSITY statements are ignored.

**What Next**

Please make sure that the nxtgrd file is valid, original and up-to-date. Please refer to StarRC manual on THICKNESS_VS_DENSITY.

## EX-154

(Warning) ETCH_VS_WIDTH_AND_SPACING is incorrect, please check your grd file

Feedback

**Description**

The nxtgrd file may be corrupted with inconsistent ETCH_VS_WIDTH_AND_SPACING statements.

**What Next**

Please make sure that the nxtgrd file is valid and original. Please refer to StarRC manual on ETCH_VS_WIDTH_AND_SPACING.

---

## EX-155

(Warning) ETCH_VS_WIDTH_AND_SPACING does not work with resistance only extraction

**Description**

ETCH_VS_WIDTH_AND_SPACING statements in the nxtgrd file are not compatible with resistance only extraction.

**What Next**

Please refer to StarRC manual on EXTRACTION and ETCH_VS_WIDTH_AND_SPACING.

---

## EX-156

(Warning) in grd file, CEVWSE line is incorrect, please check your grd file

**Description**

The nxtgrd file may be corrupted with inconsistent CAPACITIVE_ONLY ETCH_VS_WIDTH_AND_SPACING statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

---

## EX-157

(Warning) ETCH_VS_CONTACT_AND_GATE_SPACINGS in ITF is empty or incorrect. please check your grd file

**Description**

The nxtgrd file may be corrupted with inconsistent ETCH_VS_CONTACT_AND_GATE_SPACING statements.

Feedback

**What Next**

Please make sure that the nxtgrd file is valid and original.

---

## EX-158

(Warning) ETCH_VS_WIDTH_AND_LENGTH table in ITF is empty or incorrect. please check your grd file

**Description**

The nxtgrd file may be corrupted with inconsistent ETCH_VS_WIDTH_AND_LENGTH statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

---

## EX-159

(Warning) GATE_TO_DIFFUSION_CAP table in ITF is empty or incorrect, please check your grd file

**Description**

The nxtgrd file may be corrupted with inconsistent GATE_TO_DIFFUSION_CAP statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

---

## EX-161

(Warning) RAISED_DIFFUSION_TO_GATE_SMIN_TABLE is corrupted, please check your ITF or grd file

**Description**

The nxtgrd file may be corrupted with inconsistent RAISED_DIFFUSION_TO_GATE_SMIN_TABLE statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

Feedback

## EX-162

(Warning) Width and spacing dependent thickness feature does not work with resistance only extraction

**Description**

Process effects such as width and/or spacing dependent thickness variations are not supported in resistance only extraction.

**What Next**

Please refer to StarRC manual on EXTRACTION and all ITF statements associated with thickness variations.

## EX-163

(Warning) Cannot define THICKNESS_VS_WIDTH_AND_SPACING together with command option use_polygon_thickness, ignore the THICKNESS_VS_WIDTH_AND_SPACING.

**Description**

When polygon thickness data are defined together with THICKNESS_VS_WIDTH_AND_SPACING statements for the same layer, the former takes precedence and the latter is ignored.

**What Next**

Please make sure that the polygon thickness data are indeed the preferred thickness variation process effects.

## EX-164

(Warning) density dependent thickness feature does not work with resistance only extraction

**Description**

Process effects such as density based thickness variations are not supported for resistance only extraction.

**What Next**

Please refer to StarRC manual on EXTRACTION and all density based thickness variation statements in the ITF file.

Feedback

## EX-165

(Fatal) corrupt grd file, via temperature derating information incomplete

**Description**

The nxtgrd file is corrupted with inconsistent via temperature derating data.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-166

(Fatal) corrupt grd file, via capactive only etch information incomplete

**Description**

The nxtgrd file may be corrupted with inconsistent via capacitive only etch statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-167

(Fatal) corrupt grd file, %s line is inconsistent with VIA_FRT line.

**Description**

The nxtgrd file may be corrupted with inconsistent via resistance data.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-176

(Fatal) corrupt grd file, CVASKIP line is inconsistent with VIA_FRT line.

**Description**

The nxtgrd file may be corrupted with inconsistent CRT statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

Feedback

## EX-179

(Fatal) SEARCH_DISTANCE line is corrupted, please check grd file.

**Description**

The nxtgrd file may be corrupted with inconsistent layer based search distance.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-180

(Fatal) SEARCH_DISTANCE for CONDUCTOR %s in grd file must be positive.

**Description**

The nxtgrd file may be corrupted because there are negative search distance specified in ITF file.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-181

(Fatal) SEARCH_DISTANCE for CONDUCTOR %s in grd file is too large. It must be no greater than 10um and no greater than 25 * (WMIN + SMIN).

**Description**

The nxtgrd file may be corrupted because the search distance in ITF file may be too large.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-183

(Warning) Operating frequency smaller than minimum frequency in TCAD file.

**Description**

The operating frequency specified in StarRC command file is smaller than the minimum frequency from the nxtgrd file.

Feedback

**What Next**

Please consider changing the operating frequency according to the range specified in the nxtgrd file.

---

## EX-184

(Warning) Operating frequency larger than maximum frequency in TCAD file.

**Description**

The operating frequency specified in StarRC command file is larger than the minimum frequency from the nxtgrd file.

**What Next**

Please consider changing the operating frequency according to the range specified in the nxtgrd file.

---

## EX-185

(Fatal) Invalid operating frequency for reluctance or it is not specified!

**Description**

Operating frequency for reluctance extraction is either empty or invalid.

**What Next**

Please specify a valid operating frequency for reluctance extraction. Please refer to StarRC manual on reluctance extraction.

---

## EX-186

(Warning) The grd file doesn't contain SCT models, but (MULTIGATE_MODELS: yes) or (DEVICE_MODEL_LEVEL: 2).

**Description**

The nxtgrd file contains FinFET or other multigate features but no SCT models.

**What Next**

Please contact foundry for an up-to-date nxtgrd file.

---

## EX-187

(Warning) Port %s is changed to upper-case.

Feedback

**Description**

The ports in SPICE_SUBCKT_FILE are defined in lower case while CALIBRE_LAYOUT_CASE_SENSITIVE is set to NO, changing the port names to upper-case in case of wrong connection.

**What Next**

No action is needed.

---

## EX-188

(Warning) Failed to evaluate schematic property %s in instance %s, %s.

**Description**

StarRC trys to copy schematic properties to OA view when OA_PROP_ANNOTATION_VIEW is set. This warning means the property is using pPar/iPar expression, and StarRC cannot evaluate it. The reason could be: 1. the property defined with pPar/iPar cannot be found in the design. 2. there is incorrect mathematical expression in the property expression.

**What Next**

Check if the schematic property is correctly defined.

---

## EX-199

(Fatal) TCAD_GRD_FILE is not compatible with the xTractor

**Description**

The TCAD_GRD_FILE is incompatible with this version of the xTractor.

**What Next**

Regenerate TCAD_GRD_FILE with a compatible version of grdgenxo.

---

## EX-201

(Fatal) INTERNAL Error: unknown layer has been referenced: %s

**Description**

The layer is not found in internal data base.

**What Next**

Contact the Synopsys Support Center.

Feedback

## EX-202

(Warning) INTERNAL Warning: unknown layer has been referenced: %s

**Description**

The layer is not found in internal data base.

**What Next**

Contact the Synopsys Support Center.

## EX-204

(Warning) INTERNAL Warning: via top_height (%g) < bottom_height (%g) on db layer (%s)

**Description**

An unexpected result in an internal sanity check.

**What Next**

Contact the Synopsys Support Center.

## EX-205

(Info) INTERNAL Info: via layer %s has multiple via cap clone levels %d and %d mapped to same pic level %d, removed extra via cap clone level

**Description**

An information is issued in an internal sanity check.

**What Next**

Contact the Synopsys Support Center.

## EX-207

(Fatal) INTERNAL Error: Two layers with different picture levels have been connected in the layer_info file. first layer: %s second layer: %s

**Description**

An internal connectivity check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## EX-208

(Fatal) INTERNAL Error: via layer %s for via_to has to be within [%d, %zd]

**Description**

An internal connectivity check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-209

(Fatal) INTERNAL Error: via layer %s for via_from has to be within [%d, %zd]

**Description**

An internal connectivity check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-210

(Fatal) INTERNAL Error: via_from and via_to are set to the same layer %s for via layer %s

**Description**

An internal connectivity check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-211

(Fatal) INTERNAL Error: via layer %s for both via_from and via_to layers are vias. This is not allowed.

**Description**

An internal connectivity check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## EX-212

(Fatal) INTERNAL Error: via_to %s and via_from %s for via layer %s are conneected together. This is not allowed.

**Description**

An internal connectivity check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-214

(Fatal) INTERNAL Error: inconsistancy in layer_info file for layer: %s. The following three fields should all_or_none be set VIA_FROM , VIA_TO , VIA_CONDUCTIVITY_PER_MICRONS2

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-215

(Warning) INTERNAL Warning: Conductivity is unset for layer %s; set it to 1.0

**Description**

An unexpected result in an internal sanity check.

**What Next**

Contact the Synopsys Support Center.

---

## EX-216

(Warning) INTERNAL Warning: Conductivity is unset for via layer %s. Also cann't find any other layer connected to the via layer, set conductivity to 1.0.

Feedback

**Description**

An unexpected result in an internal conductivity check.

**What Next**

Contact the Synopsys Support Center.

---

## EX-219

(Fatal)INTERNAL_Error: invalid layer in grd_layer_info: %s

**Description**

Invalid layer during parsing an internal file "grd_layer_info".

**What Next**

Contact the Synopsys Support Center.

---

## EX-221

(Fatal) Can not find resistor between %ld and %ld for net %d in corner %d! make sure REDUCTION is set to TOPOLOGICAL.

**Description**

A resistance cannot be found. This may be caused by setting inproper REDUCTION value in the command.

**What Next**

Set REDUCTION to TOPOLOGICAL and rerun. Contact the Synopsys Support Center if the error message persists.

---

## EX-222

(Fatal) can not find node %ld or %ld for net %d in corner %d! make sure REDUCTION is set to TOPOLOGICAL.

**Description**

A resistance cannot be found. This might be caused by setting inproper REDUCTION value in the command.

**What Next**

Set REDUCTION to TOPOLOGICAL and rerun. Contact the Synopsys Support Center if the error message persists.

Feedback

## EX-224

(Information) **** MAIN CIRCUIT STATISTICS ****

**Description**

Not available

**What Next**

Nothing is required at your side at the moment.

## EX-225

(Information) **** POWER CIRCUIT STATISTICS ****

**Description**

Not available.

**What Next**

Nothing is required at your side at the moment.

## EX-226

(Fatal) Desired number of corners of %u exceeds maximum number of allowed corners (%u).

**Description**

You receive this message because the total corners which are seleceted to netlist out exceed maximum number of allowed corners.

**What Next**

Reduce selected corners to make sure they don't exceed the maximum number of allowed corners.

## EX-227

(Fatal) failed to attach via_coverage file.

**Description**

via_coverage file cannot be attached.

Feedback

### What Next

Check if via_coverage file exists and rerun. Contact the Synopsys Support Center if the error message persists.

---

## EX-230

(Warning) device model linking enabled in xTractor but not in grdgenxo

### Description

Many device models have been generated in grdgenxo for equivalent layouts. SCT models for equivalent layouts may have slightly different caps due to field solver statistical noise. Device model linking is now applied in xTractor so only one of the equivalent model group will be loaded. That may cause a small version-to-version change in xTractor capacitances, corresponding to SCT field solver stattistical noise.

### What Next

You can avoid this information message by generating nxtgrd with -link_device_models grdgenxo option. This option will speed up nxtgrd generation by avoiding to simulate equivalent layouts. If using Quickcap for SCT generation, the LINKED_TO statements in ITF must be consitent with the QTF.

---

## EX-231

(Severe) No aspect ratio defined on layer '%s' to DISABLE_ASPECT_RATIO

### Description

DISABLE_ASPECT_RATIO is used to disable the ART difined on an ITF layer. Please check the ART for LINE_END_EXTENSION_TABLE is correctly defined in TCAD_GRD_FILE.

### What Next

You can check option DISABLE_ASPECT_RATIO to avoid this information.

---

## EX-256

(Warning) Line continuation is not supported in SPEF

### Description

In SPEF, each line presents a item, such as, a coupling capacitance, a resistance, a pin, etc ... and multiple items cannot be written in the same line.

Feedback

**What Next**

Nothing is required at your side at the moment.

---

## EX-257

(Warning) Line continuation is not supported in SPEF

**Description**

In SPEF, each line presents a item, such as, a coupling capacitance, a resistance, a pin, etc ... and multiple items cannot be written in the same line.

**What Next**

Nothing is required at your side at the moment.

---

## EX-261

(Fatal) A dynamic linking error occured: %s

**Description**

One of the dynamic libraries required cannot be found or linked.

**What Next**

Check your StarRC installation and that your environment is set properly.

---

## EX-262

(Fatal) Invalid netlist output. OA is only supported on linux and amd64 platforms.

**Description**

The OA flow is not supported on the current architecture.

**What Next**

Try rerunning on a supported architecture.

---

## EX-263

(Fatal) PRL output is supported only for SUN5, SUN64 and IA32

**Description**

PRL output is not supported in the current architecture

Feedback

**What Next**

Try rerunning on a supported architecture.

---

## EX-266

(Warning) Extraction was done %s only. Netlisting is requested resistance only. Please verify.

**Description**

Extraction and netlisting were done with different modes, for instance, extraction was done with capacitance-only while netlisting was done with resistance-only.

**What Next**

Nothing is requied at your side at the moment.

---

## EX-267

(Warning) Extraction was done %s only. Netlisting is requested capacitance only. Please verify.

**Description**

Extraction and netlisting were done with different modes, for instance, extraction was done with resistance-only while netlisting was done with capacitance-only.

**What Next**

Nothing is requied at your side at the moment.

---

## EX-269

(Warning) Only one corner is selected, NETLIST_SMC_FORMULAR is not needed

**Description**

NETLIST_SMC_FORMULAR is helpful when multiple corners are selected and it is not neccessary to be specified when one corner is selected.

**What Next**

Nothing is required at your side at the moment.

---

## EX-270

(Fatal) Could not find %s in LD_LIBRARY_PATH.

Feedback

**Description**

One of the dynamic libraries required cannot be found.

**What Next**

Check your StarRC installation and that your environment is set properly.

---

## EX-272

(Warning) NETLIST_POWER_MEM_OPT will be ignored because the number of nets (%ld) exceeds the limit (%d).

**Description**

When the number of nets exceeds a limit, NELIST_POWER_MEM_OPT is ignored.

**What Next**

Nothing is required at your side at the moment.

---

## EX-275

(Fatal) multi-corner netlist is only supported for NETLIST_FORMAT: STAR, NETNAME, SPF, SPEF.

**Description**

multi-corner netlist is only supported for netlist formats including STAR, NETNAME, SPF, SPEF.

**What Next**

Try with a format that supports Multi-Corner Netlisting. Contact the Synopsys Support Center if the error message persists.

---

## EX-277

(Fatal) Could not load symbols from OA.

**Description**

The OA library could not be found or it is corrupted.

**What Next**

Check your StarRC installation and that your environment is set properly. Contact the Synopsys Support Center if the error message persists.

Feedback

## EX-278

(Fatal) Please specify input xout using -i option

**Description**

Input for netlisting could not be found.

**What Next**

Try running StarRC again. Contact the Synopsys Support Center if the error message persists.

## EX-279

(Fatal) Please specify output xout using -o option

**Description**

Output of netlisting could not be found

**What Next**

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

## EX-281

(Fatal) NETLIST_TOTALCAP_THRESHOLD cannot be less than 0.

**Description**

NETLIST_TOTALCAP_THRESHOLD cannot be set to a negative value.

**What Next**

Set NETLIST_TOTALCAP_THRESHOLD to a positive value and rerun. Contact the Synopsys Support Center if the error message persists.

## EX-293

(Fatal) INTERNAL Error: Unable to parse line %d of coupling report file %s.

**Description**

An intermediate file generated by StarRC is corrupted.

Feedback

**What Next**

A corrupt file may be produced for a variety of reasons such as the disk being full or more than one job running concurrently in the same run directory. Try running StarRC one more time.

Contact the Synopsys Support Center if the error message persists.

---

## EX-296

(Fatal) I/O error while writing to file %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## EX-304

(Information) Parsing option_file: %s

**Description**

xTractor has started parsing its option file.

**What Next**

This message is for informational purposes only. No further action is needed.

---

## EX-306

(Fatal) INTERNAL Error: num_same_text_id for text id:%d has been previously assigned as %d but is being reset to %d

**Description**

An unexpected result in an internal sanity check during circuit node creation.

**What Next**

Contact the Synopsys Support Center.

---

## EX-314

(Fatal) Data inconsistency, please rerun StarRC

Feedback

### Description

An intermediate file produced by StarRC is corrupted which caused data inconsistency. A corrupt file may be produced for a variety of reasons such as the disk being full, or more than one job running concurrently in the same run directory, or running a newer version of StarRC on data produced by an older version.

### What Next

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

---

## EX-315

(Fatal) Invalid option MODE:%d

### Description

Setting mode or license is not valid. This may be caused by the license being invalid.

### What Next

Make sure the license is valid. Contact the Synopsys Support Center if the error message persists.

---

## EX-318

(Fatal) File %s can't be opened.

### Description

An intermediate file produced by StarRC is corrupted. A corrupt file may be produced for a variety of reasons such as the disk being full, or more than one job running concurrently in the same run directory, or running a newer version of StarRC on data produced by an older version.

### What Next

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

---

## EX-320

(Fatal) INTERNAL Error: intermediate file %s is corrupted.

Feedback

**Description**

An intermediate file produced by StarRC is corrupted. A corrupt file may be produced for a variety of reasons such as the disk being full, or more than one job running concurrently in the same run directory, or running a newer version of StarRC on data produced by an older version.

**What Next**

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

---

## EX-321

(Fatal) Internal error: netId %d is greater than the total number of nets %d

**Description**

An intermediate file produced by StarRC is corrupted. A corrupt file may be produced for a variety of reasons such as the disk being full, or more than one job running concurrently in the same run directory, or running a newer version of StarRC on data produced by an older version.

**What Next**

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

---

## EX-324

(Fatal) No reluctance data in tcad_file or tcad_file corrupted!

**Description**

TCAD_GRD_FILE does not contain reluctance data.

**What Next**

TCAD_GRD_FILE must be regenerated using ITF containing reluctance data. Contact the Synopsys Support Center for instructions on obtaining a compatible grd file.

---

## EX-325

(Fatal) Unknown reluctance model

**Description**

Unknown reluctance model is found in TCAD_GRD_FILE.

Feedback

**What Next**

Regenerate TCAD_GRD_FILE with a compatible version of grdgenxo. Contact the Synopsys Support Center for further information.

---

## EX-326

(Fatal) negative Self-K in model %d\t possible TCAD_GRD_FILE file mismatch

**Description**

Self-K values are required by xTractor to be non-negative. TCAD_GRD_FILE file may be incompatible with this version of the xTractor.

**What Next**

Contact the Synopsys Support Center to get more information on generating a compatible TCAD_GRD_FILE.

---

## EX-327

(Information) Invalid RV via array id %d is accessed for net %s

**Description**

Invalid RV via array id is accessed for the given net.

**What Next**

No action is required on your side.

---

## EX-329

(Fatal) XOUT_K_AUXILIARY file corrupted!

**Description**

An intermediate file produced by StarRC is corrupted. A corrupt file may be produced for a variety of reasons such as the disk being full, or more than one job running concurrently in the same run directory, or running a newer version of StarRC on data produced by an older version.

**What Next**

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

Feedback

## EX-334

(Fatal) Can not have NETLIST_PRINT_CC_TWICE: YES for NETLIST_FORMAT: SPF

**Description**

SPF prints coupling capacitance in either victim net or aggressive net depending on their order in the netlist file. Setting NETLIST_PRINT_CC_TWICE: YES with NETLIST_FORMAT: SPF, thus, is not allowed.

**What Next**

Try to remove NETLIST_PRINT_CC_TWICE: YES and rerun. Contact the Synopsys Support Center if the error message still persists.

## EX-338

(Fatal) Inconsistent corner information provided ...

**Description**

The number of valid nxtgrd files provided is not identical to the number of process corners specified in the StarRC command file.

**What Next**

Please check the validity and consistency of your statements in StarRC command file. Please also make sure that nxtgrd files from foundry are all valid and original.

## EX-339

(Fatal) Temperature statements in nxtgrd File are inconsistent.

**Description**

Statements related to TEMPERATURE_DERATION in the nxtgrd file are not consistent.

**What Next**

Please make sure that nxtgrd files from foundry are all valid and original.

## EX-340

(Fatal) CRT statements in nxtgrd file are inconsistent.

**Description**

CRT statements and temperature statements in nxtgrd file are not consistent. .

Feedback

**What Next**

Please make sure that nxtgrd files from foundry are all valid and original.

---

## EX-341

(Warning) The thickness variation defined in the technology file is ignored. The polygon thickness variation defined in the THICKNESS_VARIATION_FILE is used instead.

**Description**

When polygon thickness variation data defined in THICKNESS_VARIATION_FILE exist together with the thickness variation data from ITF file, the former takes precedence.

**What Next**

Please make sure that using polygon thickness variation data from THICKNESS_VARIATION_FILE is indeed intended.

---

## EX-343

(Fatal) ild thickness variations defined but pbtv data and thickness_vs_density_and_width are missing in level %d

**Description**

Nxtgrd file is corrupt because it contains ILD thickness variation data but no PBTV data or thickness_vs_density_and_width data.

**What Next**

Please make sure that nxtgrd files from foundry are all valid and original.

---

## EX-348

(Fatal) Cap level greater than max cap level.

**Description**

New ITF file pointed by RES_UPDATE_FILE may contain more conductor layers than the nxtgrd file. This is not allowed when using RES_UPDATE_FILE.

**What Next**

Please make sure that both nxtgrd file and the ITF file used by RES_UPDATE_FILE are valid, original and consistent. Please refer to StarRC manual on RES_UPDATE_FILE command for more information.

Feedback

## EX-349

(Fatal) Cannot update RPSQ_VS_SI_WIDTH_AND_LENGTH for layer %s which is not a GATE layer.

**Description**

RPSQ_VS_SI_WIDTH_AND_LENGTH can only be used with gate poly and those conductor layers with LAYER_TYPE = GATE. It is not allowed to use RPSQ_VS_SI_WIDTH_AND_LENGTH with other conductor layers without LAYER_TYPE = GATE.

**What Next**

Please make sure that both nxtgrd file and the ITF file used by RES_UPDATE_FILE are valid, original and consistent. Please refer to StarRC manual on RES_UPDATE_FILE command and ITF statement RPSQ_VS_SI_WIDTH_AND_LENGTH for more information.

## EX-350

(Fatal) Cannot update RPSQ_VS_SI_WIDTH_AND_LENGTH for layer %s because there is no FIELD POLY layer.

**Description**

RPSQ_VS_SI_WIDTH_AND_LENGTH can only be used on gate conductors with the presence of field poly layers in the technology files. If there are no field poly (LAYER_TYPE = FIELD_POLY) in the technology files, RPSQ_VS_SI_WIDTH_AND_LENGTH can not be used on any layer even if the layer is a gate conductor (LAYER_TYPE = GATE).

**What Next**

Please make sure that both nxtgrd file and the ITF file used by RES_UPDATE_FILE are valid, original and consistent. Please refer to StarRC manual on RES_UPDATE_FILE command and ITF statement RPSQ_VS_SI_WIDTH_AND_LENGTH for more information.

## EX-352

(Fatal) INTERNAL Error: xTractor tech_file -r value out of range: %d

**Description**

An unexpected result in an internal sanity check.

**What Next**

Contact the Synopsys Support Center.

Feedback

## EX-356

(Information) SMIN: Location BBox=(%g,%g),(%g,%g) Net=%d,%d Layer=%d,%d r1= %s %d %d r2= %s %d %d

**Description**

Spacing values between these polygons and their neighbors are much smaller than minimum spacing. This message lists the location of the violating polygon.

**What Next**

Please check if the small spacing values in the layout are indeed desired.

## EX-357

(Warning) 3DIC: cannot read subckt file %s, StarRC model will be used.

**Description**

StarRC could not find subckt file provided by user. The default model will be used to replace TSV in netlist.

**What Next**

Check if 3D_IC_SUBCKT_FILE is set correctly.

## EX-358

(Fatal) INTERNAL Error: Format in file TsvRC is not correct.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## EX-359

(Warning) The user defined subckt in %s will be skipped because its corresponding layer %s is not TSV or bump via.

**Description**

Cell name of subckt is not layer name of TSV or bump via so the model is ignored.

Feedback

**What Next**

Check if the cell name in 3D_IC_SUBCKT_FILE is correct.

---

## EX-361

(Fatal) INTERNAL Error: The Grd file was not declared in the tech file.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-362

(Fatal) INTERNAL Error: The HN database was not declared in the tech file.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-363

(Fatal) INTERNAL Error: Could not find tsv cell %s in data base.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## EX-365

(Fatal) 3DIC: syntax error in subckt file %s line %d:%s

**Description**

Model defined in 3D_IC_SUBCKT_FILE has problem so StarRC could not use it.

Feedback

**What Next**

Check the content defined in 3D_IC_SUBCKT_FILE.

---

## EX-366

(Fatal) 3DIC: subckt file %s did not specify DB layer.

**Description**

The cell name in 3D_IC_SUBCKT_FILE needs to be TSV layer name.

**What Next**

Check the cell name used in 3D_IC_SUBCKT_FILE.

---

## EX-367

(Fatal) 3DIC: subckt file %s specified %d res and %d cap. StarRC only supports 1Res, or 2Res, or 2Res+1Cg models.

**Description**

StarRC only support some pre-defined models. Others are not acceptable.

**What Next**

Check the model defined in 3D_IC_SUBCKT_FILE.

---

## EX-368

(Fatal) Unsupported format for TSV as cell. Please run -clean using SPEF or SPF.

**Description**

In TSV-as-cell flow, StarRC only support SPEF/SPF netlist. Other formats are not acceptable.

**What Next**

Reset NETLIST_TYPE:[SPEF/SPF] in StarRC command file.

---

## EX-375

(Warning) TSV instance:%s connected to 2 different nets

Feedback

**Description**

2 TSV terminals connect to different nets at front and back side. This could be short problem in netlist.

**What Next**

Check TSV connection in data input.

---

## EX-377

(Warning) TSV cell %s two pins connected to the same node

**Description**

The two terminals of TSV cell connect to same node.

**What Next**

Information only; no action is needed.

---

## EX-388

(Fatal) Multicontact via on layer %s (%d) is detected.

**Description**

Detected multicontact via is not supported for certain layers.

**What Next**

Please set AUTO_RUNSET: YES and restart StarXtract

---

## EX-390

(Fatal) For the layer %s option RPV_VS_AREA or RPV_VS_WIDTH_AND_LENGTH is not supported when multiple vias defined between the same pair of conductors.

**Description**

Option RPV_VS_AREA or RPV_VS_WIDTH_AND_LENGTH is not supported when multiple vias defined between the same pair of conductors.

**What Next**

Modify ITF definitions and regenerate nxtgrd.

Feedback

## EX-391

(Fatal) For the layer %s option RPV_VS_AREA can't be used for a trench contact array.

**Description**

Option RPV_VS_AREA can't be used for a trench contact array.

**What Next**

Modify ITF definitions and regenerate nxtgrd.

## EX-392

(Fatal) For the layer %s option RPV_VS_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH can't be used for a via array.

**Description**

Option RPV_VS_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH can't be used for a via array.

**What Next**

Modify ITF definitions and regenerate nxtgrd.

## EX-393

(Fatal) For the layer %s option RPV_VS_AREA must be specified for a via array when other via statement are not defined in ITF.

**Description**

Option RPV_VS_AREA must be specified for a via array when other via statement are not defined in ITF.

**What Next**

Modify ITF definitions and regenerate nxtgrd.

## EX-394

(Fatal) Fake via length is zero.

**Description**

Fake via length is zero.

Feedback

**What Next**

No action is required on your side.

---

## EX-395

(Fatal) Layer %s is not a TRENCH CONTACT FAKE VIA. Option RPV_VS_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH can only be specified for TRENCH CONTACT FAKE VIA layers.

**Description**

Option RPV_VS_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH can only be specified for TRENCH CONTACT FAKE VIA layer.

**What Next**

Modify ITF definitions and regenerate nxtgrd.

---

## EX-397

(Fatal) For the layer %s option RPV_VS_AREA or RPV_VS_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH or RPV_VS_COVERAGE must be specified when other via statements are not defined in ITF.

**Description**

Option RPV_VS_AREA or RPV_VS_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH or RPV_VS_COVERAGE must be specified when other via statements are not defined in ITF.

**What Next**

Modify ITF definitions and regenerate nxtgrd.

---

## EX-398

(Warning) Found mismatch between bridge via array and bridge via stucture, via resistor may not be correct for the bridge via (%d %d), (%d %d) on level %d.

**Description**

Found mismatch between input and actual information about bridge via.

**What Next**

Check the layout and runset data to avoid missmatch.

Feedback

## EX-410

(Fatal) Probe text on gate affects the accuracy of mos_gate_delta_resistance.

**Description**

Probe text on gate affects the accuracy of mos_gate_delta_resistance.

**What Next**

Remove the probe and rerun. Contact the Synopsys Support Center if the error message persists.

## EX-411

(Warning) Unable to convert to Delta configuration for gate %s %s located at(%f,%f) in cell %s.

**Description**

StarRC is unable to convert to Delta configuration for the particular gate

**What Next**

Nothing is required at your side at the moment if you are aware of this. Contact the Synopsys Support Center if you expect StarRC to convert the Delta configuration.

## EX-412

(Warning) Find contact on gate %s %s located at (%f, %f) in cell %s while converting to delta network.

**Description**

StarRC find contact on gate and is unable to convert to Delta configuration for the particular gate

**What Next**

Nothing is required at your side at the moment if you are aware of this. Contact the Synopsys Support Center if you expect StarRC to convert the Delta configuration.

## EX-414

(Warning) found open net(s) in the design. Check opens.sum file.

Feedback

**Description**

One or more open nets are found in the design and output in opens.sum file.

**What Next**

Nothing is required at your side at the moment.

---

## EX-415

(Warning) NETLIST_REMOVE_LOOPS will break a resistive loops in nets. Total pin-to-pin resistances will not be preserved, and REDUCTION_MAX_DELAY_ERROR may be violated. Use EXTRACT_LESS_LOOPS:YES (default) instead.

**Description**

Using NETLIST_REMOVE_LOOPS optoin will break a resistive loops in nets. Thus, the total pin-to-pin resistances may not be preserved, and REDUCTION_MAX_DELAY_ERROR may be violated. Use EXTRACT_LESS_LOOPS:YES (default) instead.

**What Next**

Nothing is required at your side at the moment.

---

## EX-417

(Fatal) Failed to copy %s to netlist %s

**Description**

An intermediate file produced by StarRC is corrupted. A corrupt file may be produced for a variety of reasons such as the disk being full, or more than one job running concurrently in the same run directory, or running a newer version of StarRC on data produced by an older version.

**What Next**

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

---

## EX-420

(Fatal) Design contains too many internal nodes. Consider using the SPF or SPEF formats to output the netlist or extract a reduced number of nets.

Feedback

**Description**

Design contains too many internal nodes. Consider using the SPF or SPEF formats to output the netlist or extract a reduced number of nets.

**What Next**

Nothing is required at your side at the moment.

---

## EX-432

(Warning) Missing model for Dieletric Thickness versus width and spacing in NXTGRD

**Description**

The NXTGRD does not contain a capacitance model table that is supposed to be present. This may have impact on capacitance accuracy. Note that if the ITF contains: 1. SIDE_DAMAGE_VS_WIDTH_AND_SPACING or SW_T_VS_WIDTH_AND_SPACING 2. Directionnal ETCH_VS_WIDTH_AND_SPACING 3. LINE_END_EXTENSION_TABLE

**What Next**

Regenerate the NXTGRD using a more recent grdgenxo version or contact your foundry to get a newer NXTGRD. If the warning persists, please contact Synopsys.

---

## EX-441

(Information) Parsing nxtgrd file: %s ...

**Description**

This message indicates the nxtgrd file specified by TCAD_GRD_FILE in StarRC command file is being parsed.

**What Next**

This is an informational message only. No action is required on your part.

---

## EX-443

(Fatal) Failed to parse nxtgrd file: %s

**Description**

The nxtgrd file specified by TCAD_GRD_FILE in StarRC command file has not been parsed sucessfully.

Feedback

**What Next**

Check TCAD_GRD_FILE in StarRC command file. Make sure that the nxtgrd file is not corrupted or obsolete. Also, check that the StarXtract version is at least as recent as the grdgenxo version used to generate the nxtgrd file.

---

## EX-444

(Information) Successfully parsed nxtgrd file: %s

**Description**

Not available.

**What Next**

This is an informational message only. No action is required on your part.

---

## EX-502

(Information) Messages about shorts/smin/vias violations are obsolete and will be removed in a future release. Please refer to shorts_all.sum, smin.sum and vias.sum files for durable report process.

**Description**

Detailled info messages about shorts, smin violations and via violations written in log files are now obsolete.

**What Next**

Contact the Synopsys Support Center.

---

## EX-503

(Information) SHORT: Two different nets TOUCH each other; ignoring the touch. BBox=(%.5f,%.5f),(%.5f,%.5f) Net=%d,%d Layer=%d,%d Inst=%d,%d r1= %s %d %d type1=0x%llx r2= %s %d %d type2=0x%llx

**Description**

Detected short between two polygons from different nets. This may cause accuracy issues.

**What Next**

Modify the layout to avoid shorts between polygons from two different nets.

Feedback

## EX-504

(Information) Two different texts touching each other; text_id1=%s text_id2=%s

**Description**

Detected short between two polygons with different text ids. This may cause accuracy issues.

**What Next**

Modify the layout to avoid shorts between polygons with different test ids.

## EX-505

(Information) FILL_SHORT: A short is found between floating metal fill polygon and design data. BBox=(%.5f,%.5f),(%.5f,%.5f) Net=%d,%d Layer=%d,%d r1=%s %d %d type1=0x%llx r2=%s %d %d type2=0x%llx

**Description**

Detected short between metal fill and design data. This may cause accuracy issues.

**What Next**

Modify the layout to avoid shorts between metal fills and design data.

## EX-506

(Information) UDDR: R %d Instance Port (%g,%g) Contact (%g,%g) %g $p_c=%d $sn_gn=%d $d_gc=%g $d_gb=%g $et_cd=%g $eb_cd=%g $w_g=%g $w_n=%g $w_d=%g $model=%s

**Description**

Detected the extraction of a User Defined Diffusion Resistance.

**What Next**

Check the correctness of the resistance and the parameters in the summary/uddr.sum file. This ouput is for debug purpose.

## EX-507

(Information) UDDR: R %d Instance Port (%g,%g) Contact (%g,%g) %g $p_c=%d $d_gc=%g $d_gb=%g $w_g=%g $w_n=%g $w_d=%g $Cenc=%g $model=%s

Feedback

**Description**

Detected the extraction of a User Defined Diffusion Resistance in the case of a bend case.

**What Next**

Check the correctness of the resistance and the parameters in the summary/uddr.sum file. This ouput is for debug purpose.

---

## EX-600

(Warning) The %d%s variation parameter specified in the ITF for %s produces greater capacitive sensitivity than the recommended %.3g%% of nominal capacitance in %.3g%% of related capacitance tables. This potentially affects VX extraction accuracy. Reduce the variation by %.3g%% for better accuracy. Statistics of the capacitive deviation: Mean = %.3g%% Standard Deviation = %.3g%%

**Description**

The variation parameters provided for sensitivity analysis allow too much variation for accurate capacitance extraction.

**What Next**

Limit the impact from variation parameters within the recommended values. In addition, ensure that the nxtgrd file is a valid and original file obtained from the foundry.

Refer to the User Guide for this StarRC version to obtain more information about using the SENSITIVITY and VARIATION_PARAMETERS commands.

---

## EX-603

(Warning) corrupt grd file, nominal_temperature is not specified.

**Description**

The nxtgrd file may be corrupted because CRT statements are specified without nominal temperature.

**What Next**

Please make sure that the nxtgrd file is valid and original. Please refer to StarRC manual on all CRT statements.

---

## EX-635

(Fatal) Unrecognized keyword %s found while parsing the device model in the nxtgrd file.

Feedback

**Description**

The nxtgrd file might be corrupted with inconsistent device model statements.

**What Next**

Ensure that the nxtgrd file is a valid and original file obtained from the foundry. If the problem persists, contact the Synopsys Support Center.

---

## EX-660

(Fatal) Failed to parse the nxtgrd file.

**Description**

The nxtgrd file specified by TCAD_GRD_FILE in StarRC command file has not been parsed sucessfully.

**What Next**

Check TCAD_GRD_FILE in StarRC command file. Make sure that the nxtgrd file is not corrupted or obsolete. Also, check that the StarXtract version is at least as recent as the grdgenxo version used to generate the nxtgrd file.

---

## EX-666

(Fatal)INTERNAL_ERROR: unknown layer has been referenced: %s

**Description**

The db layer is not found in an internal layer info table.

**What Next**

Contact the Synopsys Support Center.

---

## EX-670

(Warning) 3DIC: tsv model '%s' is not defined in 3D_IC_SUBCKT_FILE. The default model will be used to replace TSV in netlist.

**Description**

StarRC could not find tsv from user's subckt file. The default model will be used to replace TSV in netlist.

**What Next**

Check if 3D_IC_SUBCKT_FILE is set correctly.

Feedback

## EX-702

(Warning) SMIN: Found less than %sminimum spacing. SMIN: %g, found: %g

**Description**

Spacing values between neighbor polygons are found to be much smaller than minimum spacing. This message lists spacing value and the minimum spacing on this layer.

**What Next**

Please check if the small spacing values in the layout are indeed desired.

## EX-703

(Warning) Subckt device %s is declared more than once.

**Description**

TSV model has duplicated device. That could result to problem in final netlist.

**What Next**

Check the model defined in 3D_IC_SUBCKT_MODEL.

## EX-712

(Information) No trench contact shape is found for the fake via clone c1=%s c2=%s

**Description**

No trench contact shape is found for the fake via clone.

**What Next**

No action is required on your side.

## EX-714

(Information) VIA: Detected via with one or no connections: BBox=(%g,%g),(%g,%g)um Net=%d Layer=%d

**Description**

Detected via with one or no connections.

**What Next**

Correct via connections in the layout.

Feedback

## EX-716

(Warning) In the generated SPF file there are %d nets which have been netlisted in more than one part ("MULTI-PART" nets). Multi-part nets are not resistively connected; hence are open. You can find the multi-part net names below.%s

**Description**

In the generated SPEF file there might be nets that have been netlisted in more than one part ("MULTI-PART" nets). Multi-part nets are not resistively connected; hence are open.

**What Next**

Nothing is required at your side at the moment.

## EX-718

(Fatal) Cannot open TCAD_GRD_FILE: %s

**Description**

xTractor was not able to read the TCAD_GRD_FILE.

**What Next**

Check to make sure that TCAD_GRD_FILE exists and that the xTractor has read permissions for it.

## EX-719

(Fatal) TCAD_GRD_FILE %s is corrupted. The number of layers %d is outside possible range.

**Description**

Invalid layer count found in GRD file.

**What Next**

Check to make sure that GRD file is correct.

## EX-720

(Fatal) Invalid conductor layer in TCAD_GRD_FILE

**Description**

xTractor found invalid conductor layer in TCAD_GRD_FILE.

Feedback

**What Next**

Check to make sure that GRD file is compatible with this version of xTractor. Contact the Synopsys Support Center to get more information on generating a compatible GRD file.

---

## EX-721

(Fatal) Invalid layer %s in RC_SCALING_FILE

**Description**

xTractor found invalid layer in RC_SCALING_FILE.

**What Next**

Check to make sure that the input file is compatible with the GRD file.

---

## EX-724

(Information) Initializing extraction ...

**Description**

xTractor has started initializing extraction data structures.

**What Next**

This message is for informational purposes only. No further action is needed.

---

## EX-738

(Information) Parsed A tcad of %d levels

**Description**

xTracor is reporting the number of levels in the tcad file.

**What Next**

This message is for informational purposes only. No further action is required by the user.

---

## EX-739

(Warning) Cannot initialize error file!

**Description**

Not available.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## EX-741

(Fatal) Zero input and Zero Output; Exiting ...

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## EX-742

(Warning) In the region x(%d, %d) y(%d, %d), overlapping polygons are found on two layers, either between layer %s and layer %s or between via layers connecting them. Please check design or LVS runset to remove the overlap.

**Description**

Detected possible short between two polygons. This may cause accuracy issues.

**What Next**

Locate the overlapping polygons first. If there is indeed overlap, use boolean operation NOT in runset to remove the overlap.

---

## EX-743

(Warning) Number of shorted nets reported is higher than the SHORTS LIMIT specified.

**Description**

To get a report of all violations, return StarRC with SHORTS_LIMIT set to 2147483647 in the StarRC command file. Having StarRC report an excessively large number of violations can significantly increase the overall runtime.

**What Next**

Use SHORTS_LIMIT to increase shorted nets limit in the command file.

Feedback

## EX-744

(Warning) Can't find coverage option for via width '%f' length '%f' X(%f - %f) Y(%f - %f) on layer '%s'. Please check VIA_COVERAGE_OPTION_FILE or VIA_COVERAGE in StarRC command file, or VIA_COVERAGE in nxtgrd file.

### Description

Can't find coverage option for via on the layer.

### What Next

Check VIA_COVERAGE_OPTION_FILE or VIA_COVERAGE in StarRC command file, or VIA_COVERAGE in nxtgrd file.

## EX-745

(Warning) Can't find coverage option in cmd or VIA_COVERAGE in nxtgrd for via on layer '%d'

### Description

Can't find coverage option in cmd or VIA_COVERAGE in nxtgrd for this via layer.

### What Next

Information only; no action is needed.

## EX-746

(Fatal) The GPD is not compatible to SPEF netlist format since NETILST_REMOVE_DANGLING_BRANCHES or NETLIST_MERGE_SHORTED_PORTS or NETLIST_MINRES_THRESHOLD or REDUCTION: HIGH was used when generating this GPD. Command NETILST_REMOVE_DANGLING_BRANCHES and NETLIST_MERGE_SHORTED_PORTS are not supported for SPEF format. Command NETLIST_MINRES_THRESHOLD and REDUCTION: HIGH support both SPF and SPEF, but the GPDs for SPF format and SPEF format are incompatible. If you used NETLIST_FORMAT: SPF (or didn't specify NETLIST_FORMAT) along with NETLIST_MINRES_THRESHOLD or REDUCTION: HIGH, the generated GPD is incompatible to SPEF format. You can only convert SPF netlist from this GPD.

### Description

Command NETILST_REMOVE_DANGLING_BRANCHES and NETLIST_MERGE_SHORTED_PORTS are not supported for SPEF format. If you use either of these 2 commands and use NETLIST_FORMAT: SPEF, StarRC will error out; If you use either of these 2 commands and use NETLIST_FORMAT: SPF (or didn't specify

Feedback

NETLIST_FORMAT), GPD will be generated but the generated GPD is not compatible to SPEF format and you can't convert SPEF netlist from this GPD. You can only convert SPF netlist from this GPD. Command NETLIST_MINRES_THRESHOLD and REDUCTION: HIGH support both SPF and SPEF, but the GPDs for SPF format and SPEF format are incompatible. If you use either of these 2 commands and use NETLIST_FORMAT: SPF (or didn't specify NETLIST_FORMAT), the generated GPD is incompatible to SPEF format and you can't convert SPEF netlist from this GPD. You can only convert SPF netlist from this GPD. However, if you use either of these 2 commands and use NETLIST_FORMAT: SPEF, you can get the SPEF netlist.

**What Next**

If you used NETILST_REMOVE_DANGLING_BRANCHES or NETLIST_MERGE_SHORTED_PORTS, remove them and re-generate the GPD.
If you used NETLIST_MINRES_THRESHOLD or REDUCTION: HIGH, you can set NETLIST_FORMAT: SPEF to generate the SPEF netlist, or remove the 2 commands and re-generate the GPD if you want to generate a GPD which is compatible to both SPF and SPEF formats.

---

## EX-747

(Warning) Number of fill shorts reported is higher than the FILL SHORTS LIMIT specified.

**Description**

To get a report of all violations, return StarRC with FILL_SHORTS_LIMIT set to 2147483647 in the StarRC command file. Having StarRC report an excessively large number of violations can significantly increase the overall runtime.

**What Next**

Use FILL_SHORTS_LIMIT to increase shorted nets limit in the command file.

---

## EX-748

(Fatal) INTERNAL Error: The input to temperature sensitivity flow is invalid. Rerun StarRC.

**Description**

The input to temperature sensitivity flow is corrupted.

**What Next**

Please rerun StarRC to solve the issue.

Feedback

## EX-749

(Warning) GATE_TO_DIFFUSION_CAP_VS_DIFFUSION_LENGTH table in ITF is empty or incorrect, please check your grd file

**Description**

The nxtgrd file may be corrupted with inconsistent GATE_TO_DIFFUSION_CAP_VS_DIFFUSION_LENGTH statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-750

(Information) Parsing RC scaling file: %s

**Description**

xTractor has started parsing RC scaling file.

**What Next**

This message is for informational purposes only. No further action is needed.

## EX-1977

(Warning) Parameter mag for '%s' '%s' '%s' is not of type float.

**Description**

Type for parameter "mag" is not 'oacFloatParamType'.

**What Next**

Make sure that the type for parameter "mag" is 'oacFloatParamType'.

## EX-1978

(Fatal) Detected N-1 mapping in PROPMAP of device '%s' :'%s' conflicts with earlier entry '%s'.

**Description**

When adding property mapping, the user-defined property type conflicts with property type from dspf.

Feedback

### What Next

Make sure that the user-defined property type is the same with property type from dspf.

---

## EX-1979

(Warning) Detected multiple definitions for cell '%s' in skip cell mapping files. The latest definition overrides all previous definitions.

### Description

StarRC detects multiple definitions for cells listed in files specified by the OA_SKIPCELL_MAPPING_FILE or OA_DEVICE_MAPPING_FILE command. The latest definition overrides all previous definitions.

### What Next

Make sure that the definitions are correct in the skip cell mapping files.

---

## EX-1980

(Warning) Detected multiple definitions for model '%s' in the device mapping file. The latest definition overrides all previous definitions.

### Description

StarRC detects multiple definitions for a model in the device mapping file specified by the OA_DEVICE_MAPPING_FILE command. The latest definition overrides all previous definitions.

### What Next

Make sure that the definitions are correct in device mapping file.

---

## EX-1983

(Fatal) Library '%s' is not defined in the OA_LIB_DEF file.

### Description

In the OpenAccess flow, all libraries referenced by the following commands must be defined in the OA_LIB_DEF file:

OA_DEVICE_MAPPING_FILE OA_LAYER_MAPPING_FILE OA_LIB_NAME OA_SKIPCELL_MAPPING_FILE OA_PORT_ANNOTATION_VIEW OA_PROPERTY_ANNOTATION_VIEW

Feedback

**What Next**

Make sure that all libraries are defined in the OA_LIB_DEF file.

---

## EX-1984

(Fatal) Cell '%s' is not defined in library '%s'.

**Description**

StarRC has determined that the cell specified by the OA_CELL_NAME command is not defined in the library specified by the OA_LIB_NAME command.

**What Next**

Make sure that the library and cell are correctly defined.

---

## EX-1985

(Fatal) '%s'

**Description**

StarRC encountered this OpenAccess error message when trying to open the design.

**What Next**

Ensure that the design database is correct. If the error persists, contact the Synopsys Support Center.

---

## EX-1986

(Fatal) '%s'

**Description**

StarRC encountered this OpenAccess error message when trying to open the design.

**What Next**

Ensure that the design database is correct. If the error persists, contact the Synopsys Support Center.

---

## EX-1991

(Warning) Pin count mismatch for instance '%s' of device '%s'. '%s' has '%d' pins. '%s' has '%d' pins. Device will remain unconnected.

