No cells with the given name is found on the top module.

**What Next**

Ensure the existence of cell name is correct.

---

## SPCNL-002

(error) The cell named '%s' is present in both -die1 and -die2 lists.

Feedback

**Description**

The given cell name is common in -die1 and -die2 command options. These lists are expected to be mutually exclusive.

**What Next**

Ensure that no cells are common in -die1 and -die2 command options.

# SQM

## SQM-0001

(error) Cannot map sequential element '%s' in module '%s'. Library has no flip-flops of the required type. Check that usable flip-flops with the required type of asynchronous set/reset signals are available in the library.

**Description**

This message is issued when there is no logically equivalent flip-flops available in library during initial mapping or when there are only flops with opposite clock edge which is not allowed by user setting.

**What Next**

Check that usable flip-flops with the required type of asynchronous set/reset signals are available in the library. For example, the design requires both asynchronous set/reset signals while library has reset-only cells. The cell can't be mapped in this case; Or check if library only contains flop with opposite clock and any of following app options is set to true: *seqmap.count_added_inverters_for_flops* => This app option deprecates in T release and is aliased to *seqmap.honor_clock_sense_for_registers compile.seqmap.preserve_rtl_clock_phase_strictly*

## SQM-0002

(error) Cannot map sequential elements of module '%s'. Library has no flip-flops.

**Description**

Cannot map sequential element. Library has no flip-flops.

**What Next**

Need to provide flip-flops in library. ~

Feedback

## SQM-0003

(error) Cannot map retention register '%s' in module '%s'. No replacement set available.

**Description**

This error message is issued when no replacement set available for the retention cell. For example, libcell is not specified in retention strategy.

**What Next**

Check library and retention strategy to make sure that repalcement set available for retention cell ~

## SQM-0004

(error) Cannot map sequential elements of module '%s'. Library has no latches.

**Description**

Cannot map sequential element. Library has no latches.

**What Next**

Need to provide latches in library. ~

## SQM-0005

(error) Cannot map sequential element '%s' in module '%s'. Library has flip-flops of the required type, but they are not usable in the module context. Check purpose, target library subset and voltage domain compatibility of library elements.

**Description**

This message is issued when there are logically equivalent flip-flops available in library but the library cell can't be used in the module context.

**What Next**

- Use *analyze_mv_feasibility* to report mapping failure for retention cells. This command generates a report indicating the failure reason for each mapping cell. A more detailed version of this report (in HTML format) can be created with *analyze_mv_feasibility -format html*. It's possible to set *-format html* as default option assigning the application option *mv.upf.enable_amvf_html_report* to *true* with the command *set_app_options -as_user_default -name mv.upf.enable_amvf_html_report -value true*.
- For retention mapping failure, check if a suitable lib cell is specified in *map_retention_cells* setting, and those lib cells are usable.

Feedback

- Check purpose, target library subset and voltage domain compatibility of library elements.
- Check if the qualified cells have dont_use attribute or do not match pvt parameter making them not usable.

**See Also**

- analyze_mv_feasibility
- set_app_options
- mv.upf.enable_amvf_html_report

---

## SQM-0011

(error) Cannot map sequential element '%s' in module '%s'. Library has no latch of the required type.

**Description**

This message is issued when there is no logically equivalent latches available in library during initial mapping.

**What Next**

Library has no latch of the required type. ~

---

## SQM-0015

(error) Cannot map sequential element '%s' in module '%s'. Library has latches of the required type, but they are not usable in the module context. Check purpose, target library subset and voltage domain compatibility of library elements.

**Description**

This message is issued when there is logically equivalent latches available in library but the libcell can't be used in the module context.

**What Next**

o Use *analyze_mv_feasibility* to report mapping failure for retention cells. This command generates a report indicating the failure reason for each mapping cell. A more detailed version of this report (in HTML format) can be created with *analyze_mv_feasibility -format html*. It's possible to set *-format html* as default option assigning the application option *mv.upf.enable_amvf_html_report* to *true* with the command *set_app_options -as_user_default -name mv.upf.enable_amvf_html_report -value true*.

Feedback

o For retention mapping failure, check if a suitable lib cell is specified in *map_retention_cells* setting, and those lib cells are usable.

o Check purpose, target library subset and voltage domain compatibility of library elements.

o Check if the qualified cells have dont_use attribute or do not match pvt parameter making them not usable.

**See Also**

- analyze_mv_feasibility
- set_app_options
- mv.upf.enable_amvf_html_report

---

## SQM-1005

(warning) In module '%s' : No negative-edge flip-flops available in library. Resorting to positive-edge flip-flops.

**Description**

Negative-edge flip-flops are prefered but no such flip-flops available in library. Resorting to positive-edge flip-flops for mapping.

**What Next**

If negative-edge flip-flops must be used, please check that usable negative-edge flip-flops are available in the library. ~

---

## SQM-1006

(warning) In module '%s' : No positive-edge flip-flops available in library. Resorting to negative-edge flip-flops. Adding inversions on the clock net.

**Description**

Positive-edge flip-flops are prefered but no such flip-flops available in library. Resorting to negative-edge flip-flops for mapping.

**What Next**

If positive-edge flip-flops must be used, please check that usable positive-edge flip-flops are available in the library. ~

Feedback

## SQM-1007

(warning) Unable to swap out libcell '%s' for sequential element '%s'. Libcell/instance either has dont_use attribute or must change scan type but couldn't find a match.

**Description**

Swap for dont_use/opposite scan preference libcell is attemped but not successful. No match is found.

**What Next**

Provide matching cell in the library for the target dont_use/opposite scan preference libcell. ~

## SQM-1008

(warning) For sequential element '%s' of module '%s' : No flip-flops available in library with requested dedicated scan output type. Instance '%s' is mapped to different scan output type flip-flop '%s'

**Description**

No flip-flops available in library with requested dedicated scan output type. Instance is mapped to different scan output type flip-flop. For example, flip-flop with dedicated scan output pin is requested but library only has flip-flop with no dedicated scan output pin.

**What Next**

If certain dedicated scan output type libcell must be used, provide such cell in the library. ~

## SQM-1009

(warning) For sequential element '%s' of module '%s' : No flip-flops available in library with requested scan type. Instance '%s' is mapped to non-scan flip-flop '%s'

**Description**

No flip-flops available in library with scan type. Instance is mapped to non-scan flip-flop.

**What Next**

Check that usable flip-flops with scan type are available in the library if necessary. ~

## SQM-1010

(warning) For sequential element '%s' of module '%s' : No non-scan flip-flops available in library. Instance '%s' is mapped to scan flip-flop '%s'

Feedback

**Description**

No non-scan flip-flops available in library. Instance is mapped to scan type flip-flop.

**What Next**

Check that usable non-scan type flip-flops are available in the library if necessary. ~

---

## SQM-1011

(warning) Sequential element '%s' of module '%s' was mapped to a a flip-flop without dedicated scan out pin. Constraints placed on dedicated scan out pin will be dropped

**Description**

Sequential element was mapped to a flip-flop without dedicated scan out pin. Constraints placed on dedicated scan out pin will be dropped.

**What Next**

Check that usable flip-flops with dedicated scan out pin are available in the library if necessary. ~

---

## SQM-1012

(warning) For sequential element '%s' of module '%s' : No non-scan flip-flops available in library. Trying to map to scan flip-flop.

**Description**

No non-scan flip-flops available in library. Instance is mapped to scan type flip-flop. This happens during swapping out cells that is marked as don't use.

**What Next**

Check that usable non-scan type flip-flops are available in the library if necessary. ~

---

## SQM-1015

(warning) Sequential element '%s' of module '%s' could not be mapped without state inversion. For this element, allowing mapping with state inversion

**Description**

This warning message is issued when no solution is found to map the sequential element without output inversion. We are trying to map the element with output inverted. The solution is not guaranteed.

Feedback

**What Next**

- Check library and provided cells with desired Q/QN pins if the cell has to be mapped without output inversion.
- If you want to leave cell unmapped and don't want output inversion, you can use the following app option: set_app_options -as_user_default -list {compile.seqmap.allow_output_inversion_if_unmapped false}

---

## SQM-1016

(warning) Sequential element '%s' of module '%s' could not be mapped without state inversion. For this element, changing asynchronous set and reset priority

**Description**

This warning message is issued when no solution is found via regular mapping flow and changing asynchronous set/reset priority is allowed for mapping. However, solution is not guranteed.

**What Next**

If you want to leave cell unmapped and don't want to change asynchronous set/reset priority, you can use the following app option: set_app_options -as_user_default -list {compile.seqmap.allow_async_set_reset_priority_inversion_if_unmapped false} ~

---

## SQM-1019

(warning) For sequential element '%s' of module '%s' : No latches available in library with requested scan type. Instance '%s' is mapped to non-scan latch '%s'

**Description**

No latches available in library with scan type. Instance is mapped to non-scan latch.

**What Next**

Check that usable latches with scan type are available in the library if necessary. ~

---

## SQM-1020

(warning) Multibit lib cell '%s' is ignored because of incompatible attributes.

**Description**

Multibit libcell is ignored because one or some of its library attributes is/are not valid. For example, no module is found; no timing design is found; multibit width is less or equal to 1, etc.

Feedback

**What Next**

Check the attribute of the reported libcell. Fix if possible. ~

---

## SQM-1021

(warning) Multibit lib cell '%s' is ignored because of no valid functional description and no single-bit representative.

**Description**

The warning message is issued when multibit cell has no valid functional description and no single-bit representative.

**What Next**

Check the library of the reported lib cell. Provide functional description and single-bit representative as needed. ~

---

## SQM-1022

(warning) Library cell %s has inconsistent port directions: port %s (of slice %u), direction %s vs. port %s (of slice 0), direction %s.

**Description**

This warning is issued when multibit lib cell has inconsistent port directions among different slices. Cell will be marked as invalid.

**What Next**

Check the library of the reported lib cell. Make sure multibit cell ports are consistent. ~

---

## SQM-1023

(warning) Library cell %s, port %s (id %u) has %zu corresponding single-bit pins.

**Description**

This warning is issued when a certain multibit cell port corresponds to more than two single-bit pins, which is not allowed. Cell will be marked as invalid.

**What Next**

Check the library of the reported lib cell. Fix pin relation as needed. ~

Feedback

## SQM-1024

(warning) Library cell %s, inconsistent scan enable pins: %s (id %u) vs. %s (id %u).

**Description**

This warning is issued when multibit cell scan enable pin id does not match its single-bit cell scan enable pin id.

**What Next**

Check the library of the reported lib cell. Fix pin id as needed. ~

## SQM-1025

(warning) Library cell %s, inconsistent scan input pins: %s (id %u) vs. %s (id %u).

**Description**

This warning is issued when multibit cell scan input pin id does not match its single-bit cell scan input pin id.

**What Next**

Check the library of the reported lib cell. Fix pin id as needed. ~

## SQM-1026

(warning) Library cell %s has no scan enable pin.

**Description**

This warning is issued when multibit cell does not have scan enable pin.

**What Next**

Check the library of the reported lib cell. Use a different cell if needed. ~

## SQM-1027

(warning) Library cell %s has no scan input pin.

**Description**

This warning is issued when multibit cell does not have scan input pin.

**What Next**

Check the library of the reported lib cell. Use a different cell if needed. ~

Feedback

## SQM-1028

(warning) Library cell %s has no scan output pin.

**Description**

This warning is issued when multibit cell does not have scan output pin.

**What Next**

Check the library of the reported lib cell. Use a different cell if needed. ~

## SQM-1029

(warning) Library cell %s, inconsistent serial scan chain: slice %u, scan out pin %s (id %u) vs. slice %u, scan in pin %s (id %u) are different -- they should be the same.

**Description**

This warning is issued when multibit cell scan out pin doesn't match scan in pin of the next slice when it's in serial scan mode.

**What Next**

Check multibit cell scan chain connection. ~

## SQM-1030

(warning) Library cell %s, inconsistent parallel scan chain: slice %u, scan out pin %s (id %u) and slice %u, scan in pin %s (id %u) are the same -- they should be different.

**Description**

This warning is issued when multibit cell scan out pin matches scan in pin of the next slice when it's in parallel scan mode, which should not happen.

**What Next**

Check multibit cell scan chain connection. ~

## SQM-1031

(warning) Library cell %s, slice %u, scan out pin %s (id %u) corresponds to single-bit degenerate cell %s, non-scan out pin %s (id %u).

Feedback

**Description**

This warning is issued when multibit cell dedicated scan out pin corresponds to single bit degenerate non-dedicated scan out pin. Cell is marked as invalid.

**What Next**

Check library for the reported cell for more information. ~

---

## SQM-1032

(warning) Library cell %s, slice %u, non-scan out pin %s (id %u) corresponds to single-bit degenerate cell %s, scan out pin %s (id %u).

**Description**

This warning is issued when multibit cell non-dedicated scan out pin corresponds to single bit degenerate dedicated scan out pin. Cell is marked as invalid.

**What Next**

Check library for the reported cell for more information. ~

---

## SQM-1033

(warning) Cell bus '%s' (register '%s') cannot be mapped to multibit cell.

**Description**

This warning message is issued when instance can't be mapped to multibit cell due to its own reason. Refer to SQM-1036 for exact reason.

**What Next**

Check SQM-1036 for exact reason. These two message should come together. ~

---

## SQM-1034

(warning) No cell bus will be mapped to multibit because multibit mapping has been disabled by user.

**Description**

This warning message will be issued when (1) seqmap.enable_multibit is false && compile.seqmap.enable_multibit is false (or) (2) compile.seqmap.enable_rtl_multibit_banking is false This basically mean multibit mapping is disabled by user

Feedback

### What Next

Check script for these settings to see if they are expected. ~

---

## SQM-1035

(warning) Cell '%s' cannot be mapped to multibit because constraint(s) on its shared pins (such as clock, enable, set/reset, scan enable, etc) is(are) incompatible to rest of the cell bus.

### Description

This warning message is issued when multibit mapping is enabled but cell can't be mapped to multibit due to constraints on its shared pins.

### What Next

Check constraints set on cell shared pins to see if they can be removed so that cell can be mapped to multibit. ~

---

## SQM-1036

(warning) %s

### Description

This warning message is issued when instance can't be mapped to multibit cell due to its own reason. This message contains three possible reasons: 1. Cell is excluded from mapping to multibit by 'set_multibit_options -exclude' directive. 2. Cell cannot be mapped to multibit because it is a DFT register. 3. Cell cannot be mapped to multibit because of non-timing size_only restriction on it.

### What Next

~

---

## SQM-1037

(warning) Sequential element '%s' could not be mapped, because there is no matching library cells available for it.

### Description

This warning message is issued when sequential element is left unmapped after all possible trial.

Feedback

**What Next**

Check library to provide matching library cells for the unmapped instance. ~

---

## SQM-1040

(warning) No cell bus will be mapped to multibit because there is no multibit cells in the cell libraries.

**Description**

This warning message is issued when bus instance is to be mapped but library doesn't have multibit cells.

**What Next**

Check library to provide multibit cells for bus mapping. ~

---

## SQM-1041

(warning) Could not map retention cell '%s' to multibit due to lack of compatible multibit library cells.

**Description**

This warning message is issued when instance is retention cell and retention repalcement set is available but there is no multibit cell in repalcement set.

**What Next**

Check library and retention strategy to make sure retention multibit cell is added to repalcement set. ~

---

## SQM-1046

(warning) Sequential element '%s' of module '%s' is mapped to library cell '%s' or its equivalents, which don't have nextstate:data defined on input port. This may result in synchronous input nets swapped.

**Description**

This warning message is issued when instance is mapped to a libcell where there is no nextstate_type attribute defined on its ports. In this case, functional input pairs like D/SET, D/CLEAR can be swapped during net connection as they are logically equivalent. Tool can't tell which port is the "true" data port.

Feedback

### What Next

User can ignore this warning if they don't care about pin connection. Otherwise choose another libcell which is properly defined with nextstate_type. For example: get_attribute [get_lib_pins -of_objects [get_lib_cells */DFPCRQX1HXP ] ] nextstate_type ~

---

## SQM-1047

(warning) Sequential element '%s' of module '%s' is mapped to library cell '%s' or its equivalents, which have multiple input ports defined as nextstate:data. This may result in synchronous input nets swapped.

### Description

This warning message is issued when instance is mapped to a libcell where there are multiple ports defined as nextstate:data. In this case, functional input pairs like D/SET, D/CLEAR can be swapped during net connection as they are logically equivalent. Tool can't tell which port is the "true" data port.

### What Next

User can ignore this warning if they don't care about pin connection. Otherwise choose another libcell which is properly defined with nextstate_type. Follow the example to query nextstate type value on libcell pins: get_attribute [get_lib_pins -of_objects [get_lib_cells */DFPCRQX1HXP ] ] nextstate_type ~

---

## SQM-1051

(warning) Sequential element '%s' of module '%s' cannot be mapped single-bit, allowing it to be mapped to multibit lib cells.

### Description

This warning message is issued when the sequential mapper fails to map the sequential cell to a single-bit libcell. It then tries to find a multibit mapping for the sequential cell in order to avoid leaving it unmapped.

### What Next

Check the attributes or restrictions set on the single-bit library cells that prevents them from being used for sequential mapping.

---

## SQM-1054

(warning) User provided DW synchronous cell list '%s' doesn't have valid single stage libcell. Required cell should be valid in library and have

Feedback

**Description**

This warning is issued when user didn't provide valid single stage cell for DW synchronizers via "set_syncff_libcells".

**What Next**

Check the cell list carefully and make sure there is single stage cell; Make sure the single stage cell has "ff_chain" attribute defined; Check that the single stage cell can be used(no dont_use restriction) ~

---

## SQM-1055

(warning) Could not swap out user size_only sequential element '%s' without state inversion. Allowing mapping with state inversion.

**Description**

This warning is issued when a sequential instance is set with user size_only restriction but can't find a solution where we can swap out the cell without phase inversion.

**What Next**

No other action needed. For user size_only cells, it's required to try remapping them without input/output inversion first.

~

---

## SQM-1056

(warning) User provided DW synchronous multistage cell '%s' is not compatible with single stage cell '%s' in terms of matching keys. Cell is discarded

**Description**

This warning is issued when any user provided multi-stage cell for DW synchronizers is not compatible with single stage cell via "set_syncff_libcells" in terms of functional keys.

**What Next**

Locate the single stage cell in the cell list and get the string value for its ff_chain attribute. Make sure the multi-stage reported is in that string; If it's in the string, check their library details. It could be a mistake to mix two types of libcells in script setting.

~

Feedback

## SQM-1057

(warning) User provided DW synchronous multistage cell '%s' is not compatible with current design PVT setting. Cell is discarded.

**Description**

This warning is issued when any user provided multi-stage cell for DW synchronizers is not compatible with current design PVT setting.

**What Next**

Check the PVT settings for single stage cell library and multi-stage cell library as well as the script setting, There could be a mismatch. For example, multi-stage cell has only one voltage pane 0.8, but the power root is set to 0.9.

~

## SQM-1058

(warning) Libcell '%s' has a dedicated scanout pin but does not have the requisite attributes for sequential mapping.

**Description**

This warning message is issued when the libcell has a dedicated scanout pin but it does not have the attributes on the pin that are required for use by sequential mapping.

**What Next**

Check the attributes set on the dedicated scanout pin of this libcell.

## SQM-1062

(warning) Gating asynchronous set/reset for scan cells on net %s can't be done because it is driven by port

**Description**

This warning is issued when scan register is qualified for gating but its asynchronous nets are driven by port directly.

**What Next**

No further action needed. Gating for this register will be skipped.

~

Feedback

## SQM-1063

(warning) Gating asynchronous set/reset for scan cells can't be done because user didn't provide valid control signal

**Description**

This warning is issued when user didn't provide gating signal in script or tool couldn't find the signal on top level hier.

**What Next**

Check the script and make sure gating signal is properly set with command "set_register_async_gating_pin"

~

## SQM-1065

(warning) User has explicitly set 'compile.seqmap.scan' to false, thus mapping to scan flop is disabled.

**Description**

This warning is issued when user set "compile.seqmap.scan" to false. This means cells will be mapped to non-scan type by default.

**What Next**

Check your script to see if this app option is set as desired.

~

## SQM-1066

(warning) Sequential cell '%s' has noScan attribute, thus it won't be mapped to scan cell.

**Description**

User has explicitly set 'set_scan_element false' on the cell or the module containing this cell. Thus the cell has noScan attribute and will be mapped to non-scan cell.

**What Next**

Check your script to see if this command is set as desired.

~

Feedback

## SQM-1067

(warning) Mapping to scan cell '%s' in library is not possible because cell has 'dont_use' attribute.

**Description**

This is to warn user that certain scan cell in library can't be used because they are marked as dont_use.

**What Next**

Check library to make sure there is required scan cell.

~

## SQM-1068

(warning) Prefer scan over multibit banking ratio as user set 'seqmap.prefer_scan_over_mb_banking' to true

**Description**

This is to warn user that when multibit scan solution is not found, tool will prefer single bit scan solution instead of multibit non-scan solution.

**What Next**

Check script and make sure the app option is set as expected.

~

## SQM-1069

(warning) Prefer multibit banking ratio over scan as user set 'seqmap.prefer_scan_over_mb_banking' to false

**Description**

This is to warn user that when multibit scan solution is not found, tool will prefer multibit non-scan solution instead of single bit scan solution.

**What Next**

Check script and make sure the app option is set as expected.

~

Feedback

## SQM-1072

(warning) Latch cell '%s' couldn't honor user setting 'compile.seqmap.preserve_rtl_clock_phase_strictly' because either 'compile.seqmap.allow_tieoffs_for_latches' is false or library doesn't have appropriate cell

### Description

This warning is issued when user explicitly set 'compile.seqmap.preserve_rtl_clock_phase_strictly' to true but latch cell mapping couldn't honor it. There are two possible reasons: 1. 'compile.seqmap.allow_tieoffs_for_latches' is set to false. It will deactivate above app option so that tool will not spend the effort; 2. 'compile.seqmap.allow_tieoffs_for_latches' is set to true but tool couldn't find appropriate libcell.

### What Next

Check user setting for 'compile.seqmap.allow_tieoffs_for_latches'. Correct the value to true if it's set to false(if possible).

~

## SQM-1073

(warning) Sequential mapper only sees LSSD type scan cells in library but LSSD mapping is not enabled. No muxed scan cell is available.

### Description

This warning is issued because LSSD mapping is not enabled but sequential mapper couldn't see any mux based scan cell in library. Instead, all scan cells in library are marked with LSSD attribute. It's possible that these libcells are marked with wrong scan type.

### What Next

Check to see if library scan cells are marked with the correct scan type. Or turn on LSSD mapping support.

~

## SQM-1074

(warning) Shift register Inferencing is enabled so only head flop will be replaced with scan cell and not all registers in shift register chains are scan replaced.

Feedback

**Description**

This warning is to tell user that shift register inferring is enabled and only head register will be mapped to scan type.

**What Next**

NA

~

---

## SQM-1075

(warning) Gating asynchronous set/reset for scan cells can't be done because design hasn't been scan stitched.

**Description**

This warning is issued because the design is not scan stitched. If the design is not scan stitched, then there's no need for cells to be gated.

**What Next**

NA

~

---

## SQM-1076

(warning) Gating asynchronous set/reset for scan cells can't be done because user provided control port '%s' is driving other loads.

**Description**

This warning is issued when control port is driving other loads. The port is set by user via "set_register_async_gating_pin -port xxx". It must be top level that doesn't drive any other loads.

**What Next**

Create a new port on top level and put its name as control port for gating

~

---

## SQM-1080

(warning) Complex sequential cell %s is not swapped to complex retention cell. App option mv.cells.infer_complex_retention_cells needs to be set to enable this feature.

Feedback

### Description

This warning is issued when user set a complex instance(doesn't have valid function id, valid functionality info or more than one stage) in retention strategy but app option mv.cells.infer_complex_retention_cells is set to false.

### What Next

Set mv.cells.infer_complex_retention_cells to true to enable retention complex cell mapping.

~

---

## SQM-1081

(warning) Logic has been pushed out of latch '%s' for mapping purpose. Set *compile.seqmap.disable_async_logic_push_out_for_latches* to disable it.

### Description

This warning message is issued when logic is pushed out on SEQGEN latch instance. If user don't want logic be pushed out, setting app option *compile.seqmap.disable_async_logic_push_out_for_latches* would help preserve the logic. This, however, will potentially result in latch unmapped.

### What Next

Check the app option value for compile.seqmap.disable_async_logic_push_out_for_latches.

---

## SQM-1082

(warning) Output port '%s' on parallel scan libcell is not marked with signal type: test_scan_out. May need to check library definition.

### Description

This warning message is issued when the tool identified a multibit sequential libcell as parallel scan but found no signal type of test_scan_out on a register bit. For robustness, libcell should mark all scan output pins with signal type of test_scan_out.

### What Next

Check the definition of this libcell in user library.

Feedback

## SQM-1083

(warning) Unable to maintain scan connection of original cell '%s' on its non-scan replacement '%s'.

**Description**

This warning message is issued when the tool trys to rebind scan chain connection but cell is being remapped from scan to non-scan type. This could happen in flow that forces a remapping/swapping solution. For example, swap out dont_use libcells or debanking by remapping.

**What Next**

Check the reason of forced remapping from scan to non-scan cells.

## SQM-1084

(warning) Skipping scan type swap for sequential cell '%s', as retention type cannot be maintained with provided replacement set.

**Description**

This warning message is issued when the tool trys to swap out register for a different scan type but skipped due to unavailablity of remap candidates in the replacement set to maintain the current retention type.

**What Next**

Check the library and UPF setup.

## SQM-2004

(warning) No single-bit representative was found for multibit lib cell '%s'.

**What Next**

Check library and provide single-bit degenerate for the reported multibit cell. ~

## SQM-2005

(warning) Inferred a shift register of length %ld with %s as head in module %s\n

**Description**

This message is issued when shift register is created.

Feedback

**What Next**

~

---

## SQM-2006

(warning) The sequential cells in module '%s' are to be retimed, they will not be mapped to multibit.\n

**Description**

This message is issued when the module is to be retimed and user instructs that no multibit mapping for retimed module.

**What Next**

~

---

## SQM-2007

(warning) Sequential cell '%s' of module '%s' is to be retimed, it will not be mapped to multibit.\n

**Description**

This message is issued when a single instance in bus will not be mapped to multibit cell because the module is to be retimed.

**What Next**

~

---

## SQM-2010

(info) Multibit sequential cell '%s' does not have bus info nor single_bit_list attribute (common for pre-instantiated multibit cells). Multibit naming style support will be limited.\n

**Description**

This warning is issued when tool cannot name a multibit sequential cell properly since both bus info and single_bit_list attribute are missing. Instead, the cell will be named by annotating bit indices in the original cell name.

**What Next**

Check if the multibit sequential cell has valid bus info or single_bit_list attribute for naming.

~

Feedback

## SQM-2011

(info) Multibit sequential cell '%s' does not support setting of 'multibit.naming.expanded_name_style = 0' due to missing bus info.\n

**Description**

This warning is issued when tool cannot name a multibit sequential cell without expansion due to missing bus info. Instead, the cell will be named as expansion of single-bit names.

**What Next**

Check if the multibit sequential cell has valid bus info for naming.

~

## SQM-2012

(info) Library has LSSD cell but mapping to them is not possible because user setting 'set_scan_configuration -style lssd' is missing.

**Description**

This warning is issued when tool sees LSSD cell in library but user didn't set "set_scan_configuration -style lssd" in script. This setting is needed to enable LSSD mapping.

**What Next**

Set "set_scan_configuration -style lssd" in script if LSSD mapping is desired. Or ignore the message.

~

## SQM-2030

(info) The design contains some dont_touch registers, through which constant propagation is not allowed. Refer man page for more details.

**Description**

This info message is issued when the tool finds some constant registers marked dont_touch. By default, the tool does not propagate constants through dont_touch registers.

**What Next**

In order to allow constant propagation through dont_touch registers, set the following app option set_app_options -name

Feedback

compile.flow.propagate_constants_through_dont_touch_cells -value true. Note that, this setting propagates constants through dont_touch registers, but does not remove the register. ~

---

## SQM-2031

(info) The design contains some size_only registers, through which constant propagation is not allowed. Refer man page for more details.

**Description**

This info message is issued when the tool finds some constant registers marked size_only. By default, the tool does not propagate constants through size_only registers.

**What Next**

In order to allow constant propagation through size_only registers, set the following app option set_app_options -name compile.flow.propagate_constants_through_size_only_cells -value true. Note that, this setting propagates constants through size_only registers, but does not remove the register. ~

---

## SQM-3001

(warning) Failed to analyze the equivalent pins of lib cell '%s'.

**Description**

Debugging message for internal use.

**What Next**

~

---

## SQM-3002

(warning) No flip-flops in the library.

**Description**

Debugging message for internal use.

**What Next**

~

Feedback

## SQM-3003

(warning) No latchs in the library.

**Description**

Debugging message for internal use.

**What Next**

~

## SQM-3004

(warning) No usable multibit sequential cells in the library.

**Description**

Debugging message for internal use.

**What Next**

~

## SQM-3005

(warning) Shift register body or tail '%s' is mapped to a scan cell '%s'.

**Description**

Debugging message for internal use.

**What Next**

~

## SQM-3006

(warning) Shift register head '%s' is mapped to a non-scan cell '%s'.

**Description**

Debugging message for internal use.

**What Next**

~

Feedback

## SQM-3011

(warning) Mapping of flip-flop '%s' to library cell '%s' required tying off some pins

**Description**

Debugging message for internal use.

**What Next**

~

## SQM-3012

(warning) Mapping of latch '%s' to library cell '%s' required tying off some pins

**Description**

Debugging message for internal use.

**What Next**

~

## SQM-3013

(warning) Library cell %s: skip internal port %s (its id %u > max %u).

**Description**

Debugging message for internal use.

**What Next**

~

## SQM-3014

(warning) Logic has been pushed out of register '%s' for mapping purpose.

**Description**

Debugging message for internal use.

**What Next**

~

Feedback

## SQM-3015

(warning) Library cell %s has no dedicated scan output pin.

**Description**

Debugging message for internal use.

**What Next**

~

## SQM-3100

(Information): '%d' registers are removed as constant. Use report_transformed_registers for a list.

**Description**

This information message is printed as summary of constant registers removed by tool. At the end of each pass constant register removal by tool during initial_map/logic_opto/ initial_opto, this message prints total number of constant registers removed.

**What Next**

This is an information-only message. No action is required.

## SQM-3101

(information) %d registers are removed as unloaded. Use report_transformed_registers for a list

**Description**

This information message is printed as summary of unloaded registers removed by tool. At the end of each pass of unloaded register removal by tool during initial_map/logic_opto/ initial_opto, this message prints total number of unloaded registers removed.

**What Next**

This is an information-only message. No action is required.

## SQM-4022

(warning) set_register_replication: No replicable path found %s cell '%s' %s register '%s'.

Feedback

### Description

This message is printed when Fusion Compile cannot determine replicable path from a register to an included fan out cell or from fan in cell to a register. Fan in and fan out cells are specified as -include_fanout_logic and -include_fanin_logic command line options of set_register_replication.

Replicable path may not exists under following cases:

(1) it contains a cell marked dont touch (2) constant propagation is disabled across a net on a path (3) path crosses power domain boundary. (3) path contains coarse grain switch cell.

### What Next

Trace the path and inspect if any of the conditions above are met. Revise constraints accordingly.

---

## SQM-4034

(warning) set_register_replication: Register '%s' not replicated as it's fanout is less than max fanout constraint.

### Description

This message is printed when register replication engine finds number of load pins on register's output net less than the max fanout constraint specified using -max_fanout switch. When number of load pins is less than the max fanout constraint, engine considers constraints as satisfied and it will not replicate register.

Here is how replication engine calculates number of load pins:

The engine deletes the buffer tree on the net of register's output pin. The number of load pins on the flat net, connected to input pins of logical cells or output ports is considered as a fanout count. When a hierarchy in the fanout of a register is ECO hierarchy, engine considers hierarchical pin of ECO hierarchy as a load pin. That is, it does not descend in ECO hierarchy to count pins of the logical cells.

The number of pins thus collected is compared to the -max_fanout constraint.

Please note that engine does not consider timing end point as a load pin of a register.

### What Next

Please disable replication of register inside ECO hierarchy.

Feedback

## SQM-4037

(warning) set_register_replication: Cell '%s' not replicated as it does not have enough loads.

**Description**

This message is printed when Fusion Compile cannot determine load pins of a cell whose replication is requested. Minimum of 2 loads are required for a successful replication. The number of load pins are found at the time of replication in the compile flow. The load pins to go down to less than 2 should be rare. But if that happens, it means one of the following:

(1) some cell such as ISO cell has been added at Q pin of a register after set_register_replication command is issued. Addition of a cell can reduce number of loads.

(2) The net driven by Q pin drives ECO hierarchy. The load pins inside ECO hierarchy are counted as one as port-punching of ECO hierarchy is not allowed.

If un-replicated cell is an end point of a path, the replication of the entire path will be aborted. Path replication is specified by setting either -include_fanin_logic or -include_fanout_logic switch of a set_register_replication command.

**What Next**

Analyze design on which replication is done and see if any of the above mentioned conditions are present.

## SQM-4044

(information) Un-merging previously merged register '%s' into '%s'.

**Description**

Register that was merged previously was found to be on critical path during optimization. This register is split again.

**What Next**

~

## SQM-4045

(warning) Register '%s' does not have asynchronous control pins. It will not be replicated.

Feedback

**Description**

Registers without asynchronous pins will not be required as compile.seqmap.replicate_registers_with_asynchronous_logic option is set to false.

**What Next**

If you want to allow replication of such registers, then remove compile.seqmap.replicate_registers_with_asynchronous_logic from the script and re-run compile. ~

---

## SQM-4046

(warning) Register '%s' is self gated. It will not be replicated.

**Description**

Registers that are self gated are not replicated as it provides challenges during verification.

**What Next**

If you want to allow replication of such registers, disable self gating on replicated registers. ~

---

## SQM-4047

(warning) Register '%s' is size only. It will not be replicated.

**Description**

Replication of size only register is disabled using compile.seqmap.replicate_size_only_registers app-option.

**What Next**

If you want to allow replication size-only registers, set compile.seqmap.replicate_size_only_registers to false or remove it from the script.

---

## SQM-4048

(warning) There is no enough space to insert requested replicated copies of register %s in scan chains. Reducing number of copies from %d to %d to accomodate them in scan chains.

Feedback

### Description

This message is issued when there is no enough space in the scan chains to insert all newly created registers in the scan chains. Number of requited copies is reduced so that newly replicated registers can be added to scan chains.

### What Next

This message indicate an error in the estimation of scan chain capacity. Please contact Synopsys customer support.

---

## SQM-4049

(warning) Register %s can't be replicated because DFT requirements are not met: %s

### Description

A register that is part of a scan chain can't be replicated because certain DFT requirements that need to be met in order to allow the copied register to be also included in the correct scan chain are not met. This might be not be possible, for example, if the register's copy can't be accommodated on another already existing DFT scan chain.

This situation can arise because of several reasons that prevent updating the scan chains, DFT connections or similar DFT considerations in a safely way, i.e. allowing the replication can harm or break the scan chain connectivity. A message will provide a reason for the rejection.

A (non-exhaustive) list of usual rejection reasons is:

dft feature disabled

Replication feature for scan stitched cells is disabled. Check for the application option (*opt.dft.utils_allow_register_replication*) in the test case setup.

target cell is not in SCANDEF

Original register is scan chain stitched but it is not part of a SCANDEF file's stub chain, therefore its scan chain connection cannot be updated safely.

target cell is SCANDEF ordered

Original register is part of a SCANDEF stub chain's ordered component, like shift registers and alike that are 'read only' for scan chain purposes, therefore a copy register cannot be allocated in that fixed structure.

unsupported anchor cell found

Original register is driven by a cell that is not supported for modifying its scan connection safely for allocating a register copy.

Feedback

no replication slots available

There are no extra slots available for replication in the scan chain, i.e. scan chain max length would be violated if replication had been allowed.

invalid ScanOutput of previous cell

Original register is driven by an element that cannot be disconnected to insert a valid copy without disrupting the scan chain.

**What Next**

- Please verify how the register that cannot be replicated relates to the scan chains it belongs to and other related DFT logic.
- Consider to enable and perform register replication over the target registers before DFT scan chain insertion (*insert_dft*).

---

## SQM-4050

(warning) Register %s can't be replicated as it is TMR register.

**Description**

TMR registers can't be replicated.

---

## SQM-4051

(warning) duplicate_registers command is aborted as it can't replicate some register. Please refer to messages and re-run duplicate_registers command.

**Description**

Some registers specified for duplication by duplicate_registers command can't be replicated. Please refer to log to find messages explaining rejection of replication.

**What Next**

Please analyze error messages, fix problem and rerun duplicate_registers command

---

## SQM-4052

(warning) Register %s can't be replicated due to potential simulation mismatch at critical end point %s."

**Description**

This register can't be replicated due to simulation mismatch at critical end point.

Feedback

**What Next**

Please analyze error messages, fix problem and rerun register replication command.

---

## SQM-4053

(warning) Replication of register in ECO region is not allowed. Register: '%s'

**Description**

Replication of register inside ECO region is not allowed. ECO region is any hierarchy on which port punching is disallowed using set_freeze_ports command. Name of register being replicated is given.

**What Next**

Please disable replication of register inside ECO hierarchy.

---

## SQM-4054

(warning) Replication of register or fanout logic cell is rejected. Register/cell: '%s' Reason: '%s'"

**Description**

Replication of a register or a fanout logic cell is rejected. The reason for rejection is given.

**What Next**

Please review reason and update set_register_replication directive accordingly.

---

## SQM-4055

(warning) "Register '%s' is a scanned register but its copies will not be added to scan chains during replication."

**Description**

This message is issued when a register replication is requested on a register on a scan chain of partially scanned design. The replication engine will create copies however, those copies will not be inserted in scan chains. If this is not acceptable, please remove set_register_replication directive from the register and re-issue compile_fusion

**What Next**

Please review set_register_replication directive and follow recommended test insertion strategy.

Feedback

## SQM-4100

(information) The register '%s' is removed as constant '%d'.

### Description

This information message is printed because when constant propagation is enabled and constant optimization removes any detected constant register unless the register has user restrictions like user size_only.

The removal of constant registers is controlled by below app options.

```
compile.flow.propagate_constants_through_registers
compile.flow.enable_high_effort_constant_propagation
```

Both of which are true by default.

### What Next

This is an information-only message. No action is required.

## SQM-4101

(information) The register %s is removed because it is unloaded.

### Description

This information message is printed because when a register is removed as unloaded because of optimization during compile_fusion. The removal of unloaded registers is controlled by app option *compile.seqmap.remove_unloaded_registers* which are true by default.

### What Next

This is an information-only message. No action is required.

## SQM-4102

(information) The register %s is removed because it is merged to register %s.

### Description

When register merging is enabled, compile will detect the set of equivalent registers and merge them with this info message.

To disable register merging on specific registers, use *set_register_merging* command.

Feedback

## SQM-4104

(information) Unloaded register %s is preserved in module %s due to restriction: %s.

### Description

This information message is printed when an unloaded register is not removed due to user restriction like user size_only or don’t_touch. The removal of unloaded registers is controlled by app option which is true by default. *compile.seqmap.remove_unloaded_registers*

### What Next

Please check user restrictions using report_size_only/report_dont_touch.

## SQM-5001

(error) set and reset cannot be applied at the same time for command set_constant_register_removal.

### Description

set_constant_register_removal can be used as "set_constant_register_removal f1 true" or "set_constant_register_removal f1 -reset". However, it cannot be used as "set_constant_register_removal f1 true -reset". See man page of set_constant_register_removal for more information.

### What Next

Please contact Synopsys customer support and request enhancement.

## SQM-5002

(warning) Cannot apply command set_constant_register_removal on a combinational cell %s.

### Description

set_constant_register_removal does not support and cannot be applied on any combinational cell. See man page of set_constant_register_removal for more information.

### What Next

Please contact Synopsys customer support and request enhancement.

Feedback

## SQM-5003

(error) set and reset cannot be applied at the same time for command set_unloaded_register_removal.

### Description

set_unloaded_register_removal can be used as "set_unloaded_register_removal f1 true" or "set_unloaded_register_removal f1 -reset". However, it cannot be used as "set_unloaded_register_removal f1 true -reset". See man page of set_unloaded_register_removal for more information.

### What Next

Please contact Synopsys customer support and request enhancement.

## SQM-5004

(warning) Cannot apply command set_unloaded_register_removal on a combinational cell %s.

### Description

set_unloaded_register_removal does not support and cannot be applied on any combinational cell. See man page of set_unloaded_register_removal for more information.

### What Next

Please contact Synopsys customer support and request enhancement.

## SQM-5009

(warning) Fusion Compiler will not replicate registers that do not have asynchrnous control pins as app option compile.seqmap.replicate_registers_without_asynchronous_logic is set to false.

### Description

Fusion Compiler has been instructed not to replicate registers which do not have asynchronous set or reset pins. Replication of such registers will not be done. Only registers with asynchronous set or reset pins will be replicated.

### What Next

If you wish to enable replication of such registers, please set compile.seqmap.replicate_registers_without_asynchronous_logic to true or remove compile.seqmap.replicate_registers_without_asynchronous_logic from the script.

Feedback

# SRM

## SRM-000

(info) Deleted redundant routing blockage %s (blockage_group_id %d, layer %s).

**Description**

This routing blockage has been associated to a repelling group bound core via its blockage_group_id, and is deemed redundant.

## SRM-001

(info) Created routing blockage %s (blockage_group_id %d, layer %s).

**Description**

This routing blockage has been created for the core of a repelling group bound.

## SRM-002

(error) Unable to create routing blockage for block %s.

**Description**

As part of create_repelling_group_bound_shapes, a routing blockage should be created and associated to the core of a repelling group bound, but it could not be created.

## SRM-003

(error) Could not assign routing blockage %s to the appropriate layer %s.

**Description**

As part of create_repelling_group_bound_shapes, the routing blockage has been created for a core of a repelling group bound, but it could not be assigned to the appropriate layer.

## SRM-004

(error) Could not set routing blockage %s's blockage_group_id to %d.

Feedback

**Description**

As part of create_repelling_group_bound_shapes, the routing blockage has been created for a core of a repelling group bound, but it could not be assigned the appropriate blockage_group_id.

---

## SRM-005

(error) Could not set routing blockage %s to be zero spacing.

**Description**

As part of create_repelling_group_bound_shapes, the routing blockage has been created for a core of a repelling group bound, but it could not be defined as zero spacing.

---

## SRM-006

(error) Unable to extract routing blockage for core %s in repelling group bound %s.

**Description**

The cells of this core are placed in such a way that no valid shape could be extracted.

**What Next**

The cell placement of the core may be overlapping with other cores causing the shape extraction to fail. Run create_placement and legalize_placement to place the cores with sufficient spacing, and then rerun create_repelling_group_bound_shapes.

---

## SRM-007

(error) Could not change the name of routing blockage %s to %s.

**Description**

As part of create_repelling_group_bound_shapes, the routing blockage has been created for a core of a repelling group bound, but its name could not be changed to include the specified name prefix.

---

## SRM-008

(info) Renaming routing blockage %s to %s (blockage_group_id %d, layer %s).

**Description**

This routing blockage has been created earlier for the core of a repelling group bound but has been renamed following the given name_prefix.

Feedback

## SRM-009

(info) Block %s contains FuSa intent (%s).

**Description**

This message informs about detected functional safety intent of the specified type.

## SRM-010

(error) No proper lib_cell defined for creating a guide %s.

**Description**

Provide the proper lib_cell(s) to insert_redundant_trees via -buffer_lib_cell/-inverter_lib_cell.

## SRM-011

(error) Unable to create guide cell in hierarchy %s using lib_cell %s.

**Description**

The guide buffer/inverter cell could not be created in this hierarchy.

## SRM-012

(error) Unable to connect %s with %s.

**Description**

The connection between the given pin/net could not be created.

## SRM-013

(info) Working on %d split pin(s), driven by %d unique driver(s). The split pins form %d group(s) which require splitting. The design contains %d safety register group(s) and %d safety core group(s).

**Description**

Information about objects that insert_redundant_trees works on.

Feedback

## SRM-014

(info) Added %d guide buffer(s) and %d guide inverter(s). The design contains %d guide buffer(s) and %d guide inverter(s) in total.

**Description**

Shows the result of running insert_redundant_trees.

## SRM-015

(info) Selected %u split pin(s) for %s %s.

**Description**

Shows the selected split pin count for this redundancy group. Selection is done via split pin (types) following the rule or group, or if specified via the -pin_types or -pins option to insert_redundant_trees.

## SRM-016

(warning) Physical checks are off by default in this shell.

**Description**

In RTL-Architect, the design is typically not legalized, and therefore report_safety_status disables physical checks when run in this shell. If your design has been legalized, you can enable the physical checks by setting the following app-option before running report_safety_status. set_app_options -name report.safety.enable_physical_checks_in_rtla -value true

## SRM-017

(info) This type of summary formatting is deprecated.

**Description**

The summary formatting has changed to employ tables for improved legibility. The use of "set_app_options -name report.safety.use_tables_in_summary -value false" is deprecated.

## SRM-018

(error) Unable to select %s %s.

Feedback

**Description**

A group object was provided which could not be selected.

---

## SRM-019

(error) No valid reference found for %ld registers shared by groups {%s } %s.

**Description**

Found registers requiring isolation for which no valid tap cell reference could be determined. The rules of the groups could be conflicting; make sure that their optional tap_mapping list have at least one reference in common. When you are running create_safety_tap_cells with option -tap_lib_cells, ensure that it has a reference in common with the rules. A third option is that the libraries do not contain any lib_cells of type well_tap.

---

## SRM-020

(error) None of the %ld registers requiring isolation were selected.

**Description**

There are still registers that require isolation for functional safety, but none are selected to work in.

---

## SRM-021

(info) Selected %ld out of %ld registers requiring isolation for functional safety; %ld registers still require work.

**Description**

This message is purely informational.

---

## SRM-022

(info) Created %ld new tap cells.

**Description**

This message is purely informational.

---

## SRM-023

(warning) The advanced legalizer is not enabled while Functional Safety intent is specified.

Feedback

**Description**

Your design contains functional safety intent which requires the advanced legalizer. Please enable the advanced legalizer with: set_app_options -name place.legalize.enable_advanced_legalizer -value true

---

## SRM-024

(warning) Isolation checks are turned off and violations will not be reported.

**Description**

Certain Functional Safety related rules may require isolation of specific registers. This will be implemented during chip finishing by inserting adjacent tap cells through the create_safety_tap_cells command. So, during the earlier stages of the flow, groups related to rules stating an isolation requirement will fail because of the missing tap cells.

It is helpful to see whether such groups fulfill all other requirements and temporarily skip the isolation requirements. This is exactly what report_safety_status -ignore_isolation does. Groups will be marked passed if they fulfill all requirements other than the isolation requirements.

After tap cells have been inserted, run a regular report_safety_status to confirm that the isolation requirements are abided to.

---

## SRM-025

(info) Deleted routing blockage %s (blockage_group_id %d, layer %s).

**Description**

This routing blockage has been associated via its blockage_group_id to a core of a safety core group (or repelling group bound).

---

## SRM-026

(info) Removed %ld obsolete tap cells.

**Description**

This message is purely informational.

---

## SRM-027

(info) Added tap cell %s.

Feedback

**Description**

This message is purely informational.

---

## SRM-028

(error) Cannot define any restrictions.

**Description**

Due to an unknown reason, restrictions cannot be created.

---

## SRM-029

(info) Port %s will not be buffered because its net has multiple drivers.

**Description**

This input port drives a net that exceeds the maximum fanout limit, but that net will not be buffered because it is connected to another driver.

---

## SRM-030

(info) Port %s will not be buffered because its net is protected by dont_touch.

**Description**

This input port drives a net that exceeds the maximum fanout limit, but because it is protected by dont_touch, it cannot be buffered.

---

## SRM-031

(error) Could not create a buffer for port %s.

**Description**

This input port drives a net that exceeds the maximum fanout limit, but there was a problem in creating a new cell for buffering the net.

---

## SRM-032

(info) Created %s to buffer port %s.

**Description**

This input port drives a net that exceeds the maximum fanout limit. To buffer that net, a new cell has been created.

Feedback

### SRM-033

(error) Failed to insert %s to buffer port %s.

**Description**

This input port drives a net that exceeds the maximum fanout limit, but there was a problem in insert the cell between the port and the net.

## SRT

### SRT-001

(Error) No valid pins to be routed.

**Description**

Among all the input pins, there is no any valid PG pins that can be routed.

**What Next**

Check the pin list to ensure there is at least one PG pin.

### SRT-002

(Error) stripe layers are not specified or valid.

**Description**

The stripe layer is either not specified or not routable.

**What Next**

Check the stripe layer setting.

### SRT-003

(Error) No valid routing layer combinations.

**Description**

The routing layer combination is not routable given the stripe layer.

Feedback

**What Next**

Check the routing layer setting, and make sure that the routing direction of stripe layer, main-trunk layer, sub-trunk layer is either horizontal, vertical, horizontal or vertical, horizontal, vertical.

---

## SRT-004

(Warning) The top layer of pin %s (%s) should be lower than the layer of sub-trunk (%s), skipping it.

**Description**

Please check if routing layers setting correctly.

---

## SRT-005

(Warning) Pin %s does not belong to a PG Net, skipping it.

**Description**

Please check if pin setting correctly.

---

## SRT-006

(Error) association can't generte in read mode.

**Description**

Read mode design can't set association on lib pins.

**What Next**

Please turn off the read mode and try it again.

---

## SRT-007

(Error) The structured route rule: %s has been created in previous flow.

**Description**

Please use remove_structured_route_rule to remove current existing rule.

---

## SRT-008

(Warning) Pin %s is not secondary pg pin, skipping it.

Feedback

**Description**

Please check if lib pin is secondary pg.

---

## SRT-009

(Error) The value of option -number_of_stripes_by_layer is wrong

**Description**

There are a few possible wrong directions here, please confirm. 1. The layer you define is not defined in NDM. 2. The layer cannot be defined by multiple number of stripes. 3. The number of stripes should be 1 or 2. 4. The format of -number_of_stripes_by_layer should be {{layer1 count1} {layer 2 count2} {layer3 count3} .....}

---

## SRT-010

(Error) The option of -stripe_layer, -main_trunk_layer, or sub_trunk_layer is wrong.

**Description**

Please check whether the layer is already defined in ndm. In addition,-stripe_layer(-main_trunk_layer/-sub_trnuk_layer) needs to be the same layer.

---

## SRT-011

(Error) The structured route rule: %s is not existing.

**Description**

Please use create_structured_route_rule to create this rule first.

---

## SRT-012

(Error) Create via rules and constraints failed

**Description**

Create via rule and constraint failed when running autogen.

**What Next**

Please check whether autogen can run on secpg pins or set user_defined_via_ladder to use user-defined via rule.

Feedback

### SRT-013

(Error) The number of rules has exceeded the upper limit of %d, please remove the unused rules.

**Description**

Please use remove_structured_route_rule to remove outdated rules.

### SRT-014

(Error) One of the options %s and %s listed below is required.

**Description**

You must choose one of the options listed below to specify.

### SRT-015

(Warning) The secpg pin: %s already has rule. Will overwrite pin's rule.\n

**Description**

Please note set_structured_route_rule will overwrite pins rule setting.

### SRT-016

(Warning) The secpg lib_pin: %s already has rule. Will overwrite lib_pin's rule.\n

**Description**

Please note set_structured_route_rule will overwrite lib_pins rule setting.

## SSF

### SSF-001

(error) Invalid scope specified for SSF - %s.

**Description**

The value provided for the scope option of the command is not valid. Only a single cell must be specified and it must be a logical hierarchy only.

Feedback

**What Next**

Provide a single valid logical hierarchy cell.

# STIL

## STIL-101

(error) %s

**Description**

This error is generated when you try to read a STIL file with syntax error. The syntax error happens at the next symbol.

**What Next**

Fix the syntax error and read in the file again.

## STIL-102

(error) %s block is not a top level STIL block.

**Description**

This error is generated when you try to read a STIL file without any top level STIL blocks. At least one top level STIL block (except STIL & Header) is required for a valid STIL file.

**What Next**

modify the STIL file to make it valid.

## STIL-103

(error) Can't read version %s of STIL.

**Description**

This error is generated when the STIL parser can not parse the STIL version mentioned. It is usually caused by reading in a ctldb file that was generated by early version of dft compiler.

**What Next**

User have to regenerate the ctldb file with current version of dft compiler.

Feedback

## STIL-104

(information) Using CTL parser version %s on a version %s model.

**Description**

The model's CTL version is no longer supported. This message informs you that the tool will attempt to read the model using a parser designed for a later version of CTL. Most constructs in newer versions are backwards compatible. In all likelihood, the read will be successful.

**What Next**

Pay attention to the next messages. They will inform you whether the read was successful or not.

## STIL-301

(error) Illegal STIL string: %s.

**Description**

This error is generated when the mentioned string in is illegal according to STIL syntax.

**What Next**

Check with STIL syntax, modify the string to make it legal.

## STIL-302

(error) Illegal STIL identifier: %s.

**Description**

This error is generated when the mentioned identifier is illegal according to STIL syntax.

**What Next**

Check with STIL syntax and modify it to legal identifier.

## STIL-303

(error) Cannot find PatternExec with name %s

**Description**

This error is generated when the PatternExec with the specified name is not found in the STIL file.

Feedback

**What Next**

Specify another PatternExec name or modify the existing PatternExec name in STIL file.

---

## STIL-304

(error) Signal %s already defined.

**Description**

This error is generated when the concerned signal is previously defined in the STIL file. Redefinition of signal is not allowed in STIL file.

**What Next**

Remove the one of the dual signal definitions.

---

## STIL-305

(error) Variable %s redefined.

**Description**

This error is generated when the concerned variable is previously defined in the same domain. Redefinition of variable is not allowed in the same domain.

**What Next**

Remove one of the dual variable definitions.

---

## STIL-306

(error) Signals block redefined.

**Description**

This error is generated when the Signals block was redefined. Only one and anonymous Signals block is allowed in STIL syntax.

**What Next**

Remove the duplicated definition of Signals block.

---

## STIL-307

(error) Anonymous SignalGroups block redefined.

Feedback

**Description**

This error is generated when the anonymous SignalGroups block was redefined. Only one anonymous SignalGroups block is allowed in STIL syntax.

**What Next**

Remove the duplicated definition of the anonymous SignalGroups block.

---

## STIL-308

(error) Named %s domain not allowed in this context.

**Description**

This error is generated when it is not allowed to defined a named domain in the current context. e.g. when you try to define a named SignalGroups domain in the CoreTypes block. Only an anonymous SignalGroups domain is allowed to be defined there.

**What Next**

Modify the named domain to an anonymous(unnamed) domain.

---

## STIL-309

(error) Cann't define SignalVariables in %s block.

**Description**

This error is generated when user try to define SignalVariables in the block mentioned. This definition is not supported currently.

**What Next**

Remove the SignalVariable definition from the concerned block.

---

## STIL-310

(error) Cann't define SignalVariableEnums in %s block.

**Description**

This error is generated when user try to define SignalVariableEnums in the block mentioned. This definition is not supported currently.

**What Next**

Remove the SignalVariableEnum definition from the concerned block.

Feedback

## STIL-311

(error) ScanChain Length and number of scancells don't match in ScanChain %s.

**Description**

This error is generated when the specified scan chain length doesn't match the number of scan cells in the ScanChain mentioned.

**What Next**

Check to make them consistent.

## STIL-312

(error) Time expression format are supported.

**Description**

This error is generated when the format of time expression user specified is not supported now. Currently only numerical time expression format is supported.

**What Next**

Modify the concerned time expression to numerical only format.

## STIL-313

(error) The ScanInversion must be 0 or 1 in ScanChain %s.

**Description**

This error is generated when the user specify the ScanInversion value as neither 0 nor 1. The ScanInversion value means the overall inversion from before the first scan cell to after the last scan cell.

**What Next**

Correct the ScanInversion value to either 0 or 1.

## STIL-314

(error) Anonymous ScanStructures block redefined.

**Description**

This error is generated when the anonymous ScanStructures block was redefined. Only one anonymous ScanStructures block is allowed in STIL syntax.

Feedback

**What Next**

Remove the duplicated definition of the anonymous ScanStructures block.

---

## STIL-315

(error) %s Domain %s redefined.

**Description**

This error is generated when the Domain mentioned above is redefined. The Domain can be SignalGroups, ScanStructures, Timing, Procedures or MacroDefs. Each named domain can only be defined once.

**What Next**

Remove the duplicated domain definition.

---

## STIL-316

(error) Anonymous Variables block redefined.

**Description**

This error is generated when the anonymous Variables block was redefined. Only one anonymous Variables block is allowed in STIL syntax.

**What Next**

Remove the duplicated definition of the anonymous Variables block.

---

## STIL-317

(error) Duplicated signal %s in the signal expression.

**Description**

This warning is generated when there exists duplicate signals in a signal expresion.

**What Next**

Check each element in the signal expression, find out and remove the duplicates.

---

## STIL-318

(error) Non-cyclized data is not supported.

Feedback

**Description**

This error is generated when user includes non-cyclized data in a vector statement. Currently the STIL reader only support single cyclized data in a vector statement. For exact meaning of cyclized and non-cyclized data, please refer to STIL syntax.

**What Next**

You may need to remove non-cyclized data and find alternative ways to express that.

---

## STIL-319

(warning) Only constant expression is allowed in %s.

**Description**

This error is generated under given context, integer expression or sigvar expression can only contains constant variables or values, while non-constant variables were used in those expressions.

**What Next**

Replace the non-constant variables with constant variables or values.

---

## STIL-320

(error) %s domain %s does not exist.

**Description**

This error is generated when the specified STIL domain was not defined before. The STIL domain can be SignalGroups, ScanStructures, Timing, Procedures or MacroDefs.

**What Next**

Please check if the domain is referred or defined correctly.

---

## STIL-324

(error) Can't create PatternBurst %s.

**Description**

This error is generated when PatternBurst mentioned above can not be created during model construction. The most probable reason is that the PatternBurst with the same name has already been created before.

Feedback

**What Next**

Check if the duplicated PatternBurst has already been created.

---

## STIL-326

(error) PatternExec block has multiple Timing statements.

**Description**

This error is generated when the PatternExec block has multiple Timing statements. Only one Timing statement is allowed according to STIL syntax.

**What Next**

Remove the duplicated Timing statements in PatternExec block.

---

## STIL-327

(error) PatternBurst %s does not exist.

**Description**

This error is genenrated when the PatternBurst mentioned in the PatternExec block was not defined before. It is required by the STIL syntax to define PatternBurst before referencing.

**What Next**

Check if the PatternBurst was referred or defined correctly.

---

## STIL-328

(error) PatternExec block has multiple PatternBurst statements.

**Description**

This error is generated when multiple PatternBurst statements is included in the PatternExec block. Currently only PatternBurst statement is allowed in PatternExec block according to STIL syntax.

**What Next**

Define a new PatternBurst block to include the multiple PatternBurst statements, and put the new defined PatternBurst in the PatternExec block.

Feedback

## STIL-329

(error) Can't create PatternExec %s.

**Description**

This error is generated when PatternExec mentioned above can not be created during model construction. The most probable reason is that the PatternExec with the same name has already been created before.

**What Next**

Check if the duplicated PatternExec has already been created.

## STIL-330

(error) Too many events in event list.

**Description**

This error is generated when you define a waveform character list, the number of events in the event list is more than the number of wfcs in the wfc list.

**What Next**

Modify your wfc defintion to make them consistent.

## STIL-331

(error) Waveform inheritance not supported.

**Description**

This error is generated when the user specify an InheritWaveform statement in WaveformTable definition. Currently, the waveform inheritance is not supported.

**What Next**

Try alternative ways to reach the goal.

## STIL-332

(warning) Unsupported construct in waveform definition.

Feedback

**Description**

This warning is generated when the construct in the waveform definition is legal but not supported now. e.g. in the definition list of wfcs, currently we only support time-value pair definition. Other constructs are not recognized.

**What Next**

Try alternative ways to reach the goal.

---

## STIL-333

(error) Incomplete time-value pair in waveform definition.

**Description**

This error is generated when there is an imcomplete time-value pair in waveform definition. Currently we only support time-value pair as the definition of wfcs.

**What Next**

Correct it or try alternative ways to reach the goal.

---

## STIL-334

(error) Waveform inheritance not supported.

---

## STIL-335

(error) WaveformTable inheritance not supported.

**Description**

This error is generated when the user specify an InheritWaveformTable statement in WaveformTable definition. Currently, the waveform table inheritance is not supported.

**What Next**

Try alternative ways to reach the goal.

---

## STIL-336

(error) SubWaveforms not supported.

**Description**

This error is generated when the user specify an SubWaveforms statement in WaveformTable definition. Currently, the SubWaveforms is not supported.

Feedback

**What Next**

Try alternative ways to reach the goal.

---

## STIL-337

(error) WaveformTable %s redefined.

**Description**

This error is generated when user redefined a WaveformTable in the same Timing domain. The WaveformTable definition should be unique within one Timing domain.

**What Next**

Remove the duplicated definition of WaveformTable.

---

## STIL-339

(error) Single signal expected for %s.

**Description**

This error is generated when a signal bus is passed in when a single signal is expected. e.g. in the scan chain definition, the scan in and scan out are required to be a single signal.

**What Next**

Modified the signal bus to a single signal.

---

## STIL-340

(error) Signal or SignalGroup %s not defined.

**Description**

This error is generated when user tries to refer to an undefined signal or signal group. Signals and SignalGroups must be defined before being referenced.

**What Next**

Define the signal or signal group before using it.

---

## STIL-341

(error) ScanCell %s not defined.

Feedback

**Description**

This error is generated when user tries to refer to an undefined scancell. ScanCells must be defined before being referenced. They are defined in the ScanStructures blocks.

**What Next**

Define the scancell before using it.

---

## STIL-342

(error) Anonymous BistStructures block redefined.

**Description**

This error is generated when the anonymous BistStructures block was redefined. Only one anonymous BistStructures block is allowed in STIL syntax.

**What Next**

Remove the duplicated definition of the anonymous BistStructures block.

---

## STIL-345

(error) Ambigous parameter matching '%s' in call to '%s'.

**Description**

This error is issued when a parameter is multiple defined in a macro or procedure call.

**What Next**

Modify the macro or procedure call and remove the multiple defined parameter.

---

## STIL-401

(warning) Domain name '%s' already exists in the test model. Overwriting the old one.

**Description**

This warning is issued when a domain name in a STIL file read by read_test_protocol command already exists in the existing test model.

The old domain in the test model will be replaced by the new one.

**What Next**

If you do not want to overwrite the old one, remove the '-overwrite' argument from the read_test_protocol command. This will ignore the new one and keep the old one.

Feedback

## STIL-402

(warning) Domain name '%s' already exists in the test model. Ignoring the new one.

**Description**

This warning is issued when a domain name in a STIL file read by read_test_protocol command already exists in the existing test model.

The old domain in the test model will be preserved, and the domain in the protocol file will be ignored.

**What Next**

If you want to overwrite the old one, specify the '-overwrite' argument in the read_test_protocol command. This will replace the old one by the new one.

## STIL-403

(warning) Overwriting the existing waveform table with new timing.

**Description**

This warning is issued when the existing waveform talbe is overwritten by a new waveform table defined in the test protocol read by read_test_protocol command.

**What Next**

Check if the new waveform table is compatible with the timing in other test modes.

## STIL-404

(error) The timing of signal '%s' is different from the existing one.

**Description**

This error is issued when the waveform of the signal in the test protocol is different from the existing one.

The sequence of events in a waveform should be in canonical order, and the waveforms in the test protocol read and in the existing protocol (or model) should be equal.

DFTCompiler allows only one timing block and waveform table. You cannot read a test protocol that has different timing block from the one in other test protocols in different test modes.

You can replace the old timing with the new timing only if you have no protocol, or you have only one test protocol and replace it in the same test mode.

Feedback

**What Next**

Write out the existing test protocol, and compare the timing block against the timing block of the test protocol you want to read.

## STIL-406

(Error) Signal or SignalGroup %s used in test setup procedure is not defined.

**Description**

This error is generated when user tries to refer to an undefined signal or signal group in test setup. Signals and SignalGroups must be defined before being referenced. Make sure all referenced signals are within double quotes.

**What Next**

Define the signal or signal group before using it.

# STREAM

## STREAM-001

(warning) Incorrect syntax '%s' specified for cell-rename entry. The entry will be ignored.

**Description**

The syntax for the cell-rename entry is not a valid one. Refer the man-page of write_gds for the appropriate syntax.

## STREAM-002

(error) Failed to open the cell-rename map file '%s'.

**Description**

The cell-rename map file could not be opened. Verify the file-permissions and retry.

## STREAM-003

(error) Failed to start the stream-merger.

**Description**

A non-recoverable error occured while merging the stream-files.

Feedback

**What Next**

This is an internal error.

---

## STREAM-004

(error) Failed to merge the %s files.

**Description**

A non-recoverable error occured while merging the stream-files.

**What Next**

This is an internal error.

---

## STREAM-005

(error) Reading directory is not supported. File %s is a directory.

**Description**

The input file is a directory.

---

## STREAM-006

(error) Input file '%s' is neither a GDSII nor an OASIS file.

**Description**

The input file can be either a GDSII file or an OASIS file.

---

## STREAM-007

(error) Invalid suffix '%s' specified for conflict cell renaming.

**Description**

The suffix string should be an alpha-numeric string of maximum size of 10 characters.

---

# STROKE

---

## STROKE-001

(Error) Specified stroke sequence string, %s, is not valid.

Feedback

**Description**

The specified stroke sequence string is not valid. The sequence is comprised of an optional sequence of key modifiers and separated from the path sequence which is a sequence of one or more grid numbers in the range 1-9. See the man page for the set_gui_stroke_binding command for detailed documentation on the format for stroke sequences.

---

## STROKE-002

(Error) Failed to set the stroke binding because the built-in stroke command %s does not exist

**Description**

The specified built-in stroke command name is not valid. Use the report_gui_stroke_builtins command to get a report listing the available built-in commands.

---

## STROKE-003

(Error) Failed to set the gui stroke preference %s because the value was not valid for that preference.

**Description**

The specified stroke preference value is not valid. Please refer to the man page for the set_gui_stroke_preferences command for more details on the preferences.

---

## STROKE-004

(Error) Failed to set the gui stroke preference %s because the preference key was not valid.

**Description**

The specified stroke preference key does not exist. Please refer to the man page for the set_gui_stroke_preferences command for more details on the preferences.

---

## STROKE-005

(Error) Stroke dictionary %s does not exist.

Feedback

**Description**

The specified stroke dictionary does not exist. Use the report_gui_stroke_bindings commands to view the dictionaries that are defined as well as the bindings that they specify.

# SVF

## SVF-1104

(error) Cannot open file %s.

**Description**

The file cannot be opened.

**What Next**

Check to see if the specified file exists and that you have the proper access permissions.

## SVF-1107

(error) "%s" is not an SVF file.

**Description**

The given file does not appear to be an SVF file.

## SVF-1108

(error) The SVF file format is not compatible with this executable.

**Description**

The SVF format of the provided file appears to be newer than the version supported by this executable.

**What Next**

A newer version of this product is needed to run this command on this SVF file.

## SVF-1109

(error) Cannot extract the contents of the currently opened SVF file.

Feedback

**Description**

The extract_svf command is being run on the currently opened SVF file. This file must be closed first using set_svf -off.

**What Next**

Close the SVF file first using "set_svf -off" command before re-running extract_svf command.

---

## SVF-1110

(error) Cannot append to file "%s". File does not exist.

**Description**

Unable to append to the given file because the file appears to be missing.

**What Next**

Check to see if the path to the file is correct.

---

## SVF-3207

(info) Environment variable CDPL_IPV6 enabled on IPV4 host. Unsetting CDPL_IPV6 environment variable.

**Description**

Setting environment variable CDPL_IPV6 on a IPV4 host will result in an error. This environment variable is unset internally in Descartes.

---

## SVF-3210

(error) The app option formality.svf.compact_mode may not be changed at this time.

**Description**

The formality.svf.compact_mode app option may not be changed while there is already an opened SVF.

**What Next**

In order to change the value of this app option, you must first close the currently opened SVF using set_svf -off.

Feedback

# SVR

## SVR-1

(error) Unable to open file '%s'.

**Description**

The Verilog file you tried to open does not exist or has incorrect permissions.

**What Next**

Verify the file name and permissions.

## SVR-2

(information) Verilog read failed.

**Description**

This is a summary informational message indicating that the Verilog file could not be read. Previous error messages will point you at the actual problem source. There are two types of syntax errors: a real violation of Verilog syntax, or reading a Verilog file that has non-structural or other unsupported constructs with this reader.

**What Next**

Review previous error messages. Then, either correct the actual Verilog syntax errors in the file and reread the file, or use a Verilog reader that supports the constructs that are flagged as syntax errors.

## SVR-3

(error) Unsupported construct '%s'\n \tat line %d in '%s'.

**Description**

The reader detected an unsupported construct. Not all unsupported constructs are trapped in this way. Many show up as more simple syntax errors.

**What Next**

Either correct the error by removing the construct or use a Verilog reader that supports the construct.

Feedback

## SVR-4

(error) Expected %s but found '%s'\n \tat line %d in '%s'.

**Description**

This message covers a wide variety of syntax errors. A token was expected, but something else was found. For example, after a module formal list, a close paren is expected, but if it is omitted and a semicolon is found, this message appears.

This can be an indication of a real syntax error. It is also possible for this message to be used when Verilog constructs, which are not supported by this reader, are encountered.

**What Next**

Review the line number reported in the message and determine if a real syntax error needs to be corrected or if the file contains unsupported constructs.

## SVR-5

(error) Expected identifier after %s\n \tat line %d in '%s'.

**Description**

An identifier is expected after the token shown and something else was found.

**What Next**

Review the line number reported in the message and determine if a real syntax error needs to be corrected or if the file contains unsupported constructs.

## SVR-6

(error) Premature end-of-file reading '%s'.

**Description**

The reader detected end-of-file before it was expected. For example, an end-of-file within a module construct before the endmodule would cause this message to be raised.

**What Next**

Correct the error and reread the file.

## SVR-8

(error) Port '%s' is not defined in module terminal list\n \tbut is defined in an %s statement \n \tat line %d in '%s'.

Feedback

**Description**

While processing an input, output, or inout statement, a port was found which did not exist anywhere in the module terminal list.

**What Next**

Correct the module terminal list or remove the port wire from the appropriate input/output/inout declaration.

---

## SVR-9

(error) Duplicate wire/tri/wand/wor declaration for '%s'\n \tat line %d in '%s'.

**Description**

The named wire was found in a wire, tri, wand, or wor statement. However, the wire was already declared in a similar statement.

**What Next**

Ensure that each wire is only declared once.

---

## SVR-10

(error) Illegal assignment %s\n \tat line %d in %s.

**Description**

An assign statement (or wire statement with inline assignment) has one of several errors:

- Nothing is on the left side of the '='. • The left side of the assignment contains an undeclared net or unexpected characters. • The right side of the assignment contains an undeclared net or unexpected characters.

Note that the following syntax for *assign* is not supported:

assign z = ( a );

Use of parentheses is considered non-structural.

**What Next**

Correct the syntax error and reread the file.

---

## SVR-11

(error) Cannot assign to constant%s\n \tat line %d in %s.

Feedback

### Description

There is a constant on the left side of an assignment, which is not allowed.

### What Next

Correct the error, and reread the file.

---

## SVR-13

(error) Number of ports of instance is inconsistent with other instances\n \tat line %d in %s.

### Description

All ordered (non-name based) instances of a design must have the same number of ports. The first such instance sets the number. The following example would raise this error.

```
ND2 i1 (a, b, c);
ND2 i2 (d, e);
```

The first instance has 3 ports, whereas the second has only 2. It's possible that the second instance is missing a comma. For example,

```
ND2 i1 (a, b, c);
ND2 i2 (d, , e);
```

### What Next

Examine the instances to determine which is correct. One might be missing a comma.

---

## SVR-14

(error) Indexing into non-array '%s' is not allowed\n \tat line %d in %s.

### Description

A connection has a wire or port with bus notation, and the wire or port was not declared as a bus. For example, the following would raise this error.

```
input A;

ND2 i1 (A[0], b, c);
```

### What Next

Determine if the wire or port declaration or usage is correct.

---

## SVR-15

(error) Width of port %s (%d) is inconsistent with other instances (%d)\n \tat line %d in %s.

Feedback

### Description

The first instance of a design's port sets its width. The width is inferred from the connections to that port. This error indicates, and a subsequent instance has, a different width for a particular port. The following example would raise this error.

```
D1 i1 (A[15:0], b, c);
D1 i2 (A[17:16], e, f);
```

### What Next

Examine the various instances of the design to see which one is correct.

---

## SVR-16

(error) Constant width overflow\n \tat line %d in %s.

### Description

The constant is too large to be represented. Constants cannot exceed 32K bits.

### What Next

Correct the error and reread the file.

---

## SVR-17

(error) %s constant requires %d bits\n \twhich is too large for %s width %d\n \tat line %d in %s.

### Description

The constant specified is too wide for the given width. The default width for a decimal constant is 32 bits. In all other cases, the width would be specified as in 64'b0. An example error would be specifying a decimal number 2535353678882999122 without a width.

### What Next

Correct the error and reread the file.

---

## SVR-18

(error) Slice direction [%d:%d] does not match array direction\n \tat line %d in %s.

### Description

An array (bus) was declared either ascending (like A[0:3]) or descending (like A[3:0]). The reference to this array is inconsistent with the way it was declared. For example, if the declaration is A[3:0], a reference like A[0:1] would raise this error.

Feedback

**What Next**

Correct the error and reread the file.

---

## SVR-19

(error) Index range [%d:%d] is not within bounds [%d:%d]\n \tat line %d in %s.

**Description**

Some or all of the array (bus) indecies of the reference are out of range of the declaration. For example, if the bus was declared A[15:0], A[31:0] would raise this error, because indecies 31 down to 16 are out of bounds.

**What Next**

Correct the error and reread the file.

---

## SVR-20

(error) Non-terminated comment starting at line %d\n \tof '%s'

**Description**

The reader detected end-of-file in the middle of a C-style comment.

**What Next**

Go to the line number mentioned, and find where the comment should be terminated.

---

## SVR-21

(information) %s converted to a wire with no special attributes\n \tat line %d in %s

**Description**

The verilog constructs wand, wor, and tri are converted to a simple wire with no special attributes. This is just an informational message.

**What Next**

No action.

---

## SVR-22

(error) Duplicate instantiation of '%s' (first instance at line %d)\n \tat line %d in %s

Feedback

**Description**

A duplicate instance name was found. The line number of both the duplicate and the original are shown.

**What Next**

Rename one of the duplicates.

---

## SVR-23

(error) Duplicate module '%s' (first occurrence at line %d)\n \tat line %d in %s

**Description**

A module is defined more than once in the file. The line number of both the duplicate and the original are shown.

**What Next**

Rename one of the duplicates.

---

## SVR-24

(warning) Ignored '%s' construct\n \tat line %d in '%s'.

**Description**

This message covers a variety of constructs which are ignored by the native verilog reader, including *specify*, *parameter*, and so on.

This can be an indication of a real problem, especially in the case of *parameter*. The native verilog reader does not support parameters, so if the parameter is being used, other syntax errors will follow. If the parameter is just defined but not used, then ignoring it will be sufficient.

**What Next**

In almost all cases, no action is necessary. If you have real parameters in your netlist, you must use a different verilog reader which understands parameters.

---

## SVR-25

(error) Global reference to '%s' not valid in this context\n \tat line %d in '%s'.

**Description**

Global references are inter-module references, for example, a connection to a wire in a different module like 'global.gnd'. Although this is part of the verilog language, the native

Feedback

verilog reader has very limited support for global references. They can only be used in connections - they cannot be used in assign statements, tran statements, and so on.

This error is generated when a global reference is used in an unsupported context.

**What Next**

For any usage of global references other than in a connection, you need to use a different verilog reader.

---

## SVR-26

(error) Port '%s' has no defined direction (input/output/inout)\n \tin module %s at line %d in file %s.

**Description**

You received this message because the named port was defined in the module terminal list, but did not appear in an input, output, or inout statement. The line number reported is the line number in the module statement where the port is referenced.

**What Next**

Add an appropriate input, output, or inout statement for the named port.

---

## SVR-27

(error) Duplicate declaration of port '%s' in instance '%s'\n \tat line %d in '%s'.

**Description**

You received this message because the named port was defined twice in the terminal list of the given instance, as in the following example:

```
AN2 i0 (.A(a), .A(b), .Z(z));
```

**What Next**

Remove or replace the duplicate port.

---

## SVR-28

(warning) Number %s is too big. It will be truncated to 32 bits\n \tat line %d in '%s'.

Feedback

### Description

When reading a bus (array) declaration or instance, the msb or lsb was bigger than 32 bits, and was truncated. For example:

```
BOX u1 (.A(a[36'hF00000001:0]), .Z(z));
```

The range of a will be truncated to 1:0.

### What Next

Verify that the netlist is correct. This could be a typo.

---

## SVR-31

(error) Expected %s '%s' to be declared as a range\n \tat line %d in '%s'.

### Description

A port has been declared in an input/output/inout statement as a scalar, but was referenced in the module terminal list using a range. In this example:

```
module test (a, b[0], z);
input b;
```

port 'b' is either declared incorrectly in the input statement, or it is referenced incorrectly in the module statement.

### What Next

Correct one of the errors.

---

## SVR-32

(error) Range of %s port '%s' (%d:%d) does not cover\n \tthe range required by the module statement (%d:%d)\n \tat line %d in '%s'.

### Description

A port has been declared in an input/output/inout statement as a range, but the range was inadequate to cover the range required by references to it from the module statement. In this example:

```
module test ({a, b[2:1]}, b[0], z);
input [1:0] b;
```

the module statement requires a range of 2:0, but the input statement declares 1:0. Either the module statement or the input statement is incorrect.

Feedback

### What Next

Correct one of the errors.

---

## SVR-33

(warning) Port '%s' (%s) has a different direction than\n \tother ports in module formal %d (declared line %d); %s statement\n \tat line %d in '%s'.

### Description

A port has been declared in an input/output/inout statement, but its usage in the module statement creates a bus with mixed directions. For example:

```
module test ({a, b}, z);
output b, z;
input [1:0] a;
```

Port number 1 of the module statement has both inputs and outputs. The first *output* statement sets the direction as output. When the input statement is processed, this warning will be issued, since 'a' and 'b' are concatenated in the first module port, and they are different directions. The first port in the concatenation defines the direction for the entire bus (in this case, an input).

### What Next

Verify that the ports are declared correctly, and consider that the netlist created may not have the port directions that you expect.

---

## SVR-34

(error) Slice direction for '%s' [%d:%d] in module port %d ('%s')\n \tdoes not match declared array direction\n \tat line %d in '%s'.

### Description

A port has been declared in an input/output/inout statement as an array with a particular order, like n:0 or 0:n. Its usage in the given port in the module statement is inconsistent with that order. For example:

```
module test ({a[0:1], b}, z);
input [1:0] a;
input b;
output z;
```

Port number 1 of the module statement references a[0:1], but 'a' is declared 1:0. Either the module statement or the input statement is incorrect.

Feedback

### What Next

Correct one of the errors.

---

## SVR-35

(error) Port wire '%s' was never declared in an input/output/inout\n \tstatement in module %s in file %s.

### Description

A port in the module statement references a wire which was never declared in an input/output/inout statement. For example:

```
module test ({a[0:1], b}, z);
input [1:0] a;
output z;
```

Port number 1 of the module statement references 'b', but 'b' was never declared. Either the module statement or the input statement is incorrect.

### What Next

Correct one of the errors.

---

## SVR-37

(warning) Port ‘%s’ at Port number %d of module '%s' was renamed to '%s'\n\tat line %d in '%s'.

### Description

A port has been found in the module terminal list which needs to be renamed. Ports will be renamed if they are explictly repeated, or if they are a single bit of a bus. For example, in this module statement:

```
module test (a, b[0], a, {a,b});
```

The first port will be named 'a'. The second port will be renamed Port2. The third port will be renamed Port3 because 'a' is already in use. Similarly, the fourth port will be renamed Port4, again because 'a' is already in use. In case one of these generated names is already in use, the Verilog reader will continue to append the port number until a free port name is found.

### What Next

No action necessary.

Feedback

## SVR-38

(error) You are declaring the direction of a port '%s'\n \twhose direction is already specified. (File: %s Line: %d)

### Description

Formality reports this error if a port direction is declared more than once. It is an error if the port re-declared with direction whose direction is already specified.

Example:

```
module test (a, b);
input a;
output b;
output a;  //Error
output b;  //Error
```

In above example port 'a' is declared as 'input' port and later re-declared with 'output' direction. Also port 'b' is declared as a 'output' port and re-declared again as 'output' port. Formality will issue an error in each of these cases.

### What Next

Verify that the ports are declared correctly and correct the netlist.

## SVR-40

(error) Could not open temp file in '%s'

### Description

While reading Verilog, it was necessary to create a temporary file, and the file could not be opened. This could be due to file permissions on the directory, incorrect directory, and so on.

### What Next

Verify that you have access to the given directory. If necessary, change the directory as directed by the application.

## SVR-41

(error) while writing to temp directory '%s':\n \t%s

### Description

An error occured while writing to a temporary file in the given directory. This could be due to insufficient space on the disk, or other disk errors.

Feedback

**What Next**

Use a different temporary directory.

---

## SVR-42

(warning) %s constant '%s' requires %d bits\n \twhich is too large for width %d. Truncated. \n \tAt line %d in %s.

**Description**

The constant specified is too wide for the given width. A simple example would be specifying 2'h1e which is truncated from 00011110 to 10. Another example would be specifying a decimal number 2535353678882999122 without a width. The default width for decimal is 32 so this would be truncated from the MSB.

---

## SVR-50

(error) %s

**Description**

A syntax error occurred while parsing the Verilog file during the preprocessor phase. The message specifies where the error appeared and why it was issued.

**What Next**

Action based on the text of the message.

---

## SVR-51

(error) End of file seen before %s block begun at line %d was ended

**Description**

During preprocessing, a comment or directive was found which crossed the end of file boundry, indicating it wasn't terminated appropriately. This problem likely involves an unbalanced "/*", which will need a terminating "*/", or an ifdef without a terminating endif.

**What Next**

For run-on comments, examine the lines immediately after the one specified in the error. Mark the boundry between code and comment with a terminating "*/".

For (preprocessor) directives, its very likely an `ifdef or `else was not completed with an `endif. Determine what code should fit within the `ifdef, and end it with an `endif.

Feedback

## SVR-52

(error) 'include' directive requires a filename enclosed in double quotes\n \t%s

**Description**

The Verilog preprocessor found a missing or misformed include filename. Here is an example of the correct usage of `include:

`include "myfile.v"

**What Next**

Provide the filename, if missing.

Preface the filename with a double-quote ("), and place another double-quote after the last character in the filename.

## SVR-53

(error) Recursive file inclusion detected for file "%s"

**Description**

While preprocessing the Verilog file, a circular dependency was found in the use of an "`include" directive. This error is issued to prevent a file from including itself in an endless loop. Breaking the need for an include loop will avoid triggering this error.

A file that directly includes itself most likely meant to include another file with a similiar name.

**What Next**

Examine the need for the nested "`include". Most likely, several files all depend on each other. The dependencies should be split up so that one file does not depend on any of the others. This can be achieved by moving needed code or `defines to one central file. When one file no longer depends on the others, the corresponding `include(s) can be removed from that file. This should break the `include loop and avoid this error.

## SVR-54

(error) Unable to open file '%s' included by the 'include'\n \tdirective %s

**Description**

The Verilog preprocessor was unable to open a file specified in an "`include" directive. This is most likely caused by the file being outside of the search path. This error is also triggered if the file permissions prohibit read access.

Feedback

**What Next**

If the file exists in the current directory, ensure that "." is present in the search path.

For files in other directories, add the directory to your search path.

Permissions problems can be ruled out by trying to view the file in an editor. Errors of this variety are not specific to Verilog.

---

## SVR-55

(error) Mismatched directive %s

**Description**

The Verilog preprocessor found a compiler directive used with incorrect coupling. For example, an "`endif" is used without a corresponding "`ifdef" before it.

**What Next**

Delete the mismatched directive or add the missed one.

---

## SVR-57

(warning) Macro %s is redefined %s

**Description**

The Verilog preprocess detected a macro redefinition. The same macro name is provided two different definitions, leading to a single macro name having different meanings in separate parts of the file. Although not an error, this is a potentially hard to find and confusing problem.

**What Next**

If the duplicate macro definition was accidental, provide a different name for one of the usages.

If the duplicate usage is intentional, this warning can be avoided by performing an `undef of the macro name before each duplicate definition.

---

## SVR-58

(error) You are declaring a variable '%s' whose name is already found in the same scope\n \tat line %d in %s

Feedback

### Description

This fatal error occurs when the Verilog Netlist reader encounters a variable name that is already used in that scope. For example:

```
module top(clk, out);
  input clk;
  output out;
  wire a, b;
  GTECH_BUF aaa ( .A(clk), .Z(aaa) );
endmodule
```

### What Next

Correct the source so that the port, net, instance or variable is not redeclared.

---

## SVR-59

(error) Instantiation '%s' has mixed ordered and named port connections\n \tat line %d in %s

### Description

This fatal error occurs when the Verilog Netlist reader encounters a Instantiation with mixed ordered and named port connections. For example:

```
module top (a,b,c,out,out1,out2,out3);
input [1:0] a,b,c;
output out,out1,out2,out3;
and_gate and_instance2 ( {b[0],b[1]},.out(out2));
endmodule
```

### What Next

Correct the source so that the Instantiation does not have mixed port connection.

---

## SVR-60

(error) Token beginning with '%s'\n \texceeds maximum allowable length (%d)\n \tat line %d in '%s'.

### Description

A token was found which exceeds the maximum allowable length.

### What Next

Look for a syntax error, such as missing punctutation, near the line referenced.

Feedback

## SVR-61

(warning) Empty port at Port number %d of module '%s' was renamed to '%s'\n\tat line %d in '%s'.

### Description

You receive this warning message when the port list for a module has empty port, with no local name by which to form connections between its body and the instantiation site.

### Examples

The following legal Verilog statement indicates a module with four ports, the last of which is unconnected. ... module m( a,b,c,); /* Legal, but perhaps not intended */ ...

### What Next

This is a warning message only. No action is required on your part.

However, if the unconnected port is not your intention, remove a comma and then run the command again.

## SVR-62

(error) Mixed Port declaration style in module '%s'

### Description

Verilog module can have port declarations in 'ANSI' and 'non-ANSI' formats. It is illegal to mix both the formats.

### Examples

Following example shows illegal use of non-ANSI style port declarations inside module 'myDesign'. ... module myDesign (input a,b, output c); /* ANSI style */ input a, b; /* non-ANSI style: illegal to have port declarations here*/ ... endmodule

### What Next

Edit source code to follow one port declaration format.

## SVR-63

(error) Type mismatch in assignment to supply net at line %d\n \tin %s.

### Description

There is a type mismatch b/w supply net in LHS & RHS, which is not supported.

Feedback

### What Next

Correct the error, and re-read the file.

---

## SVR-64

(warning) Size mismatch between port & wire declaration for the port \n \t '%s' at line %d in '%s'. \n

### Description

SVR throws this warning when a port is defined as a vector and its corresponding wire declaration is a scalar. For example :

```
module test(out);
output [15:0] out;
wire out = 16'b101;     //'out' was declared initially with range [15:0]
endmodule
```

### What Next

This is a warning message only. No action is required on your part. However, if the range mismatch is not your intention, modify the RTL & re-read the file.

---

## SVR-65

(warning) Continuous assignment statement present in netlist design '%s'\n \tat line %d in %s.

### Description

It is a common situation where assign statements result in a technology-mapped netlist sometimes due to feedthrough paths or two outputs being generated from the same logic where a buffer has not been inserted. Continuous assign statements present in technology-mapped netlist can cause problems in downstream Place and Route tools.

For example :

```
module top(in1,in2,out1,out2,out3,out4);
    input in1, in2;
    output out1,out2,out3,out4;
    wire w1,w2,w3;
    low inst1 (in1,in2,w1,w2);
    assign out1 = w1;        //Warning
    assign out2 = w1;        //Warning
    low inst2 (in1,in2,out1,out2);
    low inst3 (in1,in2,out2,out3);
    low inst4 (in1,in2,out3,out4);
endmodule
```

Feedback

```
module low (in1,in2,o1,o2);
    input in1, in2;
    output o1,o2;

    assign o1 = in1;          //Warning
    assign o2 = in2;          //Warning
endmodule
```

**What Next**

Check if the assign statement is valid.

---

## SVR-66

(warning) Statement at Line %d in '%s'\n \texceeds maximum allowable length (%d).\n \tIncomplete statement will be returned.

**Description**

A statement was found which exceeds the maximum allowable length.

---

## SVR-67

(warning) The undeclared symbol '%s' is assumed to have default\n \tnet type 'wire' at line %d in %s.

**Description**

The RHS of an assignment contains an undeclared net. It will be implicitly declared as wire for Verilog 2001 onwards.

Ex: module x (a, z); input a; output z; assign z = q; //q will be implicitly declared as 'wire' endmodule

**What Next**

Check your design to make sure that you intended an implicit declara- tion for this symbol. If not, add an explicit declaration.

---

# SVW

---

## SVW-001

(warning) Writing SystemVerilog from unlinked design '%s'.

Feedback

**Description**

The current design is not linked and could not be automatically linked. The generated SystemVerilog file will contain only modules from within the current design. Modules from other designs and libraries will not be included. The modules will not be hierarchically ordered.

**What Next**

Link the current design and rerun write_sverilog, if you want a complete or hierarchically ordered SystemVerilog file.

---

## SVW-002

(warning) Inapplicable option '%s' ignored.

**Description**

The specified option is not applicable for unlinked designs. The current design is unlinked.

**What Next**

Link the current design and rerun write_sverilog, if you want a hierarchically ordered SystemVerilog file.

---

## SVW-003

(warning) Non-unique module name '%s' (from library '%s' design '%s') renamed to '%s'.

**Description**

Multiple distinct modules exist with the specified name. Duplicate modules are renamed to a unique name.

**What Next**

The user must make sure that any external scripts are modified to match the now-unique SystemVerilog file.

---

## SVW-004

(error) A %s within the design %s does not have a valid name.

**Description**

The specified object within the design does not have a valid name. The object will be omitted from the SystemVerilog output file.

Feedback

**What Next**

The user should check the design and verify that it is valid.

---

## SVW-005

(warning) Skipping module '%s' from design %s.%s ...

**Description**

The module cannot be written because it is from a non-design design view and would not create valid SystemVerilog. The module is probably from an Abstract or an Outline design view. These design views are abstractions of the full designs. They do not contain the complete design information. Writing such a module would result in incomplete SystemVerilog.

**What Next**

Switch to the design view for this design, then write your SystemVerilog modules from that design.

---

## SVW-006

(error) Cannot write SystemVerilog for design %s.%s.

**Description**

The design cannot be written because it is from a non-design design view and would not create valid SystemVerilog. The module is probably from an Abstract or an Outline design view. These design views are abstractions of the full designs. They do not contain the complete design information. Writing such a module would result in incomplete SystemVerilog.

**What Next**

Switch to the design view for this design, then write your SystemVerilog modules from that design.

---

## SVW-007

(warning) Net name '%s' is omitted from the output file, because the net name does not match a connected port name. The net is implicitly renamed to match one of its connected ports.

Feedback

### Description

The indicated net name is omitted from the output SystemVerilog file, because the net name does not match a connected port name. The ports and pins of the net are connected together by a implicit net in the output file. This net is implicitly named to match one of its ports.

When this SystemVerilog file is read back into the tool, the net will have the same name as one of its ports. Hence the original net name is lost.

---

## SVW-008

(Error) Port bus member name '%s' in port bus '%s' of module '%s' is invalid. Similar errors for each port bus might be reported only once.

### Description

The indicated port bus member is invalid. If it is a legal name in SystemVerilog, ensure that the port is declared in ANSI-C style in the original RTL and read in as SystemVerilog by the tool.

### What Next

Correct the issue and run the *write_sverilog* command again.

---

## SVW-009

(Error) Module '%s' contains unmapped synthetic cell '%s' of '%s'.

### Description

The *write_sverilog* command does not write out a module that contains unmapped synthetic cells because these cells cannot be read back into the tool as RTL.

---

## SVW-010

(Error) An interface port is detected in module '%s'.

### Description

The indicated module has an interface port, which is not supported by the *write_sverilog* command. For example, the following ANSI-C style module declaration contains an interface port a:

```
interface simple_bus;     // Define the interface
   logic req, gnt;
   logic [7:0] addr, data;
   logic [1:0] mode;
```

Feedback

```
   logic start, rdy;
endinterface

module memMod(
   simple_bus a,          // Access the simple_bus interface
   input logic clk);
    ...
endmodule
```

## SVW-011

(Error) A type parameter is detected in module '%s'.

### Description

The indicated module has a type parameter, which is not supported by the *write_sverilog* command.For example, the following ANSI-C style module declaration contains a type parameter T:

```
module mid#(parameter type T = logic)
   (input var T in, output var T out);
 ...
endmodule
```

## SVW-012

(Error) An explicitly named port is detected in module '%s'.

### Description

The indicated module has an explicitly named port, which is not supported by the *write_sverilog* command. The following example shows ANSI-C style port declarations with explicitly named ports P1, P2, and Y:

```
module mymod (
   output .P1(r[3:0]),
   output .P2(r[7:4]),
   ref .Y(x),
   input R );

   logic [7:0] r;
   int x;
endmodule
```

## SVW-013

(Information) No module has been affected by the group_cells, ungroup_cells, or uniquify command, so no module has been written out.

Feedback

**Description**

No module is written out because the *write_sverilog* command writes out only modules that are affected by the *group_cells*, *ungroup_cells*, or *uniquify* command.

## SVW-014

(Information) Module '%s' has been affected by '%s' command.

**Description**

The indicated module has been affected by the *group_cells*, *ungroup_cells*, or *uniquify* command, so the affected module is to be written out by the *write_sverilog* command. In case the module cannot be written out, an appropriate error message will be issued.

## SVW-015

(Error) Missing module header information for module '%s'.

**Description**

The module parameter and port declarations for the mentioned module are missing. It can be caused by one of the following reasons:

- The module parameter and port declarations are not in ANSI-C style.
- The module is not read in SystemVerilog format, but in Verilog or VHDL format.
- The module parameter and port declarations contain unsupported elements, such as type parameter and interface.

# SX

## SX-0001

(Fatal) -custom does not support command %s

**Description**

The -custom option in StarRC is intended for transistor level extraction only. The reported command is not supported.

**What Next**

Refer to reference manual for the set of features supported by the custom license.

Feedback

## SX-0002

(Warning) Cannot initialize error data base %s.

**Description**

StarRC could not initialize data base of error messages.

**What Next**

Check to make sure that you are running a installation StarRC installation.

## SX-0003

(Warning) REMOVE_FLOATING_NETS and REMOVE_FLOATING_PORTS are turned on when XREF_REMOVE_FLOATING_NETS is set to YES.

**Description**

REMOVE_FLOATING_NETS and REMOVE_FLOATING_PORTS are turned on when XREF_REMOVE_FLOATING_NETS is set to YES.

**What Next**

Information only; no action is needed.

## SX-0004

(Warning) Star-CCP flow is the standard flow for transistor level extraction for this process technology, please correct the command setup to achieve accurate extraction results.

**Description**

Star-CCP flow is the standard flow for transistor level extraction for this process technology. But CCP engine is not provided and could result to inaccurate result.

**What Next**

Check setting of CCP_EXTRACTION_FILE and rerun StarRC if necessary.

## SX-0010

(Fatal) The NXTGRD file is no longer supported. Regenerate with grdgenxo version 2010.12 or later.

Feedback

**Description**

Using 2010.12 or later grdgenxo version for the NXTGRD file leads to a better accuracy for StarRC.

**What Next**

Regenerate the NXTGRD file with grdgenxo version 2010.12 or later.

---

## SX-0170

(Warning) Using the NETS command with the * wildcard overrides all other NETS commands.

**Description**

You can use multiple NETS files within a StarRC command file or in a file specified with the NETS_FILE command. All of the commands are honored unless the NETS command is used with the asterisk (*) wildcard. The NETS:* command overrides all other NETS commands. The effect is the same whether the NETS command appears in the command file or in a file specified with the NETS_FILE command.

**What Next**

If you intend to select all nets, you can ignore this message. Otherwise, remove the NETS:* command from the command file.

---

## SX-0171

(Fatal) '%s':HIGH cannot be used with a LEFDEF or Milkyway cell-level database.

**Description**

REDUCTION:HIGH and POWER_REDUCTION:HIGH are not supported in the LEFDEF or Milkyway cell-level flow.

**What Next**

Modify the REDUCTION or POWER_REDUCTION command setting.

---

## SX-0172

(Fatal) Invalid '%s' value specified: '%s'.

**Description**

Not available.

Feedback

### What Next

Contact the Synopsys Support Center.

---

## SX-0173

(Warning) -cleanD mode is chosen, you can NOT run -cleanX, -cleanN or incremental afterwards.

### Description

Because cleanD mode removes internal files as many as possible, certain cleanX|N and incremental run cannot be run on top of a cleanD run.

### What Next

This is a warning message for information only.

---

## SX-0174

(Fatal) Previous run was incremental, but ECO_MODE: YES is not set in your command file. If you want to perform a full extraction from the scratch, please specify '-clean' instead.

### Description

In order to use certain '-clean' options in the Eco extraction flow, the ECO_MODE option should remain unchanged in order to ensure consistent functionality.

### What Next

Please refer to section on ECO extraction in the StarRC user guide.

---

## SX-0175

(Fatal) FS flow(EXTRACTION:FSCOMPARE or FS_EXTRACT_NETS) does not support unequal number of corners and unique nxtgrd files in SIMULTANEOUS_MULTI_CORNER flow.

### Description

The number of corners is unequal to the number of unique nxtgrd files. FS flow(EXTRACTION: FSCOMPARE or FS_EXTRACT_NETS) does not support this.

### What Next

set SIMULTANEOUS_MULTI_CORNER as NO to run FS flow or make the number of corners the same as the number of unique nxtgrd files.

Feedback

## SX-0176

(Fatal) FS_QTF_FILE does not support the simultaneous multicorner flow.

**Description**

The FS_QTF_FILE command enables StarRC to run the Field Solver flow with a QTF file. However, the FS_QTF_FILE command does not support the simultaneous multicorner flow, which is activated by the CORNER_TCAD_GRD_FILES command.

**What Next**

Remove the CORNER_TCAD_GRD_FILES command from the command file and run StarRC (with FS_QTF_FILE) with only one corner.

## SX-0177

(Warning) Cannot open CALIBRE_PDBA_FILE: '%s'. Device properties might be lost.

**Description**

The specified CALIBRE_PDBA_FILE cannot be opened for reading.

**What Next**

Please check if the file exists and you have read permission.

## SX-0178

(Information) MOS_GATE_CAPACITANCE is set to zero because this is a DHE flow.

**Description**

MOS_GATE_CAPACITANCE is set to zero because this is an dual-hiararchy extraction flow (DHE) flow. Device properties are obtained from the CALIBRE_PDBA_FILE or ICV_ANNOTATION_FILE.

**What Next**

Information only; no action is needed.

## SX-0179

(Warning) Device "%s" seems to match the SKIP_PCELLS setting, however exists outside of a pcell. Please double check the input db to see if the device got flattened unintentionally.

Feedback

### Description

The device name is matching with the wildcard settings in SKIP_PCELLS command, but it exists outside of a pcell in the input database. Mismatch between SKIP_PCELL matched in database and SKIP_PCELL recognized may cause accuracy problems, please check that LVS is not run in Flat Mode. Typically, the pcells and the device inside the pcell share a common name, except that the pcells have a suffix after this name.

### What Next

This could happen with flattened input database in which case this message can be ignored; however, if this warning occurs in an extraction run with hierarchical input database, please check if the flattening of the pcell in the input database is intended and/or if star cmd settings need to be changed appropriately to handle the intra-device parasitics in this pcell.

---

## SX-0183

(Fatal) No block name provided.

### Description

No block name provided.

### What Next

BLOCK is a required command to run StarRC. Please set it in StarRC command file.

---

## SX-0186

(Warning) METAL_FILL_POLYGON_HANDLING is set to AUTOMATIC because TRANSLATE_FILL_AS_NET is set.

### Description

METAL_FILL_POLYGON_HANDLING is set to AUTOMATIC because TRANSLATE_FILL_AS_NET is set.

### What Next

You can ignore this message if you want to use TRANSLATE_FILL_AS_NET. Otherwise, to use other METAL_FILL_POLYGON_HANDLING settings, remove the TRANSLATE_FILL_AS_NET command.

Feedback

## SX-0187

(Warning) TRANSLATE_FLOATING_AS_FILL is set to NO because TRANSLATE_FILL_AS_NET is set.

### Description

TRANSLATE_FLOATING_AS_FILL is set to NO because TRANSLATE_FILL_AS_NET is set.

### What Next

You can ignore this message if you want to use TRANSLATE_FILL_AS_NET. Otherwise, to use TRANSLATE_FLOATING_AS_FILL: YES, remove the TRANSLATE_FILL_AS_NET command.

## SX-0188

(Fatal) MILKYWAY_EXPAND_HIERARCHICAL_CELLS is only valid with P&R Milkyway databases.

### Description

MILKYWAY_EXPAND_HIERARCHICAL_CELLS only works with MILKYWAY gate-level flow.

### What Next

Make sure you specify MILKYWAY_LIBRARY in StarRC command file. Make sure MILKYWAY_EXTRAC_VIEW is NO in StarRC command file.

## SX-0189

(Fatal) MILKYWAY_EXPAND_HIERARCHICAL_CELLS and SKIP_CELLS may not be used together.

### Description

MILKYWAY_EXPAND_HIERARCHICAL_CELLS automatically configures the SKIP_CELLS list. So don't specify SKIP_CELLS when MILKYWAY_EXPAND_HIERARCHICAL_CELLS is used.

### What Next

Remove SKIP_CELLS setting in StarRC command file.

Feedback

## SX-0190

(Warning) Disable default port handling for DDB flow because the option BOX_PORT is used.

**Description**

Disable default port handling for DDB flow because the option BOX_PORT is used.

**What Next**

Information only; no action is needed.

## SX-0191

(Fatal) BOX_PORT should be only used in specific flow.

**Description**

StarRC command BOX_PORT should be only used in specific flow.

**What Next**

Remove the option from StarRC command file.

## SX-0192

(Warning) Disable SPICE_SUBCKT_FILE because OA_PORT_ANNOTATION_VIEW is set.

**Description**

Both StarRC commands control the port ordering information. Cannot specify those two commands at the same time.

**What Next**

Remove improper StarRC command.

## SX-0193

(Warning) POWER_EXTRACT:DRV_SHORT should only works with MODEL_BASED_SHORT_HANDLING.

**Description**

POWER_EXTRACT:DRV_SHORT should only works with MODEL_BASED_SHORT_HANDLING. Reset to POWER_EXTRACT:NO.

Feedback

**What Next**

Modify one of the two StarRC command file option, POWER_EXTRACT or MODEL_BASED_SHORT_HANDLING.

---

## SX-0194

(Fatal) MODEL_BASED_SHORT_HANDLING needs connectivity information for short detection. It cannot work with SKIP_CELLS_COUPLE_TO_NET.

**Description**

StarRC command MODEL_BASED_SHORT_HANDLING cannot work with StarRC command SKIP_CELLS_COUPLE_TO_NET.

**What Next**

Remove improper StarRC command.

---

## SX-0195

(Information) SHORT_EQUIV_NODES option is used.

**Description**

StarRC command option SHORT_EQUIV_NODES is found.

**What Next**

You need to do nothing about this message.

---

## SX-0197

(Warning) DPT_SHIFT_BEFORE_PROCESS_EFFECT: YES is ignored because the DPT:SHIFT option is not used.

**Description**

The DPT_SHIFT_BEFORE_PROCESS_EFFECT option configures the sequence of events when both pattern shifts and process effects are present. This option does not have any effect unless DPT:SHIFT is also set.

**What Next**

Remove DPT_SHIFT_BEFORE_PROCESS_EFFECT from the StarRC command file or add DPT:SHIFT.

Feedback

## SX-0199

(Fatal) StarXtract cannot initialize the main library.

**Description**

StarXtract encountered an error while trying to initialize the main library.

**What Next**

Check the Milkyway database. If needed, regenerate the Milkyway data.

## SX-0200

(Warning) Could not open library '%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-0201

(Fatal) Could not get cell boundary for '%s'.

**Description**

StarXtract is getting this cell boundary information from Milkyway database, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

## SX-0202

(Fatal) Found GDS record larger than 65535 bytes in %s.

**Description**

The length of a GDS record is represented by a 2-byte unsigned integer which can only represents 0-65535 range. The length should be in the range of [4, 65535] bytes.

**What Next**

Please check your GDS file.

Feedback

## SX-0203

(Warning) NUM_CORES is larger than the required partitions, and is reduced from '%d' to '%d'.

**Description**

The optimal number of partitions determined by StarRC is less than the value of NUM_CORES specified in the StarRC command file. The value of NUM_CORES is internally changed to match the number of partitions required to conserve compute resources.

**What Next**

Not further action is necessary.

## SX-0204

(Fatal) Command '%s' is not specified in CCP_EXTRACTION_FILE.

**Description**

The following commands are mandatory in the CCP command file specified by the CCP_EXTRACTION_FILE command:

STARRCXT_CCP_EXECUTABLE STARRCXT_CCP_VERSION
STARRCXT_INTERFACE_VIA_LAYERS
STARRCXT_INTERFACE_CONDUCTOR_LAYERS

**What Next**

Add the missing commands to the CCP command file and rerun the CCP flow.

## SX-0205

(Fatal) Found GDS record 0x%x with wrong data type (required: 0-6, actual: %d) in %s

**Description**

The data type of a GDS record must be in the range of [0, 6]. This record is ignored.

**What Next**

Please check your GDS file.

## SX-0206

(Warning) Found GDS record 0x%x with wrong data type (actual: %d, required: %d) in %s

Feedback

**Description**

The data type for the GDS record doesn't follow the GDS specification. Thie record is ignored.

**What Next**

Please reference the GDS specification and check the GDS file.

---

## SX-0208

(Fatal) Database layers are not initialized.

**Description**

Database layers are not correctly initialized; the flow cannot continue.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0209

(Fatal) Illegal interface via layer: '%s'.

**Description**

The layer specified by STARRCXT_INTERFACE_VIA_LAYERS is illegal. Possible causes are the layer is not found in the ITF layers, or the layer is not a via layer.

**What Next**

Correct the layer name and restart the run.

---

## SX-0210

(Fatal) Illegal connection for interface via layer: '%s'.

**Description**

The layer specified in STARRCXT_INTERFACE_VIA_LAYERS has an illegal connection. Possible causes are that its lower metal layer or upper metal layer is not found.

**What Next**

Correct the corresponding layer mapping and restart the run.

Feedback

## SX-0211

(Fatal) Illegal interface conductor layer: '%s'.

**Description**

The layer specified in STARRCXT_INTERFACE_CONDUCTOR_LAYERS is illegal. Possible causes are the layer is not found in the ITF layers, or the layer is not a conductor layer.

**What Next**

Correct the layer name and restart the run.

## SX-0212

(Fatal) Interface conductor layer should be above V0 layer(s).

**Description**

The layers specified in STARRCXT_INTERFACE_CONDUCTOR_LAYERS should be above the layers specified in STARRCXT_INTERFACE_VIA_LAYERS

**What Next**

Correct the layer setup in CCP command file and restart.

## SX-0215

(Fatal) Command line option '%s' previously set.

**Description**

A command-line option cannot be used more than once when running the StarXtract executable.

**What Next**

Check your command-line arguments for multiple occurrences of the same option and use each command-line option no more than once.

## SX-0216

(Fatal) Invalid value '%s' for command line option '%s'

**Description**

The value for the specified command-line option is invalid.

Feedback

**What Next**

Rerun StarRC by specifying the correct command-line option. Refer to the StarRC User Guide for more information.

---

## SX-0217

(Fatal) Missing value for command line option '%s'

**Description**

A command-line option to StarXtract expects a value but the value was not provided.

**What Next**

Rerun StarXtract by providing the required value to the command-line option. Refer to the StarRC User Guide for more information.

---

## SX-0218

(Fatal) Unrecognized command-line option '%s'

**Description**

The specified command-line option to StarXtract is not recognized.

**What Next**

Check the command-line options used. Refer to the StarRC User Guide for more information.

---

## SX-0219

(Fatal) No corners specified with SELECTED_CORNERS command

**Description**

You receive this message because there are no corner(s) specified to extract. You must select at least one corner to extract with SELECTED_CORNERS command.

**What Next**

Specify at least one of the corners defined in the corner file to extract.

---

## SX-0220

(Fatal) Cannot open user defined corners file '%s'

Feedback

**Description**

You receive this message because the user defined corners file specified by CORNERS_FILE command cannot be opened.

**What Next**

Make sure the path to the user defined corners file is correct and the file is not corrupted.

---

## SX-0221

(Fatal) Unexpected keyword '%s' found on line '%d' in CORNERS_FILE '%s'.

**Description**

A corner definition must consist of a corner name, an NXTGRD file and an operating temperature.

**What Next**

Clean the corner definition error before conducting any extraction.

---

## SX-0222

(Warning) Disable SKIP_INSTANCES option because the option BOX_PORT is used.

**Description**

SKIP_INSTANCES is ignored when BOX_PORT is used.

**What Next**

No further action is required.

---

## SX-0224

(Fatal) Unexpected ":" found on line '%d' in CORNERS_FILE '%s'

**Description**

You receive this message because a syntax error is detected during parsing the user defined corners file.

**What Next**

You must clean the syntax errors before conducting any extraction.

Feedback

## SX-0225

(Fatal) Corner '%s' cannot contain ":" on line '%d' in CORNERS_FILE '%s'

**Description**

You receive this message because a syntax error is detected during parsing the user defined corners file.

**What Next**

You must clean the syntax errors before conducting any extraction.

## SX-0226

(Fatal) Corner '%s' cannot contain a backslash on line '%d' in CORNERS_FILE '%s'

**Description**

A syntax error is detected in the corners file specified by the CORNERS_FILE command. The backslash character (\) is not allowed within a corners file.

**What Next**

Correct the syntax errors in the corners file.

## SX-0227

(Fatal) Corner '%s' cannot contain "/" on line '%d' in CORNERS_FILE '%s'

**Description**

A syntax error is detected in the corners file specified by the CORNERS_FILE command. The forward slash character (/) is not allowed within a corners file.

**What Next**

Correct the syntax errors in the corners file.

## SX-0228

(Fatal) Duplicate corner name '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

StarRC has detected duplicate corner names in the corners file specified by the CORNERS_FILE command. All corner names must be unique.

Feedback

**What Next**

Remove the duplicate corner definition or rename one of the corners.

---

## SX-0229

(Fatal) Cannot open TCAD_GRD_FILE '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

StarRC failed to open a TCAD_GRD_FILE defined in the CORNERS_FILE.

**What Next**

Make sure that the file specified by the TCAD_GRD_FILE command is not corrupted or missing and that StarRC has permission to read it.

---

## SX-0230

(Fatal) Invalid operating temperature of '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

You receive this message because a syntax error is detected during parsing an operating temperature defined in CORNERS_FILE.

**What Next**

An operating temperature must be defined in numeric format. Make sure the operating temperature is defined in correct format.

---

## SX-0231

(Fatal) OPERATING_TEMPERATURE is out of range. Use a value between '%f' and '%f' in corner '%s'

**Description**

The operating temperature in the corners file is out of range. The error message specifies the allowable temperature range, in Celsius.

**What Next**

Make sure that OPERATING_TEMPERATURE is defined in Celsius and falls within the supported temperature range.

Feedback

## SX-0232

(Fatal) Unexpected value in CORNER_TYPE is specified in '%s'.

**Description**

An invalid value specified by CORNER_TYPE is detected during parsing the corner definitions. The valid value of CORNER_TYPE must be one of the following values: NOMINAL | OTHER

**What Next**

Change the value of CORNER_TYPE.

## SX-0233

(Fatal) Unexpected text '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

StarRC has detected a syntax error in the corners file specified by the CORNERS_FILE command.

**What Next**

Correct the syntax errors in the corners file.

## SX-0234

(Fatal) Last corner defined in CORNERS_FILE '%s' is incomplete.

**Description**

A corner definition must consist of a corner name, an NXTGRD file and an operating temperature.

**What Next**

Clean the corner definition error.

## SX-0235

(Fatal) More than one corner is defined as CORNER_TYPE: NOMINAL

**Description**

At most one corner can be defined as the NOMINAL corner using the CORNER_TYPE command in the corners file specified by the CORNERS_FILE command.

Feedback

### What Next

Make sure that no more than one corner is defined as the NOMINAL corner.

---

## SX-0236

(Fatal) All selected corners must have OPERATING_TEMPERATURE: GLOBAL_TEMP to enable temperature coefficient output

### Description

You receive this message because to enable temperature coefficient output in a SIMULTANEOUS_MULTI_CORNER(SMC) flow, StarRC requires all selected corners to have OPERATING_TEMPERATURE: GLOBAL_TEMP. This message indicates that the corners you selected in the StarRC command file failed to meet the requirement.

### What Next

Make sure all selected corners meet the requirement by either removing the inapplicable corners from SELECTED_CORNERS or changing the definitions of the inapplicable corners.

---

## SX-0237

(Fatal) Corner '%s' specified in SELECTED_CORNERS command not found in CORNERS_FILE '%s'

### Description

The definition of a corner specified in the SELECTED_CORNERS command cannot be found in the corners file specified by the CORNERS_FILE command.

### What Next

Make sure the corners names in the SELECTED_CORNERS command are correct and that all of the selected corners are defined in the corners file specified by the CORNERS_FILE command.

---

## SX-0238

(Fatal) Corner '%s' specified in SELECTED_CORNERS has a duplicated TCAD_GRD_FILE, DENSITY_OUTSIDE_BLOCK and OPERATING_TEMPERATURE with corner '%s' specified in SELECTED_CORNERS

Feedback

**Description**

The corners that have same TCAD_GRD_FILE, DENSITY_OUTSIDE_BLOCK and OPERATING_TEMPERATURE are duplicated corners in essence.

**What Next**

Remove or modify the duplicated corners to avoid this error.

---

## SX-0239

(Warning) Corner '%s' will be ignored since it has the same NXTGRD file and DENSITY_OUTSIDE_BLOCK settings as corner '%s' and resistance is not being extracted.

**Description**

Temperature multi-corners, in other words, the extraction corners that have same NXTGRD file and different operating temperatures, are only effective in resistance extraction when running simultaneous multi-corner (SMC) flow.

**What Next**

You can ignore this message or remove the ignored corners from SELECTED_CORNERS to avoid this warning.

---

## SX-0240

(Fatal) Corner '%s' specified in SELECTED_CORNERS has a duplicated TCAD_GRD_FILE, DENSITY_OUTSIDE_BLOCK and OPERATING_TEMPERATURE or duplicated TCAD_GRD_FILE and different mapping file with corner '%s' specified in SELECTED_CORNERS

**Description**

You receive this message because multiple corners in SELECTED_CORNERS have same TCAD_GRD_FILE, DENSITY_OUTSIDE_BLOCK and OPERATING_TEMPERATURE or have same TCAD_GRD_FILE but different mapping file. Corners that have same TCAD_GRD_FILE and OPERATING_TEMPERATURE are essentially duplicated. Extracting duplicated corners should be avoided. Corners that have same TCAD_GRD_FILE should have same mapping file.

**What Next**

Make sure no duplicated corners are selected to extract and make sure the corners with same TCAD_GRD_FILE have same mapping file.

Feedback

## SX-0241

(Fatal) Macro %s doesn't define valid SIZE/PIN in LEF or DIEAREA/PINS in DEF for StarRC to calculate its placement at (%d, %d, %s) in the design %s!

**Description**

If a macro is rotated in the design, it may require valid macro size for StarRC to place it correctly in the design. StarRC uses SIZE/PIN in the MACRO for LEF, or DIEAREA/PINS for DEF.

**What Next**

Check the macro definition in the LEF or DEF files.

## SX-0242

(Warning) Macro %s doesn't define valid SIZE/PIN in LEF or DIEAREA/PINS in DEF for StarRC. Such macro placement may introduce problems in extraction!

**Description**

StarRC suggests to define valid SIZE/PIN in LEF or DIEAREA/PINS in DEF to avoid possible problems in extraction.

**What Next**

Please check the definition of the macro in LEF/DEF files.

## SX-0243

(Fatal) Invalid layer '%s' in the METAL_SHEET_OVER_AREA command.

**Description**

This error message might be caused by several conditions:

(1) The layer specified in the METAL_SHEET_OVER_AREA command is not valid. You must specify a database metal layer name from the mapping file.

(2) The specified layer might cause shorts.

**What Next**

Correct the layer name in the METAL_SHEET_OVER_AREA command in the StarRC command file.

Feedback

## SX-0244

(Fatal) Incorrect lower-left and upper-right coordinates: '%s' '%s' '%s' '%s' in the METAL_SHEET_OVER_AREA command.

**Description**

The geometry of the specified metal sheet is not correct. You must specify legal bounding box coordinates.

**What Next**

Correct the METAL_SHEET_OVER_AREA arguments in the StarRC command file.

## SX-0245

(Warning) With UNIMPORTANT_NETS command, both TRANSLATE_FLOATING_AS_FILL and REMOVE_FLOATING_NETS commands are missing.

**Description**

When using UNIMPORTANT_NETS command, you must set TRANSLATE_FLOATING_AS_FILL or REMOVE_FLOATING_NETS.

**What Next**

See the StarRC User Guide.

## SX-0246

(Information) Ignoring REMOVE_FLOATING_NETS:YES becuse TRANSLATE_FLOATING_AS_FILL:YES is specifed.

**Description**

The commands TRANSLATE_FLOATING_AS_FILL:YES and REMOVE_FLOATING_NETS:YES are incompatible. Ignoring the latter command.

**What Next**

See the StarRC User Guide.

## SX-0247

(Information) Since TRANSLATE_FLOATING_AS_FILL is set to YES, floating nets are translated as floating metal fill. Metal fill polygon handling applies only to floating metal fills.

Feedback

**Description**

This message gives more details about the handling of floating nets and metal fill. It is for informational purposes only.

**What Next**

Consult StarRC User Guide for more information.

---

## SX-0248

(Warning) DEF macro %s has no DIEAREA. Use (%d %d %d %d) calculated from PINS placement instead.

**Description**

If a DEF macro has no DIEAREA, StarRC only uses PIN placements to calculate the bounding box of the DEF macro for performance consideration. However, bounding box calculated in such way may not be accurate. If the DEF macro is rotated in the design, it may require the accurate bounding box to calculate the transformation and place the macro correctly.

StarRC suggests that DEF macros always define DIEAREA to avoid potential issues.

**What Next**

Please make sure the reported bounding box is accurate.

---

## SX-0249

(Fatal) Zone metal net names conflict with names in the input database.

**Description**

Net names referenced by the ZONE_METAL_GDSII_FILE conflict with names in the input database.

**What Next**

Check the net names used in the file specified by the ZONE_METAL_GDSII_FILE command.

---

## SX-0250

(Fatal) Failed to run CCP executable: '%s'

**Description**

Failed to run CCP executable.

Feedback

**What Next**

Check to make sure CCP executable is installed correctly. Contact the Synopsys Support Center if necessary.

---

## SX-0251

(Fatal) Zone metal net name conflicts with the SKIP_CELLS_COUPLE_TO_NET: %s command.

**Description**

A net name referenced by the ZONE_METAL_GDSII_FILE conflicts with the net specified in the SKIP_CELLS_COUPLE_TO_NET command.

**What Next**

Change the net name in either the ZONE_METAL_GDSII_FILE or the SKIP_CELLS_COUPLE_TO_NET command.

---

## SX-0252

(Fatal) Zone metal net name conflicts with the ZONE_COUPLE_TO_NET: %s command.

**Description**

A net name referenced by the ZONE_METAL_GDSII_FILE conflicts with the net specified in the ZONE_COUPLE_TO_NET command.

**What Next**

Change the net name in either the ZONE_METAL_GDSII_FILE or the ZONE_COUPLE_TO_NET command.

---

## SX-0253

(Fatal) Zone metal net name conflicts with the SHEET_COUPLE_TO_NET: %s command.

**Description**

A net name referenced by the ZONE_METAL_GDSII_FILE conflicts with the net specified in the SHEET_COUPLE_TO_NET command.

**What Next**

Change the net name in either the ZONE_METAL_GDSII_FILE or the SHEET_COUPLE_TO_NET command.

Feedback

## SX-0254

(Fatal) TSV Layer '%s' is not defined in the ITF file.

**Description**

Through-silicon via (TSV) extraction is enabled with the 3D_IC_TSV_COUPLING_EXTRACTION command, but the TSV layer is not defined in the ITF file. TSV extraction cannot be performed.

**What Next**

Check if the ITF file is correct. Alternatively, disable TSV extraction by setting the 3D_IC_TSV_COUPLING_EXTRACTION command to NONE or by removing it from the StarRC command file.

## SX-0255

(Severe) StarRC task %s failed. For more details, see task summary file '%s'.

**Description**

A StarRC task has failed to complete successfully.

**What Next**

For more details on the cause of the failure, check the summary file for this task located in ./star/summary/.xxxx.sum. Contact the Synopsys Support Center if you need further help.

## SX-0256

(Warning) RSUB_VS_SPACING table is not defined in ITF file.

**Description**

If you use the 3D_IC_TSV_COUPLING_EXTRACTION:RCSUB command in the StarRC command file, you must provide a RSUB_VS_SPACING table within the TSV block in the ITF file.

**What Next**

Check if the ITF file is correct or modify the 3D_IC_TSV_COUPLING_EXTRACTION:RCSUB command.

## SX-0257

(Warning) incompatible Rapid3d version. Rapid3d will check out its separate licenses.

Feedback

**Description**

Rapid3d version is incompatible with StarRC version.

**What Next**

Check the User Guide for more information on the Field Solver flow. Contact the Synopsys Support Center for further details.

---

## SX-0258

(Warning) FS option -perc_self is set to a value larger than 0.5. FSCOMPARE reports may not be accurate enough to validate StarRC extraction results.

**Description**

Larger accuracy tolerance for the field solver can result in faster runtime. However the FS results may not have sufficient accuracy to validate extraction results.

**What Next**

For more information on accuracy setting in the field solver flow, consult the User Guide.

---

## SX-0259

(Warning) CSUB_VS_SPACING table is not defined in ITF file.

**Description**

If you use the 3D_IC_TSV_COUPLING_EXTRACTION:RCSUB command in the StarRC command file, you must provide a CSUB_VS_SPACING table within the TSV block in the ITF file.

**What Next**

Check if the ITF file is correct or modify the 3D_IC_TSV_COUPLING_EXTRACTION:RCSUB command.

---

## SX-0260

(Fatal) FS flow does not support CCP_EXTRACTION_FILE together with SIMULTANEOUS_MULTI_CORNER.

**Description**

FS CCP flow does not support SIMULTANEOUS_MULTI_CORNER yet.

Feedback

**What Next**

Run FS CCP flow without SIMULTANEOUS_MULTI_CORNER command.

---

## SX-0261

(Fatal) Failed to run field solver using the command: '%s'

**Description**

Field solver run failed.

**What Next**

Make sure you are running from a proper StarRC installation. If you need further help, call the Synopsys Support Center.

---

## SX-0262

(Warning) LEF/NDM macro %s merged with FOREIGN (%d %d %s) and GDS/OASIS content is 5%% larger than its defined SIZE.

**Description**

If the GDS/OASIS merged LEF/NDM cell is larger than its SIZE in LEF/NDM, its FOREIGN in LEF/NDM or GDS content might be problematic and will result in possible extraction problems, s.t. false shorts.

**What Next**

Please check the FOREIGN in the LEF/NDM macro or GDS/OASIS content.

---

## SX-0267

(Fatal) INSTANCE_PORT: PORT_DIR is not supported!

**Description**

INSTANCE_PORT: PORT_DIR currently doesn't support port directions defined in SKIP_CELL_PORT_PROP_FILE when XREF != NO.

**What Next**

Please review your StarRC command file.

---

## SX-0268

(Fatal) INSTANCE_PORT: '%s' uses invalid type.

Feedback

**Description**

Invalid type for INSTANCE_PORT command. Currently supported types are: < NOT_CONDUCTIVE | CONDUCTIVE | EXPLODE | SUPERCONDUCTIVE | MULTIPLE | CAPACITIVE | SUFFIXED >.

**What Next**

Change type to the one of the supported.

---

## SX-0269

(Fatal) Parse error in INSTANCE_PORT command: %s .

**Description**

Incorrect syntax for the command INSTANCE_PORT command. Command syntax is: INSTANCE_PORT: <type> [<type2>] [[CELL <wildcard>] [INST <wildcard>] [PORT <wildcard>] [PORT_DIR <IN|OUT|INOUT>]].

**What Next**

Correct syntax of the command.

---

## SX-0271

(Fatal) Unknown command (option) name in file %s Line: %s.

**Description**

StarRC does not recognize the name of a command (also known as an option) in the StarRC command file.

For example, the following line in a command file results in a SX-0271 error because the command name is misspelled (it should be INSTANCE_PORT).

INSTACE_PORT: CONDUCTIVE

**What Next**

Verify that the intended command name is correctly spelled. Consult the StarRC User Guide for more information about accepted commands.

---

## SX-0272

(Fatal) FS_DB Failed (see file '%s')

Feedback

**Description**

FS_DB stage failed unexpectedly. See the log file mentioned in message above to find the cause.

**What Next**

Correct the run settings based on the log file mentioned in message above. If the issue still exists, contact the Synopsys Support Center.

---

## SX-0273

(Fatal) Unknown keyword in file %s Line: %s .

**Description**

StarRC does not recognize a keyword used in the StarRC command file. A keyword is a word used to specify the setting of a StarRC command.

For example, the following line in a command file results in a SX-0273 error because the keyword name is misspelled (it should be CONDUCTIVE).

INSTANCE_PORT: CONDUCIVE

**What Next**

Verify that the intended keyword is correctly spelled. Consult the StarRC User Guide for more information about accepted keywords for specific commands.

---

## SX-0274

(Fatal) INTERNAL Error: unable to parse technology file.

**Description**

A consistency check failed during the parsing of a StarRC command file or an internal file produced by StarRC.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0275

(Fatal) Netlist VI PostProcess command Failed.

**Description**

VI post process command failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-0276

(Fatal) Internal error: report file '%s' does not exist

**Description**

StarRC cannot find the internal file mentioned in message above.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0277

(Warning) Failed to create symbolic link file to '%s'

**Description**

A system call to create a symbolic link failed.