Feedback

**Description**

You receive this message because of the mismatch between number of device ports and number of ports in the symbol view. To correctly connect the device, the number of device ports should be equal to number of ports in the symbol view. If number of device ports is not equal to number of ports in the symbol view, spice_subckt_file can be used to match number of ports in the symbol view. The device is invalid and unconnected.

**What Next**

Check why the device has different number of device ports and number of ports in the symbol view. If the number of device ports can be matched by spice_subckt_file, you can define the ports you want to connect in this device in spice_subckt_file.

---

## EX-1992

(Warning) Pin count mismatch: '%s'

**Description**

In OA flow, StarRC trys to match pins in skip cell with symbol view before using device mapping file, there's a mismatch between the number of instance pins and the number of its master cell pins.

**What Next**

Make sure the number of the skip cell instance pins is correct, or you can use device mapping file to match the pins.

---

## EX-1993

(Warning) '%s'layer '%s' undefined in technology library.

**Description**

The layer defined in layer_mapping_file is not defined in technology library.

**What Next**

Make sure that the layer is defined in technology library.

---

## EX-1994

(Warning) In layer mapping file line '%d' purpose '%s' undefined in technology library.

**Description**

The purpose defined in layer_mapping_file is not defined in technology library.

Feedback

**What Next**

Make sure that the purpose is defined in technology library.

---

## EX-1995

(Warning) Flylines for resistors will not be generated: please define valid *pres layer-purpose in layer mapping file, or define the default lpp (y0, drawing) in the technology library.

**Description**

When adding pres flyline layer-purpose pair(lpp), the layer-purpose pair is not corecttly defined in layer_mapping_file.

**What Next**

Define valid *pres layer-purpose in layer mapping file, or define the default lpp (y0, drawing) in the technology library.

---

## EX-1996

(Warning) Flylines for capacitors will not be generated: please define valid *pcap layer-purpose in layer mapping file, or define the default lpp (y1, drawing) in the technology library.

**Description**

When adding pcap flyline layer-purpose pair(lpp), the layer-purpose pair is not corecttly defined in layer_mapping_file.

**What Next**

Define valid *pcap layer-purpose in layer mapping file, or define the default lpp (y1, drawing) in the technology library.

---

## EX-1997

(Warning) Parse line: '%d' in layer_mapping_file.

**Description**

Syntax error(s) seen while parsing layer_mapping_file. This can lead to some layers not getting mapped as expected.

**What Next**

Make sure that the layer_mapping_file does not have syntax errors.

Feedback

## EX-1998

(Warning) Only one corner is selected, NETLIST_SMC_FORMULAR is ignored

**Description**

You receive this message because you use NETLIST_SMC_FORMULAR while specify only one corner. In a simultaneous multicorner flow, you can use the NETLIST_SMC_FORMULA command to specify that the output should be a single netlist containing RC values written as formulas that use the corner names as variables. If you only specify one corner name in SELECTED_CORNERS, the NETLIST_SMC_FORMULA will be ignored.

**What Next**

Check if your NETLIST_SMC_FORMULAR and SELECTED_CORNERS settings are correct.

## EX-2000

(Warning) Physical shape and presistor of design layer '%s' ('%d') is not available in parasitic view as there is no corresponding LPP in OA_LAYER_MAPPING_FILE.

**Description**

Physical shape and presistor of design layer is not available in parasitic view as there is no corresponding LPP in OA_LAYER_MAPPING_FILE.

**What Next**

Make sure that the LPP for the specified layer is correctly defined in OA_LAYER_MAPPING_FILE.

## EX-2001

(Fatal) lib '%s' is not defined in OA_LIB_DEF file.

**Description**

StarRC failed to open an OA view.

**What Next**

Make sure the OA library is correctly defined in OA_LIB_DEF file.

## EX-2002

(Fatal) '%s' is not defined in '%s'.

Feedback

**Description**

In OA flow, cell is not defined in lib.

**What Next**

Make sure that the cell is defined in lib.

---

## EX-2003

(Warning) Create view %s/%s/%s failed, waiting to re-try. Remaining: %d s.

**Description**

Create OA view failed. It might be locked by other session, or you do not have the permission. StarRC is waiting to re-try.

**What Next**

Please close other process which opens this view. Or wait for specified time.

---

## EX-2005

(Fatal) '%s'

**Description**

There is a OpenAccess Exception, when StarRC is trying to open the design.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2006

(Fatal) '%s'

**Description**

There is an OpenAccess Exception, when StarRC is trying to open the design.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2007

(Fatal) Can not create design '%s'/'%s'/'%s'

Feedback

**Description**

StarRC failed to generate symbol view for skip cell.

**What Next**

Check if you have the permission to write.

---

## EX-2008

(Fatal) lib '%s' is not defined in '%s'

**Description**

In OA flow, lib is not defined in OA_LIB_DEF file.

**What Next**

Make sure that the lib is defined in OA_LIB_DEF file.

---

## EX-2009

(Fatal) Cannot create or overwrite the view '%s'/'%s'/'%s', It might be locked by another session, or you do not have the permission.

**Description**

In OA flow, an attempt to create or overwrite the OA view failed. It may be locked by another session, or you do not have the permission to write.

**What Next**

Make sure that the OA view is not locked by another session, and you do have the permission to write.

---

## EX-2010

(Fatal) Cannot open tech database for library '%s'

**Description**

In OA flow, cannot open the technology library.

**What Next**

Make sure that the technology lib exists and you have the permission to read.

Feedback

## EX-2012

(Warning) '%s': '%s' is ignored due to illegal format.

**Description**

In OA flow, a syntax error was encountered when reading StarRC commands OA_PORT_ANNOTATION_VIEW or OA_PROPERTY_ANNOTATION_VIEW.

**What Next**

Make sure that the OA_PORT_ANNOTATION_VIEW or OA_PROPERTY_ANNOTATION_VIEW is correctly defined.

## EX-2013

(Warning) Cannot access the view '%s': '%s'

**Description**

The OpenAccess view cannot be opened.

**What Next**

Make sure that the OpenAccess view exists, is defined in cds.lib, and you have permission to read it.

## EX-2014

(Warning) Some instances cannot get schematic properties, please check oa_property_annotation.sum

**Description**

In OA flow, some instances cannot get schematic properties because they are not xref-ed.

**What Next**

Contact the Synopsys Support Center.

## EX-2015

(Warning) The program failed to create the OA view because of '%d': '%s'

**Description**

There is an OpenAccess Exception, when StarRC is trying to create the OA view.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## EX-2016

(Fatal) '%d': '%s'

**Description**

There is an OpenAccess Exception, when StarRC is trying to create the OA view.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2017

(Warning) warning: '%s'

**Description**

StarRC is unable to read the OA_LIB_DEF file.

**What Next**

Please make sure the OA_LIB_DEF file exists and you have the read permission.

---

## EX-2018

(Warning) syntax issue in '%s': '%s'

**Description**

There is an OpenAccess exception, when StarRC tries to open OA_LIB_DEF file.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2019

(Warning) '%s' load warning: '%s'

**Description**

StarRC ran into a syntax error while reading the OA_LIB_DEF file.

Feedback

**What Next**

Please make sure the OA_LIB_DEF file does not have syntax errors.

---

## EX-2020

(Fatal) '%s'

**Description**

StarRC found a fatal error.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2021

(Fatal) '%s'

**Description**

There is an OpenAccess exception, when StarRC tries to get mapping information for device modeling.

**What Next**

Make sure the device mapping information is correctly defined in OA_DEVICE_MAPPING_FILE or OA_SKIPCELL_MAPPING_FILE.

---

## EX-2054

(Fatal) extraction output appears to be corrupted or truncated.

**Description**

StarRC's internal circuit representation seems corrupted.

**What Next**

Check that the extraction stages completed successfully. Contact the Synopsys Support Center for further assistance.

---

## EX-2058

(Fatal) unable to determine offset for file %s, operating system error status: %s.

Feedback

**Description**

StarRC is unable to determine the offset of the specified file because of problems with the runtime environment.

**What Next**

Probable cause is due to unsupported OS. Please make sure to use OS that are supported by StarRC. If the OS is supported and issue is not clear, please contact the Synopsys Support Center.

---

## EX-2059

(ERROR) The program failed to create the OA view because of: %s

**Description**

There is an exception, when StarRC tries to get mapping information for device modeling.

**What Next**

Make sure the device mapping information is correctly defined in OA_DEVICE_MAPPING_FILE or OA_SKIPCELL_MAPPING_FILE, and layer mapping information is correctly defined in OA_LAYER_MAPPING_FILE.

---

## EX-2065

(Fatal) Unable to read data from file %s, error status %s

**Description**

StarRC is unable to read data from a file because of issues in the runtime environment.

**What Next**

Carry out remedial actions as suggested by the operating system error status. Contact your system administrator if necessary.

---

## EX-2082

(Warning) OPERATING_TEMPERATURE is ignored from corner file because TEMPERATURE_SENSITIVITY is set to NO.

**Description**

Because OPERATING_TEMPERATURE and TEMPERATURE_SENSITIVITY: NO are mutually exclusive the OPERATING_TEMPERATURE will be ignored.

Feedback

**What Next**

No action is required.

---

## EX-2085

(Fatal) The corner name %s specified in the NETLIST_CORNER_NAMES option cannot be found in the file specified by NETLIST_CORNER_FILE.

**Description**

StarRC detects inconsistency between the NETLIST_CORNER_NAMES option and the corners defined in the file specified by the NETLIST_CORNER_FILE option.

**What Next**

Ensure that all of the NETLIST_CORNER_NAMES are present in the NETLIST_CORNER_FILE.

---

## EX-2101

(Fatal) Invalid entry in command %s: %s

**Description**

Invalid entry detected for a command in xTractor options file.

**What Next**

Contact Synopsys Support Center.

---

## EX-2110

(Warning) Routing layer direction for layer %s cannot be determined. VMF will be disabled for that layer.

**Description**

The routing layer direction for layer %s cannot be determined, therefore VMF flow will be disabled for that layer.

**What Next**

If this is intentional, there is no action to take. If you want VMF to be enabled for that layer, please specify the layer direction with the direction statements in the VMF parameter file.

Feedback

## EX-2112

(Warning) Failed to openLibs because of: '%d': '%s'

**Description**

There is an OpenAccess exception, when StarRC tries to open the library.

**What Next**

Contact the Synopsys Support Center.

## EX-2114

(Warning) GATE_TO_DIFFUSION_CHANNEL_CAP table is corrupted, please check ITF or NXTGRD file

**Description**

The nxtgrd file may be corrupted with inconsistent GATE_TO_DIFFUSION_CHANNEL_CAP statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-2116

(Fatal) INTERNAL Error: problem while processing internal circuit representation.

**Description**

A internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## EX-2117

(Warning) INTERNAL Warning: Node %d_%ld is connected to port %ld but is also shorted to port %ld.

**Description**

A non-critical internal consistency check has failed. This warning message is printed for use by the Synopsys Support Center in case a program error occurs during StarRC's execution.

Feedback

**What Next**

Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

---

## EX-2118

(Warning) INTERNAL Warning: Node %d_%ld is connected to port %ld and also to port %ld

**Description**

A non-critical internal consistency check has failed. This warning message is printed for use by the Synopsys Support Center in case a program error occurs during StarRC's execution.

**What Next**

Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

---

## EX-2120

(Warning) INTERNAL Warning: Node %d_%ld is shorted to port %ld but is also shorted to port %ld

**Description**

A non-critical internal consistency check has failed. This warning message is printed for use by the Synopsys Support Center in case a program error occurs during StarRC's execution.

**What Next**

Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

---

## EX-2121

(Warning) INTERNAL Warning: Node %d_%ld is shorted to port %ld but is also connected to port %ld.

**Description**

A non-critical internal consistency check has failed. This warning message is printed for use by the Synopsys Support Center in case a program error occurs during StarRC's execution.

Feedback

**What Next**

Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

---

## EX-2125

(Warning) In NXTGRD backdoor, the fourth column in some EVWSB line is incorrect. It should be same as the first EVWS table on the same layer if it is the first sub EVWS table, or 0 if not.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2126

(Warning) In NXTGRD file, some sub EVWS table is missing. Please use newest version of grdgenxo to regenerate the NXTGRD file.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2127

(Warning) In NXTGRD backdoor, the fourth column in some CEVWSB line is incorrect. It should be same as the first EVWS table on the same layer if it is the first sub EVWS table, or 0 if not.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## EX-2128

(Warning) In NXTGRD file, some sub CEVWS table is missing. Please use newest version of grdgenxo to regenerate the NXTGRD file.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## EX-2129

(Fatal) SMC via_coverage corrupted: RPV table size is different cross corners.

**Description**

When using corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow, each RPV table should have consistent number of entries across corners.

**What Next**

Correct the input files for VIA_COVERAGE_OPTION_FILE and restart.

## EX-2130

(Fatal) Only temperature_sensitivity is supported for CCP sensitivity flow.

**Description**

StarRC-CCP sensitivity extraction flow only supports temperature variations (TEMPERATURE_SENSITIVITY: YES) but not other variations.

**What Next**

Change the setup and restart. If more variations are required, please use SIMULTANEOUS_MULTI_CORNER flow.

## EX-2131

(Fatal) Failed to read global temperature used by CCP engine for temperature sensitivity calculation.

**Description**

Failed to retrieve the global temperature value.

Feedback

**What Next**

First check whether the nominal temperature or global temperature is defined in nxtgrd file. Or contact the Synopsys Support Center.

---

## EX-2132

(Fatal) Global temperature mismatch: %.1f in ITF and %.1f in CCP.

**Description**

There is a discrepancy on the global temperature values used by CCP and StarRC.

**What Next**

Check the consistency of nominal temperature and global temperature in the nxtgrd file. Or contact the Synopsys Support Center.

---

## EX-2133

(Information) ANALOG_SYMMETRIC_NET forced to YES for this process

**Description**

ANALOG_SYMMETRIC_NET option is forced to YES for this process.

**What Next**

Please check StarRC manual for the definite of ANALOG_SYMMETRIC_NET.

---

## EX-2140

(Information) Detected large percentage (%g%%) ECO nets changed.

**Description**

Large percentage of ECO nets have changed. This may affect speed of ECO extraction.

**What Next**

Please refer to section on ECO extraction in the StarRC user guide.

---

## EX-2141

(Warning) Unexpected number (%d) of polygons in in layer %d in window: (%d,%d) (%d, %d)

Feedback

**Description**

Detected a polygon that is surrounded by the window overlaps with too many other polygons. The coordinates of the window is in database units.

**What Next**

Check if the large number of overlaps are reasonable.

---

## EX-2142

(Warning) The grd file contains SCT models, but they are ignored (MULTIGATE_MODELS:NO)

**Description**

Although the nxtgrd file contains SCT models, they are ignored because MULTIGATE_MODELS is set to NO.

**What Next**

Please refer to StarRC manual on MULTIGATE_MODELS.

---

## EX-2144

(Fatal) Characterization Initialize Failed

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## EX-2145

(Fatal) Characterization Failed

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## EX-2147

(Warning) FLOATING_GATE_TO_DIFFUSION_CONTACT_CAP table in ITF is empty or incorrect, please check your grd file.

**Description**

The nxtgrd file may be corrupted with inconsistent FLOATING_GATE_TO_DIFFUSION_CONTACT_CAP statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-2148

(Warning) SPACER_ER_VS_WIDTH_AND_SPACING table in ITF is empty or incorrect, please check your grd file.

**Description**

The nxtgrd file may be corrupted with inconsistent SPACER_ER_VS_WIDTH_AND_SPACING statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-2149

(Fatal) FLOATING_GATE_TO_DIFFUSION_CONTACT_CAP table has too few entries for GATE_POLYGON_LENGTH. Please check your NXTGRD file.

**Description**

Statements related to FLOAT_GATE conductors in your nxtgrd file does not have enough entries for GATE_POLYGON_LENGTH. This may lead to errors in capacitance extraction.

**What Next**

Please make sure that nxtgrd files from foundry are all valid and original.

## EX-2150

(Fatal) The values in FLOATING_GATE_TO_DIFFUSION_CONTACT_CAP table are invalid. Please check your NXTGRD file.

Feedback

**Description**

Statements related to FLOAT_GATE conductor capacitance values are not valid.

**What Next**

Please make sure that nxtgrd files from foundry are all valid and original.

---

## EX-2151

(Warning) FinFET width and spacing violates design rules described at TCAD_GRD_FILE and it will lead to parasitic capacitance inaccuracy

**Description**

Width and spacing values on FinFET structures are not compatible with foundry design rules.

**What Next**

Please check FinFET layout to make sure that the design satisfies foundry rules.

---

## EX-2155

(Fatal) %s is incompatible with this version of StarRC.

**Description**

The internal circuit representation is not compatible with this version of StarRC. This might be caused by using -cleanN to skip extration with a run generated by an older version of StarRC.

**What Next**

Please rerun StarXtract to generate compatible xout files. For further assistance, please contact the Synopsys Support Center.

---

## EX-2156

(Warning) Inconsistency between StarRC and CCP extraction output files is detected on: %s.

**Description**

The extraction output files from StarRC and CCP are not compatible to be merged.

Feedback

### What Next

Check whether the extraction setups in star command file and CCP_EXTRACTION_FILE are correct. If the error does not go away, contact the Synopsys Support Center.

---

## EX-2159

(Fatal) While loading multi-corner nxtgrd files, found and inconsistent number of capacitance tables

### Description

StarRC is loading many nxtgrd files for multi-corner flow. Some capacitance tables are present in some nxtgrd files but not in another nxtgrd file.

### What Next

Ensure that the nxtgrd files have been generated using identical grdgenxo versions and identical options. If the error persists, contact the Synopsys Support Center.

---

## EX-2160

(Fatal) The process TSMC N20 V1.0 is no longer supported in StarRC versions J-2014.12 or later.

### Description

The nxtgrd file from TSMC N20 V1.0 is no longer supported in StarRC versions J-2014.12 or later.

### What Next

Please contact the foundry for an up-to-date version of nxtgrd files.

---

## EX-2161

(Fatal) INTERNAL Error: intermediate file '%s' does not exist.

### Description

An intermediate file expected to be produced by StarRC does not exist.

### What Next

It is possible that a file written by a process on one host may not be immediately visible on another host if the disk or network is busy. Try rerunning StarRC on a lightly loaded disk or network.

Contact the Synopsys Support Center if this problem persists.

Feedback

## EX-2162

(Fatal) Unable to open gzip file '%s' for writing: %s

**Description**

StarRC failed to open a gzip file for writing.

**What Next**

Make sure that you have permission to write to this directory, and that the file system is not full.

## EX-2163

(Fatal) Unable to close gzip file '%s'

**Description**

StarRC was not able to close a gzip file.

**What Next**

Check to see if the file system is full.

## EX-2164

(Fatal) Attempt to write to file '%s' failed.

**Description**

StarRC failed to write to a file.

**What Next**

Contact the Synopsys Support Center.

## EX-2165

(Fatal) Unable to write %ld bytes to gzip file '%s': %s

**Description**

StarRC failed to write to a gzip file.

**What Next**

Make sure that you have permission to write to this directory, and that the file system is not full.

Feedback

## EX-2168

(Fatal) Unable to flush buffer for file '%s': %s

**Description**

Unable to complete writing to a file.

**What Next**

Make sure that the file system is not full.

## EX-2169

(Fatal) unable to flush buffer for file '%s' after %d attempts: %s

**Description**

Unable to complete writing to a file after multiple attempts.

**What Next**

Make sure that the file system is not full.

## EX-2170

(Fatal) Unable to write %ld bytes to gzip file '%s': %s

**Description**

Failed to write to a gzip file.

**What Next**

Make sure that the file system is not full.

## EX-2171

(Warning) Found short between clock net %d and net %d; inductance not extracted for region of BBox BBox=(%g,%g),(%g,%g) layer %s

**Description**

A short found in clock net inductance extraction. Inductance calculation is skipped for the affected polygon. Accuracy of inductance for this net may be adversely affected.

**What Next**

Contact Synopsys Support Center.

Feedback

## EX-2172

(Warning) Cannot find a capacitance table that shall be in the nxtgrd file; that may cause cap underestimation.

### Description

You receive this message when StarXtract cannot retrieve a capacitance table that shall be in the nxtgrd file. This is generally due to an incorrect ITF description.

### What Next

This is only a warning message. No action is required. However, if the accuracy is not good and the ITF file is available, check any warning or error message when launching the following comand:

grdgenxo -parse <ITF>

If the issue can be fixed, relaunch the nxtgrd file generation. In other cases, contact the Synopsys Support Center.

## EX-2175

(Fatal) Fail to create file '%s' to merge shorted ports.

### Description

An intermediate file cannot created. This may be produced for a variety of reasons such as the disk being full, or more than one job running concurrently in the same run directory and one of them holding the file.

### What Next

Try running StarRC again from a clean directory. Contact the Synopsys Support Center if the error message persists.

## EX-2176

(Fatal) Detected too many shorts (%lld) in this partition. BBox=(%g,%g),(%g,%g)

### Description

The number of polygon shorts exceeds the number of polygons in this partition. The coordinates of the bounding box are in microns.

Feedback

### What Next

Check the design and remove the shorts. The excessive shorts could be due to many unplaced cells in the design. To ignore the error and proceed, use STOP_EXTRACTION_ON_NUMEROUS_SHORTS:NO.

---

## EX-2180

(Warning) Clock net polygon has no shielding polygon on a power net within %f microns. Coordinates: (%f,%f) (%f,%f), layer %d; for inductance extraction purpuses, StarRC will assume a shielding distance of %f microns";

### Description

Clock net inductance extraction expects shielding wires on power or ground nets within a maximum distance. The absence of such shielding may affect the accuracy of the inductance extractor.

### What Next

Check the design to make sure clock net polygons are shielded. Read the section on clock net inductance extraction in the StarRC user manual.

---

## EX-2190

(Fatal) Cannot output temperature coefficients of grouped corners (the selected corners concatenated with ':').

### Description

The grouped corners are the selected corners which are concatenated with ':'. StarRC cannot output temperature coefficients (TC1/TC2) for the grouped corners.

### What Next

Remove the grouped corners or separate the corners with ' '.

---

## EX-2191

(Warning) Multi-corner temperature coefficients output does not support command "NETLIST_CORNER_FILE" and command "NETLIST_CORNER_NAMES".

### Description

Multi-corner temperature coefficients output does not support command "NETLIST_CORNER_FILE" and command "NETLIST_CORNER_NAMES".

Feedback

**What Next**

Use SELECTED_CORNER to select corners to output temperature coefficients.

---

## EX-2192

(Warning) Using GLOBAL_TEMP in corner definition to output multi-corner TC1/TC2 will be obseleted in 2016.06.

**Description**

Please use SIMULTANEOUS_MULTI_CORNER: YES and TEMPERATURE_SENSITIVITY: YES to output multi-corner TC1/TC2.

---

## EX-2193

(Warning) GATE_TO_DIFFUSION_ADJUSTMENT_CAP table is corrupted, please check your ITF or grd file

**Description**

The nxtgrd file may be corrupted with inconsistent GATE_TO_DIFFUSION_ADJUSTMENT_CAP statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

---

## EX-2194

(Warning) Multiple connections on both upper and lower layer is found for via: (%d %d), (%d %d) on level %d.

**Description**

Multiple connections on both upper and lower layer is not expected for any via. In this case, it is not treated as a bridge via, but only one via resistor is extracted from center to center.

**What Next**

Modify the layout.

---

## EX-2195

(Warning) Multiple connections on both horizontal and vertical direction of a via are found at : (%d %d), (%d %d) on level %d.

Feedback

**Description**

A via with multiple connections on one direction on upper or lower layer is considered as a bridge via. Multiple connections on both horizontal and vertical direction might cause open.

**What Next**

Modify the layout.

---

## EX-2196

(Warning) Via center is not covered by any metal at: (%f %f), (%f %f)um on layer %s.

**Description**

Via node is created at the center of the via. If the center is not covered by any metal, there will be a shorting resistor connecting via node and the node on the metal.

**What Next**

Please check the original layout with -Display to confirm if the via misalignmane is reported correctly. If not, please check if via merging is performed (MERGE_VIAS_IN_ARRAY in command file or MAX_VIA_ARRRAY_LENGTH/SPACING). If root cause is still not clear, please contact Synopsys Support Center.

---

## EX-2197

(Warning) The center of via and one leg overlapping area is not covered by any metal at: (%d %d), (%d %d)nm on level %d.

**Description**

Via node is created at the center of the overlapping area of the via and one leg. If the center is not covered by any metal, there will be a shorting resistor connecting via node and the node on a nearby metal.

**What Next**

Nothing

---

## EX-2198

(Warning) Ignoring unsupported vector: (%g %g), (%g %g) on level %d.

**Description**

Current vector file supports only horizontal or vertical vectors.

Feedback

**What Next**

Fix file content.

---

## EX-2199

(Fatal) Internal error on CUT_END_EXTENSION_TABLE for conductor layer %s. nxtgrds are broken.

**Description**

Some or all of the nxtgrds are broken. Regenerate all the nxtgrds and re-run.

**What Next**

If the issue still exist after nxtgrd regeneration, contact the Synopsys Support Center.

---

## EX-2200

(Warning) The grd file contains %s models, but they are ignored

**Description**

Although the nxtgrd file contains models described in the message, they are ignored because of customor setting.

**What Next**

Please refer to StarRC manual on how to turn on the models.

---

## EX-2201

(Warning) Tall via layer %s and %s have couplings, but there is no PAIR_TO defined for them in ITF. Caps between these two layers may be extracted with inaccuracy.

**Description**

The two tall via layers described in the warning message have coupling caps in design. However, there is no PAIR_TO defined for them in TALL_VIA_CONFIG of either one of these two layers in ITF. Coupling cap accuracy is not good for these two layers.

**What Next**

Add the reported layers in PAIR_TO section of TALL_VIA_CONFIG.

Feedback

## EX-2202

(Warning) Instance port via center is not covered by any metal at: (%d %d), (%d %d)nm on level %d.

**Description**

Via node is created at the center of the via. If the center is not covered by any metal, there will be a shorting resistor connecting via node and the node on the metal.

**What Next**

Nothing

## EX-2203

(Warning) '%s'

**Description**

StarRC detect inconsist layers in ignore cap behavior.

**What Next**

Overlapping polygons' ignore cap pair behavior inconsistency is detected, which may introduce accuracy issues, user need to fix overlapping layer definition.

## EX-2204

(Warning) GATE_TO_GROUND_ADJUSTMENT_CAP table is corrupted, please check your ITF or grd file

**Description**

The nxtgrd file may be corrupted with inconsistent GATE_TO_GROUND_ADJUSTMENT_CAP statements.

**What Next**

Please make sure that the nxtgrd file is valid and original.

## EX-2205

(Warning) Thermal parameter file(s) defined by user, has failed to open, please check thermal parameter file location etc. Turns off thermal aware extraction.

Feedback

**Description**

Thermal parameter file(s) defined by user, has failed to open, please check thermal parameter file location etc. Turns off thermal aware extraction.

**What Next**

Please check thermal parameter file(s) defined in either SMC command file or user command file.

---

## EX-3005

(Fatal) For the layer %s option RPV_VS_COVERAGE can't be used for a via array.

**Description**

Option RPV_VS_COVERAGE can't be used for a via array.

**What Next**

Modify ITF definitions and regenerate nxtgrd.

---

## EX-3006

(Warning) Excessive number (%d) of overlapping polygons encountred in the input database at location: (%d,%d) DB layer %d.

**Description**

Detected a polygon that overlaps with significant number of other polygons.

**What Next**

Remove overlaps in the input database.

---

## EX-3007

(Warning) Cannot open EM_PARAM_MAPPING_FILE: %s.

**Description**

xTractor was not able to read the EM_PARAM_MAPPING_FILE.

**What Next**

Check to make sure that EM_PARAM_MAPPING_FILE exists and that the xTractor has read permissions for it.

Feedback

## EX-3008

(Warning) EM_PARAM_MAPPING_FILE syntax: %s.

**Description**

EM_PARAM_MAPPING_FILE has syntax error. The line with syntax error is ignored.

**What Next**

Check to make sure that EM_PARAM_MAPPING_FILE has correct syntax.

## EX-3009

(Warning) Model for TSV layer found multiple times in 3D_IC_SUBCKT_FILE specification. Selecting first model found in file %s, ignoring subsequent model from file %s.

**Description**

This warning is seen whenever the 3D IC model for a TSV layer is specified more than once in the input file(s) specified with the 3D_IC_SUBCKT_FILE option. StarRC selects the first model it reads from the user-specified file(s) and disregards all others, even if they appear in the same input file.

**What Next**

Remove extraneous model definitions and specify only one 3D IC model for each TSV layer.

## EX-3010

(Warning) Density grid is enlarged due to huge input layout size and small number of polygons. It may introduce errors in density calculation.

**Description**

When the number of polygon is small, the layout is extracted in a single partition. To prevent memory from being exhausted, density grid is enlarged when layout area is too big. It may introduce error in density value calculation.

**What Next**

Reduce the layout size to 10mm X 10mm for N10 and above or 2mm X 2mm for N7 and below.

Feedback

## EX-3011

(Fatal) StarRC command MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE is not supported when ITF file has VERTICAL_RESISTANCE_VS_SI_WIDTH_AND_LENGTH table.

**Description**

StarRC command MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE is not supported when ITF file has VERTICAL_RESISTANCE_VS_SI_WIDTH_AND_LENGTH table.

**What Next**

Remove MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE from the StarRC command file.

## EX-3012

(Fatal) The maximum VIA_INDEX in layer_info file (%d) is bigger than that in nxtgrd file (%d), due to different version of StarXtract and grngenxo.

**Description**

Using different version of StarXtract and grngenxo may cause different number of via layers in layer_info file and nxtgrd file, which may cause program crash.

**What Next**

Regenerate nxtgrd file with newer version grdgenxo.

## EX-3013

(Warning) %d violation are present for net %d!

**Description**

One or more of the following netlist integrity violation are present for this net. 1. NodeID Bound - some nodes are beyond nodeCount for the net. 2. Holes in node Id - For res nodes, we should have all the nodes from 0 to nodeCount -1 but we have some of the missing from the list. 3. Negative parasitics - some cap/res values are negative. 4. Netlist Connectivity (open count) - there are open nets present in the final netlist.

**What Next**

These could be design problems. Ensure that your setting is correct. If problme still persists, contact StarRC.

Feedback

## EX-3014

(Warning) IC Compiler II InDesign StarRC's %s option is invoked. It is not meant for final signoff flow because aggregate scaling may not represent the actual process corner characteristics of a technology node.

**Description**

StarRC scales parasitic values according to provided coefficients.

**What Next**

Please make sure this option is not used during sign-off.

## EX-3015

(Warning) IC Compiler II InDesign StarRC's %s option is invoked.

**Description**

StarRC provides the details of the parasitics of the routed sections of the specified nets while ICC2 native extraction estimates the parasitics for the open parts of the network.

**What Next**

Please make sure this option is not used during sign-off.

## EX-3016

(Warning) Trench contact polygon at (%d %d %d %d) on layer %d abut two other polygons with trench contact extension.

**Description**

StarRC only support trench contact extension from one neighbor.

## EX-3017

(Fatal) Aborting extraction on core %d because of an error during extraction on another core.

**Description**

If an error occurs during extraction on one core, extraction on all other cores terminates with this error message.

Feedback

### What Next

See the summary file for information about the nature of the error on the first failing core.

---

## EX-3018

(Warning) Resistor width smaller than WMIN are snapped to WMIN.

### Description

Resistor width smaller than WMIN are snapped to WMIN in the netlist tail comments. Please refer to snap_resistor_width file in the star directory for pairs of nodes of the resistance with width snapped.

### What Next

Nothing is required at your side at the moment.

---

## EX-3019

(Information) [STAR_MAIN_SUMMARY] Extracting %s with bounding box left: %.2f bottom: %.2f right: %.2f top: %.2f

### Description

The displayed coordinates represent values for the lower-left and upper-right corners of the layout being extracted by a particular extraction job in a StarRC run. The ID of the partition being extracted is also listed if StarRC has internally divided the layout into multiple partitions.

### What Next

This is an informational message only. Remove the PRINT_EXTRACTION_BBOX option from the StarRC command file or set its value to NO to prevent this message from appearing in the summary file.

---

## EX-3020

(Information) Extrapolation on RPV_VS_AREA table for via connecting a TRENCH_CONTACT, FIELD_POLY or GATE layer at bottom is handled differently in TSMC N5 and below.

### Description

For via connecting a TRENCH_CONTACT, FIELD_POLY or GATE layer at bottom, extrapolation on RPV_VS_AREA table is handled differently in TSMC N5 and below comparing to other nodes. For TSMC N5 and below, the tool determines the conductance

Feedback

of the via with the smallest or biggest area entry and uses that value to calculate the via resistance for any vias with smaller or bigger areas. For other nodes, if via area is outside the bounds of area entry in the RPV_VS_AREA table, the tool uses the RPV value according to the smallest or biggest area.

**What Next**

This is an informational message only. If you do not want to extrapolate RPV_VS_AREA table on a perticular layer, you can specify EXTRAPOLATE_NO on that table.

---

## EX-3021

(Warning) Process %d for extracting partition %d exited after receiving signal %d

**Description**

Sometimes a StarRC run exits without an error messages in the summary file if the processes used for extraction are delivered an uncaught signal. This message is output to help identify the root cause of such failures.

---

## EX-3022

(Fatal) RCAPI_VERSION RCAPI_MODEL_VERSION or RCAPI_PARAM_FILE is missing in the nxtgrd file.

**Description**

RCAPI_VERSION RCAPI_MODEL_VERSION and RCAPI_PARAM_FILE must be specified together with RCAPI_LIBRARY_NAME in the ITF header and stored in nxtgrd file.

**What Next**

specify RCAPI_VERSION RCAPI_MODEL_VERSION and RCAPI_PARAM_FILE together with RCAPI_LIBRARY_NAME in the ITF header and regenerate nxtgrd file.

---

## EX-3023

(Warning) There are two nets with different net id has the same netname net1: %s net_id: %ld, net2: %s net_id: %ld. if they are different actually, please set CASE_SENSITIVE: YES.

**Description**

if case_sensitive:no, we think net1 and NET2 are the same.

Feedback

**What Next**

Set CASE_SENSITIVE:YES

---

## EX-3024

(Fatal) TMIRC initialization failed! Please check if PARAM_FILE specified in %s exist, and if proper version (%s) of library is specified by TMIRC_LIBRARY_FILE.

**Description**

TMIRC initialization function failed. Possible reasons include not limited to: missing file or wrong path of files in the TMIRC configure file specified by TMIRC_CONFIG_FILE; wrong version of library specified by TMIRC_LIBRARY_FILE.

**What Next**

Make sure to use proper version of TMIRC_LIBRARY_FILE is used, all files specified in TMIRC_CONFIG_FILE exist. If problem persist, please contact TSMC for TMIRC initialize issue.

---

## EX-3025

(Fatal) TMIRC gate resistance extraction function failed.

**Description**

StarRC calls a function in TMIRC libary to extract resistance on gate. The function failed.

**What Next**

contact Synopsys for support.

---

## EX-3026

(Fatal) TMIRC capacitance extraction function failed.

**Description**

StarRC calls a function in TMIRC libary to extract capacitance around gate and diffusion. The function failed.

**What Next**

contact Synopsys for support.

Feedback

## EX-3027

(Fatal) TMIRC failed. %s.

**Description**

There is an issue in TMIRC library.

**What Next**

get updated library from foundry.

## EX-3028

(Fatal) Failed to load shared object: %s

**Description**

There is an issue loaing shared object.

**What Next**

Contact the Synopsys Support Center.

## EX-3030

(Fatal) corrupted TCNR simulation result file.

**Description**

TCNR simulation result file should include three columns: instancer_name TCNR_source and TCNR_drain. The TCNR simulation result of this test case is corrupted.

**What Next**

Contact Synopsys Inc.

## EX-3031

(Fatal) The number of tcnr value in TCNR simulation result is wrong. Please check if proper version of hspice is specified in TCNR_SIMULATION_SETUP_FILE.

**Description**

hspice version Q-2020.03-SP1-2 or later is needed to support TCNR SMC.

**What Next**

set hspice version Q-2020.03-SP1-2 or later in TCNR_SIMULATION_SETUP_FILE.

Feedback

## EX-3032

(Warning) The RPSQ is set to 0.001 on superconductive on layer %s for TCNR extraction.

**Description**

When TCNR is on, diffusion layer needs to be conductive to be extracted.

**What Next**

Check RPSQ setting in nxtgrd and mapping files. Set RPSQ on diffusion layer not smaller than 0.001.

## EX-3033

(Fatal) Unexpected connection between trench contact and RVTV at (%f %f), (%f %f).

**Description**

All trench contact should connect RVTV from one side of RVTV.

**What Next**

Check the layout.

## EX-3034

(Fatal) There is no trench contact connection on RVTV layer at (%d %d), (%d %d).

**Description**

Every RVTV shape need to have 1 and more trench contact connections.

**What Next**

Check the layout.

## EX-3035

(Warning) no resistor was added between the bulk layer and a pin of net '%s' for NETLIST_BULK_TO_PIN: yes because the net did not have any pins.

**Description**

The NETLIST_BULK_TO_PIN option can only work on nets that have pins. The option has no effect for nets that do not have any pins.

Feedback

**What Next**

Check your layout for possible errors. Remove NETLIST_BULK_TO_PIN: yes from the StarRC command file to prevent this warning from being generated.

---

## EX-3036

(Fatal) INTERNAL Error: ML model file '%s' does not exist.

**Description**

ML model is expected to be provided with StarRC installation.

**What Next**

Contact the Synopsys Support Center if this problem persists.

---

## EX-3037

(Fatal) 3DIC: syntax error when parsing 3C RLC model.

**Description**

StarRC only support the specific 3C RLC models.

**What Next**

Check the model defined in 3D_IC_SUBCKT_FILE.

---

## EX-3039

(Fatal) Density vaule of Conductor Layer '%s' in density layers file '%s' is not between 0 and 1

**Description**

Density value should be in 0~1

**What Next**

Check the density value defined in density layers file.

---

## EX-3040

(Fatal) Conductor Layer '%s' in density layers file '%s' is not DB layer.

**Description**

StarRC only support DB layer in density layers file.

Feedback

**What Next**

Check the conductor layer defined in density layers file.

---

## EX-3041

(Warning) Missing metal on layer %s for virtual via at (%d %d %d %d)

**Description**

Virtual via needs to be covered by metals on both top and bottom sides.

**What Next**

Check your layout for possible errors.

---

## EX-3045

(Fatal) corrupt grd file, duplicate mask pair in %s table.

**Description**

One mask pair can only be specified once in the same table in the ITF file. Duplicate mask pair is found during parsing nxtgrd file in extraction.

**What Next**

Contact foundry for a regenerated nxtgrd file.

---

## EX-3046

(Fatal) corrupt grd file, missing mask pair in %s table.

**Description**

All mask pairs must be specified the same table if NUMBER_OF_MASKS is specified in the ITF file. Missing mask pair is found during parsing nxtgrd file in extraction.

**What Next**

Contact foundry for a regenerated nxtgrd file.

---

# EXC

---

## EXC-0001

(Error) An exception has conflicting rise_or_fall and to_rise_or_fall options specified.

Feedback

### Description

The specified endpoint cannot simultaneously be both rising and falling. The -rise/-fall options refer to a rising/falling value at the end point. As a result, the -rise_to option conflicts with the -fall option and vice versa. The exception will be ignored. The exception will be ignored because of ambiguity due to the conflicting options. Ignored exceptions might result in undesired analysis of the design, resulting in larger optimization or timing closure effort. Multicycle paths in the design might be analyzed with the wrong timing, or timing violations might be reported for false paths. Maximum or minimum path delays will be checked against the library specified setup or hold time of the capturing clock.

### ONE POSSIBLE SCENARIO

Consider a scenario where a constraint is specified with a conflicting -rise and -fall_to option:

set_multicycle_path 2 -rise -from [get_pins ff1/CP] \ -fall_to [get_pins ff2/D]

This exception has conflicting values specified for the ff2/D endpoint. The -fall_to option specifies a falling edge at this point, and the -rise option specifies a rising edge at this point. Because both transitions cannot occur simultaneously, the exception will be ignored, and an EXC_0001 rule violation will be issued.

### What Next

The "Violation Details" section in the GUI contains the design objects in the exception and the location of the constraint conflicts.

### FIX SUGGESTION

Revise the exception to remove the inconsistency. If the exception is not revised, it will be ignored. For the following example, the exception could be applied to both transitions at the endpoint, the -rise/-fall or -rise_to/-fall_to options need to be removed.

The following example shows possible ways to resolve the conflict:

If the required analysis at the endpoint is for a rising edge, it can be rewritten in one of two ways:

set_multicycle_path 2 -rise -from [get_pins ff1/CP] \ -to [get_pins ff2/D]

Or

set_multicycle_path 2 -from [get_pins ff1/CP] \ -rise_to [get_pins ff2/D]

Similarly, if the required analysis at the endpoint is for a falling edge, it can be rewritten in one of two ways:

set_multicycle_path 2 -fall -from [get_pins ff1/CP] \ -to [get_pins ff2/D]

Or

Feedback

```
set_multicycle_path 2 -from [get_pins ff1/CP] \ -fall_to [get_pins ff2/D]
```

**See Also**

set_false_path set_multicycle_path set_min_delay set_max_delay

---

## EXC-0002

(Warning) An exception has both valid and invalid startpoints and endpoints specified.

**Description**

The *-from* objects are not valid timing path startpoints, and the *-to* objects are not valid timing path endpoints.

Valid startpoints are:

Input or bidirectional ports

Register clock pins

Transparent latch D-pins

Internal pins that have a *set_input_delay* constraint set

Internal pins that have a set_min_delay or set_max_delay constraint set with the *-from*, *-rise_from*, or *-fall_from* option

A clock source

Valid endpoints are:

Output or bidirectional ports

Pins constrained by a setup/hold/recovery/removal timing check including:

Register data pins

Register preset and clear pins

Clock gating enable pins

Internal pins that have a set_output_delay constraint set

Internal pins that have a set_min_delay/set_max_delay constraint set with the -to, -rise_to, or -fall_to option

The "Violation Details" section of the GUI shows the -from or -to objects that are invalid. The reasons are as follows:

Non-startpoint – The pin is internal and is not a timing path startpoint

Non-endpoint – The pin is internal and is not a timing path endpoint

Feedback

Endpoint – The pin or port is used as a -from object and is a timing path endpoint

Startpoint – The pin or port is used as a -to object and is a timing path startpoint

Case disabled – The pin or port has been disabled by set_case_analysis

Check disabled – Timing check at the pin or port has been disabled

Sequential disabled – A sequential arc at the timing path startpoint is disabled

Node disabled – A valid endpoint or startpoint is disabled

Hierarchical pin – The pin is on a hierarchical boundary

Not a start cell – The cell used as a -from object does not have any valid timing path startpoints

Not an end cell – The cell used as a -to object does not have any valid timing path endpoints

Only false path (set_false_path) and multicycle path (set_multicycle_path) exceptions are included in this check.

The invalid startpoints and endpoints will be ignored, and the exception will take effect only on the valid timing points. The result is poor analysis or relaxed timing requirements being applied to the design.

**ONE POSSIBLE SCENARIO**

Consider a scenario where wildcards are used to specify that all paths that end at register pins with the name ‘D’ in a design are false:

set_false_path -to [get_pins */D]

The name ‘D’ could also be a pin name for other gates in the library that may not be valid timing path endpoints. In this scenario, the false path exception is not applied to ‘gate/D’ because this is a combinational cell, and it is not a valid endpoint. An EXC_0002 rule violation will be issued.

**FIX SUGGESTION**

Revise the exceptions to specify only valid startpoints and endpoints.

Exceptions containing wildcard may lead to unintended false paths or multicycle paths being applied to the design. For example, false paths originally intended only for D-type flip-flops may be applied more broadly when new sequential elements are added to the design.

For the preceding example scenario, the false path can be specified as:

set_false_path -from ff1/D

Feedback

**See Also**

set_false_path set_multicycle_path

---

## EXC-0003

(Warning) All -from objects for an exception are not valid path startpoints.

**Description**

All of the *-from* objects are not valid path startpoints. This exception will be ignored.

Valid startpoints are:

Input or bidirectional ports

Register clock pins

Transparent latch D-pins

Internal pins that have a set_input_delay constraint set

Internal pins that have a set_min_delay/set_max_delay constraint set with the -from, -rise_from, or -fall_from option

A clock source

The "Violation Details" section in the GUI shows the -from objects that are not valid. The reasons are as follows:

Non-startpoint – The pin is internal and is not a timing path startpoint

Endpoint – The pin or port is used as a -from object and is a timing path endpoint

Case disabled – The pin or port has been disabled by set_case_analysis

Check disabled – Timing check at the pin or port has been disabled

Sequential disabled – A sequential arc at the timing path startpoint is disabled

Node disabled – A valid startpoint is disabled

Hierarchical pin – The pin is on a hierarchical boundary

Non-start cell – The cell used as a -from object does not have any valid timing path startpoints

Only false path (set_false_path) and multicycle path (set_multicycle_path) exceptions are included in this check.

The exception will be completely ignored. Ignored exceptions can lead to larger optimization or timing closure effort.

Feedback

**ONE POSSIBLE SCENARIO**

Consider the following command used to disable a path between two registers:

set_false_path -from [get_pins ff1/Q] -to [get_pins ff2/D]

Even though the -to objects are correct, this exception is entirely ignored because the -from object is invalid, making the path specification ambiguous. The EXC_0003 rule violation will be issued.

**FIX SUGGESTION**

Revise the exceptions to specify only valid startpoints.

For the example, set the false path to specify the clock pin of the register as the startpoint:

set_false_path –from [get_pins ff1/CP] –to [get_pins ff1/D]

**See Also**

set_false_path set_multicycle_path

---

## EXC-0004

(Warning) All -to objects for an exception are invalid timing path endpoints.

**Description**

All of the *-to* objects are not valid path endpoints. This exception will be ignored.

Valid endpoints are

- Output or bidirectional ports
- Pins constrained by a setup/hold/recovery/removal timing check including:
- Register data pins
- Register preset and clear pins
- Clock gating enable pins
- Internal pins that have a set_output_delay constraint set
- Internal pins that have a set_min_delay/set_max_delay constraint set with the -to, -rise_to, or -fall_to option

Feedback

The "Violation Details" section in the GUI shows the -to objects that are invalid. The reasons are as follows:

- Non-endpoint – The pin is internal and is not a timing path endpoint
- Startpoint – The pin or port is used as a -to object but is a timing path startpoint
- Case disabled – The pin or port has been disabled by set_case_analysis
- Check disabled – The timing check at the pin or port has been disabled
- Sequential disabled – A sequential arc at the timing path startpoint is disabled
- Node disabled – A valid endpoint is disabled
- Hierarchical pin – The pin is on a hierarchical boundary
- Not an end cell – The cell is used as a -to object and does not have any valid timing path endpoints

Only false path (set_false_path) and multi-cycle path (set_multicycle_path) exceptions are included in this check.

The exception will be ignored, resulting in timing violations due to false paths or stricter timing requirements. Ignored exceptions can lead to larger optimization or timing closure effort.

**ONE POSSIBLE SCENARIO**

Consider a scenario where a path is disabled between two registers with the constraint:

create_clock -period 10 [get_ports CLK] set_false_path -from [get_pins ff1/CP] -to [get_pins inv/Z]

Even though the -from object is correct, this exception will be ignored because the -to object is invalid, which makes the path specification ambiguous. As a result, the EXC_0004 rule violation will be issued.

**ANOTHER POSSIBLE SCENARIO**

Consider a scenario where the correct startpoint and endpoint are specified for disabling a path between two registers with the following constraints:

create_clock -period 10 [get_ports CLK] set_case_analysis 0 [get_pins ff_end2/CP] set_false_path -from [get_pins ff_start1/CP] -to [get_pins ff_end2/D]

Even though both the -from and the -to objects are correct, this exception will be ignored. The reason is that the timing checks on the -to object are disabled by a set_case_analysis constraint on the ff_end2 register’s clock pin CP. The exception cannot be applied, and an EXC_0004 rule violation will be issued.

Feedback

**What Next**

The Violation Details section in the GUI shows the reason the -to objects are invalid.

For the first example scenario, the Violation Details section provides the following information: Figure 3: First Scenario Violation Details

The Reason, non-endpoint, is included in the table, which shows that the specified -to point is not a valid endpoint, and the set_false_path constraint was ignored.

For the second scenario, the “Violation Details” section provides the following information: Figure 4: Second Scenario Violation Details

The Reason, check disabled, is highlighted in the table, which means that the timing check at the specified -to point is disabled, and the set_false_path constraint was ignored.

To understand why the timing check is disabled at the -to point, use report_disable_timing -all_arcs on the -to cell, which is the endpoint specified in the constraint. This command may be useful for the case disabled, check disabled, sequential disabled, and node disabled Reason provided in the “Violation Details” section. For the example scenario, the command and its report are shown here:

rtl_shell> report_disable_timing -all_arcs [get_cells ff_end2]

**********
Report : disable_timing
Design : …
**********

Attributes
c - case-analysis
C - Conditional arc
d - default conditional arc
f - false net-arc
l - loop breaking
L - db inherited loopbreaking
m - mode
p - propagated constant
u - user-defined
U - User-defined library arcs

Cell or Port From To Sense Flag Reason
---------- ff_end2 CP QN rising_edge c CP = 0
ff_end2 CP Q rising_edge c CP = 0
ff_end2 CP CP clock_pulse_width_high c CP
ff_end2 CP CP clock_pulse_width_low c CP
ff_end2 CP D setup_clk_rise c CP = 0
ff_end2 CP D hold_clk_rise c CP = 0

The report shows that all the timing checks on the ff_end2 register were disabled due to a case analysis condition (flag column) that sets the CP pin on ff_end2 to 0 (reason column).

**FIX SUGGESTION**

It is best to revise the exceptions to specify only valid endpoints.

For the first example scenario, the correct way to specify the false path is to specify the data pin of the register as the endpoint:

set_false_path -from [get_pins ff1/CP] -to [get_pins ff2/D]

Feedback

For the second example scenario, you should verify the set_case_analysis constraint. If it is correct, the false path specification definition will need to be revisited. If it is incorrect, the case analysis command can be removed from the constraints.

**See Also**

set_false_path set_multicycle_path report_disable_timing set_case_analysis

---

## EXC-0005

(Error) An exception will create startpoints or endpoints and break other timing paths through those pins.

**Description**

A maximum or minimum delay exception forces the path startpoints or endpoints, because the -from or -to values are not typical timing path. This will break other paths from passing through these points. The ‘Violation Details’ located in the GUI shows the -from or -to pins that have been forced to be startpoints or endpoints. This exception will disable all other paths that would have passed through these points.

**ONE POSSIBLE SCENARIO**

Consider a scenario where a maximum delay exception is set on a timing path as follows:

set_max_delay 2 -from [get_pins ff_start/Q] -to [get_pins ff_end1/D]

The constraint specifies the ‘Q’ pin of a register which is not a valid timing startpoint. Any other paths that pass through this pin will be disabled. The path from ff_start to ff_end2 will be disabled because a new timing startpoint is created at ff_start/Q. In addition, the path from ff_start/CP to ff_end1 is blocked by the startpoint ff_start/Q. This exception will cause a EXC_0005 violation to be issued. Figure 1: Invalid Timing Startpoint

**FIX SUGGESTION**

Revise the exceptions to specify only valid startpoints and endpoints.

For the preceding example, the command specifies the maximum delay for the path by using the clock pin of the register, ff_start/CP, as the startpoint:

set_max_delay 2 -from [get_pins ff_start/CP] -to [get_pins ff_end1/D]

**See Also**

set_max_delay set_min_delay

---

## EXC-0007

(Warning) An exception has incomplete values.

Feedback

### Description

Both rise and fall values should be specified for maximum delay and minimum delay exceptions.

This check is performed only with the -rise and -fall options. There is no check if the specification is incomplete or if the -rise_from, -fall_from, -rise_to, or -fall_to options are used in the maximum or minimum delay exception.

The paths with the missing transition are checked if they meet the library specified setup or hold time. This may be an undesired analysis for unspecified transition.

### ONE POSSIBLE SCENARIO

Consider a scenario where a set_max_delay exception is specified with the -rise flag, but no constraint is included for the -fall flag:

set_max_delay -rise 8 -from [get_pins ff1/CP] -to [get_pins ff2/D]

The maximum delay exception forces a startpoint and endpoint for the rising path delays. Since no maximum delay constraint is set for the falling path; the path will be checked against the setup constraint for the capturing clock of register, ff2. In cases where a maximum or minimum delay constraint is specified for one transition and not the other, an EXC_0007 rule violation will be issued.

### FIX SUGGESTION

Provide the minimum and maximum delays, and rise and fall values for an exception.

For the preceding example, there are two ways the violation can be removed:

If different fall and rise constraints need to be set, then add another set_max_delay constraint with the -fall flag:

set_max_delay -rise 8 -from [get_pins ff1/CP] -to [get_pins ff2/D] set_max_delay -fall 9 -from [get_pins ff1/CP] -to [get_pins ff2/D]

If the fall constraint is the same as the rise constraint, then the -rise flag can be removed from the existing constraint:

set_max_delay 8 -from [get_pins ff1/CP] -to [get_pins ff2/D]

Or a -fall constraint can be added with the same delay as the rise constraint:

set_max_delay -rise 8 -from [get_pins ff1/CP] -to [get_pins ff2/D] set_max_delay -fall 8 -from [get_pins ff1/CP] -to [get_pins ff2/D]

### See Also

set_min_delay set_max_delay

Feedback

## EXC-0008

(Error) An exception is forcing startpoints or endpoints by breaking the clock network.

### Description

A maximum or minimum delay exception is forcing startpoints or endpoints. The -from or -to options specified are not timing startpoints or endpoints causing a break at the clock network. The ‘Violation Details’ section located in the GUI lists the pins that have been affected. This exception will break the clock network. An incomplete clock network may result in inaccurate timing analysis on the design.

### ONE POSSIBLE SCENARIO

Consider a scenario where a maximum delay constraint is set on an invalid startpoint:

set_max_delay 8 -from [get_pins inv/Z] -to [get_pins ff1/CP]

The inverter, inv/Z pin is not a valid timing startpoint; the set_max_delay command will create a startpoint at the specified pin and prevent the clock from propagating any further. This exception will cause an EXC_0008 rule violation to be issued. Figure 1: Invalid Timing Startpoint Preventing Clock Propagation

### FIX SUGGESTION

Revise the exceptions to specify only valid startpoints and endpoints.

For the preceding example, specify the maximum delay for the path using the clock source as the startpoint. Also, check your clock network to see if the maximum or minimum delay constraint can be removed. The example command is shown:

set_max_delay 8 –from [get_ports CLK] –to [get_pins ff1/CP]

### See Also

set_max_delay set_min_delay

## EXC-0009

(Warning) Inconsistent exception; min_delay must be less than max_delay.

### Description

Values for set_max_delay and set_min_delay must be consistent. The min rise delay must be less than the max rise delay. Similarly, the min fall delay must be less than the max fall delay.

Setup analysis on a design uses the worst-case operating condition, which produces the largest delay, to ensure that the setup time for the slowest path to each endpoint in the design is met. Similarly, hold analysis uses the best-case operating condition, which

Feedback

produces smallest delay, to ensure that the hold time for the fastest path to each endpoint in the design is met. It is expected that the max delay will always be larger than the min delay. If the min delay value is not smaller than the max delay, the min (hold) and max (setup) analysis will be performed on possibly incorrect values, resulting in optimistic timing.

**ONE POSSIBLE SCENARIO**

Consider a scenario where a max delay and min delay constraint are set on the same startpoint and endpoint, and the min delay is larger than the max delay:

set_max_delay 2 -from [get_pins ff1/CP] -to [get_pins ff2/D] set_min_delay 6 -from [get_pins ff1/CP] -to [get_pins ff2/D]

The min delay is set to 6 library timing units, and the max delay is set to 2 library timing units. Because the min delay is larger than the max delay, this will cause an EXC_0009 rule violation to be issued.

**What Next**

The ‘Violation Details’ section will give you the locations of the related set_max_delay and set_min_delay constraints with the problem.

**FIX SUGGESTION**

It is best to revise the exceptions with appropriate values for correct timing analysis. For the example scenario, the violation can be resolved by updating the constraints so that the max delay value is larger than the min delay:

set_max_delay 3 -from [get_pins ff1/CP] -to [get_pins ff2/D] set_min_delay 2 -from [get_pins ff1/CP] -to [get_pins ff2/D]

Make sure the values used make sense for your design.

**See Also**

set_max_delay set_min_delay

---

## EXC-0010

(Info) An exception has no corresponding min_delay for a max_delay exception.

A path constrained with a set_max_delay is also expected to have a corresponding set_min_delay exception. If the path specified in the from/through/to region of the set_max_delay is constrained through other means, then there is no risk associated with this violation. However, if the path is not constrained with a library check or a set_min_delay then the minimum timing on this path will not be checked.

Feedback

The purpose of this violation is to raise the awareness that you could have potentially missed specifying a constraint.

**ONE POSSIBLE SCENARIO**

Consider a scenario where a user sets a max delay constrain on a combinational path of the design.

set_max_delay 8 -from [get_ports in] -to [get_ports out]

Figure 1: Unconstrained Minimum Delay

Because this design has a purely combinational path and you did not specify input and output delays, its minimum delay is unconstrained. As a consequence, that minimum delay is never checked during timing analysis and could results in unexpected timing analysis.

Constraint consistency flags an EXC_0010 rule violation to make sure that the missing set_min_delay does not cause some paths to go unchecked by analysis.

**FIX SUGGESTION**

Specifying a set_min_delay constraint for the from/through/to corresponding to the set_max_delay constraint would eliminate this rule violation.

**See Also**

set_max_delay set_min_delay

---

## EXC-0011

(Info) An exception has no corresponding max_delay for a min_delay exception.

**Description**

A path constrained by set_min_delay is also expected to have a corresponding set_max_delay exception.

If the path specified in the from/through/to region of the set_min_delay is constrained through other means, then there is no risk associated with the EXC_0011 rule violation. However, if the path is not constrained with a library check or a set_max_delay then the maximum timing on this path will not be checked.

The purpose of this violation is to raise awareness of a potentially missing constraint in the design.

**ONE POSSIBLE SCENARIO**

Consider a scenario where a user sets a min delay constrain on a combinational path of the design.

set_min_delay 2 -from [get_ports in] -to [get_ports out]

Feedback

Because this design has a purely combinational path and you have not specified input and output delays, its maximum delay is unconstrained. As a consequence, the maximum delay is never checked during timing analysis. Constraint consistency flags an EXC_0011 rule violation to make sure that the missing set_max_delay does not cause some paths to go unchecked by analysis.

**What Next**

The "Violation Details" section also reports what constraints are currently applied on that path and what is missing.

**FIX SUGGESTION**

Specifying a set_max_delay constraint for the from/through/to corresponding to the set_min_delay constraint would eliminate this rule violation.

**See Also**

set_max_delay set_min_delay

---

## EXC-0012

(Info) An exception has incomplete values.

*Status*: Disabled by default

**Description**

An incomplete false path exception was specified. In most cases all combinations of rise/fall and setup/hold should be false if any of them are false. The violation detail section highlights which value is missing. If the current exception truly captures the intent of the designer and that not all the rise/fall and setup/hold are false for the specified path, this violation can be safely ignored. However, it is not a common practice that the user would want the path to be false only for a subset of those.

**FIX SUGGESTION**

It is best to re-express the false path exception for all the *rise/fall* and *setup/hold* combinations.

The current set of exceptions can be reported with the *report_exceptions* command:

rtl_shell> report_exceptions -from [get_pins {ff1/CP}] -to [get_pins {ff2/D}]

****************************************** Report : exceptions Design : EXC_0012 Scenario: default Version: … Date : … ******************************************

# ./src/scripts/constraints.tcl, line 3 set_false_path -setup -rise -from [get_pins {ff1/CP}] -to [get_pins {ff2/D}]

Feedback

**See Also**

set_false_path report_exceptions

---

## EXC-0013

(Info) An exception has incomplete values.

*Status*: Disabled by default

**Description**

An incomplete multicycle path exception was specified. In most cases all combinations of rise/fall and setup/hold should be specified if any of them are multicycle. The violation detail section will highlight which combination value is missing.

If the current exception truly captures the intent of the designer and that not all combinations of the rise/fall and setup/hold have a multicycle condition, this violation can be safely ignored. However, it is not a common practice that the user would want the path to have a multicycle value only for a subset of those.

**FIX SUGGESTION**

It is best to re-express the multicycle path exception for all the rise/fall and setup/hold combinations.

The currently set exceptions can be reported using the report_exceptions command:

rtl_shell> report_exceptions -from [get_pins {ff1/CP}] -to [get_pins {ff2/D}]

****************************************** Report : exceptions Design : EXC_0013 Scenario: default Version: ... Date : ... ******************************************

########################################################################## ## Exceptions that are dominant for at least one path: # ./src/scripts/constraints.tcl, line 3 set_multicycle_path 2 -setup -rise -from [get_pins {ff1/CP}] -to [get_pins {ff2/D}]

**See Also**

set_multicycle_path report_exceptions

---

# EXD

---

## EXD-0008

(Warning) The input_or_output delay at pin object_name is forcing a start_or_end point that blocks paths through this pin.

Feedback

**Description**

Use the set_input_delay or set_output_delay command to set the input or output delay on the reported pin location. This forces the reported pin to be either a timing startpoint or a timing endpoint. All paths through this pin are now blocked.

In the event no valid paths are going through this pin, this warning will not be issued.

Paths which should be crossing this pin will now be segmented. The path delays are now calculated based on the set_input_delay or set_output_delay command specifications. This calculation might result in incorrect timing analysis of the path.

**ONE POSSIBLE SCENARIO**

Consider a scenario shown in the following figure. where a clock is created on port CLK, while input delay is specified with respect to clock CLK on pin U1/Z:

create_clock -period 10 [get_ports CLK] set_input_delay -clock CLK 1 [get_ports A] set_input_delay -clock CLK 1 [get_ports B] set_input_delay -clock CLK 3 [get_pins U1/Z]

The set_input_delay command breaks any timing paths going through pin U1/Z as shown in Figure 1. The pin, U1/Z , becomes a startpoint for the rest of the design. Any path originating at pin U1/Z will now use “3” as the input delay rather than the actual propagated delay between ports “A” or “B” and pin U1/Z.

**What Next**

The “Violation Details” section located in the GUI reports the pin that is forced to become a path startpoint due to the input delay specification.

**FIX SUGGESTION**

Remove the set_input_delay command specification and use the propagated delay instead.

# FAE

## FAE-1001

(error) set_register_replication is not enabled during FM eco mode.

**Description**

The command is not enabled during formality eco mode, which is enabled using set_fm_eco_mode

Feedback

**What Next**

Command is not enabled in this mode so either exit the FM eco mode or drop the command.

---

## FAE-1002

(error) Error encountered during execution of region file '%s' in FM eco mode.

**Description**

Error encountered while executing region file which is being done during set_top_module in fm eco mode.

**What Next**

Verify the contents of region file.

---

## FAE-1003

(warning) It is already in FM eco mode.

**Description**

Tool is alredy set in formality eco mode. Check for correct region file.

**What Next**

Verify the region file path.

---

## FAE-1004

(warning) This command does not seem to be the first command. Execute elaborate, set_top_module, compile on design.

**Description**

set_fm_eco_mode keeps the tool in fm eco mode which does special actions in these commands so ideally set_fm_eco_mode should be the first command in the session. It seems that it is not the first command executed in current session so make sure to execute the impacted commands.

**What Next**

Either restart the session and execute the command again or start from elaborate again.

Feedback

## FAE-1005

(error) Error encountered during %s in FM eco mode.

**Description**

Error encountered during particular operation.

**What Next**

check the configuration.

## FAE-1006

(error) Verification checkpoints can't be enabled during FM eco mode.

**Description**

Verification checkpoint can't be enabled during formality eco mode, which is enabled using set_fm_eco_mode.

**What Next**

This operation is not enabled so either exit the FM eco mode or drop the command.

## FAE-1007

(error) Region file %s is not in correct format.

**Description**

Region file specified is not in correct encrypted formated.

**What Next**

Provide correct Region file.

## FAE-1008

(error) Required option '%s' for Targeted Synthesis is missing.

**Description**

Required option for Targeted Synthesis is missing.

**What Next**

Provide the required option to run Targeted Synthesis.

Feedback

## FAE-1009

(error) Invalid format of LLIB FRD file '%s'.

**Description**

The FRD file specified is not in the correct format.

**What Next**

Provide the FRD file in the correct format.

## FAE-1010

(error) Error encountered during loading ONET '%s' in TS flow.

**Description**

Encountered an error when loading the ONET (original netlist from full synthesis) in Targeted Synthesis flow.

**What Next**

Review the setup and the original netlist (ONET) provided as input to Targeted Synthesis flow.

## FAE-1011

(error) Error encountered during executing step '%s' in TS flow.

**Description**

Encountered an error when executing steps in Targeted Synthesis flow. Please review the TS setup before proceeding.

**What Next**

Review the setup and the options provided as input to Targeted Synthesis flow.

## FAE-1012

(error) FRD file '%s' does not include hybrid data file.

**Description**

The FRD file does not include the hybrid data file required for Targetes Synthesis flow.

Feedback

**What Next**

Provide a valid FRD file with region and hybrid data required for Targeted Synthesis.

---

## FAE-1013

(error) FRD file '%s' does not include region data file.

**Description**

The FRD file does not include the region data file required for Targetes Synthesis flow.

**What Next**

Provide a valid FRD file with region and hybrid data required for Targeted Synthesis.

---

## FAE-1015

(info) Extracting '%s' from '%s' .

**Description**

Exracting the reguired data for the flow.

**What Next**

This is an information only message. No action is needed.

---

## FAE-1020

(error) duplicate_registers is not enabled during FM eco mode.

**Description**

The command is not enabled during formality eco mode, which is enabled using set_fm_eco_mode

**What Next**

Command is not enabled in this mode so either exit the FM eco mode or drop the command.

---

# FILE

---

## FILE-001

(error) Unable to open file '%s' for reading; %s

Feedback

**Description**

The file cannot be read for the reason specified.

**What Next**

Examine the reason given. The file may not exist or may not be readable due to file permissions.

---

## FILE-002

(error) File '%s' cannot be found using search_path of: '%s'.

**Description**

The file cannot be found on the specified search_path.

**What Next**

Determine whether the file name or the search_path is incorrect, or whether the file does not exist at all.

---

## FILE-003

(error) Unable to open file '%s' for writing; %s.

**Description**

The file cannot be opened for writing for the reason specified.

**What Next**

Examine the reason given. The parent directory may not exist or write permission may be denied.

---

## FILE-004

(error) Unable to create directory '%s'; %s.

**Description**

The directory cannot be created for the reason specified.

**What Next**

Examine the reason given. The parent directory may not exist or write permission may be denied.

Feedback

## FILE-005

(error) Unable to access directory '%s'; %s

**What Next**

Check the directory path name.

## FILE-006

(error) Unable to remove directory '%s'; %s

**Description**

The tool was unable to remove the specified directory.

**What Next**

The directory could not be removed.

## FILE-007

(information) Loading %s file '%s'

**Description**

This informational message shows the full path name and type of a file being read into the application.

**What Next**

Use the full path name to help understand any problems encountered while reading the file.

## FILE-008

(error) Directory '%s' already exists

**Description**

The directory with the specified name already exists.

**What Next**

Try another name for the new directory.

Feedback

## FILE-009

(error) File '%s' already exists

**Description**

A file with the specified name already exists.

**What Next**

Try another name for the new file.

## FILE-010

(error) Unable to lock file '%s' for write @%s; %s.

**Description**

The file cannot be write-locked for the reason specified.

**What Next**

Examine the reason given. The file may be locked by another process or lock services may not be available on this server.

The reason “No locks available.” indicates a machine error. The ‘lockd’ process (a part of the NFS lock manager, which supports record locking operations on NFS files) is either not running on the server or has malfunctioned. ‘lockd’ may need to be started, or killed and then restarted. In some cases, a server reboot may be needed. These actions typically require the end-user to make a request to their local IT department.

## FILE-011

(error) Problem writing to file '%s'; %s.

**Description**

There was an error writing data to the specified file.

**What Next**

Examine the reason given. The disk may have ran out of space, or there was a system or network event that interrupted the write operation.

## FILE-012

(error) Directory '%s' already exists, '%s'.

Feedback

**Description**

The directory with the specified name already exists.

**What Next**

Try another name for the new directory.

---

## FILE-013

(error) Cannot open file '%s' for read.

**Description**

Unable to open file for read.

**What Next**

Check that the file exists. Check file/directory for read permissions.

---

## FILE-014

(error) Cannot open file '%s' for write.

**Description**

Unable to open output file for write.

**What Next**

Check file/directory for write permissions.

---

## FILE-015

(error) Basenames of original file and new file do not match. Original file: %s New file: %s

**Description**

The given filenames do not have matching basenames.

**What Next**

This check is done to avoid user error. If this is intended, please run update_cross_probing_files command with -force option to bypass this check.

---

## FILE-016

(error) File %s not found in the set of cross-probing files.

Feedback

**Description**

The file being requested for update does not appear to be in the set of Cross-Probing files.

**What Next**

Run report_cross_probing_files to retrieve the list of files known by Cross-Probing manager.

---

## FILE-017

(error) Unable to retreive the disk space for %s; %s.

**Description**

The directory cannot be created for the reason specified.

**What Next**

Examine the reason given. The directory may not exist or permission may be denied.

---

## FILE-018

(error) Unable to get working directory name; %s

**Description**

The current working directroy name could not be returned. The most common reason is the directory you are in no longer exists.

**What Next**

Examine the reason given. If your working directory no longer exists, change into a valid directory using absolute path and try again.

---

## FILE-019

(error) Decompressing failed; %s.

**Description**

Unable to decompress the file for the specified reason.

**What Next**

Check the compressed file.

Feedback

### FILE-020

(error) Command '%s' not executed due to '%s' error.

**Description**

The command run by you is not successfully executed due to the error message printed.

**What Next**

Please give a valid command. for example: if there is a directory "dir1" present and if someone creates directory using command "mkdir dir1" then error reported will be "mkdir: cannot create directory ‘dir1’: File exists"

### FILE-021

(info) File %s already exists. It will be overwritten.

**Description**

The command run by you is writing a file that already exists, so it will be overwritten.

## FLIB

### FLIB-1

(information) %s

**Description**

This is a general informational message.

**What Next**

No action required.

### FLIB-2

(warning) The fusion_lib library '%s' registry file error at line %d. %s

**Description**

The registry.dat file inside a fusion_lib library (directory) is created and updated by Library Compiler. Note that in the early phase of testing, there may be frequent incompatibility between versions. The following descriptions should help in diagnosing issues.

*Bad symbolink link.* Most likely the symbolic link points to a file no longer exists.

Feedback

*First line not recognizable.* The first line is of a fixed "key" format that users must not modify.

*File type not supported.* The fusion_lib only supports a limited number of file.

*Bad data format.* Each line consists of 2 or 3 tokens (fie_type file_name checksum). This line is invalid.

*File name already registered.* This is most likely a bug as two files cannot have the same name in a given fusion_lib directory.

*File missing or not readable.* The file has been removed or is not readable.

*Bad checksum in registry.* The registry checksum in the first line no longer agrees with the checksum generated from the rest of the file. This means a user may have modified the registry.

**What Next**

If the problem is a bad symbolic link because of a moved file, update the symbolic link. In general, the fusion_lib library needs to be re-checked and saved in order to update the registry. R&D.

---

## FLIB-3

(error) The fusion_lib library '%s' not qualified.

**Description**

This error message occurs after the fusion_lib checks failed either by check_fusion_lib command or internally called in create_fusion_lib or save_fusion_lib command (equivalent to check_library -logic_vs_physical). The default check is -logic_vs_physical and multiple library groups. When it is not qualified by the default check, save_fusion_lib cannot save it as qualified fusion_lib on disk. When the specified corner libraries are in multiple groups, a fusion library cannot be created. It is recommended using compile_fusion_lib to group and create. When there is no frame file, it will print out: No physical library found.

When the fusion library is not created, the check results are saved in autofix0.db3 at the current directory. When this message "Failed to qualify the fusion library due to multiple library groups" is shown it indicates the dbs are in multiple groups based on cell set.

The fusion_lib passing criteria depend on the policy specified by set_early_data_check_policy command:

1) error policy, default mode No missing physical cells reported in LIBCHK-211 and no missing logic or physical signal pins reported in LIBCHK-212.

2) tolerate policy Library data as is, and no severe errors below reported No missing logic or physical signal pins reported in LIBCHK-212.

Feedback

3) repair policy: Use the same criteria as tolerate policy, and apply check_library -auto_fix

In all policies, mismatched voltage_name/rail_name reported in LIBCHK-322 and missing pg_pins in logic libraries, i.e. non-pg_pin based dbs, will forbid fusion lib to be created.

**What Next**

Check the reported issues in LIBCHK-xxx tables for detail and correct the library accordingly or apply auto fix. In the case of multiple library groups, most likely the create_fusion_lib command failed as the input set of libraries may have multiple grouping scenario, It is recommended to run the compile_fusion_lib command when DB libraries need to be auto grouped. When mismatched voltage_name/rail_name is reported, please use rename_rail command to fix mismatched voltage_name. When mismatched pin/pg_pin direction is reported, please use set_attribute to fix. Please use add_pg_pin_to_db in 2013.12-SP5 lc_shell or common_shell (dc_shell) to convert the non-pg_pin based dbs. Use the following command to report the check results:

report_check_library_records -logic_vs_physical autofix0.db3

---

## FLIB-4

(error) Failed to save fusion library '%s': %s.

**Description**

This message indicates that an operation of saving the specified fusion library failed. The reason is given with the message.

**What Next**

This is just a summary message. Usually there will be other error message(s) before this one to indicate the actual problem. Please refer to those error messages for how to correct the issue.

---

## FLIB-5

(error) Failed to create fusion library '%s': %s.

**Description**

This message indicates that an operation of creating a fusion library failed. The reason is given with the message.

**What Next**

Correct the problem and try again.

Feedback

## FLIB-6

(error) Failed to %s ECO file '%s': %s.

**Description**

This message indicates that an operation of specified ECO file failed. The reason is given with the message.

**What Next**

Correct the problem and try again.

## FLIB-7

(error) Failed to save frame '%s' for fusion library '%s'.

**Description**

This message indicates that saving specified frame of fusion library failed. The reason is given with the message.

**What Next**

Correct the problem and try again.

## FLIB-8

(error) Failed to open fusion library '%s': %s.

**Description**

This message indicates that an operation of open the specified fusion library failed. The reason is given with the message.

**What Next**

Correct the problem and try again.

## FLIB-9

(information) ECO file '%s' was changed: %s.

**Description**

This message indicates that the specified ECO file had been changed outside Library Compiler. The actual change and tool's re-action are given with the message.

Feedback

**What Next**

Verify whether the change is expected.

---

## FLIB-9w

(warning) ECO file '%s' was changed: %s.

**Description**

This message indicates that the specified ECO file had been changed outside Library Compiler. The actual change and tool's re-action are given with the message.

**What Next**

Verify whether the change is expected.

---

## FLIB-10

(error) Unable to create a temporary work directory

**Description**

Library Compiler is unable to create a temporary work directory to store data. If the environment variable TMPDIR is present, please make sure it points to a writable disk location which is not full. If TMPDIR is missing, Library Compiler uses /usr/tmp, please make sure /usr/tmp is writable and not full.

**What Next**

Fix the problem and run again.

---

## FLIB-11

(information) The fusion_lib %s needs a refresh. %d file(s) have modified timestamps.

**Description**

The fusion_lib has been copied or moved inappropriately. As a result, timestamps on some files are altered. This triggers additional checks and performance overhead.

**What Next**

When copying using "cp", be sure to specify "-a" (for archive), rather than "-R":

cp -a fusion_lib_dir destination

When copying using "tar", preserve high-resolution time stamps using posix format.

Feedback

tar --posix -cf output.tar fusion_lib_dir

Alternatively, you may wish to refresh the fusion_lib using open_fusion_lib and save_fusion_lib commands in lc_shell.

---

## FLIB-12

(error) Cannot open fusion library '%s' as it had been changed since last save. Please save it again using Library Compiler first.

**Description**

This message indicates that the specified fusion library had been changed since last save and cannot be opened. Here, the change means any content or time stamp change of any relavent files in the fusion library.

**What Next**

Save the fusion library using Library Compiler and try again.

---

## FLIB-13

(error) Frame file using "reflib.ndm" as frame file name is NOT supported.

**Description**

The "reflib.ndm" is a reserved file name of directory-based ndm library. It usually resides under the ndm library directory. The frame file should be defined using the ndm library directory name.

If it's a file-based ndm file which has schema version prior to 1.200, please avoid using "reflib.ndm" as the file name.

**What Next**

For directory-based frame libray, please use the parent directory of reflib.ndm as the frame file name. For file-based frame library, please use a different file name as the frame file name.

---

## FLIB-14

(warning) Fusion library '%s' created or saved with inconsistency issues waived.

**Description**

This message indicates that a fusion library is created or saved with missing or mismatched issues waived between logic and physical libraries. These issues are reported

Feedback

in the library checker in LIBCHK tables above this message line. Please refer to FLIB-3 man page for qualification criteria under each check policy.

**What Next**

Investigate the reported missing or mismatched issues. If those cannot be waived for your design, please fix the library first. You may fix the issues by set_early_data_check_policy -config {repair} or explicitly use set_attribute or other utilities to fix.

---

## FLIB-15

(Error) %s

**Description**

This is a general Error message.

**What Next**

Please follow the message.

---

## FLIB-16

(warning) Cannot record command %s: %s.

**Description**

The specified command cannot be recorded. This means the effect of the command only persist until the fusion lib is closed.

**What Next**

Do not use this command as persistent eco command. If need to be persistent, require an enhancement first.

---

## FLIB-17

(warning) Mapping of lef pattern '%s' will %s: %s.

**Description**

This message occurred when lef pattern to post script mapping is duplicately specified. If the new post script is different from the old post script, the new post script will override the old one.

**What Next**

Check the content of physical_lib.lef_to_frame_postprocess_scripts and make sure it does not have duplicate lef pattern specified.

Feedback

## FLIB-18

(Warning) %s

**Description**

This is a general Warning message.

**What Next**

Please follow the message.

## FLIB-19

(error) Cannot create virtual frame as technology file not specified.

**Description**

This message indicates that the tool need to create virtual frame for a fusion lib, but there is no technology file specified.

**What Next**

Specify the -technology option or set application option *fusion_lib.use_default_technology_file* to true and try again.

## FLIB-19w

(warning) Use default technology file for creating virtual frame.

**Description**

This message indicates that the tool need to create virtual frame for a fusion lib, but there is no technology file specified. So the tool will use the default technology file for creating virtual frame.

**What Next**

If using the default technology file is not desired, please specify the -technology option and try again.

## FLIB-20

(error) Cannot add frame '%s', not a lib cell library.

**Description**

This message indicates that the specified frame is not a lib cell library.

Feedback

**What Next**

Specify a valid frame and try again.

---

## FLIB-21

(warning) The '%s' option will be ignored. Cannot be specified with '%s' option.

**Description**

The reported command option will be ignored as it cannot be specified with another option.

**What Next**

Look at the manpage for this command for more information on command options.

---

## FLIB-22

(warning) The '%s' option will be ignored.

**Description**

The reported command option will be ignored as it has no use in this run of the command.

**What Next**

Look at the manpage for this command for more information on command options.

---

## FLIB-23

(error) Must specify one or more of these options: %s.

**Description**

This command requires that one or more of the options in the list are specified.

**What Next**

Refer to the manual page for this command for detailed information on valid options.

---

## FLIB-24

(error) Cannot launch a job for CDPL run.

**Description**

This message indicates that the attemption to launch a job for CDPL run of the command was failed.

Feedback

**What Next**

Either make sure CDPL is configured correctly on local machine, or run the command without CDPL by removing the *-protocol* and *-parallel_jobs* options.

---

## FLIB-25

(error) Failed to add '%s' to the fusion lib: %s.

**Description**

This message indicates that adding a file to the fusion lib failed. The reason is given with the message.

---

## FLIB-25w

(warning) Not able to add '%s' to the fusion lib: %s.

**Description**

This message indicates that tool is not able to add a file to the fusion lib. The reason is given with the message.

**What Next**

Check whether there is typo in the db name. If it's a typo, then fix it and try again.

---

## FLIB-26

(warning) Skip duplicate %s '%s'.

**Description**

This message indicates that a duplicate file was specified. It will be ignored.

**What Next**

Check whether there is typo in the file name. If there is a typo, then fix it and try again.

---

## FLIB-27

(error) Please specify lib path for report_fusion_lib -summary

**Description**

Library Compiler is unable to report summary info without path, you should add libpath for this command or run open_fusion_lib at first

Feedback

**What Next**

Fix the problem and run again.

---

## FLIB-28

(error) The command %s needs an opened fusion lib

**Description**

Run open_fusion_lib command first before executing this command

**What Next**

Fix the problem and run again.

---

## FLIB-29

(error) The specified lib path is not consistent with the opened fusion lib path

**Description**

The specified lib path for report_fusion_lib is not consistent with the opened fusion lib path

**What Next**

Fix the problem and run again.

---

## FLIB-30

(warning) Data type '%s' is not supported for class '%s'; will use '%s'.

**Description**

This message indicates that the specified data type is not supported to be a user defined attribute of the specified class. Another data type will be used actually.

**What Next**

To avoid the warning message, use the allowed data type to replace the original data type.

---

## FLIB-31

(error) Invalid library name, the speicified library name %s doesn't exist

**Description**

The speicified library name doesn't exist

Feedback

### What Next

Fix the problem and run again.

---

## FLIB-32

(warning) Option '%s' is not supported for class '%s'; will be ignored.

### Description

This message indicates that the specified option is not supported for a user defined attribute of the specified class. The option will be ignored.

### What Next

To avoid the warning message, do not use the option when define the user attribute for the class.

---

## FLIB-33

(error) Failed to make the command %s persistent: %s.

### Description

This message indicates that the attempt to make the specified command persistent failed. This means the effect of the command only persist until the fusion lib is closed.

### What Next

Check the reported message for the reason of the fail.

---

## FLIB-34

(warning) Failed to make a Tcl recording of the command %s: %s.

### Description

This message indicates that the attempt to make a Tcl recording of the specified command failed. The consequence is: it cannot know what kind of operation had been performed to the fusion lib, and cannot restore the fusion lib in case a data corruption happens.

---

## FLIB-35

(error) Different types of physical files found in the group %s.

Feedback

**Description**

This message indicates that different types of physical files was found in the reported group. Although frames, LEFs and Milkyway libraries are allowed to be specified with the compile_fusion_lib command at the same time, they must be in different groups.

**What Next**

Please check the source of the physical files and make sure different types of physical files will be grouped into different groups.

---

## FLIB-36

(warning) %s as the -continue_on_error option is specified.

**Description**

This message indicates that an error condition is ignored as the -continue_on_error option is specified.

---

## FLIB-37

(error) File '%s' cannot be found using search_path of: '%s'.

**Description**

The file cannot be found on the specified search_path.

**What Next**

Determine whether the file name or the search_path is incorrect, or whether the file does not exist at all.

---

## FLIB-38

(warning) %s lib-cells of '%s' will be ignored as they are duplicate with the lib-cells in previous files.

**Description**

This message indicates that some or all lib-cells of the specified physical source file will be ignored as they are duplicate with the lib-cells in previous physical source files.

Here is the order with which the physical source files will be processed. For different kinds of physical source files, the tool processes them with following order: frame NDMs, LEFs, MW libraries. Among one kind of physical source files, the one listed earlier will be processed first.

Feedback

**What Next**

Please make sure there is no duplication among all physical source files, or check the duplication and make sure the ignore of those duplicates are expected.

---

## FLIB-39

(warning) '%s' will be ignored: %s.

**Description**

The message indicates that given source file for *compile_fusion_lib* will be ignored. The possible reasons which will be given in the message include:

1. There is no lib cell in the file

**What Next**

Check whether the ignorance of the given file is expected.

---

## FLIB-40

(error) '%s' is invalid: %s.

**Description**

The message indicates that given source file for *compile_fusion_lib* is invalid. The reason is given in the message.

**What Next**

Provide valid source files for *compile_fusion_lib*.

---

## FLIB-41

(warning) Remove eco file '%s': %s.

**Description**

This message indicates that the tool will remove the specified ECO file. The reason is given with the message.

Note that the fusion lib needs to be re-checked and saved by using save_fusion_lib command or "close_fusion_lib -save" command so that this message won't be reported again in the next open_fusion_lib.

If the remove of the eco file is not expected, please do not save the fusion lib. Just quit fusion lib session by "close_fusion_lib -force". The fusion lib will kept untouched. However, in the next open_fusion_lib, it will report this message again.

Feedback

## FLIB-42

(error) File '%s' was changed outside of Library Compiler.

**Description**

This message indicates that a specific file under the fusion library directory was changed outside of Library Compiler. This is an severe error since all fusion library modification should through Library Compiler.

**What Next**

Re-create the fusion lib using original data.

## FLIB-43

(error) Multiple designs are detected in etm flow.

**Description**

ETM flow will build a library from Extracted Timing Models (ETMs), it will merge multiple PVTs and modes for one design into a single library cell. For each session, will do the merge for only one design. You get this error message because multiple designs are detected in current session.

**What Next**

Only read DB files that contain the specific design you want to do the merge and create lib. You can start again by reading only related DB files.

## FLIB-44

(error) More than one instance of cell %s, mode %s, PVT '%s'

**Description**

For the ETM flow, each logical design with the same name is compared using the mode label and the PVT information from *add_db*. There can be only one unique combination of logical design name, mode, and PVT. You get this message if there is a duplicate.

**What Next**

Make sure you have applied the correct mode label to each logical library read into the ETM flow. Once you know which library has the wrong label, remove it, then re-read it with the correct label.

Feedback

## FLIB-45

(error) Library %s is not compatible with the etm flow:%s

**Description**

The named library has a problem construct which is not allowed in the etm flow, or is missing a required construct or attribute.

**What Next**

Either change flows, or modify the library source.

## FLIB-46

(error) Dbs added before are%s etm moded, while new added dbs are%s etm moded.

**Description**

New added dbs are not aligned with the dbs added before in terms of whether the dbs are paired etm modes or not.

**What Next**

Recreate the flib with all dbs added with or without etm modes.

## FLIB-47

(error) Cannot find a physical %s for '%s'.

**Description**

The specified object only exists in timing view. There is no physical view counterpart for it.

**What Next**

Make sure every timing view object has a physical view counterpart.

## FLIB-48

(error) Attribute value '%s' is not valid: %s.

**Description**

The specified attribute value is not valid. The reason is given with the message.

**What Next**

Specify a correct attribute value for setting.

Feedback

### FLIB-101

(information) Processing of %s NOT supported. Skipped.

**Description**

This information indicates a specific command or app option does NOT affect the Fusion Library creation, thus is NOT supported in LM script migration for LC.

**What Next**

No action required.

## FLT

### FLT-002

(information) Errors preprocessing compiled filter.

**Description**

This is a summary message generated after a filter expression has successfully parsed, but unsuccessfully processed because of an unknown identifier, type mismatch in a relation, or invalid operator in a relation.

**What Next**

Look at previous error messages to determine the problem with the filter expression. Correct the problems, and retry the operation.

### FLT-003

(error) while parsing filter expression: %s\n \tat '%s'

**Description**

A filter expression could not be successfully parsed, typically because of a syntax error. The point in the expression that caused the failure is shown along with the remainder of the expression.

**What Next**

Look at the man pages for filter expression syntax, and verify that your expression conforms to the syntax. Ensure that supported relation and logical operators are in use, that the expression is constructed of a series of relations separated by logical operations, etc.

Feedback

## FLT-005

(error) Unknown attribute '%s'.

### Description

Filters are evaluated within a context. Given the current context, an attribute which you entered is unknown.

A relation in a filter expression is very simple. For example, "area <= 2.4". In this case, the attribute is "area". If you were applying the filter to a pin collection, since "area" is not a valid pin attribute, this error would occur.

### What Next

Look at the man pages for the given command, and ascertain the valid values for attributes.

## FLT-006

(error) Type mismatch between '%s' and '%s'.

### Description

A relation in a your filter expression has an identifier and value with inconsistent types. The following simple rules apply:

```
Identifier              Type mismatch
        generates:              when value is:
        ------------------------------------------------------
        string                  n/a - never an error
        numeric literal         string, true, false
        boolean                 numeric literal, string
```

Note some important distinctions: the boolean words TRUE and FALSE are interpreted as strings in a string relation, or as boolean in a boolean relation. Similarly, the numeric literal 2.4E-9 is interpreted as a string in a string relation, or as a number in a numeric relation.

### What Next

Re-enter the filter with valid identifier/value relations.

## FLT-007

(error) Invalid operator '%s' for '%s' and '%s'.

Feedback

**Description**

A relation in a your filter expression has an identifier and value with consistent types but an invalid operator. The following simple rules apply:

Type: Invalid operators: ---------- string None. All operators ok. numeric literal =~, !~ boolean =~, !~, <, >, >=, <=

**What Next**

Re-enter the filter with a valid operator for the failed relation.

# FLW

## FLW-1101

(info) Design checksums: %s

**Description**

Starting print of Design checksum tokens for current step. This message appears in pair with FLW-1101.

**What Next**

Information. No action needed.

## FLW-1230

(error) Block %s does not have design view or is not in the current design library. Unable to generate a hierarchical checkpoint.

**Description**

In a hierarchical design all the blocks must have design view and should be in the current design library. The checkpoint will have only the current design, sub-designs/blocks will not be written to the checkpoint.

## FLW-1241

(error) Compile failed due to presence of %s cells in design '%s'.

**Description**

This message is reported when there are unresolved or unmapped cells. As such, Tool cannot proceed further with rest of the synthesis.

Feedback

**What Next**

- Use *analyze_mv_feasibility -format html* to know the detailed reasons of unmapped cells.
- Check strategy present using *report_mv_path*.
- Check if available library cells can fulfill operation conditions by running *report_mv_lib_cells*. See if library cells have correct *valid_purposes* in the report. Library cells with *none* purpose cannot be used by the Tool. Use *set_lib_cell_purpose* to make library cells available to be used by the Tool.

**See Also**

- analyze_mv_feasibility
- report_mv_lib_cells
- report_mv_path
- set_lib_cell_purpose

---

## FLW-1762

(error) Flow status set to Error by step: %s

**Description**

This indicates that synthesis flow encountered error during the given step and exited early.

**What Next**

Look for errors/warning prior to this error and fix them.

---

## FLW-2543

(warning) Flow step returns Error: %s

**Description**

This indicates that synthesis flow encountered error during the given step.

**What Next**

Look for errors/warning prior to this error and fix them.

Feedback

## FLW-3574

(warning) Option %s for command 'compile_fusion' is deprecated and should be replaced by the %s app option setting.

### Description

The command options *-no_autoungroup*, *-no_boundary_optimization*, and *-no_seq_output_inversion* are deprecated but will still be honored by compile_fusion.

### What Next

Users should instead use the associated app options to control the optimization behavior.

## FLW-5560

(error) The preceding synthesis command aborted unexpectedly. Please revert to a previously saved version of the database.

### Description

The previous optimization aborted with an unexpected error. Revert to last sane database to ensure correct results.

### What Next

Users should rewind to last saved database version and review the flow script.

## FLW-5561

(warning) Previously executed stage '%s' may be unexpected for the current flow stage '%s'

### Description

The optimization history is not the expected flow for the action you requested. Certain optimization stages must follow other specific stages, additionally certain actions may require specific design-states to be met. This error message can be made to stop the flow if changed to 'severe'.

### What Next

Users should review the compile flow script.

### See Also

- set_msg

Feedback

## FLW-5562

(info) For standard results, execute '%s', right after one of the following: %s.

**Description**

The optimization path is not the expected for achieving the best results.

**What Next**

Users should review the compile flow script.

## FLW-5563

(info) For standard results, run '%s' after having completed all of these stages: %s.

**Description**

The synthesis path is not the expected, for achieving best results.

**What Next**

Users should review the compile flow script.

## FLW-5564

(info) Verify the design '%s' before running '%s'.

**Description**

The synthesis state is not the expected, for achieving best results.

**What Next**

Users should review the compile flow script.

## FLW-8000

(info) Starting %s

**Description**

Starting message of a command, compile stage or step. This message appears in pair with FLW-8001.

**What Next**

Information. No action needed.

Feedback

## FLW-8001

(info) Ending %s

**Description**

Ending message of a command, compile stage or step. This message appears in pair with FLW-8000.

**What Next**

Information. No action needed.

## FLW-8003

(info) Running %s

**Description**

Information of the currently running step.

**What Next**

Information. No action needed.

## FLW-8004

(warn) Incomplete %s

**Description**

The incomplete flow has been started (as in FLW-8000), but no corresponding FLW-8001 is seen.

**What Next**

Users should review the flow.

## FLW-8100

(info) Time: %s / Session: %s / Command: %s / CPU: %s / Memory: %.0f MB

**Description**

Information of timestamp, elapsed time in the tool session, elapsed time and CPU time in the command and peak memory usage.

Feedback

**What Next**

Information. No action needed.

---

## FLW-9000

(info) %s

**Description**

This shows runtime summary for major engines at major breakpoints of core commands. Currently, it is printed at compile_fusion (final_place, final_opto), create_placement, place_opt, clock_opt, route_opt and hyper_route_opt.

**What Next**

Information. No action needed.

---

# FMT

---

## FMT-001

(information) FMT-DESIGN: 'write_correlation_files' completed with result = '%d'.

**Description**

This information message indicates whether 'write_correlation_files' completed successfully or not.

**What Next**

Please correct the error if the result is non-zero.

**See Also**

- set_consistency_settings_options

---

## FMT-002

(information) FMT-DESIGN: Found missing db-file '%s', successfully resolve to '%s'...\n

**Description**

This information message indicates the .db files stored inside nlib have been successfully resolved.

Feedback

Missing db-files could happen if we moved those .db files to other places after we built nlib.

In this case, we have to redirect the new .db files paths through 'set_consistency_settings_options -search_path {...}'.

**What Next**

No action needed.

**See Also**

- set_consistency_settings_options

---

## FMT-003

(Error) The original db-file '%s' has been moved or deleted! Please double-check.\n

**Description**

This information message indicates the .db files stored inside nlib have been deleted or moved to some other place.

Missing db-files could happen if we moved those .db files to other places after we built nlib.

In this case, we have to redirect the new .db files paths through 'set_consistency_settings_options -search_path {...}'.

**What Next**

Specify those .db files new paths with 'set_consistency_settings_options' and then retry.

**See Also**

- set_consistency_settings_options

---

## FMT-004

(Warning) Failed to find PVT [%f %f %f] in characterization points of lib '%s'.\n

**Description**

This information message indicates tool can't find the corresponding .db file which exactly matches with PVT criteria.

In this case, tool will choose the .db file which has closet PVT against the user's PVT.

Feedback

**What Next**

No action needed.

**See Also**

- set_consistency_settings_options

---

## FMT-005

(Error) Can not find flow-name '%s'! Ignore it...\n

**Description**

User could force write_correlation_files to skip specific flows if needed.

For example, option '-filter_flows XXX' could be used if user does not need to generate parasitics-files.

**What Next**

Please correct the error.

---

## FMT-006

(Warning) Found arc-problem with lib-cell '%s'\n.

**Description**

The arcs of this lib-cell could be empty of missed when we build this nlib.

Timing Qor could be impacted if arcs of lib-cell is incompleted.

**What Next**

Check whether we need to fix this issue or not.

---

## FMT-007

(Error) Scenario '%s' uses different SPEF<%s/%s> for early/late analysis.\n

**Description**

Due to incorrect extraction-setting(tlu+ or extraction-options), one scenario could use different SPEF-files

for early/late analysis and this could lead to bad Qor results.

Feedback

**What Next**

Correct the bad extraction-settings which could lead to different SPEF for early/late analysis.

---

## FMT-008

(Warning) High-fanout Net '%s'(threshold=%d) might lead to bad-Qor due to using ideal pin-caps for delay-calculation!\n

**Description**

Using ideal pin-cap for high-fanout net could lead to correlation issue.

**What Next**

Correct high-fanout settings and rerun the command again.