**What Next**

Check to make sure that disk permissions are correct and that disk response is normal. For further details, contact the Synopsys Support Center.

---

## SX-0280

(Fatal) %s '%s' does not exist.

**Description**

An expected input file does not exist. The missing file might be an input file specified in the StarRC command file, or it might be an internally generated intermediate file.

**What Next**

If a user-specified input file is missing, verify that the file exists and has the requisite permissions for reading.

If an internally generated intermediate file is missing, contact the Synopsys Customer Support Center.

Feedback

## SX-0281

(Fatal) Invalid DP submission command %s : '%s'.

**Description**

The DP submission command specified in the error message is set to an invalid value.

**What Next**

Modify the value of the DP submission command. The correct choice depends on your computing environment. Refer to the StarRC User Guide for more information.

## SX-0282

(Fatal) Command %s is not supported anymore. Please remove it from the command file.

**Description**

User is attempting to run an obsolete command.

**What Next**

See StarRC user guide.

## SX-0284

(Fatal) The NUM_PARTS command is not supported.

**Description**

The NUM_PARTS command is not supported. For more information about distributed processing in this version of the StarRC tool, see the StarRC User Guide.

**What Next**

Remove the NUM_PARTS command from the StarRC command file. Use the NUM_CORES command to specify distributed processing.

## SX-0285

(Fatal) Working directory must be specified with an absolute path.

**Description**

-chdir option is intended for use with remote batch mode execution. Consequently it must specify an absolute path.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-0286

(Fatal) Unable to change to specified working directory prior to execution.

**Description**

You must specify global absolute network path for the working directory, and it must be visible from the target host.

**What Next**

See StarRC user guide.

---

## SX-0289

(Fatal) MAGNIFICATION_FACTOR cannot be used in HALF NODE flow where the scaling factor is specified in the nxtgrd file.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0290

(Warning) HALF_NODE_SCALE_FACTOR detected in nxtgrd file, setting NETLIST_UNSCALED_COORDINATES:YES for unshrunk coordinates.

**Description**

StarRC automatically sets NETLIST_UNSCALED_COORDINATES to YES when HALF_NODE_SCALE_FACTOR is detected in the nxtgrd file. This ensures that the netlist coordinates are unscaled, in other words, they are full node coordinates.

**What Next**

If your design or process contains a half-node scale factor, no action is required on your part; this message is for informational purpose only. Refer to the sections on NETLIST_UNSCALED_COORDINATES and HALF_NODE_SCALE_FACTOR in the StarRC user guide for additional details. If you see this warning message and your design does not contain a half-node scale factor, contact the Synopsys Support Center.

Feedback

## SX-0291

(Warning) HALF_NODE_SCALE_FACTOR detected in nxtgrd file, setting NETLIST_UNSCALED_RES_PROP:YES for unshrunk coordinates.

**Description**

StarRC automatically sets NETLIST_UNSCALED_RES_PROP to YES when HALF_NODE_SCALE_FACTOR is detected in the nxtgrd file. This ensures that the resistor properties are unscaled, in other words, they are full node values.

**What Next**

If your design or process contains a half-node scale factor, no action is required on your part; this message is for informational purpose only. Refer to the sections on NETLIST_UNSCALED_RES_PROP and HALF_NODE_SCALE_FACTOR in the StarRC user guide for additional details. If you see this warning message and your design does not contain a half-node scale factor, contact the Synopsys Support Center.

## SX-0292

(Warning) HALF_NODE_SCALE_FACTOR detected in nxtgrd file, setting MAGNIFY_DEVICE_PARAMS:NO for unshrunk device properties.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-0293

(Fatal) MAGNIFICATION_FACTOR have to be greater than 0

**Description**

MAGNIFICATION_FACTOR can only accept positive number.

**What Next**

Assign positive number for MAGNIFICATION_FACTOR

## SX-0294

(Fatal) METAL_FILL_GDS_MAG/METAL_FILL_OASIS_MAG must to be larger than 0

Feedback

**Description**

METAL_FILL_GDS_MAG/METAL_FILL_OASIS_MAG can only accept positive number.

**What Next**

Assign positive number for METAL_FILL_GDS_MAG/METAL_FILL_OASIS_MAG.

---

## SX-0295

(Fatal) No block name provided

**Description**

StarRC requires BLOCK in StarRC command file be specified.

**What Next**

Provide BLOCK setting in StarRC command file.

---

## SX-0296

(Fatal) StarRC cannot detect the input database

**Description**

StarRC can determine whether it's MILKYWAY, LEF/DEF, CALIBRE, AGDS, or NDM flows.

**What Next**

Provide corresponding input database source setting in StarRC command file.

---

## SX-0297

(Fatal) BLOCK and DB top block are not the same BLOCK = '%s' DB_BLOCK = '%s'

**Description**

The setting in BLOCK command has to be the same as the top block name stored in the input database.

**What Next**

Provide correct BLOCK setting in StarRC command file.

---

## SX-0298

(Warning) Unable to open PARA view.

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0299

(Warning) SHORT_PINS_IN_CELLS option is not supported for the selected database since it does not contain structres for EEQ pins. This option will be ignored.

**Description**

SHORT_PINS_IN_CELLS supports MILKYWAY, LEF/DEF, and NDM flow only. Other flows don't have EEQ information so this option will be ignored.

**What Next**

If this is expected, no action is needed.

---

## SX-0300

(Severe) Map file '%s' does not exist

**Description**

MAPPING_FILE is required by StarRC.

**What Next**

Provide MAPPING_FILE in StarRC command file.

---

## SX-0303

(Fatal) TCAD_GRD_FILE contains unrecognized syntax.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-0304

(Fatal) TCAD_GRD_FILE contains SEARCH_DISTANCE for one or more layers. This feature is not supported for Milkyway or Lef/Def databases. Please supply a TCAD_GRD_FILE which does not contain SEARCH_DISTANCE.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-0305

(Fatal) Not enough layers specified in UNIMPORTANT_NETS_LAYER_CONNECT: '%s'

**Description**

StarRC needs at least 2 different layers set in option for reconnect.

**What Next**

Set correct layers for option and rerun StarRC.

## SX-0306

(Fatal) Invalid layer name '%s' specified in UNIMPORTANT_NETS_LAYER_CONNECT.

**Description**

Invalid layer is specified in UNIMPORTANT_NETS_LAYER_CONNECT.

**What Next**

Set correct layer and rerun StarRC.

## SX-0308

(Warning) Global wildcard '%s' is not supported in SKIP_INSTANCES option. This entry will be ignored.

**Description**

SKIP_INSTANCES doesn't support global wildcard '*', '!*'.

Feedback

**What Next**

Specify the instance names directly or provide more specific wildcard settings like "inst*" in StarRC command file.

---

## SX-0309

(Warning) Device '%s' set in 3D_IC_FILTER_DEVICE is not found.

**Description**

Device set in 3D_IC_FILTER_DEVICE is not found in input data.

**What Next**

Information only; no action is needed.

---

## SX-0310

(Fatal) Instance '%s' port number is not 2.

**Description**

Device set in 3D_IC_FILTER_DEVICE must have 2 ports to connect signal on front side and back side.

**What Next**

Check the devices set in 3D_IC_FILTER_DEVICE and rerun StarRC.

---

## SX-0311

(Warning) Net %s not extracted.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0314

(Severe) SkipCell '%s' is not found in design

**Description**

StarRC cannot find this skip cell in the input database.

Feedback

**What Next**

Provide correct skip cell settings in StarRC command file.

---

## SX-0315

(Fatal) Found missing skip cells

**Description**

StarRC detects there are some skip cell names listed in SKIP_CELLS cannot be found in the input database.

**What Next**

Provide correct skip cell settings in StarRC command file.

---

## SX-0316

(Warning) Reducing the number of partitions from %d to %d.

**Description**

The NUM_PARTS is larger than this design need, StarRC automatically adjust the number of partitions.

**What Next**

Information only. No action is needed.

---

## SX-0317

(Fatal) Could not open file dist_cuts for writing.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0320

(Fatal) No compare directory provided in XREF flow.

**Description**

No compare directory provided in XREF flow.

Feedback

**What Next**

Please provide compare directory with COMPARE_DIRECTORY to run XREF flow. Or please use XREF: NO in StarRC command file.

---

## SX-0321

(Fatal) Schematic block '%s' is not a valid equiv point.

**Description**

In XREF:YES or XREF:COMPLETE, it is requested for schematic block to be a valid equiv point.

**What Next**

Please check LVS run result. Or you can use XREF:NO for StarRC run.

---

## SX-0322

(Fatal) Cannot use MODEL_TYPE:SCHEMATIC with XREF:NO.

**Description**

The MODEL_TYPE:SCHEMATIC command specifies that the reference model comes from the schematic. However, the XREF:NO command specifies to use the layout net names. These two commands cannot be used together.

If the MODEL_TYPE command is not present in the command file, its setting defaults to LAYOUT.

If the XREF command is not present in the command file, its setting defaults to NO.

**What Next**

Remove the MODEL_TYPE:SCHEMATIC command or use the XREF:YES command in the StarRC command file.

---

## SX-0323

(Fatal) Cannot use MODEL_TYPE:SCHEMATIC with XREF_USE_LAYOUT_DEVICE_NAME:YES.

**Description**

The MODEL_TYPE:SCHEMATIC command cannot be used with the XREF_USE_LAYOUT_DEVICE_NAME:YES command.

Feedback

If the MODEL_TYPE command is not present in the command file, its setting defaults to LAYOUT.

If the XREF_USE_LAYOUT_DEVICE_NAME command is not present in the command file, its setting defaults to NO.

**What Next**

Remove the MODEL_TYPE:SCHEMATIC command or use the XREF_USE_LAYOUT_DEVICE_NAME:NO command in the StarRC command file.

---

## SX-0324

(Fatal) Invalid MODEL_TYPE value : '%s'

**Description**

An invalid keyword is specified for the MODEL_TYPE command. Valid keywords are SCHEMATIC and LAYOUT. If the MODEL_TYPE command is not present in the command file, the setting defaults to LAYOUT.

**What Next**

Correct the MODEL_TYPE command to use a valid keyword or remove the command from the command file.

---

## SX-0325

(Fatal) NETLIST_TYPE: unknown type '%s'. Possible types are: [no_couple] [R | Cg | Cc | RCg | RCc].

**Description**

An invalid setup is detected in NETLIST_TYPE command.

**What Next**

Correct the command setting and restart.

---

## SX-0326

(Warning) %s is not supported when EXTRACT_RES_BODY_COUPLING:YES and will be ignored.

**Description**

StarRC cannot run with both EXTRACT_RES_BODY_COUPLING:YES and the specified option, therefore the specified option is ignored.

Feedback

**What Next**

If this is acceptable, no action is needed otherwise contact the Synopsys Support Center.

---

## SX-0329

(Warning) CAP_DISTRIBUTION_SEGMENT_LENGTH is automatically set equal to NET_SEGMENT_CUT_LENGTH.

**Description**

CAP_DISTRIBUTION_SEGMENT_LENGTH can be set as minimum threshold for deciding the capacitance distribution during extraction. NET_SEGMENT_CUT_LENGTH is the maximum value for polygon segmentation. The value set on NET_SEGMENT_CUT_LENGTH is smaller than CAP_DISTRIBUTION_SEGMENT_LENGTH. To maintain the effects of CAP_DISTRIBUTION_SEGMENT_LENGTH, its value is automatically set to NET_SEGMENT_CUT_LENGTH.

**What Next**

Remove CAP_DISTRIBUTION_SEGMENT_LENGTH or set it to smaller than NET_SEGMENT_CUT_LENGTH.

---

## SX-0330

(Warning) CAP_DISTRIBUTION_SEGMENT_LENGTH is larger than default NET_SEGMENT_CUT_LENGTH value, it does not take effect.

**Description**

CAP_DISTRIBUTION_SEGMENT_LENGTH can be set as minimum threshold for deciding the capacitance distribution during extraction. The value set on this option is larger than NET_SEGMENT_CUT_LENGTH which is the largest segmentation. So the value of CAP_DISTRIBUTION_SEGMENT_LENGTH can never be achieved during extraction, hence it is ignored.

**What Next**

Modify the value of CAP_DISTRIBUTION_SEGMENT_LENGTH equal to or less than NET_SEGMENT_CUT_LENGTH.

---

## SX-0334

(Fatal) CCP_NUM_PARTS is only supported in CCP flow.

Feedback

**Description**

CCP_NUM_PARTS is only supported in CCP flow (when CCP_EXTRACTION_FILE is set).

**What Next**

Change the command setting and restart.

---

## SX-0335

(Fatal) CCP_ANNOTATION_FILE can't work when CCP_EXTRACTION_FILE is not set.

**Description**

CCP_ANNOTATION_FILE can't work when CCP_EXTRACTION_FILE is not set.

**What Next**

Set CCP_EXTRACTION_FILE in StarRC command file.

---

## SX-0337

(Fatal) A MAPPING_FILE command must be specified in the StarRC command file.

**Description**

The MAPPING_FILE command specifies a file containing physical layer mapping information between the design database and the nxtrgrd file. The StarRC tool requires at least one mapping file to perform extraction.

**What Next**

Add the MAPPING_FILE command to the StarRC command file.

---

## SX-0338

(Warning) EXTRACT_VIA_CAPS: FS is set, but FS_EXTRACT_NETS is not set. Setting EXTRACT_VIA_CAPS to NO.

**Description**

EXTRACT_VIA_CAPS: FS must be used with FS_EXTRACT_NETS. Since FS_EXTRACT_NETS is not set, StarRC sets EXTRACT_VIA_CAPS to NO.

**What Next**

If this behavior is acceptable, no action is required. Otherwise, if you want to use EXTRACT_VIA_CAPS: FS, you must also specify FS_EXTRACT_NETS.

Feedback

## SX-0339

(Fatal) METAL_FILL_POLYGON_HANDLING must be IGNORE GROUNDED FLOATING or AUTOMATIC.

**Description**

METAL_FILL_POLYGON_HANDLING must be IGNORE GROUNDED FLOATING or AUTOMATIC.

**What Next**

Use valid settins for METAL_FILL_POLYGON_HANDLING in StarRC command file.

## SX-0340

(Fatal) SUBSTRATE_SEGMENT_CUT_LENGTH must to be larger than or equal to 1 micron.

**Description**

In the StarRC command file, the value of SUBSTRATE_SEGMENT_CUT_LENGTH is less than 1 micron.

**What Next**

In the StarRC command file, set SUBSTRATE_SEGMENT_CUT_LENGTH to be larger than or equal to 1 micron.

## SX-0341

(Fatal) METAL_SLOT_LONG_DIMENSION_LENGTH must to be larger than or equal to 1 micron.

**Description**

In the StarRC command file, the value of METAL_SLOT_LONG_DIMENSION_LENGTH is less than 1 micron.

**What Next**

In the StarRC command file, set METAL_SLOT_LONG_DIMENSION_LENGTH larger than or equal to 1 micron.

## SX-0342

(Fatal) Invalid MILKYWAY_REF_LIB_MODE, '%s'

Feedback

**Description**

Invalid MILKYWAY_REF_LIB_MODE, valid settings are: NONE, HIER, FILE.

**What Next**

Set MILKYWAY_REF_LIB_MODE with correct setting.

---

## SX-0344

(Fatal) No schematic netlist is provided for a run that specifies XREF: COMPLETE.

**Description**

The XREF: COMPLETE command requires a schematic netlist.

**What Next**

For Hercules flows, use the EVACCESS_DIRECTORY command in the StarRC command file.

For IC Validator flows, use the ICV_SCHEMATIC_NETLIST or ICV_RUNSET_REPORT_FILE command in the StarRC command file.

---

## SX-0345

(Fatal) No evaccess directory provided

**Description**

No evaccess directory provided in StarRC command file or ICV_RUNSET_REPORT_FILE.

**What Next**

Please make sure EVACCESS_DIRECTORY is set in StarRC command file or ICV_RUNSET_REPORT_FILE.

---

## SX-0346

(Fatal) Option CALIBRE_IXF_FILE is required for Calibre input.

**Description**

You are running cross reference flow (XREF:YES) with Calibre CCI database. Option CALIBRE_IXF_FILE is required for input.

Feedback

**What Next**

Set CALIBRE_IXF_FILE with correct Calibre IXF file.

---

## SX-0347

(Fatal) Option CALIBRE_NXF_FILE is required for Calibre input.

**Description**

CALIBRE_NXF_FILE is not specified in star command file for Calibre input.

**What Next**

Set CALIBRE_NXF_FILE in star command file to the Calibre NXF file.

---

## SX-0348

(Fatal) Option XREF_USE_LAYOUT_DEVICE_NAME is only supported for XREF: YES

**Description**

XREF_USE_LAYOUT_DEVICE_NAME specifies whether to use layout device names with XREF: YES, it is only supported for XREF: YES.

**What Next**

Set XREF:YES in command file if you really want to use layout device names with XREF:YES, or you can remove XREF_USE_LAYOUT_DEVICE_NAME from command file.

---

## SX-0349

(Fatal) Option MERGE_INSTANCE_PORTS is only supported for XREF: COMPLETE

**Description**

MERGE_INSTANCE_PORTS is only valid when XREF: COMPLETE is also used.

**What Next**

Set XREF: COMPLETE in the StarRC command file.

---

## SX-0351

(Fatal) NETLIST_INCREMENTAL: YES only supports NETLIST_FORMAT: SPEF.

Feedback

**Description**

NETLIST_INCREMENTAL: YES is only supported for NETLIST_FORMAT: SPEF.

**What Next**

Change the command setting and restart.

---

## SX-0352

(Fatal) NETLIST_NODENAME_NETNAME can only be used with NETLIST_FORMAT: NETNAME|SPF|STAR|OA.

**Description**

NETLIST_NODENAME_NETNAME can only be used with NETLIST_FORMAT: NETNAME|SPF|STAR|OA.

**What Next**

Use supported NETLIST_FORMAT (NETNAME|SPF|STAR|OA) for NETLIST_NODENAME_NETNAME. Or remove NETLIST_NODENAME_NETNAME in StarRC command file.

---

## SX-0353

(Fatal) Cannot set netlist_format to NONE for EXTRACTION: FSCOMPARE.

**Description**

NETLIST_FORMAT:NONE makes StarRC skip netlist stage. It cannot be used with EXTRACTION:FSCOMPARE.

**What Next**

Set NETLIST_FORMAT with other option and run again.

---

## SX-0354

(Fatal) Cannot set netlist_format to NONE for incremental extraction.

**Description**

Netlist format NONE is not a valid incremental extraction netlist option. The most common netlist format for incremental extraction is SPEF.

**What Next**

Please refer to section on ECO extraction in the StarRC user guide.

Feedback

## SX-0355

(Fatal) RSPEF/RSPF format is no longer supported. Currently supported NETLIST_FORMAT are: SPF | STAR | SPEF | MW | CONLY | NETNAME | NONE.

**Description**

RSPEF/RSPF format is no longer supported.

**What Next**

Set NETLIST_FORMAT to either one of supported netlist formats: SPF, STAR, SPEF, MW, CONLY, NETNAME and NONE.

## SX-0356

(Warning) DPT_COLOR_GDS_FILE does not contain any cell definition for BLOCK %s . Color objects must reside in same name cell as BLOCK.

**Description**

DPT_COLOR_GDS_FILE doesn't contain any cell that matches BLOCK. The DPT_COLOR_GDS_FILE should be associated with the original design by having the same top cell.

**What Next**

Provide DPT_COLOR_GDS_FILE that contains a cell with name equals to BLOCK.

## SX-0358

(Fatal) Unknown NETLIST_FORMAT: '%s'

**Description**

Unknown NETLIST_FORMAT: '%s'

**What Next**

Please use correct setting for NETLIST_FORMAT: SPF | STAR | SPEF | CONLY | NETNAME | NONE | OA

## SX-0359

(Fatal) Number of values specified in OPERATING_TEMPERATURE is not equal to number of corners nor 1.

Feedback

**Description**

You receive this message because you are using OPERATING_TEMPERATURE, and the values is not equal to TCAD_GRD_FILE number nor 1.

**What Next**

Please change OPERATING_TEMPERATURE in StarRC command file to match the number with TCAD_GRD_FILE or only provide one value.

---

## SX-0360

(Fatal) OPERATING_TEMPERATURE is specified in CELSIUS. Please use temperature between -200 and +300

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0361

(Fatal) Duplicated values in TCAD_GRD_FILE are allowed only when OPERATING_TEMPERATURE has multiple values

**Description**

You receive this message because you set duplicated values in TCAD_GRD_FILE, but OPERATING_TEMPERATURE does not have multiple values.

**What Next**

Please remove duplicated values in TCAD_GRD_FILE if you do not use temperature sensitivity Or set OPERATING_TEMPERATURE with multiple values to use temperature sensitivity flow.

---

## SX-0362

(Warning) Ignoring operating_temperature in the StarRC command file, will use operating_temperatures in corner file.

**Description**

When TEMPERATURE_SENSITIVITY and NETLIST_CORNER_NAMES are both set in the StarRC command file, the operating temperatures take precedence.

Feedback

**What Next**

This is only a warning message. No action is required.

---

## SX-0363

(Warning) Ignoring operating_temperature in StarRC command file, will output CRT sensitivities.

**Description**

In TEMPERATURE_SENSITIVITY flow the TC1/TC2 is outputted based on the global temperature definition. So specified OPERATING_TEMPERATURE is not used and it is ignored.

**What Next**

Remove OPERATING_TEMPERATURE from StarRC command file

---

## SX-0367

(Fatal) ECO_MODE: YES does not support POWER_EXTRACT:'%s'

**Description**

Incremental extrction does not support extraction of power nets.

**What Next**

Please refer to section on ECO extraction in the StarRC user guide.

---

## SX-0368

(Warning) No NETLIST_POWER_FILE specified. Power extraction not performed.

**Description**

No NETLIST_POWER_FILE specified. Power extraction not performed.

**What Next**

Please add NETLIST_POWER_FILE if you want to performance power extraction. Or you can ignore this message.

---

## SX-0369

(Fatal) Only one nxtgrd file may be specified for TEMPERATURE_SENSITIVITY:YES

Feedback

**Description**

Only one nxtgrd file may be specified for TEMPERATURE_SENSITIVITY:YES

**What Next**

Please only keep on nxtgrd file in TCAD_GRD_FILE in StarRC command file.

---

## SX-0370

(Fatal) No tcad file provided

**Description**

No tcad file provided.

**What Next**

Set TCAD_GRD_FILE or MULTI_CORNER_TCAD_GRD_FILES in StarRC command file.

---

## SX-0371

(Warning) TCAD_GRD_FILE will be ignored because MULTI_CORNER_TCAD_GRD_FILES is set. Stop the job now if this is not what you intended.

**Description**

MULTI_CORNER_TCAD_GRD_FILES is intended to list multiple corners including nominal corner in correct order, TCAD_GRD_FILE is intended to provide nominal corner. When both are provided, TCAD_GRD_FILE is ignored. Stop the job now if this is not what you intended!

**What Next**

This is a warning message for information only.

---

## SX-0372

(Fatal) TCAD_GRD_FILE must specify exactly one file if it is used with TCAD_MIN_GRD_FILE/TCAD_MAX_GRD_FILE.

**Description**

You receive this message because you set multiple values for TCAD_MIN_GRD_FILE/ TCAD_MAX_GRD_FILE. Only one value is supported.

Feedback

**What Next**

Change TCAD_MIN_GRD_FILE/TCAD_MAX_GRD_FILE in StarRC command file to only provide one value.

---

## SX-0373

(Warning) TCAD_MIN_GRD_FILE and TCAD_MAX_GRD_FILE must both be specified. Not extracting triplets.

**Description**

This warning informs you that only one of TCAD_MIN_GRD_FILE and TCAD_MAX_GRD_FILE is specified in StarRC command file.

**What Next**

If you want to extract both min and max corner, you should specify both TCAD_MIN_GRD_FILE and TCAD_MAX_GRD_FILE. If you only want to extract one corner, you don't need to take any action.

---

## SX-0378

(Fatal) Inductance extraction is not supported in this release

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0379

(Fatal) Attempting to run invalid extraction mode.

**Description**

Extraction type must be RC, C, R, or FSCOMPARE.

**What Next**

See StarRC user guide.

Feedback

## SX-0380

(Fatal) Command EXTRACTION: C is not supported in CCP flow. Please use EXTRACTION: RC and NETLIST_TYPE: Cc * to get C only netlist.

**Description**

CCP flow does not support EXTRACTION: C. Please use EXTRACTION: RC and NETLIST_TYPE: Cc * to get C only netlist.

**What Next**

Revise the command file and restart.

## SX-0381

(Fatal) SENSITIVITY: YES and TEMPERATURE_SENSITIVITY:YES are not supported for EXTRACTION: %s

**Description**

SENSITIVITY: YES and TEMPERATURE_SENSITIVITY:YES can be used only for EXTRACTIONset as RC, C, FSCOMPARE and R.

**What Next**

Set EXTRACTION as RC, C, FSCOMPARE or R.

## SX-0384

(Fatal) SENSITIVITY:YES and TEMPERATURE_SENSITIVITY:YES only support specification of one file in TCAD_GRD_FILE command

**Description**

SENSITIVITY:YES and TEMPERATURE_SENSITIVITY:YES only supports with one file in TCAD_GRD_FILE command.

**What Next**

Set TCAD_GRD_FILE to one file, or change one of the two commands SENSITIVITY and TEMPERATURE_SENSITIVITY as other options other than YES.

## SX-0386

(Fatal) TEMPERATURE_SENSITIVITY:YES is supported for SPF, STAR, NETNAME, SPEF netlist formats and OA parasitic view only.

Feedback

**Description**

TEMPERATURE_SENSITIVITY:YES can only be used when the output netlist format is SPF, STAR, NETNAME, SPEF, or OA parasitic view.

**What Next**

You should use supported netlist format in NETLIST_FORMAT command in StarRC command file.

---

## SX-0392

(Fatal) ECO_MODE: YES can not be used with EXTRACTION: %s

**Description**

Incremental extraction limits the types of extraction options due to scope and typical usage. Please use RC extraction type.

**What Next**

Please refer to section on ECO extraction in the StarRC user guide.

---

## SX-0405

(Fatal) The IGNORE_CAPACITANCE value must be ALL [RETAIN_GATE_DIFFUSION_COUPLING], DIFF, or NONE.

**Description**

StarRC does not recognize the keyword used for the IGNORE_CAPACITANCE command.

**What Next**

Modify the IGNORE_CAPACITANCE command to use one of the supported values:

```
ALL
ALL RETAIN_GATE_DIFFUSION_COUPLING
DIFF
NONE
```

---

## SX-0406

(Warning) NETLIST_COMPRESS_COMMAND is not supported in non-ASCII NETLIST_FORMAT

**Description**

NETLIST_COMPRESS_COMMAND is not supported in non-ASCII NETLIST_FORMAT

Feedback

**What Next**

NETLIST_COMPRESS_COMMAND is ignored.

---

## SX-0407

(Warning) NETLIST_POSTPROCESS_COMMAND is not supported in non-ASCII NETLIST_FORMAT

**Description**

NETLIST_POSTPROCESS_COMMAND is not supported in non-ASCII NETLIST_FORMAT

**What Next**

NETLIST_POSTPROCESS_COMMAND is ignored

---

## SX-0408

(Warning) EXTRACT_RES_BODY_COUPLING is not supported in the Field Solver flow.

**Description**

EXTRACT_RES_BODY_COUPLING is not supported in the Field Solver flow. Set it to NO or remove the command from the command file (it defaults to NO).

**What Next**

Set the EXTRACT_RES_BODY_COUPLING command to NO or remove it from the command file (the default is NO).

---

## SX-0409

(Fatal) Current setting of NETLIST_FORMAT is only valid with EXTRACTION: RC

**Description**

Current setting of NETLIST_FORMAT and EXTRACTION is conflict.

**What Next**

Revise either above option to avoid the conflict.

---

## SX-0411

(Warning) FSCompare mode only produces comparison output... NETLIST_FORMAT is ignored.

Feedback

**Description**

FSCompare mode only produces comparison output... NETLIST_FORMAT is ignored.

**What Next**

You can ignore this message. StarRC will not output NETLIST_FORMAT.

---

## SX-0412

(Fatal) FS_EXTRACT_NETS is not supported for EXTRACTION: FSCOMPARE.

**Description**

FS_EXTRACT_NETS and EXTRACTION: FSCOMPARE can not be both set in StarRC command file.

**What Next**

If you want to use FS_EXTRACT_NETS, set EXTRACTION: RC instead of EXTRACTION: FSCOMPARE. If you want to set EXTRACTION: FSCOMPARE, you should not set FS_EXTRACT_NETS.

---

## SX-0416

(Fatal) TRANSLATE_RETAIN_BULK_LAYERS:YES must be set for substrate extraction with SUBSTRATE_EXTRACTION:YES.

**Description**

TRANSLATE_RETAIN_BULK_LAYERS:YES must be set for substrate extraction with SUBSTRATE_EXTRACTION:YES.

**What Next**

Set TRANSLATE_RETAIN_BULK_LAYERS: YES if you want to do substrate extraction. Or use SUBSTRATE_EXTRACTION: NO.

---

## SX-0418

(Fatal) EXTRACTION: C and REDUCTION: NO_REDUCTION are incompatible options.

**Description**

You can not use EXTRACTION: C and REDUCTION: NO_REDUCTION together.

**What Next**

Please user other settings for EXTRACTION and REDUCTION in StarRC command file.

Feedback

## SX-0419

(Fatal) NETLIST_REMOVE_LOOPS must be YES or NO.

**Description**

NETLIST_REMOVE_LOOPS must be YES or NO.

**What Next**

Please set NETLIST_REMOVE_LOOPS to YES or NO in StarRC command file.

## SX-0420

(Fatal) NETLIST_TAIL_COMMENTS is not allowed with POWER_REDUCTION: YES or POWER_REDUCTION: HIGH.

**Description**

NETLIST_TAIL_COMMENTS is not allowed with POWER_REDUCTION: YES or POWER_REDUCTION: HIGH.

**What Next**

If you want to see NETLIST_TAIL_COMMENTS, please set POWER_REDUCTION to other settings. Or remove NETLIST_TAIL_COMMENTS in StarRC command file.

## SX-0421

(Fatal) NETLIST_TAIL_COMMENTS: YES is not allowed with REDUCTION: YES or REDUCTION: HIGH or REDUCTION: NO_EXTRA_LOOPS.

**Description**

When reduction takes place across layers, the tail comments are not correct. Therefore you cannot set the NETLIST_TAIL_COMMENTS command to YES if the REDUCTION command is set to YES, HIGH, or NO_EXTRA_LOOPS.

**What Next**

Modify the StarRC command file to use an allowable combination of commands.

## SX-0423

(Warning) VIA_COVERAGE must be used with NETLIST_TAIL_COMMENTS.

Feedback

**Description**

NETLIST_TAIL_COMMENTS: YES|ADVANCED is required for VIA_COVERAGE.

**What Next**

Set NETLIST_TAIL_COMMENTS: YES|ADVANCED.

---

## SX-0424

(Warning) VIA_COVERAGE is only available with SPEF output format

**Description**

VIA_COVERAGE is only available with SPEF output format

**What Next**

Set NETLIST_FORMAT: SPEF or remove VIA_COVERAGE in StarRC command file

---

## SX-0425

(Fatal) SKIP_CELLS_COUPLE_TO_NET option only valid with COUPLE_TO_GROUND: NO

**Description**

SKIP_CELLS_COUPLE_TO_NET option only valid with COUPLE_TO_GROUND: NO.

**What Next**

Remove SKIP_CELLS_COUPLE_TO_NET or set COUPLE_TO_GROUND: NO in StarRC command file.

---

## SX-0427

(Fatal) ZONE_COUPLE_TO_NET option only valid with COUPLE_TO_GROUND: NO

**Description**

ZONE_COUPLE_TO_NET option only valid with COUPLE_TO_GROUND: NO

**What Next**

Remove ZONE_COUPLE_TO_NET or set COUPLE_TO_GROUND: NO in StarRC command file

Feedback

## SX-0429

(Fatal) SHEET_COUPLE_TO_NET option only valid with COUPLE_TO_GROUND: NO

**Description**

SHEET_COUPLE_TO_NET option only valid with COUPLE_TO_GROUND: NO

**What Next**

Remove SHEET_COUPLE_TO_NET or set COUPLE_TO_GROUND: NO in StarRC command file.

## SX-0431

(Fatal) COUPLE_NONCRITICAL_NETS option only valid with COUPLE_TO_GROUND: NO

**Description**

COUPLE_NONCRITICAL_NETS option only valid with COUPLE_TO_GROUND: NO

**What Next**

Remove COUPLE_NONCRITICAL_NETS or set COUPLE_TO_GROUND: NO in StarRC command file.

## SX-0433

(Fatal) COUPLE_NONCRITICAL_NETS is not supported for XREF:COMPLETE flow.

**Description**

COUPLE_NONCRITICAL_NETS is not supported for XREF:COMPLETE flow.

**What Next**

Remove COUPLE_NONCRITICAL_NETS or use XREF:YES in StarRC command file

## SX-0434

(Fatal) COUPLE_NONCRITICAL_NETS is not supported in FS flow.

**Description**

COUPLE_NONCRITICAL_NETS is not supported in FS flow.

Feedback

**What Next**

Remove COUPLE_NONCRITICAL_NETS or turn off FS flow in StarRC command file

---

## SX-0435

(Warning) IGNORE_CAP_FOR_ALL_DIFF_LAYERS only supports IGNORE_CAPACITANCE: ALL or DIFF. Ignored.

**Description**

IGNORE_CAP_FOR_ALL_DIFF_LAYERS only supports IGNORE_CAPACITANCE: ALL or DIFF. Ignored.

**What Next**

If you want to use IGNORE_CAP_FOR_ALL_DIFF_LAYERS, please set IGNORE_CAPACITANCE: ALL or DIFF. Or you can ignore this message.

---

## SX-0436

(Fatal) The THIRD_PARTY_FIELD_SOLVER option has been discontinued in StarRC-2008.12 beta and forward

**Description**

THIRD_PARTY_FIELD_SOLVER option has been obsolated.

**What Next**

Remove the option from StarRC command file.

---

## SX-0437

(Fatal) FSCOMPARE_OPTIONS: option '%s' has no value

**Description**

Field Solver does NOT accept options specified in FSCOMPARE_OPTIONS.

**What Next**

Modify options in FSCOMPARE_OPTIONS.

---

## SX-0438

(Fatal) FSCOMPARE_OPTIONS: option '%s' has no value or negative value

Feedback

**Description**

Not acceptable input for FSCOMPARE_OPTIONS.

**What Next**

Modify StarRC command file.

---

## SX-0439

(Fatal) FSCOMPARE_OPTIONS: option '%s' should be followed by a floating number value

**Description**

Not acceptable input for FSCOMPARE_OPTIONS.

**What Next**

Modify StarRC command file.

---

## SX-0440

(Fatal) FSCOMPARE_OPTIONS: option '%s' should be set through FS_BOUNDARY_BOX command

**Description**

Use FS_BOUNDARY_BOX instead of "-bb" in FSCOMPARE_OPTIONS to set the default boundary box for the Field Solver.

**What Next**

```
FSCOMPARE_OPTIONS
FS_BOUNDARY_BOX
```

---

## SX-0441

(Fatal) RANXT_BOUNDARY_CONDITION is obsolete in 2011.06. Use FS_BOUNDARY_CONDITION instead

**Description**

RANXT_BOUNDARY_CONDITION is obsolete in 2011.06. Use FS_BOUNDARY_CONDITION instead FS_BOUNDARY_CONDITION and FS_BOUNDARY_BOX must be used together to apply Neuman or Periodic boundary conditions for a design (or part of a design)

Feedback

**What Next**

Use FS_BOUNDARY_CONDITION

---

## SX-0442

(Fatal) bad FS_BOUNDARY_CONDITION; please check: '%s'

**Description**

Not acceptable input for FS_BOUNDARY_CONDITION option.

**What Next**

Modify StarRC command file.

---

## SX-0443

(Fatal) Both FS_BOUNDARY_CONDITION and FS_BOUNDARY_BOX must be set

**Description**

FS_BOUNDARY_CONDITION and FS_BOUNDARY_BOX must be used together to apply Neuman or Periodic boundary conditions for a design (or part of a design)

**What Next**

Set FS_BOUNDARY_CONDITION and FS_BOUNDARY_BOX both in StarRC command file.

---

## SX-0444

(Fatal) "-replicate" has been obsolated.

**Description**

"-replicate" has been obsolated in FS_BOUNDARY_BOX.

**What Next**

Remove "-replicate" in FS_BOUNDARY_BOX.

---

## SX-0445

(Fatal) RANXT_BOUNDARY_BOX is obsolete in 2011.06. Use FS_BOUNDARY_BOX instead

Feedback

**Description**

RANXT_BOUNDARY_BOX has been obsolete in 2011.06. Use FS_BOUNDARY_BOX instead. FS_BOUNDARY_CONDITION and FS_BOUNDARY_BOX must be used together to apply Neuman or Periodic boundary conditions for a design (or part of a design).

**What Next**

Use FS_BOUNDARY_BOX instead

---

## SX-0447

(Fatal) Not support FS_BOUNDARY_BOX parameters: %s

**Description**

FS_BOUNDARY_BOX requires 6 boundary box corrdinetes as input.

**What Next**

Modify StarRC command file.

---

## SX-0448

(Fatal) FS_BOUNDARY_BOX options has a non-number '%s' specified

**Description**

Not acceptable input for FS_BOUNDARY_BOX option.

**What Next**

Modify StarRC command file.

---

## SX-0454

(Fatal) Process effect(s) '%s' is (are) not supported for '%s'.

**Description**

StarRC with third-party Field Solver does not support certain process effect.

**What Next**

Use Rapid3D instead of thrid-party Field Solver.

Feedback

## SX-0455

(Fatal) TARGET_PWRA: Cannot limit EXTRACTION to C since POWER_EXTRACT is set to RONLY.

**Description**

EXTRACTION: C is conflicted with TARGET_PWRA because POWER_EXTRACT will be RONLY in TARGET_PWRA flow.

**What Next**

Correct the command setting and restart.

## SX-0456

(Warning) TARGET_PWRA: Changing POWER_EXTRACT to RONLY

**Description**

The TARGET_PWRA command automatically generates and changes a set of StarRC commands for RC extraction in a power reliability analysis flow. Refer to StarRC User Guide for more information.

**What Next**

This is only a warning message. No action is required.

## SX-0457

(Warning) TARGET_PWRA: The allowed POWER_REDUCTION settings are NO or LAYER or LAYER_NO_EXTRA_LOOPS, changing POWER_REDUCTION to LAYER_NO_EXTRA_LOOPS

**Description**

The TARGET_PWRA command automatically generates and changes a set of StarRC commands for RC extraction in a power reliability analysis flow. Refer to StarRC User Guide for more information.

**What Next**

This is only a warning message. No action is required.

## SX-0458

(Warning) TARGET_PWRA: Changing NETLIST_CONNECT_SECTION to YES

Feedback

**Description**

The TARGET_PWRA command automatically generates and changes a set of StarRC commands for RC extraction in a power reliability analysis flow. Refer to StarRC User Guide for more information.

**What Next**

This is only a warning message. No action is required.

---

## SX-0459

(Warning) TARGET_PWRA: Changing NETLIST_NODE_SECTION to YES

**Description**

The TARGET_PWRA command automatically generates and changes a set of StarRC commands for RC extraction in a power reliability analysis flow. Refer to StarRC User Guide for more information.

**What Next**

This is only a warning message. No action is required.

---

## SX-0460

(Warning) TARGET_PWRA: Changing NETLIST_TAIL_COMMENTS to YES

**Description**

The TARGET_PWRA command automatically generates StarRC commands for RC extraction in a power reliability analysis flow. NETLIST_TAIL_COMMENTS is one of them. Refer to StarRC User Guide for more information.

**What Next**

This is only a warning message. No action is required.

---

## SX-0461

(Warning) TARGET_PWRA: Changing SHORT_PINS to NO

**Description**

The TARGET_PWRA command automatically generates and changes a set of StarRC commands for RC extraction in a power reliability analysis flow. Refer to StarRC User Guide for more information.

Feedback

**What Next**

This is only a warning message. No action is required.

---

## SX-0462

(Warning) EXTRA_GEOMETRY_INFO will be set to NODE for TARGET_PWRA:YES

**Description**

The TARGET_PWRA command automatically generates StarRC commands for RC extraction in a power reliability analysis flow. EXTRA_GEOMETRY_INFO is one of them. Refer to StarRC User Guide for more information.

**What Next**

This is only a warning message. No action is required.

---

## SX-0463

(Fatal) %s is not supported in 3D_IC flow.

**Description**

The highlighted commands are not supported in 3D_IC extraction flow.

**What Next**

Remove the unsupported command and restart.

---

## SX-0464

(Warning) The GROUND_NET will be '%s' for 3D_IC_FLOATING_SUBSTRATE:YES, If a different name is desired, please use NETLIST_GROUND_NODE_NAME to specify it.

**Description**

When 3D_IC_FLOATING_SUBSTRATE:YES is required, the item *GROUND_NET in netlist file can be customized by NETLIST_GROUND_NODE_NAME.

**What Next**

This is a warning message for information purpose only. No action is required unless a different GROUND_NET is desired.

Feedback

## SX-0465

(Warning) NETLIST_GROUND_NODE_NAME: '%s' will override the default ground name '%s' for 3D_IC_FLOATING_SUBSTRATE:YES.

**Description**

This indicates the default ground name is revised by NETLIST_GROUNG_NODE_NAME setting.

**What Next**

This message is only a remind and no further action is required.

## SX-0466

(Fatal) SIMULTANEOUS_MULTI_CORNER: YES is not supported for Direct ITF flow.

**Description**

SIMULTANEOUS_MULTI_CORNER is not supported for Direct ITF flow.

**What Next**

Disable SIMULTANEOUS_MULTI_CORNER or Direct ITF setting.

## SX-0468

(Fatal) TEMPERATURE_SENSITIVITY should not be set in SIMULTANEOUS_MULTI_CORNER(SMC) flow. If you need temperature coefficients output for in transistor-level SMC flow, please just set OPERATING_TEMPERATURE: GLOBAL_TEMP for the corners in the SMC CORNERS_FILE.

**Description**

You receive this message because StarRC found TEMPERATURE_SENSITIVITY has been set in the command file when running a SIMULTANEOUS_MULTI_CORNER(SMC) flow.

**What Next**

If you expect to output temperature coefficients for a transistor-level SMC flow, make sure setting OPERATING_TEMPERATURE: GLOBAL_TEMP in the SMC CORNERS_FILE for the selected corners.

Feedback

## SX-0470

(Warning) PRINT_SILICON_INFO may not reflect all corners in SIMULTANEOUS_MULTI_CORNER flow.

**Description**

In SIMULTANEOUS_MULTI_CORNER flow, if PRINT_SILICON_INFO is set, the $si_w can only reflect the first corner being extracted. The silicon information for other corners is omitted.

**What Next**

Contact the Synopsys Support Center.

## SX-0472

(Fatal) CONVERT_DIODE_TO_PARASITIC_CAP is not supported in SIMULTANEOUS_MULTI_CORNER flow.

**Description**

CONVERT_DIODE_TO_PARASITIC_CAP needs special handling during extraction, this is not yet supported in SIMULTANEOUS_MULTI_CORNER flow.

**What Next**

Remove CONVERT_DIODE_TO_PARASITIC_CAP from StarRC command file and re-extract using SIMULTANEOUS_MULTI_CORNER flow.

## SX-0477

(Fatal) SIMULTANEOUS_MULTI_CORNER: YES is not supported with ENHANCED_PROCESS_VARIATION_HANDLING: LEVEL3.

**Description**

SIMULTANEOUS_MULTI_CORNER: YES is not supported with ENHANCED_PROCESS_VARIATION_HANDLING: LEVEL3.

**What Next**

Please change the value for the option ENHANCED_PROCESS_VARIATION_HANDLING or just remove this option when SIMULTANEOUS_MULTI_CORNER is set to YES.

Feedback

## SX-0478

(Fatal) CORNERS_FILE command option must be given if SIMULTANEOUS_MULTI_CORNER: YES is used.

**Description**

CORNERS_FILE command option must be given if SIMULTANEOUS_MULTI_CORNER: YES is used.

**What Next**

Please specify the value for the option CORNERS_FILE if SIMULTANEOUS_MULTI_CORNER is set to YES.

## SX-0479

(Fatal) SELECTED_CORNERS command option must be given if SIMULTANEOUS_MULTI_CORNER: YES is used.

**Description**

SELECTED_CORNERS command option must be given if SIMULTANEOUS_MULTI_CORNER: YES is used.

**What Next**

Please specify the selected corners for the option SELECTED_CORNERS.

## SX-0480

(Warning) Detected equal / larger value in ER_VS_SI_SPACING table than nominal ER value in TCAD_GRD_FILE from CORNER_TYPE:MIN

**Description**

It's found that ER value in ER_VS_SI_SPACING table is equal to or larger than nominal ER value in TCAD_GRD_FILE from CORNER_TYPE:MIN. You are recommended to use smaller ER in ER_VS_SI_SPACING table than nominal ER value in TCAD_GRD_FILE from CORNER_TYPE:MIN. Otherwise, there will be potential accuracy problem.

**What Next**

You should double check each nxtgrd for ER values in ER_VS_SI_SPACING table to see if they are correctly defined.

Feedback

## SX-0481

(Warning) Detected equal / smaller value in ER_VS_SI_SPACING table than nominal ER value in TCAD_GRD_FILE from CORNER_TYPE:MAX

**Description**

It's found that ER value in ER_VS_SI_SPACING table is equal to or smaller than nominal ER value in TCAD_GRD_FILE from CORNER_TYPE:MIN. You are recommended to use larger ER in ER_VS_SI_SPACING table than nominal ER value in TCAD_GRD_FILE from CORNER_TYPE:MIN. Otherwise, there will be potential accuracy problem.

**What Next**

You should double check each nxtgrd for ER values in ER_VS_SI_SPACING table to see if they are correctly defined.

## SX-0482

(Fatal) SELECTED_CORNERS must contain at least 1 unique NXTGRD files. There are '%d' unique NXTGRD files specified.

**Description**

SELECTED_CORNERS must contain at least 1 unique NXTGRD files.

**What Next**

Please specify at least 1 unique NXTGRD files for SELECTED_CORNERS.

## SX-0483

(Fatal) SELECTED_CORNERS must contain 60 or less process corners and DOB (density out of boundary) corners. There are in total '%d' process corners and DOB corners specified.

**Description**

SELECTED_CORNERS must contain 60 or less process corners and DOB corners.

**What Next**

Please only specify 60 or less process corners and DOB corners for the option SELECTED_CORNERS.

Feedback

## SX-0484

(Fatal) Grouping of corners with colons in SELECTED_CORNERS is not supported with NETLIST_FORMAT: OA. Please rerun by either removing the colons (:) in between corner names in the SELECTED_CORNERS statement or use one of the allowed NETLIST_FORMAT values.

**Description**

In SIMULTANEOUS_MULTI_CORNER flow, depending on the format of SELECTED_CORNERS output netlist can be grouped or separated. In grouped format, the RC parasitic is listed as Rval_corner1:...:Rval_cornern or Cval_corner1:...:Cval_cornern where n is the corner number. This grouping format is supported in all other NETLIST_FORMAT except OA.

**What Next**

Modify SELECTED_CORNERS to disable grouping corners in NETLIST_FORMAT:OA. Or change NETLIST_FORMAT to other format than OA if grouping output is required.

## SX-0485

(Fatal) Specification of empty corners in SELECTED_CORNERS is only supported with NETLIST_FORMAT: SPEF.

**Description**

An empty corner in the the SELECTED_CORNERS option can be used with NETLIST_FORMAT: SPEF.

**What Next**

Correct the SELECTED_CORNERS specification by removing the empty corner name, or use NETLIST_FORMAT: SPEF. Refer to the StarRC User Guide for more information.

## SX-0486

(Warning) If SIMULTANEOUS_MULTI_CORNER is set to YES, %s in the StarRC command file is ignored since the it is defined for each corner in the corner definition file.

**Description**

If SIMULTANEOUS_MULTI_CORNER is set to YES, a command in the StarRC command file is ignored since the it is defined for each corner in the corner definition file.

**What Next**

Please remove the option in the StarRC command file.

Feedback

## SX-0487

(Warning) If SIMULTANEOUS_MULTI_CORNER is set to YES and CORNER_INDICES_TO_OUTPUT is set in the command file, the corner names specified in SIMULTANEOUS_MULTI_CORNER will not be appended to the filenames.

**Description**

If SIMULTANEOUS_MULTI_CORNER is set to YES and CORNER_INDICES_TO_OUTPUT is set in the command file, the corner names specified in SIMULTANEOUS_MULTI_CORNER will not be appended to the filenames.

**What Next**

No action is required.

## SX-0488

(Fatal) If CORNER_INDICES_TO_OUTPUT is set or USE_SENSITIVITY_MULTI_CORNER_OUTPUT: NO is set in the command file, All SELECTED_CORNERS must have the same operating temperature.

**Description**

If CORNER_INDICES_TO_OUTPUT is set or USE_SENSITIVITY_MULTI_CORNER_OUTPUT: NO is set in the command file, All SELECTED_CORNERS must have the same operating temperature.

**What Next**

Please check the operating temperature for all SELECTED_CORNERS. They must have the same operating temperature. If all SELECTED_CORNERS have the same operating temperature but still get this error message, please contact the Synopsys Support Center.

## SX-0489

(Fatal) CORNER_INDICES_TO_OUTPUT must be specified with CORNER_TCAD_GRD_FILES.

**Description**

CORNER_INDICES_TO_OUTPUT can only be specified when CORNER_TCAD_GRD_FILES is already specified.

**What Next**

Please specify CORNER_TCAD_GRD_FILES or remove CORNER_INDICES_TO_OUTPUT.

Feedback

## SX-0490

(Fatal) USE_SENSITIVITY_MULTI_CORNER_OUTPUT must be specified with CORNER_TCAD_GRD_FILES.

**Description**

USE_SENSITIVITY_MULTI_CORNER_OUTPUT can only be specified when CORNER_TCAD_GRD_FILES is already specified.

**What Next**

Please specify CORNER_TCAD_GRD_FILES or remove USE_SENSITIVITY_MULTI_CORNER_OUTPUT.

## SX-0491

(Fatal) TCAD_GRD_FILE command options must have exactly 1 NXTGRD file specified to use simultaneous multi-corner flow.

**Description**

In order to use simultaneous multi-corner flow, there should be one and only one NXTGRD file specified for the option TCAD_GRD_FILE.

**What Next**

Please check the number of NXTGRD files specified for the option TCAD_GRD_FILE.

## SX-0492

(Fatal) No values given for CORNER_INDICES_TO_OUTPUT.

**Description**

No values given for CORNER_INDICES_TO_OUTPUT.

**What Next**

Please specify a correct value for CORNER_INDICES_TO_OUTPUT.

## SX-0493

(Fatal) Only one value of CORNER_INDICES_TO_OUTPUT can be specified if USE_SENSITIVITY_MULTI_CORNER_OUTPUT is set to NO.

Feedback

**Description**

If USE_SENSITIVITY_MULTI_CORNER_OUTPUT is set to NO, only one value can be specified for CORNER_INDICES_TO_OUTPUT. Don't specify more than one value for CORNER_INDICES_TO_OUTPUT if USE_SENSITIVITY_MULTI_CORNER_OUTPUT is set to NO.

**What Next**

Please check and only specify one value for CORNER_INDICES_TO_OUTPUT.

---

## SX-0494

(Fatal) Negative or zero value of CORNER_INDICES_TO_OUTPUT cannot be specified.

**Description**

Negative or zero value of CORNER_INDICES_TO_OUTPUT cannot be specified.

**What Next**

Please specify a value that is larger than zero for the option CORNER_INDICES_TO_OUTPUT.

---

## SX-0495

(Fatal) Specified CORNER_INDICES_TO_OUTPUT value is greater than the number of corner NXTGRD files provided in TCAD_GRD_FILE and CORNER_TCAD_GRD_FILES.

**Description**

The value of CORNER_INDICES_TO_OUTPUT is greater than the total number of corner NXTGRD files provided in TCAD_GRD_FILE and CORNER_TCAD_GRD_FILES.

**What Next**

Please input a smaller value for CORNER_INDICES_TO_OUTPUT and make sure that this value is not greater than the total number of corners provided in TCAD_GRD_FILE and CORNER_TCAD_GRD_FILES.

---

## SX-0497

(Fatal) Invalid option FAST_EXTRACTION_MODE

**Description**

FAST_EXTRACTION_MODE cannot be set as NO.

Feedback

**What Next**

Remove this option in star_cmd.

---

## SX-0498

(Fatal) Invalid option specified for FAST_EXTRACTION_MODE. Possible settings are NO, YES, and AUTO.

**Description**

The value of FAST_EXTRACTION_MODE is not correct and expected. Extraction cannot proceed without valid setting of this option. Note that the option of FAST_EXTRACTION_MODE is not intended for external setting.

**What Next**

Remove the option from setting or contact Synopsys for support if there is still error after removing the option.

---

## SX-0499

(Warning) MODE is no longer required for this type of extraction. Ignoring MODE in StarRC command file.

**Description**

StarRC will automatically select the appropriate accuracy level. MODE is no longer required in the StarRC command file.

**What Next**

Remove the MODE command from the StarRC command file.

---

## SX-0500

(Fatal) QTF file is missing.

**Description**

QTF file is required if the case is to simulate TSMC N16 and lower technology node design with Field Solver extraction.

**What Next**

use FS_QTF_FILE option to specify QTF file.

Feedback

## SX-0502

(Warning) CLEAN_XIN_IN_XTRACTOR: NO is not supported for fast extraction mode.

**Description**

CLEAN_XIN_IN_XTRACTOR: NO is not supported for fast extraction mode.

**What Next**

This message can be ignored. StarRC will set CLEAN_XIN_IN_XTRACTOR to YES.

## SX-0503

(Fatal) invalid option DP_TILE_WIDTH

**Description**

invalid option DP_TILE_WIDTH

**What Next**

DP_TILE_WIDTH is for internal use only

## SX-0505

(Fatal) invalid option DP_TILES

**Description**

invalid option DP_TILES

**What Next**

DP_TILES is for internal use only

## SX-0507

(Warning) Ignoring DP_MODE:USER setting, continue with DP_MODE:AUTO!

**Description**

This message informs you that the DP_MODE:USER setting is replaced by DP_MODE:AUTO.

**What Next**

You don't need to take any action.

Feedback

## SX-0516

(Fatal) Please fix the errors before proceeding

**Description**

The is error reported before this message. They may be: SX-0724, SX-0512, SX-0513, SX-0514, SX-0515.

**What Next**

Fix the error reported before this message.

## SX-0524

(Fatal) Cannot use %s in %s flow.

**Description**

This error message is used to prohibit the use of some options in the StarRC command file in specific flows or use-models.

**What Next**

Remove the option from the StarRC command file. Refer to the StarRC User Guide for more information.

## SX-0528

(Fatal) Invalid selection for EXTRACT_VIA_CAPS option.

**Description**

EXTRACT_VIA_CAPS must be set with "NO | YES [IGNORE_GATE_CONTACT_COUPLING]".

**What Next**

Correct EXTRACT_VIA_CAPS with correct option in StarRC command file.

## SX-0529

(Warning) CONLY_NETS are only valid for COUPLE_TO_GROUND: NO extractions.

**Description**

The CONLY_NETS command reports cross-capacitance to noncritical net neighbors. If the COUPLE_TO_GROUND: YES command is used, CONLY_NETS has no effect. If

Feedback

the COUPLE_TO_GROUND: NO command is used, the NETS command controls the behavior.

**What Next**

You can ignore this message and CONLY_NETS will have no effect. Otherwise, if you want to use CONLY_NETS, set COUPLE_TO_GROUND:YES in command file.

---

## SX-0530

(Fatal) INTERNAL Error: INTERNAL error in calling register_FS_xtract_jobs

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0531

(Fatal) CORNER_TCAD_GRD_FILES cannot be specified if TCAD_GRD_FILE is not specified.

**Description**

CORNER_TCAD_GRD_FILES cannot be specified if TCAD_GRD_FILE is not specified.

**What Next**

Please remove the option CORNER_TCAD_GRD_FILES or specify the option TCAD_GRD_FILE.

---

## SX-0532

(Fatal) CORNER_TCAD_GRD_FILES can be specified only if just one NXTGRD file is provided in TCAD_GRD_FILE.

**Description**

CORNER_TCAD_GRD_FILES can be specified only if just one NXTGRD file is provided in TCAD_GRD_FILE.

**What Next**

Please make sure that there is only one NXTGRD file provided in TCAD_GRD_FILE. Or remove the option CORNER_TCAD_GRD_FILES.

Feedback

## SX-0533

(Fatal) RES_UPDATE_FILE cannot be used with SIMULTANEOUS_MULTI_CORNER.

**Description**

RES_UPDATE_FILE cannot be used with SIMULTANEOUS_MULTI_CORNER.

**What Next**

Please remove RES_UPDATE_FILE or SIMULTANEOUS_MULTI_CORNER in StarRC command file.

## SX-0535

(Information) Density based thickness variation is calculated based on FIXED_DENSITY_VALUE setting instead of layout density.

**Description**

Density used for thickness variation is not calculated from layout but spicified by FIXED_DENSITY_VALUE command.

**What Next**

Information only. No action is needed.

## SX-0536

(Fatal) FIXED_DENSITY_VALUE option value must be between 0 and 1

**Description**

A non-physical value is specified for FIXED_DENSITY_VALUE in the StarRC command file. By definition, density must be between 0 (empty) and 1 (fully dense).

**What Next**

Set the value of FIXED_DENSITY_VALUE to be between 0 and 1 in the StarRC command file.

## SX-0537

(Fatal) DENSITY_OUTSIDE_BLOCK option value must be between 0 and 1

Feedback

**Description**

A non-physical value is specified for DENSITY_OUTSIDE_BLOCK in the StarRC command file. By definition, density must be between 0 (empty) and 1 (fully dense).

**What Next**

Set the value of DENSITY_OUTSIDE_BLOCK to be between 0 and 1 in the StarRC command file.

---

## SX-0538

(Warning) DENSITY_EMULATED_FILL_CONTRIBUTION must have 4 floats as arguments, skipping

**Description**

DENSITY_EMULATED_FILL_CONTRIBUTION must have 4 floats as arguments.

**What Next**

This is a Waring message and option will be ignored in this case, if this option needs to be turn on, need to revise the option with 4 floats.

---

## SX-0540

(Fatal) MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE: YES and MOS_GATE_DELTA_RESISTANCE: YES can not be used together! Only one of mos gate resistance modeling methods can be used!

**Description**

When MOS_GATE_DELTA_RESISTANCE: YES is used, StarRC will use delta network model for MOS gate resistance and will introduce negative resistor. When MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE: YES is used, StarRC will use a network model which doesn't include negative resistor for MOS gate resistance. The 2 commands can't be used together.

**What Next**

You should remove one of these 2 commands based on your purpose (Whether or not to have a negative resistor).

---

## SX-0541

(Fatal) %s is only supported in an ICV or a Calibre flow.

Feedback

**Description**

Reported command is only supported in an ICV or a Calibre flow.

**What Next**

Remove the reported command from StarRC command file.

---

## SX-0542

(Fatal) EXTRACT_VIA_CAPS must be set to YES in order to use %s.

**Description**

EXTRACT_VIA_CAPS must be set to YES in order
to use RETAIN_GATE_CONTACT_COUPLING or
RETAIN_GATE_CONTACT_AND_DIFFUSION_COUPLING.

**What Next**

Set EXTRACT_VIA_CAPS to YES in the StarRC command file.

---

## SX-0543

(Fatal) GROUND_CROSS_COUPLING may only be set to YES, NO, or AUTO.

**Description**

You are using unsupported value for command GROUND_CROSS_COUPLING.

**What Next**

Please use correct value (YES, NO, AUTO) in StarRC command file.

---

## SX-0544

(Warning) MULTIGATE_MODELS: YES is ignored, no SCT multigate models into nxtgrd file.

**Description**

The message informs that command MULTIGATE_MODELS: YES will be ignored since the nxtgrd file does not contain 3D models.

**What Next**

If you know that 3D models are not present in the nxtgrd file, remove the command from the StarRC command file. Otherwise, make sure that the nxtgrd file you are using is correct.

Feedback

## SX-0545

(Warning) MULTIGATE_MODELS: NO is set, but SCT multigate models detected into nxtgrd file.

### Description

The warning informs that 3D models present in the nxtgrd file will be ignored since MULTIGATE_MODELS: NO is set in the StarRC command file.

### What Next

If this setting is intentional, no action is needed from your side. Otherwise, review the StarRC command file and consider using MULTIGATE_MODELS: YES to enable 3D models.

## SX-0546

(Warning) DEVICE_MODEL_LEVEL: 2 is ignored, no SCT planar models into nxtgrd file.

### Description

The warning informs the user that command DEVICE_MODEL_LEVEL: 2 will be ignored since no 3D models have been detected in the nxtgrd file.

### What Next

If you know that 3D models are not present in the nxtgrd file, remove the command from the StarRC command file. Otherwise, make sure that the nxtgrd file you are using is correct.

## SX-0547

(Warning) DEVICE_MODEL_LEVEL: 1 is set, but SCT planar models detected into nxtgrd file.

### Description

The warning informs that 3D models present in the nxtgrd file will be ignored since DEVICE_MODEL_LEVEL: 1 is set in the StarRC command file.

### What Next

If this setting is intentional, no action is needed from your side. Otherwise, review the StarRC command file and consider using DEVICE_MODEL_LEVEL: 2 to enable 3D models.

Feedback

## SX-0548

(Warning) MODE is not set: setting to 400 by default for DEVICE_MODEL_LEVEL/ MULTIGATE_MODELS.

**Description**

The warning indicates that the StarRC command file does not contain the command MODE to control accuracy. StarXtract will force MODE: 400 in presence of DEVICE_MODEL_LEVEL or MULTIGATE_MODELS commands.

**What Next**

If this setting is suitable for you, no action is needed from your part. Otherwise, review the StarRC command file and consider adding command MODE.

## SX-0549

(Fatal) SENS_REDU_ERROR is only applicable with SENSITIVITY:yes or TEMPERATURE_SENSITIVITY:yes.

**Description**

SENS_REDU_ERROR is to control sensitivity accuracy during reduction. It is on applicable with SENSITIVITY:yes or TEMPERATURE_SENSITIVITY:yes.

**What Next**

Remove SENS_REDU_ERROR if you are not using SENSITIVITY:yes or TEMPERATURE_SENSITIVITY:yes. Or set SENSITIVITY:yes or TEMPERATURE_SENSITIVITY:yes to use SENS_REDU_ERROR.

## SX-0550

(INTERNAL Warning) VIAPAD_MIN_AREA will be ignored since it is not compatible for EXTRACTION: C or FSCOMPARE

**Description**

Internal StarRC command VIAPAD_MIN_AREA will be ignored for EXTRACTION:C or EXTRACTION:FSCOMPARE.

**What Next**

Nothing needs to be done.

Feedback

## SX-0551

(Warning) VIAPAD_MIN_LENGTH will be ignored since it is not compatible for EXTRACTION: C or FSCOMPARE

**Description**

For setting EXTRACTION: C or FSCOMPARE, VIAPAD_MIN_LENGTH will be ignored.

**What Next**

No further action is required.

## SX-0552

(Fatal) MESH_RESISTANCE_EXTRACTION_FOR_DIFFUSION supported in transitor level flow only.