---

# FRAM

---

## FRAM-001

(warning) Ignore non-existent via definition '%s'.

**Description**

The specified via definition cannot be found in the design or the technology.

**What Next**

Check the specified object exists in either the design or the technology.

---

## FRAM-002

(info) Ignore default via definition '%s' specified in non-default via option.

**Description**

There is no need to specify default vias for this command. Default vias are automatically included.

**What Next**

Optionally remove the default via definition names from command option.

Feedback

## FRAM-003

(warning) Ignore design or library cell '%s' that has no physical data in design view.

**Description**

The specified design or library cell does not have physical data in the design view for the command to extract.

**What Next**

No action is needed if no physical data is expected. Otherwise, please check the LEF file and read_lef result.

## FRAM-003e

(error) Design or library cell '%s' that has no physical data in design view, cannot create frame view.

**Description**

The specified design or library cell does not have physical data in the design view for the command to extract.

**What Next**

No action is needed if no physical data is expected. Otherwise, please check the LEF file and read_lef result.

## FRAM-004

(warning) Ignore design or library cell '%s' that is not opened.

**Description**

The specified design or library cell is not opened.

**What Next**

Open the design and try again.

## FRAM-005

(warning) Non-manhattan '%s' is not supported. It is replaced by bbox.

**Description**

Non-manhattan shape is replaced by its bbox.

Feedback

## FRAM-006

(error) Current design is not a design view.

**Description**

This command requires that the current design is a design view. Either there is no current design available or the current design is not a design view.

**What Next**

Load the design view of this design.

## FRAM-007

(warning) Sub-row count is incorrect for block '%s'. Ignore extracting frame properties.

**Description**

The specified block has incorrect boundary or site information for extracting frame properties.

**What Next**

Check the specified block has correct data in either the design or the technology.

## FRAM-008

(warning) Skip parsing 'isCutArray' attribute for layer '%s' in block '%s'. Please check layer setting in technology file.

**Description**

Skip parsing attribute for shapes in via cut layers.

**What Next**

Check the specified block has reasonable number of shape in via cut layers, and the number of routing layer and via cut layer is also correct.

## FRAM-009

(warning) Parse the source-drain file failure.

**Description**

Fail to parse source-drain annotation.

Feedback

**What Next**

Check the source-drain file has correct format.

---

## FRAM-010

(error) Block '%s' is not in frame view. %s

**Description**

Specified block is reguired in frame view; if not, skip the process.

**What Next**

Check the specified block is in frame view.

---

## FRAM-011

(warning) For block '%s', there are pins smaller than the pin must connect area threshold on layer '%s', and those pins are not blocked by zero-spacing routing blockages.

**Description**

If the pin area of a port is not sufficient to the pin_must_connect_area_thresholds, then the zero-spacing routing blockages are not created for those pin shapes.

**What Next**

Check the setting of pin_must_connect_area_thresholds.

---

## FRAM-012

(warning) '%s' is not a valid layer name in tech file. Ignore the setting for option '%s'.

**Description**

The input layer name of the frame option does not exist in tech file, ignore the option setting.

**What Next**

Check the input layer name.

---

## FRAM-012e

(error) '%s' is not a valid layer name in tech file. Invalid setting for option '%s'.

Feedback

**Description**

The input layer name of the frame option does not exist in tech file.

**What Next**

Check the input layer name.

---

## FRAM-013

(warning) '%s' is not a via or polyCont layer for option '%s'. Ignore the setting on the layer.

**Description**

The input layer name is not a via or polyCont layer, ignore the setting on the layer.

**What Next**

Check the input layer name.

---

## FRAM-013e

(error) '%s' is not a via or polyCont layer for option '%s', which is invalid setting.

**Description**

The input layer name is not a via or polyCont layer, which is invalid setting.

**What Next**

Check the input layer name.

---

## FRAM-014

(warning) List of pins without %s.

**Description**

List the pins which miss via region or access edge in the library. Missing via region or access edge might impact routing QoR.

**What Next**

Check these pins and see if regenerate frame is needed.

---

## FRAM-015

(warning) List of cells without placement layers and constraints .

Feedback

**Description**

List the cells which miss geometry on tech file layers or constraints in the library. Missing these might impact placement QoR.

**What Next**

Please check the design and fix these issues.

---

## FRAM-016

(warning) '%s' is not a metal or poly layer for option '%s'. Ignore the setting on the layer.

**Description**

The input layer name is not a metal or poly layer, ignore the setting on the layer.

**What Next**

Check the input layer name.

---

## FRAM-016e

(error) '%s' is not a metal or poly layer for option '%s', which is invalid setting.

**Description**

The input layer name is not a metal or poly layer, which is invalid setting.

**What Next**

Check the input layer name.

---

## FRAM-017

(information) Use current library as the technology library.

**Description**

No technology library is set by -technology_lib option. Use current library as the technology library.

**What Next**

Please specify the -technology_lib value if the current library does not contain the correct technology information.

Feedback

## FRAM-018

(warning) List of pins with off-track or missing via regions.

**Description**

List the pins with off-track or missing via regions. Missing these might impact routing QoR.

**What Next**

Please check the via-region and wire track settings. Fix the via region not on track issues.

## FRAM-019

(warning) Cannot find site definition %s. Use default site definition instead.

**Description**

The site definition specified by option -wire_tracks_site cannot be found. Use default site definition instead.

**What Next**

Please check the value set by -wire_tracks_site.

## FRAM-020

(warning) The routing direction of layer %s is not defined for wire tracks calculation.

**Description**

The routing direction of the specific layer should be defined as vertical or horizontal. The wire tracks need to be calculated by horizontal or vertical routing direction.

**What Next**

Please check your technology file or site definition setting.

## FRAM-021

(warning) The option value of '%s' cannot be less than 0. Ignore the option setting on layer '%s'.

**Description**

The option value cannot be less than 0, ignore the setting on the specified layer.

Feedback

**What Next**

Check the input option value.

---

## FRAM-021e

(error) The option value of '%s' cannot be less than 0. Invalid option setting on layer '%s'.

**Description**

The option value cannot be less than 0, which is invalid setting on the specified layer.

**What Next**

Check the input option value.

---

## FRAM-022

(error) The maskName, layerNumber, or maskOrder of the layers in technology library %s don't match with the layers of reporting library %s.

**Description**

The maskName, layerNumber, or maskOrder of the layers of the technology library are different from those of the reporting library. Cannot use the information of the technology library to calculate the wire track position.

**What Next**

Please check your -technology_lib input and specify the correct technology library.

---

## FRAM-023

(error) Option -block is not specified in write_frame_options with -format icc2_shell.

**Description**

When using -format icc2_shell in write_frame_options, option -block is also required; if not, skip the process.

**What Next**

Specify option -block in write_frame_options command.

---

## FRAM-024

(warning) The %s frame view contains more than 100000 non-pin shapes (%d). This can increase routing runtime; you might want to regenerate the frame view.

Feedback

### Description

The frame view of the specified block contains more than 100000 non-pin shapes. The large number of obstructions can increase routing runtime.

### What Next

If this is not expected, regenerate the frame view. To reduce the number of obstructions in the frame view, try using the *remove_non_pin_shapes*, *merge_metal_blockage*, *block_all*, or *block_core_margin* options.

In lm_shell, these options are application options with the *lib.physical_model* prefix. In icc2_shell, these options are options of the *create_frame* command.

### See Also

- create_frame
- lib.physical_model.block_all
- lib.physical_model.block_core_margin
- lib.physical_model.merge_metal_blockage
- lib.physical_model.remove_non_pin_shapes

## FRAM-025

(warning) List of irregular cut shapes or routing blockages.

### Description

Frame has irregular cut shapes or routing blockages. A cut layer shape or regular routing blockage which does not meet any of the following conditions will be considered as iregular:

o is not rectangular o the width and height attributes does not match any of the following values o the minimum width of the layer o the default width of the layer o the values in cutHeightTbl and cutWidthTbl of the layer o the values of cut size of any simple via definitions of the layer

These shapes or blockages may cause long runtime issue during routing.

### What Next

Please set app option 'file.lef.non_real_cut_obs_mode' as true for lef files, or use layer mapping file to map zero spacing routing blockage on cut layers for gds files. Then, regenerate the frame.

Feedback

## FRAM-026

(information) Library %s contains frames which are converted from ICC FRAM.

**Description**

This library contains frames which are converted from the FRAM views of IC Compiler or Milkyway. For getting all the converted frames, please use the following command: get_lib_cells */*/frame -filter "is_from_icc_frame==true"

## FRAM-027

(warning) The minimum height of all lib_cells in library %s is not equal to the height of the default site '%s' of this library.

**Description**

Please check if it is expected that the minimum height of all lib_cells is not equal to the height of the default site definition of this library. This difference may cause issue in placement.

**What Next**

Correct the site definitions of the library if necessary.

## FRAM-028

(warning) The %s of lib_cell %s is not the multiplier of its site '%s' %s.

**Description**

The height/width of the lib_cell is not the multiplier of its site definition height/width. This will cause issue in placement.

**What Next**

Please associate the lib_cell to the correct site definition.

## FRAM-029

(warning) The value '%s' of '%s' option is improper for cell %s.

**Description**

The frame option value for the cell is set improperly. This will cause issue in routing.

Feedback

Improper frame options setting includes:

For the following design types: diode, end_cap, fill, filler, lib_cell, physical_only, well_tap • The value of 'trim_metal_blockage_around_pin' option should not be set as 'all'. • The value of 'block_all' option should not be set as 'true'.

**What Next**

Please correct the frame option value and regenerate the frame.

---

## FRAM-030

(warning) The terminal %s of cell %s is overlapped with other terminals of different port.

**Description**

The terminal is overlapped with other terminals of different port. This will cause router fail to connect this pin without DRC violation.

**What Next**

Please check the design, correct the terminal short issue and regenerate the fame view.

---

## FRAM-031

(warning) The port %s of cell %s has no physical pin shape. Router will not be able to connect this port.

**Description**

Physical shape is missing for the specific port. Router will not be able to connect this port.

Only if the port is a device bias port or the pin direction is internal, then it does not required to have physical pin shapes. However, if the library does not contain logic db information, then tool cannot distinguish device bias ports. So this message will still show up for such kind of ports.

**What Next**

Please fix the missing pin shape issue for the port and regenerate the frame.

---

## FRAM-032

(warning) The port %s of cell %s has inconsistent value of routing attribute '%s' between timing view '%s' and frame view '%s'.

Feedback

**Description**

The specific routing attribute is defined in timing view but it is not defined in frame view. This attribute is needed in frame view for routing purpose.

Checked attributes: is_secondary_pg, is_diode

The routing attribute of ports should be set to frame view correctly if you want to set the routing attribute manually for existing reference library using edit flow. Here is the Tcl example: set_attribute [get_lib_pins -of_objects [get_lib_cells */diode_cell/frame] -filter "name == diode_pin"] is_diode true

**What Next**

Please regenerate frame view or update the attributes in frame manually.

---

## FRAM-033

(warning) There are terminals blocked by blockages or metal shapes.

**Description**

There are terminals blocked by blockages or metal shapes. Router may not able to connect these blocked terminals without DRC violation.

**What Next**

Please check and remove the unnecessary blockage or shapes over the terminals.

---

## FRAM-034

(warning) There is no technology information for this library. The reporting will not be completed.

**Description**

There is no technology information for this library. The tool cannot do complete checking and reporting without the technology information.

**What Next**

Please set the technoloy information to the library either by binding a technology file or a technology library.

---

## FRAM-035

(warning) Invalid number specified for '%s', ignore the setting on layer '%s'.

Feedback

**Description**

The option value has invalid number, please see man page for the usage of the option.

**What Next**

Please update the input value.

---

## FRAM-035e

(error) Invalid number specified for '%s' on layer '%s'.

**Description**

The option value has invalid number, please see man page for the usage of the option.

**What Next**

Please update the input value.

---

## FRAM-036

(warning) The setting of option keepout_spacing_for_non_pin_shapes for layer %s is ignored because block_all or block_core_margin is applied on this layer.

**Description**

The tool does not support option keepout_spacing_for_non_pin_shapes when block_all or option block_core_margin is also applied on the same layer.

**What Next**

Please set option block_all as false when using option keepout_spacing_for_non_pin_shapes.

---

## FRAM-037

(warning) '%s' is not a library cell, there is no frame property.

**Description**

The implant width property, diffusion width height property, and source/drain annotation are only extracted in library cells. The report_frame_properties is also used for library cells.

**What Next**

Please assign library cells by option -library (required) and -block (optional) in report_frame_properties.

Feedback

## FRAM-038

(warning) The option value of '%s' cannot be less than 0. Ignore the option setting.

**Description**

The option value cannot be less than 0, ignore the option setting.

**What Next**

Check the input option value.

## FRAM-038e

(error) The option value of '%s' cannot be less than 0.

**Description**

The option value cannot be less than 0.

**What Next**

Check the input option value.

## FRAM-039

(warning) The internal port %s of cell %s has improper setting(s) of direction as internal and is_physical as false. Router will skip the terminals of this internal port.

**Description**

In general, internal ports from the logic library should not have physical terminals. If a port has a *direction* attribute of *internal* and an *is_physical* attribute of *false*, the router does not treat it as real metal and ignores its terminals.

**What Next**

Internal ports should not be formed as physical terminals in the design and frame views. You can modify the physical data (GDSII, OASIS, or LEF) directly or by using the *remove_terminal* command to change the terminals in the design view to shapes, as shown in the following script example:

```
create_workspace ...
read_gds ...

# Change terminals to shapes in the design view for internal ports
foreach_in_collection int_port [get_lib_pins -quiet -all -filter
 "direction==internal"] {
  set _block [get_object_name [get_attribute -quiet $int_port design]]
  set port_name [get_attribute -quiet $int_port name]
```

Feedback

```
  set block [get_lib_cells -quiet */${_block}/design]
  if {$block!=""} {
    current_block $block
    set int_term [get_terminal -quiet -filter "port.name==$port_name"]
    set _int_term [get_object_name $int_term]
    if {$int_term!=""} {
      remove_terminal $int_term
      echo -n "${_block}.design: Changed terminal objects \{$_int_term\}
 "
      echo "to shape objects for internal port
    }
  }
}

check_workspace ...
commit_workspace ...
```

## FRAM-040

(warning) Value '%s' for option '%s' is not valid. Specify one of: %s. Ignore the option setting on layer '%s'.

### Description

The option value is invalid, ignore the option setting on the specified layer.

### What Next

Check the input option value.

## FRAM-040e

(error) Value '%s' for option '%s' is not valid. Specify one of: %s. Invalid option setting on layer '%s'.

### Description

The option value is invalid on the specified layer.

### What Next

Check the input option value.

## FRAM-041

(warning) Value '%s' for option '%s' is not valid. Specify one of: %s. Tool will use default value '%s' for the option.

Feedback

**Description**

The option value is invalid, ignore the option setting and use the default value for the option.

**What Next**

Check the input option value.

---

## FRAM-041e

(error) Value '%s' for option '%s' is not valid. Specify one of: %s. The default value is '%s'.

**Description**

The option value is invalid.

**What Next**

Check the input option value.

---

## FRAM-042

(warning) Value '%s' for option '%s' is not a metal or poly layer. Tool will use default value '%s' for the option.

**Description**

The option value is not a metal or poly layer, ignore the option setting and use the default value for the option.

**What Next**

Check the input option value.

---

## FRAM-042e

(error) Value '%s' for option '%s' is not a metal or poly layer.

**Description**

The option value is not a metal or poly layer, which is invalid.

**What Next**

Check the input option value.

Feedback

## FRAM-043

(warning) '%s' has DRC violations.

**Description**

The frame has DRC violations.

**What Next**

Please update input data.

## FRAM-044

(error) Cannot open block %s.frame for write.

**Description**

check_frame_drc needs to have write permission for the frame block.

**What Next**

Please open the frame block with write permission.

## FRAM-045

(information) Block %s.frame, the feature of blocking core area is set on specific layers. New zero-spacing routing blockages and RC metal are added on layers:%s.

**Description**

The blocking core area feature is honored on specific layers. The tool creates zero-spacing routing blockages and RC metal in the frame view for the entire block except pins.

It is controlled by app_options lib.physical_model.block_all and lib.physical_model.block_core_margin in lm_shell, or controlled by create_frame options -block_all and -block_core_margin in icc2_shell.

**What Next**

Check if added zero-spacing routing blockage and RC metal on specific layers in frame view meets the original design intent. If not, you can modify app_options lib.physical_model.block_all and lib.physical_model.block_core_margin in lm_shell or modify create_frame options -block_all and -block_core_margin in icc2_shell to adjust/remove added zero-spacing routing blockage and RC metal.

Feedback

## FRAM-046

(information) Block %s.frame, the feature of blockage trimming by pin is set to 'touch' on specific layers. All metal shapes and routing blockages touch pins in design view are trimmed on layers:%s.

### Description

The blockage trimming by pin feature is set to 'touch' on specific layers. All metal shapes and routing blockages touch pins are trimmed and coverted to a zero-spacing routing blockage.

Trimming method depends on the option value.

It is controlled by app_options lib.physical_model.trim_metal_blockage_around_pin and lib.physical_model.preserve_metal_blockage in lm_shell, or controlled by create_frame options -trim_metal_blockage_around_pin and -preserve_metal_blockage in icc2_shell.

### What Next

Check if blockage trimming by pin on specific layers in frame view meets the original design intent. If not, you can modify app_options lib.physical_model.trim_metal_blockage_around_pin and lib.physical_model.preserve_metal_blockage in lm_shell, or modify create_frame options -trim_metal_blockage_around_pin and -preserve_metal_blockage in icc2_shell to adjust blockage trimming by pin.

## FRAM-047

(information) Block %s.frame, the feature of blockage trimming by pin is set to 'all' on specific layers. All metal shapes and routing blockages around pins in design view are trimmed on layers:%s.

### Description

The blockage trimming by pin feature is set to 'all' on specific layers. All metal shapes and routing blockages around pins are trimmed and coverted to a zero-spacing routing blockage.

Trimming method depends on the option value.

It is controlled by app_options lib.physical_model.trim_metal_blockage_around_pin and lib.physical_model.preserve_metal_blockage in lm_shell, or controlled by create_frame options -trim_metal_blockage_around_pin and -preserve_metal_blockage in icc2_shell.

Feedback

### What Next

Check if blockage trimming by pin on specific layers in frame view meets the original design intent. If not, you can modify app_options lib.physical_model.trim_metal_blockage_around_pin and lib.physical_model.preserve_metal_blockage in lm_shell, or modify create_frame options -trim_metal_blockage_around_pin and -preserve_metal_blockage in icc2_shell to adjust blockage trimming by pin.

---

## FRAM-048

(warning) Starting with the L-2016.03 release, the default value of app_options lib.physical_model.block_all will be changed from 'false' to 'auto'.

### Description

If you do not set app_options lib.physical_model.block_all explicitly and then the block_all behavior will be changed and it depends on design_type. For analog, black-box, and module design types, the tool creates zero-spacing routing blockages on all layers (true). For macro cells, the tool creates zero-spacing routing blockages only on used layers (used_layers). For all other design types, the tool does not create zero-spacing routing blockages(false).

### What Next

Set app_options lib.physical_model.block_all explicitly and then the tool behavior keeps the same.

---

## FRAM-049

(warning) Starting with the L-2016.03 release, the default value of -block_all option of create_frame command will be changed from 'false' to 'auto'.

### Description

If you do not set -block_all option of create_frame command explicitly and then the block_all behavior will be changed and it depends on design_type. For analog, black-box, and module design types, the tool creates zero-spacing routing blockages on all layers (true). For macro cells, the tool creates zero-spacing routing blockages only on used layers (used_layers). For all other design types, the tool does not create zero-spacing routing blockages(false).

### What Next

Set -block_all option of create_frame command explicitly and then the tool behavior keeps the same.

Feedback

## FRAM-050

(warning) There are color rules defined in the technology file, suggest to enable option 'color_based_dpt_flow' for frame creation.

### Description

The following color rules are defined in the technology file.

sameColorSpanTblXMinSpacing sameColorSpanTblYMinSpacing diffColorSpanTblXMinSpacing diffColorSpanTblYMinSpacing mask1SpanTblXMinSpacing mask1SpanTblYMinSpacing mask2SpanTblXMinSpacing mask2SpanTblYMinSpacing

If option color_based_dpt_flow is not enabled, the metal shapes beyond DRC distance will be generated as colorless shapes. By colorless, it means the attribute mask_constraint of the shape is undefined. (The metal shapes are added by option block_all or block_core_margin in frame creation.)

### What Next

In icc2_shell, enable -color_based_dpt_flow option of create_frame command.

In lm_shell, enable app_options lib.physical_model.color_based_dpt_flow.

## FRAM-050e

(error) There are color rules defined in the technology file, please enable option 'color_based_dpt_flow' for frame creation.

### Description

The following color rules are defined in the technology file.

sameColorSpanTblXMinSpacing sameColorSpanTblYMinSpacing diffColorSpanTblXMinSpacing diffColorSpanTblYMinSpacing mask1SpanTblXMinSpacing mask1SpanTblYMinSpacing mask2SpanTblXMinSpacing mask2SpanTblYMinSpacing

If option color_based_dpt_flow is not enabled, the metal shapes beyond DRC distance will be generated as colorless shapes. By colorless, it means the attribute mask_constraint of the shape is undefined. (The metal shapes are added by option block_all or block_core_margin in frame creation.)

### What Next

In icc2_shell, enable -color_based_dpt_flow option of create_frame command.

In lm_shell, enable app_options lib.physical_model.color_based_dpt_flow.

Feedback

## FRAM-051

(warning) Macro frame %s has colorless shapes on layers:%s. Those layers are with 'doublePattern*' rules in the technology file.

### Description

There are 'doublePattern*' rules defined for certain layers in the technology file. Shapes on those layers in 'module' or 'macro' design should be pre-colored already.

### What Next

Please pre-color shapes in 'module' or 'macro' design before frame creation.

## FRAM-052

(warning) Starting with the M-2016.12 release, the default value of frame option color_based_dpt_flow will be changed from 'false' to 'auto'.

### Description

If you do not set frame option color_based_dpt_flow explicitly and then the metal shapes beyond the DRC distance will be changed from colorless shapes to colored shapes when the following color rules are defined in the technology file. By colorless, it means the attribute mask_constraint of the shape is undefined. (The metal shapes are added by option block_all or block_core_margin in frame creation.)

sameColorSpanTblXMinSpacing sameColorSpanTblYMinSpacing diffColorSpanTblXMinSpacing diffColorSpanTblYMinSpacing mask1SpanTblXMinSpacing mask1SpanTblYMinSpacing mask2SpanTblXMinSpacing mask2SpanTblYMinSpacing

In icc2_shell, whether to create colored metal shapes beyond the DRC distance is controlled by -color_based_dpt_flow of create_frame command.

In lm_shell, whether to create colored metal shapes beyond the DRC distance is controlled by app_options lib.physical_model.color_based_dpt_flow.

### What Next

In icc2_shell, set -color_based_dpt_flow option of create_frame command explicitly and then the tool behavior keeps the same.

In lm_shell, set app_options lib.physical_model.color_based_dpt_flow explicitly and then the tool behavior keeps the same.

Feedback

## FRAM-053

(warning) Layer '%s' with mask name '%s' is not supported by option '%s'. Ignore the setting on the layer.

### Description

The mask name of the input layer is not supported by this frame option.

### What Next

Specify the layer with supported mask name for this frame option.

## FRAM-053e

(error) Layer '%s' with mask name '%s' is not supported by option '%s'.

### Description

The mask name of the input layer is not supported by this frame option.

### What Next

Specify the layer with supported mask name for this frame option.

## FRAM-054

(warning) Technology used to create frame-view and current technology have inconsistency: %s.

### Description

The reported part of the technology are inconsistent between the reference library and the design library.

### What Next

Update the library with consistent technology and try again.

### See Also

- create_lib
- open_lib
- read_tech_file

Feedback

## FRAM-055

(warning) The terminal '%s' of cell '%s' is on layer '%s' lower than the minimum pin layer.

**Description**

The terminal is on a layer lower than the minumum pin layer which is defined by the option -min_pin_layer.

**What Next**

Please update your design and regenerate frame.

## FRAM-056

(warning) The track color information of layer %s is not defined for color wire tracks calculation.

**Description**

The track color information of the specific layer should be defined before with create_track_pattern -mask_pattern. The color wire tracks need to be calculated using this information.

**What Next**

Please use create_track_pattern -mask_pattern to set the color of the wire tracks. See the man page of create_track_pattern for more information.

## FRAM-057

(information) '%s' has '%d' different geometries.

**Description**

There are different geometries between the two frames.

**What Next**

Please check input data.

## FRAM-058

(warning) List of terminals which are on improper color track. Terminal width smaller or equal to default width should be on the same color track, and terminal width larger than default width (fat pin) should be on inverse color track.

Feedback

**Description**

List the terminals which are on improper color track. These wrong setting might impact routing QoR.

**What Next**

Please check the color of the terminals and wire track settings. Fix the color inconsistent issue.

---

## FRAM-059

(warning) There are more than 10000 '%s'.

**Description**

There are more than 10000 different geometries between the two frames. Stop to check this type of error.

**What Next**

Please check input data.

---

## FRAM-060

(information) The error data is saved in '%s'.

**Description**

There are different geometries between the two frames. The error data will be saved in the path.

**What Next**

Please check the error data.

---

## FRAM-061

(error) The input layer of option %s is invalid.

**Description**

The input layer is not a valid layer. Please check your input.

**What Next**

Please check your input and specify the correct layer name.

Feedback

## FRAM-062

(warning) The siteDef %s is %f, thus the input track offset {%s} will be ignored when calculating the track position on layer '%s'.

**Description**

The specified track pattern offset value is bigger than the siteDef width/height. This value will be ignored when calculating the track position.

**What Next**

Please check your setting for the track pattern offset.

## FRAM-063

(warning) In block %s.frame, the port '%s' has many terminals on metal layer (Number of terminals: %d), which may increase the runtime of frame creation. Please check whether all the terminals are expected.

**Description**

The port has many terminals, which may increase the runtime of frame creation.

**What Next**

Please check the terminals for the port. Keep only the necessary terminals may improve the runtime of frame creation.

## FRAM-064

(warning) The port '%s' of cell '%s' has attribute 'pattern_must_join' set as true. However, it has multi-layer terminals on layers '%s', which conflicts the setting.

**Description**

Pattern_must_join is to perform must_join connection for lib pin in strict mode to use one single metal piece to join all the terminals. The reported port has pattern_must_join atrribute set as true but also has multi-layer terminals, which is a conlict setting.

**What Next**

Please update the pattern_must_join attribute or correct your design.

## FRAM-065

(warning) Regular routing blockage %s on metal layer %s touches terminal %s. For blockage purpose, please use zero-spacing routing blockage instead.

Feedback

### Description

Since router need to keep correct spacing with regular routing blockage, then regular routing blockage touches terminal might make router unable to connect the terminal without DRC violation. For blockage purpose, please use zero-spacing routing blockage instead or use option 'convert_metal_blocakge_to_zero_spacing' to convert those blockages into zero-spacing routing blockage during frame creation.

### What Next

Modify your design for set option 'convert_metal_blocakge_to_zero_spacing' and regenerate frame. See convert_metal_blocakge_to_zero_spacing(2).

---

## FRAM-066

(warning) Block %s.frame has a very large regular routing blockage %s on the %s metal layer; this might prevent the router from connecting to nearby terminals.

### Description

The tool issues this warning message when a block contains a very large regular routing blockage. For regular routing blockages, the router must honor the fat spacing rules. This can prevent the router from connecting to terminals near very large regular routing blockages without DRC violations.

### What Next

To improve the routability near a very large routing blockage, use a zero-spacing routing blockage, which does not need to honor the fat spacing rules, instead of a regular routing blockage.

To create a zero-spacing routing blockage, use the *-zero_spacing* option with the *create_routing_blockage* command. To convert regular routing blockages to zero-spacing routing blockages during frame view generation,

- In lm_shell, set the *lib.physical_model.convert_metal_blockage_to_zero_spacing* application option before running the *commit_workspace* command.
- In icc2_shell, use the *-convert_metal_blockage_to_zero_spacing* option with the *create_frame* command.

### See Also

- create_frame
- create_routing_blockage
- lib.physical_model.convert_metal_blockage_to_zero_spacing

Feedback

## FRAM-067

(warning) Invalid mode specified for '%s', mode should be one of %s. Ignore the setting on layer '%s'.

**Description**

The option value has invalid mode string, please see the message and man page for the usage of the option.

**What Next**

Please update the input value.

## FRAM-067e

(error) Invalid mode specified for '%s', mode should be one of %s. Invalid setting on layer '%s'.

**Description**

The option value has invalid mode string, please see the message and man page for the usage of the option.

**What Next**

Please update the input value.

## FRAM-068

(error) Input format for option '%s' is wrong; The correct format is '%s'.

**Description**

The input format for the option is wrong. Please see the message or man page for the correct input format.

**What Next**

Provide the correct intput format to the option.

## FRAM-069

(warning) There is no via region created in block '%s.frame'. Please check your design and settings.

Feedback

**Description**

There is no via region created for design, which may cause routing QoR issue.

**What Next**

Please check your design and settings and regenerate frame.

---

## FRAM-069e

(error) There is no via region created for port '%s' in block '%s.frame'. Please check your design and settings.

**Description**

There is no via region created for the port in the design, which may cause routing QoR issue.

**What Next**

Please check your design and settings and regenerate frame.

---

## FRAM-070

(warning)There are improper regular routing blockages which touch terminals or are extra-large. For blockage purpose, please use zero-spacing routing blockage instead.

**Description**

Since router needs to keep correct spacing with regular routing blockage, then regular routing blockage touches terminal or being extra-large might make router unable to connect the terminal without DRC violation. For blockage purpose, please use zero-spacing routing blockage instead or use option 'convert_metal_blocakge_to_zero_spacing' to convert those blockages into zero-spacing routing blockage during frame creation.

**What Next**

Modify your design for set option 'convert_metal_blocakge_to_zero_spacing' and regenerate frame. See convert_metal_blocakge_to_zero_spacing(2).

---

## FRAM-071

(warning) Error in %s.frame, the zero-spacing routing blockage around Z-shape is too small on layer '%s'. Z-shape object_class: '%s'; %s.

Feedback

**Description**

The zero-spacing routing blockage around Z-shape is too small for the keepout rule, which may cause routing QoR issue.

**What Next**

Please check your design and settings and regenerate frame.

---

## FRAM-072

(warning) In %s.frame, the zero-spacing routing blockage around Z-shape is too large on layer '%s'. Z-shape object_class: '%s'; %s.

**Description**

The zero-spacing routing blockage around Z-shape is too large for the keepout rule, which may cause routing QoR issue.

**What Next**

Please check your design and settings and regenerate frame.

---

## FRAM-073

(warning) Error in %s.frame, the zero-spacing routing blockage under Z-shape is too small on lower via layer '%s'. Z-shape object_class: '%s'; %s.

**Description**

The zero-spacing routing blockage under Z-shape is too small on the lower via layer, which may cause routing QoR issue.

**What Next**

Please check your design and settings and regenerate frame.

---

## FRAM-074

(warning) In %s.frame, the zero-spacing routing blockage under Z-shape is too large on lower via layer '%s'. Z-shape object_class: '%s'; %s.

**Description**

The zero-spacing routing blockage under Z-shape is too large on the lower via layer, which may cause routing QoR issue.

Feedback

**What Next**

Please check your design and settings and regenerate frame.

---

## FRAM-075

(warning) All terminals of the port '%s' of cell '%s' are on a single metal layer '%s'. However, the 'pattern_must_join' attribute is not set as true on this port, which makes conflicts.

**Description**

If all the terminals of a lib pin are on the same metal layer, then the 'pattern_must_join' attribute should be set as true on this lib pin.

**What Next**

Please update the 'pattern_must_join' attribute or correct your design.

---

## FRAM-076

(warning) Option value '%s' is set more than once in option '%s'. Keep the first setting value for frame creation, and skip the later setting value.

**Description**

If option value is specified with the same "key" for multiple times, the later setting value won't replace the first one.

For example:

set_app_options -name lib.physical_model.block_core_margin -value {{M1 0.5} {M2 0.3} {M1 0.3}} -as_user_default

The margin for M1 is the first value 0.5 for frame creation.

**What Next**

Please correct the duplicated settings in the option value list.

---

## FRAM-076e

(error) Option value '%s' is set more than once in option '%s'. Please correct the setting.

**Description**

The option value is specified with the same "key" for multiple times, please correct the setting.

Feedback

**What Next**

Please correct the duplicated settings in the option value list.

---

## FRAM-077

(warning) Via region %s of port %s is not associated to any via definition.

**Description**

There exists via region with no associated via definition, which might cause tool crash in further P&R stage. The missing via definition might be caused by removing via definition from library or tech after frame view creation.

**What Next**

Please regenerate the frame view.

---

## FRAM-078

(warning) %s %s in design %s is off track. Skip the end of preferred grid status reporting.

**Description**

The shape or regular blockage is either on the wrong color track or the center line of it is not aligned with the track. Zroute cannot do proper metal extension to such shapes/ blockages. Skip the end of preferred grid status reporting.

For off-track terminals, please see off-track condition using the report of report_lib -wire_track_colors.

**What Next**

Please check your design and track pattern setting.

---

## FRAM-079

(warning) %s %s in design %s has line ends in between low end grid and high end grid.

**Description**

The space in between the low end grid and high end grid is the potential space for cut metal insertion. However, the line end of the shape or regular blockage ends in between the low end grid and high end grid. This will cause issue when Zroute tries to do metal extension to meet the cut metal rule. The metal extension will either fail or waste routing resource.

Feedback

### What Next

Please check your design and fix the issue.

---

## FRAM-080

(warning) End of preferred grid setting on layer %s is invalid. Skip the checking for the shapes on this layer.

### Description

The end of preferred grid setting on the layer makes the low grids and high grids unable to make reasonable pairs. So the input end of preferred grid is invalid and the checking is skipped for the shapes and obstacles on this layer.

### What Next

Please check the track pattern, especially the low_offsets, high_offsets, low_steps, and high_steps values. See report_track_patterns(2)

---

## FRAM-081

(warning) Site '%s' has no end of preferred grid pattern on it. Skip the checking for the designs associated to this site.

### Description

There is no end of preferred grid pattern defined on the site. So the tool cannot do the checking for designs associated to this site. Please use create_track_pattern -site SITE \ -end_grid_high_steps {...} \ -end_grid_low_steps {...} \ -end_grid_high_offset {...} \ -end_grid_low_offset {...} to create the end of preferred grid pattern.

### What Next

Please create the correct track pattern with end of preferred grid information to the site. See create_track_pattern(2)

---

## FRAM-082

(error) The inconsistency between current technology and the technology used to create frame view is not acceptable for deriving via regions.

### Description

For deriving via regions, the only acceptable inconsistency between current technology and the technology used to create frame is contact code difference or via region creation

Feedback

related design rules. For other inconsistency, the whole frame should be regenerated instead of only update the via regions.

**What Next**

Update the library with consistent technology or regenerate the frame.

**See Also**

- read_tech_file
- check_workspace

---

## FRAM-083

(information) Block %s.frame, the feature of blocking via layers is set for the blocked metal layers. New zero-spacing routing blockages are added on layers:%s.

**Description**

The blocking via layers feature is honored for the blocked metal layers. The tool creates zero-spacing routing blockages on upper, lower or both via layers in the frame view for the entire block.

It is controlled by app_options lib.physical_model.create_zero_spacing_via_blockages_for_blocked_layers in lm_shell, or controlled by create_frame options -create_zero_spacing_via_blockages_for_blocked_layers in icc2_shell.

The blocked area on via layers are controlled by app_options lib.physical_model.block_all and lib.physical_model.block_core_margin in lm_shell, or controlled by create_frame options -block_all and -block_core_margin in icc2_shell.

**What Next**

Check if added zero-spacing routing blockage on specific via layers in frame view meets the original design intent. If not, you can modify app_options lib.physical_model.create_zero_spacing_via_blockages_for_blocked_layers in lm_shell or modify create_frame options -create_zero_spacing_via_blockages_for_blocked_layers in icc2_shell to adjust/remove added zero-spacing routing blockage.

---

## FRAM-084

(information) The feature of 'creat_zero_spacing_via_blockages_for_blocked_layers' and 'enable_via_regions_for_all_design_types' are conflict. Do not cut extra pin channel on upper via layer by pin direction.

Feedback

**Description**

When the feature of 'enable_via_regions_for_all_design_types' is specified, the tool checks pin direction and cuts extra channel on upper via layer if necessary. But when 'create_zero_spacing_via_blockages_for_blocked_layers' is specified, it intends to connect pins on the same layer without dropping vias. The two features are conflict, so the tool skip cutting extra pin channel on upper via layer by pin direction.

**What Next**

Check if added zero-spacing routing blockage on via layers in frame view meets the original design intent. If not, you can modify option 'create_zero_spacing_via_blockages_for_blocked_layers'. Or check if via regions are required for the design. If not, you can modify option 'enable_via_regions_for_all_design_types'.

---

## FRAM-085

(warning) There is no frame view in library '%s', skip derive_via_regions for this library.

**Description**

Via regions are only created on frame view. Thus, if there is no frame view in the library, then the derive via region process will be skipped.

**What Next**

Check your input library.

---

## FRAM-086

(warning) The boundary of block '%s' is not rectangular, skip 'layer_bbox' mode for layer '%s' in option pin_channel_boundary_modes.

**Description**

The tool does not support 'layer_bbox' mode for non-rectangular boundary in option pin_channel_boundary_modes. The option setting for the layer is skipped.

**What Next**

Check your input library.

---

## FRAM-086e

(error) The boundary of block '%s' is not rectangular, cannot set 'layer_bbox' mode for layer '%s' in option pin_channel_boundary_modes.

Feedback

**Description**

The tool does not support 'layer_bbox' mode for non-rectangular boundary in option pin_channel_boundary_modes.

**What Next**

Check your input library.

---

## FRAM-087

(warning) Library '%s' is an aggregate library. Please change current_lib to each sub-library and do the techfile replacement and derive_via_regions to each sub-library.

**Description**

In an aggregate library, each sub-library has its own associated technology. Thus, the techfile replacement and derive_via_regions operations should be done on each sub-library separately.

**What Next**

Please change current_lib to each sub-library and do the techfile replacement and derive_via_regions to each sub-library.

---

## FRAM-088

(information) Using technology '%s' to derive design library via region in the frame-views of library '%s'.

**Description**

Use the technology from the design library to derive via regions on the frame views in the reference library. These new derived via regions are only at the design library, and are not saved to the reference library. Zroute will honor these design-library via regions during routing.

---

## FRAM-089

(warning) Invalid pair value '%s' is specified for option '%s'. Ignore the setting on the layer.

**Description**

The input pair value in list has invalid format. The number or type may be incorrect. Ignore the setting on the spcified layer.

Feedback

**What Next**

Please check the command man page and correct the usage.

---

## FRAM-089e

(error) Invalid pair value '%s' is specified for option '%s' on the layer.

**Description**

The input pair value in list has invalid format. The number or type may be incorrect.

**What Next**

Please check the command man page and correct the usage.

---

## FRAM-090

(warning) In block '%s', layer '%s' has multiple islands for the boundary or more than 5000 shapes. Skip 'layer_boundary' mode on this layer in option pin_channel_boundary_modes and use defautl mode 'block_boundary' instead.

**Description**

For 'layer_boundary' mode in option pin_channel_boundary_modes, the tool does not support multiple islands or more than 5000 shapes. The tool will skip the option setting on this layer and use default mode 'block_boundary' instead.

**What Next**

Check your input library.

---

## FRAM-091

(warning) Input design %s does not belong to lib %s. Ingore this design.

**Description**

The input design of -cells option need to belong to the input library. Designs from other libraries are ignored.

**What Next**

Please correct your input.

---

## FRAM-092

(warning) create_frame command option %s will be obsolete in future release %s.

Feedback

**Description**

The command option will be obsolete in future release, please check the usage of this option.

**What Next**

Please check the usage of the command option.

---

## FRAM-093

(warning) The app_option lib.physical_model.* is set. For frame creation, please use "create_frame -honor_physical_model_app_options true". The app_options lib.physical_model.* will be obsolete in future release %s. Please use create_frame command options instead.

**Description**

The app_options lib.physical_model.* will be obsolete in future release, please use create_frame command options instead.

**What Next**

Please replace the usage of app_options lib.physical_model.* by create_frame command options.

---

## FRAM-094

(warning) When create_frame option %s is specified, the setting of option %s is ignored and using default value instead.

**Description**

The command does not support certain option combination. Please check the usage of command options.

**What Next**

Please verify the usage of command options.

---

## FRAM-094e

(error) When create_frame option %s is specified, cannot support option %s at the same time.

Feedback

**Description**

The command does not support certain option combination. Please check the usage of command options.

**What Next**

Please verify the usage of command options.

---

## FRAM-095

(warning) Block '%s' has non-rectlinear cell boundary. The '%s' mode in option via_region_trim_by_cell_boundary for layer '%s' will be ignored and use default mode 'all' instead.

**Description**

For 'horizontal' and 'vertical' mode in option via_region_trim_by_cell_boundary, the tool only support it when cell boundary is rectlinear. For non-rectlinear cell boundary, tool will use the default mode 'all' instead.

**What Next**

Please set 'all' or 'none' mode in option via_region_trim_by_cell_boundary for non-rectlinear cell boundary.

---

## FRAM-095e

(error) Block '%s' has non-rectlinear cell boundary. The tool cannot support the '%s' mode in option via_region_trim_by_cell_boundary for layer '%s'.

**Description**

For 'horizontal' and 'vertical' mode in option via_region_trim_by_cell_boundary, the tool only support it when cell boundary is rectlinear. For non-rectlinear cell boundary, tool only support the default mode 'all'.

**What Next**

Please set 'all' or 'none' mode in option via_region_trim_by_cell_boundary for non-rectlinear cell boundary.

---

## FRAM-096

(warning) For, block '%s, pin shape of '%s' is not a rectangle. The '%s' mode in option via_region_trim_by_cell_boundary will be ignored and use default mode 'all' instead.

Feedback

**Description**

For 'horizontal' and 'vertical' mode in option via_region_trim_by_cell_boundary, the tool only support it for rectangular pin. For non-rectangular pin, tool will use the default mode 'all' instead.

**What Next**

Please set 'all' or 'none' mode in option via_region_trim_by_cell_boundary for the layer which non-rectangular pin is on it.

---

## FRAM-096e

(error) For, block '%s, pin shape of '%s' is not a rectangle. The tool cannot support the '%s' mode in option via_region_trim_by_cell_boundary.

**Description**

For 'horizontal' and 'vertical' mode in option via_region_trim_by_cell_boundary, the tool only support it for rectangular pin. For non-rectangular pin, tool only support the default mode 'all'.

**What Next**

Please set 'all' or 'none' mode in option via_region_trim_by_cell_boundary for the layer which non-rectangular pin is on it.

---

## FRAM-097

(information) Skip creating frame view for block '%s', because the design_type is '%s'. %s

**Description**

Frame view is not necessary for some design_type, skip creating frame view for these designs.

**What Next**

Please check the design_type for the frame creation process.

---

## FRAM-098

(info) Block '%s' has null design bbox, skip the frame creation process.

**Description**

The design bbox is null, the block may have no physical data. Skip the frame creation process.

Feedback

**What Next**

Please check the block for the frame creation process.

---

## FRAM-099

(info) Block '%s' contains blkInst with null bbox. The refBlk is '%s' and it may have no physical data.

**Description**

The design bbox of the refernce block is null, it may have no physical data. Skip reading it in the frame creation process.

**What Next**

Please check the reference block for the frame creation process.

---

## FRAM-100

(warning) The technology information used to create frame-view is not available in library '%s'. Need to derive design library via region for this library.

**Description**

Technology information used to create frame-view is stored in the library in version later than K-2015.06-SP1. Reference library created using older version does not have the information, thus it is impossible to compare between the technology used to create frame-view and current technology. It is better to derive design library via region for this library.

**What Next**

Check if derive design library via regions are generated in later steps.

---

## FRAM-101

(warning) Frame '%s' has colorless shapes or colorless regular routing blockages on layers: '%s'. The number of mask setting is larger than one on those layers.

**Description**

The number of mask setting is larger than one for certain layers. Shapes and regular routing blockages on those layers should be pre-colored already.

**What Next**

Please pre-color shapes and regular routing blockages before frame creation.

Feedback

## FRAM-102

(warning) Drop colorless shapes and colorless regular routing blockages on DPT layers: '%s', when app option 'lib.setting.handle_noncolored_shapes' is in 'strict' mode.

**Description**

When 'lib.setting.handle_noncolored_shapes' is in 'strict' mode, drop colorless shapes and colorless regular routing blockages on dpt layers in frame creation.

**What Next**

Please pre-color shapes and regular routing blockages before frame creation.

## FRAM-103

(warning) Incorrect setting for port '%s' in option '%s', the setting is ignored for the port.

**Description**

The option value format is incorrect, and the setting is ignored for the port. The tool will use default option value for the port in frame creation.

**What Next**

Please look up the option man page and correct the option setting.

## FRAM-103e

(error) Incorrect setting for port '%s' in option '%s'.

**Description**

The option value format is incorrect for the port, user needs to correct the setting for frame creation.

**What Next**

Please look up the option man page and correct the option setting.

## FRAM-104

(warning) Fail to merge special router extension or patching net shape to pin '%s'.

Feedback

**Description**

Frame option "merge_extension_to_pin" or "merge_patch_to_pin" is turned on, but the tool cannot merge the special router extension or patching net shape to the pin. It may have color/net conflict or fail in deleting/creating shape/pin.

**What Next**

Please check the design or disable option "merge_extension_to_pin" or "merge_patch_to_pin".

---

## FRAM-105

(warning) Drop non-pin curved shape %s in frame view.

**Description**

The non-pin curved shapes in design view are dropped in frame view. Frame view only carries curved pin shapes from design view.

---

## FRAM-106

(error) Design '%s' has colorless shapes or colorless regular routing blockages on DPT layers: '%s'. Exit frame creation in 'strict' mode.

**Description**

When 'lib.setting.check_mask_constraints' is in 'strict' mode, exit frame creation when colorless shapes or colorless regular routing blockages are on DPT layers.

**What Next**

Please pre-color shapes and regular routing blockages on those layers before frame creation.

---

## FRAM-107

(warning) Frame '%s' has color shapes or color regular routing blockages on layers: '%s'. The number of mask setting is 0 or 1 on those layers.

**Description**

The number of mask setting is 0 or 1 for certain layers. Do not pre-color shapes and regular routing blockages on those layers.

Feedback

**What Next**

Please remove color constraints on shapes and regular routing blockages before frame creation.

---

## FRAM-108

(error) Design '%s' has color shapes or color regular routing blockages on non-DPT layers: '%s'. Exit frame creation in 'strict' mode.

**Description**

When 'lib.setting.check_mask_constraints' is in 'strict' mode, exit frame creation when color shapes or color regular routing blockages are on non-DPT layers.

**What Next**

Please remove color constraints on shapes and regular routing blockages before frame creation.

---

## FRAM-109

(information) Allow design library via region to extend by routing direction for port '%s' in block '%s'.

**Description**

Allow design library via region to extend by routing direction for the pin shape.

**What Next**

None

---

## FRAM-110

(warning) There are more than %d non-pin shapes on layer %s, drop those shapes in frame view for P&R runtime consideration.

**Description**

Too many shapes or routing blockages might cause long runtime issue in further P&R stage, the tool drops those non-pin shapes by default.

**What Next**

Please specify block_all or block_core_margin for adjacent metal layers, which can reduce the via layer shapes or routing blockages.

Feedback

If there are long PG terminals above the via layer, then the shapes and routing blockages under the terminals are preserved for DRC checking. It is fine to drop them if there is no DRC concern, but if you still need to keep those details on via layers, please change the internal threshold value.

---

## FRAM-111

(warning) There are more than %d RC metal shapes on layer %s, skip generating RC metal shapes in frame view for P&R runtime consideration.

**Description**

Too many RC metal shapes might cause long runtime issue in further P&R stage, the tool skips generating the RC metal shapes by default.

**What Next**

Please check if there are long PG terminals across the design, which will trim a large piece of RC metal as many fragmented shapes.

If you still need to output the RC metal shapes, please change the internal threshold value.

---

## FRAM-112

(warning) Option %s does not support backside layer, ignore layer %s of this option.

**Description**

Some frame view features do not support with backside layer.

**What Next**

Please remove backside layer from the option.

---

# GCR

---

## GCR-001

(error) Could not execute command '%s' because router is not initialized.

**Description**

The Custom Router is not initialized so the command cannot be executed.

Feedback

### What Next

This message doesn't apply to IC Compiler II, as the Custom Router will automatically initialize whenever the user executes a command which requires it.

### See Also

- route_custom

---

## GCR-002

(error) '%s' execution failed with message: '%s'

### Description

An internal Custom Router command has failed. The reason will be displayed.

### See Also

- route_custom

---

## GCR-003

(error) The router private command '%s' requires at least one of the %s features, which are not currently checked out.

### Description

One or more required licenses was not available.

### What Next

Ensure that the proper licenses have been installed. Check that other users are not using all the licenses.

### See Also

- route_custom

---

## GCR-004

(error) The router could not be initialized because there are no layers with material %s in the database.

Feedback

### Description

When reading the technology data, there were no layers with the specified material defined.

### What Next

Make sure the routes are on metal layers. Make sure the layers are defined in the technology data. For instructions, see the *Library Manager User Guide*.

### See Also

- route_custom

---

## GCR-006

(error) The license feature %s could not be checked out because %s.

### Description

Either the feature is not installed, or the license keys for the feature are in use by other users.

### What Next

The most common situation is that all licenses are taken by other users. Make sure the feature you want to use is installed correctly, or wait until other users have finished using the feature.

### See Also

- route_custom

---

## GCR-007

(info) The command was interrupted.

### Description

The user pressed Ctrl-C during a command.

### What Next

Rerun the command if desired.

### See Also

- route_custom

Feedback

## GCR-009

(info) The router was initialized with stop level %d.

### Description

This informational message indicates the stop level used to initialize the custom router.

### What Next

This is an informational message. Verify that the stop level is proper for your tasks and continue routing.

### See Also

- route_custom

## GCR-010

(error) The router could not be initialized.

### Description

There is a problem with the data and the Custom Router could not initialize itself.

### See Also

- route_custom

## GCR-011

(error) The router could not be initialized because an Open Access exception occurred: %s.

### Description

There is a problem with the database and the Custom Router tool could not initialize itself.

### What Next

Verify that your database has the correct permissions. Verify that network drives are connected and accessible on the system you are using.

### See Also

- route_custom

Feedback

## GCR-012

(error) The specified path style %s is not valid because %s.

### Description

The string entered does not match the valid path style values. Allowed style values are *truncate*, *extend*, *round*, and *variable*.

### What Next

Check your script for the correct spelling.

### See Also

- route_custom

## GCR-013

(error) The specified path segment end style %s is not valid because %s.

### Description

The string entered does not match the valid path styles. Allowed styles are *truncate*, *extend*, *variable*, *chamfer*, and *custom*.

### What Next

Check your script for the correct spelling.

### See Also

- route_custom

## GCR-014

(error) The router could not create a path segment because %s.

### Description

An invalid set of endpoints, an incorrect width, or an incorrect extension value is preventing the router from creating path segments.

### See Also

- route_custom

Feedback

## GCR-015

(error) The router could not create a path because %s.

### Description

An invalid point list (with duplicate points or collinear points), an incorrect width, or an incorrect extension value is preventing the router from creating path segments.

### See Also

- route_custom

## GCR-016

(error) The router could not create a %s via because %s.

### Description

The router tried to use an incorrect via definition name, the router could not access the via definition when trying to create the via, or the coordinates were illegal.

### See Also

- route_custom

## GCR-018

(error) The router could not be initialized because a general exception occurred.

### Description

A general exception error is preventing the router from initializing.

### See Also

- route_custom

## GCR-019

(warning) %s %s has no PR boundary defined.

### Description

The design does not have a boundary.

Feedback

**What Next**

Create a boundary for the design.

**See Also**

- route_custom

---

## GCR-020

(warning) %s rule for layer %s has a wire width of 0, which is not allowed.

**Description**

In the technology library, the min_width setting for the layer is set to 0.

**What Next**

In the technology library, set the min_width to a value > 0 for the layer.

**See Also**

- route_custom

---

## GCR-021

(warning) Layer %s has no minimum width constraint.

**Description**

The minimum width constraint is not defined for the layer in the technology data.

**What Next**

In the technology data, set the minimum width for the layer to a value greater than 0.

**See Also**

- route_custom

---

## GCR-022

(warning) Layer %s has a maximum width of %d which is less than the minimum width of %d.

**Description**

The maximum width for a layer must be greater than its minimum width.

Feedback

**What Next**

In the technology data, set the maximum width to a value greater than the minimum width value.

**See Also**

- route_custom

---

## GCR-023

(warning) Layer %s has no minimum spacing constraint.

**Description**

The minimum spacing constraint is not defined for the layer in the technology data.

**What Next**

In the technology data, define the minimum spacing constraint and set it to a value greater than 0 for the layer.

**See Also**

- route_custom

---

## GCR-024

(warning) %s rule for layer %s has a minimum spacing with value 0, which is not allowed.

**Description**

The minimum spacing setting for the layer is set to 0 in the technology data.

**What Next**

In the technology data, set the minimum spacing to a value greater than 0 for the layer.

**See Also**

- route_custom

---

## GCR-025

(warning) Layer %s has a minimum spacing of value 0 at 2D spacing table index (%d, %d), which is not allowed.

Feedback

### Description

The system is expecting a min_spacing value greater than 0 at the location in the 2D spacing table.

### What Next

In the technology library, set the min_spacing value greater than 0 at the location in the 2D table.

### See Also

- route_custom

---

## GCR-026

(warning) Layer %s has a minimum spacing of value 0 at 1D spacing table index %d, which is not allowed.

### Description

The system is expecting a min_spacing value greater than 0 at the location in the 1D table.

### What Next

In the technology library, set the min_spacing value greater than 0 at the location in the 1D table.

### See Also

- route_custom

---

## GCR-027

(warning) Layer %s has an invalid %s routing pitch %f. The pitch cannot be smaller than %f, which is minimum width plus minimum spacing.

### Description

An invalid pitch value is specified in the technology library.

### What Next

In the technology library, set the routing pitch to a value that is min_width plus min_spacing.

Feedback

**See Also**

- route_custom

---

## GCR-028

(warning) Layer %s has a manufacturing grid of 0, which is not allowed.

**Description**

The manufacturing grid in the technology library for this layer is 0.

**What Next**

In the controls section of the technology file, make sure the manufacturing grid resolution is greater than 0.

**See Also**

- route_custom

---

## GCR-029

(warning) Layer %s has 0 size minimum number cut table, which is not allowed.

**Description**

The via reliability constraint for the specified layer has no cut value.

**What Next**

Review the constraints and ensure the minimum number of cuts table for the specified layer is not empty.

**See Also**

- route_custom

---

## GCR-030

(warning) Layer %s has 0 value in minimum number cut table at index %d, which is not allowed.

**Description**

The via reliability constraint for the specified layer has a cut value of 0.

Feedback

### What Next

Review the constraints and ensure the minimum number of cuts table for the specified layer has values greater than 0.

### See Also

- route_custom

---

## GCR-031

(warning) Instance %s does not have a valid placement status.

### Description

The placement status of the instance is unplaced.

### What Next

Place the instance in the design, or change the placement status property in the property editor.

### See Also

- route_custom

---

## GCR-032

(warning) Pin %s does not have a valid placement status.

### Description

The pin belongs to an instance that has a status of unplaced.

### What Next

Place the pin and/or instance in the design, or change the placement status property in the property editor.

### See Also

- route_custom

---

## GCR-033

(warning) Net %s has no pin.

Feedback

### Description

The net is missing pins, so routes cannot be created. Routes requires pins to form connections. Pins can be top level pins or ports from the top level into lower level instances.

### What Next

Add pins on the specified net or create ports to your lower level instances.

### See Also

- route_custom

---

## GCR-034

(warning) %s %s has shielding gap %f smaller than minimum spacing %f.

### Description

The distance between the signal and shield is less than the default minimum spacing value.

### What Next

Check the shielding constraints and increase the gap value.

### See Also

- route_custom

---

## GCR-035

(warning) %s %s has shielding width %f smaller than minimum width %f.

### Description

The shield width is narrower than the default minimum width value.

### What Next

Check the shield constraints and ensure that the width value is at least equal to the minimum width value.

### See Also

- route_custom

Feedback

## GCR-036

(warning) %s has net match length constraint with max value %f less than minimum value %f.

### Description

The maximum value is less than the minimum value for the length constraint.

### What Next

Correct the minimum and maximum values for the length constraint.

### See Also

- route_custom

## GCR-037

(warning) The via stack limit cannot be less than 1.

### Description

The via stack limit constraint is set to a value less than 1 in the technology library.

### What Next

Check the technology library and set the via stack limit to a value of 1 or higher.

### See Also

- route_custom

## GCR-038

(error) The design has no via definitions that are suitable for routing.

### Description

The vias used in the design are not defined in the technology library.

### What Next

Review your technology library. Check that the vias are defined as desired, and create new via definitions if necessary.

### See Also

- route_custom

Feedback

## GCR-039

(error) %s has no valid routing layers.

**Description**

No valid routing layers are selected.

**What Next**

Check the valid routing layer constraint. Check the technology library for the layer definitions. Check that metal layers are selected for use.

**See Also**

- route_custom

## GCR-040

(warning) %s has no vertical routing layers.

**Description**

None of the eligible routing layers has vertical direction.

**What Next**

Check the layer directions in the layers constraint and on the router setup dialog. Ensure that at least one layer has vertical direction.

**See Also**

- route_custom

## GCR-041

(warning) %s has no horizontal routing layers.

**Description**

None of the eligible routing layers has horizontal direction.

**What Next**

Check the layer directions in the layers constraint and on the router setup dialog. Ensure that at least one layer has horizontal direction.

Feedback

- route_custom

---

## GCR-043

(warning) %s use via %s with cut %s number %d, which is not allowed.

**Description**

Either the number of row or the number of columns in the via is 0, which is not allowed.

**What Next**

Ensure your array vias have at least one cut per row and column.

**See Also**

- route_custom

---

## GCR-044

(warning) %s use via with minimum cut number %d at layer %s, which is not allowed.

**Description**

In the via reliability constraint, the number of cuts value for the specified layer is less than 1.

**What Next**

Check the constraints and set the number of cust value to 1 or greater in the via reliability constraint.

**See Also**

- route_custom

---

## GCR-045

(warning) Instance %s has no master.

**Description**

The instance does not have a master. The master could be unbound or missing from your library.

Feedback

**What Next**

Create a master cell for the instance. Check your library references and ensure that all the data is accessible.

**See Also**

- route_custom

---

## GCR-046

(warning) Instance %s is placed outside of design boundary.

**Description**

The instance has placed status but is incorrectly placed outside the design boundary.

**What Next**

Move the instance within the boundary, or enlarge the design boundary to enclose the instance.

**See Also**

- route_custom

---

## GCR-047

(warning) Pin %s is placed outside of design boundary.

**Description**

The pin is incorrectly placed.

**What Next**

Move the pin within the boundary, check the placement of its instance, or enlarge the design boundary to enclose the instance and all of its pins.

**See Also**

- route_custom

---

## GCR-048

(warning) Via constraint for %s contains via %s which has no valid via def. This will not be used by router.

Feedback

### Description

A via you selected in the Vias constraint has a missing or invalid via definition. The router is unable to use this via.

### What Next

In the Constraint Editor, check the via selections in the Vias constraint. Make sure that selected vias have valid via definitions or remove them from the Vias Constraint.

### See Also

- route_custom

---

## GCR-049

(warning) %s shorts with %s on layer %s at %s.

### Description

Two pins short circuited on the specified layer. Routing results may be affected.

### What Next

Change the placement of one instance so the pins no longer cause short circuitry.

### See Also

- route_custom

---

## GCR-050

(warning) Design %s has no net.

### Description

The design does not have any nets. You can only create routes in designs that have nets.

### What Next

Create nets in the design. If you are using a routing area, please ensure that it is defined correctly.

### See Also

- route_custom

Feedback

## GCR-053

(warning) Net %s shorts with net %s on layer %s at %s.

**Description**

Two shapes short circuited on the specified layer.

**What Next**

Check the overlapping shapes and move one of them top fix the short circuitry.

**See Also**

- route_custom

## GCR-054

(warning) Layer %s doesn't have a standard via available to move up.

**Description**

No standard via definition was found for the specified layer.

**What Next**

Select a standard via for the layer in the vias constraint.

**See Also**

- route_custom

## GCR-057

(warning) Layer %s has %s routing pitch %f bigger than %f, which is 10x(width+spacing).

**Description**

The given route pitch is very large compared to the width and spacing rules.

**What Next**

Check the pitch value in the grids constraint.

**See Also**

- route_custom

Feedback

## GCR-058

(error) Cannot define Group %s. Net is either NULL or pins have different net names.

### Description

The attempt to define a group from a topology_edge failed because a pin has a NULL net or a different net from the other pin.

### What Next

Check the definition of your toplogy routing to be sure it defines the correct end points.

### See Also

- route_custom

## GCR-059

(warning) Net %s has shielding gap %f but the clearance for width %f is %f in layer %s spacing table. Loss of shielding can occur.

### Description

The shielding gap conflicts with the layer width and layer spacing table.

### What Next

Check the gap parameters in the net shielding constraints.

### See Also

- route_custom

## GCR-061

(error) Shielding net %s but it does not contain any valid shield rules.

### Description

A net was specified for shielding in the command net list, but the net does not have a valid shield constraint associated with it.

### What Next

Check that you have selected the correct nets for routing. Check the shielding constraints to ensure that the net you wish to shield has a shield constraint defined.

Feedback

## GCR-062

(info) Custom Router Antenna Report

**Description**

This is the header of the antenna report.

**What Next**

This is an informational message and no action is required.

**See Also**

- route_custom

---

## GCR-063

(info) %d Net%s %sSuccessfully Modified to Correct Antenna Violations

**Description**

This message indicates how nets were successfully modified and/or could not be successfully modified to correct process antenna violations.

**What Next**

This is an informational message and no action is required. For nets which were not successfully modified, the net may have to be manually edited to correct the process antenna effect.

**See Also**

- route_custom

---

## GCR-064

(error) Unable to write detailed antenna report because file %s could not be opened.

**Description**

The attempt to write the report fail failed. The disk might be full, the directory might not have write permission, or the file might already exist and cannot be overwritten.

Feedback

### What Next

Check your disk space and the write permissions for the directory and report file.

### See Also

- route_custom

---

## GCR-066

(warning) Shielding net %s has no pin. No shield vias can be added.

### Description

The net selected to shield your connections does not have any valid place to insert the shield vias.

### See Also

- route_custom

---

## GCR-067

(warning) Net %s has %f shield gap, but coaxial shielding width %f requires %f clearance in layer %s spacing table. Please change shield constraint to split-coaxial.

### Description

A coaxial shield requires more space for the specified width.

### What Next

Check the coaxial shielding style constraint definition. Select the split-coaxial shielding style if possible or increase the shield gap value.

### See Also

- route_custom

---

## GCR-068

(warning) Width %.10g is not an even multiple of the layer manufacturing grid. Router will modify width to %.10g.

### Description

The width must be an even multiple of the manufacturing grid to aviod errors in precision.

Feedback

### What Next

The router automatically adjusts the width to the value shown.

### See Also

- route_custom

---

## GCR-069

(warning) Cannot complete Interactive Router solution at the specified point. Topology constraints on the net\n prevent the creation of the topology that would result from completing a route\n at the specified point with the specified start.\n If applicable, ensure that the route start point is within the Steiner geometry.

### Description

The Interactive Router cannot end at the specified point because of the given topology specifications.

### What Next

If attempting to begin or end the router at a topoogy node, ensure that the specified point is within the geometry of the node.

### See Also

- route_custom

---

## GCR-070

(warning) Cannot start Interactive Router from the specified point. Topology constraints on the net\n prevent the creation of the topology that would result from completing a route\n at the specified point.

### Description

The Interactive Router cannot begin at the specified point because of the given topology specifications.

### What Next

If attempting to being or end the router at a topology node, ensure that the specified point is withing the geometry of the node.

### See Also

- route_custom

Feedback

## GCR-071

(warning) Cannot start Interactive Router from the specified point. No object was selected or the selected object is not a routable object.

### Description

The Interactive Router did not detect a valid object at the selected point. Either there was no object or the object is not valid for routing.

### What Next

Click at an appropriate point, such as a pin, topology node, or wire and try again.

### See Also

- route_custom

## GCR-072

(warning) Cannot complete Interactive Router operation. Cannot find a legal snapping point to nearest routable target.

### Description

The Interactive Router did not detect a valid target point for routing.

### What Next

Click close to an appropriate point, such as a pin, topology node, or wire and try again.

### See Also

- route_custom

## GCR-073

(warning) Cannot complete Interactive Router operation. Cannot find a nearby routable target.

### Description

The Interactive Router did not detect a valid target point for routing.

### What Next

Click close to an appropriate point, such as a pin, topology node, or wire and try again.

Feedback

**See Also**

- route_custom

---

## GCR-074

(warning) Add Point event ignored. Specified point has previously been added.

**Description**

You clicked twice in the same area.

**What Next**

Do not click more than once in a small area. Zoom in closer for better precision.

**See Also**

- route_custom

---

## GCR-075

(warning) Cannot complete Interactive Router operation at specified point. The selected object is not a routable target.

**Description**

You have selected a non-routable object for interactive routing.

**What Next**

Click at an appropriate point, such as a pin, topology node, or wire and try again.

**See Also**

- route_custom

---

## GCR-076

(warning) Cannot complete Interactive Router operation. Cannot find a legal snapping point on specified routable target.

**Description**

The target you have selected does not have a legal snapping point. The target might be off grid, or might be blocked by other nearby objects.

Feedback

### What Next

Make sure the target is on grid. Check for nearby obstacles before adding routes.

### See Also

- route_custom

---

## GCR-077

(warning) Cannot provide an Interactive Router solution from the starting point. The starting pin/wire appears\n to be covered by a routing obstruction. Suggest attempting the route from a different point.

### Description

One or more obstacles might be blocking the starting pin or wire.

### What Next

Start the router from a different pin or wire.

### See Also

- route_custom

---

## GCR-078

(warning) Cannot provide an Interactive Router solution to the targeted pin/wire which appears\n to be covered by a routing obstruction. Suggest attempting the route to a different point.

### Description

One or more obstacles might be blocking the starting pin or wire.

### What Next

Try to end your route at a different pin or wire.

### See Also

- route_custom

Feedback

## GCR-079

(warning) Cannot provide an Interactive Router solution to the targeted pin/wire. Verify obstructions near the target for constraints.\n Alternatively, verify track patterns at the targeted object.

### Description

One or more obstacles might be blocking access to the target pin or wire. Track patterns may not permit routing to the target.

### What Next

Check nearby objects and review your track pattern definitions for conflicts.

### See Also

- route_custom

## GCR-080

(warning) Cannot provide an Interactive Router solution to the targeted pin/wire within resource limits. Routing failure occurs somewhere between\n the routing source and target. Verify for obstructions. Alternatively, verify that source and\n target are not separated by unroutable layers. Alternatively ensure that\n P2P guidance is orthogonal.

### Description

One or more obstacles might be preventing the router from creating a route between the specified source and target objects.

### What Next

Check for obstacles along the desired route. You might have to create a different route. Check that the source and target shapes are not separated by unroutable layers. Make sure the routes are in orthogonal directions only.

### See Also

- route_custom

## GCR-081

(warning) Cannot provide an Interactive Router solution from the designated pin/wire. Verify obstructions near the source for constraints.\n Alternatively, verify track patterns at the starting object.

Feedback

### Description

One or more obstacles might be preventing the router from creating a route between the specified source and target objects.

### What Next

Check for obstacles along the desired route. You might have to create a different route. Check that the source and target shapes are not separated by unroutable layers. Make sure the routes are in orthogonal directions only.

### See Also

- route_custom

---

## GCR-082

(warning) Cannot complete Interactive Router operation. Verify: valid routing layers, Non Default Rules, track patterns, pin accessibility.\n Alternatively, try setting the Ignore Samenet DRCs option.

### Description

Invalid routing layers, constraints violations, track patterns and obstacles might be preventing the routier from creating a route between the specified source and target objects.

### What Next

Check for obstacles along the desired route. Check for constraint violations and fix them. Check the track pattern definition for conflicts.

### See Also

- route_custom

---

## GCR-083

(warning) Cannot provide an Interactive Router solution from the starting point. The starting pin/wire location appears\n to conflict with local track pattern constraints.

### Description

A conflict exists between the starting point and the track pattern constraints.

### What Next

Review your track pattern definitions.

Feedback

### See Also

- route_custom

---

## GCR-085

(warning) Interactive solution could only be found by ignoring routing blockages.\n This may result in DRCs. The routing blockages preventing a clean route appear to be located \n near the targeted pin/wire.

### Description

Blockages near the target pin or wire are causing the router to ignore the routing blockages to route successfully.

### What Next

Review your DRC report carefully. The Interactive Router might be creating DRCs when it ignores a routing blockage.

### See Also

- route_custom

---

## GCR-086

(warning) Interactive solution could only be found by ignoring routing blockages.\n This may result in DRCs. The routing blockages preventing the generation of a clean route appear\n to be located near the source pin/wire.

### Description

Blockages near the origin pin or wire are causing the router to ignore the routing blockages to route successfully.

### What Next

Review your DRC report carefully. The Interactive Router might be creating DRCs when it ignores a routing blockage.

### See Also

- route_custom

Feedback

## GCR-087

(warning) Interactive solution could only be found by ignoring routing blockages or constraints like via redundancy. This may result in DRCs.

### Description

Blockages or constraints near the origin or target pin or wire are causing the router to fail. The router has chosen to ignore them to complete the route.

### What Next

Review your DRC report carefully. The Interactive Router might be creating DRCs when it ignores a routing blockage.

### See Also

- route_custom

## GCR-088

(warning) Point (%d,%d) is outside of the defined routing area. Point ignored.

### Description

The router is ignoring the point outside the defined routing area.

### What Next

Click inside the routing area and continue your routing.

### See Also

- route_custom

## GCR-089

(error) No contiguous path found between clicked points.

### Description

No contiguous path found between clicked points.

### What Next

Check the area being routed and click in an open space.

Feedback

**See Also**

- route_custom

---

## GCR-090

(error) Clicked shapes have no net definition.

**Description**

You clicked shapes that do not have assigned nets. The router cannot use these shapes as a starting or ending point.

**What Next**

Use the Property Editor to verify the shapes of the objects you want to use during routing.

**See Also**

- route_custom

---

## GCR-091

(error) P2P shielder doesn't currently support shielding on bit nets.

**Description**

The point-to-point shielding tool cannot shield individual bit nets of a bus or bundle.

**What Next**

Apply the shield to the entire bus or bundle.

**See Also**

- route_custom

---

## GCR-092

(warning) Cannot complete Interactive Router operation. There appears to be no possible routing path between the source and target.\n Verify: valid routing layers, Non Default Rules, track patterns, pin accessibility.

**Description**

One or more obstacles, unroutable layers between source and target shapes, or spacing violations are preventing the router from creating routes.

Feedback

### What Next

Check for obstacles, unroutable layers, and spacing constraints.

### See Also

- route_custom

---

## GCR-094

(warning) Width %.10g on original Interactive Router tandem route start layer has been increased to %.10g\n to match the maximum tandem routing width required.

### Description

The router had to adjust the width on a tandem route to match the required maximum width.

### What Next

Be aware of the change in width.

### See Also

- route_custom

---

## GCR-095

(warning) Cannot complete Interactive Router multi-wire routing. There appears to be no possible routing path between the sources and targets.\n Verify: valid routing layers, Non Default Rules, pin accessibility.\n Alternatively ensure that P2P guide points select accessible tapoff locations and adequate open corridor areas.\n Routed wire connections: %u, unrouted wire connections: %u.

### Description

One or more obstacles, unroutable layers between source and target shapes, or spacing violations are preventing the router from creating routes.

### What Next

Check for obstacles, unroutable layers, and spacing constraints. Also, for point-to-point routing, select accessible tapoff locations and corridors that have sufficient space.

### See Also

- route_custom

Feedback

## GCR-096

(warning) Tandem solution failed. However, a base route was found. To allow partial tandem solution,\n set the Allow Tandem Breaks option to true (preference: rtTandemAllowBreaks)

### Description

Your settings required that tandem shield be inserted without any breaks. There was at least one section where the tandem shield was blocked by routing, blockages or other obstacles on the layer above or below.

### What Next

The router will be able to create partial tandem shields if you set the preference rtTandemAllowBreaks to true. If partial tandem shields are okay, please set the preference as indicated.

### See Also

- route_custom

## GCR-097

(error) Shielding net %s but no shield net specified.

### Description

The net was specified for shielding in the command net list, but the net to use to create the shielding was not specified.

### What Next

Check that the net to be used for shielding is specified on the Add Shield toolbar, P2P Shield toolbar, and the Auto Route dialog box.

### See Also

- route_custom

## GCR-098

(warning) Tandem vias at corners were not inserted in order to respect stacking via constraints.

Feedback

### Description

The viaStackLimit constraint does not permit another via to be inserted at some location, so some shield vias were omitted.

### What Next

Check the viaStackLimit constraint. Reroute the connection being shielded to an area with more room for vias to be inserted.

### See Also

- route_custom

---

## GCR-099

(warning) There is no PR boundary or routing area defined in the design. Router will use boundary (%f %f) (%f %f) for routing.

### Description

The design does not have a boundary or a routing area defined, so the router computes the boundary box of all the shapes and pins.

### What Next

If this is not desired, be sure to define a PR boundary or routing area before starting the router.

### See Also

- route_custom

---

## GCR-100

(warning) Cannot switch to tandem routing mode in the middle of a routing operation. Routing operation has been aborted.

### Description

You attempted to switch to the Tandem routing mode in the middle of the routing operation. The router could not continue.

### What Next

Turn on the Tandem mode before starting a route operation.

Feedback

**See Also**

- route_custom

---

## GCR-111

(warning) Skip bit net %s for creating bus virtual pin, because only one steiner is found on it.

**Description**

The router found only one steiner on a bus net bit, so it could not create a bus virtual pin.

**What Next**

Check the bus net bit steiner definitions.

**See Also**

- route_custom

---

## GCR-112

(warning) Placement found %d images placed outside PR boundary (%g,%g)(%g,%g) These images will be ignored.

**Description**

This is an informational message and no action is required.

**What Next**

Check instance placement or referenced libraries

**See Also**

- route_custom

---

## GCR-113

(warning) Projection for '%s' failed because pin and/or routing path is blocked by obstruction or is outside corridors.

**Description**

Projection failed because pin and/or routing path is blocked by obstruction or is outside corridors

Feedback

**What Next**

Ensure blockages, corridors and/or pin alignments on pins and expected connecting paths, so remove ignore_constraints_for_straight_connection option and rerun route_custom.

**See Also**

- route_custom

---

## GCR-114

(warning) Bitnets of bus %s have different corridors assigned on layer %s, all corridors on layer %s are merged into one big corridor.

**Description**

The router combined one or more corridors into a single larger corridor on the specified layer.

**What Next**

Check your corridor definitions and define a single corridor per layer.

**See Also**

- route_custom

---

## GCR-115

(warning) Detected width, spacing, rule, or constraint errors. See details in file '%s'.

**Description**

One or more errors were detected while processing the constraints.

**What Next**

Review the errors in the specified output file and make corrections if possible.

**See Also**

- route_custom

---

## GCR-116

(warning) Shield constraint on '%s' is ignored. There is no shield net '%s' in database.

Feedback

**Description**

The net requested to be used for shielding was not found in the database.

**What Next**

Check that the shield net name is spelled correctly and review your design data.

**See Also**

- route_custom

---

## GCR-117

(warning) The Shielder could not create the shielding via at (%f %f) (%f %f) via due to DRC Error.

**Description**

When adding shielding, the router encountered a DRC error and did not create a via at the noted coordinate.

**What Next**

Visually check the area specified for other objects that might interfere with the shielding tool.

**See Also**

- route_custom

---

## GCR-118

(warning) Cannot shield net %s. It is not fully routed.

**Description**

Shielding is only supported on fully routed nets.

**What Next**

Make sure the net is fully routed before adding shielding.

**See Also**

- route_custom

Feedback

## GCR-119

(warning) Supply net %s has no top level shape and would be ignored for routing.

### Description

The router cannot use a supply net without one or more top-level shapes that can be used as connection points.

### What Next

Check the design data and the supply net definitions. Ensure that you have top-level shapes that can be used as connection points.

### See Also

- route_custom

## GCR-120

(info) Net %s configured %d multiport pins.

### Description

This informational message indicates that the net contained some pins configured as multiport.

### What Next

This is an informational message and no action is required.

### See Also

- route_custom

## GCR-121

(warning) Shielding net %s has no pin in specified edit window. No shield vias can be added.

### Description

The viewed area does not contain any pins from the supply net, so shield vias do not have connection points.

Feedback

### What Next

Try zooming out so that the viewing area includes the supply shapes and shield vias have connection points.

### See Also

- route_custom

---

## GCR-122

(warning) Net %s unable to process oaRoute with end type of %s.

### Description

The router does not support a topology route that ends at a via.

### What Next

Add a topology node or use an inst term for your route end-point.

### See Also

- route_custom

---

## GCR-123

(warning) Detected %d feedthrough connections and %d nearby pin-pin connections.

### Description

This is an informational message indicating how many feedthrough and nearby pin-pin connections were detected when the design was loaded.

### What Next

This is an informational message and no action is required. If the numbers seem unusual, review the design data.

### See Also

- route_custom

---

## GCR-124

(warning) Bus/Diffpair trunk %s has 3 or more terminal groups. P2P can only handle 2 terminal groups. All terminal groups are routed.

Feedback

### Description

During point-to-point interactive routing, the router can support two terminal groups. However, the design contains at least three terminal groups.

### What Next

Review the bus or diffpair and ensure there are no more than two terminal groups defined, then try to route again.

### See Also

- route_custom

---

## GCR-125

(warning) Bus/Diffpair trunk %s has predefined corridor. P2P corridor is suppressed.

### Description

The bus or diffpair already had a route-guide corridor defined. We cannot use the mouse-click corridor in this case.

### What Next

Check that the bus or diffpair route-guide corridor is defined as expected. Your mouse-click point-to-point corridor will not be used.

### See Also

- route_custom

---

## GCR-126

(info) Net:%s pin:[%s-%s] Defined as trunk found within image.

### Description

This informational message indicates that the router defined the given net and pin as a trunk.

### What Next

This is an informational message and no action is required.

### See Also

- route_custom

Feedback

## GCR-127

(info) %s:'%s' succeeded route : applied (%d) applied wire and (%d) routed wires

**Description**

This informational message indicates that the trunk route is fully routed.

**What Next**

This is an informational message and no action is required.

**See Also**

- route_custom

## GCR-128

(warning) %s:'%s' applied (%d) applied wire and (%d) routed wires

**Description**

This informational message indicates that the trunk router doesn't fully routed.

**What Next**

This is an informational message and no action is required.

**See Also**

---

## GCR-138

(warning) Could not process via %s because its viaDef %s is not bound.

**Description**

Some via definitions were invalid or unbound and could not be loaded by the router.

Feedback

### What Next

Review your technology and library data to look for unbound vias masters. Files might have been moved or might not be readable. Correct if possible.

### See Also

- route_custom

---

## GCR-139

(error) TrackPattern %s with color %d exceeds maximum color of %d.

### Description

The router only supports up to three colors (upper and lower metal layer plus cut layer).

### See Also

- route_custom

---

## GCR-140

(error) Cannot use one-loop lengthening without Wire Matching or Length constraint.

### Description

Single-loop matching requires matching constraint (wireMatching or Length) assigned to the initial routed nets

### What Next

Set the Wire Matching or Length constraint to use the single-loop preference.

### See Also

- route_custom

---

## GCR-141

(error) Lengthen bounding box must be specified when using One-loop lengthening.

### Description

You must specify lengthening area (custom.route.match_box) to run single-loop matching.

Feedback

### What Next

Define the wire-lengthening area using the custom.route.match_box app option.

### See Also

- route_custom

---

## GCR-142

(warning) Net %s: Wire Matching or Length constraint must be specified to use One-loop lengthening.

### Description

Single-loop matching requires a matching constraint (wireMatching or Length) assigned to the net

### What Next

Set the Wire Matching or Length constraint for the net to use the single-loop preference.

### See Also

- route_custom

---

## GCR-143

(warning) Net %s: Routing is incomplete. One-loop lengthening does not support partially routed nets.

### Description

Because the single-loop matching is a post-route operation, all nets must be fully routed before using One-loop lengthening.

### What Next

Make sure the nets are fully routed before attempting One-loop lengthening.

### See Also

- route_custom

Feedback

## GCR-144

(warning) Net %s: Shapes on net must be located within One-loop lengthening bounding box.

### Description

The defined lengthening area (rtMatchBox) does not contain any shapes from the original routing, so there is no place to insert single detour wire for matching.

### What Next

Redefine the lengthening area by updating the rtMatchBox preference.

### See Also

- route_custom

## GCR-145

(warning) Net %s: One-loop lengthening does not have enough room to satisfy constraint within the specified bounding box.

### Description

Matching algorithm has exhaustively searched all possible single detour solutions based on the criteria you provided (loop min/max spacing, offset layer, on grid) within the defined lengthening area and cannot find a satisfactory solution.

### What Next

Enlarge the wire-lengthening area if possible. Check the other constraint values to ensure they are compatible with single loop matching.

### See Also

- route_custom

## GCR-146

(warning) Net:%s route_fromto_only preference is <on>. Skipping non-topology_edge [%s-%s][%s-%s].

### Description

You have requested to route only connections defined as routes. The specified non-route connection will be skipped.

Feedback

### What Next

If the connection must be routed, define it as a topology_edge using the topology commands.

### See Also

- route_custom

---

## GCR-147

(warning) Net %s will be protected and will not be routable by the batch router due to the presence of diagonal segment shapes. It will however be possible to modify the net using the Interactive Router.

### Description

Diagonal paths or path segments have prevented the Auto Router from creating routes.

### What Next

Use the Interactive Router to update your routes, or remove the diagonal path segments and try again.

### See Also

- route_custom

---

## GCR-148

(warning) Rules for layer '%s' are ignored because it has an undefined mask number.

### Description

When processing the rules and constraints, the router found an invalid mask number. The router could not process the rules for this layer.

### What Next

Check your technology library and verify the correct layers have been applied to all of your rules and constraints.

### See Also

- route_custom

Feedback

## GCR-149

(error) The router could not be initialized because there are more than 2 poly layers (%s) defined in the tech file.

### Description

The router current supports no more than two poly layers.

### What Next

Check your technology library and ensure only two poly layers are defined.

### See Also

- route_custom

## GCR-150

(error) The router could not be initialized because the custom router does not support routing with two poly layers (two poly layers "%s" are selected for %s).

### Description

The router can only route using one poly layer when there are two poly layers defined.

### What Next

Check your technology library and ensure only two poly layers are defined. Use the Object/Layer Panel to deselect one of the two poly layers.

### See Also

- route_custom

## GCR-151

(warning) Can't build the design channel map required to do device row cloning for the Interactive Router.\n The design appears to be too large. The current limit for the number of shapes to be processed is: %d.\n To increase this limit, set the rtMaxShapesForCloning preference to a higher value.

### Description

The router has encountered more shapes than the maximum number that your preference value permits.

Feedback

### What Next

Set the rtMaxShapesForCloning preference if possible, or define a smaller window to reduce the shape count.

### See Also

- route_custom

---

## GCR-152

(warning) Not all possible Interactive Router clone candidates were actually cloned. The limit of %d clones per Interactive Router operation has been reached.\n To increase this limit, set the rtMaxCloning preference to a higher value.

### Description

The router has reached the maximum number of clones based on the rtMaxCloning preference value.

### What Next

Increase the rtMaxCloning value if possible.

### See Also

- route_custom

---

## GCR-154

(warning) Only one poly layer could be selected.

### Description

You selected more than one poly layer for routing. The router only supports one poly layer.

### What Next

Check your selected layers and ensure only one poly layer is selected, then rerun your command.

### See Also

- route_custom

Feedback

## GCR-155

(error) Command '%s' cannot be run because the required license '%s' is not available.

**Description**

The command requires the specified license feature to be available.

**What Next**

Check your license installation to ensure the specified key is installed. Check that other users have not consumed all copies of the license. Contact Synopsys for assistance if you do not have the correct licenses available.

**See Also**

- route_custom

## GCR-156

(warning) Backup layers must be continuous for net %s.

**Description**

Backup layers must be continuous.

**What Next**

Check the backup layers for the specified net and ensure they are continuous.

**See Also**

- route_custom

## GCR-157

(warning) Backup layers must be subset of valid routing layers for net %s.

**Description**

Backups layers must be a subset of the valid routing layers. Layers not in the valid routing layers set for the net cannot be used as backup layers.

**What Next**

Check the valid routing layers for the specified net. Ensure that only layers listed in this set are used for backup.

Feedback

**See Also**

- route_custom

---

## GCR-158

(warning) The net %s must have at least 4 routing layers to setup backup layers.

**Description**

To specify backup layers, a net's valid routing layer set must include at least four routing layers.

**What Next**

Check the valid routing layers for the net and ensure that at least four layers are specified. Alternatively, do not use the backup feature.

**See Also**

- route_custom

---

## GCR-159

(warning) Track Regions on layer '%s' overlap and create infeasible track region setup, this region '%s' will be ignored.

**Description**

The tracks in track regions overlap on same layer and create an impossible setup on the specified layer. The router will ignore the region as specified.

**What Next**

Check the track regions at the global and local level and make sure they do not conflict or overlap unexpectedly for same layer.

**See Also**

- route_custom

---

## GCR-160

(warning) There are more than 64,000 shapes in a small area (%f, %f, %f, %f). The router will ignore some of the shapes.

Feedback

### Description

The router detected a very large number of shapes in a small area as shown. The router will ignore some of the shapes.

### What Next

Check that all pins and instances are properly placed. Check for overlapping placements. Check blockages in instance masters.

### See Also

- route_custom

---

## GCR-161

(error) The router could not be initialized because the routing area is outside the PR boundary (%f, %f, %f, %f).

### Description

The routing area you have defined is outside of the PR boundary. The router cannot proceed.

### What Next

Check the routing area definition and create an area which is within the PR boundary.

### See Also

- route_custom

---

## GCR-162

(error) The router could not be initialized because the routing area is null.

### Description

The routing area you have defined is effectively null (either the x or y dimension is zero or too small to be useful).

### What Next

Check the routing area definition and create an area which is larger than the track width and spacing rules.

### See Also

- route_custom

Feedback

## GCR-163

(error) The router could not be initialized because there are more than %d metal and cut layers defined.

### Description

The router only support a limited number of cut and metal layers. Your data contains more layers than the router can support.

### What Next

Check the technology library and ensure that the total number of cut and metal layers is within the noted limit.

### See Also

- route_custom

## GCR-164

(error) The router could not be initialized because there are no routing layers defined in the tech data.

### Description

The router did not find any metal or cut layers in the technology library.

### What Next

Check your technology library and ensure that the metal and cut layers are properly defined.

### See Also

- route_custom

## GCR-165

(error) The router could not be initialized because there are no valid via definitions in the tech data.

### Description

The router did not find any valid via definitions in the technology library.

Feedback

### What Next

Check your technology library and ensure that the via definitions are properly defined.

### See Also

- route_custom

---

## GCR-166

(warning) There is no user-function 'CustomViaParameterizeFunc' available for custom vias, custom vias will not be modified by router.

### Description

There is no user-function 'CustomViaParameterizeFunc' available for custom vias.

### What Next

Remove custom vias from the valid routing via definition, or provide the required function to use custom vias.

### See Also

- route_custom

---

## GCR-167

(warning) Found preroute shapes with MPT color or tech layer with default color. Provide active color tracks in layer %s to enable color routing methodology.

### Description

The preroute shapes contains shapes with multiple-patterning color or layer with default color.

### What Next

Please provide active color tracks for the specified layer to enable color routing.

### See Also

- route_custom

---

## GCR-168

(error) RPDL error: '%s'.

Feedback

### Description

While attempting to parse the RPDL extraction data, a syntax error occurred. The message inidicates the exact error.

### What Next

Examine the RPDL file and fix the indicated syntax error.

### See Also

- route_custom

---

## GCR-169

(info) Extracted RPDL: "%s".

### Description

The output indicates the extraction channels that were processed.

### What Next

This is an informational mesage. No action is needed.

### See Also

- route_custom

---

## GCR-170

(error) The routing area defined in %s contains an illegal value %s.

### Description

While processing the routing area in the custom.route.routing_area app option, an illegal string value was encountered.

### What Next

The routing area must consist of a Tcl list containing one or more rectangles or polygons. A rectangle can be specified by providing exactly two points: the lower right and upper left vertices. A polygon must contain a list of four or more points. Any non-numeric characters or incomplete entries in the option value will result in an error.

### See Also

- route_custom

Feedback

## GCR-171

(warning) Rules for layer '%s' are ignored because it is an equivalent layer.

### Description

If you have equivalent layers defined, the rules can only be processed for one of the layers.

### What Next

Check your technology library and ensure rules are not set for more than one layer of an equivalent set.

### See Also

- route_custom

## GCR-172

(warning) Pin centered at (%.10g,%.10g) on layer %s is off-track or off-colored.

### Description

Full colored routing for multipatterning layer requires pin to be on-track with mask color matching track color.

### What Next

Move pin to be on track. Change pin color to match track color.

### See Also

- route_custom

## GCR-173

(info) Converge mode [bus] has been activated and some potential DRC/shorts/runtime may be impacted, please turn on the %s and refer for detailed log.

### Description

Converge mode is kicked in during bus routing.

### What Next

Some potential DRC/shorts/runtime may be impacted.

Feedback

**See Also**

- route_custom

---

## GCR-174

(info) Converge mode [signal] has been activated and some potential DRC/shorts/runtime may be impacted, please turn on the %s and refer for detailed log.

**Description**

Converge mode is kicked in during signal routing.

**What Next**

Some potential DRC/shorts/runtime may be impacted.

**See Also**

- route_custom

---

## GCR-175

(warning) River style routing is not supported. The river constraint will be ignored for net %s.

**Description**

Custom router does not support river style routing. The router detected a river constraint in your data.

**What Next**

Remove the river constraint and try your routing again.

**See Also**

- route_custom

---

## GCR-176

(warning) %s style shielding is not supported. This shielding type will be ignored for net %s.

**Description**

Custom router does not support the specified shielding style. The constraint will be ignored.

Feedback

### What Next

Change your constraint to use parallel shielding or delete the constraint.

### See Also

- route_custom

---

## GCR-177

(warning) Min and max resistance constraints are not supported. The custom router will not attempt to follow the resistance constraint for net %s.

### Description

The custom router does not support min or max resistance constraints. The constraint will be ignored.

### What Next

You may continue routing and the router will ignore the constraint. You can delete the constraint to eliminate the warning message.

### See Also

- route_custom

---

## GCR-178

(warning) The router detected a wire resistance matching constraint, which is not supported. The constraint will be ignored for net %s.

### Description

The custom router does not support wire matching for resistance. The constraint will be ignored.

### What Next

You may continue routing and the router will ignore the constraint. You can delete the constraint to eliminate the warning message.

### See Also

- route_custom

Feedback

## GCR-179

(warning) The router detected a wire length matching-per-layer constraint where there are also more than two layers defined in the NDR layer constraint for net %s. The routing quality may not be acceptable.

### Description

The custom router supports wire length matching on a per layer basis, but it may not be able to produce good results when three or more layers are used to route the given net.

### What Next

For best result quality, create a non-default-rule specifying just two layers for any net which has this type of matching per layer constraint.

### See Also

- route_custom

## GCR-180

(warning) Topology constraints may only be used for bus routing. Other topology definitions have been ignored for net %s.

### Description

The custom router detected topology constraints and data for a net which is not part of a bus. These definitions will be ignored.

### What Next

Limit your topology node and edge definitions to nets which are included in a bus.

### See Also

- route_custom

## GCR-181

(info) Custom router requires all routing layers to have a discrete direction. The router has set layer %s to use direction %s.

### Description

Custom router detected that the layer direction was unknown. The router has assigned it to use the specified direction.

Feedback

### What Next

Check your technology definitions and ensure that all routing layers specify a direction of either verticial or horizontal.

### See Also

- route_custom

---

## GCR-182

(warning) Wire striping routing is not supported. The wire striping constraint will be ignored for net %s.

### Description

Custom router does not support wire striping routing. The router detected a wire striping constraint in your data.

### What Next

Remove the wire striping constraint and try your routing again.

### See Also

- route_custom

---

## GCR-183

(warning) Could not extract the routing pattern for net %s.

### Description

The routing pattern extraction was not able to successfully describe the net with the currently supported RPD syntax. The net was either dirty (extra jogs for instance) or simply not compatible with RPD syntax.

### What Next

Clean up the net if possible.

### See Also

- route_custom

Feedback

## GCR-184

(warning) Group shielding is only supported for the Add Shield flow. Shielding constraint will be ignored for net %s.

### Description

Group Shielding is only supported for the Add Shield flow. Auto-route flow is not supported at this time.

### What Next

Try the Add Shield flow in order to shield the group of nets.

### See Also

- route_custom

## GCR-185

(warning) Group shielding is only supported for net(s) belonging to a net group. Shielding constraint will be ignored for net %s.

### Description

Group Shielding is only supported for a group of nets.

### What Next

Create a net group and run the Add Shield command again.

### See Also

- route_custom

## GCR-186

(warning) Group shielding is only supported for a group of net(s) which are connected to macros. Shielding constraint will be ignored for net %s.

### Description

Group shielding is only supported for a group of net(s) which are connected to macros.

### What Next

Limit the the members of the net group to nets which are connected to macros.

Feedback

**See Also**

- route_custom

---

## GCR-187

(warning) Enclose Pin and Enclose Via options on net %s will be ignored for group shielding flow.

**Description**

Enclose Pin and Enclose Via options will be ignored for group shielding flow.

**See Also**

Feedback

## GCR-190

(warning) Bus '%s' has insufficient corridors at %s, hence bus route may leave some bus nets open. Please extend routing corridors to cover all pin area.

### Description

Bus trunk route has a unrouted trunk and may have some routing blockages or insufficient corridors.

### What Next

Check the bus net bit steiner definitions or corridor boundaries.

### See Also

- route_custom

## GCR-191

(warning) Bus '%s' can't be routed by projection because of %d nets over total %d nets can't be projected. Please checks corridors and/or blockages on pin and expected paths

### Description

Bus trunk route has a unrouted trunk and may have some routing blockages or insufficient corridors.

### What Next

Check the bus net bit steiner definitions or corridor boundaries.

### See Also

- route_custom

## GCR-192

(warning) Bus '%s' has insufficient corridors at %s %s, hence bus route may leave some bus nets open.

### Description

Bus trunk route has a unrouted trunk and may have some routing blockages or insufficient corridors.

Feedback

### What Next

Check the bus net bit steiner definitions or corridor boundaries.

### See Also

- route_custom

---

## GCR-233

(warning) '%s' is not a valid group for Lasso matching per layer. Inconsistent net's layer distribution.

### Description

When doing length matching per layer with Lasso matching style, it requires every net in the matching group to have the same initial routing layer distribution.

### What Next

Set min/max layer constraints on the nets of the matching group.

### See Also

- route_custom

---

## GCR-234

(warning) %s width of %f is incompatible with the allowedWidthRange constraint for layer %s. legal widths near this value are (%f %f)

### Description

used widths are incompatible with allowedWidthRange process constraint.

### What Next

user is expected to select one from suggested legal widths.

### See Also

- route_custom

---

## GCR-238

(warning) Length matching mismatches during routing for group %s. Matching percentage = %s.

Feedback

### Description

Length matching fails to find a feasible free space to lengthen wires in the group during MSCTS flow.

### What Next

User is expected to enlarge tolerance or adjust layout to leave more free space for length matching.

### See Also

- route_custom

---

## GCR-239

(error) The grouping rate %d%% is too low ( < %d%%) and not suitable for group planning flow. Please try other grouping size settings.