**Description**

MESH_RESISTANCE_EXTRACTION_FOR_DIFFUSION is only supported for transistor level flow extraction.

**What Next**

Remove command MESH_RESISTANCE_EXTRACTION_FOR_DIFFUSION and restart.

## SX-0553

(Warning) DETECT_FUSE can be set only for REDUCTION:NO

**Description**

DETECT_FUSE is only supprted for REDUCTION:NO. DETECT_FUSE is ignored.

**What Next**

If you want to use DETECT_FUSE, please set EXTRACTION:NO. Or you can ignore this message.

## SX-0554

(Warning) DETECT_FUSE can be set only for POWER_REDUCTION:NO

**Description**

DETECT_FUSE is only suported for POWER_EXTRACTION:NO. DETECT_FUSE is ignored.

Feedback

**What Next**

If you want to use DETECT_FUSE, please set POWER_EXTRACTION:NO. Or you can ignore this message.

---

## SX-0555

(Fatal) PRINT_RV_FUSE must be used with NETLIST_TAIL_COMMENTS and DETECT_FUSE.

**Description**

PRINT_RV_FUSE is only supported with NETLIST_TAIL_COMMENTS:YES and DETECT_FUSE:YES.

**What Next**

Please set NETLIST_TAIL_COMMENTS:YES and DETECT_FUSE:YES if you want to use PRINT_RV_FUSE:YES

---

## SX-0558

(Warning) DIFFUSION_RES_GATE_TO_CONT_THRESHOLD is used in StarRC command file. It will override nxtgrd DIFFUSION_RES_GATE_TO_CONT_THRESHOLD.

**Description**

DIFFUSION_RES_GATE_TO_CONT_THRESHOLD can be specified in both StarRC command file and ITF file. The command specified in StarRC command file take precedence.

**What Next**

This is only a warning message. No action is required.

---

## SX-0559

(Warning) DIFFUSION_RES_BEND_THRESHOLD is used in StarRC command file. It will override nxtgrd DIFFUSION_RES_BEND_THRESHOLD command.

**Description**

DIFFUSION_RES_BEND_THRESHOLD can be specified in both StarRC command file and ITF file. The command specified in StarRC command file take precedence.

**What Next**

This is only a warning message. No action is required.

Feedback

## SX-0560

(Warning) USER_DEFINED_DIFFUSION_RES needs NETLIST_POSTPROCESS_COMMAND to plug-in user defined equation.

**Description**

StarRC writes information into the tail comments of diffusion resistors in the netlist. The extra information can then be used to calculate resistance according to a script specified by the NETLIST_POSTPROCESS_COMMAND in the StarRC command file.

**What Next**

Specify NETLIST_POSTPROCESS_COMMAND in the StarRC command file or use a script to postprocess the netlist to calculate the resistance.

## SX-0564

(Fatal) EXTRA_GEOMETRY_INFO:RES must be used with REDUCTION:NO/ POWER_REDUCTION:NO.

**Description**

EXTRA_GEOMETRY_INFO:RES enables StarRC to print bounding box for metal and via resistors. Reduction may cause incorrect geometry information.

**What Next**

Set both REDUCTION and POWER_REDUCTION to NO.

## SX-0565

(Fatal) EXTRA_GEOMETRY_INFO:RES must be used with NETLIST_TAIL_COMMENTS.

**Description**

EXTRA_GEOMETRY_INFO:RES enables StarRC to print bounding box for metal and via resistors in the tail comment. It must be used with NETLIST_TAIL_COMMENTS: YES| ADVANCED.

**What Next**

Set NETLIST_TAIL_COMMENTS to YES or ADVANCED.

## SX-0566

(Fatal) NETLIST_PORT_LEVEL_COMMENTS must be used with EXTRA_GEOMETRY_INFO: NODE.

Feedback

**Description**

In order to print level information required by NETLIST_PORT_LEVEL_COMMENTS, EXTRA_GEOMETRY_INFO: NODE must be enabled.

**What Next**

Enable EXTRA_GEOMETRY_INFO: NODE and restart.

---

## SX-0567

(Fatal) DP_TILES_STITCHING cannot be less than 0 or greater than 3.

**Description**

DP_TILES_STITCHING is an internal command.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0568

(Fatal) INTERNAL error: invalid option IAPI

**Description**

You are using invalid optin IAPI.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0569

(Fatal) IAPI:YES cannot be combined with EXTRACTION:FSCOMPARE

**Description**

IAPI:YES cannot be combined with EXTRACTION:FSCOMPARE

**What Next**

Please use other EXTRACTION settings in StarRC command file

---

## SX-0570

(Warning) Improper value %f for StarRC command IAPI_CRICIAL_AREA_WIDTH.

Feedback

**Description**

IAPI_CRICIAL_AREA_WIDTH value cannot be zero, negative or larger than 100um. A default value of 4um will be used instead.

**What Next**

Set proper value for the StarRC command.

---

## SX-0572

(Warning) Improper value %f for StarRC command IAPI_OVERLAP_BAND_WIDTH.

**Description**

IAPI_OVERLAP_BAND_WIDTH value cannot be zero, negative or larger than 100um. A default value of 4um will be used instead.

**What Next**

Set proper value for the StarRC command.

---

## SX-0574

(Warning) MODEL_BASED_SHORT_HANDLING does not work with EXTRACTION: '%s'. Disable MODEL_BASED_SHORT_HANDLING.

**Description**

MODEL_BASED_SHORT_HANDLING does not work with EXTRACTION: R / C / RK / RKC / FSCOMPARE

**What Next**

If this option needs to be turn on, need revise the EXTRACTION option to solve the conflict.

---

## SX-0575

(Warning) REFERENCE_DIRECTION: VERTICAL setting in star_cmd will be used and REFERENCE_DIRECTION=HORIZONTAL in ITF will be ignored.

**Description**

This message informs you that you are setting REFERENCE_DIRECTION: VERTICAL in StarRC command file but also setting REFERENCE_DIRECTION=HORIZONTAL in ITF. The setting in StarRC command file takes precedence so the setting in ITF will be ignored.

Feedback

### What Next

If you want to set REFERENCE_DIRECTION as VERTICAL, you don't need to take any action; if you want to set REFERENCE_DIRECTION as HORIZONTAL, you should also set REFERENCE_DIRECTION: HORIZONTAL in StarRC command file.

---

## SX-0576

(Warning) REFERENCE_DIRECTION: HORIZONTAL setting in StarRC command file will be used and REFERENCE_DIRECTION=VERTICAL in ITF will be ignored.

### Description

This message informs you that you are setting REFERENCE_DIRECTION: HORIZONTAL in StarRC command file but also setting REFERENCE_DIRECTION=VERTICAL in ITF. The setting in StarRC command file takes precedence so the setting in ITF will be ignored.

### What Next

If you want to set REFERENCE_DIRECTION as HORIZONTAL, you don't need to take any action; if you want to set REFERENCE_DIRECTION as VERTICAL, you should also set REFERENCE_DIRECTION: VERTICAL in StarRC command file.

---

## SX-0577

(Fatal) REFERENCE_DIRECTION type must be VERTICAL or HORIZONTAL or NONE or GATE

### Description

REFERENCE_DIRECTION is option to configurate the reference direction during process variation. The valid options of this command include VERTICAL, HORIZONTAL, NONE, GATE. The value of option in this run is not equivalent to any of valid values.

### What Next

Refer to StarRC manual to correct the setting of REFERENCE_DIRECTION.

---

## SX-0578

(Warning) LARGE_EXTRACTION_WINDOW: YES will be ignored because it is not defined in the nxtgrd file.

### Description

LARGE_EXTRACTION_WINDOW:YES is only applicable when the nxtgrd file defines it as well.

Feedback

**What Next**

This is a warning message for information only. The extraction will proceed.

---

## SX-0579

(Fatal) Unknown ANALOG_SYMMETRIC_NETS command choice! '%s'

**Description**

An invalid setting was provided for the ANALOG_SYMMETRIC_NETS option in the StarRC command file.

**What Next**

Provide a valid setting for the ANALOG_SYMMETRIC_NETS option in the StarRC command file.

---

## SX-0580

(Fatal) Unknown PARALLEL_TRANSISTOR choice: '%s'

**Description**

Specified setting for PARALLEL_TRANSISTOR is not valid.

**What Next**

Use proper setting for PARALLEL_TRANSISTOR in your StarRC command file. Valid settings are: YES, ETCH, AUTO, NONE

---

## SX-0581

(Fatal) Unknown choice '%s' for command NANOMETER_DESIGN

**Description**

You are using unsuported settings for command NANOMETER_DESIGN

**What Next**

Please use corret setting (YES, NONE, AUTO)

---

## SX-0583

(Fatal) Unknown REMOVE_OVERLAPS choice: '%s'

Feedback

**Description**

The specified setting for REMOVE_OVERLAPS is not valid.

**What Next**

Use valid setting for REMOVE_OVERLAPS in StarRC command file. valid settings are: YES, AUTO, NONE.

---

## SX-0584

(Fatal) Unknown DEVICELAYER_MODE choice: '%s'

**Description**

Unknown DEVICELAYER_MODE choice: '%s'

**What Next**

Please use correct setting for DEVICELAYER_MODE, YES, NORMAL, HIGH, NONE.

---

## SX-0588

(Fatal) Unknown ENHANCED_PROCESS_VARIATION_HANDLING parameter specified: '%s'

**Description**

Unknown parameter is specified for ENHANCED_PROCESS_VARIATION_HANDLING. Expected values are: DEFAULT, NO, LEVEL1, LEVEL2, LEVEL3, LEVEL4

**What Next**

Change your StarRC command file to provide valid parameter.

---

## SX-0596

(Warning) NONCRITICAL_POLYGON_SCAN: YES does not have any effect unless fast extraction mode is enabled.

**Description**

The NONCRITICAL_POLYGON_SCAN option was added in conjunction with FAST_EXTRACTION_MODE capability. It does not affect FAST_EXTRACTION_MODE:NO functionality.

**What Next**

NONCRITICAL_POLYGON_SCAN will be ignored and you don't need to take any action.

Feedback

## SX-0601

(INTERNAL Error) ADAPTIVE_SEARCH_DISTANCE_LEVEL must be >= 0

**Description**

StarRC internal command ADAPTIVE_SEARCH_DISTANCE_LEVEL must be >=0.

**What Next**

Contact the Synopsys Support Center.

## SX-0605

(Warning) KEEP_SKIPCELL_PIN_CG:YES has no effect!
KEEP_SKIPCELL_PIN_CG:YES only has effect when
COUPLE_TO_SKIPCELL_PINS:YES is set!

**Description**

KEEP_SKIPCELL_PIN_CG:YES can only be used when
COUPLE_TO_SKIPCELL_PINS:YES is set.

**What Next**

You should use both COUPLE_TO_SKIPCELL_PINS:YES and
KEEP_SKIPCELL_PIN_CG:YES in StarRC command file.

## SX-0607

(Fatal) invalid RV_VIA_EXTRACT_PROPERTY: '%s'

**Description**

The value of RV_VIA_EXTRACT_PROPERTY can only be SAVL, SAVC or both.

**What Next**

Set RV_VIA_EXTRACT_PROPERTY to SAVL, SAVC or both.

## SX-0611

(Warning) NETLIST_PRINT_CC_TWICE: YES is not supported for NETLIST_FORMAT:
SPF. It will be ignored.

Feedback

**Description**

NETLIST_PRINT_CC_TWICE: YES is only supported in NETLIST_FORMAT:STAR and NETNAME

**What Next**

You can ingore this message if you want to use NETLIST_FORMAT: SPF. Otherwise, change NETLIST_FORMAT to STAR or NETNAME

---

## SX-0612

(Warning) NETLIST_INTRANET_CAPS will obsolete, use INTRANET_CAPS: YES/NO instead.

**Description**

NETLIST_INTRANET_CAPS will obsolete, use INTRANET_CAPS: YES/NO instead.

**What Next**

Please use INTRANET_CAPS in your StarRC command file.

---

## SX-0614

(Warning) NETLIST_INSTANCE_SECTION only supports NO/YES/SELECTED, '%s' is ignored.

**Description**

Option other than NO|YES|SELECTED is supplied to NETLIST_INSTANCE_SECTION. The option is ignored. No instance section will be printed in output netlist.

**What Next**

Modify NETLIST_INSTANCE_SECTION with correct option in StarRC command file to remove this warning message.

---

## SX-0615

(Fatal) COUPLING_REPORT_FILE has the same name as the netlist file.

**Description**

The value for the COUPLING_REPORT_FILE option in the StarRC command file is identical to the value of the NETLIST_FILE option.

Feedback

**What Next**

Modify the StarRC command file to use different values for the COUPLING_REPORT_FILE and NETLIST_FILE options.

---

## SX-0616

(Fatal) COUPLING_REPORT_NUMBER must be greater than zero.

**Description**

This error message informs you that COUPLING_REPORT_NUMBER is set to a number less than zero.

**What Next**

Reset COUPLING_REPORT_NUMBER to an integer greater than zero.

---

## SX-0618

(Fatal) NETLIST_MINCAP_THRESHOLD is supported in transitor level flow only.

**Description**

NETLIST_MINCAP_THRESHOLD is only supported for transistor level flow.

**What Next**

Remove NETLIST_MINCAP_THRESHOLD and restart.

---

## SX-0619

(Fatal) NETLIST_MINCAP_THRESHOLD must be greater than zero.

**Description**

NETLIST_MINCAP_THRESHOLD must be greater than zero.

**What Next**

Correct the command setting and restart.

---

## SX-0620

(Fatal) NETLIST_TOTALCAP_THRESHOLD supported in transitor level flow only.

**Description**

NETLIST_TOTALCAP_THRESHOLD is only supported in transistor level flow extraction.

Feedback

**What Next**

Remove the command and restart.

---

## SX-0621

(Fatal) NETLIST_TOTALCAP_THRESHOLD must be greater than zero.

**Description**

NETLIST_TOTALCAP_THRESHOLD must be greater than zero. Otherwise the tool aborts.

**What Next**

Correct the command setting and restart.

---

## SX-0622

(Warning) INTERNAL Warning: NETLIST_MAX_MEMORY option is no longer supported.

**Description**

NETLIST_MAX_MEMORY option is no longer supported.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0623

(Warning) NETLIST_COUPLE_UNSELECTED_NETS is only valid with NETLIST_SELECT_NETS.

**Description**

NETLIST_COUPLE_UNSELECTED_NETS only works when NETLIST_SELECT_NETS is set.

**What Next**

This is a warning message, NETLIST_COUPLE_UNSELECTED_NETS will be ignored and the run will continue.

---

## SX-0624

(Warning) NETLIST_COUPLE_UNSELECTED_NETS is set to an obsolete option 'YES'. StarRC will use IDEAL instead.

Feedback

**Description**

The supported options for NETLIST_COUPLE_UNSELECTED_NETS are NO, IDEAL and COMPLETE. YES is obsolete and StarRC automatically replaces it with IDEAL.

**What Next**

This is a warning message for information only.

---

## SX-0625

(Fatal) '%s' is not a known option for NETLIST_COUPLE_UNSELECTED_NETS; please specify NO, IDEAL, COMPLETE or ADVANCED.

**Description**

An invaid option is detected in NETLIST_COUPLE_UNSELECTED_NETS command, the valid options are NO, IDEAL, COMPLETE and ADVANCED.

**What Next**

Correct the command NETLIST_COUPLE_UNSELECTED_NETS and restart.

---

## SX-0626

(Fatal) NETLIST_MERGE_SHORTED_PORTS is only supported for NETLIST_FORMAT: STAR|NETNAME|SPF|OA.

**Description**

NETLIST_MERGE_SHORTED_PORTS is dependent on NETLIST_FORMAT and is only supported for STAR/NETNAME/SPF/OA format.

**What Next**

Change the command setting and restart.

---

## SX-0627

(Fatal) NETLIST_PIN_SUBNODE_RES_VALUE can not be negative.

**Description**

NETLIST_PIN_SUBNODE_RES_VALUE is set as a negative value, which is invalid.

**What Next**

Set NETLIST_PIN_SUBNODE_RES_VALUE to a zero or positive value.

Feedback

## SX-0628

(Fatal) RV_PRINT_RESISTOR_TYPE must be used with NETLIST_TAIL_COMMENTS.

**Description**

NETLIST_TAIL_COMMENTS needs to be YES or ADVANCED to print the resistor type as a comment in the netlist.

**What Next**

Set NETLIST_TAIL_COMMNETS to YES or ADVANCED in StarRC command file.

## SX-0629

(Fatal) RV_PRINT_RESISTOR_TYPE must be used with EXTRA_GEOMETRY_INFO:RES.

**Description**

In the StarRC command file, RV_PRINT_RESISTOR_TYPE is used, but EXTRA_GEOMETRY_INFO is not set to RES.

**What Next**

Set EXTRA_GEOMETRY_INFO: RES in the StarRC command file.

## SX-0631

(Fatal) EXTRA_GEOMETRY_INFO must be used with NETLIST_TAIL_COMMENTS.

**Description**

When EXTRA_GEOMETRY_INFO: RES is specified, current direction is printed as comment in the output netlist. Following options must be enabled: NETLIST_TAIL_COMMENTS:YES|ADVANCED, REDUCTION: NO, KEEP_VIA_NODES:YES

**What Next**

Set NETLIST_TAIL_COMMENTS to YES or ADVANCED.

## SX-0632

(Fatal) PRINT_THICKNESS_INFO must be used with NETLIST_TAIL_COMMENTS.

Feedback

**Description**

When PRINT_THICKNESS_INFO: YES is specified, the top thickness variation and bottom thickness variation are printed in tail comment of resistors in the netlist. It must be used with NETLIST_TAIL_COMMENTS: YES|ADVANCED.

**What Next**

Set NETLIST_TAIL_COMMENTS to YES or ADVANCED.

---

## SX-0633

(Fatal) PRINT_SILICON_INFO must be used with NETLIST_TAIL_COMMENTS.

**Description**

NETLIST_TAIL_COMMENTS: YES|ADVANCED is required for PRINT_SILICON_INFO.

**What Next**

Set NETLIST_TAIL_COMMENTS: YES|ADVANCED.

---

## SX-0634

(Warning) ADD_ZERO_GROUND_CAP is only available with SPEF output format.

**Description**

ADD_ZERO_GROUND_CAP is only available with SPEF output format. It is ignored.

**What Next**

Use other NETLIST_FORMAT if you want to use ADD_ZERO_GROUND_CAP. Otherwise, you can ignorethis message.

---

## SX-0635

(Fatal) Options NETLIST_CORNER_FILE and NETLIST_CORNER_NAMES are valid only in Statistical netlisting.

**Description**

Options NETLIST_CORNER_FILE and NETLIST_CORNER_NAMES are valid only in Statistical netlisting.

Feedback

**What Next**

Please remove options NETLIST_CORNER_FILE and NETLIST_CORNER_NAMES if none of options SENSITIVITY, TEMPERATURE_SENSITIVITY, USE_SENSITIVITY_MULTI_CORNER_OUTPUT is set.

---

## SX-0636

(Warning) Option NETLIST_CORNER_FILE is ignored because option NETLIST_CORNER_NAMES isn't set.

**Description**

Option NETLIST_CORNER_FILE is ignored because option NETLIST_CORNER_NAMES isn't set.

**What Next**

You can ignore this message if you do not use multi-corner extraction. Or set NETLIST_CORNER_NAMES in StarRC command file.

---

## SX-0637

(Fatal) NETLIST_REMOVE_DANGLING_BRANCHES is not supported with NETLIST_FORMAT:SPEF.

**Description**

NETLIST_REMOVE_DANGLING_BRANCHES does not work when NETLIST_FORMAT is set to SPEF.

**What Next**

Change the command setup and restart.

---

## SX-0638

(Fatal) NETLIST_REMOVE_DANGLING_BRANCHES is supported in transitor level flow only.

**Description**

NETLIST_REMOVE_DANGLING_BRANCHES is an option only valid for transistor level flow.

**What Next**

Remove the command NETLIST_REMOVE_DANGLING_BRANCHES and restart.

Feedback

## SX-0639

(Fatal) NETLIST_REMOVE_MINRES_THRESHOLD supported in transitor level flow only.

**Description**

NETLIST_REMOVE_MINRES_THRESHOLD supported in transitor level flow only.

**What Next**

Please remove NETLIST_REMOVE_MINRES_THRESHOLD in StarRC command file since you are running gate level fow.

## SX-0640

(Fatal) Option NETLIST_MINRES_THRESHOLD value should be positive or zero

**Description**

Option NETLIST_MINRES_THRESHOLD value should be positive or zero

**What Next**

Please use positive value or zero for NETLIST_MINRES_THRESHOLD in StarRC command file

## SX-0641

(Warning) NETLIST_MINRES_HANDLING: MERGE (also default) and NETLIST_MINRES_THRESHOLD > 0 combination is not allowed with NETLIST_TAIL_COMMENTS: YES. Merging is turned off

**Description**

When NETLIST_MINRES_HANDLING: MERGE, StarRC merges the resistor with a neighboring resistor if it is in series and is smaller than the threshold. It need NETLIST_TAIL_COMMENTS to be NO.

**What Next**

Set NETLIST_TAIL_COMMENTS to NO.

## SX-0642

(Fatal) File specified in option MINRES_THRESHOLD_GRD_FILE doesn't match any file in TCAD_GRD_FILE.

Feedback

**Description**

MINRES_THRESHOLD_GRD_FILE does not match any file in TCAD_GRD_FILE.

**What Next**

Change MINRES_THRESHOLD_GRD_FILE in StarRC command file to use one of the files in TCAD_GRD_FILE.

---

## SX-0643

(Warning) TCAD_GRD_FILE will be used in applying NETLIST_MINRES_THRESHOLD.

**Description**

Since MINRES_THRESHOLD_GRD_FILE is not set, StarRC will use TCAD_GRD_FILE in applying NETLIST_MINRES_THRESHOLD.

**What Next**

If you want to use a different nxtgrd file for NETLIST_MINRES_THRESHOLD, set MINRES_THRESHOLD_GRD_FILE in StarRC command file.

---

## SX-0644

(Fatal) NETLIST_PARASITIC_RESISTOR_MODEL is supported for SPF, STAR, NETNAME netlist formats only.

**Description**

NETLIST_PARASITIC_RESISTOR_MODEL is only supported for NETLIST_FORMAT: SPF|STAR|NETNAME.

**What Next**

Correct the command setting and restart.

---

## SX-0645

(Fatal) NETLIST_MMC_FORMULA is supported for SPF, STAR, NETNAME netlist formats only.

**Description**

NETLIST_MMC_FORMULA is supported for SPF, STAR, NETNAME netlist formats only.

**What Next**

Disable NETLIST_MMC_FORMULA or change NETLIST_FORMAT to a supported format.

Feedback

## SX-0646

(Fatal) NETLIST_MMC_FORMULA is supported with MERGE_MULTI_CORNER:YES only.

**Description**

NETLIST_MMC_FORMULA is only supported when MERGE_MULTI_CORNER: YES is set.

**What Next**

Change the command setup and restart.

## SX-0647

(Fatal) NETLIST_SMC_FORMULA is supported for SPF, STAR, NETNAME, OA netlist formats only.

**Description**

NETLIST_SMC_FORMULA: YES can only be used when the output netlist is SPF, STAR, NETNAME, or OA. If you use other format in NETLIST_FORMAT command, StarRC will give this error.

**What Next**

You should use supported netlist format in StarRC command NETLIST_FORMAT. Otherwise, you should remove command NETLIST_SMC_FORMULA: YES.

## SX-0648

(Fatal) NETLIST_SMC_FORMULA is supported with SIMULTANEOUS_MULTI_CORNER:YES only.

**Description**

In SIMULTANEOUS_MULTI_CORNER flow, a formula format output can be achieved by setting NETLIST_SMC_FORMULA:YES. The formula format can be achieved only in SIMULTANEOUS_MULTI_CORNER flow. The run has NETLIST_SMC_FORMULA but not in SIMULTANEOUS_MULTI_CORNER flow, so it errors.

**What Next**

Remove NETLIST_SMC_FORMULA from StarRC command file

Feedback

## SX-0650

(Fatal) SELECTED CORNERS HAD BEEN CHANGED WHEN USING cleanN

**Description**

SELECTED CORNERS ARE MISMATHCHED WITH PREVIOUS RUNNING

**What Next**

THE SELECTED CORNERS SHOULD BE THE SAME AS THE RUNNING TO GENERATING SPF

## SX-0651

(Warning) BUS_BIT and OA_BUS_BIT should be set first if OA_INSTANCE_BIT is used! command OA_INSTANCE_BIT will be ignored!

**Description**

OA_INSTANCE_BIT is used to change bit delimiters for instances in OA view. For example, if the original database use () as bit delimiters for instances but you want to use <> in the output OA view, you can set: BUS_BIT: () OA_BUS_BIT: <> OA_INSTANCE_BIT: [] OA_INSTANCE_BIT should be always used together with BUS_BIT and OA_BUS_BIT command. If BUS_BIT or OA_BUS_BIT is missing but OA_INSTANCE_BIT is used, StarRC will give this warning and the bit delimiters for instances in OA view will not be changed.

**What Next**

You should add BUS_BIT and OA_BUS_BIT command to specify the bit delimiters for instances used in original database to StarRC command file.

## SX-0653

(Warning) NETLIST_DEVICE_LOCATION_ORIENTATION only supports NO/YES/COMMENT, '%s' is ignored.

**Description**

NETLIST_DEVICE_LOCATION_ORIENTATION only supports NO/YES/COMMENT options. The option specified is invalid and the default "NO" option will be used.

**What Next**

Remove NETLIST_DEVICE_LOCATION_ORIENTATION, or set it to either YES or COMMENT options.

Feedback

## SX-0655

(Warning) NETLIST_FORMAT: OA does not support HIERARCHICAL_SEPARATOR: / or HIERARCHICAL_SEPARATOR: ., changing it to |.

**Description**

HIERARCHICAL_SEPARATOR: '/' cannot be used with NETLIST_FORMAT: OA, StarRC will change it to '|' internally.

**What Next**

Nothing needs to be done.

## SX-0656

(Warning) BUS_BIT should be set first if OA_BUS_BIT is used! command OA_BUS_BIT will be ignored!

**Description**

OA_BUS_BIT is used to change but bit delimiters in OA view. For example, if the original database use () as bus bit delimiters but you want to use <> in the output OA view, you can set: BUS_BIT: () BUS_BIT: <> OA_BUS_BIT should be always used together with BUS_BIT command which specify the bus bit delimiters used in original database. If BUS_BIT is missing but OA_BUS_BIT is used, StarRC will give this warning and the bus bit delimiters in OA view will not be changed.

**What Next**

You should add BUS_BIT command to specify the but bit delimiters used in original database to StarRC command file.

## SX-0657

(Fatal) OA_LIB_NAME is mandatory in OA flow.

**Description**

OA_LIB_NAME must be set for NETLIST_FORMAT: OA

**What Next**

Set a correct OA_LIB_NAME command and restart.

## SX-0658

(Fatal) OA_DEVICE_MAPPING_FILE is mandatory in OA flow.

Feedback

**Description**

OA_DEVICE_MAPPING_FILE must be set for NETLIST_FORMAT: OA.

**What Next**

Correct the command setting and restart.

---

## SX-0659

(Warning) OA_LAYER_MAPPING_FILE was not specified. The parasitic view will not contain physical data.

**Description**

When using NETLIST_FORMAT: OA, in order to include physical data in the parasitic view, OA_LAYER_MAPPING_FILE must be specified.

**What Next**

This is a warning message for information only. If physical data is required, add OA_LAYER_MAPPING_FILE and restart.

---

## SX-0660

(Warning) OA_SKIPCELL_MAPPING_FILE will be ignored because SKIP_CELLS is not specified.

**Description**

OA_SKIPCELL_MAPPING_FILE only takes effect when SKIP_CELLS is specified.

**What Next**

This is a warning message for information only. The extraction will proceed.

---

## SX-0661

(Warning) Schematic property annotation is not supported for XREF:NO; OA_PROPERTY_ANNOTATION_VIEW will be ignored.

**Description**

Schematic property annotation is only applicable when you use XREF feature.

**What Next**

This is a warning message for information only. The extraction will proceed.

Feedback

## SX-0662

(Fatal) OA_PROPMAP_CASE_SENSITIVE may only be set to YES, NO, or MIXED.

**Description**

OA_PROPMAP_CASE_SENSITIVE may only be set to YES, NO, or MIXED.

**What Next**

Set OA_PROPMAP_CASE_SENSITIVE with correct setting.

## SX-0663

(Warning) COUPLE_NONCRITICAL_NETS_SUBNODE_SUFFIX will be ignored unless you specify NETLIST_FORMAT:SPEF.

**Description**

COUPLE_NONCRITICAL_NETS_SUBNODE_SUFFIX is only supported for NETLIST_FORMAT: SPEF.

**What Next**

This is a warning message for information only.

## SX-0664

(Fatal) NONCRITICAL_COUPLING_REPORT_FILE has the same name as %s.

**Description**

Each output file should have a unique name.

**What Next**

Change the file name and restart.

## SX-0665

(Fatal) NETLIST_FORMAT: OA is mandatory in OA_MULTI_OUTPUT flow.

**Description**

Because OA_MULTI_OUTPUT flow will run OA flow, you need to make sure NETLIST_FORMAT: OA is set and all OA libraries and setting files are ready.

Feedback

**What Next**

Set NETLIST_FORMAT: OA in StarRC command file.

---

## SX-0666

(Warning) NONCRITICAL_COUPLING_REPORT_FILE will not be generated unless you specify NETLIST_FORMAT:SPEF.

**Description**

NONCRITICAL_COUPLING_REPORT_FILE is only supported with NETLIST_FORMAT: SPEF. The file will not be generated in other netlist format.

**What Next**

This is a warning message for information only. But if NONCRITICAL_COUPLING_REPORT_FILE is a required output, set NETLIST_FORMAT to SPEF and rerun.

---

## SX-0667

(Fatal) Both LPE_PARAM and LPE_DEVICES must be defined.

**Description**

LPE_PARAM and LPE_DEVICES must be both set. StarRC aborts if only one of them is set.

**What Next**

Correct the command setting and restart.

---

## SX-0668

(Fatal) LPE_FLAGS_SETTING can only be set to either NETLIST or EXTRACTION.

**Description**

LPE_FLAGS_SETTING can only be set to NETLIST or EXTRACTION. Other settings are invalid and StarRC will abort.

**What Next**

Correct the command setting and restart.

Feedback

## SX-0669

(Fatal) RV_VIA_ARRAY_GDS_FILE need to be set when RV_VIA_ARRAY_REPORT_FILE mode is activated.

**Description**

RV_VIA_ARRAY_REPORT_FILE need to be used together with RV_VIA_ARRAY_GDS_FILE.

**What Next**

Please set RV_VIA_ARRAY_GDS_FILE in StarRC command file.

## SX-0670

(Fatal) RV_VIA_ARRAY_GDS_LAYER_MAP_FILE need to be set when RV_VIA_ARRAY_REPORT_FILE mode is activated.

**Description**

RV_VIA_ARRAY_REPORT_FILE need to be used together with RV_VIA_ARRAY_GDS_LAYER_MAP_FILE

**What Next**

Please set RV_VIA_ARRAY_GDS_LAYER_MAP_FILE in StarRC command file.

## SX-0671

(Fatal) NETLIST_ISOLATED_PORTS: YES only works with MULTIPLE option in INSTANCE_PORT setting.

**Description**

NETLIST_ISOLATED_PORTS: YES only works for ports with "MULTIPLE" option enabled in INSTANCE_PORT command.

**What Next**

Add MULTIPLE option in INSTANCE_PORT settings, or disable NETLIST_ISOLATED_PORTS command.

## SX-0672

(Warning) NETLIST_ISOLATED_PORTS: YES will override command NETLIST_REMOVE_ISOLATED_PORTS: '%s'

Feedback

**Description**

When NETLIST_ISOLATED_PORTS: YES conflicts with NETLIST_REMOVE_ISOLATED_PORTS setup, NETLIST_ISOLATED_PORTS will take the precedence. The only compatible setting of NETLIST_REMOVE_ISOLATED_PORTS is NONE (or not set at all) when NETLIST_ISOLATED_PORTS: YES is set.

**What Next**

This is a warning message for information only.

---

## SX-0673

(Warning) Invalid setting for NETLIST_REMOVE_ISOLATED_PORTS: '%s'

**Description**

NETLIST_REMOVE_ISOLATED_PORTS only support the following three possible input <{AUTO}|YES|NO>.

**What Next**

Revise the star_cmd to one of above three allowed options.

---

## SX-0674

(Warning) Instance section port names may not match net port names because of INSTANCE_PORT

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0675

(Fatal) STARDIR_REDUCE_SIZE:NO cannot be used in -cleanD mode, please switch to -clean mode and restart.

**Description**

STARDIR_REDUCE_SIZE:NO cannot be used in -cleanD mode because cleanD is intended to remove as many files as possible.

Feedback

**What Next**

Change the setting and restart.

---

## SX-0679

(Fatal) NETLIST_PARASITIC_RESISTOR_MODEL is allowed with REDUCTION: LAYER_NO_EXTRA_LOOPS, TOPOLOGICAL, NO or LAYER only.

**Description**

NETLIST_PARASITIC_RESISTOR_MODEL is allowed with REDUCTION: LAYER_NO_EXTRA_LOOPS, TOPOLOGICAL, NO or LAYER only.

**What Next**

Set REDUCTION command to the supported options for NETLIST_PARASITIC_RESISTOR_MODEL.

---

## SX-0680

(Fatal) invalid extra_geometry_info: %s

**Description**

EXTRA_GEOMETRY_INFO is not set correctly.

**What Next**

Refer to user mannual and set EXTRA_GEOMETRY_INFO correctly.

---

## SX-0681

(Warning) ENHANCED_CAP_DISTRIBUTION is ignored as it is only valid under 28nm process.

**Description**

The process node in your run is equal to or larger than 28nm, but ENHANCED_CAP_DISTRIBUTION is ignored as it is only valid under 28nm process.

**What Next**

Remove ENHANCED_CAP_DISTRIBUTION command to suppress this warning, or contact the Synopsys support center if you have some conerns related to this command.

Feedback

## SX-0682

(Fatal) EXTRA_GEOMETRY_INFO:RES must be used with REDUCTION:NO/ POWER_REDUCTION:NO.

**Description**

EXTRA_GEOMETRY_INFO:RES enables StarRC to print bounding box for metal and via resistors. Reduction may cause incorrect geometry information.

**What Next**

Set both REDUCTION and POWER_REDUCTION to NO.

## SX-0683

(Fatal) NETLIST_COMMENTS_FILE '%s' does not exist.

**Description**

NETLIST_COMMENTS_FILE '%s' does not exist.

**What Next**

Please check if specified file exists.

## SX-0685

(Warning) DENSITY_BASED_THICKNESS: YES is ignored since there is no thickness variation modeling.

**Description**

DENSITY_BASED_THICKNESS: YES is specified StarRC command file, but there is no thickness variation modeling in the nxtgrd file, such as THICKNESS_VS_DENSITY, POLYNOMIAL_BASED_THICKNESS_VARIATION. DENSITY_BASED_THICKNESS: YES is ignored.

**What Next**

You can ignore this message if it is expected to have no thickness vaiation modeling in nxtgrd file. Or use a nxtgrd file with thickness variation modeling.

## SX-0686

(Fatal) EXTRACT_VIA_CAPS may not be NO in order to use GATE_TO_DIFFUSION_CAP table defined in nxtgrd file.

Feedback

**Description**

EXTRACT_VIA_CAPS is set to NO, but there is GATE_TO_DIFFUSION_CAP table defined in nxtgrd file.

**What Next**

Please set EXTRACT_VIA_CAPS to YES in StarRC command file to use GATE_TO_DIFFUSION_CAP in nxtgrd file.

---

## SX-0687

(Warning) IGNORE_CAPACITANCE:ALL RETAIN_GATE_DIFFUSION_COUPLING specified but ITF file does not have a GATE_TO_DIFFUSION_CAP or GATE_TO_DIFFUSION_CHANNEL_CAP table defined.

**Description**

StarRC need GATE_TO_DIFFUSION_CAP or GATE_TO_DIFFUSION_CHANNEL_CAP table for extracting the gate-to-diffusion component when "IGNORE_CAPACITANCE:ALL RETAIN_GATE_DIFFUSION_COUPLING" is specified.

**What Next**

If gate-to-diffusion capacitance is not required, ignore this warning.

---

## SX-0691

(Fatal) nxtgrd file includes PARALLEL_TO_REFERENCE/ PERPENDICULAR_TO_REFERENCE, but neither nxtgrd file nor StarRC command file defines REFERENCE_DIRECTION

**Description**

nxtgrd file includes PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE, but neither nxtgrd file nor StarRC command file defines REFERENCE_DIRECTION

**What Next**

Please add PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE in nxtgrd file or StarRC command file

---

## SX-0692

(Warning) StarRC command file has REFERENCE_DIRECTION, but TCAD_GRD_FILE do not have PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE keywords. REFERENCE_DIRECTION will be ignored for table lookup.

Feedback

**Description**

StarRC command file has REFERENCE_DIRECTION, but TCAD_GRD_FILE do not have PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE keywords. REFERENCE_DIRECTION will be ignored for table lookup.

**What Next**

You can ignore this message if you do not want to use REFERENCE_DIRECTION. Or please add PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE in TCAD_GRD_FILE.

---

## SX-0693

(Warning) nxtgrd file has REFERENCE_DIRECTION, but do not have PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE keywords. REFERENCE_DIRECTION will be ignored for table lookup.

**Description**

nxtgrd file has REFERENCE_DIRECTION, but do not have PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE keywords. REFERENCE_DIRECTION will be ignored for table lookup.

**What Next**

You can ignore this message if you do not want to use REFERENCE_DIRECTION. Or please add PARALLEL_TO_REFERENCE/PERPENDICULAR_TO_REFERENCE in nxtgrd file.

---

## SX-0694

(Fatal) IGNORE_ETCH is not supported with RPSQ_VS_WIDTH_SPACING or RHO_VS_WIDTH_SPACING in nxtgrd file

**Description**

You can not use IGNORE_ETCH in StarRC command file and RPSQ_VS_WIDTH_SPACING or RHO_VS_WIDTH_SPACING in nxtgrd file

**What Next**

Please either remove IGNORE_ETCH in StarRC command file

Feedback

## SX-0695

(Warning) PRINT_SILICON_INFO in the StarRC command file: silicon width information in netlist tail comments may be inaccurate due to RPSQ_VS_WIDTH_AND_SPACING or RHO_VS_WIDTH_AND_SPACING in the nxtgrd file.

### Description

The silicon width might be inaccurate when ITF commands RPSQ_VS_WIDTH_AND_SPACING or RHO_VS_WIDTH_AND_SPACING are specified.

### What Next

Replace RPSQ_VS_WIDTH_AND_SPACING and RHO_VS_WIDTH_AND_SPACING with RPSQ_VS_SI_WIDTH and ETCH_VS_WIDTH_AND_SPACING.

## SX-0696

(Fatal) The starRC command USER_DEFINED_DIFFUSION_RES is set but the nxtgrd file has no USER_DEFINED_DIFFUSION_RESISTANCE model defined.

### Description

The nxtgrd file was generated without a USER_DEFINED_DIFFUSION_RESISTANCE statement in the ITF file so the user defined diffusion resistance model parameters are not defined.

### What Next

Either remove USER_DEFINED_DIFFUSION_RES in the starRC command file to disable the user defined diffusion resistance feature or update the nxtgrd file to enable it. Afterwards, run StarXtract again. To update the nxtgrd file: add a USER_DEFINED_DIFFUSION_RESISTANCE statement in the ITF file and run grdgenxo with -res_update.

## SX-0697

(Warning) NETLIST_CONNECT_OPENS is not set for all nets. This may cause failure to connect short equivalent nodes.

### Description

When you use SHORT_EQUIV_NODES: YES, StarRC will try to merge short equivalent nodes into a single net and connect them with short resistors. If NETLIST_CONNECT_OPENS is not set for all nets, StarRC may fail to add short resistors to connect the short equivalent nodes.

Feedback

**What Next**

You should use NETLIST_CONNECT_OPENS: * in StarRC command file when you use SHORT_EQUIV_NODES: YES.

---

## SX-0698

(Fatal) INTERNAL Error: SCHEMATIC_SKIP_CELLS list cannot be used with SKIP_CELLS list, if CELL_TYPE is set to LAYOUT.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0699

(Fatal) BLOCK "%s" did not compare.

**Description**

Specified BLOCK did not compare. This is required to run StarRC.

**What Next**

Please check LVS run to make sure the TOP block compared to run StarRC.

---

## SX-0700

(Fatal) There is no valid equiv cell in the SKIP_CELLS list.

**Description**

SKIP_CELLS is set but there is no valid equiv cell in the SKIP_CELLS list.

**What Next**

Please check your SKIP_CELLS list or check LVS database to make sure SKIP_CELLS are valid equiv cells.

Feedback

## SX-0701

(Fatal) HIERARCHICAL_SEPARATOR must be / | . or :

**Description**

HIERARCHICAL_SEPARATOR must be / | . or :

**What Next**

Set HIERARCHICAL_SEPARATOR to proper value in your StarRC command file.

## SX-0702

(Fatal) BUS_BIT prefix must be [ < ( { . or : and suffix must be ] > ) or }

**Description**

BUS_BIT prefix must be [ < ( { . or : and suffix must be ] > ) or }

**What Next**

Set BUS_BIT in correct format.

## SX-0703

(Fatal) OA_BUS_BIT prefix must be [ < ( { and suffix must be ] > ) or }

**Description**

OA_BUS_BIT is used to change but bit delimiters in OA view. For example, if the original database use () as bus bit delimiters but you want to use <> in the output OA view, you can set: BUS_BIT: () BUS_BIT: <> OA_BUS_BIT only supports 4 pairs of but bit delimiters: [], <>, (), {}. If other character is used in this command, StarRC will give this error.

**What Next**

You should remove unsupported character from OA_BUS_BIT command.

## SX-0704

(Fatal) NETLIST_DELIMITER must be : . / | or #

**Description**

Unsupported NETLIST_DELIMITER setting is specified.

Feedback

**What Next**

Please use supported values: . / | #

---

## SX-0705

(Fatal) OA_INSTANCE_BIT prefix must be [ < ( { and suffix must be ] > ) or }

**Description**

OA_INSTANCE_BIT is used to change bit delimiters for instances in OA view. For example, if the original database use () as bit delimiters for instances but you want to use <> in the output OA view, you can set: BUS_BIT: () OA_INSTANCE_BIT: <> OA_INSTANCE_BIT only supports 4 pairs of bit delimiters: [], <>, (), {}. If other character is used in this command, StarRC will give this error.

**What Next**

You should remove unsupported character from OA_INSTANCE_BIT command.

---

## SX-0706

(Fatal) Errors while writing file '%s', disk may be full.

**Description**

An internal file could not be successfully written to disk.

**What Next**

Check if the disk has space or contact your system administrator.

---

## SX-0708

(Fatal) INTERNAL Error: Syntax error while parsing command file at line '%d'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0709

(Warning) INTERNAL Warning: Layer '%s' is not in layers file

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0710

(Fatal) Can not open file '%s' for reading

**Description**

StarRC cannot open a file for reading and parsing.

**What Next**

Check to make sure that you have read permission on the file system and that the disk performance is good.

---

## SX-0711

(Information) The starRC command TEMPERATURE_SENSITIVITY is set and the nxtgrd file has USER_DEFINED_DIFFUSION_RESISTANCE model defined. The two features are not compatible.

**Description**

This is an information message. TEMPERATURE_SENSITIVITY and USER_DEFINED_DIFFUSION_RESISTANCE features are not compatible. The TEMPERATURE_SENSITIVITY is not applied to User Defined Diffusion Resistances (UDDR).

**What Next**

No action is needed.

---

## SX-0712

(Information) The starRC command SIMULTANEOUS_MULTI_CORNER is set and USER_DEFINED_DIFFUSION_RESISTANCE is set to VERBOSE. The two features are not compatible, USER_DEFINED_DIFFUSION_RESISTANCE is set to YES.

Feedback

**Description**

This is an information message. The USER_DEFINED_DIFFUSION_RESISTANCE:VERBOSE mode is only available for single corner run.

**What Next**

In order to run StarRC in USER_DEFINED_DIFFUSION_RESISTANCE VERBOSE mode, setup individual starRC command file and run StarXtract for each corner.

---

## SX-0716

(Fatal) Tclsam_init result: '%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0717

(Fatal) Tksam_init result: '%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0718

(Fatal) Tixsam_init result: '%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-0719

(Warning) Could not find any net for wildcard set '%s'

**Description**

StarRC cannot find any net with name matches this wildcard set.

**What Next**

Information only. No action is needed.

## SX-0720

(Warning) Could not find net "%s"

**Description**

StarRC cannot find this net in input database.

**What Next**

Information only. No action is needed.

## SX-0722

(Warning) Negation wildcard is not supported for power nets selection. Token '%s' will be ignored.

**Description**

POWER_NETS and POWER_NETS_SOLVE don't support negation wildcard '!'. This wildcard will be ignored.

**What Next**

Information only. No action is needed.

## SX-0725

(Warning) Could not find instance %s .

**Description**

StarRC cannot find this instance specified in SKIP_INSTANCES in the input database.

**What Next**

If this is expected, no action is needed.

Feedback

## SX-0726

(Warning) DANGLING_NET '%s' is removed from netlist.

**Description**

Dangling net is removed from netlist.

**What Next**

Information only. No action is needed.

## SX-0727

(Warning) Removed %d %s_NETS from the netlist (see cells.sum/translate.sum).

**Description**

StarRC reports how many nets are removed.

**What Next**

Information only. No action is needed.

## SX-0728

(Warning) Floating nets will be translated as fill.

**Description**

TRANSLATE_FLOATING_AS_FILL is YES, floating nets will be translated as fill.

**What Next**

Information only. No action is needed.

## SX-0730

(Warning) Environment variable STARRCXT_OA_LIBS is going to be replaced by STARRC_OA_LIBS in 2010.06

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-0735

(Warning) METAL_FILL_POLYGON_HANDLING is set to IGNORE so METAL_FILL_GDS_FILE will be ignored.

**Description**

METAL_FILL_POLYGON_HANDLING is set to IGNORE so METAL_FILL_GDS_FILE is not used and will be ignored.

**What Next**

If this is expected, no action is needed.

## SX-0737

(Warning) METAL_FILL_POLYGON_HANDLING is set to FLOATING so METAL_FILL_GDS_FILE_NET_NAME/METAL_FILL_OASIS_FILE_NET_NAME option will be ignored.

**Description**

METAL_FILL_POLYGON_HANDLING is set to FLOATING so METAL_FILL_GDS_FILE_NET_NAME/METAL_FILL_OASIS_FILE_NET_NAME option will be ignored.

**What Next**

If this is expected, no action is needed.

## SX-0738

(Warning) METAL_FILL_GDS_FILE_NET_NAME/ METAL_FILL_OASIS_FILE_NET_NAME: '%s' is not a valid layout netname. Grounded metal fill objects will be assigned to net 0.

**Description**

StarRC cannot find this net name in the input database so the grounded metal fill objects will be assigned to net 0 instead of METAL_FILL_GDS_FILE_NET_NAME/ METAL_FILL_OASIS_FILE_NET_NAME.

**What Next**

If this is expected, no action is needed.

Feedback

## SX-0739

(Fatal) METAL_FILL_GDS_OFFSET/METAL_FILL_OASIS_OFFSET must have 2 float elements

**Description**

The syntax of METAL_FILL_GDS_OFFSET/METAL_FILL_OASIS_OFFSET is: METAL_FILL_GDS_OFFSET: offsetX offsetY METAL_FILL_OASIS_OFFSET: offsetX offsetY

**What Next**

Provide correct METAL_FILL_GDS_OFFSET/METAL_FILL_OASIS_OFFSET setting in StarRC command file.

## SX-0741

(Fatal) Invalid syntax in METAL_SHEET_OVER_AREA. Usage is: METAL_SHEET_OVER_AREA: <metal_layer_name> <left> <bottom> <right> <top> .

**Description**

Format of METAL_SHEET_OVER_AREA is not correct.

**What Next**

Reset METAL_SHEET_OVER_AREA in StarRC command file.

## SX-0742

(Warning) Net %s becomes %s due to instance port(s) explosion and is removed.

**Description**

The instance port(s) is exploded and removed, and then this net name changed.

**What Next**

Confirm this is expected data.

## SX-0743

(Fatal) Metal fill block '%s' is not found in the METAL_FILL_GDS_FILE/ METAL_FILL_OASIS_FILE.

Feedback

**Description**

The import of fills into the main design database often takes significant time and inconsistent fill design hierarchy imported will be difficult to debug and cause numerous problems in later extraction stage. To avoid possible problems as early as possible, StarRC errors out when it is unable to find consistent fill design hierarchy.

**What Next**

METAL_FILL_GDS_FILE/METAL_FILL_OASIS_FILE must contain top block with same name as main design block given by BLOCK in the command file. You should correct top block in the METAL_FILL_GDS_FILE/METAL_FILL_OASIS_FILE or use METAL_FILL_BLOCK_NAME to continue.

---

## SX-0752

(Fatal) The use of '%s' for option '%s' is not yet supported.

**Description**

The specified value for the option mentioned the error message is not yet supported by StarRC.

**What Next**

Change the value for the option being used. Refer to the StarRC User Guide for more information.

---

## SX-0754

(Fatal) ASTRO_TIMER is no longer supported.

**Description**

Setting of ASTRO_TIMER for the TARGET_ANALYSIS option in the StarRC command file is no longer supported.

**What Next**

Change the value for the TARGET_ANALYSIS option in the StarRC command file. Refer to the StarRC User Guide to get the list of supported values.

---

## SX-0755

(Warning) EXTRA_STAR_CMD_FILE '%s' does not exist.

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0756

(Fatal) One or more prohibited option combinations or settings were found in star_cmd file. Please correct the issues listed above.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0757

(Warning) '%s'. Setting '%s'...

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0758

(Severe) '%s'.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0759

(Fatal) SIMULTANEOUS_MULTI_CORNER extraction condition violation at : %s

Feedback

**Description**

This message indicates that the nxtgrd file in the selected corner does not support SIMULTANEOUS_MULTI_CORNER extraction.

**What Next**

Use single corner extraction.

---

## SX-0760

(Fatal) ITF_FILE command only supports EXTRA_GEOMETRY_INFO:NONE

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0761

(Warning) Could not open library '%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0762

(Warning) Could not open '%s' view.

**Description**

Not available.

**What Next**

---

## SX-0763

(Warning) Failed to get dbUnit from library '%s' cell '%s' : '%s'

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0764

(Warning) Can not find MW object: cellId='%s' objId='%s' typeId='%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0765

(Warning) Layer name not found for layer number '%d'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0766

(Warning) Lib: '%s' cell: '%s' view: '%s' not open!

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0767

(Warning) PARA net '%s' not found in cell '%s' in library '%s'

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0768

(Warning) PARA view needs to have extra geometry info for node searching tasks.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0770

(Warning) Can not iterate nets in PARA view!

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0771

(Fatal) Option %s should not be mixed with HERCULES/CALIBRE options %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0772

(Fatal) Option %s should not be mixed with HERCULES/LEFDEF options %s

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0773

(Fatal) Option %s should not be mixed with HERCULES/MILKYWAY options %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0774

(Fatal) Option %s should not be mixed with LEFDEF/CALIBRE option %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0775

(Fatal) Internal error while processing PATTERN commands

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0776

(Fatal) Please specify input file using -i

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0777

(Fatal) Please specify output file using -out

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0779

(Information) PIN_CUT_THRESHOLD for layer: '%s' set to value :'%d'.

**Description**

StarXtract reports this PIN_CUT_THRESHOLD is specified for this layer name.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-0780

(Warning) Layer '%s' specified in PIN_CUT_THRESHOLD cannot be found in layer mapping file.

**Description**

This layer name is specified for PIN_CUT_THRESHOLD, but StarXtract cannot find this name in layer mapping file.

**What Next**

Confirm this specified layer name is correct.

Feedback

## SX-0781

(Warning) Ignored '%d' entries in PROBE_TEXT_FILE due to bad syntax or invalid layer specification (see translate.sum).

**Description**

Bad syntax exists in PROBE_TEXT_FILE.

PROBE_TEXT_FILE syntax is as follow:

CELL <cell_name> TEXTSTRING LOCAL_X(um) LOCAL_Y(um) LAYER_NAME TEXTSTRING LOCAL_X(um) LOCAL_Y(um) LAYER_NAME CELL <cell_name>

**What Next**

Correct the PROBE_TEXT_FILE syntax.

## SX-0782

(Fatal) option %s should not be mixed with LEFDEF/MILKYWAY option %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-0783

(Warning) Could not open cell "'%s' : '%s'".

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-0784

(Warning) Could not find node '%s'

**Description**

Not available.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-0785

(Warning) Could not find node neighboring location ('%f', '%f')

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0786

(Fatal) Cannot find net id in hnfile.hn for '%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0787

(Fatal) Cannot find pin id in hnfile.hn for '%s'

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0788

(Fatal) Need ASCII_DESIGN_FILE in quick_mode

**Description**

Not available.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-0789

(Fatal) Need TCAD_GRD_FILE in quick_mode

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0790

(Warning) Logical pin port '%s' in BLOCK is not placed in the layout. This port will be netlisted in the *PORTS section of SPEF and/or the .SUBCKT statement for SPF/STAR/NETNAME formats but will not appear in the detail parasitic section (since it has no physical characteristic).

**Description**

StarRC detects logical only port. There is no physical shapes associated with it.

**What Next**

If this is expected, no action is needed.

---

## SX-0791

(Warning) Invalid boundary: '%d' , '%d' : '%d' , '%d'

**Description**

Invalid boundary setting of RING_AROUND_THE_BLOCK_TOP_METAL.

**What Next**

Reset RING_AROUND_THE_BLOCK_TOP_METAL in StarRC command file.

---

## SX-0792

(Fatal) Incorrect %s metal name: '%s' in %s command. You must specify a database metal layer name from the mapping file.

Feedback

**Description**

Layer set in RING_AROUND_THE_BLOCK_TOP_METAL/ RING_AROUND_THE_BLOCK_BOTTOM_METAL is invalid.

**What Next**

Reset RING_AROUND_THE_BLOCK_TOP_METAL/ RING_AROUND_THE_BLOCK_BOTTOM_METAL in StarRC command file.

---

## SX-0793

(Warning) Polygons for marker can not be non-manhattan, check the gds file

**Description**

Marker polygon of ViaArray has non-manhattan geometry. It's not available and the polygon is ignored.

**What Next**

Check GDSII file set in RV_VIA_ARRAY_GDS_FILE.

---

## SX-0794

(Fatal) option %s should not be mixed with CALIBRE/MILKYWAY option %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0796

(Fatal) This function %s should not be mixed with HERCULES option

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-0798

(Fatal) INTERNAL Error: cut polygon horizontal distance is less than 10nm: '%f'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-0799

(Warning) INTERNAL Warning: overlap distance is rounded to '%d' due to smaller dbUnit.

**Description**

A consistency check may have failed or StarRC may be operating in a mode that is not considered normal. This condition is not considered severe enough to abort StarRC's execution but a warning message is given to alert the StarRC support team in case of unexpected program behavior.

**What Next**

Contact the Synopsys Support Center if StarRC terminates abnormally or if other issues are found.

## SX-0800

(Fatal) INTERNAL Error: cut thickness can not be larger than overlap distance

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-0801

(Fatal) INTERNAL Error: File '%s' did not contain sufficient data to generate the dist_report file.

**Description**

An internal consistency check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-0802

(Fatal) INTERNAL Error: File '%s' did not contain sufficient data to generate the dist_report file ('%s' : '%d')

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0803

(Fatal) Cannot open file '%s' for reading.

**Description**

The specified file cannot be opened.

**What Next**

Make sure the specified file exists and you have the permission to read.

---

## SX-0804

(Fatal) This function %s should not be mixed with CALIBRE option

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0805

(Fatal) This function %s should not be mixed with MILKYWAY option

**Description**

Not available.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-0806

(Fatal) This function %s should not be mixed with LEFDEF option

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0807

(Warning) Incremental extraction doesn't support change of option: %s between a pre-ECO run and post-ECO run."

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0811

(Fatal) Both -custom and -ultra license options are specified.

**Description**

-custom and -ultra are mutually exclusive!

**What Next**

See StarRC user guide.

---

## SX-0812

(Fatal) -custom only supports setting %s

**Description**

The -custom option in StarRC is intended for transistor level extraction only. Only the setting in this message is suported for this command.

Feedback

**What Next**

Refer to reference manual for the set of features supported by the custom license.

---

## SX-0813

(Warning) Duplicate placement of '%s' found in an %dx%d OASIS array reference record placed at (%d, %d).

**Description**

Duplicate placements in the OASIS array reference create unexpected polygons in extraction and may introduce significant performance/accuracy problems.

StarRC will ignores such duplicate placements and leave only first one in the OASIS array reference record.

**What Next**

Check the array reference element in the OASIS file.

---

## SX-0814

(Warning) System error: Failed to set file descriptor limit to '%d'

**Description**

StarRC has determined that it may need to have a larger number of files open. A system call to increase the the limit on file descriptors has failed.

**What Next**

Check with local system administrator about possible system level fix. Contact the Synopsys Support Center if necessary.

---

## SX-0818

(Fatal) Unsupported option IAPI is not available.

**Description**

The IAPI debug option is not supported, and is not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-0819

(Fatal) Invalid syntax. Usage: StarXtract -sort_xin tech_file -i <xin_file_name>

**Description**

StarXtract -sort_xin command requires an input xin file.

**What Next**

Contact the Synopsys Support Center.

## SX-0820

(Fatal) Invalid syntax. Usage: StarXtract -sort_xin_by_net tech_file -i <xin_file_name>

**Description**

StarXtract -sort_xin_by_net command requires input xin file.

**What Next**

Contact the Synopsys Support Center.

## SX-0821

(Fatal) Invalid syntax. StarXtract -pcell_layers tech_file -i <xin_file_name>

**Description**

StarXtract -pcell_layers command requires an input xin file.

**What Next**

Contact the Synopsys Support Center.

## SX-0822

(Fatal) Quick mode processing failed. Check star/.xTract.messages for details.

**Description**

StarXtract Quick mode processing failed. Check star/.xTract.messages for details.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-0823

(Fatal) Invalid syntax. Usage: StarXtract -partition tech_file -i <xin file name>.

**Description**

StarXtract -partition option requires an input xin file name.

**What Next**

Contact the Synopsys Support Center.

## SX-0824

(Fatal) Invalid syntax. Usage: StarXtract -post_partition tech_file -i <xin_file_name>

**Description**

StarXtract -post_partition command requires an input xin file name.

**What Next**

Contact the Synopsys Support Center.

## SX-0830

(Fatal) Licenses available allow a distributed run with a maximum of %d cores.

**Description**

The number of StarRC licenses currently available allow the use of only a limited number of cores for extraction.

**What Next**

Contact the Synopsys Support Center.

## SX-0835

(Fatal) '%s' should be declared as an absolute path, because STAR_DIRECTORY is specified relative to the parent of current directory.

**Description**

When STAR_DIRECTORY is specified relative to the parent of the current directory, this input path must be specified as an absolute path.

Feedback

**What Next**

Consult the StarRC user guide.

---

## SX-0837

(Fatal) Invalid specification for NUM_CORES command: '%d'

**Description**

NUM_CORES must be must be specified as an integer greater than 1.

**What Next**

Consult the StarRC user guide.

---

## SX-0838

(Warning) Specified value %d of NUM_CORES is larger than the number of partitions. Reducing to %d.

**Description**

NUM_CORES cannot be larger than the number of tiles into which StarRC has partitioned the input design.

**What Next**

Consult the StarRC user guide. Contact the Synopsys Support Center.

---

## SX-0839

(Warning) STARRC_DP_STRING is ignored because a -clean option was not specified in the command line.

**Description**

If StarXtract is run using command-line options, and if STARRC_DP_STRING is specified, the -clean option or one of its variants must be specified in the command line.

**What Next**

Consult the StarRC user guide.

---

## SX-0840

(Warning) There are %d slots specified in %s. However, %s is specified as %d. The run will use only the first %d slots from %s.

Feedback

**Description**

NUM_CORES specification overrides the number of DP processes specified in the DP string command if the latter is greater.

**What Next**

Consult the StarRC user guide.

---

## SX-0841

(Warning) There are only %d cores specified in %s. However, NUM_CORES is specified as %d. The value of NUM_CORES is reduced to %d.

**Description**

The number of cores specified in the DP string command overrides specified value of NUM_CORES when the latter is greater.

**What Next**

Consult the StarRC user guide.

---

## SX-0842

(Fatal) Invalid job submission command in STARRC_DP_STRING.

**Description**

The job submission specification in STARRC_DP_STRING is not supported.

**What Next**

Consult the StarRC user guide for currently supported job submission protocols and their syntax.

---

## SX-0844

(Fatal) Neither of the environment variables SNPSLMD_LICENSE_FILE or LM_LICENSE_FILE, which specify the paths of license files has been set.

**Description**

The path to the license servers or license files must be specified in one of these environment variables.

**What Next**

Consult the StarRC user guide.

Feedback

## SX-0845

(Fatal) Environment variable PATH is not set.

**Description**

The PATH variable must be defined in DP mode.

**What Next**

Consult StarRC user guide.

## SX-0846

(Information) Launching jobs with xterms running gdb.

**Description**

This message is for informational purposes only.

**What Next**

Contact the Synopsys Support Center.

## SX-0847

(Information) Submitting job %d via system call to localhost.

**Description**

This message is for informational purposes only.

**What Next**

Contact the Synopsys Support Center.

## SX-0848

(Information) Submitting job '%d' by %s to '%s'

**Description**

A job is submitted to a remote host using the protocol mentioned in the message.

**What Next**

No further action is necessary.

Feedback

## SX-0851

(Fatal) The tech_file file from the previous StarRC run does not exist.

**Description**

A file named tech_file in the STAR_DIRECTORY from the previous run that needed to run StarXtract with the -cleanN option is not found.

**What Next**

StarXtract cannot be run with the -cleanN option. Rerun StarRC with the -clean option to generate netlist files in the desired format.

## SX-0852

(Fatal) In this release, the "-cleanN" command does not allow the user to change NETLIST_FORMAT from '%s' to '%s'.

**Description**

The following is supported: SPF to SPEF

**What Next**

Consult the StarRC user guide.

## SX-0854

(Warning) Running 32-bit binary with -64 flag.

**Description**

StarXtract was started with -64 flag, but we are running a 32-bit binary. The -64 flag is ignored.

**What Next**

Make sure you are running from a properly installed StarRC configuration.

## SX-0857

(Fatal) No technology (command) file provided.

**Description**

StarXtract command line must contain least one tech_file (command file).

Feedback

**What Next**

Consult the StarRC user guide.

---

## SX-0859

(Warning) '%s' will be interpreted as SKIP_CELLS: !*

**Description**

In SKIP_CELLS setting, it only contains "!" wildcard. In that case, StarRC interprets this setting as not skipping every cell (include the cells not specified in this command).

**What Next**

If this is expected, you don't need to do anything. But if you expect to skip every cell except the entries specified in SKIP_CELLS command with "!", change the setting to SKIP_CELLS: * !<cell name 1> !<cell name 2> ...

---

## SX-0860

(Information) Command line option -b '%s' supersedes block name '%s' specified in the command file.

**Description**

The name of the block specified using the -b option in the command line takes precedence over the one specified in the command file.

**What Next**

For more information, consult the StarRC user guide.

---

## SX-0861

(Fatal) No block name set for input design.

**Description**

The top level block (cell) name must be specified.