### Description

When enabling planning feature of custom router, it will try to group nets connected to boundary pins based on their pin locations in order to route similar topology. If the group rate is too low, it will stop custom router to avoid expected long runtime.

### What Next

User can turn off planning flow or remove repeaters in the design to improve planning results.

### See Also

- route_custom

---

## GCR-240

(error) Net %s is connected to standard cell pins and not suitable for group planning flow.

### Description

When enabling planning feature of custom router, it will try to group nets connected to boundary pins based on thier pin locations in order to route similar topology. Nets connected to standard cell pins are not allowed as they are almost impossible to group other pins togheter.

Feedback

### What Next

User can turn off planning flow or remove all nets connected to standard cell pins from the net collection to be routed.

### See Also

- route_custom

---

## GCR-241

(error) Option -planning should be specified when app option custom.route.plan_grouping_size is set.

### Description

When specify grouping size to one of the values {auto, small, medium, large} with app option custom.route.plan_grouping_size, user needs to enabling planning feature of custom router.

### What Next

Set app option custom.route.plan_grouping_size.

### See Also

- route_custom

---

## GCR-242

(error) App option custom.route.plan_grouping_size is not compatible with app option custom.route.transparent_hier.

### Description

Planning grouping size feature is not compatible with transparent hierarchy feature.

### What Next

Either turn off plan_grouping_size or turn off transparent_hier app options.

### See Also

- route_custom

Feedback

## GCR-243

(warning) Planning feature is not compatible with app option custom.route.transparent_hier. Will ignore -planning and continue routing with transparent hierarchy feature.

### Description

Planning feature is not compatible with transparent hierarchy feature. Router will ignore planning feature and continue with transparent hierarchy feature.

### What Next

User can turn off planning flow or remove all nets connected to standard cell pins from the net collection to be routed

### See Also

- route_custom

## GCR-245

(error) There are too many (%d) fragmented shapes on layer %s slicing the channel %s into discontinuous routing resources.

### Description

Custom route planner found many small shapes or vias in the channel such that makes it very difficult to plan bus-like patterns in auto grouping mode. Planner has to stop routing otherwise it will take extreme runtime to finish planning.

### What Next

User has to check the design to see if there are enough routing resources available in channel %s. For example, there may exist previous routing results in the design which should be cleared first before invoking planner.

### See Also

- route_custom

## GCR-246

(error) Violated rate %.2g%% exceeds max allowed violated rate %d%%.

Feedback

### Description

In auto grouping mode, custom route planner plans a lot of violated nets such that not suitable to continue routing because routing quality and runtime are expected to be poor. A violated net in planner is defined as either open (unplanned) or has DRC violations related to the net.

### What Next

User has to check the design if there are enough routing resources available. Or there are some difficult to route nets like power/ground or clock nets accidentally included in the routing nets.

### See Also

- route_custom

---

## GCR-247

(error) Open rate %.2g%% exceeds max allowed open rate %d%%.

### Description

In auto grouping mode, custom route planner generates many failed to plan nets such that not suitable to continue routing because routing quality and runtime are expected to be poor.

### What Next

User has to check if the pins of the routing nets are accessible or there exists many obstacles in the routing region such that router cannot route the nets without many bends.

### See Also

- route_custom

---

## GCR-248

(warning) Ignore net '%s' which connects to a standard cell.

### Description

Custom route planner is not suitable to route standard cells. It will not plan nets connected to standard cells and continue to plan the other nets.

Feedback

### What Next

User has to check if the nets are reasonable to connect to standard cells. Custom route planner works better if there are no standard cells in routing region because it may fragment routing resources and result in poor auto grouping results.

### See Also

- route_custom

---

## GCR-249

(error) There are no nets for planning.

### Description

Custom route planner does not find any nets to be planning.

### What Next

User has to check if the specified nets set is empty. Note custom route planner will ignore any nets connected to standard cells.

### See Also

- route_custom

---

## GCR-250

(error) Follow rate %.2g%% below custom.route.plan_min_follow_rate %.2g%%.

### Description

Autoroute follow rate (w.r.t. custom route planner) is less than the min value. Router will stop to avoid expected long runtime and scenic routes.

### What Next

User has to check if the design style is suitable for custom router planner such that it can generate high quality routing results which autoroute can follow most of planned results.

### See Also

- route_custom

Feedback

## GCR-251

(warning) Net %s is set to ignored %s.

### Description

Custom route planner checker detects errors on the net. The errors may cause serious routing problems and thus to be ignored in following planning and routing processes.

### What Next

Depends on the root cause, user has to fix the design errors reported eariler in the planner checking process.

### See Also

- route_custom

## GCR-252

(error) Found %d overlapped pins so %d nets are ignored. The first one is at %s of net %s.

### Description

Custom route planner checker found several overlapped pins of different nets in the design. The corresponding nets are set to be ignored in following planning and routing processes.

### What Next

User has to fix the overlapped pins reported by the planner checker.

### See Also

- route_custom

## GCR-253

(warning) Found %d off track pins. The first one is at %s of net %s.

### Description

Custom route planner checker found off track pins in the design. They can be handled in following planning and routing processes, but resulting routing shapes may be reported as DRC errors.

Feedback

### What Next

User has to make sure those off track pins are reasonable. If not, user may adjust track settings or move pin locations to on track locations.

### See Also

- route_custom

---

## GCR-254

(warning) Found %d pins have different pin width to track width. The first one is at %s of net %s.

### Description

Custom route planner checker found there are some pins have inconsistent pin width and track width settings. They can be handled in following planning and routing processes, but resulting routing shapes may be reported as DRC errors.

### What Next

User has to make sure those inconsistent pin width and track width pins are reasonable. If not, user may adjust track width or pin width settings.

### See Also

- route_custom

---

## GCR-255

(error) Found %d pins have short tracks so %d nets are ignored. The first one is at %s of net %s.

### Description

Custom route planner checker found there are short tracks on some pins. Short track on a pin means that the track length from the pin is too short to make router reserve enough routing resources before bending to another routing layer. Thus the net is set to be ignored in following planning and routing processes.

### What Next

User has to make sure the short track is reasonable. If not, user may adjust track settings to make longer track from the pin.

Feedback

**See Also**

- route_custom

---

## GCR-256

(warning) Found %d discontinuous tracks on layer %s. The first one is at %s.

**Description**

Custom route planner checker found there are some discontinuous tracks in the design. They can be handled in following planning and routing processes, but may result in undesired routing patterns.

**What Next**

User has to check if the discontinuous tracks are reasonable. If not, user may adjust track settings to get desired routign patterns.

**See Also**

- route_custom

---

## GCR-257

(warning) Found %d dangling shapes in the design. The first one is at %s of net %s.

**Description**

Custom route planner checker found there are some dangling shapes in the design. They can be handled in following planning and routing processes, but may affect grouping and routing quality.

**What Next**

User has to check if the dangling shapes are reasonable. If not, user may remove the dangling shapes in the design.

**See Also**

- route_custom

---

## GCR-258

(warning) Router is stopped because the runtime exceeds the user-defined maximum runtime %d seconds.

Feedback

### Description

Router stops because the runtime exceeds user-defined maximum allowed runtime by custom.route.max_routing_time app option.

### What Next

User can enlarge or reset custom.route.max_routing_time app option to change the early stop behavior.

### See Also

- route_custom

---

## GCR-259

(warning) Ignore net '%s' which connects to a macro cell.

### Description

Currently custom route planner cannot plan macro cells well in auto grouping mode. The nets connected to macro cells will be ignored and continue to plan the other nets.

### What Next

If user still wants to route the nets connected to macro cells, user has to flatten the macro pins into top-level IO pins.

### See Also

- route_custom

---

## GCR-260

(error) User defined group '%s' is invalid since %s.

### Description

In auto grouping mode of custom route planner, user defined groups have to meet the following conditions: 1. At least two nets in a group. 2. Pin counts of all nets in a group are equal. 3. Pin layers and directions of all nets in a group are the same. 4. One net cannot presence in more than one group.

### What Next

User has to modify group to meet the user defined group conditions.

Feedback

- route_custom

---

## GCR-261

(info) Routing layers have no routing pitch defined in technology file. The default pitch, which is the minimum width plus minimum spacing for each layer, will be used.

**Description**

There is no pitch value for any layer in the technology library.

**What Next**

In the technology library, set the routing pitch to a value that is min_width plus min_spacing.

**See Also**

- route_custom

---

## GCR-262

(warning) Found %d pins have different pin width to NDR width. The first one is at %s of net %s.

**Description**

Custom route planner checker found there are pins width mismatching thier NDR width.

**What Next**

This is just a warning. User can check if the NDR settings are reasonable.

**See Also**

- route_custom

---

## GCR-268

(warning) Found %d pins have different pin width to default width and NDR is not set. The first one is at %s of net %s.

**Description**

Custom route planner checker found there are pins width mismatching thier default width and NDR is not set.

Feedback

### What Next

This is just a warning. User can set NDR width to match the pin width.

### See Also

- route_custom

---

## GCR-269

(warning) Found %d no track pins. The first one is at %s of net %s.

### Description

Custom route planner checker found there are pins do not overlap with any track. They can be handled in following planning and routing processes, but resulting routing shapes may be reported as DRC errors.

### What Next

User has to make sure those no track pins are reasonable. If not, user may adjust track settings or move pin locations to on track locations.

### See Also

- route_custom

---

## GCR-270

(error) Found %d illegal width pins so %d nets are ignored. The first one is at %s of net %s.

### Description

Custom route planner checker found there are pins do not follow the Discrete Metal Widths Rule.

### What Next

User can open the error browser to check the legal widths of each pin and modify them.

### See Also

- route_custom

Feedback

## GCR-271

(error) Found %d pins violated min max layer rule so %d nets are ignored. The first one is at %s of net %s.

### Description

Custom route planner checker found there are pins do not in the valid layers.

### What Next

User can open the error browser to check the valid layer range.

### See Also

- route_custom

## GCR-272

(error) Selected user defined group '%s' does not appear in selected net.

### Description

In auto grouping mode of custom route planner, user difined group have to been selected to be routed. If nets in certain user-defined group is selected to be routed, all nets in this group would be routed with AG.

### What Next

User has to set these user-defined groups to be routed.

### See Also

- route_custom

## GCR-277

(error) Fail to parse topology. There is topology across the boundary of design or routing area.

### Description

The topology across the boundary is not the expected use model. Router may have trouble to follow such pattern.

Feedback

**What Next**

User adjust boundary or re-draw topology to make all of the topologies are inside the boundary of routing area or design.

**See Also**

- route_custom

---

## GCR-278

(info) '%s' ViaDef '%s' layer '%s' is not defined, so, this via definition will be ignored during routing. Check if it's routing layer function is defined correctly in technology.

**Description**

Mising Via Definition in GCR database.

**What Next**

Fix routing layer function defined in technology data attached to design

**See Also**

- route_custom

---

## GCR-280

(warning) Shorts are removed for %d nets, of which %d nets were fully routed.

**Description**

Shorts are removed in the end of Custom Route.

**What Next**

User can disable the short removal if user wanys to keep the short.

**See Also**

- route_custom

---

## GCR-281

(warning) Net %s is incomplete because of short removal.

Feedback

**Description**

Net is fully routed, but it is incomplete in the end due to the short removal.

**What Next**

User can disable the short removal if user wanys to keep the short.

**See Also**

- route_custom

---

## GCR-282

(info) [%s] Elapsed time: real = %s, cpu = %s, [sys = %s, usr = %s]

**Description**

Time stamp for the custom route stage.

**See Also**

- route_custom

---

## GCR-283

(info) [%s] Memory: total = %s, peak = %s.

**Description**

Memory information for the custom route stage.

**See Also**

- route_custom

---

## GCR-284

(info) Number of nets asked to route = %d.

**Description**

Number of nets asked to route

**See Also**

- route_custom

Feedback

## GCR-285

(info) Number of nets attempted to route = %d.

**Description**

Number of nets attempted to route

**See Also**

- route_custom

## GCR-286

(info) Number of nets rejected to route = %d.

**Description**

Number of nets rejected to route

**See Also**

- route_custom

## GCR-287

(error) Found %d signal pins on PG track so %d nets are ignored. The first one is at %s of net %s.

**Description**

Custom route planner checker found signal pins on PG track in the design.

**What Next**

User can open Error Browser to identify where are the error pins.

**See Also**

- route_custom

## GCR-288

(warning) Supply net %s is ignored for routing.

**Description**

Supply net is ignored for routing.

Feedback

**See Also**

- route_custom

---

## GCR-289

(warning) Failed to create trunk for net %s because no tracks are available on %s within search box.

**Description**

No tracks are available inside the search box.

**What Next**

Define tracks if there is no track in the design, or enlarge the search box to cover some tracks.

**See Also**

- route_custom

---

## GCR-292

(warning) User defined group '%s' is skipped since valid net count < 2.

**Description**

Some nets in the user define are not valid and the number of valid nets is less than 2. For example routed nets, PG nets and nets with less than 2 pins are not valid nets.

**What Next**

The group will not be routed, and user has to modify group to meet the user defined group conditions.

**See Also**

- route_custom

---

## GCR-315

(error) Failed to find user defined group '%s'. Please specify correct group name.

Feedback

### Description

The app option custom.route.plan_user_defined_groups takes a list of bundle names. This error indicates GCR failed to find the group with specified bundle names. The error would be also raised if user specifies object collection (like bundle itself) in the app option.

### What Next

Check if the bundle does exist or the bundle name is incorrect.

### See Also

- route_custom

---

## GCR-323

(warning) The pin or port '%s' to SuperNet '%s' is missing, it may be ignored during routing.

### Description

The pin object for the supernet is not found in GCR database. It is required to route supernet using GCR.

### What Next

check supernet creation step to see if specfied port or terminal is correctly specified. Run GCR in debug mode to see any error messages about it.

### See Also

- route_custom

---

## GCR-324

(warning) The '%s' pin for %s '%s' is missing, this %s will be ignored during %s routing.

### Description

Specified terminals are not found in GCR database, it may be either incorrectly specified during constraint creation or incorrectly parsed during data import into GCR.

### What Next

Check if the terminal exists in database. Run GCR in debug mode to check their dump into intent file and look for error messages in logfile for more information.

Feedback

**See Also**

- route_custom

---

## GCR-325

(warning) Skip net %s which is already fully connected.

**Description**

Custom route planner found a net which is already fully connected, so it would not try to plan and route it again.

**What Next**

User need to check if forgeting to remove preroutes or selecting wrong nets to route.

**See Also**

- route_custom

---

## GCR-330

(warning) Failed to route bus %s since %s.

**Description**

Routing fail in LH global routing

**What Next**

Adjust the design by hints in the warnning.

**See Also**

- route_custom

---

## GCR-350

(warning) A number of nets will not be routed because they have only one pin within the design prBoundary or within the specified routing area.\n Review %s for the complete net list.

**Description**

In order for GCR to route a signal net, two or more net pins must be present in the design or within the routing area if applicable.

Feedback

**What Next**

From the list of nets with only one pin in the design, review if these nets are correctly specified

**See Also**

- route_custom

---

## GCR-427

(warning) CTS net %s will not be matched because the original routing length is greater than net length limit.

**What Next**

User is expected to enlarge for net length matching target.

---

## GCR-428

(warning) NDR of CTS net %s is not properly set. Routing results may be incorrect.

**What Next**

User is expected to provide NDR rule for the CTS nets.

---

## GCR-429

(warning) Found unexpected routing layers of CTS net %s. Routing results may be incorrect.

**What Next**

User is expected to provide one NDR layer setting for the CTS nets.

---

## GCR-430

(error) This app option '%s' is only supported in 3DIC mode.

**Description**

This error indicates this option failed to work under this design session.

**What Next**

Check if the design session is 3DIC mode.

Feedback

**See Also**

- route_custom

---

## GCR-431

(error) Net '%s' cannot complete routing in balance mode feature. %s

**Description**

This error indicates the root cause failed to route this net in balance mode feature.

**What Next**

Check if the reason could be fixed.

**See Also**

- route_custom

---

## GCR-432

(warning) Net '%s' has unexpected result in balance mode feature. %s

**Description**

The warning indicates the result may be unexpected due to some reason.

**What Next**

Check if the reason could be fixed.

**See Also**

- route_custom

---

## GCR-433

(warning) Cannot connect pin/terminal %s for net %s. The pin/terminal is blocked by %s.

**What Next**

User is expected to modify placement results.

**See Also**

- route_custom

Feedback

# GDS

## GDS-001

(error) Library %s is not Found.

**Description**

The Given library is not Found.

## GDS-002

(error) Design %s with view type %s is not Found in the Library.

**Description**

The Given Design name with the specified viewtype is not Found in the Specified Library.

## GDS-003

(error) Technology Definition for Layer Number %d and Purpose %d not defined.

**Description**

The Given Design doesn't have a LAYER Definition for the Layer in question in the Associated Technology Library.

## GDS-004

(information) Text %s (%d, %d)is creating a short with already detected Pin %s.The current text will be ignored.

**Description**

The Text is having a coordinate which overlaps with a geometry with has been already detected as another pin. So this is creating a short and will be ignored.

## GDS-005

(error) Current Design %s is not Found.

**Description**

The current Design is not Found.

Feedback

## GDS-006

(error) Current Design is not of LAYOUT type.

**Description**

The current Design loaded is not of Layout type.

## GDS-007

(information) No Design has been Added or Modified in the current read_gds. So no tracing will happen.

**Description**

The current read_gds has not modified any Designs, so pin tracing won't happen as part of read_gds.

## GDS-008

(warn) Multiple Boundary definition found for Module %s, keeping the last definition.

**Description**

The current GDSII file has multiple boundary definition for a module.

## GDS-009

(error) Reading Directory is not supported. File %s is a directory.

**Description**

The input file is a directory.

## GDS-010

(warn) Layer mapping rule for "%d:%d" is defined multiple times. Only the last instance will be effective.

**Description**

Multiple Layer Mapping rule is not supported in GDSII read/write utility.

## GDS-011

(error) GDSII Parsing Error: %s

Feedback

**Description**

GDSII file has problem.

---

## GDS-012

(warn) Technology Definition for Layer Number %d and Purpose %d not defined.

**Description**

The Given Design doesn't have a LAYER Definition for the Layer in question in the Associated Technology Library.

---

## GDS-013

(warn) Layer Mapping for GDSII LAYER %d and DATATYPE %d not specified.

**Description**

For the GDSII LAYER and DATATYPE, layer mapping is not specified in the layer map file.

---

## GDS-014

(error) Library name has spaces.

**Description**

A library name had spaces.

**What Next**

Check that the given library name is valid simple path.

---

## GDS-015

(error) Library name specified %s cannot be same as workspace library.

**Description**

The Given library name is not allowed.

---

## GDS-016

(error) Wrong Block Map file Syntax.

Feedback

**Description**

The syntax of Block Map file is not allowed.

---

## GDS-017

(error) Wrong layer map file syntax at line %lu.

**Description**

The syntax of Layer Map file at the specified line number is not allowed.

**What Next**

Please check the man-page of the read_gds(2), write_gds(2) for the correct syntax.

---

## GDS-018

(warning) FIXEDMASK defined, geometry without MASK will be set as same_mask type.

**Description**

The module has the fixed mask attribute set but the geometry doesn't have a mask attribute defined. The geometry will be set as same_mask type.

---

## GDS-019

(error) The mask number exceeds the number of masks defined for the tech layer %d.

**Description**

The Mask number should not exceed the number of masks defined in the Tech layer.

---

## GDS-020

(error) Library '%s' is not a physical lib_cell library.

**Description**

The library specified for read GDSII must be a physical lib_cell library.

**What Next**

Choose a physical lib_cell library to read GDSII in.

Feedback

## GDS-021

(information) Read GDSII into %s library '%s'.

**Description**

This message reports the name of the library to accommodate GDSII data. It also indicates whether the library is an existing library or a new library.

**What Next**

No action required.

## GDS-022

(warn) The Application option "file.gds.port_type_map" is not defined before "read_gds" command.

**Description**

The Application option "file.gds.port_type_map" is not defined before "read_gds" command. GDSII generated libraries will not generate any PG pins. This may create problem in final library generation. Please check your setup.

## GDS-023

(warn) The Module '%s' does not have any port matching the PG names provided by "file.gds.port_type_map" application option

**Description**

The Module does not have any port matching the PG names provided by "file.gds.port_type_map" application option. GDSII generated Module will not have any PG pins. This may create problem in final library generation. Please check your setup.

## GDS-024

(warn) Text '%s' is not on routing layer. Tracing for the given text may result in identification of wrong pins.

**Description**

Text '%s' is not on routing layer. Tracing for this text has been enabled on all routing layers by setting the application option "file.gds.trace_unmapped_text".Also, routing layer to text layer mapping is not specified using "file.gds.text_layer_map" application option. Connectivity tracing for the text will be done on all layers. This may lead to erroneous

Feedback

result. Please specify routing layer to text layer mapping using "file.gds.text_layer_map". Please check your setup.

**What Next**

```
file.gds.port_type_map(3),
file.gds.trace_unmapped_text(3),
```

## GDS-025

(error) The %d is outside the allowed valid range for %s in layer map. Valid range is between %d and %d.

**Description**

Value specified outside valid range.

## GDS-026

(error) The special character %s is not allowed in %s field of layer map.

**Description**

The special character is not allowed in layer map field.

## GDS-027

(error) The input GDSII file name and the output ascii file name can't be same.

**Description**

GDSII file name and Ascii file name are same.

## GDS-028

(warning) The string '%s' is longer than %lu characters. Please use '-long_names' for proper output.

**Description**

The length of the string name to be written in the GDSII file is longer than the supported length. The name will be truncated.

**What Next**

The command "write_gds" needs to be run with "-long_names" option.

Feedback

## GDS-029

(Information) %s '%s' already exists (will %s).

**Description**

This message indicates that specified object already exists when reading a GDSII file into an existing library. The library manager shell, lm_shell, will take action according to the merge settings.

**What Next**

No action required.

## GDS-030

(information) Change %s name '%s' from GDS file to '%s' to resolve a conflict.

**Description**

When the object to be created by read GDS conflict with an existing object, there is an attempt to change the name of the object to be created to a unique name to resolve the conflict.

**What Next**

No action required.

## GDS-031

(warning) Merge action in '%s' will be ignored when read GDS into a new library.

**Description**

When read GDS into a new library, merge settings will be ignored.

**What Next**

Do not specify merge related options when read GDS into a new library.

## GDS-032

(warning) The width of the boundary %d is more than width %d of site width.

**Description**

The width of the boundary is more than width of the site def.

Feedback

**What Next**

May need to check the boundary or the site def of the lib-cell.

---

## GDS-033

(warning) The height of the boundary %d is more than height %d of site def.

**Description**

The height of the boundary is more than height of the site def.

**What Next**

May need to check the boundary or the site def of the lib-cell.

---

## GDS-034

(warning) The user specified view '%s' for lib-cell '%s' is not available.

**Description**

The user specified view for lib-cells is not available for this lib-cell design. The definition for the current lib-cell design will not be written to the GDSII file.

**What Next**

The user may need to change the view to be written to GDSII file for the lib-cell design using option "-lib_cell_view".

---

## GDS-035

(Error) The design '%s' is found to have mismatches. Use allow_design_mismatch option to write GDSII file.

**Description**

The design is found to have mismatches due to which allow_design_mismatch option needs to be used to write GDSII file. Please use report_design_mismatch user command initially to review all the mismatches. If the design mismatches are found to be fine, use the option allow_design_mismatch to write the GDSII file.

**What Next**

Use the command report_design_mismatch to review all the design mismatches. The user may then use allow_design_mismatch option to write the gds file.

Feedback

## GDS-036

(error) The mask number(%s) for the tech layer %d doesn't belong to a VIA Cut Layer.

**Description**

The Mask number should be associated with a VIA cut layer. The input layer number is not a VIA cut layer.

**What Next**

Please check the GDSII layer map.

## GDS-037

(warning) Unable to obtain mask value for surround on lower metal layer of via '%s'.

**Description**

This warning message is issued since the surround on lower metal layer of the via cannot touch any pin in the design. This could be a via that only connects two layers but is not on a pin.

**What Next**

Please check the via and the design data if needed.

## GDS-038

(warn) Zero width spur in the input point list {%s}.

**Description**

The Input point list has zero width spur. The polygon will not be added.

**What Next**

Please check the point list been passed.

## GDS-039

(error) Invalid layer-name '%s' specified at line %lu in the input layer-map file.

**Description**

A layer by the specified name does not exist. Please check the layers present in the associated technology file.

Feedback

## GDS-040

(error) Invalid value '%s' specified for '%s', at line %lu in the input layer-map file.

**Description**

The value specified for the flag is not a valid value. Please check the man-page of read_gds(2), write_gds(2) for the allowed values. The stream file will still be written out but ignoring the line with invalid value in the layer mapping file. This error will be reported in several scenarios. For example, the input value cannot be recognized due to type error or the use_type in newer version of the tool is not supported in the older version.

**What Next**

Please modify the layer mapping file for the invalid value or use the latest version of the tool.

## GDS-041

(warning) Ignoring the invalid layer map file syntax at line %lu.

**Description**

The syntax of Layer Map file at the specified line number is not allowed.

**What Next**

Please check the man-page of the read_gds(2), write_gds(2) for the correct syntax.

## GDS-042

(error) Line %lu: multi-pattern map entry with wild-card cannot co-exist with multi-pattern map entry with specified layer for same mask type.

**Description**

This message occurs when there is invalid line in the layer mapping file. Multi-pattern map entry with wildcard cannot co-exist with Multi-pattern map entry with specified layer for same mask type. For example, M1 * *:108 M1 12 12:108

**What Next**

Remove Multi-pattern map with wildcard or Multi-pattern map with specified layer.

## GDS-044

(error) The ICC2 layer number '%d', specified at line %lu is not a valid value for %s layer map format.

Feedback

**Description**

The ICC2 layer number specified should follow the limits below: icc2 : 0 - 32767 icc default : 0 - 255 icc extended : 0 - 4095

**What Next**

Use layer-numbers within the specified limits.

---

## GDS-045

(warning) Technology layer for layer number %d, does not exist. Ignoring the layer-map entry at line %lu.

**Description**

The technology file associated with the current library does not have a layer defined with the given layer-number.

---

## GDS-046

(warning) The magnification %f is different than the default value of 1.0. This will be ignored.

**Description**

The magnification specified is different from 1.0 and hence is ignored. Only magnification of 1.0 is supported now.

---

## GDS-047

(error) Invalid purpose-name '%s' specified at line %lu in the input layer-map file.

**Description**

A tech-layer purpose by the specified name does not exist. Please check the tech-layer purposes present in the associated technology file.

---

## GDS-048

(error) The simple via def '%s' does not have the lower overhang metal layer set.

**Description**

A simple via def has both the lower and upper metal overhang defined. A simple via_def cannot have either of them not defined .

Feedback

**What Next**

Use 'report_via_defs' to review the set of via_defs.

---

## GDS-049

(error) The simple via def '%s' does not have the upper overhang metal layer set.

**Description**

A simple via def has both the lower and upper metal overhang defined. A simple via_def cannot have either of them not defined .

**What Next**

Use 'report_via_defs' to review the set of via_defs.

---

## GDS-050

(information) Translating structure '%s' as cell '%s/%s'.

**Description**

The GDS structure being read is translated to the given cell name.

---

## GDS-051

(error) Input file '%s' is neither a GDSII nor an OASIS file.

**Description**

The input file can be either a GDSII file or an OASIS file.

---

## GDS-052

(warning) Ignoring the layer map entry at line %lu as it doesn't have usage_type as "area_fill".

SH DESCRIPTION Layer map entries without usage_type as "area_fill" is invalid in this command.

**What Next**

Specify usage_type as "area_fill" for every layer_map entry for passive_fill data.

Feedback

## GDS-053

(error) Input file '%s' is not a flat structured GDSII file.

**Description**

Only flat structured GDSII file can be given as input file when merge_action is replace_layer and append.

## GDS-054

(error) Input file '%s' is not a appropriate GDSII file.

**Description**

Illegal usage of the command.

## GDS-055

(error) Reading of input GDSII file failed.

**Description**

When reading of GDSII file fails, design will be restored to it's previous state.

## GDS-056

(information) no mapping information for system purpose %s in layer mapping file. Mapped to default data type.

**Description**

When there is explicit mapping of system purpose (-1, -2, -3 and -4) in layer mapping file, the tool will use that mapping; for example, with the mapping "all 32:-1 32:55", the tool maps database layer "32:-1" to GDS layer 32:55; if no mapping for these system purposes, the tool will follow the mapping of the purpose 0 of the same layer. For example, if the mapping has "all 32:0 32:70", system purpose "-1" will be mapped to GDS layer 32:70. Please note that GDS datatype can't be any data less than 0, the usage like "all 32:-1 132:-1" is invalid for GDS language, and the datatype will be taken as 0 like "A 32:-1 132 0".

**What Next**

If the implicit mapping as described above does not meet the requirement, you can explicitly map the system purpose (-1, -2, -3 and -4) in layer mapping file.

Feedback

## GDS-057

(warning) Found child design '%s' for option "-bbox_list".

**Description**

Option "-bbox_list" is only for flatten design, otherwise, it might cause GDS file inconsistency.

**What Next**

To flatten the design and try the option "-bbox_list" again.

## GDS-058

(error) Block %s is not Found in the Library.

**Description**

The given VIB block name is not Found in the current design of the Specified Library.

## GDS-059

(information) Outputting hierarchy '%s' from '%s' view.

**Description**

write_gds is generating the structure for the hierarchy.

## GDS-060

(error) command failed at outputting structure '%s'.

**Description**

write_gds failed at generating the content for the structure.

**What Next**

Please check what's the exact data caused the failure.

## GDS-061

(warning) The user specified view '%s' for cell '%s' is not available.

Feedback

**Description**

The user specified view for cells is not available for this cell. If all specified views cannot be found for the cell, design view will be output, if any. The definition for the cell will not be written to the GDSII file, if all specified views and design view cannot be found.

**What Next**

The user may need to change the view to be written to GDSII file for the cell using option "-switch_view_list".

---

## GDS-062

(information) Cell instance '%s' referred to reference design '%s' is retained and will refer to designs in reference library.

**Description**

It means the block to which the cell instance referred is retained in block mapping file, and the STRUCTURE record in GDSII file is skipped, the cell instance will be bound to corresponding reference design in reference library.

**What Next**

No action required.

---

## GDS-063

(error) Failed to write out Path '%s'.

**Description**

The path is irregular, please check its coordinates.

---

## GDS-064

(error) Input file '%s' is OASIS format file instead of GDSII.

**Description**

Command 'read_gds' only support GDSII format file.

**What Next**

Please use 'read_oasis' command to read in this file.

Feedback

## GDS-065

(error) Invalid value for option -mask_shift_layers.

**Description**

There can not be duplicated layers in the specified value.

## GDS-066

(error) Mask shifted cell '%s' does not have its corresponding mapping in the map file.

**Description**

There is not a corresponding mapping for the mask shifted cell in the map file.

**What Next**

Please add the corresponding mapping to the map file and then try again.

## GDS-067

(error) Mask shift property mismatch on cell '%s'.

**Description**

There is mask shift property mismatch between different map files.

**What Next**

Please correct the mask shift property and then try again.

## GDS-068

(error) Fail to remove the file '%s'.

**Description**

The gds file is removed if failure occurs.

**What Next**

Please ignore the file.

## GDS-069

(warning) Found uncolored multi-patterning shapes in the database which won't be output.

Feedback

**Description**

This warning message occurs when there are some uncolored multi-patterning shapes in the database, the check is controlled by the app option file.gds.ignore_uncolored_shapes or the syntax forbidNoMaskConstraint in technology file. write_gds will continue to write out all other shapes except the uncolored ones.

**What Next**

Please use command check_shapes -uncolored to find out all these shapes and color them, or turn off the app option mentioned above to output uncolored shapes. Note, if the syntax forbidNoMaskConstraint is 1, the value of the app option will be ignored.

---

## GDS-070

(error) Unsupported option '%s' to new engine of write_gds.

**Description**

It means the command option or app option isn't supported at current stage.

**What Next**

To achieve the option feature, turn off the file.gds.enable_new_writer to output GDSII layout file.

---

## GDS-071

(warning) The deprecated option '%s' is ignored when the new_writer app option is enabled.

**Description**

It means that the command option or app option is deprecated and ignored when turning on the app option "file.gds.enable_new_writer".

**What Next**

Remove the option setting

---

## GDS-072

(Information) Empty block %s is excluded in the GDSII file.

**Description**

This message indicates that the empty structure defintion(s) and instance(s) are excluded in the GDSII file for the empty block specified.

Feedback

**What Next**

No action required.

---

## GDS-073

(warning) GDSII Parsing Warning: %s

**Description**

GDSII file has problem. Ignore the problem geometory and continue parsing.

---

## GDS-074

(warning) GDSII Parsing Warning: %s

**Description**

GDSII file has problem. Ignore the problem geometory and continue parsing.

---

## GDS-075

(information) Output mask-shifted cell name according to rename files.

**Description**

This message occurs when -rename_cell is specified to write_gds and the rename files are only for mask-shifted cells.

**What Next**

No action required.

---

## GDS-076

(error) %s "%s" has an angle of %.3f degrees which is not supported currently.

**Description**

This message occurs when sref or aref specified an unsupported ANGLE value. Supported values are: 0/90/180/270 degrees.

**What Next**

Check the GDS file to find the "abnormal" object, change the ANGLE value of it, or delete the object.

Feedback

## GDS-077

(warning) Ignoring %s, because there is another design with the same name %s.

**Description**

This warning message occurs when app option "file.gds.output_first_same_name_cell" is on, write_gds only writes the first encountered cell.

**What Next**

Please turn off the app option "file.gds.output_first_same_name_cell" if you expect that write_gds renames the cells with the same name and writes them as different structures in the output GDSII file.

## GDS-078

(warning) Found uncolored shapes on multi-patterning layer in the database which won't be output.

**Description**

This warning message occurs when there are some uncolored shapes on multi-patterning layer in the database, the check is controlled by the app option file.gds.check_mask_constraints, value "loose". write_gds will continue to write out all other shapes except the uncolored ones.

**What Next**

Please use command check_shapes to find out all these shapes and color them, or turn off the app option mentioned above to output uncolored shapes.

## GDS-079

(warning) Found colored shapes on uni-patterning layers in the database.

**Description**

This warning message occurs when there are some colored shapes on uni-patterning layers in the database, the check is controlled by the app option file.gds.check_mask_constraints, value "loose". write_gds will continue to write out all shapes.

**What Next**

Please use command check_shapes to find out all these shapes.

Feedback

## GDS-080

(error) Found mismatch on shapes and layers for color check.

**Description**

This error message occurs when there is mismatch on shapes and layers for color check in the database, the check is controlled by the app option file.gds.check_mask_constraints, value "strict".

**What Next**

Please use command check_shapes to find out all these shapes and fix them.

## GDS-081

(error) The layer '%s' provided by "file.gds.text_layer_map" application option was not found.

**Description**

A layer by the specified name in "file.gds.text_layer_map" application option does not exist. Please check the layers present in the associated technology file.

**What Next**

```
file.gds.text_layer_map(3)
```

## GDS-082

(warning) Ignoring invalid value '%s' provided for app option file.gds.shape_use_for_pg_mesh.

SH DESCRIPTION Value provided for app option file.gds.shape_use_for_pg_mesh is invalid. Valid values are case-insensitive "stripe", "ring", "lib_cell_pin_connect" or "macro_pin_connect".

**What Next**

Specify correct values for app option.

## GDS-083

(error) The design %s is not of the 3dic_top type.

Feedback

**Description**

The design is not of the 3dic_top type

**What Next**

Make sure the design is 3dic_top type and run the command again

---

## GDS-084

(warning) object type is converted to all, pincode to none, use type to all in double pattern map rule.

**Description**

The layer mapping file in IC Compiler format supports double pattern map rule for supported masks. In the output rule, the object type is converted to all, pincode to none, use type to all no mattern what object type, pincode, use type are in original rule.

---

## GDS-085

(warning) Layer mapping file in IC Compiler II format does not contain the equivalent logical information for %s. This rule is skipped.

**Description**

The layer mapping file for MWNetType in IC Compiler II format does not contain the equivalent logical information as the original layer mapping file.

The IC Compiler II format file will skip the following IC Compiler special format MWNetType. * U for up conduction layer (upper layer in a via) * D for down conduction layer (lower layer in a via) * X for power or ground wires or contacts with a "signal" or "tie-off" routing type

The only supported use types are as follows. power, ground, clock, signal, and the sub types for them four; area_fill, boundary, hard_placement_blockage, soft_placement_blockage, routing_blockage, track, bridge_shape, keepout_region, instance_specific_mask, same_net_feedthrough_tsv, hi_voltage, lo_voltage, route_guide,single_row_via_ladder_pattern_must_join_allowed, routing_blockage,is_allow_metal_fill_only, routing_blockage,reserve_for_top_level_routing

---

## GDS-086

(warning) Layer mapping file in IC Compiler format does not contain the equivalent logical information for %s. This rule is skipped.

Feedback

**Description**

The layer mapping file in IC Compiler format does only support mask rules containing the following: same_mask, mask_one, mask_two and mask_three. This rule with other mask is skipped.

---

## GDS-087

(warning) Layer mapping file in IC Compiler format does not contain the equivalent use type for %s. This rule is skipped.

**Description**

The layer mapping file in IC Compiler format supports the following use types: use_all, power, clock, signal, ground, boundary, routing_blockage, hard_placement_blockage, soft_placement_blockage, hard_macro_placement_blockage, pin_blockage, pin_guide, route_guide, icc1_mw_net_type_u, icc1_mw_net_type_d, icc1_mw_net_type_x. Certain use types, for example, "power,net" are turned to a power net rule, "power, pin" to a power pin rule and "power,port" to a power port rule in IC Compiler II format.

Other examples of such use types are: power,net power,port power,pin ground,net ground,port ground,pin clock,net clock,port clock,pin signal,net signal,port signal,pin

---

## GDS-088

(warning) Layer mapping file in IC Compiler format does not contain an equivalent rule for %s.

**Description**

The layer mapping file in IC Compiler format does not support the following IC Compiler II layer mapping file syntax: [read_always { true | false [-mapped_only | -ignore_missing_layers ] } ] [blockage_as_zero_spacing {true|false}] [cell_prop_attribute attribute_number] [net_prop_attribute attribute_number] [pin_prop_attribute attribute_number] [via_prop_attribute attribute_number]

---

## GDS-110

(warning) Unplaced cell '%s' is written to the GDSII file.

**Description**

This warning is displayed upto 20 times when unplaced cells are present in the design. By default unplaced cells will be outputted to GDSII file.

Feedback

**What Next**

Please use option -skip_unplaced_cells if you do not need unplaced cells.

## GDS-111

(warning) Ignoring line %d in file '%s' for the reason: '%s'.

**Description**

This warning message occurs when there is something wrong in the marker layer map file, which was instroduced to duplicate routing data in database to specified GDSII/OASIS marker layer.

There are 4 types (layer, region, net and cell) in the marker layer map file. Each line indicates a mapping, the mapping starts with marker and ends with ";", any text after a semicolon "#" in each line is a comment.

For all the types, -FBlayer, -cad_layer and -data_type are required options. When the type value is not cell, the -layer option is also required option. When the type value is region, the -bbox is also required option. When the type value is net, the -net, -from and -to are also required options. When the type value is cell, the -cell is also required option.

The following statements are the example for all kinds of type. marker -type layer -layer METAL -FBlayer FB9 -cad_layer 135 -data_type 1999 ; #layer based marker -type region -layer METAL -FBlayer FB9 -bbox {{1294 479} {1415 507}} -cad_layer 222 -data_type 1999 ; #region based marker -type net -net VDD -layer METAL3 -from U458/ZN -to H1/H3/B1 -FBlayer FB6 -cad_layer 333 -data_type 1999 ; #net based marker -type cell -cell inst2 -FBlayer FB7 -cad_layer 444 -data_type 1999 ; #cell based

**What Next**

Please check and correct the marker layer map file according to the message about the warning reason.

# GRD

## GRD-0001

(Fatal) GPGPU is NOT supported on this platform or build.

**Description**

GPGPU (grdgenxo -gpu) is supported only on linux platform and dedicate released builds.

Feedback

**What Next**

If you are running grdgenxo on linux platform and still get this error, contact the Synopsys Support Center.

---

## GRD-0002

(Fatal) Fail to run grdgenxo on GPGPU.

**Description**

The grdgenxo tool was run with the *-gpu* option but failed to initialize gpu devices.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0003

(Fatal) grdgenxo -inc_clean is NOT to be used with any other command line options.

**Description**

The grdgenxo tool runs with the *-inc_clean* option to clean up the incremental grdgenxo work directory. Do not use the *-inc_clean* option with any other command line options.

**What Next**

Remove all other options besides the *-inc_clean* option and run the *grdgenxo -inc_clean* command again.

---

## GRD-0004

(Warning) grdgenxo -inc_clean should only be run once, before any job is submitted.

**Description**

Running the *grdgenxo -inc_clean* command cleans up the incremental grdgenxo work directory. This command should only be run one time before submitting other grdgenxo jobs.

**What Next**

If the *grdgenxo -inc_clean* command is being run before any other grdgenxo job is submitted, no action is needed.

If there are submitted grdgenxo jobs in the current working directory before the *grdgenxo -inc_clean* run, kill the jobs, rerun the *grdgenxo -inc_clean* command, and then submit the other grdgenxo jobs.

Feedback

## GRD-0005

(Fatal) Bad usage of -zirva option. Expected usage: grdgenxo -zirva [<config_file>] <itf_file>.

**Description**

Run "grdgenxo -zirva" with bad usage. Expected usage: grdgenxo -zirva [<config_file>] <itf_file>.

**What Next**

Correct grdgenxo command and run again.

## GRD-0006

(Fatal) INTERNAL Error: failed internal consistency check in 3D model generation.

**Description**

An internal consistency check has failed in 3D model generation.

**What Next**

Contact the Synopsys Support Center.

## GRD-0007

(Fatal) %s option requires filename.

**Description**

A filename is not supplied for a grdgenxo option.

**What Next**

Add a filename corresponding to the grdgenxo option mentioned in the error message and run again.

## GRD-0008

(Warning) The tech file to create TLU+ is created by metal composer. It should not be used for sign-off extraction purpose. Please contact foundry to get the official version.

**Description**

The ITF to create TLU+ is created by metal composer. It should not be used for sign-off extraction purpose, because the ITF may be not fully qualified by foundry yet.

Feedback

**What Next**

Please contact foundry to get the official version.

---

## GRD-0009

(Fatal) ITF file is NOT provided.

**Description**

An input ITF file was not provided to the grdgenxo tool.

**What Next**

Specify an ITF file by using the *-input* option with the *grdgenxo* command.

---

## GRD-0010

(Fatal) Do NOT use this option -goldxModel. It is used for experimenting GoldX model.

**Description**

This option "-goldxModel" for grdgenxo is only for SNPS testing internal models.

**What Next**

Remove "-goldxModel" in grdgenxo command.

---

## GRD-0011

(Fatal) Incorrect command line option: %s. Try "grdgenxo -usage" for help.

**Description**

An unknown option was used with the *grdgenxo* command.

Use the *grdgenxo -help* or *grdgenxo -usage* command to list the supported options for the grdgenxo tool.

**What Next**

Correct the syntax and resubmit the *grdgenxo* command.

---

## GRD-0012

(Fatal) Multiple ITF files supplied.

Feedback

**Description**

More than one ITF files are supplied for the grdgenxo run.

**What Next**

Remove redundant ITF files in the grdgenxo command line. Supply only one ITF file.

---

## GRD-0013

(Fatal) Incorrect command line option for launching %s.

**Description**

The grdgenxo tool calls external tools (for example, gds2cap, quickcap, rapid3d) to generate device models. This message indicates that arguments for those tools are not set correctly in the command line.

**What Next**

Refer to detailed messages in the log file and correct arguments for those external tools.

---

## GRD-0014

(Information) Done with all the structures in the configuration file!

**Description**

You are running "grdgenxo -config <config_file>". All the structures in config_file have been processed.

**What Next**

Information only. No action is needed.

---

## GRD-0015

(Fatal) Technology statements used in incremental run must be the same (%s vs. %s).

**Description**

The grdgenxo tool supports incremental runs only for ITF modifications that have localized capacitance effects. This error message indicates that some modifications in the ITF file are not supported for incremental grdgenxo runs.

Feedback

**What Next**

See the StarRC User Guide and Command Reference for more information on what kinds of modifications are supported for incremental runs. Modify the ITF file to comply with the incremental run rules.

Alternatively, run the grdgenxo tool without the incremental option.

---

## GRD-0016

(Fatal) Failed to open ITF file: %s.

**Description**

The grdgenxo tool failed to open the input ITF file.

**What Next**

Check the availability and access rights of your input ITF file. Address any issues, then resubmit the grdgenxo run. If it still fails, contact the Synopsys Support Center.

---

## GRD-0017

(Fatal) Failed to write to file: %s.

**Description**

The grdgenxo tool fails to write to a file.

**What Next**

Check the disk to make sure the disk is writable and not full. Address any issues, then resubmit the grdgenxo run. If it still fails, contact the Synopsys Support Center.

---

## GRD-0018

(Fatal) INTERNAL Error: failed to read from file: %s.

**Description**

The grdgenxo tool fails to read an internal file.

**What Next**

Resubmit the grdgenxo run. If it still fails, contact the Synopsys Support Center.

Feedback

## GRD-0019

(Fatal) Specify the old ITF file previously used to produce %s.nxtgrd database by using -old_itf <old_itf_filename> option.

**Description**

You are running the grdgenxo tool with the *-inc* option.

In incremental grdgenxo runs, the grdgenxo tool first tries to find the old ITF file from the previous grdgenxo run directory. If the grdgenxo tool cannot find it, the tool checks whether the *-old_itf* option was used to specify an ITF file.

This error message indicates that the grdgenxo tool cannot find the old ITF file, either from the previous grdgenxo run directory or from the *-old_itf* option.

**What Next**

Specify the old ITF file previously used to produce the nxtgrd database mentioned in the error message by using the *-old_itf <old_itf_filename>* option.

Alternatively, run the grdgenxo tool without the incremental option.

## GRD-0020

(Fatal) A different ITF file has been specified for this processor.

**Description**

You are running the grdgenxo tool with the *-inc* option.

In incremental grdgenxo runs, the grdgenxo tool checks that all grdgenxo processors are using the same ITF file. In this case, different ITF files have been specified for different processors.

**What Next**

Check the grdgenxo submission commands to ensure that all grdgenxo commands use the same ITF file.

## GRD-0021

(Fatal) Current working directory was created with an old version of grdgenxo. Delete it and run grdgenxo from scratch, or use an older version of grdgenxo (earlier than version A-2007.12) for the current working directory.

Feedback

### Description

The grdgenxo tool detects that the current working directory was created with a version earlier than version A-2007.12. The current grdgenxo version is not compatible with the working directory.

### What Next

Remove the current working directory and resubmit the grdgenxo run.

---

## GRD-0022

(Fatal) The input ITF file (%s) is different from the file used in the previous run (%s). Please remove the existing working directory and re-run grdgenxo from scratch.

### Description

You are running the grdgenxo tool with an existing grdgenxo working directory. However, the ITF file supplied for the current grdgenxo run is different from the one detected in the existing working directory. The grdgenxo tool supports continuous running with the existing working directory only when the new ITF is the same as the one used in the previous run.

### What Next

Remove the existing working directory and rerun the grdgenxo tool.

---

## GRD-0023

(Warning) The tech file is created by metal composer. It should not be used for sign-off extraction purpose. Please contact foundry to get the official version.

### Description

The ITF file used to generate this nxtgrd file was created by the metal composer function. The ITF and nxtgrd files should not be used for signoff extraction because they might not be fully qualified by the foundry.

### What Next

Contact the foundry to obtain official nxtgrd or ITF files.

---

## GRD-0024

(Fatal) Front-end process stacks till M1 are not equal for the two technologies. Please align all conductors, vias and dielectrics below M1.

Feedback

**Description**

You are running the grdgenxo tool with the *-reuse_device_models* option. The grdgenxo tool has found an issue during equivalence checking between the current ITF file and the ITF file under the reuse_device_models directory for the layers below M1.