**What Next**

Consult the StarRC user guide.

---

## SX-0862

(Warning) Could not write to the summary file '%s'.

Feedback

**Description**

StarRC failed to open the summary file for writing.

**What Next**

Check to make sure that the file system has available space and that the disk performance is good.

---

## SX-0863

(Information) Preparing to submit %d jobs with command from STARRC_DP_STRING: '%s' for extraction: '%s'

**Description**

StarRC is spawning DP jobs using the command in STARRC_DP_STRING.

**What Next**

For more details, consult the StarRC user guide.

---

## SX-0864

(Fatal) NUM_CORES is set to 0. It must be at least 1.

**Description**

NUM_CORES must have a value of 1 or greater.

**What Next**

Consult the StarRC user guide.

---

## SX-0868

(Fatal) StarRC ran to completion but writing of the .starrc_complete file failed: '%s'

**Description**

A file opening problem was encountered when writing the .starrc_complete file.

**What Next**

Check to see if file system has sufficent space that disk performance is good.

Feedback

## SX-0869

(Fatal) Syntax is : StarXtract -virtual_metal_fill_dump tech_file -i <xin_file_name> -out <gds_file_name>

**Description**

Syntax is : StarXtract -virtual_metal_fill_dump tech_file -i <xin_file_name> -out <gds_file_name>

**What Next**

Review the syntax

## SX-0955

(Warning) Found shorted nets (see file shorts_all.sum). The capacitances of these nets may be unreliable due to the shorts.

**Description**

Not available.

**What Next**

See star/shorts_all.sum and verify reported shorts in layout. If there is no short in layout, run -Display debug function to find the short. If the root cause is still not clear, please contact the Synopsys Support Center.

## SX-0957

(Warning) Found metal fill shorts (see file shorts_all.sum).

**Description**

Not available.

**What Next**

See star/shorts_all.sum and verify reported shorts in layout. If there is no short in the layout, run the -Display debug function to find the short. If the root cause is still not clear, please contact the Synopsys Support Center.

## SX-0959

(Warning) Found vias with one or no connection (see file vias.sum)

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-0961

(Warning) Found less than minimum spacing (see file smin.sum).

**Description**

Spacing values between neighbor polygons are found to be much smaller than minimum spacing. This message lists spacing value and the minimum spacing on this layer.

**What Next**

Please check if the small spacing values in the layout are indeed desired.

---

## SX-0962

(Warning) File specified for option '%s': '%s' has zero-bytes file size.

**Description**

The file name used to specify an input file as the value of an option in the StarRC command file has 0-bytes file size.

**What Next**

Verify the path to the file name mentioned in the error message. Check for spelling errors, access permissions and file size.

---

## SX-0963

(Information) WARNING: top-level equivalent nets found in design. Please refer to shorted_nets file for more information.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-0964

(Fatal) sview tech_file [<tech_file> ... ]

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-0965

(Fatal) Query RC Viewer does not support XREF: COMPLETE. Please set XREF: YES or XREF: NO and re-run StarXtract.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-0966

(Fatal) File name specified for option '%s': '%s' does not exist.

**Description**

The file name used to specify an input file as the value of an option in the StarRC command file does not exist.

**What Next**

Verify the path to the file name mentioned in the error message. Check for spelling errors and access permissions.

## SX-0967

(Warning) File specified for option '%s': '%s' can't be read.

**Description**

The file name used to specify an input file as the value of an option in the StarRC command file does not exist or can't be read due to permission.

Feedback

### What Next

Verify the path to the file name mentioned in the error message. Check for spelling errors and access permissions.

---

## SX-0968

(Fatal) '%s' is not a valid setting for the '%s' option. Valid choices are: '%s'

### Description

The value for an option in the StarRC command file that allows only a limited set of values has been incorrectly specified.

### What Next

Fix the incorrect value setting by using one of the valid choices mentioned in the error message. Refer to the StarRC Use Guide for more information.

---

## SX-0969

(Fatal) Input files specified for options can't be read or have zero-bytes file size.

### Description

Some input files specified for options can't be read or have zero-bytes file size.

### What Next

Verify the path to the file name mentioned in the error messages. Check for spelling errors and access permissions. Files with zero-bytes file size should be removed from your StarRC command file.

---

## SX-0973

(Warning) Option '%s' will become obsolete from the next release of StarRC. Remove this option from the StarRC command file.

### Description

An option specified in the StarRC command file will become obsolete from the next release of StarRC. The feature enabled by this option may be supported by another option, or it may no longer be necessary for the user to enable this feature explicitly.

### What Next

Consult the StarRC User Guide or contact the Synopsys Customer Support Center for more information.

Feedback

## SX-0974

(Fatal) Option '%s' used in the StarRC command file is obsolete. Remove this option from the command file.

### Description

An option used in the StarRC command file is obsolete and can no longer be used. Users need to remove this option from the command file in order to run StarRC.

An option is made obsolete if the feature enabled by it is supported by another option, or it becomes unnecessary for users to enable the supported feature explicitly.

### What Next

Consult the StarRC User Guide or contact the Synopsys Customer Support Center for more information.

## SX-0981

(Fatal) 3D_IC can not support view only layers. Remove viewonly_layers section in mapping file.

### Description

If you run 3D_IC flow with StarRC, you can't add view only layers in viewonly_layers section in StarRC mapping file. Otherwise, StarRC will give this error.

### What Next

You should remove or comment out the whole viewonly_layers section in StarRC mapping file.

## SX-0984

(Warning) Could not open via_conns file for read.

### Description

An internal consistency check has failed.

### What Next

Contact the Synopsys Support Center.

## SX-0985

(Information) \t\tTrap ('%d') +'%d' -'%d' del:'%d'

Feedback

**Description**

Internal debug message.

**What Next**

Information only; no action is needed.

---

## SX-0986

(Information) \t\tElem ('%d') +'%d' -'%d'

**Description**

Internal debug message.

**What Next**

Information only; no action is needed.

---

## SX-0987

(Warning) No unimportant net found. Skipping reconnect...

**Description**

StarRC does not find any net in input data base match the syntax defined in command UNIMPORTANT_NETS so reconnection work is skipped.

**What Next**

Check the syntax defined in command UNIMPORTANT_NETS.

---

## SX-0988

(Fatal) Corner name '%s' is reserved for internal use and cannot be used in a SELECTED_CORNERS statement.

**Description**

The corner name used in the CORNERS_FILE specified in the StarRC command file is reserved for internal use.

**What Next**

Replace all occurrences of the forbidden corner name in the CORNERS_FILE to something else other than the forbidden name.

Feedback

## SX-0989

(Fatal) Via array merge error 1

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-0995

(Fatal) VIA_ARRAY_GDS_LAYER_MAP_FILE is required for RV_VIA_ARRAY_GDS_FILE.

**Description**

GDS layer mapping file is not provided for translation.

**What Next**

Set VIA_ARRAY_GDS_LAYER_MAP_FILE in StarRC command file.

## SX-0997

(Warning) RV_VIA_ARRAY_GDS_FILE(s) do not contain any cell definition for top BLOCK. Via array objects must reside in same name cell as BLOCK.

**Description**

No cell in RV_VIA_ARRAY_GDS_FILE has same name as option BLOCK in StarRC command file.

**What Next**

Check RV_VIA_ARRAY_GDS_FILE in StarRC command file.

## SX-0998

(Information) Group bbox ('%d' , '%d')~( '%d' , '%d') is covered by more than 1 array bbox, please check the design

**Description**

Via group box is covered by more than 1 via array box.

Feedback

**What Next**

Check the mark polygons in RV_VIA_ARRAY_GDS_FILE.

---

## SX-0999

(Information) Group bbox ('%d' , '%d')~( '%d' , '%d') has invalid size of array bbox, please check the design

**Description**

Via group box of bridge via is not covered corretly by via array box.

**What Next**

Check the mark polygons in RV_VIA_ARRAY_GDS_FILE.

---

## SX-1001

(Fatal) Error in parsing VIA_COVERAGE_OPTION_FILE '%s'

**Description**

Invalid syntax is in VIA_COVERAGE_OPTION_FILE.

**What Next**

Check data in VIA_COVERAGE_OPTION_FILE.

---

## SX-1002

(Fatal) Could not open VIA_COVERAGE_OPTION_FILE '%s'

**Description**

StarRC could not open VIA_COVERAGE_OPTION_FILE.

**What Next**

Reset VIA_COVERAGE_OPTION_FILE in StarRC command file.

---

## SX-1003

(Warning) Layer specified in VIA_COVERAGE_OPTION_FILE is not a valid via layer: '%s'

**Description**

Layer specified in VIA_COVERAGE_OPTION_FILE is not a valid via layer.

Feedback

**What Next**

Reset VIA_COVERAGE_OPTION_FILE in StarRC command file.

---

## SX-1004

(Warning) Cell '%s' contains zero-width polygon (%d, %d) (%d %d) on layer %s.

**Description**

StarRC cannot handle zero-width polygon.

**What Next**

Information only; no action needed.

---

## SX-1005

(Fatal) Syntax error in VIA_COVERAGE_OPTION_FILE: '%s'

**Description**

Syntax error in VIA_COVERAGE_OPTION_FILE.

**What Next**

Reset VIA_COVERAGE_OPTION_FILE in StarRC command file.

---

## SX-1006

(Fatal) '%s' : '%s'

**Description**

StarRC meets error when parsing VIA_COVERAGE_OPTION_FILE.

**What Next**

Check context in VIA_COVERAGE_OPTION_FILE.

---

## SX-1007

(Fatal) Not support BOUNDARY_BOX parameters: %s

**Description**

BOUNDARY_BOX requires 4 boundary box corrdinetes as input.

Feedback

**What Next**

Modify StarRC command file.

---

## SX-1008

(Fatal) BOUNDARY_BOX options has a non-number '%s' specified

**Description**

Not acceptable input for BOUNDARY_BOX option.

**What Next**

Modify StarRC command file.

---

## SX-1019

(Fatal) An internal density parameter must be positive: %f

**Description**

StarRC Internal Error.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1020

(Fatal) Hash table initialized with invalid max density: %f

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1022

(Fatal) corrupted file

**Description**

StarRC is not able to read a file because it has been corrupted.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-1023

(Fatal) Can not create/open file '%s', please check filesystem for space and permissions.

**Description**

StarRC was not able to create or open a file.

**What Next**

Check file system for space and read/write permissions in the directory.

---

## SX-1024

(Fatal) Unable to lock file '%s', error status '%s', host '%s', working directory '%s'

**Description**

StarRC is unable to lock a file because of issues in the runtime environment.

**What Next**

Try running StarRC again or contact your system administrator.

---

## SX-1027

(Fatal) Failed to open '%s' for writing, last system error : '%s'

**Description**

Unable to open an output file.

**What Next**

Check to make sure the file system has sufficient space, and write permissions.

---

## SX-1028

(Warning) Netlist exceeded the file size limit %d; it has been splited to %d files.

**Description**

Netlist file exceeded maximum file size. As a result, it has been split into multiple files.

Feedback

**What Next**

This message is for informational purposes only.

---

## SX-1030

(Warning) Resetting max file size to %d

**Description**

This is a message for Synopsys internal purposes.

**What Next**

Contact Synopsys Support Center.

---

## SX-1031

(Fatal) Internal Error when initializing data of type '%s'

**Description**

Internal data initialization error.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1032

(Fatal) Version mismatch found on '%s'. (found: '%d', require: '%d')

**Description**

The version of an input file format is not supported.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1033

(Warning) Unable to open %s '%s' for %s, error status '%s'

**Description**

StarRC was unable to open a file because of conditions in the runtime environment.

Feedback

**What Next**

Take remedial actions based on the error status reported by the operating system. Contact your system administrator if necessary.

---

## SX-1034

(Warning) Unable to close file '%s' that was opened for reading: '%s'

**Description**

StarRC was able to open a file for file for reading, but could not close it.

**What Next**

Check to make sure disk I/O speeds are acceptable.

---

## SX-1036

(Fatal) Unable to read %d bytes from file %s, error status: '%s'

**Description**

StarRC cannot complete a read operation on the specified file because of conditions in the runtime environment. The error message includes the error status returned by the operating system.

**What Next**

Carry out remedial actions based on the operating system error status. Contact your system administrator if necessary.

---

## SX-1037

(Fatal) Unable to write %d bytes to file %s, error status: %s

**Description**

StarRC cannot complete a read operation on the specified file because of conditions in the runtime environment. The error message includes the error status returned by the operating system.

**What Next**

Carry out remedial actions based on the operating system error status. Contact your system administrator if necessary.

Feedback

## SX-1038

(Warning) Internal error: while copying '%s' to '%s', bytes read = '%d', but bytes written = '%d'

**Description**

StarRC was not able to write to an output file during a file copy operation.

**What Next**

Check to make sure that the output file system has sufficient disk space.

## SX-1039

(Warning) Unable to open file '%s' with mode '%s', error status: '%s' (re-try %d times)

**Description**

StarRC is unable to open a file because of conditions in the run-time environment.

**What Next**

Carry out remedial actions based on the error status indicated by the operating system. Contact your system administrator if necessary.

## SX-1040

(Warning) Unable to close file '%s' that was opened for writing: '%s'

**Description**

A file that was opened for output could not be closed.

**What Next**

Check to make sure that the file system has sufficient space.

## SX-1041

(Fatal) Unable to open file '%s' for %s, error status: '%s'

**Description**

StarRC is unable to open a file because of conditions in the runtime environment.

Feedback

**What Next**

Carry out remedial actions based on the error status indicated by the operating system. Contact your system administrator if necessary.

---

## SX-1042

(Fatal) Unable to close file '%s', error status '%s'

**Description**

StarRC is unable to close a file because of conditions in the runtime environment.

---

## SX-1043

(Fatal) Call to fclose() failed, error status '%s'

**Description**

StarRC is unable to close a file because of conditions in the runtime environment.

---

## SX-1044

(Fatal) File system error : '%s'

**Description**

StarRC detected an error during a file access operation.

**What Next**

Check to make sure the file system is working properly.

---

## SX-1045

(Fatal) Call to fseeko failed: '%s'

**Description**

StarRC detected an error during a file access operation.

**What Next**

Check to make sure the file system is working properly.

Feedback

## SX-1046

(Fatal) Failed to write '%d' bytes to disk: '%s'

**Description**

StarRC failed to write to a file that it opened.

**What Next**

Check to make sure that file system is not full.

## SX-1047

(Fatal) Failed to read '%d' bytes from disk: '%s'

**Description**

StarRC failed to read from an open disk file.

**What Next**

Check to make sure that the file system is working correctly.

## SX-1048

(Fatal) Unable to remove file '%s' : '%s'

**Description**

StarRC failed to remove a file.

**What Next**

Check to make sure that the file system is working properly.

## SX-1049

(Warning) failed to rename '%s' to '%s': '%s'

**Description**

Failed to rename a disk file.

**What Next**

Check to make sure that the file system is working properly.

Feedback

## SX-1050

(Fatal) Unable to save data to disk: '%s'

**Description**

StarRC failed to write binary data to an open file.

**What Next**

Check to make sure that file system has sufficient space, and that I/O operations are working properly.

## SX-1051

(Fatal) Unable to load binary data from disk: '%s'

**Description**

StarRC failed to read binary data from an open file.

**What Next**

Check to make sure file system I/O operations are working properly.

## SX-1052

(Fatal) Unable to save data to disk: '%s'

**Description**

StarRC failed to write binary data to an open file.

**What Next**

Check to make sure that file system has sufficient space and that I/O operations are working properly.

## SX-1053

(Fatal) Unable to load binary data from disk: '%s'

**Description**

StarRC failed to load binary data from disk.

**What Next**

Check to make sure that file system I/O is working properly.

Feedback

## SX-1054

(Fatal) Failed to rename '%s' to '%s': '%s'

**Description**

Failed to rename a disk file.

**What Next**

Check to make sure that the file system is working properly.

## SX-1076

(Fatal) Unable to create directory %s, error status %s

**Description**

StarRC is unable to create a directory because of issues in the runtime environment.

**What Next**

Carry out remedial actions based on the operating system error status. Contact your system administrator if necessary.

## SX-1077

(Fatal) Unable to change directory from %s to %s, error status %s.

**Description**

StarRC is unable to complete a directory change operation because of issues in the runtime environment.

**What Next**

Carry out remedial actions based on the operating system error status. Contact your system administrator if necessary.

## SX-1078

(Fatal) Environment variable %s is not defined.

**Description**

An environment variable required to run StarRC is not defined.

Feedback

**What Next**

Define the environment variable using

```
setenv VARIABLE_NAME value
```

in csh and tcsh or

```
VARIABLE_NAME=value
    export VARIABLE_NAME
```

in bash.

---

## SX-1079

(Fatal) Could not determine executable location '%s'

**Description**

The location of one of the executables required to run StarRC cannot be determined.

**What Next**

Check your StarRC installation. Verify that your PATH environment variable includes a path to the location of StarRC executables you intend to use.

---

## SX-1080

(Fatal) Could not determine path to current executable '%s', check your StarRC installation.

**Description**

The location of one of the executables required to run StarRC cannot be determined.

**What Next**

Check your StarRC installation. Verify that your PATH environment variable includes a path to the location of StarRC executables you intend to use.

---

## SX-1086

(Fatal) Unable to stat('%s'), error status %s'

**Description**

StarRC is unable to obtain the status of a file from the operating system.

Feedback

**What Next**

Probable cause is due to unsupported OS. Please make sure to use OS that are supported by StarRC. If the OS is supported and issue is not clear, please contact the Synopsys Support Center.

---

## SX-1091

(Warning) unable to stat path '%s', error status '%s'

**Description**

StarRC is unable to obtain the status of a file from the operating system.

**What Next**

No action is necessary if StarRC runs to completion. This message may indicate the source of a problem is StarRC does not run to completion. In this case, rerun StarRC after carrying out remedial actions based on the error status reported by the operating system. Contact your system administrator if necessary.

---

## SX-1093

(Warning) Failed to rename '%s' to '%s': %s, will attempt to copy file.

**Description**

StarRC is unable to rename a file and will attempt to copy the file to the new location and remove the original file.

**What Next**

No action is needed if StarRC runs to completion. Failure to rename a file might indicate a problem with file system configuration.

---

## SX-1094

(Warning) Failed to copy '%s' to '%s'

**Description**

StarRC is unable to make a copy of a file.

**What Next**

Another message before this one may give reasons why copying of the file failed. Carry out remedial actions based on the reasons given in the other warning message. Contact your system administrator if necessary.

Feedback

## SX-1095

(Fatal) Unable to open handle for file '%s', error status %s.

**Description**

A file cannot be opened or created because of issues in the runtime environment.

**What Next**

Carry out remedial actions based on the error status reported by the operating system. Contact your system administrator if necessary.

## SX-1097

(Fatal) Failed to allocate memory.

**Description**

A StarRC process ran out of memory.

**What Next**

Rerun StarRC on a host with more memory available.

## SX-1098

(Fatal) Unable to determine the current working directory, error status %s

**Description**

StarRC is unable to determine the current working directory because of issues in the runtime environment.

**What Next**

Carry out remedial actions based on the error status reported by the operating system. Contact your system administrator if necessary.

## SX-1099

(Fatal) Could not obtain information from the local password database for user %s, error status %s.

**Description**

StarRC is unable to obtain information for the specified user from the local password database file (typically /etc/passwd).

Feedback

**What Next**

Carry out remedial actions based on the error status reported by the operating system. Contact your system administrator if necessary.

---

## SX-1101

(Fatal) segmentation fault

**Description**

StarRC errors out with a memory segmentation violation.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1102

(Fatal) A call to system function %s failed, error status %s.

**Description**

A call to a function provided by the operating system interface failed.

**What Next**

Check if any remedial action can be taken based on the error status indicated by the operating system. If no action can be taken, try running StarRC once again, or contact your system administrator.

---

## SX-1103

(Fatal) Could not close the file descriptor associated with stream %s, error status %s.

**Description**

The file descriptor associated with the specified stream could not be closed because of issues in the runtime environment.

**What Next**

Take remedial actions based on the status reported by the operating system or contact your system administrator if necessary.

---

## SX-1104

(Fatal) Could not obtain a duplicate file descriptor for stream %s, error status %s.

Feedback

**Description**

A duplicate file descriptor for the specified stream could not be obtained because of issues in the runtime environment.

**What Next**

Take remedial action based on the operating system error status or contact your system administrator.

---

## SX-1105

(Fatal) Could not close stdout output: %s.

**Description**

This is an error in system which makes StarRC can't close stdout output.

**What Next**

Check system running status and rerun StarRC. If this error still occurs, contact Synopsys for more information.

---

## SX-1107

(Information) NOT RUNNING %s !! Using previous results. Previous %s

**Description**

When StarRC is run with options which reuse results from an earlier run (such as -cleanN), steps in StarRC's flow that are not necessary to produce the desired output for the current run are not re-run. This message indicates which steps do not get re-run.

**What Next**

This message is for information only, no further action is needed.

---

## SX-1108

(Warning) INTERNAL Warning: The intermediate DP stage summary file may be corrupted, StarRC cannot calculate total wall time information.

**Description**

An internal file produced by StarRC to tabulate runtime information is corrupt. The final runtime summary appearing at the end of StarRC's summary file may be missing or incorrect.

Feedback

### What Next

This message has no bearing on the results of parasitic extraction produced by StarRC, so no action is recommended. Contact the Synopsys Support Center if this message persists or is seen for many designs.

---

## SX-1109

(Warning) There are %d unfinished jobs.

### Description

An internal consistency check revealed that some jobs in StarRC's distributed processing schedule did not complete.

### What Next

Check if the results produced by StarRC are complete, such as by checking the number of nets in the netlist file. Try running StarRC again and contact the Synopsys Support Center if this warning persists.

---

## SX-1111

(Fatal) INTERNAL Error: Unknown file type

### Description

An internal consistency check has failed.

### What Next

Contact the Synopsys Support Center.

---

## SX-1113

(Fatal) INTERNAL Error: unknown LineModified return status.

### Description

An internal consistency check has failed.

### What Next

Contact the Synopsys Support Center.

Feedback

## SX-1116

(Information) Slave process %d is terminated since the number of partitions has been reduced to %d.

**Description**

To save resources, StarRC terminates unneeded processes during a distributed processing run if the number of partitions into which the layout is decomposed is lower than the number of CPU cores used.

**What Next**

No further action is necessary.

## SX-1120

(Warning) Number of jobs already reached the NUM_CORES value %d, terminating current process.

**Description**

Users cannot launch more StarXtract jobs than the value of NUM_CORES specified in the StarRC command file.

**What Next**

Do not launch more StarXtract jobs than the NUM_CORES value or increase the NUM_CORES specification in the StarRC command file.

## SX-1121

(Fatal) Attempting to use more CPU cores than the available number of licenses.

**Description**

The number of StarRC processes that can be launched concurrently is limited by the number of licenses available. Attempting to launch more processes than this limit will result in StarRC jobs terminating with this error message.

**What Next**

The following actions could be taken:

1

Use fewer number of processes to run StarRC by reducing the value of NUM_CORES in the StarRC command file.

Feedback

2

If StarRC is being run on more than one design concurrently, wait for other jobs to complete.

3

Acquire more StarRC licenses.

---

## SX-1132

(Fatal) Command '%s' not recognized on line '%d' in file '%s'.

**Description**

The Eco file is used to provide ECO change information to StarRC and reduces runtime overhead. This file has been corrupted and contains invalid information.

**What Next**

Check the available disk space and rerun as needed. This file should not be modified during StarRC extraction.

---

## SX-1133

(Fatal) Wrong number of arguments for command '%s' on line '%d' in file '%s'.

**Description**

The Eco file is used to provide ECO change information to StarRC and reduces runtime overhead. This file has been corrupted and contains invalid information.

**What Next**

Check the available disk space and rerun as needed. This file should not be modified during StarRC extraction.

---

## SX-1134

(Fatal) Unknown option '%s' on line '%d' in file '%s'.

**Description**

The Eco file is used to provide ECO change information to StarRC and reduces runtime overhead. This file has been corrupted and contains invalid information.

Feedback

**What Next**

Check the available disk space and rerun as needed. This file should not be modified during StarRC extraction.

---

## SX-1135

(Fatal) Database type '#D' not set.

**Description**

The Eco file is used to provide ECO change information to StarRC and reduces runtime overhead. This file has been corrupted and contains invalid information.

**What Next**

Check the available disk space and rerun as needed. This file should not be modified during StarRC extraction.

---

## SX-1201

(Fatal) Found .SUBCKT mismatches between nl and PDBA file near "%s".

**Description**

Found .SUBCKT mismatches between nl and PDBA file near "%s".

**What Next**

You should revise your nl or PDBA to make them consistancy.

---

## SX-1202

(Warning) Unrecognized syntax in CALIBRE_AGF_NAME_MAP file "%s" at line number %d.

**Description**

StarRC can not recongize the syntax in CALIBRE_AGF_NAME_MAP file "%s" at line %d.

**What Next**

You should check the syntax in CALIBRE_AGF_NAME_MAP. If there have new syntax which StarRC can not support, you should contact Synopsys customer support.

---

## SX-1203

(Fatal) Cell Extents file %s does not exist.

Feedback

**Description**

Calibre Cell Extents file does not exist.

**What Next**

You should check that the Calibre Cell Extents file defined in calibre query file or calibre runset does exist or not.

---

## SX-1204

(Fatal) Top block only format of CALIBRE_CELLS_PORTS file is unsupported. Please use PORT TABLE CELLS WRITE command instead.

**Description**

Top block is not acceptable in CALIBRE_CELLS_PORTS.

**What Next**

You should revise your CALIBRE_CELLS_PORTS to remove the top block, or use the default CALIBRE_CELL_PORTS defined in calibre query command file.

---

## SX-1206

(Warning) CELLS_PORTS file references unknown cell "%s" on line number %d. SKIP_CELLS must be defined in the AGF_NETLIST. This entry will be ignored.

**Description**

The cell "%s" in CELLS_PORTS file is not recognized by StarRC. This entry will be ignored.

**What Next**

SKIP_CELLS must be defined in the AGF_NETLIST. You should check whether the cell is defined in CALIBRE_AGF_NETLIST (CCI flow) or ICV_ANNOTATED_LAYOUT_NETLIST (ICV AGDS flow) or not. If not, you should fix the mismatch between the CELLS_PORTS file and AGF_NETLIST.

---

## SX-1207

(Warning) Non-existent or removed layer name "%s" found in CELLS_PORTS file on line %d. This entry will be ignored.

Feedback

**Description**

The layer name "%s" in CELLS_PORTS file on line %d is not acceptable, and this entry will be ignored.

**What Next**

You should look into the MAPPING_FILE to check this layer is not exist or defined in the remove_layers section.

---

## SX-1208

(Warning) Encountered port "%s" in CELLS_PORTS_FILE at line %d which does not exist in the AGF_NETLIST. This entry will be ignored.

**Description**

The port name "%s" in CELLS_PORTS file on line %d is not exist in AGF_NETLIST, and this entry will be ignored.

**What Next**

You should check the CALIBRE_CELLS_PORTS file (CCI flow) or ICV_ANNOTATED_CELL_PORTS file (ICV AGDS flow) is compatible with the CALIBRE_AGF_NETLIST file (CCI flow) or ICV_ANNOTATED_LAYOUT_NETLIST file (ICV AGDS flow) or not.

---

## SX-1209

(Fatal) Unable to parse CALIBRE_AGF_CELL_EXTENTS command; expected format is: CALIBRE_AGF_CELL_EXTENTS: <llx> <lly> <urx> <ury> Coordinates are inmicrons.

**Description**

Unable to parse CALIBRE_AGF_CELL_EXTENTS command. Because StarRC can not support the input format.

**What Next**

You should revise the format of CALIBRE_AGF_CELL_EXTENTS. The expected format is: CALIBRE_AGF_CELL_EXTENTS: <llx> <lly> <urx> <ury> Coordinates are inmicrons.

---

## SX-1212

(Warning) CALIBRE_AGF_CELL_EXTENTS bounding box is incorrect. Please specify coordinates which result in a positive chip area; <llx> <lly> <urx> <ury>

Feedback

**Description**

CALIBRE_AGF_CELL_EXTENTS bounding box is incorrect because the bounding box has negative area(urx less than llx or ury less than lly).

**What Next**

You should specify coordinates which result in a positive chip area; <llx> <lly> <urx> <ury>

---

## SX-1213

(Warning) CALIBRE_AGF_CELL_EXTENTS are too large; '%d'umx'%d'umy.

**Description**

CALIBRE_AGF_CELL_EXTENTS are too large. If width or height bounding box is above 1e6 um, StarRC will report this warning.

**What Next**

You should check the CALIBRE_AGF_CELL_EXTENTS is reasonable or not.

---

## SX-1214

(Warning)INTERNAL Error: %s option is not set.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1215

(Warning) LVS_EXTRACTION_REPORT_FILE or CALIBRE_RUNSET option is not set.

**Description**

LVS_EXTRACTION_REPORT_FILE or CALIBRE_RUNSET option is not set.

**What Next**

CALIBRE_RUNSET option is set by user. LVS_EXTRACTION_REPORT_FILE option comes from calibre query command file or comes from user. You should check your calibre command file or StarRC command file is correct or not.

Feedback

## SX-1216

(Fatal) Please set the above missing options.

**Description**

There have some missed calibre runset files in this case.

**What Next**

You should set option in "SX-1214" to make the CCI runset complete. Or you should check you calibre input file(CALIBRE_RUNSET or CALIBRE_QUERY_FILE).

## SX-1217

(Warning) CASE_SENSITIVE: NO is required for NET_TYPE: LAYOUT selection when LVS_EXTRACTION_REPORT_FILE or CALIBRE_RUNSET sets LAYOUT CASE NO; setting CASE_SENSITIVE: NO...

**Description**

CASE_SENSITIVE: NO is required for NET_TYPE: LAYOUT selection when LVS_EXTRACTION_REPORT_FILE or CALIBRE_RUNSET sets LAYOUT CASE NO. But in this case, the CASE_SENSITIVE:YES, it has a conflict between StarRC option and calibre runset. Here set the CASE_SENSITIVE:NO to make compatible with calibre runset.

**What Next**

You should check why the CASE_SENSITIVE used in starRC command file have conflict with calibre runset.

## SX-1218

(Fatal) BLOCK: %s is not an equivalence point.

**Description**

You receive this message if the string value of BLOCK in StarRC command file cannot in .nxf file outputted by Calibre.

**What Next**

You should check the BLOCK name according to the CELL_TYPE. If the CELL_TYPE: LAYOUT, you should fill in LAYOUT block name. If the CELL_TYPE: SCHEMATIC, you should fill in SCHEMATIC name. If the format of .nxf file has changed, you should contact Synopsys Support Center for enhancement.

Feedback

## SX-1219

(Warning) No equivalence points are found in this design. BLOCK: %s will be extracted at device level (SKIP_CELLS: !*).

### Description

You receive this message if no cell name or only BLOCK name found in the .nxf file output by Calibre. And StarRC will extract this case without any skip_cell(SKIP_CELL:!*)

### What Next

You should check the .nxf is expected or not.

## SX-1220

(Warning) SKIP_CELLS: * is specified but no lower level equivalence points are found. BLOCK: %s will be extracted at device level (SKIP_CELLS: !*).

### Description

SKIP_CELLS: * is specified but no lower level equivalence points are found. BLOCK: %s will be extracted at device level (SKIP_CELLS: !*).

### What Next

You set SKIP_CELLS:* but no lower level equivalencepoint below top block. You should set SKIP_CELLS:!* in this case to avoid this warning.

## SX-1221

(Warning) SKIP_CELLS list member "%s" does not match any equivalence points and will be ignored.

### Description

SKIP_CELLS list member "%s" does not match any equivalence points and will be ignored.

### What Next

If you want to use SKIP_CELLS flow in this case , you should revise your SKIP_CELLS starRC command to match the cell name in this case. Or you should set SKIP_CELLS: !*.

## SX-1222

(Warning) SKIP_CELLS list member "%s" is not an equivalence point and will be ignored.

Feedback

**Description**

SKIP_CELLS list member "%s" is not an equivalence point and will be ignored.

**What Next**

If you want to use SKIP_CELLS flow in this case , you should revise your SKIP_CELLS starRC command to match the cell name in this case. Or you should set SKIP_CELLS: !*.

---

## SX-1223

(Warning) %s BLOCK: %s will be extracted at device level (SKIP_CELLS: !*).

**Description**

SKIP_CELLS is set but not match any cells in this case. StarRC set SKIP_CELLS: !* and top block %s will be extracted at device level.

**What Next**

You should check the SKIP_CELLS is set correctly or not. If you want to use SKIP_CELLS flow, you should set SKIP_CELLS and compatible with the case to avoid this warning message. If not, you should set SKIP_CELLS: !*.

---

## SX-1224

(Warning) %s LVS BOX cells will be added to SKIP_CELLS list automatically while the remaining hierarchies will be flattened.

**Description**

the value of SKIP_CELLS StarRC option do not match any cell in this case, but LVS BOX cell added to SKIP_CELLS list automatically. It means other hierarchies will be flattened and LVS BOX cells are in SKIP_CELLS list.

**What Next**

You should check the SKIP_CELLS value is correct or not. If you want add some cells into SKIP_CELLS, you should correct the SKIP_CELLS option. Or you should use SKIP_CELLS: !*.

---

## SX-1225

(Warning) Equivalence point "%s(L)::%s(S)" is an LVS BOX cell and must be a SKIP_CELL; adding this cell to the SKIP_CELLS list...

Feedback

**Description**

LVS BOX cell must be a SKIP_CELL. This case SKIP_CELLS not contains LVS BOX cell "%s(Layout)::%s(Schematic)". StarRC add this cell to the SKIP_CELLS list automatically.

**What Next**

You should add the LVS BOX cell into SKIP_CELLS list to avoid this warning message.

---

## SX-1226

(Fatal) CALIBRE_AGF_CELL_EXTENTS_FILE was imported but contains no entry for specified BLOCK "BLOCK". Please provide cell extents information manually for selected BLOCK with CALIBRE_AGF_CELL_EXTENTS or complete the content of CALIBRE_AGF_CELL_EXTENTS_FILE.

**Description**

ALIBRE_AGF_CELL_EXTENTS_FILE was imported but contains no entry for specified top block defined in BLOCK starRC command.

**What Next**

You should provide cell extents information manually for selected BLOCK with CALIBRE_AGF_CELL_EXTENTS or complete the content of CALIBRE_AGF_CELL_EXTENTS_FILE.

---

## SX-1227

(Fatal) Please provide cell extents information for BLOCK with either CALIBRE_AGF_CELL_EXTENTS or CALIBRE_AGF_CELL_EXTENTS_FILE.

**Description**

StarRC do not find any cell extents information for BLOCK.

**What Next**

You can fix this issue in three ways: 1. set CALIBRE_AGF_CELL_EXTENTS directly. 2. set CALIBRE_AGF_CELL_EXTENTS_FILE directly. 3. check the CALIBRE_AGF_CELL_EXTENTS in your calibre query command file is exsit or not.

---

## SX-1229

(Fatal) Expected integer %s instead of %s

Feedback

### Description

You receive this message if the precision defined in the DEVICE TABLE(defined in CALIBRE_QUERY_FILE) are not integer. You can find the precision defined in the 2nd column of the first line in the DEVICE TABLE which is outputted by Calibre.

### What Next

Calibre output DEVICE TABLE, and you should check there have issue in Calibre flow or not. If DEVICE TABLE format updated with Calibre in new version, please contact Synopsys Customer support for enhancement. If old Calibre output the precision not integer, please contact Calibre side.

---

## SX-1230

(Fatal) Invalid setting for %s; %d. Must be greater than zero.

### Description

You receive this message if the precision defined in the DEVICE TABLE(defined in CALIBRE_QUERY_FILE) less than zero. You can find the precision defined in the 2nd column of the first line in the DEVICE TABLE which is outputted by Calibre.

### What Next

Calibre output DEVICE TABLE, and you should check there have issue in Calibre flow or not. If DEVICE TABLE format updated with Calibre in new version, please contact Synopsys Customer support for enhancement. If old Calibre output the precision less than zero, please contact Calibre side.

---

## SX-1231

(Warning) Suspicious value for %s; %d. Expected value divisible by 10.

### Description

You receive this message if the precision defined in the DEVICE TABLE (defined in CALIBRE_QUERY_FILE) cannot be divided by 10. You can find the precision defined in the 2nd column of the first line in the DEVICE TABLE.

### What Next

Calibre output DEVICE TABLE, and you should check there have issue in Calibre flow or not. If DEVICE TABLE format updated with new Calibre new version, please contact Synopsys Customer support for enhancement. If old Calibre output the precision cannot be divided by 10, please contact Calibre side.

Feedback

## SX-1232

(Fatal) The number of terminals of device "%s" is inconsistent between runset and pin file.

**Description**

In calibre DEVICE_TABLE, the number of terminals in device "%s" is different with CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

**What Next**

You should check compatibility between calibre runset and CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

## SX-1233

(Fatal) Pin %d of device "%s" has inconsistent layer between runset and pin file.

**Description**

In calibre DEVICE_TABLE, the layer of terminals in device "%s" is different with CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

**What Next**

You should check compatibility between calibre runset and CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

## SX-1234

(Severe) Parse error on line %d in CALIBRE_DEVTAB.

**Description**

StarRC not support the syntax in the line %d in calibre DEVICE TABLE.

**What Next**

You should check the Calibre DEVICE TABLE which is defined in CALIBRE_QUERY_FILE is correct or not. If there have new syntax defined in Calibre DEVICE TABLE, you should contact Synopsys Support Center.

## SX-1236

(Warning) CALIBRE_RUNSET does not contain LVS POWER/GROUND NAME setting and POWER_NETS option is empty

Feedback

**Description**

CALIBRE_RUNSET does not contain LVS POWER/GROUND NAME setting and POWER_NETS option is empty.

**What Next**

You should check your runset and put the power nets into your runset and write into POWER_NETS if there have power net in this case.

---

## SX-1237

(Warning) CALIBRE_RUNSET contains invalid setting for UNIT LENGTH parameter: %s. Supported values are numeric or u mil mm cm inch or m. Default value of u will be applied.

**Description**

StarRC not reconginze the UNIT LENGTH parameter in CALIBRE_RUNSET, so StarRC set the default value u in this case.

**What Next**

You should revise UNIT LENGTH in the CALIBRE_RUNSET using the value which StarRC can support. Now StarRC only support numeric or u mil mm cm inch or m.

---

## SX-1238

(Warning) CALIBRE_RUNSET INCLUDE file "%s" does not exist. This statement will be ignored.

**Description**

In CALIBRE_RUNSET, INCLUDE file does not exist. StarRC ignore this statement.

**What Next**

You should check the INCLUDE file does exist or not. If you input the wrong file location, you should correct it. If you do not want this INCLUDE file, you should remove this line from CALIBRE_RUNSET.

---

## SX-1239

(Warning) CALIBRE_RUNSET pre-processor directives which refer to shell or ENV variables are not supported. Conditional expressions which refer to external variables will evaluate as though the variable is undefined. Please see layers.sum for a full list of affected directives.

Feedback

**Description**

StarRC can not support the shell or ENV variables in CALIBRE_RUNSET pre-processor directives. So if you use '$' in your pre-processor directives, StarRC will not recognize this variables.

**What Next**

You should remove '$' in your pre-processor directives and use the defined variables in the CALIBRE_RUNSET to use directives.

---

## SX-1240

(Information) CALIBRE_RUNSET environment variable interpreted as undefined; '%s'@'%d': '%s'

**Description**

StarRC can not support the shell or ENV variables in CALIBRE_RUNSET pre-processor directives at line '%d'. So if you use '$' in your pre-processor directives, StarRC will not recognize this variables.

**What Next**

You should remove '$' in your pre-processor directives and use the defined variables in the CALIBRE_RUNSET to use directives.

---

## SX-1241

(Warning) CALIBRE_RUNSET contains unsupported pre-processor directive "%s". Supported directives are DEFINE UNDEFINE IFDEF IFNDEF ELSE and ENDIF. The following directive will be ignored; '%s'@'%d': '%s'

**Description**

the pre-processor directives only support DEFINE UNDEFINE IFDEF IFNDEF ELSE and ENDIF. If directives do not include these keywords, StarRC will ignore these directives.

**What Next**

You should check the directives with this message is necessary or not. You should remove these directives in CALIBRE_RUNSET if they are not necessary. Or you should revise the CALIBRE_RUNSET.

Feedback

## SX-1242

(Warning) Composite STAMP BY operations are not supported in CALIBRE_RUNSET_FILE (line:%d). Derived connectivity for runset layer "%s" will be ignored;this layer will not be allowed in MAPPING_FILE.

### Description

Composite STAMP BY operations are not supported in CALIBRE_RUNSET_FILE. StarRC ingore this operation and the layer defined in this operation is not allowed in MAPPING_FILE.

### What Next

StarRC do not support composite operations in CALIBRE_RUNSET_FILE. You should revise your calibre runset file and simplify the operations.

## SX-1243

(Warning) Composite COPY operations not supported in CALIBRE_RUNSET_FILE (line:%d). Derived connectivity for runset layer "%s" will be ignored; this layer will not be allowed in MAPPING_FILE.

### Description

Composite COPY operations are not supported in CALIBRE_RUNSET_FILE. StarRC ingore this operation and the layer defined in this operation is not allowed in MAPPING_FILE.

### What Next

StarRC do not support composite operations in CALIBRE_RUNSET_FILE. You should revise your calibre runset file and simplify the operations.

## SX-1244

(Warning) Skip encrypted lines from line @%d in CALIBRE_RUNSET.

### Description

If the line in CALIBRE_RUNSET is begin with #DECRYPT, StarRC treats this line and below as encrypted lines until the line begin with #ENDCRYPT. And StarRC print this warning message. StarRC ignore all the encrypted lines in CALIBRE_RUNSET.

### What Next

You should check this line is encrypted as expected or not. If you want StarRC read the encrypted lines, you should decrypted these lines and remove #DECRYPT.

Feedback

## SX-1245

(Warning) Resume to parse runset after line @'%d' in CALIBRE_RUNSET

**Description**

If the line in CALIBRE_RUNSET begin with #ENDCRYPT, StarRC will resume to parse CALIBRE_RUNSET and believe the encrypt section has ended.

**What Next**

You should check this line is encrypted as expected or not. If you want StarRC read the encrypted lines, you should decrypted these lines and remove #DECRYPT and #ENDCRYPT.

## SX-1246

(Fatal) Invalid selection for MARKER_GENERATION. Must be AUTOMATIC or USER.

**Description**

MARKER_GENERATION must be set as AUTOMATIC or USER. Other settings is not acceptable.

**What Next**

You should use AUTOMATIC or USER in MARKER_GENERATION.

## SX-1247

(Fatal) INTERNAL Error:Cell %s doesn't exist in AGF.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1249

(Fatal) BLOCK_BOUNDARY must have an even number of entries [%d].

**Description**

BLOCK_BOUNDARY must have an even number of entries.

Feedback

**What Next**

You should revise your BLOCK_BOUNDARY as an even number to describe the block boundary.

---

## SX-1250

(Fatal) BLOCK_BOUNDARY must have at least 4 points.

**Description**

BLOCK_BOUNDARY must have at least 4 points to describe the block boundary.

**What Next**

You should revise your BLOCK_BOUNDARY to have at least 4 points to describe the block boundary.

---

## SX-1254

(Information) BLOCK Boundary = {%s }

**Description**

StarRC recognize the BLOCK boundary as '%s'.

**What Next**

You can check the block boundary is expected or not.

---

## SX-1256

(Warning)Internal: In cell %s, cannot find device "%s" in HN database.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1257

(Warning) LVS_EXTRACTION_REPORT_FILE does not contain LVS POWER/GROUND NAME setting and POWER_NETS option is empty

Feedback

**Description**

LVS_EXTRACTION_REPORT_FILE does not contain LVS POWER/GROUND NAME setting and POWER_NETS option is empty.

**What Next**

You should check you LVS POWER/GROUND NAME setting in you LVS_EXTRACTION_REPORT_FILE>

---

## SX-1258

(Fatal) LVS_EXTRACTION_REPORT_FILE contains invalid setting for UNIT_LENGTH parameter: %s. Supported values are numeric or u mil mm cm inch or m.Default value of u will be applied.

**Description**

LVS_EXTRACTION_REPORT_FILE contains invalid setting for UNIT_LENGTH parameter: %s. Supported values are numeric or u mil mm cm inch or m.Default value of u will be applied.

**What Next**

You should revise the UNIT_LENGTH parameter.

---

## SX-1259

(Fatal) LVS_EXTRACTION_REPORT_FILE contains invalid setting for PRECISION parameter: %d.

**Description**

LVS_EXTRACTION_REPORT_FILE contains invalid setting for PRECISION parameter. You receive this message because the PRECISION parameter is empty or is negative number.

**What Next**

You should revise the PRECISION parameter in LVS_EXTRACTION_REPORT_FILE.

---

## SX-1260

(Warning) Without NETLIST_DEVICE_LOCATION_ORIENTATION, PLACEMENT_INFO_FILE will always report angle=0 for devices.

Feedback

**Description**

This case do not use NETLIST_DEVICE_LOCATION_ORIENTATION:YES, and without NETLIST_DEVICE_LOCATION_ORIENTATION, PLACEMENT_INFO_FILE will always report angle=0 for devices.

**What Next**

You should check the NETLIST_DEVICE_LOCATION_ORIENTATION and PLACEMENT_INFO_FILE setting is expected or not. If you want StarRC output the device angle, you should set NETLIST_DEVICE_LOCATION_ORIENTATION:YES.

---

## SX-1261

(Warning)Internal: Some devices are missing terminal coordinate information. (%s, etc.)

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1262

(Warning) %s.

**Description**

This is a multiple purpose message. In save_eco command, `target_file_name exists. Remove it.' indicates that target_file_name is already existed and will be removed. `STAR_DIRECTORY does not exist.' and `ECO_DIRECTORY does not exist.' are warning messages, which warn the absence of directories and save_eco cannot be done. `target_file_name is a directory.' is another warning message indicating that save_eco cannot be done because target_file_name exists and is a directory.

**What Next**

`target_file_name exists. Remove it.' is information only; no action is needed. For `STAR_DIRECTORY does not exist.' and `ECO_DIRECTORY does not exist.,' make sure incremental extraction is done successfully. For `target_file_name is a directory.,' make sure target_file_name is a valid file name.

Feedback

## SX-1263

(Warning) One or more *.DEVTMPLT entries referenced in the CALIBRE_AGF_NETLIST body could not be associated with a corresponding CALIBRE_DEVTAB Device Entry. %s

### Description

One or more *.DEVTMPLT entries referenced in the CALIBRE_AGF_NETLIST body could not be associated with a corresponding CALIBRE_DEVTAB Device Entry.

### What Next

There have some mismatch between *.DEVTMPLT and CALIBRE_DEVTAB. You should ensure that the CALIBRE_AGF_NETLIST is generated in accordance with CCI usage guidelines and that the CALIBRE_DEVTAB is consistent with the CALIBRE_AGF_NETLIST for best results.

## SX-1264

(Warning) One or more element devices referenced in the CALIBRE_AGF_NETLIST body could not be associated with either a *.DEVTMPLT or CALIBRE_DEVTAB Device Entry. %s

### Description

One or more element devices referenced in the CALIBRE_AGF_NETLIST body could not be associated with either a *.DEVTMPLT or CALIBRE_DEVTAB Device Entry.

### What Next

There have some mismatch between *.DEVTMPLT and CALIBRE_DEVTAB. You should ensure that the CALIBRE_AGF_NETLIST is generated in accordance with CCI usage guidelines and that the CALIBRE_DEVTAB is consistent with the CALIBRE_AGF_NETLIST for best results.

## SX-1266

(Fatal) Cell "%s" is both SKIP_CELL and SKIP_PCELL. Please remove all cells specified in SKIP_PCELLS from SKIP_CELLS or set SKIP_CELLS:!*.

### Description

Cell "%s" is both SKIP_CELL and SKIP_PCELL.

### What Next

You should remove all cells specified in SKIP_PCELLS from SKIP_CELLS or set SKIP_CELLS:!*.

Feedback

## SX-1267

(Fatal) Calibre runset syntax error! Improper specification of conditional pair(#IFDEF #ENDIF).

**Description**

#IFDEF and #ENDIF must be a pair in the CALIBRE_RUNSET file. But in this CALIBRE_RUNSET file, only have #ENDIF no #IFDEF.

**What Next**

You should add #IFDEF in the CALIBRE_RUNSET to make the conditional pair completely.

## SX-1308

(Fatal) Layer can not be negative at line %d

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-1355

(Fatal) STARRC_AGF_NETLIST is missing.

**Description**

Direct DB flow needs STARRC_AGF_NETLIST as input for connectivity.

Feedback

**What Next**

Add STARRC_AGF_NETLIST in StarRC command file.

---

## SX-1356

(Fatal) File %s listed in STARRC_AGF_LIST doesn't exist.

**Description**

Files specified in STARRC_AGF_LIST must exist.

**What Next**

Provide correct filenames for STARRC_AGF_LIST.

---

## SX-1357

(Fatal) STARRC_AGF_LIST format: <file name> <mapping file name> <top-level macro name>

**Description**

The STARRC_AGF_LIST file format is: <file name> <mapping file name> <top-level macro name>

**What Next**

Follow the STARRC_AGF_LIST file format.

---

## SX-1358

(Warning) Device "%s" is not defined in STARRC_AGF_CONFIGURATION_FILE.

**Description**

StarRC use device definition in STARRC_AGF_CONFIGURATION_FILE
to determine the device terminal layers. If the device isn't defined in
STARRC_AGF_CONFIGURATION_FILE, StarRC cannot detect device terminal locations
properly.

**What Next**

Define this device in STARRC_AGF_CONFIGURATION_FILE.

---

## SX-1359

(Fatal) Error opening file '%s': %s

Feedback

**Description**

StarRC cannot open this file.

**What Next**

Provide correct filename.

---

## SX-1364

(Warning) Unknown GDS record '0x%x'

**Description**

StarRC parsed an unknown GDS record. This record is ignored.

**What Next**

Make sure this is a correct GDS file.

---

## SX-1384

(Warning) Polygon with property 30=CELL_BOUNDARY_POLYGON is missing. StarRC calculates the boundary box by iterating through all polygons in the top cell.

**Description**

StarRC uses the polygon with property 30=CELL_BOUNDARY_POLYON in the GDSII file as the boundary box for the top cell. If this information doesn't exist, StarRC iterates through the whole design to calculate the correct boundary box, requiring additional runtime.

**What Next**

Provide a polygon with property 30 in the GDSII file to specify the correct boundary box and reduce StarRC runtime.

---

## SX-1386

(Fatal) Could not find liboaReader-O.so in LD_LIBRARY_PATH.

**Description**

StarRC uses dynamic library liboaReader-O.so to read OpenAccess database.

**What Next**

Check whether your StarRC installation is correct.

Feedback

## SX-1387

(Fatal) A dynamic linking error occurred: %s

**Description**

StarRC is unable to link the dynamic library liboaReader-O.so

**What Next**

Check whether your StarRC installation is correct.

## SX-1389

(Fatal) Could not load symbols from OA.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1398

(Fatal) Specified models file %s is not a valid binary models database

**Description**

This is an internal fatal message

**What Next**

Contact the Synopsys Support Center.

## SX-1399

(Fatal) Specified models file %s is not compatible with this executable release.

**Description**

This is an internal fatal message

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1400

(Fatal) Unknown marker %d encountered. Internal models database is corrupted.

**Description**

This is an internal fatal message

**What Next**

Contact the Synopsys Support Center.

## SX-1402

(Fatal) Could not open file "%s".

**Description**

StarRC cannot open one of the files specified in the SKIP_CELL_PORT_PROP_FILE command.

**What Next**

Ensure that the reported file exists and that you have read permission.

## SX-1405

(Warning) Skipping invalid line %d in PIO_FILE.

**Description**

There is invalid syntax in PIO_FILE. For pin direction, only "IN", "OUT", "BIDIR" are accepted.

**What Next**

Please correct the syntax in PIO_FILE.

## SX-1409

(Warning) Element device "%s" is not defined.

**Description**

A device definition is missing. Standard SPICE terminal order and names are used for instances of these devices in the ideal netlist.

Since the terminal layers of these devices cannot be identified, there are several possible consequences for parasitic extraction or netlisting: a) IGNORE_CAPACITANCE for these

Feedback

devices will not be correct. b) Shorts or opens might be reported for nets connected to instances of these devices. c) Parasitic structures for instances of these devices (such as *|I or instance calls in the instance section) might not be netlisted.

**What Next**

For best results, include all device definitions in the input.

---

## SX-1410

(Warning) Parse error at line %d in "%s".

**Description**

There is parse error in reported spice file.

**What Next**

Please check the syntax and correct it.

---

## SX-1412

(Warning) Missing .SUBCKT for referenced model "%s".

**Description**

The reported model does not has .SUBCKT defination in spice file.

**What Next**

Please check spice syntax and correct it.

---

## SX-1413

(Warning) Cannot determine parameter identity '%s'.

**Description**

The reported parameter in spice file does not have expected format.

**What Next**

Check spice syntax and correct it.

---

## SX-1414

(Warning) Bad parameter found in line: '%s'.

Feedback

**Description**

The reported parameter in spice file does not have expected format.

**What Next**

Check spice syntax and correct it.

---

## SX-1415

(Warning) Cell Name is not found for instance '%s'

**Description**

The cell name is not found for reported instance. The connection may have issue.

**What Next**

Check spice syntax and correct it.

---

## SX-1417

(Warning) Wrong Format in SKIP_CELL_PORT_PROP_FILE: %s

**Description**

You receive this message because there is more that 3 entries provided.

**What Next**

Please correct SKIP_CELL_PORT_PROP_FILE syntax. Expected syntax:

CELL cell1name pin1name pin1io pin_cap pin2name pin2io pin_cap

---

## SX-1418

(Warning) Running multiple netlist output flow, there might be mismatch between OA and %s output due to some flow-dependent commands.

**Description**

You receive this message because you are running multiple netlist output flow with OA_MULTI_OUTPUT. There are some star commands may be applicable to OA flow only and not to SPF/SPEF flow and also vice versa, these commands may cause mismatch between OA and SPF/SPEF outputs.

**What Next**

This is only a warning message. No action is required.

Feedback

## SX-1429

(Information) DEF macro %s does not have correspondent macro LEF. Use pin info from DEF instead.

**Description**

For those DEF macros which have correspondent LEF macro definitions, StarRC combine ports from both sources to form a complete port list for a cell. But, if a DEF macro has no correspondent LEF macro definition, StarRC will only use port info from DEF.

**What Next**

Information only; no action needed.

## SX-1430

(Fatal) Could not rename file %s to %s

**Description**

An internal file operation has failed.

**What Next**

Check if the working directory is full. If not, contact the Synopsys Support Center.

## SX-1433

(Warning) NETLIST_IDEAL_SPICE_TYPE is set to SCHEMATIC, but XREF is set to NO. NETLIST_IDEAL_SPICE_FILE will not be created.

**Description**

XREF is set to NO. Set NETLIST_IDEAL_SPICE_TYPE to SCHEMATIC is invalid. NETLIST_IDEAL_SPICE_FILE will not be created.

**What Next**

Correct the StarRC command file settings.

## SX-1434

(Warning) Can only attach DHE information to layout ideal spice file in XREF:NO run. Ignoring DHE...

Feedback

**Description**

NETLIST_IDEAL_SPICE_TYPE is set to LAYOUT but XREF is not set to NO. StarRC cannot attach dual-hiararchy extraction flow (DHE) in NETLIST_IDEAL_SPICE_FILE.

**What Next**

Check StarRC command file settings.

---

## SX-1435

(Warning) NETLIST_IDEAL_SPICE_HIER: YES is not allowed with CALIBRE_PDBA_FILE. Ignoring CALIBRE_PDBA_FILE setting...

**Description**

NETLIST_IDEAL_SPICE_HIER:YES doesn't work with CALIBRE_PDBA_FILE. CALIBRE_PDBA_FILE will be ignored.

**What Next**

Check StarRC command file settings.

---

## SX-1436

(Warning) NETLIST_IDEAL_SPICE_HIER: YES is not allowed with ICV_ANNOTATION_FILE . Ignoring ICV_ANNOTATION_FILE setting...

**Description**

NETLIST_IDEAL_SPICE_HIER:YES does not work with ICV_ANNOTATION_FILE. Information from ICV_ANNOTATION_FILE will be ignored.

**What Next**

Check StarRC command file settings.

---

## SX-1437

(Warning) %s

**Description**

The conditions that NETLIST_TYPE can specify must be covered by EXTRACTION and COUPLE_TO_GROUND commands.

**What Next**

Check StarRC command file settings.

Feedback

## SX-1438

(Warning) L or K must be used together with R.

**Description**

You must use R in NETLIST_TYPE with L and K.

**What Next**

Check StarRC command file settings.

## SX-1439

(Information) NETLIST_TYPE: Cc means netlisting both coupling and capacitance to ground.

**Description**

You specify both Cc and Cg in NETLIST_TYPE. It means netlisting both coupling and capacitance to ground.

**What Next**

Information only; no action is needed.

## SX-1440

(Warning) NETLIST_TYPE: no_couple option only goes with R|Cg|RCg|RL|RLCg.

**Description**

Cannot specify NO_COUPLE with CC.

**What Next**

Check StarRC command file settings.

## SX-1442

(Fatal) NETLIST_INDUCTANCE: YES only goes with NETLIST_TYPE: RLICc|RLICg|RLI|RLmCc|RLmCg|RLm.

**Description**

Cannot specify NETLIST_TYPE: K with NETLIST_INDUCTANCE:YES.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-1443

(Fatal) NETLIST_INDUCTANCE: NO only goes with NETLIST_TYPE: RKlCc|RKlCg|RKl|RKmCc|RKmCg|RKm.

**Description**

NETLIST_INDUCTANCE:NO cannot work with NETLIST_TYPE: Ll or NETLIST_TYPE: Lm

**What Next**

Check StarRC command file settings.

---

## SX-1444

(Fatal) NETLIST_FORMAT: SPEF does not support mutual inductance.

**Description**

NETLIST_FORMAT: SPEF does not work with NETLIST_TYPE: Lm

**What Next**

Contact the Synopsys Support Center.

---

## SX-1445

(Fatal) NETLIST_TYPE: RL|RLCg|RLCc is no longer supported. Try RLm or RLl.

**Description**

NETLIST_TYPE: RL|RLCg|RLCc is no longer supported. Try RLm or RLl.

**What Next**

Check StarRC command file settings.

---

## SX-1447

(Warning) NET "%s" is not set to be extracted in NETS and will not be netlisted.

Feedback

**Description**

NETLIST_SELECT_NETS and LOOP_OK_NETS can only contain nets that are specified in NETS.

**What Next**

Check StarRC command file settings. If this is expected, no action is needed.

---

## SX-1448

(Fatal) File : "%s" doesn't exist.

**Description**

Internal file does not exist.

**What Next**

Check the file system to see whether disk is full or connection is stable. Contact the Synopsys Support Center if receive this message again.

---

## SX-1449

(Fatal) Error(s) found while parsing commands

**Description**

StarRC encountered internal fatal error.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1451

(Fatal) Unknown command : %s

**Description**

StarRC encountered internal fatal error.

**What Next**

Retry with "StarXtract -clean" command. If receive this message again, contact the Synopsys Support Center.

Feedback

## SX-1452

(Fatal) Invalid command file : "%s" command line : "%s"

**Description**

Missing internal file.

**What Next**

Check the file system to see whether disk is full or connection is stable.

## SX-1454

(Warning) OVERLAP_FILL_SPACING set in mapping file is less than SMIN for layer "%s", will use SMIN.

**Description**

The keyword OVERLAP_FILL_SPACING is defined in conducting_layers section in StarRC mapping file. This keyword is used by metal fill reuse flow in an ECO loop. After ECO, some of the old metal fill structures might short to the new design changes. StarRC resolves these shorts by moving metal fill polygons away from signal nets by the value of OVERLAP_FILL_SPACING. However, the value you set for OVERLAP_FILL_SPACING is less than SMIN of that layer, which is not allowed in StarRC, so SMIN of that layer will be used instead of OVERLAP_FILL_SPACING to move metal fill polygons away from signal nets

**What Next**

To avoid this warning, you can set OVERLAP_FILL_SPACING to a value not less than the minimum spacing of that conductor layer. Or you can ignore this warning if minimum spacing of that conductor layer is also acceptable for OVERLAP_FILL_SPACING.

## SX-1455

(Warning) INTERNAL Warning: Invalid command no source: %s

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1456

## SX-1490

(Information) No overlap polygond found.

**Description**

StarRC didn't find overlap polygon.

**What Next**

You need to do nothing about this message.

Feedback

## SX-1491

(Warning) %d overlap polygons found and cleaned up. (See file overlap.sum)

**Description**

StarRC has cleaned up overlap polygons in design.

**What Next**

You need to do nothing about this message.

## SX-1492

(Warning) Overlap found around %s

**Description**

StarRC found overlap. This only report 1 location for your reference.

**What Next**

This is just information for your reference. If it is expected to have metal fill and signal overlap, you can ignore this message. Otherwise, please check your design in reported location.

## SX-1493

(Information) INTERNAL Warning: Layer %s is not in layers file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1494

(Fatal) INTERNAL Error Unknown flag %d found

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1495

(Fatal) Error in setting FS_BOUNDARY_BOX

**Description**

FS_BOUNDARY_BOX only accept number inputs.

**What Next**

Only use number inputs for FS_BOUNDARY_BOX.

## SX-1496

(Warning) Some resistor body have too many terminals.

**Description**

Some resistor body have too many terminals. This may cause accuracy issue.

**What Next**

Check design database.

## SX-1497

(Fatal) Internal Error: Source Layer should exist

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1498

(Fatal) INTERNAL Error: Output/source Layer should exist

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1499

(Warning) Layer %s is not in mapping file.

**Description**

Layer not found in mapping file. StarRC will ignore it.

**What Next**

Set proper mapping information for all layers in design.

## SX-1500

(Warning) SKIP_PCELLS is not set along with SKIP_PCELL_LAYERS_FILE

**Description**

StarRC require to specify the PCELL or blocking layer, as well as the layers that are exploded, in a file specified by the SKIP_PCELL_LAYERS_FILE command.

**What Next**

Specify the PCELL or blocking layer with SKIP_PCELL_LAYERS_FILE.

## SX-1501

(Warning) PCELL %s is not set in SKIP_PCELLS (only print the first one), ignored

**Description**

PCELL is not set in SKIP_PCELLS. StarRC won't treat the PCELL as a fully characterized gray-box cell unit.

**What Next**

Check SKIP_PCELLS and SKIP_PCELL_LAYERS_FILE setting

## SX-1502

(Fatal) Parsing error in SKIP_PCELL_LAYERS_FILE at line %s

**Description**

Syntax error found in SKIP_PCELL_LAYERS_FILE.

**What Next**

Modify SKIP_PCELL_LAYERS_FILE.

Feedback

## SX-1503

(Fatal) Unrecognized input in SKIP_PCELL_LAYERS_FILE at %s

**Description**

Unrecognized input found in SKIP_PCELL_LAYERS_FILE.

**What Next**

Check SKIP_PCELL_LAYERS_FILE.

## SX-1504

(Fatal) Bad scale value in SKIP_PCELL_LAYERS_FILE at %s

**Description**

Scale parameter in SKIP_PCELL_LAYERS_FILE is not acceptable.

**What Next**

Modify scale parameter in SKIP_PCELL_LAYERS_FILE.

## SX-1505

(Warning) Layer "%s" is not found in database

**Description**

Layer specified in SKIP_PCELL_LAYERS_FILE is not found in database.