**What Next**

Align the layer stacks below M1 between the current ITF and the ITF file under the reuse_device_models directory, then resubmit the grdgenxo run with the *-reuse_device_models* option.

Alternatively, run the grdgenxo tool without the *-reuse_device_models* option.

---

## GRD-0025

(Fatal) Invalid SCT file in reference technology.

**Description**

You are running the grdgenxo tool with the *-reuse_device_models* option. The grdgenxo tool has found an issue with the device models data file under the reuse_device_models directory.

**What Next**

Run the grdgenxo tool without the *-reuse_device_models* option to regenerate the device models.

---

## GRD-0026

(Fatal) Can NOT initialize SCT Table settings.

**Description**

The grdgenxo tool cannot generate the SCT table.

Possible reasons are as follows:

- You are running the grdgenxo tool with the existing working directory. The grdgenxo tool tries to reuse the SCT table in the existing working directory and finds that the SCT table was not correctly generated in the previous grdgenxo run.

- The path to another tool (such as the gds2cap, quickcap, or rapid3d tools) is not set correctly.

- Arguments for another tool are not set correctly.

Feedback

**What Next**

Check the log file for more information about the specific error condition. Address any issues and resubmit the grdgenxo run.

To address problems with SCT tables, remove all of the sct directories under the existing working directory and resubmit the grdgenxo run.

---

## GRD-0027

(Fatal) Can NOT generate SCT file. Check %s.failure for a list of the failing simulations and check the log files in the specified directories. Remove them before launching grdgenxo again.

**Description**

The grdgenxo tool cannot generate the SCT file.

**What Next**

Check the *.failure file mentioned in the error message for a list of the failing simulations and check the log files in the directories for those failing simulations. Remove the directories for the failing simulations and run the grdgenxo tool again.

---

## GRD-0028

(Fatal) Layer %s has a positive bottom thickness variation specified that is greater than the inter-layer conductor separation.

**Description**

Bottom thickness variation of conducting layer %s is positive and such large that it is greater than the inter-layer distance between this layer and conducting layer below. This makes the bottom of conducting layer %s extend into conducting layer below when bottom thickness variation is applied. StarRC does not support this kind of scenario.

**What Next**

Check BOTTOM_THICKNESS_VS_SI_WIDTH or ILD_VS_WIDTH_AND_SPACING table (depending on which table is used in current nxtgrd) to correct the violated numbers. Rerun grdgenxo and StarRC.

---

## GRD-0029

(Fatal) To use reluctance capability, both of the following must be specified: RELUCTANCE_FREQUENCIES, and RELUCTANCE_SUBSTRATE_RHO.

Feedback

**Description**

StarRC uses RELUCTANCE_SUBSTRATE_RHO to model non-ideal substrate effects by computing the skin depth of substrate. RELUCTANCE_SUBSTRATE_RHO must be specified with RELUCTANCE_FREQUENCIES. In this case, only RELUCTANCE_SUBSTRATE_RHO is specified.

**What Next**

Specify RELUCTANCE_FREQUENCIES in ITF and re-run grdgenxo.

---

## GRD-0030

(Information) Building %s.

**Description**

This information message indicates that 3D model generation by grdgenxo has correctly started.

**What Next**

Information only; no action is needed.

---

## GRD-0031

(Fatal) INTERNAL Error: failed internal consistency check in 3D model generation.

**Description**

An internal consistency check has failed in 3D model generation.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0032

(Fatal) Fatal error in SCT flow (mkdir %s): %s.

**Description**

StarRC cannot create a directory in the SCT flow.

**What Next**

Check the file system to see whether the disk is full or the connection is unstable. Address the issues and restart the grdgenxo run.

Feedback

## GRD-0033

(Warning) Nodes %s found in %s/%s were unexpected.

**Description**

Unexpected nodes have been detected during one or more simulations. The error message lists the unexpected nodes. The presence of these nodes might be detrimental for capacitance accuracy.

**What Next**

Review the list of nodes and the technology files and remove the problem nodes. Remove the folders containing the log file indicated in the message and relaunch the grdgenxo run.

## GRD-0034

(Severe) Failed to launch %s for %s, please check %s. End of %s.log: %s.

**Description**

The Field Solver simulation failed due to some unexpected reason. The grdgenxo tool cannot build three-dimensional model tables.

**What Next**

Review the information contained in the log file specified in the error message and perform the necessary fixes and cleanup. Rerun the grdgenxo tool to generate the models.

## GRD-0035

(Warning) Failed to launch field solver for %s, SCT table might be incomplete, please check %s.

**Description**

The Field Solver failed to launch for some simulations. Therefore the SCT table containing three-dimensional models might be incomplete and accuracy issues might result.

**What Next**

Check the specified log file and review why the Field Solver failed. Remove the folders of the failed simulations and rerun the grdgenxo tool.

## GRD-0036

(Fatal) Fatal error in SCT flow (while locking %s): %s.

Feedback

**Description**

StarRC cannot create or lock a file required for three-dimensional model generation.

**What Next**

Check the file system to see whether the disk is full or the connection is unstable. Address the issues and restart the grdgenxo run.

---

## GRD-0037

(Information) SCT file already generated and reused.

**Description**

This message indicates that the SCT file containing 3D models generated by grdgenxo has already been generated by a previous run of the tool. Consequently, grdgenxo skips 3D model generation and uses the previously-generated file.

**What Next**

If you would like to use the previously-generated SCT file, no action is required on your part. Otherwise, remove the SCT folder in grdgenxo working directory and rerun.

---

## GRD-0038

(Warning) SCT file failed to be generated in a previous run. See %s for additional info.

**Description**

The warning indicates that 3D model generation has failed in previous run of grdgenxo. The nxtgrd file will not be generated. The file indicated in the message contains additional instructions to follow to solve the problem.

**What Next**

Follow the instructions indicated in the file that is specified and rerun grdgenxo.

---

## GRD-0039

(Fatal) Could NOT initialize 3D model file generation.

**Description**

The grdgenxo tool cannot initialize the model which will contain 3D models. Therefore model generation cannot start.

Feedback

**What Next**

Check the file system to see whether the disk is full or the connection is unstable. Resolve any issues and resubmit the grdgenxo run.

---

## GRD-0040

(Fatal) Could NOT read field solver technology file (after %d attempts).

**Description**

The grdgenxo tool cannot read the field solver technology file that has been created by the tool that generates 3D models.

**What Next**

Check the file system to see whether the disk is full or the connection is unstable. Resolve any issues and resubmit the grdgenxo run.

---

## GRD-0041

(Fatal) Could NOT write field solver technology file.

**Description**

The grdgenxo tool cannot write the field solver technology file needed to generate 3D models.

**What Next**

Check the file system to see whether the disk is full or the connection is unstable. Resolve any issues and resubmit the grdgenxo run.

---

## GRD-0042

(Fatal) Cannot select Field-Poly layer for gate layer %s (missing or duplicated DEVICE_TYPE).

**Description**

The ITF file contains an invalid combination of field poly and gate layers. As a result, the grdgenxo tool cannot generate 3D models. Field poly and gate conductor layers should be defined together with unique DEVICE_TYPE statements to allow the grdgenxo tool to select a unique pair of gate and field poly layers for each device type.

Feedback

**What Next**

Review the syntax in the ITF file for gate and field poly conductors. Make sure that each gate has its corresponding field poly defined together with a unique DEVICE_TYPE statement.

---

## GRD-0043

(Warning) There were unexpected nodes found in the reports of the simulations launched for the 3D models generation. It may cause accuracy issues in 3D modeling. Please see %s.

**Description**

This message informs that unexpected nodes had been detected in one or more 3D model simulations. Unexpected nodes generally indicate a technology modeling issue such as parts of conductors that are not supposed to be created by the field solver. They can cause inaccuracies in capacitance calculation and should be removed.

**What Next**

Review the technology file (ITF or QTF files) and fix any modeling issue.

---

## GRD-0044

(Severe) Failed to check %s's version.

**Description**

The grdgenxo tool cannot determine the version of the field solver. You might be using an incompatible or old field solver.

**What Next**

Make sure that you have access and the correct environment variables configured to run the indicated version of the field solver. Clean up the model folder and rerun the grdgenxo tool.

---

## GRD-0045

(Severe) Failed to find %s's version.

**Description**

The grdgenxo tool cannot detect the version of the field solver. You might be using an incompatible or old field solver.

Feedback

**What Next**

Make sure that you have access and the correct environment variables configured to run the indicated version of the field solver. Clean up the model folder and rerun the grdgenxo tool.

---

## GRD-0046

(Severe) Failed to execute %s.

**Description**

grdgenxo failed to spawn the field solver simulation required to run 3D model generation.

**What Next**

Make sure that you have access and the correct environment variables configured to run the field solver, cleanup the model folder and rerun grdgenxo.

---

## GRD-0047

(Severe) Version of %s must be >= %s.%s.

**Description**

The grdgenxo tool has detected an incompatibility issue with the field solver version. To support the 3D model functionality, the field solver version should be higher that the one indicated in the message.

**What Next**

Make sure that you have access and the correct environment variables configured to run the indicated version of the field solver. Clean up the model folder and rerun the grdgenxo tool.

---

## GRD-0048

(Severe) Error: NOT supported differences in conductor %s between ITF and nxtgrd files.

**Description**

The grdgenxo tool detects a difference between the new ITF file and the old nxtgrd file that prevents the use of the grdgenxo update flow.

In the grdgenxo update flow, conductor layers must be consistent between the old nxtgrd file and the new ITF file.

Feedback

**What Next**

Check the differences between the new ITF and old nxtgrd files. If the differences are expected, you must regenerate the nxtgrd file without using the update flow.

---

## GRD-0049

(Warning) The tech file is created by metal composer. It should not be used for sign-off extraction purpose. Please contact foundry to get the official version.

**Description**

The ITF file used to generate this nxtgrd file was created by the metal composer function. These ITF and nxtgrd files should not be used for signoff extraction because they might not be fully qualified by the foundry.

**What Next**

Contact the foundry to obtain official nxtgrd or ITF files.

---

## GRD-0050

(Fatal) The %s statement cannot be encrypted in the tech file.

**Description**

The statement cannot be encrypted in the tech file.

**What Next**

Do not put the statement between #beginHide and #endHide

---

## GRD-0051

(Warning) The ITF includes both planar devices and FinFet devices. Is this intentional?

**Description**

The ITF includes both planar devices and FinFet devices. Is this intentional?

**What Next**

Check ITF correctness: both planar and FinFet device SCT models will be generated.

---

## GRD-0052

(Severe) Cannot open in read mode the QTF File %s.

Feedback

**Description**

The grdgenxo tool fails because it cannot open the specified QTF file for reading. The file might not exist or read access rights might not be set properly.

**What Next**

Check the path of the QTF file, verify that the file exists on the file system, and verify that you have the rights to read it. Correct the problems and resubmit the grdgenxo run.

---

## GRD-0053

(Severe) The QTF File is different from the previous run. Remove %s and re-run grdgenxo.

**Description**

The QTF FIle has been modified from the previous grdgenxo run. Therefore grdgenxo cannot proceed further.

**What Next**

Remove the QTF File in the nxtgrd folder and re-run grdgenxo.

---

## GRD-0054

(Severe) -gds2cap_arguments requires arguments.

**Description**

grdgenxo stops because it cannot find arguments specified after the -gds2cap_arguments statement in the command line.

**What Next**

Specify some arguments after -gds2cap_arguments or remove it from the command line.

---

## GRD-0055

(Information) gds2cap options have been set to "%s -qtfExtract %s".

**Description**

The listed options have been set for the gds2cap tool.

**What Next**

Information only; no action is required.

Feedback

## GRD-0056

(Fatal) Cannot open layer mapping file %s for metal composer

**Description**

grdgenxo cannot read the mapping file specified with option "-layer_mapping_file".

**What Next**

Provide correct mapping file.

## GRD-0057

(Warning) -quickcap_arguments: -g may cause simulation time to explode.

**Description**

The *-g* option has been specified for use with the QuickCap tool. This high-accuracy option might cause simulation to run more slowly.

**What Next**

If the use of the *-g* option is intentional, no action is needed.

## GRD-0058

(Information) QuickCap options have been set to "%s".

**Description**

The listed options have been set for the QuickCap tool.

**What Next**

Information only; no action is required.

## GRD-0059

(Severe) Could NOT encrypt rapid3d technology file.

**Description**

grdgenxo cannot encrypt the field solver technology file.

**What Next**

Check the file system to see whether disk is full or connection is stable. Make possible clean up and rerun the job.

Feedback

## GRD-0060

(Fatal) Usage is: itf2Linear <itf_file>.

**Description**

Usage not correct.

**What Next**

Follow the usage of: itf2Linear <itf_file>.

## GRD-0061

(Information) Generating Linear Cap Model.

**Description**

Indicating the job is running.

**What Next**

No further action is required.

## GRD-0062

(Information) Done.

**Description**

Indicate the model running is completed.

**What Next**

No further action is required.

## GRD-0063

(Fatal) INTERNAL Error: Array bound violation in SIDE_TANGENT, program terminated.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## GRD-0064

(Fatal) INTERNAL Error: File generation appears to be corrupt, please contact StarRC support.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## GRD-0065

(Fatal) File generation appears to be corrupt, please erase the file and re-run.

**Description**

Data file contains invalid number.

**What Next**

Remove this file and rerun the job. If issue still exist, Contact the Synopsys Support Center.

## GRD-0066

(Fatal) The GRD file version is earlier than 60. Please use an earlier version of grdgenxo or run grdgenxo again to get new binary file.

**Description**

grdgenxo version is different from the one used to generate the nxtgrd.

**What Next**

Use an earlier version of grdgenxo or run grdgenxo again to get new binary file.

## GRD-0067

(Fatal) INTERNAL Error: RELUCTANCE is expected.

**Description**

An internal consistency check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

## GRD-0068

(Fatal) INTERNAL Error: END_RELUCTANCE is expected.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## GRD-0069

(Severe) Usage: grdgenxo -bin2ascii -i <bin.grd> -o <asc.grd>.

**Description**

An error has occurred with the usage of the *grdgenxo* command. The error might be caused by improper command syntax or by an unsuitable input file.

The correct syntax is as follows:

```
% grdgenxo -bin2ascii -i <input_grd_file> -o <ascii_grd_file>
```

where *-i* is the short form of the *-input* option and *-o* is the short form of the *-output* option of the *grdgenxo* command.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

## GRD-0070

(Severe) Error opening input file.

**Description**

Input file is not readable or is not a binary file.

**What Next**

Check the input file.

Feedback

## GRD-0071

(Severe) %s is NOT a binary grd file, exiting...

**Description**

Input file is not a binary file.

**What Next**

Check the input file.

## GRD-0072

(Severe) Usage: grdgenxo -prime_rail <nxtgrd>.

**Description**

An error has occurred with the usage of the *grdgenxo* command. The error might be caused by improper command syntax or by an unsuitable input file.

The correct syntax is as follows:

```
% grdgenxo -prime_rail <nxtgrd_file>
```

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

## GRD-0073

(Severe) Usage: grdgenxo -add_sf <factor> -i <input_grd_file> -o <output_grd_file>.

**Description**

An error has occurred with the usage of the *grdgenxo* command. The error might be caused by improper command syntax or by an unsuitable input file.

The correct syntax is as follows:

```
% grdgenxo -add_sf <factor> -i <input_grd_file> -o <ascii_grd_file>
```

where *-i* is the short form of the *-input* option and *-o* is the short form of the *-output* option of the *grdgenxo* command. The argument of the *-add_sf* option must be a positive value representing the half-node scaling factor.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

Feedback

## GRD-0074

(Severe) ERROR: HALF_NODE_SCALE_FACTOR must be greater than 0.

**Description**

HALF_NODE_SCALE_FACTOR must be set to a number greater than 0.

**What Next**

Revise the HALF_NODE_SCALE_FACTOR value.

## GRD-0075

(Warning) Warning: The value of HALF_NODE_SCALE_FACTOR is 1.0 and will be ignored.

**Description**

StarRC ignores the HALF_NODE_SCALE_FACTOR because it is set to 1.0, which means no scaling should be applied.

**What Next**

No further action is required if the value of 1.0 is expected.

## GRD-0076

(Severe) Error: Orientation of ETCH_VS_WIDTH_AND_SPACING table must be the same or merely swapped between ITF and NXTGRD files.

**Description**

The grdgenxo tool detects an unsupported difference in the *ETCH_VS_WIDTH_AND_SPACING* table between the new ITF file and the old nxtgrd file.

In the grdgenxo update flow, the *ETCH_VS_WIDTH_AND_SPACING* table in the new ITF file and the old nxtgrd file must be the same; the only difference allowed is that the direction can be swapped.

**What Next**

Check the *ETCH_VS_WIDTH_AND_SPACING* tables in the new ITF and old nxtgrd files. If the difference is expected, you must regenerate the nxtgrd file without using the update flow.

Feedback

## GRD-0077

(Severe) Error: NOT supported differences in %s between ITF and NXTGRD files.

**Description**

The grdgenxo tool detects a difference between the new ITF file and the old nxtgrd file that prevents the use of the grdgenxo update flow.

**What Next**

Check the differences between the new ITF and old nxtgrd files. If the differences are expected, you must regenerate the nxtgrd file without using the update flow.

## GRD-0078

(Severe) Error: NOT supported differences in resistance between ITF and NXTGRD files, due to presence of reluctance.

**Description**

The grdgenxo tool detects a difference between the new ITF file and the old nxtgrd file that prevents the use of the grdgenxo update flow.

**What Next**

Check the differences between the new ITF and old nxtgrd files. If the differences are expected, you must regenerate the nxtgrd file without using the update flow.

## GRD-0079

(Severe) Error opening SCT file for reading.

**Description**

The input sct file cannot be opened for reading.

**What Next**

Check the existence of sct file and rerun the job.

## GRD-0080

(Severe) Error: Can NOT update encrypted nxtgrd file.

**Description**

The grdgenxo update flow does not support encrypted nxtgrd files.

Feedback

**What Next**

Decrypt the nxtgrd before running the update flow. Alternatively, regenerate the nxtgrd completely, without using the update flow.

---

## GRD-0081

(Severe) Error: Can NOT update nxtgrd file older than version 63.

**Description**

The version of the nxtgrd file is too old for the grdgenxo update flow.

**What Next**

Regenerate the nxtgrd completely, without using the update flow.

---

## GRD-0082

(Severe) Error in opening ITF file for updating.

**Description**

The input ITF file cannot be opened for reading.

**What Next**

Check the existence of the ITF file and rerun the job.

---

## GRD-0083

(Severe) Usage: grdgenxo -itf2itf -i <itf> -o <itf>.

**Description**

Use grdgenxo in a incorrect way. An error has occurred with the usage of the *grdgenxo* command. The correct syntax is as follows:

```
% grdgenxo -itf2itf -i <input_itf> -o <output_itf>
```

where *-i* is the short form of the *-input* option and *-o* is the short form of the *-output* option of the *grdgenxo* command.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

Feedback

## GRD-0084

(Severe) Error: Unable to write to %s.

**Description**

Cannot open output file to write.

**What Next**

Check the disk space and connection.

## GRD-0085

(Severe) Usage: grdgenxo -sct2sct_decrypt -i <sct> -o <sct>.

**Description**

Use grdgenxo in a incorrect way.

**What Next**

Follow the usage.

## GRD-0086

(Severe) Could NOT access %s.

**Description**

Cannot open output file to write.

**What Next**

Check the disk space and connection.

## GRD-0087

(Severe) %s is NOT a valid sct file.

**Description**

Input sct file is not valid.

**What Next**

Check the input file and rerun the job.

Feedback

## GRD-0088

(Severe) Usage: grdgenxo -nxtgrd2itf -i <bin.grd> -o <itf>.

**Description**

An error has occurred with the usage of the *grdgenxo* command. The correct syntax is as follows:

```
% grdgenxo -nxtgrd2itf -i <input_grd_file> -o <itf_file>
```

where *-i* is the short form of the *-input* option and *-o* is the short form of the *-output* option of the *grdgenxo* command.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

## GRD-0089

(Severe) %s is encrypted, exiting...

**Description**

The *-nxtgrd2itf* option of the *grdgenxo* command is not supported for nxtgrd files generated from encrypted ITF files.

**What Next**

Use a different nxtgrd file, or do not use the *-nxtgrd2itf* option.

## GRD-0090

(Severe) Error opening input nxtgrd file.

**Description**

Input file is not readable.

**What Next**

Check the input file.

## GRD-0091

(Fatal) Internal error in Boundary.C.

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0092

(Fatal) RPV_VS_SI_COVERAGE and RPV_VS_COVERAGE can not be applied to same layer.

**Description**

RPV_VS_SI_COVERAGE and RPV_VS_COVERAGE can not be applied to same layer.

**What Next**

Correct ITF and rerun StarRC.

---

## GRD-0093

(Warning) RPV_VS_SI_COVERAGE does not support trench contact virtual via.

**Description**

RPV_VS_SI_COVERAGE on trench contact virtual via layer is not allowed.

**What Next**

Correct ITF and rerun StarRC.

---

## GRD-0094

(Warning) RPV_VS_COVERAGE does not support trench contact virtual via.

**Description**

RPV_VS_COVERAGE on trench contact virtual via layer is not allowed.

**What Next**

Correct ITF and rerun StarRC.

---

## GRD-0095

(Fatal) Can NOT open configuration file %s.

Feedback

**Description**

Input configuration file is not readable.

**What Next**

Check the input file.

---

## GRD-0096

(Fatal) Invalid configuration input for model %s.

**Description**

Input configuration file is not correct for particular model.

**What Next**

Revise the configuration file and rerun the job.

---

## GRD-0097

(Fatal) Raphael run is NOT supported with GPGPU.

**Description**

Raphael run is NOT supported with GPGPU.

**What Next**

Unset Raphael run setting and rerun the job.

---

## GRD-0098

(Fatal) %s appears to be corrupt. Please erase that file and re-run.

**Description**

Data file contains invalid number.

**What Next**

Remove this file and rerun the job.

---

## GRD-0099

(Fatal) Can NOT create/open file handle %s.

Feedback

**Description**

grdgenxo cannot access the output file.

**What Next**

Check filesystem for space/connection.

---

## GRD-0100

(Fatal) Can NOT open file from file handle. Please check file system for space/connection.

**Description**

StarRC is not able to open a file to write.

**What Next**

Check the file system to see whether disk is full or connection is stable. Make possible clean up and rerun the job.

---

## GRD-0101

(Severe) INTERNAL Error: Wrong ascii header in the TLUPlus file.

**Description**

Ascii header in TLUPlus file is wrong.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0102

(Severe) INTERNAL Error: Cannot open file host_id.

**Description**

Internal host_id file cannot be opened.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0103

(Severe) INTERNAL Error: TLUPlus decode can NOT be run at this host.

Feedback

**Description**

This internal function can be run on specified hosts.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0104

(Severe) INTERNAL Error: Can NOT open file %s.

**Description**

The internal decode binary cannot open the input file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0105

(Warning) INTERNAL Warning: For Synopsys internal use only. Do NOT distribute without R&D's permission.

**Description**

This binary decode can be used only within Synopsys

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0106

(Severe) INTERNAL Error: Fail to read CapTable from attached file.

**Description**

The internal build decode cannot read CapTable from the specified file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0107

(Severe) INTERNAL Error: Fail to read ResModel from attached file.

Feedback

**Description**

The internal binary decode fails to read ResModel from the specified file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0108

(Severe) INTERNAL Error: Fail to read CapModel from attached file.

**Description**

The internal binary decode fails to read CapModel from the specified file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0109

(Severe) INTERNAL Error: Fail to read additional CapInfo from attached file.

**Description**

The internal binary decode fails to read additional CapInfo from the specified file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0110

(Severe) INTERNAL Error: Fail to read via info from attached file.

**Description**

The internal binary decode fails to read via info from the specified file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0111

(Severe) INTERNAL Error: Format error in CapModel attached file %s.

Feedback

**Description**

The internal binary decode detects format error in CapModel in the specified file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0112

(Severe) INTERNAL INFO: Usage: decode <file_name>.

**Description**

This is an internal binary related usage.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0113

(Fatal) INTERNAL Error: Conductors shorting in layer %s.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0114

(Severe) INTERNAL Error: Read size %d exceeds the limit %d.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0115

(Severe) INTERNAL Error: Check fails.

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0116

(Severe) Can NOT open file for GDS output.

**Description**

Cannot open output file for writing.

**What Next**

Check the file system and connection.

---

## GRD-0117

(Severe) Can NOT open %s.

**Description**

Cannot open input file for reading.

**What Next**

Check the input file existence.

---

## GRD-0118

(Severe) INTERNAL Error: Unrecognized record ID.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0119

(Severe) Can NOT open GDS file to write.

Feedback

**Description**

Cannot open output file for writing.

**What Next**

Check the file system and connection.

---

## GRD-0120

(Fatal) INTERNAL Error: Ending besim index larger than size.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0121

(Fatal) Can NOT open lock file handle. Either disk is full or a lock file from another run persists. Please remove *.llock from grd repository, or create some disk space.

**Description**

Can NOT open lock file handle.

**What Next**

Either disk is full or a lock file from another run persists. Please remove *.llock from grd repository, or create some disk space.

---

## GRD-0122

(Fatal) Lock file failure! Please remove *.llock from grd repository.

**Description**

Unable to lock the output file for writing.

**What Next**

Remove *.llock from grd repository.

---

## GRD-0123

(Fatal) Can NOT fdopen lock file.

Feedback

**Description**

Cannot open file for writing.

**What Next**

Check the file system and connection.

---

## GRD-0124

(Fatal) Grdgenxo can NOT proceed without STAR-RC2-TCAD license. Please make sure the license is up and running.

**Description**

STAR-RC2-TCAD license is not avalible.

**What Next**

Check the license setting and rerun the job.

---

## GRD-0125

(Warning) Database file %s is not ready for output. Please start another GRD process if there is no followup process.

**Description**

Data file is not generated, will be automated be running if there is followup process.

**What Next**

If there is no grdgenxo process is running, should start a new one. Otherwise, no actions is required.

---

## GRD-0126

(Fatal) There seems to be a bad GRD process. Please restart grdgenxo run.

**Description**

One grdgenxo process seems corrupted.

**What Next**

Start a new grdgenxo running process.

Feedback

## GRD-0127

(Fatal) File %s seems to be corrupted. Please remove the file and restart the grdgenxo run.

**Description**

Data file is corrupted due to some reasons.

**What Next**

Remove this specific file and rerun the job.

## GRD-0128

(Fatal) INTERNAL Error: Invalid table type.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## GRD-0129

(Fatal) Internal Error: dereferring to a unavailable via layer %s.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## GRD-0130

(Fatal) Can NOT open nxtgrd file %s for appending info

**Description**

grdgenxo fails to open nxtgrd file mentioned in error message above for appending info.

**What Next**

Check disk is accessible and has space for writing. If disk is in good state, contact the Synopsys Support Center.

Feedback

## GRD-0132

(Fatal) Can NOT create lock file.

**Description**

grdgenxo fails to create an internal file.

**What Next**

Check disk is accessible and has space for writing. If disk is in good state, contact the Synopsys Support Center.

## GRD-0133

(Fatal) SCT file failed to be generated. Exiting...

**Description**

grdgenxo finds errors in SCT file generation. There are possibly some information in log file explaining the reason why SCT file fails to be generated.

**What Next**

Check the log to find the detailed reason of this failure and guidance to fix the issue. If there is no any clues on the failure in the log, contact the Synopsys Support Center.

## GRD-0134

(Fatal) Can NOT open nxtgrd file for writing.

**Description**

grdgenxo fails to open nxtgrd file for writing.

**What Next**

Check disk is accessible and has space for writing.

## GRD-0135

(Information) Waiting for SCT file. If the current grdgenxo is the only one running, run several other grdgenxo processors in order to complete SCT file generation.

Feedback

**Description**

grdgenxo is waiting for SCT file to complete nxtgrd generation. If there is only one grdgenxo processor, you need run several other grdgenxo processors to accelerate SCT generation.

**What Next**

If there is only one grdgenxo processor, you need run several other grdgenxo processors to accelerate SCT generation. Otherwise, nothing is needed to be done.

---

## GRD-0136

(Fatal) Numerical instability in bottom thickness variation calculation for layer %s.

**Description**

In that layer, numerical number as NaN is calculated during generation.

**What Next**

Verify the thickness related tabel in ITF file for certain layer and rerun the job. If error still exists, contact the Synopsys Support Center.

---

## GRD-0139

(Fatal) %s is different from the previously defined ITF file. This is NOT supported by incremental grdgenxo. Do a complete run from scratch.

**Description**

grdgenxo supports incremental run with ITF modifications which have localized capacitance impact. The difference mentioned in error message above has substantial impact on nxtgrd models and is not supported by incremental grdgenxo.

**What Next**

Do a complete run from scratch

---

## GRD-0140

(Warning) The copy of old ITF file already under the directory of %s will be used, rather than the one specified using -old_itf %s.

**Description**

You are running grdgenxo with option "-inc". In incremental grdgenxo run mode, grdgenxo first tries to find old ITF from previous grdgenxo run directory. If grdgenxo cannot find it,

Feedback

grdgenxo turns to option "-old_itf" to get old ITF. In this case, grdgenxo finds old ITF from both the directory mentioned in message above and option "-old_itf". The copy of old ITF file under the specified directory will be used.

**What Next**

If the directory mentioned in message above is where you want to run incremental grdgenxo, nothing is needed to be done.

---

## GRD-0141

(Fatal) Usage is: inductancexo itffile.

**Description**

Use the binary in a wrong way.

**What Next**

Use the binary with above rules.

---

## GRD-0142

(Severe) INTERNAL Error: Peel exponent less than 1.0 may create unstable gridding (infinitely many sub filements).

**Description**

Peel exponent is an internal variable for controling filement generation when grdgenxo discretizing wires for inductance modeling. If you see this error in log, it means some unknown internal error occurs.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0143

(Severe) INTERNAL Error: Overlapping wires NOT allowed.

**Description**

The grdgenxo tool finds overlapped wires when preparing inductance models. Overlapped wires are not allowed and might be caused by internal errors.

**What Next**

Contact the Synopsys Support Center.

Feedback

## GRD-0145

(Warning) INTERNAL Warning: Conductors %s and %s at different potentials are (almost) touching.

### Description

The two conductors listed in the warning message are almost touching each other while they are modeled as different nets (having different potentials for capacitance extraction). The generated nxtgrd capacitance models associated with these conductors might be inaccurate.

### What Next

Contact the Synopsys Support Center.

## GRD-0146

(Fatal) INTERNAL Error: Bottom dielectric internal error for layer %s

### Description

For the conductor layer mentioned in the error message, the bottom dielectric layer associated with the conductor layer has been defined with ITF syntax *BOTTOM_DIELECTRIC_THICKNESS* abd *BOTTOM_DIELECTRIC_ER*. However, the grdgenxo tool cannot find the bottom dielectric layer because of an internal error.

### What Next

Contact the Synopsys Support Center.

## GRD-0147

(Fatal) Floating metal fill emulation does not work with sensitivity extraction!

### Description

For TLU flow, grdgenxo need emulate metal fill when generating cap/res models. The extractor (for example, extractor in ICC) using TLU need extract caps with metal fills considered although design does not include them yet at the extraction time. However, floating metal fill emulation in grdgenxo cannot work with sensitivity extraction which is activated by ITF syntax "VARIATION_PARAMETERS".

### What Next

Remove VARIATION_PARAMETERS in ITF and re-run grdgenxo.

Feedback

## GRD-0148

(Fatal) INTERNAL Error: Error in handling reluctance and floating metal fill for file %s.

**Description**

The grdgenxo tool detects floating metal fill in the file listed in the error message, which is not expected when grdgenxo is generating reluctance models.

**What Next**

Contact the Synopsys Support Center.

## GRD-0149

(Fatal) Incompatible/corrupt database file %s! Clean the offending files and re-run grdgenxo.

**Description**

The database file named in the error message is incompatible or corrupt.

**What Next**

Replace the specified file and resubmit the grdgenxo run. If the issue still occurs, contact the Synopsys Support Center.

## GRD-0150

(Fatal) Incompatibility in sensitivity database.

**Description**

The grdgenxo tool detects an incompatible sensitivity database. The database might be corrupted or incompatible with the current grdgenxo version.

**What Next**

Run the grdgenxo tool in an empty directory. If the issue still occurs, contact the Synopsys Support Center.

## GRD-0151

(Fatal) %s contains unrecognized field %s in GRD database

Feedback

**Description**

grdgenxo finds unrecognized fields in database file mentioned above. The database file might be corrupted or you are running grdgenxo with an incompatible old database.

**What Next**

Run grdgenxo in an empty directory. If the issue still occurs, contact the Synopsys Support Center.

---

## GRD-0152

(Fatal) INTERNAL Error: Unknown generic structure.

**Description**

grdgenxo fails to generate generic structure for simulation.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0153

(Fatal) INTERNAL Error: Failed to initialize the same_effective vectors.

**Description**

grdgenxo fails to initialize internal variables.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0154

(Fatal) INTERNAL Error: Failed to initialize vector: is_sens_computed.

**Description**

grdgenxo fails to initialize an internal variable.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0156

(Warning) "rapahel rc2" convergence is poor. Use these results with caution.

Feedback

**Description**

grdgenxo is calling raphael rc2 for simulation. "raphael rc2" reports poor convergence for simulated patterns.

**What Next**

Use these results with caution. Or Contact the Synopsys Support Center for further support.

---

## GRD-0157

(Fatal) INTERNAL Error: Raphael translation can NOT handle non-planar conductors.

**Description**

grdgenxo is calling raphael for simulation. grdgenxo forbids non-planar conductors when preparing inputs for raphael.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0158

(Severe) INTERNAL Error: Can NOT open file tmp.4in.

**Description**

grdgenxo failed to open an internal file "tmp.4in".

**What Next**

Check the disk is in good state and not full. Re-run grdgenxo. If the issue still occurs, contact the Synopsys Support Center.

---

## GRD-0159

(Information) User specified spacing dimension of %d is provided for layer %s.

**Description**

Informational message indicating the spacing for the layer specified by the user.

**What Next**

This message is for information only. Continue with your run.

Feedback

## GRD-0160

(Fatal) wrong syntax in mapping file: %s

**Description**

Wrong syntax in metal composer mapping file.

**What Next**

Check syntax for metal composer mapping file.

## GRD-0161

(Fatal) Duplicate layer name in metal composer : %s

**Description**

Layer name cannot be the same in one ITF file.

**What Next**

Check layer names in metal composer mapping file.

## GRD-0162

(Fatal) Fixed top layer %s is not a conducting layer.

**Description**

Fixed top layer must be a conducting layer.

**What Next**

Use conducting layer as fixed top layer in metal composer mapping file.

## GRD-0163

(Fatal) Cannot find layer %s in ITF file.

**Description**

Cannot find layer %s in ITF file.

**What Next**

Layers specified in Metal Composer mapping file must exists in ITF file. Check syntax of Metal Composer mapping file.

Feedback

## GRD-0164

(Warning) %s layer %s is very close to device layers, SCT tables need to be regenerated to ensure accuracy.

**Description**

Fixed top conducting layer, adjustable conducting layers and bottom fixed layer is not suggested to be too close to device layers. You need to regenerate all the SCT tables, instead of reuse of them.

**What Next**

Modify metal composer mapping file accordingly, or regenerated all the SCT tables for nxtgrd creatation.

## GRD-0165

(Fatal) Covertical layer %s is found in ITF file.

**Description**

Metal Composer does NOT support ITFs with covertical conducting layers.

**What Next**

Use ITFs with no covertical conducting layers.

## GRD-0166

(Fatal) %s

**Description**

An internal consistency check in Metal Composer has failed.

**What Next**

Contact the Synopsys Support Center.

## GRD-0167

(Fatal) Fixed bottom layer %s is not a conducting layer.

**Description**

Fixed bottom layer must be a conducting layer.

Feedback

**What Next**

Use conducting layer as fixed bottom layer in metal composer mapping file.

---

## GRD-0168

(Warning) There is no VIA between nearby conductor layer %s

**Description**

There is not VIA between nearby condutor layer in output ITF file.

**What Next**

Confirm mapping information in layer composer mapping file.

---

## GRD-0169

(Warning) Multiple VIA defination between layer %s

**Description**

There is more than 1 VIA layer defined between 2 conducting layers in the output ITF file.

**What Next**

Confirm mapping information in layer composer mapping file.

---

## GRD-0170

(Warning) VIA %s connecting layer %s and %s is not the VIA in original ITF.

**Description**

The 2 conductor layer come from the same input ITF and there does exist a VIA layer between those 2 layers in input ITF. The new specified VIA in output ITF is not that existing via.

**What Next**

Confirm mapping information in layer composer mapping file.

---

## GRD-0171

(Fatal) VIA %s does not connect with adjustable conducting layers or fixed top/bottom layers.

Feedback

**Description**

VIA layer specifed in layer composer mapping file should connect with adjustable conducting layers or fixed top/bottom layers.

**What Next**

Confirm VIA mapping information in layer composer mapping file.

---

## GRD-0172

(Fatal) MEASURED_FROM layer %s of layer %s is adjusted in mapping file.

**Description**

MEASURED_FROM layer is adjusted.

**What Next**

Confirm mapping information in layer composer mapping file.

---

## GRD-0173

(Fatal) wrong syntax in mapping file: %s, at least one conductor name is needed after layer_group

**Description**

Wrong syntax in metal composer mapping file.

**What Next**

Check syntax for metal composer mapping file.

---

## GRD-0174

(Fatal) %s layer %s is not one of BEOL layers.

**Description**

Either fixed_top_layer_name or fixed_bottom_layer_name defined in mapping file for layer composer should be one of BEOL layers.

**What Next**

Set either fixed_top_layer_name or fixed_bottom_layer_name to one of BEOL layers' name; or leave it empty, this will not keep the BEOL layers and will refill in all the BEOL layers based on mapping file users set.

Feedback

## GRD-0175

(Fatal) The ITF file %s contains encrypted sections cross one or more CONDUCTOR/ DIELECTRIC/VIA layers, stop layer composer.

**Description**

ITF partial encryption with #beginHide/#endHide contains one or more blocks of CONDUCTOR, DIELECTRIC or VIA. Layer composer is stopped to avoid decryption.

**What Next**

User could use #beginHide/#endHide inside each block defintions of CONDUCTOR, DIELECTRIC or VIA, then layer composer could be used without this error.

## GRD-0176

(Information) For this process, the accuracy goal of SCT models generation is set internally and overrides the -quickcap_arguments command.

**Description**

The accuracy goal of SCT models generation is set internally and overrides the -quickcap_arguments command.

**What Next**

Information only. Indicates the accuracy goal of SCT models generation is set internally.

## GRD-0180

(Fatal) TRENCH_CONTACT_EXTENSION can not be a non-positive value on layer %s.

**Description**

TRENCH_CONTACT_EXTENSION must be a positive value.

**What Next**

Specify a positive value to TRENCH_CONTACT_EXTENSION on the layer.

## GRD-0181

(Fatal) TRENCH_CONTACT_EXTENSION can not be specified more than once on layer %s.

Feedback

**Description**

TRENCH_CONTACT_EXTENSION can only be specified on a conductor layer once.

**What Next**

Modify the ITF file.

---

## GRD-0182

(Fatal) TRENCH_CONTACT_EXTENSION can not be specified on layer %s whose layer_type is not TRENCH_CONTACT.

**Description**

TRENCH_CONTACT_EXTENSION can only be specified on layer whose layer_type is TRENCH_CONTACT.

**What Next**

Modify the ITF file to only specify TRENCH_CONTACT_EXTENSION on conductor layers whose layer_type are TRENCH_CONTACT.

---

## GRD-0185

(Fatal) The FROM or TO layer %s of the via layer %s is not a valid conducting layer.

**Description**

The FROM or TO layer of a via layer must be a valid conducting layer.

**What Next**

Modify the ITF file.

---

## GRD-0186

(Fatal) The top height of two bottom conductors %s and %s of via %s are not same.

**Description**

The bottom layers of a via layer must have same top height.

**What Next**

Modify the ITF file.

Feedback

## GRD-0187

(Fatal) The bottom height of two top conductors %s and %s of via %s are not same.

**Description**

The top layers of a via layer must have same bottom height.

**What Next**

Modify the ITF file.

## GRD-0188

(Fatal) The fake via layer %s connects mutilple conducting layer at the bottom with different layer_type.

**Description**

When a via layer connects multiple conducting layers at the bottom, and one of them is TRENCH_CONTACT or ROUTING_VIA, all layers at the bottom must have same layer_type.

**What Next**

Update the ITF file.

## GRD-0189

(Fatal) The fake via layer %s connects mutilple conducting layer at the top with different layer_type.

**Description**

When a via layer connects multiple conducting layers at the top, and one of them is TRENCH_CONTACT or ROUTING_VIA, all layers at the top must have same layer_type.

**What Next**

Update the ITF file.

## GRD-0190

(Fatal) File %s is broken.

**Description**

File described in the message is broken.

Feedback

**What Next**

Check disk is accessible and has space for writing.

---

## GRD-0231

(Warning) INTERNAL Warning: The substrate charge distribution did NOT complete successfully.

**Description**

The substrate charge distribution did NOT complete successfully, and an internal model is used.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0232

(Fatal) INTERNAL Error: Can NOT create/open charge file handle %s.

**Description**

Cannot create/open internal charge distribution file.

**What Next**

Check filesystem for space/connection.

---

## GRD-0236

(Severe) INTERNAL Error: Wrong ascii header in the TLUPlus file.

**Description**

Ascii header in TLUPlus file is wrong.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0237

(Severe) INTERNAL Error: decode can NOT be run on this host.

**Description**

The internal build decode can be run on some specified hosts.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0238

(Severe) INTERNAL Error: Fail to read conductor infor from attached file.

**Description**

The internal binary decode fails to read conductor information from the specified file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0242

(Warning) Cap unit is fixed to be 1fF and Res unit is fixed to be 1ohm. Ignore the unit setting in format file.

**Description**

This is a warning message indicating the unit of capacitance and resistance from the format file. Discard the unit setting in format file.

**What Next**

Verify that values of Resistance and Capacitance are in this unit.

---

## GRD-0243

(Warning) Cap unit is fixed to be 1fF. Ignore the CAP_UNIT setting in format file.

**Description**

This is a warning message indicating the unit of capacitance and resistance from the format file. Discard the unit setting in format file.

**What Next**

Verify that values of Resistance and Capacitance are in this unit.

---

## GRD-0244

(Warning) Res unit is fixed to be 1ohm. Ignore the RES_UNIT setting in format file.

Feedback

**Description**

This is a warning message indicating the unit of capacitance and resistance from the format file. Discard the unit setting in format file.

**What Next**

Verify that values of Resistance and Capacitance are in this unit.

---

## GRD-0245

(Fatal) Unknown operating condition: %s.

**Description**

Operating conditions other than 'MAX', 'NOM', or 'MIN' are not correct.

**What Next**

Change the operating conditions and run the case.

---

## GRD-0246

(Fatal) Format file %s from previous run have incorrent layer %s. Please remove the existing running directory and re-run grdgenxo from the scratch.

**Description**

Format file from the previous run have incorrect layers.

**What Next**

Correct the format file and re-run.

---

## GRD-0247

(Fatal) Unable to find layer %s.

**Description**

Unable to find the layer in format file.

**What Next**

Correct the format file and re-run.

---

## GRD-0248

(Fatal) Error in format file.

Feedback

**Description**

Current layer is not present. Correct the format file and re-run.

**What Next**

Correct the format file and re-run.

---

## GRD-0249

(Fatal) Width/Spacing table size can NOT exceed 16. Please check the format file.

**Description**

Width/Spacing table size can not be more than 16.

**What Next**

Correct the format file and re-run.

---

## GRD-0250

(Information) User specified width dimension of %d is provided for layer %s.

**Description**

Width for the layer is defined by the user. This is for information only. Ensure that this is what you intend.

**What Next**

No further work is required.

---

## GRD-0251

(Fatal) Number of WIDTH values in format file is different from NUMWIDTH value.

**Description**

Number of WIDTH values in format file is different from NUMWIDTH value.

**What Next**

Correct the format file and re-run.

---

## GRD-0252

(Fatal) Suspicious WIDTH value of %f is specified in the format file.

Feedback

**Description**

Number of width specified is either more than 100 or negative. Suspicious value.

**What Next**

Correct the width and re-run.

---

## GRD-0253

(Information) User specified width sampling points are provided for layer %s.

**Description**

Information message indicating number of width points specified for the layer.

**What Next**

This message is for information only. No work is required.

---

## GRD-0254

(Fatal) Number of SPACING values in format file is different from NUMSPACING value.

**Description**

Total number of SPACING values in format file is different from NUMSPACING value.

**What Next**

Correct the format file and re-run.

---

## GRD-0255

(Fatal) Suspicious SPACING value of %f is specified in the format file.

**Description**

Total number of spacing entries is either more than 100 or negative. Suspicious value.

**What Next**

Correct the format file and re-run.

---

## GRD-0256

(Information) User specified spacing sampling points are provided for layer %s.

Feedback

**Description**

Informational message indicating user specified spacing points.

**What Next**

This is for information only. No work is needed.

---

## GRD-0257

(Fatal) Unknown format keyword %s.

**Description**

Invalid keyword in the format file.

**What Next**

Correct the keyword and re-run. Consult the StarRC manual for valid keywords.

---

## GRD-0258

(Fatal) %s must be an integer.

**Description**

Number of spacing or width must be an integer.

**What Next**

Use integer and re-run.

---

## GRD-0259

(Information) CAP_UNIT = %fF; RES_UNIT = %fohm; opCond = %s.

**Description**

This is an informational message indicating capacitance unit, resistance unit, and operating condition.

**What Next**

This is for information only. No work needs to be done.

---

## GRD-0260

(Information) Checking the database: first pass...

Feedback

**Description**

Grdgenxo is checking the database.

**What Next**

Informational message only. No work needs to be done.

---

## GRD-0261

(Information) Checking the database: second pass...

**Description**

Grdgenxo is checking the database.

**What Next**

Informational message only. No work needs to be done.

---

## GRD-0263

(Information) Generating resistance tables...

**Description**

Informational message indicating generation of resistance tables in progress.

**What Next**

This is for information only. No work is required.

---

## GRD-0264

(Information) Generating additional capacitance information...

**Description**

Informational message indicating generation of additional capacitance information.

**What Next**

This is for information only. No work is needed.

---

## GRD-0265

(Fatal) FILL_TYPE %s for layer %s is NOT supported.

Feedback

**Description**

Fill type for the layer is neither floating nor grounded.

**What Next**

Only grounded and floating fills are supported. Correct the fill type and re-run.

---

## GRD-0266

(Information) Generating via information...

**Description**

Informational message indicating generation of via information.

**What Next**

Only for information. No work is needed.

---

## GRD-0267

(Information) Generating conductor layer information...

**Description**

Informational message indicating generation of conductor layer information.

**What Next**

Only for information. No work is needed.

---

## GRD-0268

(Information) Generating global variables...

**Description**

Informational message. Generating global variables such as version, capunit, resunit, etc.

**What Next**

For information only. No work is needed.

---

## GRD-0269

(Information) Layer = %s. BelowPlane = %s.

Feedback

**Description**

Informational message. Name of the layer and the plane below it.

**What Next**

Information only. Check if this is what you intend.

---

## GRD-0270

(Information) AbovePlane =

**Description**

Informational only - There is no plane above the layer.

**What Next**

Information only. Check if this is what you intend.

---

## GRD-0271

(Information) AbovePlane = %s.

**Description**

Name of the plane above layer.

**What Next**

Information only. Check if this is what you intend.

---

## GRD-0272

(Fatal) Final verification of the TLU file failed.

**Description**

The final step of the TLU file correctness could not be checked in the end.

**What Next**

Please check the TLU file correctness. If the TLU file is corrupted, remove the TLU file and relaunch grdgenxo one last time.

---

## GRD-0273

(Information) Another process is working on %s.

Feedback

**Description**

Another process is working on generating data for this file.

**What Next**

Information only. Indicates another process is working on a file.

---

## GRD-0274

(Information) Another process is working on this database. Leaving TLUPlus model output task to that process.

**Description**

Another process is working on generating data for this file.

**What Next**

Information only. Indicates another process is working on a file.