**What Next**

Check SKIP_PCELL_LAYERS_FILE and design database.

## SX-1506

(Warning) INTERNAL Warning: ITF layer "%s" is not found in nxtgrd file

**Description**

An internal consistency check has failed.

**What Next**

Check the input files MAPPING_FILE or SKIP_PCELL_LAYERS_FILE. Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

Feedback

## SX-1507

(Fatal) INTERNAL Error: Cannot find ws_mkrs hdr file

**Description**

Internal file does not exist.

**What Next**

Check the file system to see whether disk is full or connection is stable. Contact the Synopsys Support Center if receive this message again.

## SX-1508

(Fatal) ERROR: width=%d spacing=%d exceeding etch table size

**Description**

Etch table defined in ETCH_VS_WIDTH_AND_SPACING section is incorrect.

**What Next**

Check ETCH_VS_WIDTH_AND_SPACING section in ITF file.

## SX-1509

(Fatal) Some geometries missing.

**Description**

Some geometries missing in Field Solver stage.

**What Next**

Retry with "StarXtract -clean" option. If issue still exist, Contact the Synopsys Support Center.

## SX-1510

(Warning) More than 50% %s thickness variation(%d) in conductor level=%d at around (%d, %d) and (%d, %d)

**Description**

Thickness variation of certain polygon is more than 50% of it's thickness.

Feedback

**What Next**

Make sure the thickness variation setting in ITF file is correct.

---

## SX-1511

(Information) More polygons with more than 50% thickness variation

**Description**

More than 100 polygons with >50% thickness variation. StarRC will suppress this warning.

**What Next**

Make sure the thickness variation setting in ITF file is correct.

---

## SX-1512

(Warning) INTERNAL Error: Invalid command no source: %s

**Description**

An internal consistency check has failed.

**What Next**

(Fatal) INTERNAL Error: Corrupted hn file... could not find netname of %d.

**Description**

The net name corresponding to the net id is not found in HN db.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1563

(Fatal) Nothing selected in FS_EXTRACT_NETS.

**Description**

You receive this error message because there are no nets provided in FS_EXTRACT_NETS option of StarRC command file.

**What Next**

Provide names of the nets which need to be extracted by Field Solver in FS_EXTRACT_NETS option of StarRC command file.

---

## SX-1564

(Fatal) INTERNAL Error: Net index %d lookup failed... bad HN database.

**Description**

The net name corresponding to the net index is not found in HN database.

Feedback

### What Next

Contact the Synopsys Support Center.

---

## SX-1567

(Fatal) Could not write comparison output.

### Description

You receive this message because StarRC can't open the file for writing when reporting comparison results.

### What Next

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

---

## SX-1570

(Fatal) Could not write gnuplot cmd file.

### Description

You receive this message because StarRC can't open the file for writing when writing gnuplot cmd file.

### What Next

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

---

## SX-1572

(Fatal) FSCORRELATION is set to RC3, but could not find -rc3_cc in FSCOMPARE_OPTIONS.

### Description

You receive this message because the option FSCORRELATION is set as RC3 in StarRC command file, but -rc3_cc is not set in option FSCOMPARE_OPTIONS. When FSCORRELATION is set as RC3 in StarRC command file, -rc3_cc should be set in option FSCOMPARE_OPTION, the names of the nets which are intended to be extracted by RC3 should also be listed after -rc3_cc.

Feedback

**What Next**

Add -rc3_cc in FSCOMPARE_OPTIONS and list the names of the nets to be extracted by RC3 after -rc3_cc.

---

## SX-1573

(Fatal) FSCORRELATION is set to RC2, but could not find -rc2_cc in FSCOMPARE_OPTIONS.

**Description**

You receive this message because the option FSCORRELATION is set as RC2 in StarRC command file, but -rc2_cc is not set in option FSCOMPARE_OPTIONS. When FSCORRELATION is set as RC2 in StarRC command file, -rc2_cc should be set in option FSCOMPARE_OPTION, the names of the nets which are intended to be extracted by RC2 should also be listed after -rc2_cc.

**What Next**

Add -rc2_cc in FSCOMPARE_OPTIONS and list the names of the nets to be extracted by RC2 after -rc2_cc.

---

## SX-1574

(Fatal) Could not write correlation output.

**Description**

You receive this message because StarRC can't open the file for writing when reporting correlation results.

**What Next**

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

---

## SX-1575

(Fatal) Could not write comparison output.

**Description**

You receive this message because StarRC can't open the file for writing when reporting comparison results.

Feedback

### What Next

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

---

## SX-1578

(Fatal) Invalid value for FS_SCALE, must be > 0.

### Description

You receive this message because FS_SCALE option is StarRC command file is set to a value less than 0. FS_SCALE should be set to a positive value.

### What Next

Reset FS_SCALE to a value larger than 0.

---

## SX-1579

(Warning) FS_RETAIN_BULK_LAYERS layer "%s" is not a valid database layer or does not have a valid GRD Layer. Please verify MAPPING_FILE includes this layer in the CONDUCTING_LAYERS section and that the layer is not excluded from extraction.

### Description

You receive this message because the layer set in option FS_RETAIN_BULK_LAYERS is not a valid database layer or the database layer does not have a valid GRD Layer.

### What Next

Check whether the layers set in FS_RETAIN_BULK_LAYERS are database layers in the design; also check MAPPING_FILE to verify that the database layers set in FS_RETAIN_BULK_LAYERS are correctly mapped to GRD layers and are not excluded from extraction.

---

## SX-1580

(Warning) FS_RETAIN_BULK_LAYERS layer "%s" is not mapped to SUBSTRATE and will be ignored.

### Description

You receive this message because the layer set in FS_RETAIN_BULK_LAYERS is not mapped to SUBSTRATE.

Feedback

**What Next**

Check whether the layer is a bulk layer. If it's a bulk layer, map the layer to SUBSTRATE in mapping file.

---

## SX-1581

(Warning) FS_RETAIN_BULK_LAYERS is only supported for COUPLE_TO_GROUND: NO.

**Description**

You receive this message because while FS_RETAIN_BULK_LAYERS is set in StarRC command file, COUPLE_TO_GROUND is set to YES at the same time.

**What Next**

If FS_RETAIN_BULK_LAYERS is set, reset COUPLE_TO_GROUND option to NO.

---

## SX-1582

(Fatal) Failed to write "%s".

**Description**

You receive this message because StarRC can't write to the file.

**What Next**

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

---

## SX-1585

(Fatal) Could not write gnuplot data file.

**Description**

You receive this message because StarRC can't open the file for writing when writing gnuplot data file.

**What Next**

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

Feedback

## SX-1586

(Information) CapCompare: (Coupling) Avg = %f%% ; StdDev = %f%%

**Description**

This is an information message. It reports the summary of FSCOMPARE coupling results, including average error and standard deviation.

**What Next**

You need to do nothing about this message.

## SX-1587

(Fatal) Could not write %s.

**Description**

You receive this message because StarRC can not write to the file in FS_EXTRACT_NETS flow.

**What Next**

Check whether the disk is full and rerun StarRC. If the message still occurs, contact Synopsys for more information.

## SX-1589

(Warning) FS_RECONNECT_MODE: %d is illegal; reset to default.

**Description**

The FS_RECONNECT_MODE option can only be set to 0 or 1. When FS_RECONNECT_MODE is set to 1, the Field Solver preprocesser reconnect stage is enabled; when FS_RECONNECT_MODE is set to 0, the Field Solver preprocesser reconnect stage is disabled.

**What Next**

If you want to enable Field Solver preprocesser reconnect stage, set the option to 1; otherwise set it to 0.

## SX-1593

(Fatal) Could not write internal tech file.

Feedback

**Description**

StarRC can't open the file for writing when writing internal tech file.

**What Next**

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

---

## SX-1595

(Information) Post processing Field Solver net caps for multi-corner: %s.

**Description**

This information informs you that StarRC is post processing Field Solver net caps for multi-corner.

**What Next**

You don't need to take any action.

---

## SX-1596

(Information) Primary corner %s idx %d.

**Description**

This information informs you that the nxtgrd file for the primary corner and its corner number.

**What Next**

You don't need to take any action.

---

## SX-1597

(Information) Corner nxtgrd file %s idx %d.

**Description**

This information informs you that the nxtgrd file for the corner being handled and its corner number.

**What Next**

You don't need to take any action.

Feedback

## SX-1598

(Fatal) INTERNAL Error: Could not find %s in string list of CORNER_TCAD_GRD_FILES.

**Description**

This nxtgrd file is tended to be handled but it's not listed in CORNER_TCAD_GRD_FILES.

**What Next**

Contact the Synopsys Support Center.

## SX-1599

(Fatal) Could not write %s.

**Description**

StarRC can't open file to write when reporting Field Solver net caps.

**What Next**

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

## SX-1600

(Information) Post processing %s.

**Description**

This information informs you that StarRC is post processing Field Solver net caps for multi-corner.

**What Next**

You don't need to take any action.

## SX-1602

(Fatal) INTERNAL Error: Found error while processing field solver data on net: %d.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1603

(Fatal) INTERNAL Error: Field Solver data is corrupted.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1604

(Warning) INTERNAL Warning: Field Solver ignores coupling cap multiplication factor '%s' in '%s'.

**Description**

When there are more than 2 layers in IGNORE_CAP, Field Solver will ignore the other layers except first two layers.

**What Next**

If coupling cap between more than two layers needs to be ignored, instead of writing IGNORE_CAP layerA layerB layerC, should write: IGNORE_CAP layerA layerB IGNORE_CAP layerA layerC IGNORE_CAP layerB layerC

## SX-1605

(Fatal) INTERNAL Error: Parsing fs_ignore_cap_layer file: found invalid layer name %s.

**Description**

The layer shown in the message is not a valid database layer.

**What Next**

Contact Synopsys Customer Support. Check the layer name and confirm that a valid database layer is used.

## SX-1607

(Fatal) INTERNAL Error: Parsing fs_ignore_cap_layer file: found invalid layer names %s and %s.

Feedback

**Description**

The layers shown in the message are not valid database layers.

**What Next**

Contact Synopsys Customer Support. Check the layer names and confirm valid database layers are used.

---

## SX-1608

(Fatal) Failed to create pipe when getting Field Solver version.

**Description**

This is an error in Linux system which causes StarRC can't get Field Solver version.

**What Next**

Check Linux running status and rerun StarRC. If this error still occurs, contact Synopsys for more information.

---

## SX-1609

(Fatal) Failed to fork when getting Field Solver version.

**Description**

This is an error in system which causes StarRC can't get Field Solver version.

**What Next**

Check system running status and rerun StarRC. If this error still occurs, contact Synopsys for more information.

---

## SX-1610

(Fatal) INTERNAL Error: Failed to execute Field Solver: '%s'.

**Description**

You receive this message because Field Solver terminated abnormally.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1611

(Fatal) INTERNAL Error: Should find Field Solver's version, but failed.

**Description**

You receive this message because StarRC can't find Field Solver's version information.

**What Next**

Contact the Synopsys Support Center.

## SX-1612

(Fatal) INTERNAL Error: Failed to find Field Solver's version.

**Description**

You receive this message because StarRC can't find Field Solver's version information.

**What Next**

Contact the Synopsys Support Center.

## SX-1618

(Fatal) Failed to find Field Solver in search path.

**Description**

You receive this message because StarRC can't find Field Solver executable file in search path.

**What Next**

In order to run Field Solver, you should set correct Field Solver executable file path.

## SX-1619

(Fatal) Failed to create pipe when getting field solver version and built time.

**Description**

This is an error in system which causes StarRC can't get Field Solver version and built time.

Feedback

**What Next**

Check system running status and rerun StarRC. If this error still occurs, contact Synopsys for more information.

---

## SX-1620

(Fatal) Failed to fork when getting field solver version and built time.

**Description**

This is an error in system which causes StarRC can't get Field Solver version.

**What Next**

Check system running status and rerun StarRC. If this error still occurs, contact Synopsys for more information.

---

## SX-1621

(Fatal) INTERNAL Error: Failed to execute field solver: %s.

**Description**

Field Solver terminated abnormally.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1622

(Fatal) INTERNAL Error: Failed to find Field Solver's version.

**Description**

StarRC can't find Field Solver's version information.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1623

(Warning) Design '%s' is edit-locked by other process/person.

Feedback

**Description**

The opening design is edit-locked by other process/person. Although StarRC can open it in read-only mode, the design may be outdated and hence the translation result.

**What Next**

Information only.

---

## SX-1624

(Fatal) Could not duplicate stderr output.

**Description**

This is an error in system which makes StarRC can't duplicate stderr output.

**What Next**

Check system running status and rerun StarRC. If this error still occurs, contact Synopsys for more information.

---

## SX-1626

(Fatal) Could not duplicate stdout output.

**Description**

This is an error in system which makes StarRC can't duplicate stdout output.

**What Next**

Check system running status and rerun StarRC. If this error still occurs, contact Synopsys for more information.

---

## SX-1627

(Fatal) Failed to read fs.log file.

**Description**

StarRC can not read fs.log file.

**What Next**

Check whether fs.log exists. If fs.log exists, check read permission of the file. If fs.log doesn't exist, rerun StarRC. If this message still occurs after rerun, contact Synopsys for more information.

Feedback

## SX-1628

(Warning) Specified ranxt config file doesn't exist. Using default ranxt config file

**Description**

The ranxt config file specified in RANXT_CONFIG_FILE option doesn't exist. StarRC will use default ranxt config file instead.

**What Next**

Make sure that the ranxt config file specified in RANXT_CONFIG_FILE option exists.

## SX-1629

(Fatal) RANXT_RESOLUTION is obsolete in 2011.06. Please use FS_RESOLUTION instead.

**Description**

RANXT_RESOLUTION is an old StarRC command and has been replaced by FS_RESOLUTION from 2011.06.

**What Next**

Replace the command RANXT_RESOLUTION with FS_RESOLUTION.

## SX-1630

(Fatal) Invalid value for FS_RESOLUTION, must be greater than 0.

**Description**

You receive this message because the value set in FS_RESOLUTION is negative, it should be greater than 0.

**What Next**

Reset FS_RESOLUTION value to a number greater than 0.

## SX-1631

(Warning) FS_RESOLUTION value is too small, reset it to %f.

Feedback

**Description**

FS_RESOLUTION is used to set the box resolution during cutting non-Manhattan geometry to Manhattan boxes. By default, it's set as 0.1um. If its value is two small, it will be reset to a new value.

**What Next**

To avoid this warning, you need to set FS_RESOLUTION to a larger value than the reported number. Or you can ignore the warning if the reset number is acceptable for you.

---

## SX-1632

(Fatal) Could not write Field Solver technology file.

**Description**

You receive this message because StarRC can't write Field Solver technology file.

**What Next**

Check whether disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more information.

---

## SX-1633

(Fatal) INTERNAL Error: Could not encrypt technology file.

**Description**

You receive this error message because StarRC can't encrypt Field Solver technology file.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1634

(Fatal) INTERNAL Error: Must read design to know if there is critical_substrate_polygon.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1635

(Warning) %s table is found, but QTF file is not set in FS flow.

**Description**

In order to run FS flow with %s defined in ITF, QTF should be specified to run StarQTF flow to get field solver results.

**What Next**

Turn off FS flows (do not use EXTRACTION: FSCOMPARE, or FS_EXTRACT_NETS) if you do not have a valid QTF file, or you could add the correct QTF file by using FS_QTF_FILE command.

## SX-1636

(Fatal) RANXT_BOUNDARY_BOX is obsolete in 2011.06. Please use FS_BOUNDARY_BOX instead

**Description**

RANXT_BOUNDARY_BOX is an old StarRC command and has been replaced by FS_BOUNDARY_BOX from 2011.06.

**What Next**

Replace the command RANXT_BOUNDARY_BOX with FS_BOUNDARY_BOX.

## SX-1637

(Fatal) Error in setting FS_BOUNDARY_BOX.

**Description**

You receive this error message because the setting of FS_BOUNDARY_BOX command is wrong.

**What Next**

The syntax of the command is: "FS_BOUNDARY_BOX: x_min y_min z_min x_max y_max z_max". You can refer to StarRC command reference for more information about setting FS_BOUNDARY_BOX.

## SX-1639

(Fatal) Failed to write out FS_BOUNDARY_BOX option.

Feedback

**Description**

You receive this error message because StarRC can't write out FS_BOUNDARY_BOX option to file.

**What Next**

Check whether the disk is full and rerun StarRC. If the message still occurs, contact Synopsys for more information.

---

## SX-1640

(Fatal) RANXT_BOUNDARY_CONDITION is obsolete in 2011.06. Use FS_BOUNDARY_CONDITION instead.

**Description**

RANXT_BOUNDARY_CONDITION is an old StarRC command and has been replaced by FS_BOUNDARY_CONDITION from 2011.06.

**What Next**

Replace the command RANXT_BOUNDARY_CONDITION with FS_BOUNDARY_CONDITION.

---

## SX-1641

(Fatal) Bad FS_BOUNDARY_CONDITION; please check: %s.

**Description**

You receive this message because you make a wrong setting for FS_BOUNDARY_CONDITION.

**What Next**

The syntax of FS_BOUNDARY_CONDITION is: "FS_BOUNDARY_CONDITION: [-bc_xn N | P] [-bc_xp N | P] [-bc_yn N | P] [-bc_yp N | P]". You can refer to StarRC command reference for more information.

---

## SX-1642

(Fatal) Failed to write out Field Solver boundary condition.

**Description**

You receive this error message because StarRC can't write out Field Solver boundary condition to file.

Feedback

**What Next**

Check whether the disk is full and rerun StarRC. If the message still occurs, contact Synopsys for more information.

---

## SX-1643

(Fatal) Obsoleted setting RANXT_DP_STRING.

**Description**

RANXT_DP_STRING has been obsoleted in 2011.06.

**What Next**

Use FS_DP_STRING instead. Refer to "Distributed Processing" section in StarRC manual for more information.

---

## SX-1644

(Information) Creating Field Solver input data.

**Description**

This information informs you that StarRC is writing Field Solver input data.

**What Next**

Information only, no action is needed.

---

## SX-1645

(Information) Done.

**Description**

This information informs you that the writing of Field Solver input data has finished.

**What Next**

Information only, no action is needed.

---

## SX-1646

(Information) Running Field Solver(%d).

**Description**

This information informs you that Field Solver has been invoked and is running.

Feedback

**What Next**

Information only, no action is needed.

---

## SX-1647

(Information) Invoking Field Solver with command:%s.

**Description**

This information informs you the command Field Solver is invoked with.

**What Next**

You can check the information to see whether the options in the command are set correctly. If any of the options are set incorrectly, you can reset them in FSCOMPARE_OPTIONS and rerun StarRC. You can also refer to StarRC command reference for the Field Solver options.

---

## SX-1649

(Fatal) Failed to run Field Solver.

**Description**

StarRC failed to run Field Solver due to unexpected reason.

**What Next**

Check <star directory>/fs.log file for detailed failure information.

---

## SX-1650

(Information) Done.

**Description**

This information informs you that Field Solver has finished running.

**What Next**

Information only, no action is needed.

---

## SX-1651

(Warning) INTERNAL Warning: Could not open fs_drop_layer file for reading.

Feedback

**Description**

StarRC can't open specified file for reading.

**What Next**

Contact the Synopsys Customer Support.

---

## SX-1652

(Fatal) Could not write Field Solver file %s.

**Description**

StarRC can't write specified Field Solver file.

**What Next**

Check whether the disk is full and rerun StarRC. If this message still occurs, contact Synopsys for more infomation.

---

## SX-1653

(Fatal) INTERNAL Error: Net index %d lookup failed... bad HN database.

**Description**

The net name corresponding to the net index is not found in HN database.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1654

(Fatal) INTERNAL error: net index '%d' lookup failed... bad HN database

**Description**

This is an internal fatal error in reading internal database

**What Next**

Contact the Synopsys Support Center.

---

## SX-1657

(Fatal) INTERNAL Error: Line %d unsupported Field Solver report format.

Feedback

**Description**

An internal consistency check has failed. StarRC can't recognize the Field Solver report on that line.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1658

(Fatal) INTERNAL Error: Unsupported capacitance format in Field Solver report.

**Description**

An internal consistency check has failed. StarRC can't recognize the capacitance format in Field Solver report.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1661

(Fatal) Multi-equivs are not yet supported for Calibre input. Layout cell "%s" is already assigned to "%s" and cannot be re-assigned to "%d".

**Description**

It is not supported that one layout cell equives to multiple schematic cell.

**What Next**

Check XREF data in Calibre input.

---

## SX-1662

(Warning) Schematic name "%s" is duplicated in XREF name table within equivalence point "%s(L):%s(S)", Original: %s(L) == %s(S) Duplicate: %s(L) == %s(S) %s will be netlisted with layout name.

**Description**

Schematic net/instance name is duplicated in XREF name table within equivalence point.

**What Next**

Information only; no action is needed.

Feedback

## SX-1663

(Fatal) Multiple schematic equivalencies for a single layout cell is not supported. Layout cell "%s" is already assigned to "%s".

**Description**

One layout cell could only has one equivalent schematic cell. Multiple schematic equivalencies for a single layout cell is not supported.

**What Next**

Check equivalent points data in input XREF data.

## SX-1664

(Information) CELL (L):%s (S):%s

**Description**

Layout and schematic equivalent point.

**What Next**

Information only; no action is needed.

## SX-1665

(Information) .alias %s %s

**Description**

Alias pair.

**What Next**

Information only; no action is needed.

## SX-1666

(Warning) Some schematic %s will not be netlisted because they belong to merged groups that contain more schematic elements than corresponding layout elements. Please see xrefhn.sum for list of excluded %s by schematic cell; .alias statements provide alternative element name from the same composite group that can be used for probing. The first field is the excluded element, the second field is the alternate element.

Feedback

**Description**

Some schematic entry will not be netlisted because they belong to merged groups that contain more schematic elements than corresponding layout elements.

**What Next**

Information only; no action is needed.

---

## SX-1667

(Information) Unused XfEntry %d(l),%d(s) in Cell %s(l);%s(s)

**Description**

An unused XREF data in cell.

**What Next**

Information only; no action is needed.

---

## SX-1668

(Fatal) Parse error on line number %d of file "%s". Line: "%s"

**Description**

An syntax error when StarRC parse input file.

**What Next**

Check content in input file.

---

## SX-1669

(Fatal) CALIBRE_IXF_FILE is required for XREF.

**Description**

StarRC fail to open file defined in CALIBRE_IXF_FILE.

**What Next**

Check setting of CALIBRE_IXF_FILE in StarRC command file.

---

## SX-1670

(Fatal) CALIBRE_NXF_FILE is required for XREF.

Feedback

**Description**

StarRC fail to open file defined in CALIBRE_NXF_FILE.

**What Next**

Check setting of CALIBRE_NXF_FILE in StarRC command file.

---

## SX-1671

(Fatal) Specified MACRO instance is not an equivalence point.

**Description**

Layout top block is not an equivalence point.

**What Next**

Check input XREF data.

---

## SX-1672

(Warning) Can not find schematic model of HN_NETLIST_MODEL_NAME:%s

**Description**

Schematic model set in HN_NETLIST_MODEL_NAME is not found in input XREF data.

**What Next**

Information only; no action is needed.

---

## SX-1673

(Warning) Can not find matched schematic model for HN_NETLIST_MODEL_NAME:%s

**Description**

Can not find matched schematic model for HN_NETLIST_MODEL_NAME.

**What Next**

Information only; no action is needed.

---

## SX-1674

(Warning) Global wildcard %s is not supported in SKIP_INSTANCES option. This entry will be ignored.

Feedback

**Description**

Global wildcard is not supported in SKIP_INSTANCES option. This entry will be ignored.

**What Next**

Set clear instance name in SKIP_INSTANCES.

---

## SX-1675

(Warning) Could not find instance "%s"

**Description**

Instance name set in SKIP_INSTANCES is not found in input data.

**What Next**

Information only; no action is needed.

---

## SX-1676

(Severe) Layout cell "%s" is identified as an EQUIV point but is not present in the instance cross-reference table.

**Description**

Layout cell is identified as an equivalence point but is not present in the instance cross-reference table.

**What Next**

Check input XREF data.

---

## SX-1677

(Severe) Layout cell "%s" is identified as an EQUIV point but is not present in the net cross-reference table.

**Description**

Layout cell is identified as an equivalence point but is not present in the net cross-reference table.

**What Next**

Check input XREF data.

Feedback

## SX-1678

(Warning) Layout element device "%s" does not have schematic EQUATE in runset or device table.

**Description**

Layout device does not have schematic equate device in runset or device table.

**What Next**

Information only; no action is needed.

## SX-1679

(Severe) Net and instance cross-reference tables contain inconsistent EQUIV points for layout cell "%s". Net table matches "%s" while instance table matches "%s".

**Description**

Net and instance cross-reference tables contain inconsistent equivalence points for layout cell.

**What Next**

Check layout cell input XREF data.

## SX-1680

(Fatal) There are composite matching MOS with RDC/RSC properties, please use XREF: YES/NO.

**Description**

Composite MOS device with RDC/RSC property is not allowed in XREF:COMPLETE mode.

**What Next**

Set XREF:YES/NO in StarRC command file.

## SX-1681

(Warning) Unknown property:%s

**Description**

Unknown property is found when StarRC parse XREF:COMPLETE data.

Feedback

**What Next**

Check device property in input file.

---

## SX-1682

(Fatal) Could not open ICV schematic netlist in %s

**Description**

Could not open ICV schematic netlist in the path.

**What Next**

Check ICV schematic netlist setting in StarRC command file.

---

## SX-1683

(Fatal) Could not open EvAccess library %s in %s

**Description**

Could not open EvAccess library in the path.

**What Next**

Check evaccess library setting in StarRC command file.

---

## SX-1684

(Fatal) Could not loop schematic netlist(Bgn).

**Description**

Could not loop schematic netlist.

**What Next**

Check schematic netlist in evaccess data.

---

## SX-1685

(Fatal) Could not open EvAccess view %s.

**Description**

Could not open EvAccess view.

Feedback

**What Next**

Check view data in evaccess directory.

---

## SX-1686

(Fatal) Could not open EvAccess cell %s in view %s.

**Description**

ould not open EvAccess cell in teh view.

**What Next**

Check cell data in evaccess directory.

---

## SX-1687

(Fatal) Schematic instance "%s%d%s" is connected to ground "0". To prevent incorrect result, please rename net "0" to another name.

**Description**

Schematic instance port is connected to ground net "0". That could result to incorrect result.

**What Next**

Rename net "0" to another name.

---

## SX-1688

(Fatal) Could not open cell %s.

**Description**

Could not open cell.

**What Next**

Check cell data in evaccess directory.

---

## SX-1689

(Fatal) Could not loop cell port(Bgn).

**Description**

Could not loop cell port data.

Feedback

**What Next**

Check cell port data in evaccess directory.

---

## SX-1690

(Fatal) Could not loop instance of cell %s.

**Description**

Could not loop instance of cell.

**What Next**

Check cell instance data in evaccess directory.

---

## SX-1691

(Fatal) Could not loop pin of instance %s.

**Description**

Could not loop pin of instance.

**What Next**

Check pin data of the instance in evaccess directory.

---

## SX-1693

(Fatal) Could not loop property of instance %s.

**Description**

Could not loop property of instance.

**What Next**

Check instance property data in evaccess directory.

---

## SX-1694

(Fatal) Could not close cell %s.

**Description**

Could not close cell.

Feedback

**What Next**

Check cell data in evaccess directory.

---

## SX-1695

(Warning) Unknown device type %d.

**Description**

Unknown device type.

**What Next**

Check device type in evaccess data.

---

## SX-1696

(Fatal) CDB database "%s" does not exist.

**Description**

StarRC could not CDB data for XREF.

**What Next**

Check CDB data generated by ICV or check path set in StarRC command file.

---

## SX-1698

(Warning) Binary Cdb file does not exist, using ASCII CDB file instead of it.

**Description**

Binary Cdb file does not exist, using ASCII CDB file instead of it.

**What Next**

Information only; no action is needed.

---

## SX-1699

(Fatal) Fail to open Binary CDB library.

**Description**

StarRC fail to open Binary CDB library from ICV.

Feedback

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library again and rerun StarRC.

---

## SX-1700

(Fatal) Fail to open Binary CDB cell pool.

**Description**

StarRc fail to open Binary CDB cell pool from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

---

## SX-1701

(Warning) More than %ld consecutively duplicate elements found in the GDS files, it might incur extraction problems.

**Description**

Consecutively duplicate GDS elements are found in the GDS files. Most of the time, it does no harms to the extraction. However, in some extreme cases due to bugs in the GDS generation, the duplicate elements will increase number of polygons exponentially and cause serious problems.

**What Next**

Check the GDS files in IC WorkBench and make sure the duplicate elements are expected.

---

## SX-1702

(Warning) Fail to open Binary CDB cell for iterate cell %s.

**Description**

StarRc fail to open Binary CDB cell for iteration from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

Feedback

## SX-1703

(Warning) Found consecutively duplicate elements (%s )

**Description**

Consecutively duplicate elements are found in the GDS cell. Usually, they does no harms to the extraction if the duplicate ones are POLY or PATH elements. But, if the duplicate ones are SREF or AREF elements, they may increase the number of polygons exponentially and incur serious performance/accuracy problems in the extraction.

**What Next**

Check the GDS files in IC WorkBench and make sure the duplicate elements are expected.

## SX-1704

(Warning) Fail to open Binary CDB Instance in Cell%s

**Description**

StarRc fail to open Binary CDB instance from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

## SX-1705

(Warning) Fail to close Binary CDB Instance in Cell %s.

**Description**

StarRc fail to close Binary CDB instance from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

## SX-1706

(Warning) Fail to open Binary CDB net in Cell %s.

**Description**

StarRc fail to open Binary CDB net from ICV.

Feedback

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

---

## SX-1707

(Warning) Fail to close Binary CDB net in Cell %s.

**Description**

StarRc fail to close Binary CDB net in cell.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

---

## SX-1708

(Warning) Fail to open Binary CDB Swapped port.

**Description**

StarRc fail to open Binary CDB swapped port from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

---

## SX-1709

(Warning) Fail to close Binary CDB Swapped port.

**Description**

StarRc fail to close Binary CDB swapped port from ICV.

**What Next**

Information only; no action is needed.

---

## SX-1710

(Warning) Failed to read some CDB cells (see xrefhn.sum)

**Description**

StarRc fail to read some CDB cells from ICV.

Feedback

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

---

## SX-1713

(Warning) Fail to iterate Binary CDB cell pool.

**Description**

StarRc fail to iterate Binary CDB cell pool from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

---

## SX-1719

(Information) This cell %d is not Match

**Description**

StarRC finds a cross-referenced instance has unmatched cell when iterating Binary CDB library from ICV.

**What Next**

Information only; no action is needed.

---

## SX-1720

(Warning) Fail to close Binary CDB library.

**Description**

StarRc fail to close Binary CDB library pool from ICV.

**What Next**

Information only; no action is needed.

---

## SX-1724

(Fatal) CDB (Hercules Compare Database) version is "%s" which is not compatible with this release of StarXtract; CDB version "ver2.6" is required. Please re-run LVS with a compatible version of Hercules as indicated by StarRC release notes.

Feedback

**Description**

ICV CDB version is not compatible with this release of StarRC.

**What Next**

Rerun LVS with a compatible version of ICV as indicated by StarRC release notes.

---

## SX-1725

(Fatal) Encountered matched composite instance with permuted ports; not supported. Permuted ports may only be applied to non-device elements which cannot be composites.

**Description**

Unsupported data is found in CDB library from ICV.

**What Next**

Check ASCII CDB library generated by ICV. Generate CDB library without unsupported data and rerun StarRC.

---

## SX-1727

(Fatal) Swapped ports section has less than 2 ports in CDB database.

**Description**

Invalid number of ports is listed at swapped ports section in CDB database from ICV..

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

---

## SX-1728

(Warning) The ICV/Hercules option, PUSH_DOWN_DEVICES, is not supported. Using this option may cause incorrect result.

**Description**

The ICV/Hercules option, PUSH_DOWN_DEVICES, is not supported. Using this option may cause incorrect result.

**What Next**

Information only; no action is needed.

Feedback

## SX-1729

(Warning) Failed in opening Composite Instance in binary CDB library.

**Description**

StarRC failed to open composite instance data in binary CDB library from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

## SX-1731

(Warning) Multiple schematic nets are apped to fewer layout nets, layout net %s will be netlisted ideally.

**Description**

Multiple schematic nets are apped to fewer layout nets. Root layout net will be netlisted ideally.

**What Next**

Information only; no action is needed.

## SX-1732

(Warning) Multiple schematic nets are mapped to zero layout net.

**Description**

Multiple schematic nets are mapped to zero layout net.

**What Next**

Information only; no action is needed.

## SX-1734

(Warning) Multiple schematic instances are mapped to fewer layout instance, layout instance %s will be netlisted ideally.

**Description**

Multiple schematic instances are mapped to fewer layout instance, root layout instance will be netlisted ideally.

Feedback

**What Next**

Information only; no action is needed.

---

## SX-1735

(Warning) Multiple schematic instances are mapped to zero layout instance.

**Description**

Multiple schematic instances are mapped to zero layout instance.

**What Next**

Information only; no action is needed.

---

## SX-1736

(Warning) Multiple schematic instances are mapped to one layout instances, layout instance %s will be netlisted ideally.

**Description**

Multiple schematic instances are mapped to one layout instances, root layout instance will be netlisted ideally..

**What Next**

Information only; no action is needed.

---

## SX-1737

(Warning) First ICV/Hercules XREF table name assignment in composite group within equivalence point %s(L):%s(S) involves a previously referenced schematic name. All members of this composite group will be netlisted with layout names.

**Description**

Duplicated schematic names are found in composite groups in CDB library from ICV/ Hercules.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

Feedback

## SX-1739

(Warning) First ICV/Hercules XREF table name assignment in composite group %s(L): %s(S) within equivalence point %s(L):%s(S) involves a previously referenced (duplicated) schematic name. All members of this composite group will be netlisted with layout names.

**Description**

Duplicated schematic names are found in composite group within the equivalence point in CDB library from ICV/Hercules.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

## SX-1740

(Warning) Fail in opening Composite Net.

**Description**

StarRC failed to open the composite net data in CDB library from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

## SX-1741

(Warning) Failed to open Binary cdb swap port.

**Description**

StarRC failed to open swap port data in CDB library from ICV.

**What Next**

Check the binary CDB library generated by ICV. Generate CDB library and rerun StarRC.

## SX-1742

(Warning) Encountered %s in permuted port group for matched instance "%s::%s" in EQUIV cell "%s::%s". Permutations involving %s are not supported, default port match for this group will be applied.

Feedback

**Description**

StarRC find unsupported port type for matched instance when reading swap ports section from CDB library.

**What Next**

Information only; no action is needed.

---

## SX-1743

(Information) Could not open file "%s".

**Description**

StarRC could not open the input file.

**What Next**

Information only; no action is needed.

---

## SX-1744

(Warning) Binary CDB file is not found

**Description**

StarRC does not find binary CDB file for XREF.

**What Next**

Check ICV result or data path set in StarRC command file.

---

## SX-1745

(Warning) TOP BLOCK "%s::%s" does not compare. LVS is not clean.

**Description**

Top block was not compared. This is not LVS-clean design.

**What Next**

Information only; no action is needed.

---

## SX-1746

(Warning) Multi-Sch equivalence found %s==%s && %s==%s

Feedback

**Description**

Schematic cell is equivalent to more than one layout cell.

**What Next**

information only; no action is needed.

---

## SX-1747

(Fatal) COMPARE_DIRECTORY is required for Hercules XREF: YES.

**Description**

ICV-StarRC flow needs compary directory when XREF:YES.

**What Next**

Provide correct setting for option COMPARE_DIRECTORY in StarRC command file.

---

## SX-1748

(Fatal) Schematic top block name not specified.

**Description**

StarRC could not find correct schematic top block from input data.

**What Next**

Set option SCHEMATIC_BLOCK in StarRC command file or check XREF data.

---

## SX-1749

(Fatal) INTERNAL Error: failed to load internal models database.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1751

(Fatal) Layout top block name is not specified.

Feedback

**Description**

StarRC could not find cell set in option BLOCK.

**What Next**

Reset option BLOCK in StarRC command file.

---

## SX-1752

(Warning) LVS_TOP_BLOCK is different from BLOCK in the command file. Parsing evaccess directory for %s.

**Description**

Cell names set in LVS_TOP_BLOCK and BLOCK are different.

**What Next**

Information only; no action is needed.

---

## SX-1755

(Warning) Both ICV_SCHEMATIC_NETLIST and EVACCESS_DIRECTORY are set. Using ICV_SCHEMATIC_NETLIST.

**Description**

Both ICV_SCHEMATIC_NETLIST and EVACCESS_DIRECTORY are set. Using ICV_SCHEMATIC_NETLIST.

**What Next**

Information only; no action is needed.

---

## SX-1756

(Warning) Ignoring syntax error in option XREF_SWAP_MOS_SD_PROPERTY: %s

**Description**

An invalid syntax was provided for option XREF_SWAP_MOS_SD_PROPERY.

**What Next**

Check StarRC command file.

Feedback

## SX-1757

(Fatal) For Model:%s, %s set more than once in XREF_SWAP_MOS_SD_PROPERTY.

**Description**

Property is set more than once for the model in XREF_SWAP_MOS_SD_PROPERTY.

**What Next**

Reset properties for the model in XREF_SWAP_MOS_SD_PROPERTY.

## SX-1758

(INTERNAL Warning) %s is default swapping property. Ignore setting in XREF_SWAP_MOS_SD_PROPERTY.

**Description**

Property is already considered for swapping. Ignore user setting in StarRC command file.

**What Next**

Information only; no action is needed.

## SX-1759

(Fatal) %s set more than once in XREF_SWAP_MOS_SD_PROPERTY.

**Description**

Property is set more than once in XREF_SWAP_MOS_SD_PROPERTY.

**What Next**

Check and correct setting in StarRC command file.

## SX-1760

(Fatal) Could not write internal tech file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1761

(Warning) %s is the schematic top block and cannot be skipped.

**Description**

Schematic top block cannot be set as skip cell.

**What Next**

Information only; no action is needed.

## SX-1762

(Warning) %s is the layout top block and cannot be skipped

**Description**

Layout top block cannot be set as skip cell.

**What Next**

Information only; no action is needed.

## SX-1763

(Warning) %s skip cell %s is not a valid equiv. Verify cell type/equiv list.

**Description**

Layout/Schematic skip cell is not a valid equivalent point.

**What Next**

Verify cell type or equivalent point list from ICV/Calibre.

## SX-1764

(Warning) %s skip cell %s is not a valid equiv. Skip cell %s was exploded during LVS - %s

**Description**

This skip cell is not a valid equivalent point because it was exploded during LVS.

XREF_KEEP_IMBALANCED_EQUIV_SKIP_CELLS: YES can still keep them as SKIP_CELLS or SCHEMATIC_SKIP_CELLS, but extraction might not be expected.

Feedback

**What Next**

Information only; no action is needed.

---

## SX-1765

(Warning) %s was exploded during LVS; It will not be a SKIP_CELL anymore

**Description**

This cell was exploded during LVS so it will not be set as skip cell.

**What Next**

Information only; no action is needed.

---

## SX-1768

(Warning) OBSERVATION_POINT cell pattern "%s" does not match any non SKIP_CELL EQUIV points and will be ignored.

**Description**

Cell name pattern defined in OBSERVATION_POINT does not match any non-skip cell and will be ignored.

**What Next**

Information only; no action is needed.

---

## SX-1769

(Warning) OBSERVATION_POINT cell "%s" is not a non SKIP_CELL EQUIV point and will be ignored.

**Description**

Cell defined in OBSERVATION_POINT is not a non-skip cell and will be ignored.

**What Next**

Information only; no action is needed.

---

## SX-1770

(Warning) An asymmetric permutation was encountered in Hercules cross-reference table; two swapped nets do not have the same number of instance/device connections. This is typically caused by improper texting in the layout in conjunction with Hercules COMPARE

Feedback

options DETECT_PERMUTABLE_PORTS=TRUE and EQUATE_BY_NAME=TRUE. Please correctly text the layout or disable EQUATE_BY_NAME and re-run Hercules COMPARE.

**Description**

An asymmetric permutation was encountered in Hercules cross-reference table; two swapped nets do not have the same number of instance/device connections.

**What Next**

Check input XREF data.

---

## SX-1771

(Fatal) INTERNAL Error: Could not read layer information file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1772

(Warning) INTERNAL Warning: Specified via coverage option for a layer which does not exist: %s

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1774

(Fatal) INTERNAL Error: Layer information file corrupted

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1776

(Fatal) INTERNAL Error: Must provide POSITIVE via_coverage either for all via layers or none: %s

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1777

(Fatal) INTERNAL Error: Could not write layer information file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1778

(Fatal) INTERNAL Error: Could not write fs_drop_layer file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1779

(Fatal) INTERNAL Error: Could not write layer density box file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1780

(Warning) LAYER_INFO_ADDITIONAL_FILE will be appended following automated connection commands. No checking until xTractor.

### Description

Each time when you use LAYER_INFO_ADDITIONAL_FILE, the message will appear. The syntax of LAYER_INFO_ADDITIONAL_FILE will only be checked in xTract stage.

### What Next

If xTract stage shows no error, nothing needs to be done. Otherwise, you should check syntax of LAYER_INFO_ADDITIONAL_FILE based on messages shown in xTract stage.

## SX-1781

(Warning) LAYER_INFO_ADDITIONAL_FILE is directly appended to layer_info file. AUTO_RUNSET: YES will not change anything in LAYER_INFO_ADDITIONAL_FILE.

### Description

When LAYER_INFO_ADDITIONAL_FILE is used along with command AUTO_RUNSET: YES, the message will appear. AUTO_RUNSET: YES will generate separate layers for device terminals, which don't exist in original input database. As a result, the ignore cap settings defined in LAYER_INFO_ADDITIONAL_FILE may not work as you expect.

### What Next

You should avoid using AUTO_RUNSET: YES along with LAYER_INFO_ADDITIONAL_FILE.

## SX-1782

(Fatal) MAX_VIRTUAL_VIA_SEGMENTATION_NUM must be used with TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO.

### Description

Command MAX_VIRTUAL_VIA_SEGMENTATION_NUM can't be used alone. It must be used along with command TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO. StarRC finds that you use MAX_VIRTUAL_VIA_SEGMENTATION_NUM without TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO and gives this error.

Feedback

**What Next**

You should also add command TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO.

---

## SX-1783

(Fatal) Invalid value %s for WIDE_DEVICE_TERM_RESISTANCE.

**Description**

The valid value for command WIDE_DEVICE_TERM_RESISTANCE is RES or NONE. Any other value is invalid. If invalid value is detected, StarRC will give this error. Users can add device names after RES to apply the command to specified devices, which must be of type RESISTOR.

**What Next**

You should use either RES or NONE as value of command WIDE_DEVICE_TERM_RESISTANCE.

---

## SX-1784

(Warning) Contact layer %s or tap layer %s in REDUCE_SUBCONT_IN_TAP is not mapped

**Description**

The contact layer and tap layer in command REDUCE_SUBCONT_IN_TAP must be defined and mapped in StarRC mapping file. StarRC finds one or two of the shown layers are not defined in StarRC mapping file but used in command REDUCE_SUBCONT_IN_TAP and give this warning.

**What Next**

You should define and map the shown layers in StarRC mapping file.

---

## SX-1785

(Warning) No valid tap and contact layers specified and tap contact reduction will not run

**Description**

The warning means StarRC doesn't find valid tap and contact layers specified in command REDUCE_SUBCONT_IN_TAP. The reason may be all the contact layers and tap layers used in command REDUCE_SUBCONT_IN_TAP are not defined or mapped in StarRC mapping file. StarRC will ignore REDUCE_SUBCONT_IN_TAP command.

Feedback

### What Next

You should guarantee that all contact layers and tap layers used in command REDUCE_SUBCONT_IN_TAP are defined in StarRC mapping file. You can check layer names used in command REDUCE_SUBCONT_IN_TAP to see whether there is any typo.

---

## SX-1786

(Fatal) There is no keyword "DEVICE_LAYER" specified in the mapping file when POWER_EXTRACT:DEVICE_LAYERS

### Description

When POWER_EXTRACT:DEVICE_LAYERS is set, StarRC will extract resistance from power nets based on layers defined with keyword "DEVICE_LAYER" in StarRC mapping file. So in order to use POWER_EXTRACT:DEVICE_LAYERS, You should first define device layers with keyword "DEVICE_LAYER" in StarRC mapping file. If StarRC finds no layers are defined as device layer with keyword "DEVICE_LAYER" in StarRC mapping file but POWER_EXTRACT:DEVICE_LAYERS is set, it will give error.

### What Next

You should define device layers with keyword "DEVICE_LAYER" in StarRC mapping file and then use POWER_EXTRACT:DEVICE_LAYERS.

---

## SX-1787

(Fatal) POWER_EXTRACT:DEVICE_LAYERS doesn't work with LEFDEF flow.

### Description

POWER_EXTRACT:DEVICE_LAYERS doesn't work in LEFDEF flow.
StarRC gives this error once it finds the input database if LEFDEF but POWER_EXTRACT:DEVICE_LAYERS is used.

### What Next

You should use other options for command POWER_EXTRACT in LEFDEF flow.

---

## SX-1788

(Fatal) POWER_EXTRACT:DEVICE_LAYERS doesn't work with Milkyway flow.

Feedback

**Description**

POWER_EXTRACT:DEVICE_LAYERS doesn't work in Milkyway flow. StarRC gives this error once it finds the input database if Milkyway but POWER_EXTRACT:DEVICE_LAYERS is used.

**What Next**

You should use other options for command POWER_EXTRACT in Milkyway flow.

---

## SX-1790

(Warning) The precedence is not set for layers mapped to substrate in the mapping file when TRANSLATE_RETAIN_BULK_LAYERS:YES or CONLY is specified in your command file. Accuracy can be affected. Check the order of substrate layer and set precedence for them in your mapping file whenever the TRANSLATE_RETAIN_BULK_LAYERS:YES or CONLY command is used.

**Description**

Once TRANSLATE_RETAIN_BULK_LAYERS:YES or TRANSLATE_RETAIN_BULK_LAYERS:CONLY is used, you should set precedence for all layers mapped to SUBSTRATE in StarRC mapping file. StarRC give this warning if it finds precedence is not set for any layer mapped to SUBSTRATE in StarRC mapping file.

**What Next**

If you want to use TRANSLATE_RETAIN_BULK_LAYERS:YES or TRANSLATE_RETAIN_BULK_LAYERS:CONLY, you should check the order of all layers mapped to SUBSTRATE in StarRC mapping file and set correct precedence. If you only want to use TRANSLATE_RETAIN_BULK_LAYERS:NO, just change the value of this command to NO.

---

## SX-1792

(Warning) The precedence is not set for all the layers mapped to SUBSTRATE in the mapping file. For those layers not set with precedence, their precedence is set to zero automatically.

**Description**

Once TRANSLATE_RETAIN_BULK_LAYERS:YES or TRANSLATE_RETAIN_BULK_LAYERS:CONLY is used, precedence for all layers mapped to SUBSTRATE should be set in StarRC mapping file. StarRC give this warning if it finds precedence is not set for a few layers mapped to SUBSTRATE in StarRC mapping file. Precedence for those layers will be set to zero by StarRC automatically.

Feedback

**What Next**

You should check the order of all layers mapped to SUBSTRATE in StarRC mapping file and set correct precedence.

---

## SX-1794

(Warning) The precedence is not set for ignored cap layer: %s

**Description**

The precedence is not set for ignored cap layer: %s. The precendence is defined in SUBSTRATE layers. When two polygons ovelapped in two layers which are mapping to SUBSTRATE without precendence but have different ignore cap layer, StarRC can not decide which layer should be used with ignore cap layer.

**What Next**

You should revise you mapping file to define precedence on SUBSTRATE layers.

---

## SX-1795

(Warning) Layer: %s is connected to layers with different precedence! Fail to set its precedence according to connections!

**Description**

Layer: %s is connected to layers with different precedence! Fail to set its precedence according to connections. StarRC set the prcedence of the layer: %s as -1.

**What Next**

You should connect all the layer with same precedence or defined precedence directly in mapping file.

---

## SX-1796

(Fatal) To model DPT effect with ER_VS_SI_SPACING in nxtgrd file, please set DPT: YES. For non-DPT flow, please provide nxtgrd file without ER_VS_SI_SPACING

**Description**

If you want to model DPT effect with ER_VS_SI_SPACING in NXTGRD file, you should set DPT: YES in command file and use a nxtgrd file with ER_VS_SI_SPACING. If you don't want to model DPT effect with ER_VS_SI_SPACING in NXTGRD file, you should set DPT: NO in command file and use a nxtgrd file without ER_VS_SI_SPACING. StarRC

Feedback

gives this error when the nxtgrd file has ER_VS_SI_SPACING but DPT: YES is not set in command file.

**What Next**

If you want to model DPT effect with ER_VS_SI_SPACING in NXTGRD file, you should set DPT: YES in command file. If you don't want to model DPT effect with ER_VS_SI_SPACING in NXTGRD file, you should use a nxtgrd file without ER_VS_SI_SPACING.

---

## SX-1800

(Warning) DPT shift on layer %s is larger than allowed DPT_MAX_SHIFT ", the shift value on this layer is ignored.

**Description**

StarRC gives this warning when it finds the x or y shift defined in color_layers section in StarRC mapping file for the shown layer is larger than DPT_MAX_SHIFT defined in ITF file or nxtgrd file for this layer.

**What Next**

You should define a smaller shift value for this layer in color_layers seciton in StarRC mapping file which is not larger than DPT_MAX_SHIFT in ITF file.

---

## SX-1801

(Fatal) Only 1 color layer for grd layer %s

**Description**

StarRC gives this error when it finds there is only one color layer defined in color_layers section in StarRC mapping file for the shown grd layer. In color-aware DPT flow, you should define at least 2 color layers in StarRC mapping file for a physical layer.

**What Next**

You should define at least 2 color layers in StarRC mapping file for the shown physical layer.

---

## SX-1802

(Fatal) INTERNAL Error: Could not write layer pairs file

**Description**

An internal consistency check has failed.

Feedback

### What Next

Contact the Synopsys Support Center.

---

## SX-1803

(Fatal) VIA_COVERAGE must be <via_layer_name> <lower_full_coverage_parameter> <lower_quarter_coverage_parameter> [<lower_semi_coverage_parameter>] <upper_full_coverage_parameter> <upper_quarter_coverage_parameter> [<upper_semi_coverage_parameter>]. check your via_coverage for %s

### Description

StarRC gives this error when it finds the number of values set in command VIA_COVERAGE is less than 5. The syntax of command VIA_COVERAGE is: VIA_COVERAGE: <via_layer_name> <lower_full_coverage_parameter> <lower_quarter_coverage_parameter> [<lower_semi_coverage_parameter>] <upper_full_coverage_parameter> <upper_quarter_coverage_parameter> [<upper_semi_coverage_parameter>]

### What Next

You should check and correct settings in command VIA_COVERAGE.

---

## SX-1804

(Fatal) VIA_COVERAGE requires full_coverage_parameter >= quarter_coverage_parameter. VIA_COVERAGE requires quarter_coverage_parameter >= 0. Check your VIA_COVERAGE for %s

### Description

The syntax of command VIA_COVERAGE is: VIA_COVERAGE: <via_layer_name> <lower_full_coverage_parameter> <lower_quarter_coverage_parameter> [<lower_semi_coverage_parameter>] <upper_full_coverage_parameter> <upper_quarter_coverage_parameter> [<upper_semi_coverage_parameter>] Besides, the following rules need to be satisfied: <lower_full_coverage_parameter> >= <lower_quarter_coverage_parameter> >= 0 <upper_full_coverage_parameter> >= <upper_quarter_coverage_parameter> >= 0 StarRC gives this error when it finds the above rules are not satisfied in VIA_COVERAGE command.

### What Next

You should check VIA_COVERAGE command and correct the values for the shown layer.

Feedback

## SX-1805

(Fatal) VIA_COVERAGE requires quarter_coverage_parameter >= semi_coverage_parameter. VIA_COVERAGE requires semi_coverage_parameter >= 0. Check your VIA_COVERAGE for %s

### Description

The syntax of command VIA_COVERAGE is: VIA_COVERAGE: <via_layer_name> <lower_full_coverage_parameter> <lower_quarter_coverage_parameter> [<lower_semi_coverage_parameter>] <upper_full_coverage_parameter> <upper_quarter_coverage_parameter> [<upper_semi_coverage_parameter>] Besides, the following rules need to be satisfied: <lower_quarter_coverage_parameter> >= <lower_semi_coverage_paramete >= 0 <upper_quarter_coverage_parameter> >= <upper_semi_coverage_parameter> >= 0 StarRC gives this error when it finds the above rules are not satisfied in VIA_COVERAGE command.

### What Next

You should check VIA_COVERAGE command and correct the values for the shown layer.

## SX-1806

(Warning) specified via coverage option for a via layer which does not exist or is not a via layer: %s

### Description

StarRC gives this warning when it finds the layer name in one VIA_COVERAGE command is not defined in StarRC mapping file, or is not defined as a VIA. This VIA_COVERAGE command will be ignored by StarRC.

### What Next

If you don't need via coverage settings for the shown layer, nothing needs to be done. Otherwise, you should check and define the via layer in via_layers section in StarRC mapping file.

## SX-1807

(Fatal) you must provide POSITIVE VIA_COVERAGE either for all via layers or none: %s

### Description

StarRC gives this error when it finds only a few via layers has VIA_COVERAGE settings.

Feedback

**What Next**

You should define via coverage for either all via layers or none of the via layers.

---

## SX-1808

(Warning) Frequency dependent R disabled for layer %s because its RPSQ overwritten in mapping file.

**Description**

If you use StarRC command OPERATING_FREQUENCY to include substrate effects during high-frequency extractions for a few layers, you should not specify RPSQ value in StarRC mapping file for those layers. StarRC will not include substrate effects during high-frequency extractions for those layers with RPSQ set in StarRC mapping file and give this warning

**What Next**

If you don't need the shown layer to include substrate effects during high-frequency extractions, nothing needs to be done. Otherwise, you should remove RPSQ parameter for the shown layer in StarRC mapping file.

---

## SX-1809

(Fatal) INTERNAL Error: Could not write layer info file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1810

(Fatal) The diffusion_res_model %s defined for the db layer %s in the mapping file does not match any of the USER_DEFINED_DIFFUSION_RESISTANCE model in the nxtgrd file.

**Description**

The nxtgrd file does not contain a user defined diffusion resistance model of the same name than the dblayer.

Feedback

**What Next**

Verify that the names of the USER_DEFINED_DIFFUSION_RESISTANCE model defined in the ITF file and the diffusion_res_model in the mapping file match. Correct the mapping file and run StarXtract again.

---

## SX-1811

(Fatal) Could not open LAYER_INFO_ADDITIONAL_FILE for read.

**Description**

StarRC gives this error when it can't open the file specified in StarRC command LAYER_INFO_ADDITIONAL_FILE. This may due to incorrect file path or you don't have read access permission for this file.

**What Next**

You should check whether the file path in LAYER_INFO_ADDITIONAL_FILE is correct or not and check whether you have read access permission for this file or not.

---

## SX-1812

(Fatal) VIA_TAG need to be specified in layer mapping file in RV_VIA_ARRAY_REPORT_FILE mode.

**Description**

When you use StarRC command RV_VIA_ARRAY_REPORT_FILE, you should also add via tags (VIA_D/VIA_T/VIA_H/VIA_GROUP_BBOX/VIA_ARRAY_BBOX) to at least one conducting layer in StarRC mapping file. Once StarRC finds command RV_VIA_ARRAY_REPORT_FILE is used but no conducting layers in StarRC mapping file have via tags, StarRC will give this error.

**What Next**

You should add via tags(VIA_D/VIA_T/VIA_H/VIA_GROUP_BBOX/VIA_ARRAY_BBOX) to StarRC mapping file. If you don't want to use command RV_VIA_ARRAY_REPORT_FILE, you should remove this command from StarRC command file.

---

## SX-1813

(Warning) MAPPING_FILE layer "%s" is not a valid database layer and will be removed.

Feedback

### Description

A valid database layer means a database layer which has connections. StarRC will check the connections of database layers except a few special layers such as view_only_layers. If the layer defined in mapping file doesn't have connection, StarRC will remove this layer and give this warning.

### What Next

If you don't need this layer, nothing needs to be done. Otherwise, you should check why there is no connection defined for this layer in database.

---

## SX-1814

(Warning) Runset gate layer "%s" is now mapped to GRD IS_GATE layer "%s" since the IS_GATE tag is used.

### Description

Runset gate layer is not mapped to gate layer in mapping file. "%s" is now mapped to GRD IS_GATE layer "%s" since the IS_GATE tag is used.

### What Next

You should map the runset gate layer to GRD gate layer in mapping file to avoid this warning message.

---

## SX-1815

(Warning) Database diffusion layer "%s" is not included in MAPPING_FILE. Mapping to "%s".

### Description

Once StarRC finds a database diffusion layer (usually based on device definition) is not defined in StarRC mapping file, StarRC will try to assign a correct physical layer (usually based on LAYER_TYPE definition in ITF file or nxtgrd file) to the diffusion layer and give this warning.

### What Next

If the automatic mapping is correct, nothing needs to be done. Otherwise, you should define correct mapping for the diffusion layer in StarRC mapping file.

---

## SX-1816

(Warning) Database gate layer "%s" is not included in MAPPING_FILE. Mapping to "%s".

Feedback

**Description**

Once StarRC finds a database gate layer (usually based on device definition) is not defined in StarRC mapping file, StarRC will try to assign a correct physical layer (usually based on LAYER_TYPE definition in ITF file or nxtgrd file) to the gate layer and give this warning..

**What Next**

If the automatic mapping is correct, nothing needs to be done. Otherwise, you should define correct mapping for the database layer in StarRC mapping file.

---

## SX-1817

(Warning) Database bulk layer "%s" is not included in MAPPING_FILE. Mapping to "%s".

**Description**

Once StarRC finds a database bulk layer (usually based on device definition) is not defined in StarRC mapping file, StarRC will try to assign a correct physical layer to the bulk layer and give this warning.

**What Next**

If the automatic mapping is correct, nothing needs to be done. Otherwise, you should define correct mapping for the bulk layer in StarRC mapping file.

---

## SX-1818

(Warning) Database layer "%s" is not included in MAPPING_FILE. Mapping to "%s".

**Description**

Once StarRC finds a device substrate layer (usually based on device definition) is not defined in StarRC mapping file, StarRC will try to assign a correct physical layer to the device substrate layer and give this warning..

**What Next**

If the automatic mapping is correct, nothing needs to be done. Otherwise, you should define correct mapping for the layer in StarRC mapping file.

---

## SX-1819

(Severe) Connected database layer "%s" does not have a valid ITF layer.

Feedback

**Description**

StarRC gives this error once it finds the shown layer is defined in database and has connections, but it is not defined in StarRC mapping file.

**What Next**

You should define the shown layer in StarRC mapping file.

---

## SX-1820

(Severe) INTERNAL Error: VIA layer "%s" connects two %d CONDUCTORS at different picture levels. %s[%s] and %s[%s]

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1821

(Warning) VIA layer "%s" connects MARKER layer "%s". MARKER layers can only connect CONDUCTOR layers. This connection will be ignored.

**Description**

StarRC gives this warning once it finds the VIA layer is connected to a MARKER layer (based on connection definitions or layer operations in database), which is not valid. This connection will be ignored.

**What Next**

If the connection can be ignored, nothings need to be done. Otherwise, you should check the database and correct the invalid connection definition.

---

## SX-1822

(Warning) The via layer %s defined from DB (runset) connects down to %s, which is mapped to ITF layer %s. The mapped ITF layer is different from the via's ITF from-layer %s. Check the mapping file.

**Description**

For a runset (DB) via layer, the down layer connected to the via layer must be mapped to from-layer of the via's ITF layer. For example, if via layer A is mapped to ITF layer VIA1

Feedback

(from-layer of VIA1 is M1 in ITF file), and layer A connects down to layer B, layer B must be mapped to M1 in StarRC mapping file. Otherwise, StarRC will give this warning and the connection will be ignored.

**What Next**

You should either correct the connection definition in database, correct the definition in the mapping file, or correct the from-layer definition in ITF file.

---

## SX-1823

(Severe) Marker layer "%s" must be connected to a conductor.

**Description**

StarRC gives this error once it finds a marker layer has on connections.

**What Next**

You should connect the marker layer to a conductor in database.

---

## SX-1825

(Warning) IGNORE_CAP_LAYERS refers to layer "%s" which is removed; all IGNORE_CAP pairs involving this layer will be ignored.

**Description**

StarRC gives this warning once it finds the layer used in ignore_cap_layers section in StarRC mapping file is removed. The causes can be: 1. the layer is defined in remove_layers section; 2. the layer is not defined in StarRC mapping file. You should define the layer in StarRC mapping file as a conductor or via. 3. the layer has no connections in database;

**What Next**

If you don't need the layer, nothing needs to be done. Otherwise, you should check the reason why the layer is removed. The possible causes are: 1. the layer is defined in remove_layers section; 2. the layer is not defined in StarRC mapping file. You should define the layer in StarRC mapping file as a conductor or via. 3. the layer has no connections in database;

---

## SX-1826

(Severe)INTERNAL Error: Layer %s is mapped to grd via layers with more than one common cap level (a)

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1827

(Severe) INTERNAL Error: Layer %s must be mapped to grd via layers with one common cap level

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1828

(Severe)INTERNAL Error: Layer %s is mapped to grd layers with more than one common cap level (c)

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1829

(Severe) Multi layer contacts(one database via layer mapped to several ITF layers) detected in the mapping file. Must set AUTO_RUNSET: YES for successful run

**Description**

Multi layer contacts(one database via layer mapped to several ITF layers)detected in the mapping file. StarRC needs to use AUTO_RUNSET:YES to seperate the polygon on the database via layer into different ITF layer.

**What Next**

You should set AUTO_RUNSET:YES in this case.

Feedback

## SX-1830

(Fatal) AUTO_RUNSET_FILE %s can not be opened

**Description**

StarRC gives this error once it can't open file specified in command AUTO_RUNSET_FILE.

**What Next**

You should check whether the file used in AUTO_RUNSET_FILE exists or not, and whether you have read permission for that file.

## SX-1832

(Fatal) No nxtgrd file defined

**Description**

StarRC gives this error once it finds nxtgrd file is not specified.

**What Next**

You should specify nxtgrd file through StarRC command TCAD_GRD_FILE.

## SX-1834

(Fatal) INTERNAL Error: Could not writ FS_LAYER_INFO_ADDITIONAL_FILE.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1835

(Fatal) Could not open LAYER_INFO_ADDITIONAL_FILE for read.

**Description**

StarRC gives this error once it can't open the file specified in StarRC command LAYER_INFO_ADDITIONAL_FILE.

Feedback

**What Next**

You should check whether the file specified in StarRC command LAYER_INFO_ADDITIONAL_FILE exists or not, and whether you have permission to read it or not.

---

## SX-1836

(Warning) Drop factor is not defined in nxtgrd file %s. No need to generate drop factor layers

**Description**

If you use command DROP_LAYERS_STAGE: YES, you need to define drop factor in nxtgrd file. Otherwise, StarRC will give this warning and not generate drop factor layers.

**What Next**

If you don't need to generate drop factor layers, nothing needs to be done. Otherwise, you should define drop factor in ITF file or nxtgrd file.

---

## SX-1837

(Severe) Layer "%s" is not mapped to an ITF VIA layer.