---

## GRD-0275

(Information) %s was successfully generated by another process.

**Description**

File was generated by another process.

**What Next**

This is for information only. No work is needed.

---

## GRD-0276

(Warning) %s seems to be corrupted. Regenerating it...

**Description**

File is corrupted. Regeneration is in progress.

**What Next**

This is warning only. No further work is required.

---

## GRD-0277

(Fatal) License lock file failure. Please remove *.llock from grd repository.

Feedback

**Description**

Grdgenxo encounterd license lock file failure.

**What Next**

Remove *.llock from grd repository and re-run. Contact Synopsys Support if the problem persists.

---

## GRD-0278

(Fatal) Lock file failure.

**Description**

Grdgenxo encountered a lock file failure.

**What Next**

Contact Synopsys Support if the problem persists.

---

## GRD-0279

(Information) Printing TLUPlus model file %s ...

**Description**

Data is being written into TLUPlus file.

**What Next**

Information only. No further acttion is required.

---

## GRD-0281

(Fatal) Fail to read CapTable from file %s.

**Description**

Failed to read capacitance table from the file under work directory.

**What Next**

Ensure that the capacitance tables are correct in the file.

---

## GRD-0282

(Fatal) Format error in file %s.

Feedback

**Description**

Format error in the file under work directory.

**What Next**

Correct the format error. If problem persists, contact the Synopsys Support Center.

---

## GRD-0283

(Fatal) %s appears to be corrupted. Remove that file and re-run grdgenxo.

**Description**

This file under work directory is corrupted. Remove that file and re-run grdgenxo.

**What Next**

Remove the corrupted file and re-run.

---

## GRD-0285

(Fatal) Number of conducting layers is limited to 100.

**Description**

The number of conducting layers in the ITF file is limited to 100.

**What Next**

If possible, modify the ITF file to contain fewer than 100 conducting layers. For assistance, contact the Synopsys Support Center.

---

## GRD-0286

(Fatal) The number of ER_VS_SI_SPACING entries %d exceeds the maximum number %d allowed for TLUPlus flow.

**Description**

The total number of spacing values in the *ER_VS_SI_SPACING* table is too large for the TLUPlus flow.

**What Next**

If possible, modify the *ER_VS_SI_SPACING* table in the ITF file to reduce the number of spacing values. For assistance, contact the Synopsys Support Center.

Feedback

## GRD-0287

(Fatal) Input format file has a %s value of %f different from previous runs. Please remove the existing running directory and re-run grdgenxo from scratch.

**Description**

CAP_UNIT in Input format file is different from previous runs.

**What Next**

Correct the unit in the format file or remove the existing running directory and re-run grdgenxo from scratch.

## GRD-0288

(Fatal) Input ITF file is different from %s used in previous runs. Please remove the existing running directory and re-run grdgenxo from scratch.

**Description**

Input ITF file is different from the one used in previous runs.

**What Next**

Remove the existing running directory and re-run grdgenxo from scratch.

## GRD-0289

(Fatal) Input format file is different from %s used in previous runs. Please remove the existing running directory and re-run grdgenxo from scratch.

**Description**

Input format file is different from the previous runs.

**What Next**

Remove the existing running directory and re-run grdgenxo from scratch.

## GRD-0290

(Fatal) %s used in previous runs is different from default format. Please remove the existing running directory and re-run grdgenxo from scratch.

**Description**

Format file used in previous runs is different from default format.

Feedback

**What Next**

Correct the format file then remove the existing running directory and re-run grdgenxo from scratch.

---

## GRD-0291

(Fatal) ITF file is too large. The input ITF file has more than 50000 lines.

**Description**

Input ITF files of more than 50000 lines are not supported.

**What Next**

If possible, modify the ITF file to contain fewer than 50000 lines. For assistance, contact the Synopsys Support Center.

---

## GRD-0292

(Fatal) Error in file %s.

**Description**

An error occurred in reading the ITF file. The file might be corrupt.

**What Next**

Correct the ITF file and resubmit the run.

---

## GRD-0293

(Fatal) Unknown direction: %s.

**Description**

Unknown keyword used for direction. Possible keywords can be BOTTOM, TOP, or LATERAL.

**What Next**

Correct the direction and re-run.

---

## GRD-0294

(Fatal) Previous running directory %s is out of date. Please remove the directory and re-run grdgenxo from scratch.

Feedback

**Description**

Previous running directory is out of date.

**What Next**

Remove the directory and re-run grdgenxo from scratch.

---

## GRD-0295

(Fatal) grdgenxo -itf2TLUPlus does NOT parse mapping file anymore. Mapping file is parsed in Astro.

**Description**

This feature is not supported.

**What Next**

Use the *grdgenxo -help* command to list the supported options for the grdgenxo tool.

---

## GRD-0296

(Fatal) ITF file is NOT provided.

**Description**

An input ITF file name must be provided in the grdgenxo command line, as follows:

```
% grdgenxo -i <input_itf> ...
```

where *-i* is the short form of the *-input* option.

Additional options are required to complete the grdgenxo command. Use the *grdgenxo -help* command to list the supported options for the grdgenxo tool.

**What Next**

Resubmit the *grdgenxo* command with the correct options.

---

## GRD-0297

(Warning) TLUPlus file name is not provided. Default file name %s will be used.

**Description**

An output file name is not provided in the command line, therefore the grdgenxo tool uses a default file name for the output TLUPlus file.

Feedback

The correct syntax for the TLUPlus flow is as follows:

```
% grdgenxo -itf2TLUPlus -i <input_itf> -o <tluplus_file>
```

where *-i* is the short form of the *-input* option and *-o* is the short form of the *-output* option of the *grdgenxo* command.

**What Next**

If the default file name is acceptable, no further action is needed. Correct the command line if you would like to specify the output file name.

---

## GRD-0298

(Information) Generating TLUPlus Cap Model...

**Description**

This message is for information only.

**What Next**

No further action is needed.

---

## GRD-0299

(Fatal) %s is reserved for grdgenxo running directory. Different TLUPlus file name must be provided.

**Description**

The name of TLUPlus output file is same as NXTGRD database directory.

**What Next**

Change the name of output TLUPLus file and re-run.

---

## GRD-0300

(Fatal) The ctf file %s doesn't contain the TLUPlus part. Please generate an nxtgrd file from your ctf file using -ctf2grd and run -res_update on the new GRD file. Commands to be launched are the following: grdgenxo -ctf2grd -i %s -o %s.GRD; grdgenxo -res_update %s -i %s.GRD -o %s

**Description**

An error has occurred with the usage of the *grdgenxo* command because the ctf file doesn't contain a TLUPlus part.

Feedback

**What Next**

Please generate an nxtgrd file from your ctf file using -ctf2grd and then run -res_update on the new GRD file.

The commands to launch are as follows:

```
% grdgenxo -ctf2grd -i <input_ctf_file> -o <output_grd_file>
% grdgenxo -res_update <updated_ITF> -i <output_grd_file> -o
 <updated_grd_file>
```

---

## GRD-0306

(Severe) INTERNAL Error: unmatched vector size.

**Description**

This is an internal check and unmatched vector size is encountered.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0307

(Severe) INTERNAL Error: Model name WOCN and WCN NOT found.

**Description**

This is an internal unit test related message.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0311

(Severe) INTERNAL Error: syntax error in file: %s : %d.

**Description**

Syntax error is found in -zirva configuration file.

**What Next**

Contact the Synopsys Support Center.

Feedback

## GRD-0312

(Severe) INTERNAL Error: Can NOT find center conductor named: %s in -zirva configuration file: %s.

**Description**

Center conductor named: %s cannot be found in -zirva configuration file.

**What Next**

Contact the Synopsys Support Center.

## GRD-0313

(Severe) Can NOT open -zirva configuration file %s.

**Description**

The tool cannot open the -zirva configuration file.

**What Next**

Check whether the -zirva configuration file is available.

## GRD-0314

(Warning) INTERNAL Warning: Bad option %s in file %s: %d.

**Description**

An unsupported option is found in the -zirva configuration file.

**What Next**

Check the file syntax and make corrections as needed. If the problem persists, contact the Synopsys Support Center.

## GRD-0315

(Severe) INTERNAL Error: Failed to generate Field Solver description file %s.

**Description**

The field solver input file cannot be opened.

**What Next**

Contact the Synopsys Support Center.

Feedback

## GRD-0316

(Warning) Can NOT initialize error file

**Description**

The grdgenxo tool cannot set up the error message system. This issue might be caused by a problem with the intallation package.

**What Next**

Contact the Synopsys Support Center.

## GRD-0319

(Fatal) INTERNAL Error: Fail to read nxtgrd file due to corrupted via data.

**Description**

StarRC failed to read the nxtgrd file, because an internal error happened while reading via descriptions.

**What Next**

Make sure that the nxtgrd file is not corrupted. If possible, regenerate the nxtgrd file using the latest grdgenxo version. If the error persists, contact the Synopsys Support Center.

## GRD-0323

(Severe) The nxtgrd file version number %d is not compatible with this release.

**Description**

The StarRC version used for this run does not support the specified nxtgrd file, which was generated using a much older StarRC version.

**What Next**

Regenerate the nxtgrd file using the newer StarRC version.

## GRD-0324

(Fatal) Can not open file to write internal Field Solver input file.

**Description**

StarRC can not open an output file to use when writing the Field Solver input file.

Feedback

**What Next**

Check whether the disk is full and resubmit the StarRC run. If the error still occurs, contact the Synopsys Support Center.

---

## GRD-0325

(Fatal) INTERNAL Error: effective thickness for subdielectric layer %s is less than 0.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-0326

(Warning) More than one raised diffusion layers have different RAISED_DIFFUSION_GATE_SIDE_CONFORMAL_ER defined or have the same RAISED_DIFFUSION_GATE_SIDE_CONFORMAL_ER but with different RAISED_DIFFUSION_THICKNESS defined in ITF. StarRC has difficulty to pair the raised diffusion layers with gate.

**Description**

StarRC detected more than one raised diffusion layers, and they have different RAISED_DIFFUSION_GATE_SIDE_CONFORMAL_ER defined or have the same RAISED_DIFFUSION_GATE_SIDE_CONFORMAL_ER but with different RAISED_DIFFUSION_THICKNESS defined.

**What Next**

Check whether this setting in ITF is intended. If this setting is intended, you don't need to take any action.

---

## GRD-0327

(Fatal) INTERNAL Error: error found while merging dielectric boxes.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## GRD-0328

(Fatal) INTERNAL Error: error found while processing dielectric boxes.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## GRD-0329

(Fatal) Conducting layer %s can not be placed on non-planar dielectric layer %s.

**Description**

A conducting layer cannot be placed on a nonplanar dielectric layer.

**What Next**

In the ITF file, check the properties of the reported conducting layer and dielectric layer.

## GRD-0330

(Fatal) Could not find MEASURED_FROM %s for %s.

**Description**

The MEASURED_FROM layer of the reported dielectric layer can not be found.

**What Next**

Check ITF to make sure the MEASURED_FROM layer of the reported dielectric layer is correctly defined.

## GRD-0331

(Fatal) Can not find FROM_LAYER %s for via %s.

**Description**

The layer name of FROM_LAYER for reported via layer can not be found.

**What Next**

Check ITF to make sure the layer in FROM_LAYER of reported via layer is correctly defined.

Feedback

## GRD-0332

(Fatal) Can not find TO_LAYER %s for via %s.

**Description**

The layer name of TO_LAYER for reported via layer can not be found.

**What Next**

Check ITF to make sure the layer in TO_LAYER of reported via layer is correctly defined.

## GRD-0333

(Fatal) Can not find dielectric %s when converting ITF to Field Solver format.

**Description**

When converting ITF information to field solver files, the StarRC tool detects that a specific dielectric layer is not found in the ITF file.

**What Next**

Check the ITF file to make sure that the named dielectric layer is specified correctly and resubmit the StarRC run. If the error still occurs, contact the Synopsys Support Center.

## GRD-0334

(Warning) INTERNAL Warning: no physical dielectric stack found

**Description**

When converting ITF information to field solver files, the StarRC tool detects that no dielectric layers are present.

**What Next**

Information only; if this structure is expected, no action is needed.

## GRD-0335

(Fatal) Fail to create internal file.

**Description**

StarRC can not create some internal file.

Feedback

**What Next**

Check whether the disk is full and rerun StarRC. If the error still ocurrs, contact Synopsys for more help.

---

## GRD-0336

(Fatal) Raised diffusion layer (%s) has edge offset while does not have thickness raise.

**Description**

The reported diffusion layer has raised diffusion etch but doesn't have raised diffusion thickness.

**What Next**

Check ITF to make sure when setting RAISED_DIFFUSION_ETCH, RAISED_DIFFUSION_THICKNESS is also set.

---

## GRD-0337

(Fatal) Failed to parse the nxtgrd file.

**Description**

An internal error has been encountered while loading the nxtgrd file.

**What Next**

Make sure that the nxtgrd file is not corrupted. If possible, regenerate the nxtgrd file using the latest grdgenxo version. If the error persists, contact the Synopsys Support Center.

---

## GRD-0338

(Information) (%d) ITF: %s.

**Description**

Information only.

**What Next**

No action is needed.

---

## GRD-0339

(Warning) (%d) ITF: WARNING: %s.

Feedback

**Description**

Information only.

**What Next**

Refer to the StarRC guide for a more detailed description. If this is acceptable, no action is needed.

---

## GRD-0340

(Information) No equal sign is found after MEASURED_FROM.

**Description**

StarRC did not find an equal sign after MEASURED_FROM.

**What Next**

The equal sign after MEASURED_FROM is optional. Information only.

---

## GRD-0341

(Fatal) The FROM layer %s of the TSV layer %s is not a valid conducting layer.

**Description**

Inside a TSV definition, the layer name specified for the FROM field does not match any CONDUCTOR definition.

**What Next**

Check for possible layer name misspelling or ITF completeness.

---

## GRD-0342

(Fatal) The TO layer %s of the TSV layer %s is not a valid conducting layer.

**Description**

Inside a TSV definition, the layer name specified for the TO field does not match any CONDUCTOR definition.

**What Next**

Check for possible layer name misspelling or ITF completeness.

Feedback

## GRD-0343

(Fatal) FROM layer %s and TO layer %s of TSV layer %s are located on the same side of the substrate.

**Description**

A through-silicon via (TSV) layer connects two conducting layers, which must be located on opposite sides of the substrate. In this run, two layers located on the same side of the substrate have incorrectly been provided.

**What Next**

Check for possible layer name misspelling.

If you want to define a standard via layer, use the *VIA* command instead of the *TSV* command.

## GRD-0344

(Severe) INTERNAL Error: %s.

**Description**

An internal consistency check has failed while reading the intermediate file sct/sct.

**What Next**

If you are reusing an existent sct file, try to regenerate it. Otherwise, contact the Synopsys Support Center.

## GRD-0345

(Fatal) Values in COV_X should be listed in ascending order.

**Description**

Inside a RPV_VS_COVERAGE table, values for COV_X are not in ascending order, which is not allowed.

**What Next**

Fix the ITF file.

## GRD-0346

(Fatal) Values in COV_Y should be listed in ascending order.

Feedback

**Description**

Inside a RPV_VS_COVERAGE table, values for COV_Y are not in ascending order, which is not allowed.

**What Next**

Fix the ITF file.

---

## GRD-0349

(Warning) Inconsistent ER_VS_SI_SPACING table value trend: Values in the table should be consistently either larger or smaller than nominal ER value for layer %s.

**Description**

Relative permittivity (ER) values specified in the *ER_VS_SI_SPACING* table do not follow expected behavior.

**What Next**

Check the ER values specified in the *ER_VS_SI_SPACING* command. If the values are correct, you can ignore this message.

---

## GRD-0350

(Information) Via %s has its bottom layer not defined or without the property LAYER_TYPE: DIFFUSION. TLI flow will be skipped for this VIA.

**Description**

The TLI flow only applies to via layers that connect difussions to metal layers, and so this via layer is ignored.

---

## GRD-0351

(Warning) Via layer %s will be converted to a TLI conductor but it has ETCH_VS_WIDTH_AND_LENGTH tables defined, which will be ignored for capacitance extraction.

**Description**

The TLI flow does not support ETCH_VS_WIDTH_AND_LENGTH tables, so these tables are ignored for via layers that are translated to TLI conductors.

Feedback

**What Next**

Either disable the TLI flow if ETCH_VS_WIDTH_AND_LENGTH tables are required, or ignore this warning message.

---

## GRD-0354

(Fatal) %s.

**Description**

An unknown option was used with the *grdgenxo* command.

Use the *grdgenxo -help* command to list the supported options for the grdgenxo tool.

**What Next**

Correct the syntax and resubmit the *grdgenxo* command.

---

## GRD-0355

(Fatal) Input format file has a %s value of %s different from previous runs. Please remove the existing running directory and re-run grdgenxo from scratch.

**Description**

Operating condition in format file is different from previous runs.

**What Next**

Correct the operating condition or remove the existing running directory and re-run grdgenxo from scratch.

---

## GRD-0357

(SEVERE) INTERNAL Error: %s appears corrupt. Erase that file and re-run the characterization.

**Description**

The internal file mentioned in the error message might be corrupted.

**What Next**

Erase the file mentioned in the error message and resubmit the grdgenxo command. If the issue still occurs, contact the Synopsys Support Center.

Feedback

## GRD-0358

(Severe) INTERNAL_Error: Failed to write nxtgrd file. Exiting...

**Description**

The grdgenxo tool failed to write the nxtgrd file.

**What Next**

Check that the disk is not full and that the directory is write-enabled. Resubmit the grdgenxo run. If the issue still occurs, contact the Synopsys Support Center.

## GRD-0359

(Fatal) The %s field for TSV layer %s must be strictly positive.

**Description**

Inside a TSV definition, a null or negative value is provided for a field that requires a value greater than zero.

**What Next**

This field must be fixed in the ITF file.

## GRD-0360

(Severe) %s.

**Description**

An error has occurred with the usage of the *grdgenxo* command. The error might be caused by improper command syntax or by an unsuitable input file.

Note that the grdgenxo update flow does not support encrypted nxtgrd files.

The correct syntax for the grdgenxo update flow is as follows:

```
% grdgenxo -res_update <updated_ITF> -i <input_grd_file> -o
 <updated_grd_file>
```

where *-i* is the short form of the *-input* option and *-o* is the short form of the *-output* option of the *grdgenxo* command.

**What Next**

Correct the syntax of the *grdgenxo* command, ensure that the nxtgrd file is not encrypted, and resubmit the command.

Feedback

## GRD-0361

(Fatal) (%d) ITF: ERROR: %s.

**Description**

The ITF file contains a syntax error which Grdgenxo cannot parse.

**What Next**

Refer to the StarRC guide for a description of the ITF syntax and correct the ITF file.

## GRD-0362

(Severe) (%d) ITF: ERROR: %s.

**Description**

The ITF file contains a syntax error which Grdgenxo cannot parse.

**What Next**

Refer to the StarRC guide for a description of the ITF syntax and correct the ITF file.

## GRD-0364

(Fatal) A temperature coefficient is defined for TSV layer %s but its nominal temperature is not specified.

**Description**

A layer-specific temperature coefficient is defined for this TSV layer, using CRT1 or CRT2. However, the corresponding nominal temperature is not specified, neither locally nor globally.

**What Next**

Nominal temperature can be defined locally using the T0 field inside the TSV definition, or globally using GLOBAL_TEMPERATURE.

## GRD-0365

(Fatal) Illegal Electro-Migration keywords were found inside the external Electro-Migration information file.

Feedback

### Description

You can provide most electromigration information either in the ITF file or in external files. However, the following statements (keywords) can only appear in the ITF file:

```
EM_INFORMATION
INCLUDE_EM_INFORMATION_FILE = <em_file>
END_OF_EM_INFORMATION
```

### What Next

Remove any occurrences of the *EM_INFORMATION*, *END_OF_EM_INFORMATION*, or *INCLUDE_EM_INFORMATION_FILE* keywords in the electromigration information file. Ensure that the syntax of the electromigration information file is correct.

---

## GRD-0366

(Fatal) "END_OF_EM_INFORMATION" statement expected at the end of EM information block.

### Description

The end of the electromigration information block must be marked with the *END_OF_EM_INFORMATION* statement.

### What Next

Correct the syntax of the electromigration block and resubmit the run.

---

## GRD-0367

(Fatal) An equal sign is expected after "INCLUDE_EM_INFORMATION_FILE".

### Description

The ITF file provided does not contain an equal sign after INCLUDE_EM_INFORMATION_FILE.

### What Next

Correct the syntax of INCLUDE_EM_INFORMATION_FILE in the ITF file. The expected syntax is "INCLUDE_EM_INFORMATION_FILE = file name".

---

## GRD-0368

(Fatal) A file name for the external Electro-Migration information file is expected.

Feedback

**Description**

The ITF file provided does not contain a file name after "INCLUDE_EM_INFORMATION_FILE = ".

**What Next**

Correct the syntax of INCLUDE_EM_INFORMATION_FILE in the ITF file. The expected syntax is "INCLUDE_EM_INFORMATION_FILE = file name".

---

## GRD-0370

(Fatal) Cannot use SCT script file %s.

**Description**

Cannot install the SCT script file specified in the message for SCT model generation.

**What Next**

Check that the SCT script file is correctly specified with the *-sct_script_path* option. Check that the disk is not full.

If the issue still exists, contact the Synopsys Support Center.

---

## GRD-0371

(Fatal) grdgenxo cannot proceed because of license failure. Please make sure either STAR-RC2-TCAD or Galaxy-Common license is up and running.

**Description**

This run requires either STAR-RC2-TCAD or Galaxy-Common license.

**What Next**

Ensure that you have the required license.

---

## GRD-0372

(Warning) SCT file not present in the folder containing the models to reuse: regenerating...

**Description**

The *grdgenxo -reuse_device_models* command is used, but the grdgenxo tool cannot find the device models in the reuse_device_models directory. Thereore, the tool ignores the *-reuse_device_models* option and regenerates the device models.

Feedback

**What Next**

To continue the run, ignore this warning message.

If you want to change the directory for the *-reuse_device_models* option, kill the grdgenxo jobs and restart the run with the correct directory.

---

## GRD-0373

(Information) Generating %s.

**Description**

The message indicates that 3D model generation has correctly started.

**What Next**

No action is needed from your part.

---

## GRD-0374

(Warning) The FROM layer %s of TSV layer %s is above the TO layer %s.

**Description**

StarRC expects the TSV layer to be defined from low to high. If it not the case, it swaps the FROM and TO layers internally.

**What Next**

The warning can be suppressed by swapping the TO layer with the FROM layer in the ITF file.

---

## GRD-0375

(Fatal) The option -profiler is obsolete.

**Description**

The *-profiler* option of the grdgenxo tool is obsolete.

**What Next**

Do not use the *-profiler* option with the *grdgenxo* command.

Feedback

## GRD-0376

(Warning) %s table(s) specified for layer %s together with more than %d %s. This might cause the simulation time to increase. Consider reducing the number of %s values.

### Description

When the ITF file contains one or more tables for a given layer, the grdgenxo tool uses the defined gate-to-contact spacings or conductor widths as a reference for building the 3D models. Simulation time increases as the number of different gate-to-contact spacing or conductor width values increases.

This warning message indicates that the number of different gate-to-contact spacing or conductor width values for a single layer is large.

### What Next

Review the list of gate-to-contact spacing or conductor width values in the mentioned tables. If possible, reduce the number of different gate-to-contact spacing or conductor width values.

## GRD-0377

(Warning) POLYNOMIAL_BASED_THICKNESS_VARIATION table consistency check: relative thickness variation changes more than 5%% (from %.2f%% to %.2f%%) between (density %.4f, width %.4f) and (density %.4f, width %.4f) for layer %s

### Description

The grdgenxo tool checks the *POLYNOMIAL_BASED_THICKNESS_VARIATION* table for consistency. The tool generates internal width and density sampling points in increasing order, then calculates thickness variations for each sampling point. For each combination of width and density, the grdgenxo tool checks that the relative thickness variation changes less than 5 per cent when width or density is increased to the next sampling point.

This warning message indicates that the grdgenxo tool detects violations between two neighboring sampling points.

### What Next

Check the information in the message carefully to ensure that the abrupt thickness variation change (>5%) is acceptable. If it is acceptable, you can ignore this warning message.

If it is not acceptable, revise the *POLYNOMIAL_BASED_THICKNESS_VARIATION* table and run the grdgenxo tool again.

Feedback

## GRD-0378

(Fatal) The maximum number of conductors that StarRC supports is limited to %i.

**Description**

There is more than %i CONDUCTOR declaration in the ITF file. StarRC does not support it.

**What Next**

Reduce the number of conductors in the ITF file or Contact the Synopsys Support Center.

## GRD-0379

(Fatal) INTERNAL Error: gap between subdielectric %s and %s for dielectric layer %s.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## GRD-0380

(Information) %s file already generated and reused.

**Description**

This message indicates that the TVM file containing 3D models generated by grdgenxo has already been generated by a previous run of the tool. Consequently, grdgenxo skips 3D model generation and uses the previously-generated file.

**What Next**

If you would like to use the previously-generated TVM file, no action is required on your part. Otherwise, remove the tvm folder in grdgenxo working directory and rerun.

## GRD-0381

(Warning) %s file failed to be generated in a previous run. See %s for additional info.

Feedback

**Description**

The warning indicates that 3D model generation has failed in previous run of grdgenxo. The nxtgrd file will not be generated. The file indicated in the message contains additional instructions to follow to solve the problem.

**What Next**

Follow the instructions indicated in the file that is specified and rerun grdgenxo.

---

## GRD-0382

(Fatal) Can NOT initialize %s Table settings.

**Description**

The grdgenxo tool cannot generate the 3D cap table decribed in the message.

Possible reasons are as follows:

- You are running the grdgenxo tool with the existing working directory. The grdgenxo tool tries to reuse the previous table in the existing working directory and finds that the table was not correctly generated in the previous grdgenxo run.

- The path to another tool (such as the gds2cap, quickcap, or rapid3d tools) is not set correctly.

- Arguments for another tool are not set correctly.

**What Next**

Check the log file for more information about the specific error condition. Address any issues and resubmit the grdgenxo run.

To address problems with SCT/DCM/TVM tables, remove all of the sct/dcm/tvm directories under the existing working directory and resubmit the grdgenxo run.

---

## GRD-0383

(Fatal) Can NOT generate %s file. Check %s.failure for a list of the failing simulations and check the log files in the specified directories. Remove them before launching grdgenxo again.

**Description**

The grdgenxo tool cannot generate the model file described in the message.

Feedback

**What Next**

Check the *.failure file mentioned in the error message for a list of the failing simulations and check the log files in the directories for those failing simulations. Remove the directories for the failing simulations and run the grdgenxo tool again.

---

## GRD-0384

(Fatal) The RVTV layer %s and the DIFFUSION layer %s are connected by the via layer %s and have no common DEVICE_TYPE.

**Description**

Grdgenxo creates models for RVTV layers based on the DEVICE_TYPE. If no DEVICE_TYPE is given, sct models are missing.

**What Next**

Please set at least one common DEVICE_TYPE for the RVTV layer and the DIFFUSION layers it is connected to through vias.

---

## GRD-0385

(Warning) The DEVICE_TYPE %s is %sin the RVTV layer %s%s

**Description**

Grdgenxo creates models for RVTV layers based on the DEVICE_TYPE. If no DEVICE_TYPE is given, grdgenxo deduces the DEVICE_TYPE from via connections.

**What Next**

Please remove the DEVICE_TYPE on the RVTV layer or set at least one common DEVICE_TYPE for the RVTV layer and the layers it is connected to through vias.

---

## GRD-0438

(Information) (%d) ITF: %s.

**Description**

Information only.

**What Next**

No action is needed.

Feedback

## GRD-0439

(Warning) (%d) ITF: WARNING: %s.

**Description**

Information only.

**What Next**

Refer to the StarRC guide for a more detailed description of ITF rules. If this is acceptable, no action is needed.

## GRD-0461

(Fatal) (%d) ITF: ERROR: %s.

**Description**

The ITF file contains a consistency error which grdgenxo cannot overcome.

**What Next**

Refer to the StarRC guide for a description of the ITF rules and correct the ITF file.

## GRD-0462

(Severe) (%d) ITF: ERROR: %s.

**Description**

The ITF file contains a consistency error which grdgenxo cannot overcome.

**What Next**

Refer to the StarRC guide for a description of the ITF rules and correct the ITF file.

## GRD-0463

(Warning) LINKED_TO statement between layers %s and %s cannot be satisfied because the layers are not capacitively equivalent

**Description**

LINKED_TO statement disables automatic linking and indicates two layers are candidate for explicit linking. However, grdgenxo will check if the candidate layers are effectively capacitively equivalent. These checks include the comparison of the conductors layer

Feedback

properties as well as the associated dielectrics properties. If one of these conditions is not satisfied, the LINKED_TO statement is discarded.

This warning message indicates that the grdgenxo tool cannot satisfy the LINKED_TO statement specified in the ITF.

**What Next**

Check if the conductor and associated dielectric properties are equivalent. Either fix the ITF by aligning them or remove the LINKED_TO statement to avoid the warning.

---

## GRD-0470

(Fatal) RC scaling file error : \n%s

**Description**

There is an error in the RC scaling file.

**What Next**

Correct the table.

---

## GRD-0471

(Fatal) SCT generation for this process requires a gds2cap supporting option %s.

**Description**

For generating SCT for the given process, grdgenxo needs to use a specific option for gds2cap. The version provided with gds2cap_path does not seem to provide this option.

**What Next**

Use a more recent version of gds2cap. Contact the support team to know which version contains this optiion.

---

## GRD-1002

(Warning) Option -old_sct_cfo will be removed in I-2013.12 release.

**Description**

The grdgenxo -old_sct_cfo command calls rapid3d to generate SCT models directly to characterize gate-diffusion caps (cfo). This option is obsolete starting with version I-2013.12.

Feedback

**What Next**

Do not use the -old_sct_cfo option in I-2013.12 and later versions.

---

## GRD-1003

(Fatal) %s file is complete but could not be renamed as %s. Move %s to %s and relaunch grdgenxo.

**Description**

This message indicates that the 3D model file generation has been successfully completed but the grdgenxo tool cannot rename it to complete the flow.

**What Next**

Check the file system to see whether the disk is full and if the network connection is stable. Make corrections as needed, rename the file as indicated in the message, and relaunch the grdgenxo tool.

---

## GRD-1004

(Warning) No previous nxtgrd run directory is found, -inc switch is ignored.

**Description**

The *grdgenxo -inc* command specifies that an incremental nxtgrd file update should be performed. However, the grdgenxo tool cannot find the previous nxtgrd run directory. Thereore, the tool ignores the *-inc* option and runs from the beginning.

**What Next**

To continue the run, ignore this warning message.

If you are running the grdgenxo tool from the wrong directory, kill the grdgenxo jobs and restart from the correct nxtgrd run directory.

---

## GRD-1005

(Fatal) In the process information keyword group of the ITF file, the process keyword %s is missing

**Description**

The process information keyword group is optional, but if one of the *PROCESS_FOUNDRY*, *PROCESS_NODE*, *PROCESS_VERSION*, or *PROCESS_CORNER* keywords is specified, then all four must be specified. Note that the *PROCESS_TYPE* keyword can exist independently from the other four.

Feedback

### What Next

Either add the missing keywords, or remove completely the process information keyword group.

For more information, see the reference pages for the *PROCESS_FOUNDRY*, *PROCESS_NODE*, *PROCESS_VERSION*, *PROCESS_CORNER*, and *PROCESS_TYPE* keywords in the *StarRC User Guide and Command Reference*.

---

## GRD-1006

(Fatal) Illegal value for the %s statement in the ITF file at line %i.

### Description

The input value of the process description keyword does not follow the requirements.

The argument of the *PROCESS_FOUNDRY*, *PROCESS_TYPE*, and *PROCESS_CORNER* keywords must be a one-word string without spaces and without special characters @, #, and $.

The argument of the *PROCESS_NODE* and *PROCESS_VERSION* keywords must be a nonnegative floating-point number.

### What Next

Correct the syntax of the process description statement.

### Examples

```
TECHNOLOGY = abc
PROCESS_FOUNDRY = fab_1802C
PROCESS_NODE = 130
PROCESS_TYPE = SOI
PROCESS_VERSION = 2.0
PROCESS_CORNER = TYPICAL
```

---

## GRD-1007

(Information) gds2cap options have been set to "%s %s".

### Description

Options for the gds2cap tool have been set to those specified in the message.

### What Next

Information only; no action is needed.

Feedback

## GRD-1008

(Fatal) Found failing simulations while generating 3D models. Could not write the log file. Please relaunch grdgenxo.

**Description**

The grdgenxo tool detected some failing simulations while generating 3D models. Consequently the tool could not write the log files correctly.

**What Next**

Review the cause of the failures in the log files specified in the SCT file, make the required corrections, and relaunch the grdgenxo run.

## GRD-1009

(Fatal) SCT_VERSION of the SCT file provided with -sct is older than the SCT_VERSION of the nxtgrd file.

**Description**

The grdgenxo tool cannot replace a new SCT file with an old SCT file.

**What Next**

Generate a new SCT file with a newwer grdgenxo version

## GRD-1011

(Fatal) The -bin2ascii option is not supported on a nxtgrd file with a bfs-encrypted header.

**Description**

You are running the grdgenxo -bin2ascii command. However, the nxtgrd file to be processed was generated by the grdgenxo -bfsEncrypt command. The grdgenxo tool cannot use the -bin2ascii option for a bfs-encryted nxtgrd file.

**What Next**

Contact the Synopsys Support Center.

## GRD-1012

(Fatal) The -res_update option is not supported on a nxtgrd file with a bfs-encrypted header.

Feedback

**Description**

You are running the grdgenxo -res_update command. However, the nxtgrd file to be processed was generated by the grdgenxo -bfsEncrypt command. The grdgenxo tool cannot use the -res_update option for a bfs-encryted nxtgrd file.

**What Next**

Run grdgenxo without the -res_update option.

---

## GRD-1014

(Fatal) VARIATION_PARAMETERS or SENSITIVITY is not supported starting from J-2014.12 release.

**Description**

VARIATION_PARAMETERS or SENSITIVITY are obsolete starting from J-2014.12 release.

**What Next**

Remove VARIATION_PARAMETERS or SENSITIVITY keywords from the ITF file.

---

## GRD-1015

(Fatal) INTERNAL Error: Can not find metal scheme %s.

**Description**

Can not find metal scheme.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-1016

(Fatal) -print_process_stack is not allowed for encrypted ITF files.

**Description**

You are running grdgenxo with option -print_process_stack. The option cannot work for encrypted ITF file.

**What Next**

Run grdgenxo -print_process_stack with un-encrypted ITF.

Feedback

## GRD-1017

(Fatal) -viewer is not allowed for encrypted ITF files.

### Description

You are running grdgenxo with option -viewer. The option cannot work for encrypted ITF file.

### What Next

Run grdgenxo -viewer with un-encrypted ITF.

## GRD-1018

(Warning) ITF Process Header is needed for advanced process node. Please add process header information to ITF and rerun grdgenxo.

### Description

The ITF has met StarRC advanced modeling requirement and it needs following PROCESS header information in ITF.

*PROCESS_NODE*, *PROCESS_VERSION*, *PROCESS_FOUNDRY*, *PROCESS_TYPE*, and *PROCESS_CORNER*

### What Next

Add process header description statement into ITF.

### Examples

```
TECHNOLOGY = abc
PROCESS_FOUNDRY = fab_1802C
PROCESS_NODE = 130
PROCESS_TYPE = SOI
PROCESS_VERSION = 2.0
PROCESS_CORNER = TYPICAL
```

## GRD-1019

(Fatal) ITF Process Header is needed for advanced process node. Please add process header information to ITF and rerun grdgenxo.

### Description

The ITF has met StarRC advanced modeling requirement and it needs following PROCESS header information in ITF.

Feedback

*PROCESS_NODE*, *PROCESS_VERSION*, *PROCESS_FOUNDRY*, *PROCESS_TYPE*, and *PROCESS_CORNER*

**What Next**

Add process header description statement into ITF.

**Examples**

```
TECHNOLOGY = abc
PROCESS_FOUNDRY = fab_1802C
PROCESS_NODE = 130
PROCESS_TYPE = SOI
PROCESS_VERSION = 2.0
PROCESS_CORNER = TYPICAL
```

---

## GRD-1020

(Fatal) -print_conductors, -print_dielectrics and -print_vias is not allowed for encrypted ITF files.

**Description**

You are running grdgenxo with option -print_conductors or -print_dielectrics or -print_vias. The option cannot work for encrypted ITF file.

**What Next**

Run grdgenxo -print_conductors or -print_dielectrics or -print_vias with un-encrypted ITF.

---

## GRD-1021

(Warning) ITF Process Header is needed for advanced process node. Please add process header information to ITF and rerun grdgenxo. grdgenxo errors out with GRD-1019 outside Synopsys network.

**Description**

The ITF has met StarRC advanced modeling requirement and it needs following PROCESS header information in ITF.

*PROCESS_NODE*, *PROCESS_VERSION*, *PROCESS_FOUNDRY*, *PROCESS_TYPE*, and *PROCESS_CORNER*

**What Next**

Add process header description statement into ITF.

Feedback

### Examples

```
TECHNOLOGY = abc
PROCESS_FOUNDRY = fab_1802C
PROCESS_NODE = 130
PROCESS_TYPE = SOI
PROCESS_VERSION = 2.0
PROCESS_CORNER = TYPICAL
```

## GRD-1022

(Information) \nFollowing PROCESS HEADER was detected in ITF:%s.

### Description

Information of PROCESS HEADER in the ITF file.

### What Next

Information only. No action is needed.

## GRD-1023

(Fatal) The NXTGRD file is corrupted, please regenerate NXTGRD file.

### Description

The NXTGRD file is corrupted, maybe due to unstable machine or outdated version, please regenerate NXTGRD file and check again.

### What Next

Please rerun grdgenxo to generate NXTGRD again.

## GRD-1288

(Information) Detect the %s inconsistency while checking the ITF, %s.

### Description

Information message indicating the ITF inconsistency which could be ignored or not.

### What Next

This message is for information only. No work is required.

## GRD-3000

(Warning) No Field-Poly layer was found. 3D device models will not be generated.

Feedback

**Description**

Simulation has stopped because no Field-Poly layer is defined in the ITF File. Consequently, grdgenxo cannot build MOS devices and generate 3D device models.

**What Next**

Review the layer definition in the ITF File, add a conductor layer having LAYER_TYPE=FIELD_POLY defined and relaunch grdgenxo.

---

## GRD-3001

(Information) %s.

**Description**

Information only, indicating update of the TLUPlus file.

**What Next**

Information only; no action is needed.

---

## GRD-3002

(Fatal) %s.

**Description**

The error description depicts the problem with the run.

**What Next**

Resubmit the run after correcting the error.

---

## GRD-3003

(Severe) Usage: grdgenxo -itfkey_nxtgrd -i <grd_file> -o <key_file>.

**Description**

The *grdgenxo* command was used incorrectly. The correct usage is as follows:

```
% grdgenxo -itfkey_nxtgrd -i <grd_file> -o <key_file>
```

where *-i* is the shorthand form of the *-input* option and *-o* is the shorthand form of the *-output* option.

**What Next**

Modify the command and submit it again.

Feedback

## GRD-3004

(Severe) Usage: grdgenxo -itfkey_tluplus -i <tluplus_file> -o <key_file>.

**Description**

The grdgenxo command was used incorrectly. The correct usage for this application is as follows:

```
% grdgenxo -itfkey_tluplus -i <tluplus_file> -o <key_file>
```

where *-i* is the shorthand form of the *-input* option and *-o* is the shorthand form of the *-output* option.

**What Next**

Modify the command and submit it again.

## GRD-3005

(Severe) This feature is not supported for TluPlus version < 16

**Description**

This feature is supported only for TLUPlus versions 16 and later.

**What Next**

Generate the TLUPlus file using a newer version of the grdgenxo tool if you would like to use this feature.

## GRD-3006

(Severe) Syntax UPPER_LAYER_ONLY must be added with RPV_VS_SI_COVERAGE.

**Description**

Syntax UPPER_LAYER_ONLY must be added with RPV_VS_SI_COVERAGE.

**What Next**

Check if the table defined in ITF is correct. Add needed syntax and rerun StarRC.

## GRD-3007

(Severe) Usage: grdgenxo -checkgrd -i <binary_grd_file> -o <out_file>.

Feedback

**Description**

An error has occurred with the usage of the *grdgenxo* command. The error might be caused by improper command syntax or by an unsuitable input file.

The correct syntax is as follows:

```
% grdgenxo -checkgrd -i <binary_grd_file> -o <out_file>
```

where *-i* is the short form of the *-input* option and *-o* is the short form of the *-output* option of the *grdgenxo* command.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

---

## GRD-3008

(Fatal) The -checkgrd option is not supported on a nxtgrd file with a bfs-encrypted header.

**Description**

You are running the grdgenxo -checkgrd command. However, the nxtgrd file to be processed was generated by the grdgenxo -bfsEncrypt command. The grdgenxo tool cannot use the -checkgrd option for a bfs-encryted nxtgrd file.

**What Next**

Contact the Synopsys Support Center.

---

## GRD-3009

(Fatal) The via layer %s with SIDE_TANGENT is not a contact layer.

**Description**

When a via layer has SIDE_TANGENT, it should be a contact layer. A contact layer is a via layer connecting diffusion/substrate layer and metal layer which is above gate layer.

**What Next**

If the via layer is not a contact layer, remove SIDE_TANGENT in via description.

---

## GRD-3010

(Fatal) Three dimensional LATERAL_CAP_SCALING_VS_SI_SPACING table is not supported from release 2016.06 onwards.

Feedback

**Description**

Three dimensional LATERAL_CAP_SCALING_VS_SI_SPACING, which contains LENGTHS keyword along with SI_SPACINGS and VALUES, is not supported anymore. Two dimensional LATERAL_CAP_SCALING_VS_SI_SPACING table, without LENGTH keyword, is still supported.

**What Next**

Use either DIELECTRIC_FILL_EMULATION_VS_SI_SPACING or two dimensional LATERAL_CAP_SCALING_VS_SI_SPACING instead.

---

## GRD-3011

(Warning) DPT_MAX_SHIFT not supported anymore. All DPT_MAX_SHIFT values will be set to 0.

**Description**

DPT_MAX_SHIFT defined in ITF file will be set to 0. Consequently, any DPT_MAX_SHIFT will be ignored during grdgenxo run.

**What Next**

Remove any DPT_MAX_SHIFT definitions in the ITF File. It will not cause any impact in the final nxtgrd file.

---

## GRD-3012

(Fatal) The via layer %s with LAYER_TYPE=TALL_CONTACT is not a contact layer.

**Description**

When a via layer has LAYER_TYPE=TALL_CONTACT, it should be a contact layer. A contact layer is a via layer connecting diffusion/substrate layer and metal layer which is above gate layer.

**What Next**

If the via layer is not a contact layer, remove LAYER_TYPE=TALL_CONTACT in via description.

---

## GRD-3013

(Warning) The thickness of via layer %s with LAYER_TYPE=TALL_CONTACT is not very large.

Feedback

**Description**

When thickness of a via layer is not very large, the tall contact model is not needed. If LAYER_TYPE=TALL_CONTACT is added to via section, the high accuracy contact model in grdgenxo will be invoked, which will make generation time of NXTGRD file longer.

**What Next**

If the via layer is not a tall contact layer, remove LAYER_TYPE=TALL_CONTACT in via description.

---

## GRD-3014

(Fatal) The conductor layer %s with GATE_PITCH/GATE_WIDTH/ GATE_TO_CONTACT_SPACING is not a gate layer.

**Description**

When a conductor layer has GATE_PITCH/GATE_WIDTH/ GATE_TO_CONTACT_SPACING syntaxes, it should be a gate layer.

**What Next**

If the conductor layer is a gate layer, add LAYER_TYPE=GATE in conductor description. If the conductor layer is not a gate layer, remove GATE_PITCH/GATE_WIDTH/ GATE_TO_CONTACT_SPACING in conductor description.

---

## GRD-3015

(Severe) Usage: grdgenxo -f2f_itf -die1_itf <file> -die1_block_name <name> -die1_num_layers <num> -die2_itf <file> -die2_block_name <name> -die2_num_layers <num> -out_itf <file>

**Description**

An error has occurred with the usage of the *grdgenxo* command with the *-f2f_itf* option. The error might be caused by improper command syntax or by an unsuitable input file.

For the *-f2f_itf* mode of *grdgenxo* all the command-line options listed above are required. Die1 is the bottom die and die2 is the top die that gets flipped. The die input files can be either an ITF or NXTGRD.

*-dieN_num_layers* specifies the number of layers selected from each of the dies.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

Feedback

## GRD-3016

(Fatal) Incorrect value of -high_er option (should be > 10)\n Usage: grdgenxo -high_er <val> <itf_file>

### Description

An error has occurred with the usage of the *grdgenxo* command with the *-high_er* option. <val> must be a number > 10 specifying the dielectric permittivity above which the field solver accuracy is increased.

### What Next

Correct the syntax of the *grdgenxo* command and resubmit the command.

## GRD-3017

(Warning) Cannot delete intermediate file %s: %s.

### Description

An internal intermediate file could not be deleted.

### What Next

If no error happened latter and the NXTGRD was succesfully generated, you can ignore this warning message. Otherwise, the error reason can point to the failure root cause.

## GRD-3018

(Fatal) RCAPI_VERSION or RCAPI_PARAM_FILE is missing in the ITF header.

### Description

RCAPI_VERSION and RCAPI_PARAM_FILE must be specified together with RCAPI_LIBRARY_NAME in the ITF header.

### What Next

specify RCAPI_VERSION and RCAPI_PARAM_FILE together with RCAPI_LIBRARY_NAME in the ITF header.

## GRD-3019

(Information) Running incremental 3DIC NXTGRD flow with base NXTGRD "%s", 3DIC ITF "%s", and # of affected layers: %d.

Feedback

**Description**

Information only, indicating command line options of incremental 3DIC NXTGRD flow.

**What Next**

Information only; no action is needed.

---

## GRD-3020

(Fatal) Invalid number of affected layers(%s) specified on command line.

**Description**

Number of affected layers must be set to a number greater than or equal to zero.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

---

## GRD-3021

(Fatal) Missing number of affected layers on command line.

**Description**

Number of affected layers must be set to a number greater than or equal to zero.

**What Next**

Correct the syntax of the *grdgenxo* command and resubmit the command.

---

## GRD-3022

(Information) Using default number of affected layers(%d) for incremental 3DIC NXTGRD flow.

**Description**

Information only, indicating default value of number of affected layers is used.

**What Next**

Information only; no action is needed.

---

## GRD-3023

(Fatal) Can NOT open %s for reading.

Feedback

**Description**

Cannot open input file for reading.

**What Next**

Check the input file existence.

---

## GRD-3024

(Fatal) Can NOT open output file %s to write TLU input data.

**Description**

*grdgenxo* can not open an output file to use when writing the TLU input file.

**What Next**

Check the file existence.

---

## GRD-3025

(Information) Regenerate layer (%s) cap. model from for incremental 3DIC NXTGRD flow.

**Description**

Information only, show all conductor layers that will be regenerated.

**What Next**

Information only; no action is needed.

---

## GRD-3026

(Information) Checking SMC compatibility versus ITF file "%s".

**Description**

Information only, show action and reference ITF file.

**What Next**

Information only; no action is needed.

---

## GRD-3027

(Information) %s: compatible.

Feedback

**Description**

Information only, inform that ITF corner file is compatible.

**What Next**

Information only; no action is needed.

---

## GRD-3028

(Information) %s: not compatible.

**Description**

Information only, inform that ITF corner file is not compatible.

**What Next**

Information only; check the file smc_compatibility.summary for information on the incompatibilities found.

---

## GRD-3029

(Warning) SMC ITF compatibility checker detected issues with some of the input ITF files. \nCheck smc_compatibility.summary for details.

**Description**

Warning only, inform an SMC incompatible ITF was found.

**What Next**

Warning only; check the file smc_compatibility.summary for information on the incompatibilites that were found.

---

## GRD-3030

(Severe) %s is a binary file, exiting...

**Description**

Input is a binary file when ascii was expected.

**What Next**

Check input file.