**Description**

StarRC gives this error once it finds the shown database VIA layer is not mapped to a VIA ITF layer defined in ITF file.

**What Next**

In StarRC mapping file, You should map this database layer to a VIA defined in ITF file.

---

## SX-1838

(Warning) DB layer %s does not have parasitic resistor model name

**Description**

Once you use StarRC command NETLIST_PARASITIC_RESISTOR_MODEL: YES, you need to specify model name through MODEL=<model_name> parameter for conducting layers and via layers in StarRC mapping file. StarRC gives this warning once it finds the shown layer has no model name defined in StarRC mapping file.

**What Next**

You should add MODEL=<model_name> for this shown layer in StarRC mapping file.

Feedback

## SX-1839

(Severe) VIA layer "%s" must connect layer mapped to an ITF CONDUCTOR instead of "%s".

### Description

A VIA should connect conductors. So all layers connected to this VIA should be mapped to ITF conductor layers in StarRC mapping file. StarRC will give this error once it finds a layer (shown at the end of this message) connected to the shown VIA is not mapped to an ITF conductor layer.

### What Next

You should map the layer connected to the VIA to an ITF conductor in StarRC mapping file.

## SX-1841

(Severe) Connections of via layer %s do not correspond to connections of the mapped ITF layer. ITF layer connects %s to %s. Runset layer connects %s[%s] to %s[%s].

### Description

The connections for runset via layer defined in database should correspond connections of ITF via layer defined in ITF file or nxtgrd file. For example, in database, if via A connects conductor B (from layer) and C (to layer), and via A is mapped to VIA1. In ITF, the definition of VIA1 is: VIA VIA1 { FROM = M1 TO = M2 ... } That defines M1/M2 as from/to layer of VIA1. So runset layer B and C should be mapped to ITF layer M1 and M2 in StarRC mapping file. Otherwise, StarRC will give this error.

### What Next

You should either modify mappings in StarRC mapping file, or modify from/to layer definition in ITF file to make the connections consistent.

## SX-1842

(Warning) The distance over which the interlayer capacitance should be ignored can be specified for only MOS transistors. Ignore distance setting on "%s" and "%s".

### Description

In ignore_cap_layers section of StarRC mapping file, if you use L=<length> parameter to specify the distance over which the interlayer capacitance should be ignored, you can only set L parameter between gate and diffusion, or between diffusion and SUBSTRATE of MOS transistor. For ignore-cap layer pair which doesn't contain SUBSTRATE, the 2

Feedback

layers should be either MOS gate or MOS diffusion layer. Otherwise, StarRC will give this warning and ignore the distance setting.

**What Next**

You should check whether the shown layer pair is the one you expected. If it is not, you need to correct corresponding statement in ignore_cap_layers section in StarRC mapping file.

---

## SX-1843

(Warning) The distance over which the interlayer capacitance should be ignored can be specified for only MOS transistors. Ignore distance setting on "%s" and "SUBSTRATE".

**Description**

In ignore_cap_layers section of StarRC mapping file, if you use L=<length> parameter to specify the distance over which the interlayer capacitance should be ignored, you can only set L parameter between gate and diffusion, or between diffusion and SUBSTRATE of MOS transistor. For ignore-cap layer pair which contains SUBSTRATE, the layer other than SUBSTRATE should be MOS diffusion layer. Otherwise, StarRC will give this warning and ignore the distance setting.

**What Next**

You should check whether the shown layer pair is the one you expected. If it is not, you need to correct corresponding statement in ignore_cap_layers section in StarRC mapping file.

---

## SX-1844

(Warning) The distance over which the interlayer capacitance should be ignored is not supported in FSCOMPARE/FS_EXTRACT_NETS flow. The final Field Solver report will not consider the distance.

**Description**

Field Solver flow (FSCOMPARE/FS_EXTRACT_NETS) doesn't support L=<length> parameter to specify the distance over which the interlayer capacitance should be ignored. If you use L=<length> parameter in StarRC mapping file and use Field Solver flow, L parameter will have no impact on the Field Solver result.

**What Next**

If you don't need L parameters, nothing needs to be done. Otherwise, you shouldn't use Field Solver flow and should remove FSCOMPARE/FS_EXTRACT_NETS StarRC command from command file.

Feedback

## SX-1845

(Severe) GATE layer "%s" must be mapped to ITF CONDUCTOR.

### Description

If a database layer is used as gate terminal layer of a device (The definition can be found in device table file in CCI database, or ICV_RUNSET_REPORT_FILE in ICV database), the layer must be mapped to an ITF CONDUCTOR in ITF file or nxtgrd file.

### What Next

You should map this layer to an ITF conductor layer in StarRC mapping file.

## SX-1846

(Severe) DIFF layer "%s" must be mapped to SUBSTRATE or ITF CONDUCTOR.

### Description

If a database layer is used as source/drain terminal layer of a device (The definition can be found in device table file in CCI database, or ICV_RUNSET_REPORT_FILE in ICV database), the layer must be mapped to an ITF CONDUCTOR in ITF file or nxtgrd file, or mapped to SUBSTRATE.

### What Next

You should map this layer to an ITF conductor layer or SUBSTRATE in StarRC mapping file.

## SX-1847

(Warning) Runset GATE layer and runset DIFFUSION layers are not vertically adjacent; For example, there is a CONDUCTOR between GATE and DIFFUSION in the process cross-section.

### Description

The gate layer and diffusion layers are usually vertically adjacent. If there is any other conductor between them in the process, StarRC will give this warning.

### What Next

If your process really contains this special scenario, nothing needs to be done. Otherwise, you should check ITF file to see whether there is any conductor defined between gate and diffusion, and also check StarRC mapping file to see whether the mappings for device gate and diffusion layers are correct.

Feedback

## SX-1848

(Warning) MOS gate and diffusion layers are co-vertical to each other or to a third layer like field poly. Check your process cross-section and see if the nxtgrd file is correct.

### Description

The warning messages appears when StarRC detects gate layers and diffusion layers are co-vertical to each other, or are co-vertical to same third layer based on nxtgrd file.

### What Next

If the process does have gate layers and diffusion layers which are co-vertical to each other, no action is needed. Otherwise, you should check nxtgrd file or ITF file to see whether the 3D geomerty parameters of gate or diffusion layers is incorrect or not, and correct wrong parameters.

## SX-1849

(Severe) CONDUCTOR layer "%s" must be mapped to an ITF CONDUCTOR or SUBSTRATE.

### Description

Database conducting layers defined in conducting_layers section in StarRC mapping file must be mapped to an ITF conductor or SUBSTRATE.

### What Next

You should map the shown layer to an ITF conductor or SUBSTRATE in StarRC mapping file.

## SX-1850

(Warning) The diffusion layer being mapped to a substrate layer can cause capacitance extraction inaccuracy.

### Description

The diffusion layer is mapped to a substrate layer and not to a conductor in the ITF. As a consequence, StarRC results may be inaccurate.

### What Next

The diffusion layer has to be mapped to a conductor layer in the ITF and LAYER_TYPE=DIFFUSION can be specified in the conductor statement in order to improve the capacitance extraction accuracy.

Feedback

## SX-1851

(Warning) Layer "%s" has no connections.

### Description

Layer '%s' has no connections. If the layer is a device terminal layer and there have the polygon on this layer, it may cause opens.

### What Next

If this layer is designed to have no connection(e.g., dummy or mask layer), please ignore this message. If this is a device layer, you should add layer connection on this terminal layer to a conductor layer which can touch the terminal layer polygon.

## SX-1852

(Warning) Found %d WMIN/SMIN violations when comparing database's technology file to TCAD_GRD_FILE (see layers.sum for details). Any violations of TCAD_GRD_FILE minimum width or spacing parameters for these layers in the layout may cause severe inaccuracies in parasitic extraction.

### Description

StarRC will compare WMIN/SMIN settings in database's technology file (in Milkyway database or LEF file) to those settings in nxtgrd file or ITF file. It there is any difference between the settings in database's technology file and nxtgrd file, StarRC will give this warning and output detailed information to layers.sum file.

### What Next

You should check detailed difference in layers.sum, and check which settings are correct. Use the correct settings in both StarRC ITF file and database technology file.

## SX-1853

(Information) Detail WMIN/SMIN violation report. Please note that reported database technology file parameters include application of MAGNIFICATION_FACTOR.

### Description

StarRC will output detailed WMIN/SMIN difference between database technology file and StarRC nxtgrd file in layers.sum. This is a message to inform that the MAGNIFICATION_FACTOR is already applied on values from database technology file in detailed report.

Feedback

**What Next**

You should be aware that the MAGNIFICATION_FACTOR is already applied on values from database technology file in detailed report.

---

## SX-1854

(Information) WMIN Violations (database routing minWidth is less than ITF CONDUCTOR WMIN)

**Description**

StarRC will output detailed WMIN/SMIN difference between database technology file and StarRC nxtgrd file in layers.sum. This is the beginning of detailed WMIN difference.

**What Next**

You should check detailed WMIN difference following this message.

---

## SX-1856

(Information) SMIN Violations (database routing minSpace is less than ITF CONDUCTOR SMIN)

**Description**

StarRC will output detailed WMIN/SMIN difference between database technology file and StarRC nxtgrd file in layers.sum. This is the beginning of detailed SMIN difference.

**What Next**

You should check detailed SMIN difference following this message.

---

## SX-1860

(Severe) Attempting to CONNECT two layers at two ITF layer %s %s. If you are sure the new connections should be done, you can try AUTO_RUNSET:YES

**Description**

StarRC find two layers mapped to different ITF layer need to connect together.

**What Next**

You should using AUTO_RUNSET:YES if you are sure the connections should be done.

Feedback

## SX-1861

(Fatal) TABLE_NAME %s specified on %s layer in the layer mapping file does not match any table name in %s table in the ITF file.

### Description

The table name specified in the layer mapping file does not match any table name in the table in the ITF file. StarRC does not know which sub table to look up.

### What Next

Specify correct TABLE_NAME for the shown layer in StarRC mapping file.

## SX-1862

(Fatal) Missing TABLE_NAME on layer %s in the layer mapping file. Corresponing ITF layer has multiple %s tables defined in the ITF file.

### Description

The table shown in this message has multiple sub tables in the ITF file. Each sub table has a table name. A TABLE_NAME is needed on the layer shown in this message in the layer mapping file to indicate which sub table to look up for the database layer.

### What Next

Specify TABLE_NAME for the shown layer in StarRC mapping file.

## SX-1863

(Warning) No TABLE_NAME is given for %s layer in Mapping file, while there exist%s tables in ITF.

### Description

There are a few tables which contains multiple sub-tables in ITF file, such as GATE_TO_DIFFUSION_CAP and GATE_TO_DIFFUSION_CHANNEL_CAP. If in StarRC mapping file, a database layer is mapped to an ITF layer which contains such kind of table, you should specify which sub-table should be used through parameter TABLE_NAME. For a gate layer, the possible tables which contains multiple sub-tables are: ETCH_VS_CONTACT_AND_GATE_SPACINGS GATE_TO_DIFFUSION_CAP GATE_TO_DIFFUSION_CHANNEL_CAP ER_TABLE RAISED_DIFFUSION_TO_GATE_SMIN_TABLE SIDE_TANGENT_VS_SI_WIDTH_AND_CCO_SPACING If StarRC finds a gate layer is mapped to an ITF layer which contains at least one of above tables (the table names will

Feedback

be shown in this message), but in StarRC mapping file, the layer has no TABLE_NAME parameter, StarRC will give this warning.

**What Next**

You should specify TABLE_NAME for the shown layer in StarRC mapping file.

---

## SX-1864

(Warning) TABLE_NAME %s is provided for %s layer in Mapping file, but is not found in ITF file. TABLE_NAME for this layer will be ignored.

**Description**

There are a few tables which contains multiple sub-tables in ITF file, such as GATE_TO_DIFFUSION_CAP and GATE_TO_DIFFUSION_CHANNEL_CAP. If in StarRC mapping file, a database layer is mapped to an ITF layer which contains such kind of table, you should specify which sub-table should be used through parameter TABLE_NAME. The possible tables which contain multiple sub-tables are: ETCH_VS_CONTACT_AND_GATE_SPACINGS GATE_TO_DIFFUSION_CAP GATE_TO_DIFFUSION_CHANNEL_CAP ER_TABLE RAISED_DIFFUSION_TO_GATE_SMIN_TABLE SIDE_TANGENT_VS_SI_WIDTH_AND_CCO_SPACING UPPERDIFF_TO_CONTACT_CAP RAISED_DIFFUSION_TO_GATE_SMIN_TABLE RAISED_DIFFUSION_ETCH_TABLE If TABLE_NAME is defined in StarRC mapping file for a gate or diffusion layer, but StarRC finds the corresponding sub-table are not defined in ITF file or nxtgrd file, StarRC will give this warning.

**What Next**

You should check whether the table name is correct or not, and use table name which exists in the ITF file or nxtgrd file.

---

## SX-1865

(Warning) No TABLE_NAME is given for %s layer in Mapping file, while there exist UPPERDIFF_TO_CONTACT_CAP tables in ITF.

**Description**

There are a few tables which contains multiple sub-tables in ITF file, such as UPPERDIFF_TO_CONTACT_CAP and GATE_TO_DIFFUSION_CAP. If in StarRC mapping file, a database layer is mapped to an ITF layer which contains such kind of table, you should specify which sub-table should be used through parameter TABLE_NAME. For a UPPERDIFF layer, the possible table which contain multiple sub-tables is: UPPERDIFF_TO_CONTACT_CAP If StarRC finds a UPPERDIFF layer is

Feedback

mapped to an ITF layer which contains UPPERDIFF_TO_CONTACT_CAP, but in StarRC mapping file, the layer has no TABLE_NAME parameter, StarRC will give this warning.

**What Next**

You should specify correct TABLE_NAME for the shown layer in StarRC mapping file.

---

## SX-1866

(Warning) TABLE_NAME %s is provided for %s layer in Mapping file, but is not found in RPSQ_VS_SI_WIDTH definition in ITF file. TABLE_NAME in the context of RPSQ_VS_SI_WIDTH for this layer will be ignored.

**Description**

If TABLE_NAME is defined in StarRC mapping file for a layer, but StarRC finds the corresponding sub-table are not defined in RPSQ_VS_SI_WIDTH in ITF file or nxtgrd file, StarRC gives this warning.

**What Next**

You should check whether the table name is correct or not, and use table name which exists in the ITF file or nxtgrd file.

---

## SX-1868

(Warning) TABLE_NAME %s is specified for non-gate-level or non-diff-level or non-upperdiff-level layer %s in the mapping file. TABLE_NAME for this layer will be ignored.

**Description**

In StarRC mapping file, TABLE_NAME parameter can only be used for gate/diffusion layers. If StarRC finds TABLE_NAME parameter is used on a layer other than gate/diffusion layers, StarRC will give this warning and ignore the TABLE_NAME setting on this layer.

**What Next**

If TABLE_NAME is not needed for this layer, nothing needs to be done. Otherwise, you should check why this layer is not mapped to a gate/diffusion layer.

---

## SX-1869

(Warning) None of the VIA_ARRAY_BBOX layer is assigned, please check the mapping file

Feedback

### Description

None of the VIA_ARRAY_BBOX layer is assigned. This warning message only appears with RV_VIA_ARRAY_REPORT_FILE:YES.

### What Next

You should check you mapping file and include the VIA_ARRAY_BBOX layer in the mapping file.

---

## SX-1871

(Warning) No SUBSTRATE layers are to be extracted because none of SUBSTRATE layers has rpsq value in the layer mapping file.

### Description

Once you use SUBSTRATE_EXTRACTION: YES to perform substrate extraction on layers specified in the mapping file as "substrate" layers, you should specify each substrate layer with RPSQ value in StarRC mapping file. If RPSQ is not set for a substrate layer, the layer will be treated as ideal and no resistance extraction will be applied on this layer. StarRC gives this warning once it finds none of the substrate layers has RPSQ settings in StarRC mapping file. As a result, all substrate layers will be treated as ideal and SUBSTRATE_EXTRACTION: YES will have no effect.

### What Next

If you don't want to extract resistance from substrate layers, nothing needs to be done. Otherwise, you should add RPSQ value for each substrate layers in StarRC mapping file.

---

## SX-1872

(Warning) Set RPV*AREA value to 1e-6 due to RPV_VS_AREA and RPV_VS_WIDTH_AND_LENGTH for %s

### Description

StarRC gives this warning when RPV value for the shown layer is set to 0 in StarRC mapping file and RPV_VS_AREA or RPV_VS_WIDTH_AND_LENGTH is the mapped ITF layer used in ITF file. The setting in StarRC mapping file will take precedence and StarRC will set RPV*AREA value to a small value 1e-6 for 0 RPV value setting in StarRC mapping file.

### What Next

If you want to use RPV_VS_AREA or RPV_VS_WIDTH_AND_LENGTH defined in ITF file, you should remove RPV setting for this layer in StarRC mapping file. Otherwise, nothing needs to be done.

Feedback

## SX-1873

(Warning) Setting RPV*AREA value of 1e-6 for %s

**Description**

If you set RPV value as 0 in either StarRC mapping file or ITF file, or no RPV value or RPV table is defined in StarRC mapping file and ITF file, StarRC will set RPV*AREA to a small value 1e-6 and gives this warning.

**What Next**

If small RPV setting is what you expected, nothing needs to be done. Otherwise, you should define RPV value in StarRC mapping file or ITF file for the shown layer and use positive value.

## SX-1874

(Fatal) Invalid resistance information for layer %s

**Description**

StarRC gives this warning once it finds resistance information for the shown via layer is invalid. You can define resistance information for via through RPV parameter in StarRC mapping file or RPV/RHO/RPV_VS_AREA in ITF file. The value should be 0 or positive. If StarRC finds a negative resistance value for the shown via layer, it will give this error.

**What Next**

You should check the resistance settings for the shown layer in StarRC mapping file and ITF file and correct the incorrect settings.

## SX-1875

(Fatal) INTERNAL Error: Could not write fs_ignore_cap_layer information file

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1878

(Warning) Invalid IGNORE_CAP_LAYERS command. VIA layers must be listed alone with IGNORE_CAP_LAYERS. Layer pair "%s" and "%s" will be ignored.

Feedback

**Description**

This message appears when StarRC finds one layer of this ignore cap layer pair defined in ignore_cap_layers section of mapping file is a VIA. For a VIA, you should list it alone in the ignore_cap_layers section. For example: ignore_cap_layers: VIA1 VIA shouldn't be in a ignore cap layer pair, such as: ignore_cap_layers: VIA1 psub The invalid ignore cap layer pair will be ignored by StarRC

**What Next**

If you want to ignore capacitance between this VIA and all other layers, you should just list this VIA alone as a single line in ignore_cap_layers section. If you don't want to ignore capacitance of this VIA, no action is needed.

---

## SX-1879

(Fatal) Incorrect ignore cap description. "%s" is not via layer and cannot be listed alone with IGNORE_CAP_LAYERS.

**Description**

Incorrect ignore cap description."%s" is not via layer and cannot be listed alone with IGNORE_CAP_LAYERS in mapping file.

**What Next**

You should revise your mapping file to avoid list only one conductor layer in IGNORE_CAP_LAYERS section.

---

## SX-1882

(Warning) VIA layer

**Description**

VIA layer has no connections.(no FROM database layer and TO database layer defined in mapping file).

**What Next**

You should revise your mapping file to add FROM and TO layer on layer %s.

---

## SX-1883

(Fatal) INTERNAL Error: Unsupported layer flag %d found in layers DB.

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1884

(Severe) SEARCH_DISTANCE for CONDUCTOR "%s" in TCAD_GRD_FILE is too large. SEARCH_DISTANCE must be no greater than 10um and no greater than 25 * (WMIN + SMIN).

**Description**

SEARCH_DISTANCE for specified CONDUCTOR in TCAD_GRD_FILE is too large. SEARCH_DISTANCE must be no greater than 10um and no greater than 25 * (WMIN + SMIN).

**What Next**

Set SEARCH_DISTANCE in ITF file to a value that no greater than 10um and no greater than 25 * (WMIN + SMIN), then re-generate TCAD_GRD_FILE.

---

## SX-1885

(Severe) SEARCH_DISTANCE for CONDUCTOR "%s" in TCAD_GRD_FILE must be positive.

**Description**

SEARCH_DISTANCE for specified CONDUCTOR in TCAD_GRD_FILE must be positive.

**What Next**

Set SEARCH_DISTANCE in ITF file to a positive value, then re-generate TCAD_GRD_FILE.

---

## SX-1886

(Severe) In layer %s, width of a density box entry cannot exceed 500.0

**Description**

Width of a density box entry for the specified layer cannot exceed 500.0.

Feedback

**What Next**

Set correct value in ITF file and re-generate TCAD_GRD_FILE.

---

## SX-1887

(Severe) Invalid search distance specification for one or more layers in TCAD_GRD_FILE. Please run concurrent release of grdgenxo on ITF file and regenerate the TCAD_GRD_FILE.

**Description**

Invalid search distance specification for one or more layers in TCAD_GRD_FILE. Please run concurrent release of grdgenxo on ITF file and regenerate the TCAD_GRD_FILE.

**What Next**

Set SEARCH_DISTANCE in ITF file to a positive value and no greater than 10um and no greater than 25 * (WMIN + SMIN), then re-generate TCAD_GRD_FILE.

---

## SX-1888

(Severe) Number of CONDUCTORs in nxtgrd file is limited to 7, if SEARCH_DISTANCE is specified.

**Description**

The message appears when StarRC finds number of conductors is large than 7 and at the same time, SEARCH_DISTANCE is specified in the nxtgrd file. StarRC only supports SEARCH_DISTANCE for processes which don't have more than 7 conductors.

**What Next**

You should remove SEARCH_DISTANCE defintion in ITF file since this process has more than 7 conductors.

---

## SX-1889

(Fatal) Could not read layer information file %s

**Description**

Could not read layer information file.

**What Next**

Make sure you have correctly set the layer infomation file and you have permission to read.

Feedback

## SX-1890

(Fatal) Layer information file corrupted - %s

**Description**

Layer information file corrupted. There's something wrong when parsing layer information file.

**What Next**

Make sure the layer information file is written in correct format.

## SX-1892

(Severe) TCAD_GRD_FILE is corrupted.

**Description**

TCAD_GRD_FILE is corrupted.

**What Next**

Make sure you have TCAD_GRD_FILE and you have permission to read.

## SX-1893

(Fatal) GRD File contains multiple diffusion layers. Layers %s and %s

**Description**

GRD File contains multiple diffusion layers.

**What Next**

Make sure you have only one diffusion layer defined in ITF file and re-generate TCAD_GRD_FILE.

## SX-1894

(Fatal) GRD File contains multiple gate layers. Layers %s and %s

**Description**

GRD File contains multiple gate layers.

Feedback

**What Next**

Make sure you have only one gate layer defined in ITF file and re-generate TCAD_GRD_FILE.

---

## SX-1899

(Information) Reading Process file %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1900

(Fatal) Conductor layer %s defined in grd file but not in process file

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1901

(Information) Done

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1902

(Fatal) While parsing process file %s at line %d: "%s" Conformal dielectrics not supported

**Description**

Not available.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-1903

(Fatal) Conductor layer %s found in process file but not in grd file

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1904

(Fatal) Physical layer %s is multiply defined in process file

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1905

(Fatal) Syntax error in process file %s at line %d: "%s"

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1906

(Warning) Incorrect MAP_LAYER %s

**Description**

You receivce this messsages because StarRC find invalid MAP_LAYER command. Valid MAP_LAYER command needs to have at least 2 strings: <layer_name> <layer_type>. All invalid MAP_LAYER commands will be ignored by StarRC.

Feedback

**What Next**

You should check the MAP_LAYER command shown in this messages and correct the command.

---

## SX-1907

(Warning) Section has not been described Line: %s

**Description**

You receive this message because StarRC can't find definition for a section before the line shown in this message when paring StarRC mapping file. The line shown in this messages will be ignored by StarRC. In StarRC mapping file, you should first define a section name such as "conducting_layers", "via_layers" and so on, and then add mapping content to each section.

**What Next**

You should add correct section name in StarRC mapping file before the line shown in this message.

---

## SX-1908

(Warning) Token %s should be an integer Line: %s

**Description**

Some parameters in StarRC mapping file needs to have an integer value, such as precedence. You receive this message because StarRC find the value for that parameter is not an integer.

**What Next**

You should correct the wrong value of the parameter with an integer.

---

## SX-1909

(Warning) Parsing mapping file, Wrong syntax in line %s

**Description**

You receive this message because StarRC finds there is no value for certain parameter in the shown line in StarRC mapping file.

**What Next**

You should add correct value for all parameters in the shown line.

Feedback

## SX-1911

(Warning) Parsing mapping file, There should be "=" after token %s in line %s

**Description**

You receive this message because StarRC find no "=" after a parameter in the shown line in StarRC mapping file. In StarRC mapping file, you should always use <parameter_name>=<value>

**What Next**

You should correct the parameter definition in the shown line.

## SX-1912

(Fatal) Layer %s multiply defined Line: %s

**Description**

You receive this message because StarRC finds the shown layer is defined more than once in StarRC mapping file. You should only define a conducting/via/marker/remove/view_only layer once.

**What Next**

You should remove all other definitions of the shown layer and keep only one.

## SX-1913

(Warning) No physical layer described for conducting layer Line: %s

**Description**

You receive this message because StarRC find no mapped physical layer for a database layer defined in color_layers section in StarRC mapping file. The syntax for a line in color_layers section should be: color_layer_name physical_layer_name [x=x_shift y=y_shift]

**What Next**

You should add mapped physical layer for the shown line.

## SX-1914

(Warning) Physical layer %s does not exist in process Line: %s

Feedback

**Description**

You receive this message because StarRC find the mapped physical layer for a database layer defined in color_layers section in StarRC mapping file is not defined in ITF or nxtgrd file. The syntax for a line in color_layers section should be: color_layer_name physical_layer_name [x=x_shift y=y_shift]. The physical_layer_name is a layer defined in ITF or nxtgrd file.

**What Next**

You should map the color layer to a layer defined in ITF or nxtgrd file.

---

## SX-1915

(Warning) Unknown color layer specification %s Line: %s

**Description**

You receive this message because StarRC can't recognize certain syntax defined in color_layers section in StarRC mapping file. The syntax for a line in color_layers section should be: color_layer_name physical_layer_name [x=x_shift y=y_shift]. Any other syntax will trigger this error.

**What Next**

You should remove the un-recognized syntax in the shown line.

---

## SX-1916

(Warning) the db layer:%s do not have the mapping in the map_qtf_layers section

**Description**

You receive this message because StarRC finds no mapped qtf layer for the database layer in the shown line in StarRC mapping file. The syntax for a line in map_qtf_layers section should be: <database_layer_name> <mapped_qtf_layer_name>

**What Next**

You should add mapped qtf layers in this line.

---

## SX-1917

(Warning) the qtf layer :%s in the qtf_layers section is not existed in the map_qtf_layers section

Feedback

**Description**

You receive this message because StarRC finds a qtf layer is defined in qtf_layers section but no database layer is mapped to this qtf layer in StarRC mapping file.

**What Next**

You should check whether there are any mappings missed in map_qtf_layer. If not, you can either remove this qtf layer from qtf_layers section or ignore this warning.

---

## SX-1918

(Warning) No physical layer described for conducting layer Line: %s

**Description**

You receive this message because StarRC find no mapped physical layer for a layer in conducting_layers section in StarRC mapping file. Each line in conducting_layers section needs at least a database layer name and a mapped physical layer name.

**What Next**

You should add the mapped physical layer to this line.

---

## SX-1919

(Warning) Physical layer %s does not exist in process Line: %s

**Description**

You receive this message because StarRC finds the mapped physical layer %s in StarRC mapping file is not defined in ITF file or nxtgrd file.

**What Next**

You should map the database layer to a physical layer defined in ITF file or nxtgrd file.

---

## SX-1920

(Warning) PRECEDENCE can be used only on SUBSTRATE Line: %s

**Description**

You receive this message because StarRC find there is precedence definition on non-substrate layer in StarRC mapping file. Precedence parameter can be defined only on substrate layer.

Feedback

**What Next**

You should remove the precedence definition from the non-substrate file in StarRC mapping file.

---

## SX-1921

(Warning) Invalid negative precedence value. Precedence value can be -1, 0, or any positive integer. Line: %s

**Description**

You receive this message because StarRC find the value for precedence parameter a negative value other than -1 in StarRC mapping file. The valid value for precedence is -1, 0, or any positive integer.

**What Next**

You should correct the precedence value with a valid integer.

---

## SX-1922

(Warning) Unknown floating as fill type: %s. Only "FLOATING" and "GROUND" are available! Line: %s

**Description**

You receive this message because StarRC find the value of floating_as_fill_type is neither "floating" nor "ground" in StarRC mapping file. Only "floating" and "ground" are valid value for floating_as_fill_type parameter.

**What Next**

You should use either "floating" or "ground" as the value of floating_as_file_type.

---

## SX-1923

(Warning) Unknown conducting layer specification %s Line: %s

**Description**

You receive this message because StarRC find invalid parameter on a conducting layer in StarRC mapping file. The syntax of a conducting layer is: db_LyrName itf_LyrName|SUBSTRATE [device_layer|capacitor_layer] [rpsq=r_value] [model=model_name] [mask=mask_num] [diffusion_res_model=diff_res_model_name] [net_segment_cut_length=cut_length] [overlap_fill_spacing=new_spacing] [table_name=cap_table]

Feedback

**What Next**

You should remove the invalid parameter on the conducting layer in StarRC mapping file.

---

## SX-1924

(Error) Database layer %s cannot map to SUBSTRATE with NXTGRD generated with NO_GROUND_PLANE=YES

**Description**

You receive this message because StarRC finds the database layer %s in StarRC mapping file maps to SUBSTRATE or SECOND_SUBSTRATE with nxtgrd generated with NO_GROUND_PLANE=YES

**What Next**

You should not use SUBSTARTE related layer with nxtgrd generated with NO_GROUND_PLANE=YES

---

## SX-1925

(Warning) AREA cannot be used with CRES or AREA cannot be set more than once

**Description**

You receive this message because StarRC find the AREA or CRES has been defined before for a via layer in StarRC mapping file. AREA parameter can be defined only once, and can't be used together with CRES.

**What Next**

You should remove the extra definition of CRES or AREA.

---

## SX-1926

(Warning) MAX_VIA_ARRAY_SPACING is specified for via layer %s connected to a diffusion layer in the mapping file and USER_DEFINED_DIFFUSION_RESISTANCE models are set for at least one gate layer. The user defined diffusion resistances having a merged via as the contact are merged as one resistor.

**Description**

Setting MAX_VIA_ARRAY_LENGTH or MAX_VIA_ARRAY_SPACING reduce the vias of the corresponding layer, if the conditions are right, to one via and eventually one resistor. Therefore, the user defined diffusion resistances having a merged via as the contact are merged as one resistor.

Feedback

**What Next**

If having merged resistors is the expected behavior, no action is needed. Otherwise, remove MAX_VIA_ARRAY_LENGTH or MAX_VIA_ARRAY_SPACING for the contact layers connected to a diffusion layer in the mapping file.

---

## SX-1928

(Warning) Unknown via layer specification %s Line: %s

**Description**

You receive this message because StarRC find invalid parameter used for a via layer in StarRC mapping file. The syntax of a via layer should be: db_layerName grd_layerName [device_layer] [rpv=rpv_value] [area=via_area] [MODEL= model_name] [MAX_VIA_ARRAY_LENGTH = length] [MAX_VIA_ARRAY_SPAING = spacing]

**What Next**

You should remove invalid parameters on the via layer.

---

## SX-1929

(Warning) Both the via resistance and area must be specified Line: %s

**Description**

You receive this message because StarRC find only AREA or only RPV is defined for a via layer in StarRC mapping file. You should either use both of the 2 parameters or use neither of the 2 parameters.

**What Next**

If yout want to use AREA or RPV, you should use both of them. If you don't want to use, you should remove the parameter.

---

## SX-1930

(Warning) FROM and TO must be used together for a VIA layer for line %s

**Description**

You receive this message because StarRC finds you use only "from" or only "to" parameter for a via layer. You should either use both of the 2 parameters or use neither of the 2 parameters.

Feedback

**What Next**

If yout want to specify 'from' layer or 'to' layer of the via layer, you should specify both. Otherwise, you should remove the parameter.

---

## SX-1931

(Warning) The value of MAX_VIA_ARRAY_SPACING or MAX_VIA_ARRAY_LENGTH could not be specified to a negative value %s

**Description**

You receive this message because StarRC find value of MAX_VIA_ARRAY_SPACING or MAX_VIA_ARRAY_LENGTH is negative, which is invalid in StarRC mapping file.

**What Next**

You should use positive value for parameter MAX_VIA_ARRAY_SPACING or MAX_VIA_ARRAY_LENGTH.

---

## SX-1932

(Fatal) MAX_VIA_ARRAY_SPACING must be specified to use via merge Line: %s

**Description**

If you set MAX_VIA_ARRAY_LENGTH or MAX_VIA_ARRAY_SPACING in StarRC mapping file, you should either set both of these 2 parameters or set MAX_VIA_ARRAY_SPACING alone. However, you can't set MAX_VIA_ARRAY_LENGTH along without setting MAX_VIA_ARRAY_SPACING. StarRC will give this error once it finds this invalid situation.

**What Next**

You should also set MAX_VIA_ARRAY_SPACING in this line.

---

## SX-1933

(Fatal) Layer %s multiply defined Line: %s

**Description**

You receive this message because StarRC finds the shown layer is defined more than once in StarRC mapping file. You should only define a conducting/via/marker/remove/view_only layer once..

Feedback

**What Next**

You should remove all other definitions of the shown layer and keep only one.

---

## SX-1934

(Fatal) FROM layer %s does not exist in process Line: %s

**Description**

You receive this message because StarRC finds the from layer %s of a via layer is not defined in StarRC mapping file.

**What Next**

You should use a layer already defined in StarRC mapping file as the from layer of a via layer.

---

## SX-1935

(Fatal) TO layer %s does not exist in process Line: %s

**Description**

You receive this message because StarRC finds the to layer %s of a via layer is not defined in StarRC mapping file.

**What Next**

You should use a layer already defined in StarRC mapping file as the to layer of a via layer.

---

## SX-1936

(Warning) Physical layer %s does not exist in process Line: %s

**Description**

This means the via defined in this line is mapped to a physical layer which is not defined in ITF or nxtgrd file.

**What Next**

You should correct the physical layer and map the via to a physical layer already defined in ITF or nxtgrd file.

Feedback

## SX-1937

(Warning) Unknown marker type %s Line: %s

**Description**

In marker_layers section, you should either only list the marker layer name or map the marker to MARKER. This message means the layer in this line is mapped to a layer other than MARKER

**What Next**

You should only list the marker layer name and remove any other tokens.

## SX-1938

(Warning) Incorrect remove description Line: %s

**Description**

Each line in remove_layers section in StarRC mapping file should only contain the removed layer name. Any other description is invalid and will trigger this warning.

**What Next**

You should only list removed layer name and remove any other tokens.

## SX-1939

(Warning) Incorrect graphic layers description Line: %s

**Description**

Each line in viewonly_layers section in StarRC mapping file should only contain the view only layer name. The message means this line is invalid.

**What Next**

You should only list view only layer name in this line and remove any other tokens.

## SX-1940

(Warning) The distance over which the interlayer capacitance should be ignored must be used together with exactly two layers in a single line. Line: %s

Feedback

**Description**

In ignore_cap_layers section of StarRC mapping file, if you use L=<length> parameter to specify the distance over which the interlayer capacitance should be ignored, you should only add 2 layers to ignore cap in this line. For example, you can only use: A B L=value, but you can't use: A B C L=value. StarRC will give this warning once it finds the invalid statement.

**What Next**

You should correct the ignore-cap statement in this line.

---

## SX-1941

(Warning) The distance over which the interlayer capacitance should be ignored must be positive. Line: %s

**Description**

In ignore_cap_layers section of StarRC mapping file, if you use L=<length> parameter to specify the distance over which the interlayer capacitance should be ignored, you should only use positive value for L parameter. Otherwise, StarRC will give this warning.

**What Next**

You should use a positive value for L parameter in this line.

---

## SX-1942

(Warning) Incorrect ignore cap description, must contain at least two layers Line: %s

**Description**

The description in ignore_cap_layers section in StarRC mapping file is incorrect. In ignore_cap_layers section, if you want to ignore cap for a via layer, you should only list the layer name of the via. If you want to ignore cap between 2 or more conducting layers, you should list layer names of the conducting layers (at least 2 layers).

**What Next**

Correct the description of ignore cap layers in this line.

---

## SX-1943

(Warning) The distance over which the interlayer capacitance should be ignored between "%s" and "%s" has been set twice. Line: %s

Feedback

**Description**

In ignore_cap_layers section of StarRC mapping file, if you use L=<length> parameter to specify the distance over which the interlayer capacitance should be ignored, you only need to specify L parameter once for same layer pair. Otherwise, StarRC will give this warning.

**What Next**

You should check whether the duplicate definition is due to typo mistake of layer name in StarRC mapping file. If not, you should remove this statement in ignore_cap_layers section in StarRC mapping file.

---

## SX-1944

(Information) License %s no longer valid, requesting again

**Description**

StarRC failed to renew a license. StarRC will repeatedly attempt to for a licenseuntil a timeout period is reached.

**What Next**

If this message appears repeatedly, check to make sure that license server is running, and that there are enough licenses available.

---

## SX-1945

(Information) ... Waiting for license (%d attempts).

**Description**

StarRC is making repeated attempts to check out a license.

**What Next**

If license checkout fails or is unduly delayed, please make sure sufficient StarRC licenses are available.

---

## SX-1946

(Information) Got license after %d attempts in %d min, continuing.

**Description**

StarRC successfully acquired a license after the reported number of attempts, and time waited.

Feedback

**What Next**

If StarRC requires unexpectedly large number of attempts before checking out a license, make sure that sufficient number of StarRC licenses are available.

---

## SX-1947

(Warning) %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1948

(Severe) Failed to obtain a license for %s %d with license key %d

**Description**

Failed to check out a license.

**What Next**

Check to make sure sufficient licenses are available.

---

## SX-1949

(Information) License %d is being re-validated.

**Description**

StarRC is re-validating a license that was previously checked out.

**What Next**

This message is for informational purposes only. No further action is necessary.

---

## SX-1959

(Fatal) This program has been built for Synopsys internal use only, and cannot be run outside Synopsys offcies.

Feedback

**Description**

This version of StarRC is a Synopsys internal build. It cannot be used outside Synopsys offices.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1960

(Warning) This executable is for DEMO purposes only.

**Description**

This build for StarRC is for demonstration purposes only, and should not be used for production runs.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1961

(Warning) This executable is an ALPHA version and is for testing purposes only.

**Description**

This build is an ALPHA version of StarRC. It should not be used for production runs.

**What Next**

Contact the Synopsys Support Center.

---

## SX-1962

(Warning) This version of StarRC is for DEMO purposes only.

**Description**

This is a special build of StarRC, intended for demo purposes only. It should not be used for production purposes.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1963

(Warning) Failed to read a license file. Checking out an Ultra license

**Description**

StarRC was not able to inherit a license by reading an encrypted license file. As a result, it will proceed to check out an Ultra license or equivalent.

**What Next**

Contact the Synopsys Support Center.

## SX-1964

(Fatal) Failed to stream-read NDM design %s for %s.

**Description**

StarRC was not able to stream-read NDM design. It may be caused by un-supported NDM objects.

**What Next**

Contact the Synopsys Support Center.

## SX-1965

(Fatal) failed to check out StarRC license

**Description**

StarRC failed to checkout a license.

**What Next**

Check to make sure you have sufficient StarRC licenses, and that the license servers are running properly.

## SX-1966

(Fatal) failed to check out DP manager license

**Description**

StarRC failed to check out a valid DP license.

Feedback

**What Next**

Check to make sure you have sufficient StarRC licenses, and that the license servers are running.

---

## SX-1967

(Warning) Fast field solver could not obtain required number of STARRC licenses. Trying again.

**Description**

The required number of licenses for running the field solver are not available.

**What Next**

If this message is repeated over several hours, check to make sure you have sufficient number of StarRC licenses and that the license server is running.

---

## SX-1971

(Warning) Fast field solver could not obtain required number of STARRC licenses. Will continue with %d processors

**Description**

StarRC was not able to obtain the required number of StarRC licenses to run the field solver using the desired number of processors. As a result, the field solver is being run with a reduced number of processors.

**What Next**

If the turn-around time for the field solver job is too slow, contact the Synopsys Customer Support Center.

---

## SX-1973

(Fatal) %s

**Description**

StarRC terminates execution because of an error.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-1974

(Fatal) Invalid RECT geometry.

**Description**

RECT in DEF must have 2 points.

**What Next**

Correct the RECT in DEF.

## SX-1975

(Fatal) LAYER '%s' has no definition

**Description**

A referenced layer in DEF should have a valid defintion in LEFs. Physical geometries bound to it will be ignored during DEF translation. This missing LAYER may cause false opens in the later extraction stage.

**What Next**

Check your input LEF files and provide missing LAYER definition.

## SX-1976

(Fatal) Illegal PATTERN '%s' of VIARULE '%s'.

**Description**

Illegal PATTERN.

**What Next**

Check PATTERN in LEF/DEF specification for valid cut pattern.

## SX-1977

(Fatal) LEF VIA '%s' doesn't specify LAYER in its RECT statement.

**Description**

RECT statements for a LEF VIA must be defined on certain layer.

**What Next**

Check the definition of the VIA and provide LAYER.

Feedback

## SX-1978

(Fatal) INTERNAL Error: the x, y number of via array should be positive integer

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-1981

(Warning) The BUSBITSCHARS is empty

**Description**

BUSBITCHARS in LEF/DEF is empty.

**What Next**

Check the BUSBITCHARS statement in your LEF/DEF files and refer to LEF/DEF specification about how to specify correct BUSBITCHARS.

## SX-1982

(Warning) Rounding error may happen when using floats to represent points in DEF

**Description**

Integer is recommended to be used in regular wiring. You are using floats, the decimals will be rounded off.

**What Next**

Check input DEF file and use integers instead.

## SX-1984

(Warning) Parse only for generated via in VIA section

**Description**

VIARULE sections in LEF are parse-only statements. Any vias created from VIARULE GENERATE rule that appear in the DEF NETS or SPECIALNETS sections must also appear in the DEF VIA section.

Feedback

**What Next**

Information only; no action required.

---

## SX-2020

(Fatal) DISCONNECT_PORT_AND_NET_IN_SKIP_CELLS only works for NDM flow or LEF/DEF flow

**Description**

DISCONNECT_PORT_AND_NET_IN_SKIP_CELLS command only works for NDM flow or LEF/DEF flow.

**What Next**

Remove DISCONNECT_PORT_AND_NET_IN_SKIP_CELLS in command file and run StarRC again.

---

## SX-2021

(Information) Duplicate cell definition for '%s' is found and ignored in '%s'.

**Description**

Multiple GDS/OASIS cell definitions are found for a skip cell. StarRC uses the first cell definition to synthesize the skip cell and ignores the duplicate cell definitions.

**What Next**

Information only; no action needed.

---

## SX-2022

(Fatal) lib '%s' is not defined in '%s'

**Description**

OA lib is not defined in OA_LIB_DEF file.

**What Next**

Make sure that the lib is defined in OA_LIB_DEF file.

---

## SX-2023

(Fatal) Cannot open design '%s', '%s', '%s'

Feedback

**Description**

Cannot open design lib/cell/view.

**What Next**

Make sure that the lib/cell/view exists and you have the permission to read.

---

## SX-2024

(Fatal) Cannot open design '%s', '%s', '%s'

**Description**

Cannot open design lib/cell/view.

**What Next**

Make sure that the lib/cell/view exists and you have the permission to read.

---

## SX-2025

(Warning) '%s'

**Description**

This message is from OA library, when StarRC tries to open OA_LIB_DEF file.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2026

(Warning) syntax error in '%s': '%s'

**Description**

This message is from OA library, when StarRC tries to open OA_LIB_DEF file.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2027

(Warning) '%s' load warning: '%s'

Feedback

**Description**

This message is from OA library, when StarRC tries to open OA_LIB_DEF file.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2028

(Fatal) Cannot open design for '%s', '%s', '%s'

**Description**

This message is from OA library, when StarRC tries to open design.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2029

(Fatal) lib '%s' is not defined in '%s'

**Description**

In OA flow, an error occurs when trying to open design.

**What Next**

Make sure that the lib is defined in OA_LIB_DEF.

---

## SX-2030

(Severe) GDS NETPROP NUMBER %d is not supported.

**Description**

StarRC do not support the "GDS NETPROP NUMBER %d" in Calibre query server commands.

**What Next**

You should revise your Calibre query server command file. StarRC only support "GDS NETPROP NUMBER 5".

---

## SX-2031

(Severe) GDS PLACEPROP NUMBER %d is not supported.

Feedback

**Description**

StarRC do not support the "GDS PLACEPROP NUMBER %d" in Calibre query server commands.

**What Next**

You should revise your Calibre query server command file. StarRC only support "GDS PLACEPROP NUMBER 6".

---

## SX-2032

(Severe) GDS DEVPROP NUMBER %d is not supported.

**Description**

StarRC do not support the "GDS DEVPROP NUMBER %d" in Calibre query server commands.

**What Next**

You should revise your Calibre query server command file. Now StarRC only support "GDS DEVPROP NUMBER 7".

---

## SX-2033

(Warning) NDM design database '%s' (schema: %s) doesn't support fast streaming read

**Description**

Old NDM database with schema version < 1.223 uses data model scheme that streaming read can't support. StarRC will switch to slower data reading for such design database.

**What Next**

No actions required.

---

## SX-2034

(Warning) Wildcards in SKIP_CELL_PORT_PROP_FILE are supported only in ICV flow.

**Description**

Wildcards are supported only in ICV flow. For other flows, wildcard settings are ignored and have no effects to the extraction.

**What Next**

No actions required.

Feedback

## SX-2035

(Warning) METAL_FILL_BLOCK_MAPPING_FILE is recommended for hierarchical metal fill extraction.

**Description**

METAL_FILL_BLOCK_MAPPING_FILE is recommended for designs with multiple MACRO_DEF_FILE(s) and METAL_FILL_GDS_FILE/METAL_FILL_OASIS_FILE.

**What Next**

No actions required.

## SX-2036

(Warning) More than 80%% (%d/%d) of the instances in the design '%s' are placed in its %s.

**Description**

If most of the instances (80%) are placed at corners of the design, it might introduce significant performance/memory issue during extraction of these corner partitions.

This is usually seen in the early-stage design which most of its instances are unplaced.

**What Next**

Check the design and see if most of the instances are unplaced.

## SX-2037

(Warning) Suspicious instance placement '%s' in desing '%s' - %s

**Description**

If an instance is placed outside die area, it may introduce accuracy problems, e.g., false open/short.

**What Next**

Check the instance in the design.

## SX-2038

(Warning) PIN '%s' is placed outside DIEAREA

Feedback

**Description**

If a pin is placed outside die area, it may introduce accuracy problems, e.g., false open/short.

**What Next**

Check the pin in the design.

---

## SX-2039

(Warning) Any NDM layer shape on layerPurpose %s (%d:%d) will %s ignored

**Description**

A Layer in technology file can declare itself as physical layer or user-purpose layer by nonMask in its associated LayerDataType struct. By default, StarRC honors this setting and automatically ignore shapes drawn on user-purpose layers (nonMask=1).

NDM_FORCE_IGNORE_USER_PURPOSE_SHAPE will bypass this checking and ignores shapes if their layerPurpose are specified in this option.

**What Next**

Review the technology database and check LayerDataType(s).

---

## SX-2040

(Fatal) Input Calibre query command file error.

**Description**

StarRC not support the value of GDS NETPROP NUMBER, GDS PLACEPROP NUMBER or GDS DEVPROP NUMBER defined in the Calibre query command file.

**What Next**

You should revise your Calibre query server commands file. Now StarRC only support "GDS NETPROP NUMBER 5", "GDS PLACEPROP NUMBER 6" and "GDS DEVPROP NUMBER 7".

---

## SX-2041

(Warning) GDS SEED PROPERTY is not set in query file.

**Description**

GDS SEED PROPERTY is not set in the query file.

Feedback

**What Next**

You should add GDS SEED PROPERTY in the calibre query file. Now StarRC only support GDS SEED PROPERTY ORIGINAL or GDS SEED PROPERTY DEVICE ORIGINAL.

---

## SX-2042

(Warning) GDS SEED PROPERTY ORIGINAL affects CCI AGF layer mapping; this command should occur before the GDS MAP command in Calibre query file. GDS MAP file could be invalid.

**Description**

GDS SEED PROPERTY ORIGINAL, when specified, must come before the GDS MAP command in the Calibre query command file.

**What Next**

You should revise your Calibre query server command file.

---

## SX-2043

(Warning) Non-RECT %s with SPACING %d on LAYER %s will not be shrunk

**Description**

Only RECT spacing OBS/BLOCKAGE are shrunk by SPACING and SMIN.

**What Next**

Check the POLYGON/PATH BLOCKAGE in the DEF. POLYGON/PATH OBS in the LEF.

---

## SX-2044

(Warning) Duplicated property: %d %s

**Description**

StarRC detects duplicated properties in GDSII elements. The first property is honored and the later one is ignored.

**What Next**

If the duplicated property is expected, no action is required.

Feedback

## SX-2045

(Warning) Found %s(s) with SPACING. %s shapes can be shrunk by their SPACING and layer SMIN in ITF if %s:SHRINK.

### Description

StarRC found OBS/BLOCKAGE(s) with SPACING. StarRC recommends to use

```
LEF_USE_OBS: SHRINK
TRANSLATE_DEF_BLOCKAGE: SHRINK
to shrink shape automatically by the SPACING and layer SMIN to improve
accuracy.

The shape is shrunk by the following rules but only RECT is shrunk and if
 the shrunk shape is NOT valid, the shape will be dropped.
SPACING == 0, shrinks the blockage by SMIN in ITF
SPACING > 0 and SMIN > SPACING, shrinks the blockage by (SMIN - SPACING)
```

### What Next

Information only.

## SX-2046

(Warning) %s ( %d %d ) ( %d %d ) with SPACING %d on LAYER %s (SMIN=%d) can not be shrunk and will be dropped!

### Description

StarRC shrinks RECT spacing blockages by their SPACING and layer SMIN. But, if the resulted shape is NOT valid, StarRC will still translate un-shrunk shape.

SMIN in the message is reported in the technology unit.

### What Next

Check the spacing blockages in the DEF.

## SX-2047

(Fatal) LAYOUT NETLIST SEPARATED PROPERTIES must be set as NO for PDBA/PDSP flow in query file.

### Description

LAYOUT NETLIST SEPARATED PROPERTIES must be set as NO for PDBA/PDSP flow in query file.

Feedback

**What Next**

You should revise your Calibre query server command file(set the LAYOUT NETLIST SEPARATED PROPERTIES as NO).

---

## SX-2048

(Fatal) LAYOUT NETLIST PIN LOCATIONS must be set as YES for non-PDBA flow in query file.

**Description**

LAYOUT NETLIST PIN LOCATIONS should be YES in non-PDBA flow(not specify CALIBRE_PDBA_FILE in StarRC command file).

**What Next**

You should revise your Calibre query server commands file(set LAYOUT NETLIST PIN LOCATIONS as YES).

---

## SX-2049

(Fatal) LAYOUT NETLIST HIERARCHY must be set as AGF in query file.

**Description**

StarRC only support LAYOUT NETLIST HIERARCHY AGF

**What Next**

You should revise your Calibre query server commands file(set LAYOUT NETLIST HIERARCHY as AGF).

---

## SX-2050

(Warning) LAYOUT NETLIST PIN LOCATIONS NO and LAYOUT NETLIST DEVICE TEMPLATES YES is recommended combination for PDBA/PDSP flow in query file.

**Description**

StarRC recommends to use LAYOUT NETLIST PIN LOCATIONS NO and LAYOUT NETLIST DEVICE TEMPLATES YES together.

**What Next**

You should revise your Calibre query server commands file.

Feedback

## SX-2051

(Warning) LAYOUT NETLIST TRIVIAL PINS YES is recommended in query file.

**Description**

LAYOUT NETLIST TRIVIAL PINS YES is recommended in query file.

**What Next**

You should revise your Calibre query server commands file(set LAYOUT NETLIST TRIVIAL PINS as YES).

## SX-2052

(Fatal) Active-fill METAL_FILL_RECONNECT flow requires METAL_FILL_POLYGON_HANDLING: FLOATING.

**Description**

Active-fill METAL_FILL_RECONNECT flow only supports METAL_FILL_POLYGON_HANDLING: FLOATING.

**What Next**

Set METAL_FILL_POLYGON_HANDLING: FLOATING in active fill METAL_FILL_RECONNECT flow.

## SX-2053

(Warning) Suggests to replace %s with LEF_USE_OBS:SHRINK.

**Description**

LEF_SPACING_OBS:YES and LEF_ZERO_SPACING_OBS:YES translate spacing OBS without considering the SMIN in ITF. This might introduce accuracy problem during extraction. StarRC suggests to replace LEF_SPACING_OBS:YES and LEF_ZERO_SPACING_OBS:YES with LEF_USE_OBS:SHRINK in the StarRC command file.

By default, spacing OBS and zero-spacing OBS are NOT translated (LEF_SPACING_OBS:NO and LEF_ZERO_SPACING_OBS:NO). LEF_USE_OBS:SHRINK overrides these two options and shrinks spacing OBS automatically.

**What Next**

Information only

Feedback

## SX-2054

(Warning) Found %s OBS being dropped. Suggest to use LEF_USE_OBS:SHRINK.

**Description**

LEF_SPACING_OBS:NO or LEF_ZERO_SPACING_OBS:NO is set in the StarRC command file.

**What Next**

Information only

## SX-2055

(Warning) BLOCKAGE(s) are being ignored due to TRANSLATE_DEF_BLOCKAGE_TYPE.

**Description**

Some BLOCKAGE(s) are being ignored due to TRANSLATE_DEF_BLOCKAGE_TYPE.

**What Next**

Information only

## SX-2056

(Warning) Option value %s in TRANSLATE_DEF_BLOCKAGE_TYPE is not supported.

**Description**

TRANSLATE_DEF_BLOCKAGE_TYPE supports

- *ALL (default) - Translate all blockages.*
- *FILLS - Translate FILLS blockage only.*
- *SLOT - Translate SLOT blockage only.*
- *PUSHDOWN - Translate PUSHDOWN blockage only.*
- *LAYER - Translate layer (EXCEPTPG, DESIGNRULEWIDTH and SPACING) blockages only.*

If TRANSLATE_DEF_BLOCKAGE_TYPE specifies no valid values, default value (ALL) is used.

Feedback

**What Next**

Information only

---

## SX-2057

(Warning) NDM blockage ( %d %d ) ( %d %d ) with SPACING %d on LAYER %s (SMIN= %d) can not be shrunk!

**Description**

StarRC shrinks rectilinear zero-spacing NDM blockages by their layer SMIN. But, if the resulted shape is NOT valid, StarRC will still translate un-shrunk shape.

SMIN in the message is reported in the technology unit.

---

## SX-2058

(Warning) NDM layer shapes on user layer purpose (%d:%d) are not ignored.

**Description**

A Layer in technology file can declare itself as physical layer or user-purpose layer by nonMask in its associated LayerDataType struct. By default, StarRC honors this setting and automatically ignore shapes drawn on user-purpose layers (nonMask=1).

NDM_FORCE_IGNORE_USER_PURPOSE_SHAPE will bypass this checking and ignores shapes if their layerPurpose are specified in this option.

**What Next**

Review the technology database and check LayerDataType(s).

---

## SX-2060

(Severe) The mapping file of OA syntax check has failed because: %s

**Description**

An exception has occurred while StarRC attempted to check the syntax of the mapping file related to OA that will be used to generate the OA view.

**What Next**

Ensure that the syntax of OA_DEVICE_MAPPING_FILE, OA_SKIPCELL_MAPPING_FILE, and OA_LAYER_MAPPING_FILE is correct.

Feedback

## SX-2061

(Fatal) No LEF_FILEs provided

**Description**

LEF_FILE in the command file must be set for LEF/DEF flow.

**What Next**

Provide valid values for LEF_FILE.

## SX-2063

(Fatal) No TOP_DEF_FILE provided

**Description**

TOP_DEF_FILE in the command file must be set for LEF/DEF flow.

**What Next**

Provide valid values for TOP_DEF_FILE.

## SX-2064

(Warning) VIA '%s' undefined.

**Description**

VIA is not defined in any LEF(s) and current parsing DEF. This via will be ignored during translation and may cause false open.

**What Next**

Check the input LEF(s) and DEF to make sure this VIA is defined.

## SX-2065

(Warning) Invalid path segment found for a NET %s at %d, %d (nm) on layer %s

**Description**

A path segment with invalid wire width or undefined layer will be ignored during translation.

**What Next**

Check this path segment in the DEF. It may be caused by undefined layer or wrong wire width from LEF and NONDEFAULTRULE.

Feedback

## SX-2073

(Fatal) Unknown selection '%s' for METAL_FILL_POLYGON_HANDLING.

**Description**

METAL_FILL_POLYGON_HANDLING command only accept AUTOMATIC, FLOATING, GROUNDED, or IGNORE.

**What Next**

Provide the correct setting for METAL_FILL_POLYGON_HANDLING in StarRC comman dfile.

## SX-2074

(Warning) No LayerDataType structs for any layer in technology file. All shapes such as fill shapes will be included during translation.

**Description**

There is no LayerDataType struct for any layer in technology file. nonMask is set to 0 by default for all LayerDataType. As a result, all shapes such as fill shapes will be included during translation.

**What Next**

Review the technology database and check LayerDataType(s).

## SX-2076

(Warning) LAYER '%s' has no VIA connection

**Description**

A LEF LAYER that has no VIA(s) reference to it is not useful layer in the design and it will be removed at Layers stage. Any geometries on the layer will also be ignored during translation.

**What Next**

Check the LAYER definition in the LEF(s). If it is needed in the design, please define a VIA that references it. If it is not needed in the design, it's safe to ignore this message.

## SX-2077

(Warning) DPT_COLOR_GDS_FILE is set, pre-color information will be ignored

Feedback

**Description**

When DPT_COLOR_GDS_FILE is set, all pre-color information defined in LEF(s)/DEF(s) will be ignored during translation.

**What Next**

Information only; no action needed.

---

## SX-2079

(Fatal) TYPE '%s' for LAYER '%s' is not supported

**Description**

The TYPE of a LAYER must be one of CUT, IMPLANT, MASTERSLIE, OVERLAP and ROUTING.

**What Next**

Refer to LEF specification for detailed description of these types.

---

## SX-2082

(Warning) VIARULE '%s' has wrong via_array_ratio='%f'

**Description**

The via array ratio of a VIARULE is derived from its attributes and it must be within (0.0, 1.0].

**What Next**

Check the definition of the VIARULE.

---

## SX-2084

(Fatal) VIA '%s' has wrong via_array_ratio='%f'

**Description**

The via array ratio of a VIA is derived from its attributes and it must be within (0.0, 1.0].

**What Next**

Check the definition of this VIA.

Feedback

## SX-2085

(Warning) NONDEFAULTRULE '%s' has previously declared LAYER '%s'

**Description**

If the previously-defined NONDEFAULTRULE has LAYER statement, the LAYER statement of newly-defined rule will be ignored, instead of merged.

**What Next**

Check all LEF files to find previously defined rule and avoid redefintion if not wanted.

## SX-2086

(Warning) LEF LAYER '%s' is not defined in mapping file

**Description**

LEF LAYER is not defined in the mapping file.

**What Next**

Information only; no action needed.

## SX-2087

(Warning) NONDEFAULTRULE '%s' has previously declared via '%s'

**Description**

If the previously-defined NONDEFAULTRULE has VIA statement, the VIA statement of newly-defined rule will be ignored, instead of merged.

**What Next**

Check all LEF files to find previously defined rule and avoid redefintion if not wanted.

## SX-2088

(Warning) Cell port '%s' is only defined in DEF macro '%s'.

**Description**

Cell ports defined in DEF macro only will be merged with ports defined in LEF macro to reduce design inconsistency.

Feedback

**What Next**

Information only; no action needed

---

## SX-2089

(Warning) Some VIA(s)/NONDEFAULTRULE(s) had previously defined (see lef_conflict.sum for details)

**Description**

Some VIA(s)/NONDEFAULTRULES(s) are multiply defined. Previous defintions will be overridden.

**What Next**

Please check your LEF/DEF to remove duplicate definitions if former definition is needed.

---

## SX-2090

(Warning) Duplicate VIA definition (%s) in '%s'

**Description**

Duplicate VIA definition is found and ignored.

**What Next**

Information only; no action needed.

---

## SX-2092

(Warning) NONDEFAULTRULE '%s' in '%s' had previously defined

**Description**

The NONDEFAULTRULE is redefined and its data will be merged during translation. For example, if previously-defined rule has no LAYER statement, StarRC will merge newly-defined LAYER statement into it.

**What Next**

Check all LEF files to find previously defined rule and avoid redefintion if not wanted.

---

## SX-2093

(Fatal) MACRO statement before any LAYER statement.

Feedback

**Description**

MACRO can't be defined before any LAYER statement as it requires LAYER information to construct.

**What Next**

Correct your LEF and move MACRO after LAYER definitions.

---

## SX-2094

(Fatal) MUSTJOIN pin '%s' is undefined.

**Description**

MUSTJOIN pin must be defined before reference.

**What Next**

Check the PIN defintion in the LEF.

---

## SX-2095

(Warning) LEF PIN '%s' in MACRO '%s' does not define any geometry.

**Description**

PIN definition in a MACRO does not include any geometry to extract.

**What Next**

Information only; no action needed.

---

## SX-2100

(Information) Wrote lef_conflict.sum.

**Description**

List of duplicate VIA and NONDEFAULTRULE definitions are written into lef_conflict.sum for information.

**What Next**

Information only; no action needed.

Feedback

## SX-2101

(Information) ECO_MODE is enabled. Currently we only support STAR DIRECTORY, GPD DIRECTORY and STAR COMMAND should in the same directory. Please make sure the setting in your star command.

**Description**

Current ECO flow setting.

**What Next**

No action required.

## SX-2102

(Warning) LEF macro '%s' has both FIXEDMASK & LAYERMASKSHIFT set

**Description**

LEF macro has both FIXEDMASK & LAYERMASKSHIFT which are mutually exclusive attributes.

**What Next**

No action required.

## SX-2103

(Information) BUSBITCHARS:%s is not consistent, use DEF's BUSBITCHARS:%s.

**Description**

The parsing DEF's BUSBITCHARS is not consistent with the one defined in the technology LEF. StarRC will use the one in DEF to translate.

**What Next**

Information only; no action needed.

## SX-2104

(Fatal) DEF component (%s %s) with MASKSHIFT '%s' - '%s' (in %s).

**Description**

DEF component's MASKSHIFT should not be specified due to the reason above.

Feedback

**What Next**

No action required.

---

## SX-2105

(Warning) DEF_MASKSHIFT_CONSISTENCY_CHECK may incur performance penalty in preXtraction.

**Description**

DEF_MASKSHIFT_CONSISTENCY_CHECK will run thorough consistency checks against each MASKSHIFT keyword in DEF files. It may incur performance penalty during HN stage if there are many mask-shifted components in the DEF(s).

If consistency checks for mask-shifting are not needed, it can be turned off for performance.

**What Next**

No action required.

---

## SX-2106

(Warning) Unsupported mask-shifting syntax in LEF - '%s'

**Description**

Technology LEF or macro LEF has unsupported syntax.

**What Next**

No action required.

---

## SX-2107

(Fatal) BLOCK_BOUNDARY required for RING_AROUND_THE_BLOCK in LEF/DEF flow.

**Description**

In LEF/DEF flow, BLOCK_BOUNDARY is required by RING_AROUND_THE_BLOCK to get bounding box of the BLOCK.

**What Next**

Review your star command file and add BLOCK_BOUNDARY for RING_AROUND_THE_BLOCK run.

Feedback

## SX-2108

(Warning) UNITS statements MUST precede the LAYER statements

### Description

The UNITS statement is optional and, when used, must precede any LAYER statements in LEF files.

### What Next

Check all LEF files and move UNITS statements before any LAYER statements.

## SX-2109

(Warning) Donut for GDS/OASIS cell %s is created successfully

### Description

GDS_DONUT is switched on to create donut ring for each GDS/OASIS cell in the run. GDS/OASIS cells that meet the criteria below can be donut'd.

- It has more than GDS_DONUT_NUM_LAYERS metal layers.
- A squared ring can be formed with GDS_DONUT_WIDTH as its ring width.

  If a GDS/OASIS cell can't be donut'd, StarRC will leave them as is.

### What Next

Information only. No action required.

```
GDS_DONUT: NO|YES
GDS_DONUT_WIDTH: 20 (microns)
GDS_DONUT_NUM_LAYERS: 2
```

## SX-2110

(Warning) BUSBITCHARS '%s' in DEF file '%s' is not consistent with '%s' in the top DEF file.

### Description

BUSBITCHARS is inconsistency between parsing DEF and top DEF file. StarRC will use BUSBITCHARS in top DEF file to translate current DEF.

### What Next

Contact the Synopsys Support Center.

Feedback

## SX-2111

(Warning) Metal fills on (%d:%d) in GDS_FILE/OASIS_FILE(s) are being ignored.

**Description**

Metal fills from GDS_FILE/OASIS_FILE(s) can be translated as FLOATING/GROUNDED/IGNORE based on the settings.

Metal fills are ignored if

- METAL_FILL_POLYGON_HANDLING:IGNORE or IGNORE being specified for IP_FILL mapping in GDS/OASIS mapping file.
- With METAL_FILL_POLYGON_HANDLING:AUTOMATIC, mappings without polygon handling mode in GDS/OASIS mapping file are ignored.

For performance consideration, only first metal fill object is reported.

**What Next**

Information only.

## SX-2112

(Warning) Invalid colored mapping for '%s' at line %d of GDS/OASIS layer map file '%s'

**Description**

The colored design database layer mapping doesn't exist. It might be caused by the missing coloring information in the NXTGRD file.

In this situation, StarRC will translate such GDS/OASIS metals to uncolored layers.

**What Next**

Please check if the colored design database layer is correctly generated at Layers stage.

## SX-2113

(Warning) Invalid database layer '%s' at line %d of GDS/OASIS layer map file '%s'

**Description**

A database layer named in either in the GDS/OASIS layer map file is not a valid layer name. The layer might be spelled incorrectly, or it might be missing from the mapping file specified by the MAPPING_FILE command.

Feedback

**What Next**

Check the layer name in the GDS/OASIS layer map file and also in the MAPPING_FILE.

---

## SX-2114

(Fatal) Syntax error '%s' at line %d of GDS/OASIS layer map file '%s'

**Description**

A line in the GDS/OASIS layer map file has invalid syntax.

**What Next**

Correct the line in the reported file.

---

## SX-2115

(Fatal) AGF file '%s' specified in SKIP_CELL_AGF_FILE for '%s' does not exist.

**Description**

The AGF file specified in SKIP_CELL_AGF_FILE for cell does not exist.

**What Next**

Check <agf file> column specifed in SKIP_CELL_AGF_FILE in StarRC command file.

---

## SX-2116

(Fatal) SPICE file '%s' specified in SKIP_CELL_AGF_FILE for '%s' does not exist.

**Description**

The SPICE netlist file specified in SKIP_CELL_AGF_FILE for cell does not exist.

**What Next**

Check <ideal spice netlist file> column specifed in SKIP_CELL_AGF_FILE in StarRC command file.

---

## SX-2117

(Warning) Metal fills on (%d:%d) in GDS_FILE/OASIS_FILE(s) are being translated as %s.

**Description**

Metal fills from GDS_FILE/OASIS_FILE(s) can be translated as FLOATING/GROUNDED/IGNORE based on the settings.

Feedback

For performance consideration, only first metal fill object is reported.

**What Next**

Information only.

---

## SX-2118

(Warning) DENSITY_BOX_WEIGHTING_FACTOR not specified in ITF. Use default value %f.

**Description**

The maximum value of DENSITY_BOX_WEIGHTING_FACTOR(s) is used to create GDS/OASIS donut. If it is not specified in ITF, StarRC uses default value.

**What Next**

Information only.

---

## SX-2119

(Warning) Donut for GDS/OASIS cell %s is not created - %s

**Description**

GDS_DONUT is switched on to create donut ring for each GDS/OASIS cell in the run. GDS/OASIS cells that meet the criteria below can be donut'd.

- It has more than GDS_DONUT_NUM_LAYERS metal layers.
- A squared ring can be formed with GDS_DONUT_WIDTH as its ring width.

  If a GDS/OASIS cell can't be donut'd, StarRC will leave them as is.

**What Next**

Information only. No action required.

```
GDS_DONUT: NO|YES
GDS_DONUT_WIDTH: 20 (microns)
GDS_DONUT_NUM_LAYERS: 2
```

---

## SX-2129

(Warning) Pin '%s' in the DEF macro is not placed and geometries are ignored.

Feedback

**Description**

Pin in the DEF macro is not placed. This pin will be nelisted in the *PORTS section of SPEF and/or the .SUBCKT statement fo r SPF/STAR/NETNAME formats but will not appear in the detail parasitic section (since it has no physical characteristic).

**What Next**

Information only; no action needed.

---

## SX-2131

(Warning) Port '%s' in subckt '%s' is duplicated.

**Description**

StarRC cannot accept duplicated ports, only one will be kept.

**What Next**

Check to make sure port definition in SUBCKT is correct in CALIBRE_AGF_NETLIST file.

---

## SX-2136

(Warning) Skip cell '%s' is not defined in either LEF or DEF files.

**Description**

The definition of the skip cell cannot be found in LEF_FILE or MACRO_DEF_FILE.

**What Next**

Check if the name of the cell is specified correctly in SKIP_CELLS or SKIP_CELLS_FILE.

---

## SX-2139

(Warning) Detected %d unconnected hierarchy pins which are not connected to parent cell for DEF '%s'

**Description**

Unconnected hierarchy pins are detected for DEF macro.

**What Next**

Information only; no action needed.

Feedback

## SX-2140

(Information) GDS Layer %s is removed by GDS_REMOVE_LAYER.

**Description**

GDS_REMOVE_LAYER will remove layers defined in GDS_LAYER_MAP_FILE.

**What Next**

Information only; no action is needed.

## SX-2141

(Fatal) Missing DIEAREA and no placements.

**Description**

There's no DIEAREA in def file and no placements in this design. StarRC can't translate this DEF file.

**What Next**

Correct this DEF file.

## SX-2142

(Information) Top Level Extents '%d' '%d' '%d' '%d'

**Description**

The extents of top-level block.

**What Next**

Information only; no action needed.

## SX-2143

(Information) Instance '%s' is multiply-defined.

**Description**

An instance is mutiply-defined in COMPONENTS section and ignored.

**What Next**

Information only; no action needed.

Feedback

## SX-2144

(Severe) The definition of cell '%s' instantiated as '%s' in DEF file '%s' is not found.

**Description**

The corresponding cell definition for the instance cannot be found in any of LEF_FILE or MACRO_DEF_FILE.

**What Next**

Check if LEF_FILE or MACRO_DEF_FILE includes the cell definition.

## SX-2145

(Warning) MHP: '%s' is not used in DEF macro '%s'

**Description**

Mismatched hierarchy pin (MHP) is detected.

For unconnected hierarchy pin (UHP) that has definition from both LEF and DEF, StarRC reports MHP for clarification.

**What Next**

Information only; no action needed.

## SX-2146

(Severe) Net '%s' connects to an undefined pin '%s' of LEF Macro '%s'.

**Description**

The pin to which the net is connected to is not defined in the LEF Macro.

**What Next**

If duplicate LEF Macro definitions are present, the first definition takes higher priority and if the first definition does not have the pin definition, StarRC reports this ERROR. Check the definition of the Macro in LEF_FILE.

## SX-2147

(Warning) NET '%s' is connected to an undefined PIN '%s'

Feedback

**Description**

In the DEF, a NET connection specified by ( PIN pinName ) must be connected to a pin that is previously defined in PINS section.

**What Next**

Check the DEF file and define missing PIN in PINS section.

---

## SX-2148

(Warning) UHP: %s macro(%s) %s

**Description**

Unconnected hierarchy pin (UHP) for DEF macro is detected.

A design that has a DEF macro in it and the DEF macro is flattened using

SKIP_CELLS: * !DEF_MACRO.

If there are nets in the DEF macro that do not connect to a top level net, they will be missing from the SPEF file and cause simulation problem. DEF pins on these nets are called unconnected hierarchy pin (UHP).

UHP will be netlisted with names of the format <instance>/<pin> since they are not pre-assigned a top level name in DEF. Such generated nets are eligible for re-assignment to ground if REMOVE_FLOATING_NETS and/or REMOVE_DANGLING_NETS are enabled and they meet the connection count criteria. If the unconnected DEF PINS have USE POWER or USE GROUND tags, the generated nets will be automatically recognized as POWER_NETS by StarRC unless the star_cmd file already sets POWER_NETS to user-defined value. If POWER_NETS is set by user and unconnected POWER or GROUND PINS exist in the design, they must be appended in the star_cmd file as 'POWER_NETS: */<pin> */*/<pin> ...' in order to be recognized by StarRC for special handling.

**What Next**

Information only; no action needed.

---

## SX-2149

(Warning) Illegal DEF dbuPerMicron

**Description**

The DEF dbuPerMicron must be less than or equal to the LEF dbuPerMicron, otherwise it may cause round-off errors and loss of accuracy during translation.

Feedback

**What Next**

See UNITS in LEF/DEF specification for valid dbuPerMicron pairings.

---

## SX-2150

(Warning) Invalid pairings of the LEF dbuPerMicron '%d' and the corresponding DEF dbuPerMircon '%d'

**Description**

StarRC requires dbuPerMicron pairings between technology LEF and parsing DEF to follow LEF/DEF specification to avoid possible round-off erros and loss of accuracy during translation.

**What Next**

Please refer to LEF/DEF specification and correct the pairings by the parings table.

---

## SX-2151

(Warning) Missing layer mapping for layernum:datatype(%d:%d) in layer map file '%s'.

**Description**

GDS/OASIS files require layer mapping specified in layer map files so as for StarRC to translate GDS/OASIS structs into appropriate layers in main design database.

**What Next**

Make sure that the layer mapping for the specified layer is correctly defined in GDS/OASIS layer map files.

---

## SX-2152

(Fatal) Layer '%s' can not be found for VIARULE '%s'

**Description**

A layer in the LAYERS statement in VIARULE defintion is not defined.

**What Next**

Correct the layer in the VIARULE defintion.

---

## SX-2153

(Warning) Duplicate layer:datetype (%d:%d) found.

Feedback

**Description**

Duplicate layer:datatype entry found in the GDS_LAYER_MAP_FILE/ OASIS_LAYER_MAP_FILE. StarRC uses the first mapping and ignore duplicate ones.

**What Next**

Remove the duplicate entries.

---

## SX-2154

(Fatal) LEF macro definition is missing for SKIP_CELL_AGF_FILE description " %s ".

**Description**

The reported AGF cell in SKIP_CELL_AGF_FILE has no correspondent LEF macro defined in LEF files.

**What Next**

Check input LEF files and provide LEF macro for reported AGF cell.

---

## SX-2155

(Warning) The pre-defined Via '%s' in LEF is covered by latest definition of DEF.

**Description**

Via defintion in LEF overridened by the one defined in DEF. StarRC will use the defintion from DEF to translate.

**What Next**

Information only; no action needed.

---

## SX-2156

(Warning) Missing layer mapping for ITF layer '%s'.

**Description**

None of any database layer maps to a specific ITF layer defined in TCAD_GRD_FILE. This ITF layer takes no effect for parasitic extraction.

**What Next**

Make sure that the physical layer mapping is correctly defined in MAPPING_FILE.

Feedback

## SX-2157

(Warning) STYLE #%d is not defined.

**Description**

A referenced STYLE is not defined in the DEF. The styling of geometries will be ignored during translation.

**What Next**

Correct the DEF with missing STYLE.

## SX-2158

(Information) Read unit %d from %s file %s. Using Units:%d to translate %s.

**Description**

StarXtract read unit from tech LEF or DEF file.

**What Next**

It is information only. No action is needed.

## SX-2165

(Information) Total %d metal fill cells are imported.

**Description**

Total number of fill cells StarRC imports.

**What Next**

Information only; no action required.

## SX-2166

(Warning) LAYER '%s' is not defined. Subsequent data for it will be ignored.

**Description**

The layer after RECT in a VIA defintion is not defined and geometries on this undefined layer will be ignored by StarRC during translation. If this via is referenced by any net, this may cause opens and other problems.

Feedback

**What Next**

Please check the layer definition in the LEFs.

---

## SX-2167

(Warning) VIA '%s' is not defined. Subsequent data for it will be ignored.

**Description**

VIA referenced by PIN statement is not defined.

**What Next**

Please check the via defintion in the LEFs and DEFs.

---

## SX-2168

(Warning) Geometries on the LAYER '%s' are found and ignored during translation.

**Description**

The LAYER is a valid LEF layer but may be marked as remove_layer in MAPPING_FILE. Geometries on the layer are ignored during translation.

**What Next**

Please check your MAPPING_FILE.

---

## SX-2169

(Warning) Duplicate cell definition is found and ignored in GDS/OASIS or fill GDS/OASIS files.

**Description**

Multiple GDS/OASIS cell defintions are found for a skip cell. When this happenes, StarRC uses the first cell defintion to synthesizethe skip cell and ignore the rest of duplicate cell defintions.

**What Next**

See stage summary file for the list of duplicate cells.

---

## SX-2170

(Information) GDS/OASIS cell '%s' applied to %s MACRO '%s' from '%s'

Feedback

**Description**

The GDS/OASIS cell definition from the file is applied and merged with macro to form a skip cell.

**What Next**

Information only; no action needed.

---

## SX-2172

(Fatal) Input in flex scanner failed. '%s'

**Description**

StarRC cannot read this GZIP properly.

**What Next**

Make sure the file is a correct GZIP file.

---

## SX-2175

(Fatal) Error parsing file '%s'

**Description**

LEF/DEF file parsing is not successful due to syntax errors.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2182

(Fatal) File doesn not exist! ICV_ANNOTATION_FILE: %s

**Description**

StarXtract is trying to open this file, but this operation is failed.

**What Next**

Correct the setting of this file.

---

## SX-2183

(Fatal) Failed to open gzip file '%s'

Feedback

**Description**

StarXtract is trying to open this file, but this operation is failed.

**What Next**

Correct the setting of this file.

---

## SX-2184

(Fatal) ICV runset report file syntax error near line '%d', '%s' '%s'.

**Description**

There is unexpected syntax in the ICV runset report file.

**What Next**

Re-run the ICV or contact the Synopsys Support Center.

---

## SX-2185

(Fatal) ICV flow cannnot support MILKYWAY_EXTRACT_VIEW:NO.

**Description**

ICV flow only supports "MILKYWAY_EXTRACT_VIEW: YES".

**What Next**

Set "MILKYWAY_EXTRACT_VIEW: YES" or contact the Synopsys Support Center.

---

## SX-2186

(Fatal) NET_TYPE:SCHEMATIC is not available with XREF:NO.

**Description**

XREF: NO does not support NET_TYPE: SCHEMATIC.

**What Next**

Set either "XREF: YES" or "NET_TYPE: LAYOUT", or contact the Synopsys Support Center.

---

## SX-2189

(Warning) Ignore unknown option '%s' in line '%d' of ICV runset report file.

Feedback

**Description**

This is unknown option of the ICV runset report file.

**What Next**

Re-run the ICV or contact the Synopsys Support Center.

---

## SX-2190

(Fatal) Missing tagname_required in ICV runset report file.

**Description**

tagname_required information is required for the ICV runset report file.

**What Next**

Re-run the ICV or contact the Synopsys Support Center.

---

## SX-2191

(Fatal) ICV runset has SIMULATION_MODEL_NAME, which is only supported for "MODEL_TYPE: LAYOUT".

**Description**

The SIMULATION_MODEL_NAME of runset is only supported for MODEL_TYPE: LAYOUT.

**What Next**

Set "MODEL_TYPE: LAYOUT" in StarXtract or, contact the Synopsys Support Center.

---

## SX-2192

(Warning) ICV COMPARE option MEMORY_ARRAY_COMPARISON is not supported for XREF extractions.

**Description**

StarXtract finds invalid equiv points of the format SRAMblock<##>x<##>#<##>.

**What Next**

Set MEMORY_ARRAY_COMPARISON to FALSE and re-run ICV LVS, or contact the Synopsys Support Center.

Feedback

## SX-2193

(Fatal) The number of terminals of device '%s' is inconsistent between runset and pin file.

**Description**

There are terminal information discrepancy of the device between the runset and the pin file.

**What Next**

Correct either the runset data or the pin file data, or contact the Synopsys Support Center.

## SX-2194

(Fatal) Pin '%d' of device '%s' has inconsistent layer between runset and pin file.

**Description**

There is a layer information discrepancy of the device's pin between the runset and the pin file.

**What Next**

Correct either the runset data or the pin file data, or contact the Synopsys Support Center.

## SX-2196

(Severe) Could not iterate instances in cell '%s'.

**Description**

StarXtract is iterating the instances of this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

## SX-2197

(Severe) Could not get instance data for '%s'.

**Description**

StarXtract is getting the instance data from Milkyway database, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

Feedback

## SX-2208

(Fatal) Requested view '%s' does not exist in main library or reference libraries.

**Description**

StarXtract is opening the requested view that depends on option settings, but it does not exist.

**What Next**

Check wheather there is any incorrect option setting about Milkyway view or there is any incorrect Milkyway input data.

## SX-2210

(Information) FORCE_REF_LIB_MODE must be used together with MILKYWAY_REF_LIB_MODE: HIER!

**Description**

FORCE_REF_LIB_MODE must be used together with MILKYWAY_REF_LIB_MODE: HIER!

**What Next**

If this is expected behavior, it is information only. No action is needed.

## SX-2211

(Fatal) MILKYWAY_REF_LIB_MODE cannot be used.

**Description**

MILKYWAY_REF_LIB_MODE cannot be used when dbSetLibRefCtrlFileMode flag is already set in the main library. dbSetLibRefCtrlFileMode controls the reference library tree source.

**What Next**

Remove MILKYWAY_REF_LIB_MODE from star_cmd file; the value of dbSetLibRefCtrlFileMode will be used.

## SX-2212

(Fatal) Failed to build FILE mode DCM table '%s'.

Feedback

**Description**

StarXtract is building this FILE mode DCM table, but this operation is failed.

**What Next**

Check whether there is any incorrect data.

---

## SX-2214

(Fatal) Failed to open reference libraries for '%s' in '%s' mode.

**Description**

StarXtract is opening this reference library, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2215

(Fatal) Syntax error in SKIP_CELL_AGF_FILE: '%s'

**Description**

Wrong SKIP_CELL_AGF_FILE syntax in StarRC command file. The syntax is,

SKIP_CELL_AGF_FILE: <cell name> <agf file> <ideal spice netlist for agf>.

**What Next**

Check SKIP_CELL_AGF_FILE in your StarRC command file.

---

## SX-2216

(Information) Requested view '%s' does not exist in main library or reference libraries.

**Description**

StarXtract is opening the requested view that depends on option settings, but it does not exist.

**What Next**

If this is expected data, it is information only. No action is needed.

Feedback

## SX-2217

(Fatal) Failed to open reference libraries by control file for '%s'.

**Description**

StarXtract is opening this main reference library, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

## SX-2218

(Fatal) RefLib Control File inconsistent

**Description**

StarXtract finds RefLib control file inconsistecy.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

## SX-2219

(Warning) Could not locate cell '%s' in library '%s'.

**Description**

StarXtract is locating this cell, but this operation is failed.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

## SX-2221

(Severe) Could not resolve libId for reference library '%s'.

**Description**

This libId is not resolved for this reference library.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

Feedback

## SX-2222

(Severe) Failed to locate cell '%s' in specfied library.

**Description**

StarXtract is locating this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

## SX-2223

(Warning) Failed to locate library EVRunset attach file.

**Description**

StarXtract is attempting to read cell EVRunset attach file.

**What Next**

Verify that all Hercules netlisting stages completed.

## SX-2224

(Warning) Attach file '%s';'%s' does not exist.

**Description**

StarXtract is accessing this attach file and it does not exist.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

## SX-2225

(Fatal) Could not determine '%s' attach file location. Milkyway '%s' is incomplete.

**Description**

StarXtract is accessing this attach file and it does not exist.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

Feedback

## SX-2226

(Fatal) Attach file '%s';'%s' does not exist.

**Description**

StarXtract is accessing this attach file and it does not exist.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

## SX-2227

(Warning) Detected the net '%s' connected to the P/G port '%s' of instance '%s' (cell '%s') would take them as power net

**Description**

The reported nets have no '+ USE POWER' attributes defined but they are connected to P/G pins of LEF macros. They will be treated as as power nets during translation.

**What Next**

Information only; no action needed.

## SX-2228

(Warning) BUSBITCHARS is only allowed 2 characters

**Description**

The BUSBITCHARS in LEF/DEF should only have 2 characters. If more than 2 characters are specified, the first two characters are taken as BUSBITCHARS.

**What Next**

Remove the redundant characters from BUSBITCHARS in your LEF/DEF files.

## SX-2230

(Information) Initializing milkyway library '%s'...

**Description**

StarXtract reports this information.

Feedback

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2231

(Severe) Could not open library '%s'.

**Description**

StarXtract is trying to open this library, but this operation is failed.

**What Next**

Confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2232

(Information) Failed to read '%s' unit from database.

**Description**

StarXtract reports this information.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2233

(Information) Invalid database unit '%d' for '%s'.

**Description**

StarXtract reports this information.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2234

(Information) Invalid scale factor '%d' for '%s'.

**Description**

StarXtract reports this information.

Feedback

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2235

(Information) DBUperMicron = '%d'

**Description**

StarXtract reports this information.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2236

(Information) CapacitanceScale = '%d'

**Description**

StarXtract reports this information.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2237

(Information) ResistanceScale = '%d'

**Description**

StarXtract reports this information.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2238

(Information) BusBitChars = '%s'

**Description**

StarXtract reports this information.

Feedback

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2239

(Information) HierchicalSep = '%c'

**Description**

StarXtract reports this information.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2241

(Information) Milkyway Layer '%d' datatype# '%d' has nonMask set to 1, polygons from that dataType will be ignored.

**Description**

StarXtract ignores all polygons that the datatype has nonMask set to 1.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2242

(Severe) MW TechFile layer '%s' is a CONNECTED layer. Either it or its mask layer '%s' must be specified in the MAPPING_FILE.

**Description**

StarXtract finds this CONNECTED layer, but cannot get its setting or its mask layer setting from MAPPING_FILE.

**What Next**

Set the correct layer mapping into MAPPING_FILE.

---

## SX-2244

(Severe) Layer '%s' is used by MWContactCode and must be in MAPPING_FILE.

Feedback

**Description**

StarXtract finds MWContactCode has this layer, but this layer is not in MAPPING_FILE. All layers mapping must be in MAPPING_FILE.

**What Next**

Set this layer mapping into MAPPING_FILE.

---

## SX-2245

(Fatal) Could not write file '%s'

**Description**

StarXtract is trying to write this file, but this operation is failed.

**What Next**

Correct the setting of this file.

---

## SX-2246

(Fatal) Could not read file '%s'

**Description**

StarXtract is trying to open this file, but this operation is failed.

**What Next**

Correct the setting of this file.

---

## SX-2247

(Fatal) Device DB is corrupted.

**Description**

StarXtract finds this incompatible data.

**What Next**

Run -clean to get updated device DB.

---

## SX-2248

(Fatal) Device DB is not compatible with this executable.

Feedback

**Description**

StarXtract finds this incompatible data.

**What Next**

Run -clean to get updated device DB.

---

## SX-2249

(Warning) Device recognition layer cannot be set to remove_layer in MAPPING_FILE when AUTO_RUNSET: YES is set.

**Description**

This in unexpected data of device recognition layer.

**What Next**

Confirm this is expected data. If it is not, correct the setting or the data.

---

## SX-2250

(Warning) Device terminal layer '%s' used by "'%s':'%s'" is removed in MAPPING_FILE or is the BULK terminal of another device.

**Description**

Terminals of this type will be netlisted ideally.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2251

(Severe) Invalid CONVERT_DIODE_TO_PARASITIC_CAP usage; wrong number of arguments in '%s'. '%s'

**Description**

StarXtract finds this invalid usage.

**What Next**

Correct the usage of CONVERT_DIODE_TO_PARASITIC_CAP.

Feedback

## SX-2252

(Severe) Invalid CONVERT_DIODE_TO_PARASITIC_CAP usage; area coefficient could not be converted to a positive number in '%s'. '%s'.

**Description**

StarXtract finds this invalid usage.

**What Next**

Correct the usage of CONVERT_DIODE_TO_PARASITIC_CAP.

## SX-2253

(Severe) Invalid CONVERT_DIODE_TO_PARASITIC_CAP usage; perimeter coefficient could not be converted to a positive number in '%s'. '%s'.

**Description**

StarXtract finds this invalid usage.

**What Next**

Correct the usage of CONVERT_DIODE_TO_PARASITIC_CAP.

## SX-2254

(Severe) Invalid CONVERT_DIODE_TO_PARASITIC_CAP usage; specified device '%s' is not a diode.

**Description**

StarXtract finds this invalid usage.

**What Next**

Correct the data of this device.

## SX-2255

(Severe) Invalid RETAIN_CAPACITANCE_CAP_MODELS usage; specified device '%s' is not a capacitor.

**Description**

StarXtract finds this device is not a capacitor.

Feedback

**What Next**

Confirm the Milkyway data is not broken. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2256

(Warning) %s device "%s" specified in %s option does not exist in the runset.

**Description**

StarXtract finds this option does not exist in the runset.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2257

(Information) '%s' Option setting will be applied to all matching runset definitions.

**Description**

StarXtract is applying this option to all matching runset definitions.

**What Next**

If this is expected behavior, it is information only. No action is needed.

---

## SX-2258

(Fatal) Cannot open file '%s'.

**Description**

StarXtract is trying to open this file, but this operation is failed.

**What Next**

Confirm the setting for this file is correct.

---

## SX-2259

(Fatal) Element devices not suppported in Milkyway XTR view.

**Description**

StarXtract does not support element devices.

Feedback

**What Next**

Confirm the procedures and settings to generate this data is correct, and then regenerate this data.

---

## SX-2260

(Warning) Parse error in runset at line '%d' near token '%s'.

**Description**

StarXtract is having this parsing error for the runset.

**What Next**

Confirm the procedures and settings to generate this data is correct, and then regenerate this data.

---

## SX-2261

(Fatal) Must specify (P)DIODE_TYPE in Hercules '%s' (P)DIODE definition.

**Description**

StarXtract finds this invalid data. The (P)DIODE_TYPE must be specified in Hercules '%s' (P)DIODE definition.

**What Next**

Confirm the procedures and settings to generate this data is correct, and then regenerate this data.

---

## SX-2262

(Fatal) Invalid (P)DIODE_TYPE '%s' in Hercules '%s' (P)DIODE defintion. Must be PN or NP.

**Description**

StarXtract finds this invalid data. It must be PN or NP.

**What Next**

Confirm the procedures and settings to generate this data is correct, and then regenerate this data.

Feedback

## SX-2263

(Severe) Invalid RES_DIODE_TYPE for '%s'. Must be PN_DIODE or NP_DIODE.

**Description**

StarXtract finds this incorrect data. This RES_DIODE_TYPE must be PN_DIODE or NP_DIODE.

**What Next**

Confirm the procedures and settings to generate this data is correct, and then regenerate this data.

## SX-2264

(Severe) RES device '%s' with PDIODE through RES_DIODE_NAME/RES_DIODE_TYPE must have 3 terminals.

**Description**

StarXtract finds this incorrect data. This device through RES_DIODE_NAME/ RES_DIODE_TYPE must have 3 terminals, includes BULK.

**What Next**

Confirm the procedures and settings to generate this data is correct, and then regenerate this data.

## SX-2265

(Severe) RES device '%s' with PDIODE through RES_DIODE_NAME/RES_DIODE_TYPE must use same layer for terminal A and terminal B.

**Description**

StarXtract finds this incorrect data. This device through RES_DIODE_NAME/ RES_DIODE_TYPE must use same layer for terminal A and terminal B.

**What Next**

Confirm the procedures and settings to generate this data is correct, and then regenerate this data.

## SX-2266

(Warning) STARRCXT_WITH_2006_12_HERCULES is going to be replaced by STARRC_WITH_2006_12_HERCULES.

Feedback

**Description**

StarXtract replaces STARRCXT_WITH_2006_12_HERCULES with STARRCXT_WITH_2006_12_HERCULES.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2267

(Warning) DEVICE_PREFIX for '%s' contains more than one character; the first character will be retained and the remainder ignored.

**Description**

StarXtract only retains the first character of DEVICE_PREFIX.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2268

(Warning) INCLUDE_TECHNOLOGY_DEFAULTS=FALSE specified in Hercules runset.

**Description**

This option overrides the -rcxt command line option and may unnecessarily increase StarRC runtime.

**What Next**

Regenerate the XTR view database without this option for optimum performance.

---

## SX-2269

(Warning) MARKER_GENERATION: HERCULES is required when using PIN_LAYER_LIST command in Hercules runset.

**Description**

To run MARKER_GENERATION: HERCULES needs PIN_LAYER_LIST in the Hercules runset.

Feedback

**What Next**

Set MARKER_GENERATION: HERCULES.

---

## SX-2270

(Warning) MARKER_GENERATION: HERCULES requires PIN_LAYER_LIST in the Hercules runset.

**Description**

To run MARKER_GENERATION: HERCULES needs PIN_LAYER_LIST in the Hercules runset.

**What Next**

Set MARKER_GENERATION: AUTOMATIC.

---

## SX-2271

(Fatal) Not an LVS runset, cannot use XREF: YES/COMPLETE.

**Description**

XREF: YES/COMPLETE only supports LVS runset.

**What Next**

Make sure that WRITE_EXTRACT_VIEW and COMPARE are both run in the same call to Hercules.

---

## SX-2272

(Fatal) LVS_TOP_BLOCK: '%s' does not match runset BLOCK '%s'.

**Description**

StarXtract finds this inconsistent setting.

**What Next**

Correct one setting of them.

---

## SX-2273

(Warning) Hercules COMPARE option MERGE_PATHS=TRUE may result in duplicated schematic name assignments for individual layout elements during Hercules COMPARE.

Feedback

The first assignment encountered will be applied and the remaining conflicting assignments will be netlisted with layout element names.

**Description**

SX-5150 and/or SX-5151 will be issued at the XrefHN stage for any occurances of duplicated assignments.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2274

(Warning) Hercules COMPARE option MEMORY_ARRAY_COMPARISON is not supported for XREF extractions.

**Description**

StarXtract does not support Hercules COMPARE option MEMORY_ARRAY_COMPARISON for XREF extractions.

**What Next**

Set MEMORY_ARRAY_COMPARISON to FALSE and re-run Hercules LVS.

---

## SX-2275

(Fatal) Hercules EVACCESS_OPTIONS option CREATE_VIEWS=TRUE is required for XREF.

**Description**

The setting of CREATE_VIEWS must be TRUE for XREF.

**What Next**

Correct this setting of Hercules runset.

---

## SX-2276

(Fatal) CELL_TYPE: SCHEMATIC is only available with XREF: YES or COMPLETE.

**Description**

StarXtract finds invalid setting of CELL_TYPE.

Feedback

**What Next**

Correct this setting in the StarXtract command file.

---

## SX-2277

(Fatal) NET_TYPE: SCHEMATIC is only available with XREF: YES or COMPLETE.

**Description**

StarXtract finds invalid setting of NET_TYPE.

**What Next**

Correct this setting in the StarXtract command file.

---

## SX-2278

(Fatal) NET_TYPE must be LAYOUT or SCHEMATIC.

**Description**

StarXtract finds there is the invalid setting of NET_TYPE.

**What Next**

Correct this setting in the StarXtract command file.

---

## SX-2279

(Fatal) Must use CASE_SENSITIVE: NO when IGNORE_CASE=TRUE in the Hercules runset.

**Description**

Hercules runset has IGNORE_CASE=TRUE. The setting of CASE_SENSITIVE in the StarXtract command file must be NO.

**What Next**

Correct the setting of StarXtract command file.

---

## SX-2280

(Warning) Specified '%s' does not exist.

**Description**

StarXtract is attempting to read this location from Hercules runset, but it does not exist.

Feedback

**What Next**

Correct this location setting.

---

## SX-2281

(Warning) '%s'::'%s'='%s' in the Hercules runset is not a valid path.

**Description**

StarXtract finds this is not a valid path.

**What Next**

Correct this setting of the path.

---

## SX-2282

(Warning) Could not determine '%s' location for Hercules runset.

**Description**

StarXtract could not determine this location for Hercules runset.

**What Next**

Correct this location setting for Hercules runset.

---

## SX-2283

(Warning) '%s' '%s' in the Hercules runset does not match '%s' in the StarXtract command file Hercules Runset: '%s' StarRC Cmd: '%s'.

**Description**

StarXtract expects they should be consistent.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2284

(Warning) Schematic device '%s' equates to undefined layout device '%s'.

**Description**

StarXtract finds this schematic device equates to undefined layout device.

Feedback

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2285

(Severe) Hercules runset does not contain any valid EQUATE statement.

**Description**

There are some devices, but StarXtract does not find any valid EQUATE statement in the Hercules runset.

**What Next**

Insert lvsflow equates into user runset.

---

## SX-2286

(Warning) The '%s' database schema version is not compatible with StarXtract.

**Description**

This is incompatible Milkyway database schema version, the result of StarXtract may be incorrect.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

---

## SX-2287

(Fatal) Missing '%d' cells in database.

**Description**

StarXtract finds there are missing cells in database, could not continue. The detail information is in summary/hn.sum, SX-2325.

**What Next**

Confirm the Milkyway data is not broken. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2288

(Warning) Missing FRAM views for '%d' SKIP_CELLs.

Feedback

**Description**

StarXtract reports there are these missing FRAM views. hn.sum file has the detail. The detail information is in summary/hn.sum, SX-2306.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2289

(Warning) Found '%d' SKIP_CELLS without POWER or GROUND ports.

**Description**

StarXtract reports there are these SKIP_CELLS without POWER or GROUND ports. hn.sum file has the detail. The detail information is in summary/hn.sum, SX-2293.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2290

(Warning) Total '%d' empty instance name errors will cause connecting to the ports fail.

**Description**

StarXtract reports there are these empty instance name errors. The detail information is in summary/hn.sum, SX-2320 and SX-2321.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2291

(Warning) Expanded '%d' hierarchical cells.

**Description**

StarXtract finds these hierarchical cells expanded. hn.sum file has the detail. The detail information is in summary/hn.sum, SX-2324.

Feedback

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate the Milkyway data.

---

## SX-2292

(Warning) EEQ pin name '%s' in cell '%s' is already used by a primary port.

**Description**

StarXtract finds this pin name is already used by a primary port. This pin will not be netlisted uniquely.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

---

## SX-2293

(Information) SKIP_CELL '%s' does not contain POWER or GROUND ports.

**Description**

StarXtract finds this skipped cell does not contain POWER or GROUND ports.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2294

(Information) physical only port found in '%s'

**Description**

StarXtract finds physical only port.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2295

(Information) Too many physical only port found. Only print the first '%d' ports.

**Description**

StarXtract finds physical only port.

Feedback

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2296

(Severe) Could not iterate port instances from instance '%s'.

**Description**

StarXtract is iterating the port instances of this instance, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2299

(Severe) Could not iterate extra port instances from instance '%s'.

**Description**

StarXtract is iterating the extra port instances of this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2300

(Severe) Could not determine extra port name of instance '%s' in cell '%s'.

**Description**

StarXtract could not determine this extra port name.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2301

(Fatal) Layout instance "%s%c%s" is connected to ground "0".

**Description**

This kind of data will have incorrect result.

Feedback

**What Next**

Rename net "0" to another name.

---

## SX-2302

(Warning) Cell placement of '%s' has nonexistent port '%s'.

**Description**

StarXtract finds this nonexistent port.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

---

## SX-2303

(Fatal) Failed to compute cell extents for design.

**Description**

StarXtract is getting the cell extent information from Milkyway database, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2304

(Warning) DIRTY_LAYOUT:YES is set in StarRC command file. This command is not for production purpose and the NETLIST_FILE with this command should not be considered as sign-off quality.

**Description**

DIRTY_LAYOUT:YES is set in StarRC command file. This command is not for production purpose and the NETLIST_FILE with this command should not be considered as sign-off quality.

**What Next**

Remove DIRTY_LAYOUT in StarRC command file for sign-off quality extraction.

---

## SX-2305

(Fatal) Cell '%s' is both SKIP_CELL and SKIP_PCELL.

Feedback

**Description**

StarXtract finds this skipped pcell is skipped cell.

**What Next**

Remove all cells specified in SKIP_PCELLS from SKIP_CELLS or set SKIP_CELLS:!*.

---

## SX-2306

(Information) Missing FRAM view for SKIP_CELL '%s'.

**Description**

StarXtract is getting the FRAM view data for this skipped cell, but this data does not exist.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2308

(Severe) Could not get instance data for '%s' in cell '%s'.

**Description**

StarXtract is getting this instance data from Milkyway database, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2309

(Warning) Instance '%s' of COUPLE_NONCRITICAL_NETS cell '%s' is not a SKIP_CELL and will be flattened.

**Description**

StarXtract will flatten this instance.

**What Next**

Confirm this is the expected behavior that depends on option settings.

---

## SX-2314

(Severe) Could not iterate port instances in cell '%s'.

Feedback

**Description**

StarXtract is iterating the port instances of this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2315

(Warning) The '%s' ('%s', '%s') has a port, portInstId = '%d', with netId = 0.

**Description**

StarXtract finds this net ID zero data.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

---

## SX-2316

(Warning) The '%s' has the port '%s', portId = '%d', with netId = 0.

**Description**

StarXtract finds this net ID zero data.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

---

## SX-2317

(Severe) Could not iterate nets in cell '%s'.

**Description**

StarXtract is iterating the nets of this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2320

(Warning) No instance name defined for placement of cell '%s'.

Feedback

**Description**

StarXtract finds there is no instance name defined for placement of this cell.

**What Next**

Confirm this Milkyway data is expected or contact the Synopsys Support Center.

---

## SX-2321

(Information) Empty instance name for placement '%s' in '%s' @ ['%d','%d'].

**Description**

StarXtract finds this empty instance name.

**What Next**

It is information only. No action is needed.

---

## SX-2322

(Severe) Unable to load cell '%s'.

**Description**

StarXtract is loading this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2324

(Information) Expanded hierarchical cell '%s' from library '%s'.

**Description**

StarXtract shows expanded hierarchical cell information.

**What Next**

It is information only. No action is needed.

---

## SX-2325

(Severe) Could not open cell "'%s'.'%s'".

Feedback

**Description**

StarXtract is opening this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2326

(Warning) Failed to iterate all '%s' in cell '%s' Total='%d' Iterated='%d'.

**Description**

StarXtract is iterating the Milkyway objects of this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2327

(Fatal) Failed to reset cell '%s'.

**Description**

StarXtract is resetting this cell, but this operation is failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2329

(Severe) Could not get instance data for '%s' in cell '%s'.

**Description**

StarXtract is trying to get this instance data from Milkyway database, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2332

(Severe) Unable to load cell '%s'.

Feedback

**Description**

StarXtract is trying to load the data of this cell from Milkyway database, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2334

(Fatal) Cell '%s' is both SKIP_CELL and SKIP_PCELL.

**Description**

StarXtract reports this conflict data.

**What Next**

Remove all cells specified in SKIP_PCELLS from SKIP_CELLS or set SKIP_CELLS:!*.

---

## SX-2335

(Fatal) Only single nxtgrd file can be specified.

**Description**

StarRC detects that you have specified multiple nxtgrd files.

**What Next**

Make sure that only one nxtgrd file can be specified.

---

## SX-2389

(Fatal) Incorrect ContactCode '%d'.

**Description**

StarXtract reports this incorrect data.

**What Next**

Check tech file for this ContactCode.

---

## SX-2393

(Fatal) MARKER_GENERATION must be USER, AUTOMATIC or HERCULES.

Feedback

**Description**

The valid setting of MARKER_GENERATION are USER, AUTOMATIC or HERCULES.

**What Next**

Correct the setting in the StarXtract command file.

---

## SX-2395

(Fatal) Could not determine P&R cell boundary for '%s'.

**Description**

StarXtract is getting the cell boundary information from Milkyway database, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2397

(Severe) Could not iterate instances array in cell '%s'.

**Description**

StarXtract is iterating the instances array of this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2398

(Warning) Virtual pin geometries are created on '%s'

**Description**

Pin in the macro is not placed in the layout. StarRC traces down the hierarchy for the first logically-connected instance and derives pin shapes from it for this unplaced pin (virtual PIO geometry). However, placement for this pin in parasitic netlist might be incorrect.

Due to the limitation in NDM streaming API, these virtual pin geometries are currently created on first metal layer.

**What Next**

Information only; no action needed.

Feedback

## SX-2399

(Warning) Pin '%s' does not have top-level routing shapes. Pin geometries are derived from the overlapping instance port shapes.

**Description**

Pin in the macro is not placed in the layout. StarRC traces down the hierarchy for the first logically-connected instance and derives pin shapes from it for this unplaced pin (virtual PIO geometry). However, placement for this pin in parasitic netlist might be incorrect.

**What Next**

Information only; no action needed.

## SX-2401

(Warning) Physical shape of logical pin port '%s' in BLOCK '%s' is not placed correctly and will be ignored.

**Description**

Physical shape of logical pin port must be placed on a physical layer.

**What Next**

Check the logical pin port that placed on a non-physical layer is expected. If not, contact the Synopsys Support Center.

## SX-2402

(Warning) Logical pin port '%s' in BLOCK is not placed in the layout.

**Description**

StarXtract is creating a virtual PIO geometry. Placement for this pin in parasitic netlist might be incorrect.

**What Next**

Confirm this is the expected data and behavior. If it is not the expected data, check Milkyway data is not broken or re-generate the Milkyway data.

## SX-2404

(Warning) Logical pin port '%s' in BLOCK is not placed in the layout.

Feedback

**Description**

This port will be nelisted in the *PORTS section of SPEF and/or the .SUBCKT statement for SPF/STAR/NETNAME formats but will not appear in the detail parasitic section (since it has no physical characteristic).

**What Next**

Confirm this is the expected data and behavior. If it is not the expected data, check Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2407

(Severe) Could not iterate rectangles in cell '%s'.

**Description**

StarXtract is iterating the rectangles of this cell, but this operation is failed.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2411

(Warning) Embedded color information will not be used since DPT_COLOR_GDS_FILE is used.

**Description**

StarXtract will not use embedded color information while DPT_COLOR_GDS_FILE is used.

**What Next**

Confirm this is the expected behavior.

---

## SX-2412

(Warning) Unsupported OASIS record

**Description**

Circle and X-Geometry records are currently not supported. They are ignored during import.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-2414

(Warning) Unrecognized OASIS record

**Description**

Records that are not documented in the OASIS specfication are unrecognized records. StarRC will skip any unrecognized record during import.

**What Next**

Contact the Synopsys Support Center.

## SX-2415

(Information) Failed to build FILE mode DCM table '%s'.

**Description**

StarXtract is building this FILE mode DCM table, but this operation is failed.

**What Next**

If this is expected behavior, it is information only. No action is needed.

## SX-2418

(Fatal) Running StarXtract with -cleanN and NETLIST_FORMAT: '%s' following a run with NETLIST_FORMAT: 'NONE' is not supported. Rerun with -clean to generate netlists with NETLIST_FORMAT '%s'.

**Description**

The only format that is supported with '-cleanN' after 'NETLIST_FORMAT: NONE' is NETLIST_FORMAT: 'SPEF'.

**What Next**

Consult the StarRC user guide.

## SX-2426

(Fatal) Found invalid option changes between previous run and this incremental run.

**Description**

There are inconsistent option commands between previous run and this incremental run. Please check command files.

Feedback

**What Next**

Please refer to section on ECO extraction in the StarRC user guide.

---

## SX-2434

(Fatal) Cannot open BLOCK '%s' in input database.

**Description**

Cannot open top BLOCK cell in input database.

**What Next**

Check whether the BLOCK setting is StarRC command file is correct.

---

## SX-2457

(Fatal) the executable is called from wrong location

**Description**

To invoke gui, please call StarXtract from correct location.

**What Next**

Check you StarXtract path or installation.

---

## SX-2458

(Fatal) Could not create tcl gui

**Description**

This is internal error message to indicate TCL interpreter cannot be created

**What Next**

Contact the Synopsys Support Center.

---

## SX-2465

(Information) Error: Could not connect to AServer.

**Description**

This is an internal error for -gui.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2466

(Information) Error: Could not connect to Executable.

**Description**

This is an internal error for -gui.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2467

(Information) Erro: No sesstion info from AServer.

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2468

(Information) ERROR: Lost connection to AServer.

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2469

(Information) ERROR: Unable to find '%s' session.

**Description**

This is an internal error for -gui

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2470

(Information) ERROR: Incorrect user id for '%s' session.

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2471

(Information) Connected to '%s' sId='%d' pId='%d'

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2472

(Information) Shutting down AServer connection...

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2473

(Information) ERROR: Unable to close connection with AServer.

**Description**

This is an internal error for -gui

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2474

(Information) Error: couldn't find hostname

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2475

(Information) ERROR: RPC connection not initialized yet.

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2476

(Information) ERROR: Time out waiting for application to respond.

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2477

(Information) ERROR: Sending command before connect.

**Description**

This is an internal error for -gui

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2478

(Information) ERROR: Connection lost while sending.

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2479

(Information) ERROR: Failed to send.

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2480

(Information) ERROR: Could not open library '%s'

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2481

(Information) Error: Could not read object details

**Description**

This is an internal error for -gui

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2482

(Fatal) Invalid violation file format

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2483

(Information) ERROR: No library opened. Cannot open cell '%s'

**Description**

This is an internal error for -gui

**What Next**

Contact the Synopsys Support Center.

---

## SX-2484

(Information) '%s'

**Description**

This is the message to pass all Error/Warning/Information message from Viewer->Prepare Viewer Data

**What Next**

If it is just a Information/Warning, please ignore it. If this is a Error, please contact Synopsys Suport Center.

---

## SX-2486

(Severe) '%s' Failed (see '%s' )

**Description**

If you get this message, that means Viewer->Prepare Viewer Data failed.

Feedback

**What Next**

Please check Error message before this message.

---

## SX-2489

(Fatal) LPE_PARAM: '%s' does not have a value defined for NORC.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2490

(Warning) LPE parameter '%s' was used for some devices but was not defined by LPE_PARAM statement.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2497

(Fatal) Could not write file '%s'.

**Description**

The file cannot be open or written.

**What Next**

Check if the disk is full.

---

## SX-2499

(Fatal) File offset is too large for 32-b application. Please run with 64-b.

**Description**

The file generated by StarRC is too large and the file offset is larger than 2^31.

Feedback

**What Next**

Run StarRC on 64-bits machine to overcome this issue.

---

## SX-2505

(Severe) Instance '%s' has no definition.

**Description**

Instances used in NETS section in DEF file aren't defined in COMPONENTS section.

**What Next**

Check the DEF file correctness.

---

## SX-2506

(Fatal) '%s' line '%d'. LPE_PARAM rule: expecting parameter name before parameter values.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2508

(Fatal) '%s' line '%d'. LPE_PARAM rule: unknown extraction mode '%s'.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2509

(Fatal) '%s' line '%d'. LPE_PARAM rule: the parameter values are not defined correctly.

**Description**

Wrong LPE_PARAM settings

Feedback

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2510

(Fatal) '%s' line '%d'. PINEXCEPT rule: expecting list of pins (indices).

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2511

(Fatal) '%s' line '%d'. PINOPERATION rule: expecting AND or OR operation.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2512

(Fatal) '%s' line '%d'. LPE_DEVICES rule: unexpected integer.

**Description**

Wrong LPE_DEVICES settings

**What Next**

Verify LPE_DEVICES settings in StarRC command file.

---

## SX-2513

(Fatal) INSTANCE_PORT_REPORT_FILE can only be set if INSTANCE_PORT is set.

**Description**

INSTANCE_PORT_REPORT_FILE is used to report instance port settings
by INSTANCE_PORT command. If INSTANCE_PORT is not set, StarRC will

Feedback

use default (CONDUCTIVE) for all instance ports. There is no need to use INSTANCE_PORT_REPORT_FILE.

**What Next**

Add INSTANCE_PORT in StarRC command file.

---

## SX-2514

(Fatal) Parse error at line '%d' of file: '%s' near unexpected token '%s'.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2515

(Fatal) LPE: 1 LPE_PARAM statement is missing.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2516

(Fatal) LPE: '%d' LPE_PARAM statements are missing.

**Description**

Wrong LPE_PARAM settings

**What Next**

Verify LPE_PARAM settings in StarRC command file.

---

## SX-2519

(Warning) Duplicate device name '%s' in CALIBRE_LVS_DEVICE_TYPE option.

Feedback

**Description**

Duplicate device name is defined in CALIBRE_LVS_DEVICE_TYPE option.

**What Next**

Make sure each device name is unique in CALIBRE_LVS_DEVICE_TYPE.

---

## SX-2520

(Warning) Duplicate device name '%s' in ICV_LVS_DEVICE_TYPE option.

**Description**

Duplicate device name is defined in ICV_LVS_DEVICE_TYPE option.

**What Next**

Make sure each device name is unique in ICV_LVS_DEVICE_TYPE.

---

## SX-2521

(Warning) Detected TSMC/3DIC design modules and exploded them automatically.

**Description**

TSMC 3DIC Design Module must be exploded (non-skipped cell) for StarRC to make them transparent in the design. Because of this, StarRC explodes them automatically if they are not marked non-skipped cells.

**What Next**

Information only; no actions required.

---

## SX-2522

(Warning) Cannot open CALIBRE_OPTIONAL_DEVICE_PIN_FILE:'%s'

**Description**

Cannot open CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

**What Next**

Make sure the CALIBRE_OPTIONAL_DEVICE_PIN_FILE is correctly defined and you have permission to read.

Feedback

## SX-2523

(Warning) Cannot open ICV_OPTIONAL_DEVICE_PIN_FILE:'%s'

**Description**

Cannot open ICV_OPTIONAL_DEVICE_PIN_FILE.

**What Next**

Make sure the ICV_OPTIONAL_DEVICE_PIN_FILE is correctly defined and you have permission to read.

## SX-2526

(Warning) CALIBRE_OPTIONAL_DEVICE_PIN_FILE: Unsupport device type '%s'.

**Description**

CALIBRE_OPTIONAL_DEVICE_PIN_FILE: Unsupport device type. Only "M", "C" and "R" are supported device type.

**What Next**

Define correct device type in CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

## SX-2527

(Warning) ICV_OPTIONAL_DEVICE_PIN_FILE: Unsupport device type '%s'.

**Description**

ICV_OPTIONAL_DEVICE_PIN_FILE: Unsupport device type. Only "M", "C" and "R" are supported device type.

**What Next**

Define correct device type in ICV_OPTIONAL_DEVICE_PIN_FILE.

## SX-2528

(Warning) CALIBRE_OPTIONAL_DEVICE_PIN_FILE: Device '%s' is not specified in CALIBRE_LVS_DEVICE_TYPE option.

**Description**

CALIBRE_OPTIONAL_DEVICE_PIN_FILE: Device is not specified in CALIBRE_LVS_DEVICE_TYPE option.

Feedback

**What Next**

Make sure that the devices defined in CALIBRE_OPTIONAL_DEVICE_PIN_FILE is specified in CALIBRE_LVS_DEVICE_TYPE option.

---

## SX-2529

(Warning) ICV_OPTIONAL_DEVICE_PIN_FILE: Device '%s' is not specified in ICV_LVS_DEVICE_TYPE option.

**Description**

ICV_OPTIONAL_DEVICE_PIN_FILE: Device is not specified in ICV_LVS_DEVICE_TYPE option.

**What Next**

Make sure that the devices defined in ICV_OPTIONAL_DEVICE_PIN_FILE is specified in ICV_LVS_DEVICE_TYPE option.

---

## SX-2530

(Warning) CALIBRE_OPTIONAL_DEVICE_PIN_FILE: Device type of '%s' is inconsistent to CALIBRE_LVS_DEVICE_TYPE specification.

**Description**

CALIBRE_OPTIONAL_DEVICE_PIN_FILE: Device type of the specified device is inconsistent to CALIBRE_LVS_DEVICE_TYPE specification. CALIBRE_LVS_DEVICE_TYPE represents for CALIBRE_LVS_DEVICE_TYPE_CAP, CALIBRE_LVS_DEVICE_TYPE_RES and CALIBRE_LVS_DEVICE_TYPE_MOS. For example: If command 'CALIBRE_LVS_DEVICE_TYPE_CAP: cap123' and 'CALIBRE_OPTIONAL_DEVICE_PIN_FILE: file_abc' are specified, and file_abc contains a line like this: R cap123 ..... Then, Warning message SX-2530 will be given to inform you the inconsistency.

**What Next**

Make sure that the device type is consistent in CALIBRE_OPTIONAL_DEVICE_PIN_FILE and CALIBRE_LVS_DEVICE_TYPE.

---

## SX-2531

(Warning) ICV_OPTIONAL_DEVICE_PIN_FILE: Device type of '%s' is inconsistent to ICV_LVS_DEVICE_TYPE specification.

Feedback

**Description**

ICV_OPTIONAL_DEVICE_PIN_FILE: Device type of the specified device is inconsistent to ICV_LVS_DEVICE_TYPE specification. ICV_LVS_DEVICE_TYPE represents for ICV_LVS_DEVICE_TYPE_CAP, ICV_LVS_DEVICE_TYPE_RES and ICV_LVS_DEVICE_TYPE_MOS. For example: If command 'ICV_LVS_DEVICE_TYPE_CAP: cap123' and 'ICV_OPTIONAL_DEVICE_PIN_FILE: file_abc' are specified, and file_abc contains a line like this: R cap123 ..... Then, Warning message SX-2530 will be given to inform you the inconsistency.

**What Next**

Make sure that the device type is consistent in ICV_OPTIONAL_DEVICE_PIN_FILE and ICV_LVS_DEVICE_TYPE.

---

## SX-2532

(Fatal) CALIBRE_OPTIONAL_DEVICE_PIN_FILE: In device '%s', terminal assignment format should be layer_name(terminal_name).

**Description**

Terminal assignment format should be layer_name(terminal_name) in CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

**What Next**

Set correct format for device terminal in CALIBRE_OPTIONAL_DEVICE_PIN_FILE.

---

## SX-2533

(Fatal) ICV_OPTIONAL_DEVICE_PIN_FILE: In device '%s', terminal assignment format should be layer_name(terminal_name).

**Description**

Terminal assignment format should be layer_name(terminal_name) in ICV_OPTIONAL_DEVICE_PIN_FILE.

**What Next**

Set correct format for device terminal in ICV_OPTIONAL_DEVICE_PIN_FILE.

---

## SX-2534

(Warning) Model doesn't exist!! HN_NETLIST_MODEL_NAME: %s.

Feedback

**Description**

StarXtract finds this model name does not exist.

**What Next**

Confirm this is expected data. If it is not, correct this model name.

---

## SX-2536

(Fatal) Cannot open internal file '%s'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2537

(Fatal) Corrupted internal DHE file '%s'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2541

(Warning) Simple array via or base via in a via matrix '%s' with via definition '%s' is found with wrong array ratio '%.4f' in the database

**Description**

Multi-cut via with regular cut pattern can be abstracted with a via array ratio for StarRC to extract faster. If the array ratio is larger than 1.0, StarRC will ignore the cut abstraction and translate each cut instead.

It's most likely caused by a wrong multi-cut via definition which has wrong rows/columns properties.

**What Next**

Correct the via definition of the reported via instance.

Feedback

## SX-2542

(Fatal) Invalid HN_NETLIST_MODEL_NAME specification.

**Description**

The correct usage is HN_NETLIST_MODEL_NAME: <device model name> <netlist model name>.

**What Next**

Correct the usage of HN_NETLIST_MODEL_NAME.

## SX-2543

(Warning) NDM design '%s' references a non-existent or unreadble FILL design in disk (%s).

**Description**

The disk file for the FILL design might be deleted accidentally or chmod without proper permission. This leave its references broken in the design. The FILL design will be ignored in the translation.

**What Next**

Check if the FILL design is removed intentionally and fix it if it is not intentional.

## SX-2544

(Information) DONE

**Description**

This is information to show Viewer->Prepare Viewer Data finish successfully.

**What Next**

No action is needed.

## SX-2545

(Warning) A big but empty design cell '%s' scheduled for parallel SkipCell creation is found

Feedback

**Description**

A design cell scheduled for parallel SkipCell creation is found empty after DB import. If it is instantiated several times in the design, it may causes false opens or other issues at the extraction considering its significant size in the DB.

When all metal routings in a design cell are not mapped correctly in the MAPPING_FILE, metal routings are considered unimportant to the extraction and ignored. In this case, the design cell will be empty after DB import and its skip cell will be excluded from SkipCell creation.

**What Next**

Please check the design cell in the input DB or MAPPING_FILE.

---

## SX-2546

(Fatal) The character '/' is not allowed in COUPLE_NONCRITICAL_NETS_PREFIX.

**Description**

'/' is not allowed in the name of COUPLE_NONCRITICAL_NETS_PREFIX.

**What Next**

Change the COUPLE_NONCRITICAL_NETS_PREFIX name.

---

## SX-2548

(Fatal) Failed to compute cell extents for '%s'.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2549

(Warning) PIN_CUT_THRESHOLD is not supported for non-manhattan pin shapes. Additional *P will not be generated for the following shape: '%s'

**Description**

StarRC detects non-manhattan shape pins. PIN_CUT_THRESHOLD only works with manhattan shape pins. So StarRC will not generate multiple *P for this pin.

Feedback

**What Next**

This is an informational message only. If this non-manhattan shape pin is expected, no action is required on your part.

---

## SX-2550

(Warning) Undefined GDS/OASIS cell '%s'

**Description**

A cell instance in the GDS_FILE/OASIS_FILE doesn't have cell definition. StarRC will ignore these instances during translation.

**What Next**

Information only; no action needed.

---

## SX-2552

(Fatal) SkipCellDB index file is corrupted or not compatible with this release. Please run -clean.

**Description**

An internal consistency check has failed.

**What Next**

This error message may due to version change in internal files. If you run StarRC with -clean command line option and you still see this error message, contact the Synopsys Support Center.

---

## SX-2553

(Fatal) SKIP_CELLS database version is not compatible with this release. Please run -clean.

**Description**

StarRC internal file version is changed. StarRC detects old version in STAR directory.

**What Next**

Run StarRC with -clean command line option. If this error still exists, contact the Synopsys Support Center.

Feedback

## SX-2555

(Fatal) %s_LAYER_MAP_FILE is missing.

**Description**

GDS_FILE, METAL_FILL_GDS_FILE, CONTEXT_GDS_FILE and SKIP_CELL_AGF_FILE require layer mappings specified GDS_LAYER_MAP_FILE so as for StarRC to translate GDS structs into appropriate layers in the main design database.

OASIS_FILE, METAL_FILL_OASIS_FILE and CONTEXT_OASIS_FILE require layer mappings specified in OASIS_LAYER_MAP_FILE so as for StarRC to translate OASIS structs into appropriate layers in main design database.

**What Next**

Specify GDS_LAYER_MAP_FILE/OASIS_LAYER_MAP_FILE in command file and run StarRC again.

## SX-2558

(Fatal) binary xin file is corrupted! suspect version mismatch.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-2563

(Fatal) error while reading xin.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-2566

(Warning) via_models file corrupted!

Feedback

**Description**

Invalid data is detected in via_models file.

**What Next**

An internal consistency check has failed.

---

## SX-2567

(Fatal) via_models file corrupted in via model section.

**Description**

Invalid data is detected in via_models file in via model section.

**What Next**

An internal consistency check has failed.

---

## SX-2569

(Fatal) via_models file corrupted in sav section.

**Description**

Invalid data is detected in via_models file in sav section.

**What Next**

An internal consistency check has failed.

---

## SX-2573

(Fatal) via_models file corrupted: cannot read corner RPV due to bad format.

**Description**

Format of via_models file is not correct.

**What Next**

An internal consistency check has failed.

---

## SX-2574

(Fatal) via_models file corrupted: cannot add corner RPV due to discrepancy from primary RPV.

Feedback

**Description**

Invalid RPV value is detected in via_models file.

**What Next**

An internal consistency check has failed.

---

## SX-2576

(Warning) Total number of via and via array models exceed limit of 32767. Via coverage codes may be incorrect!

**Description**

Total number of via models exceed the limit. The result of VIA_COVERAGE could be imfluenced.

**What Next**

Check if all the models are necessary.

---

## SX-2577

(Fatal) via_array_models file corrupted.

**Description**

Invalid data is detected in via_array_models file.

**What Next**

An internal consistency check has failed.

---

## SX-2578

(Warning) -compute_via_coverage is ON, but no via models provided, please re-run translation.

**Description**

via_models file is not found for via coverage computation.

**What Next**

Rerun StarRC.

Feedback

## SX-2579

(Fatal) could not write coverage_codes information file: '%s'

**Description**

Could not write coverage_codes information file.

**What Next**

An internal consistency check has failed.

## SX-2580

(Fatal) Some, but not all via models have semi coverage.

**Description**

Not every via model has Semi coverage.

**What Next**

An internal consistency check has failed.

## SX-2581

(Fatal) Internal, sav-dependent parameter table is empty.

**Description**

Sav-dependent table is empty.

**What Next**

An internal consistency check has failed.

## SX-2582

(Warning) Can't find coverage option for via on layer '%d'

**Description**

Can't find coverage option for this via layer.

**What Next**

Information only; no action is needed.

Feedback

## SX-2583

(Warning) Via model is empty in via_model file "via_models".

**Description**

Empty data is detected in via_models file.

**What Next**

Information only; no action is needed.

## SX-2584

(Warning) Can't find coverage option for via with ContactCode '%d' on layer '%d' with width '%d' length '%d'

**Description**

Can't find coverage option for via.

**What Next**

Information only; no action is needed.

## SX-2585

(Warning) check VIA_COVERAGE_OPTION_FILE and VIA_COVERAGE options in StarRC command file. Your VIA_COVERAGE_OPTION_FILE contains: '%s'

**Description**

Invalid data is detected in input data for via coverage.

**What Next**

Check VIA_COVERAGE_OPTION_FILE and VIA_COVERAGE options in StarRC command file.

## SX-2586

(Warning) Can't find coverage option for via width '%d' length '%d' on layer '%d'. Please check VIA_COVERAGE_OPTION_FILE and VIA_COVERAGE options in StarRC command file.

**Description**

Can't find coverage option for via on the layer.

Feedback

**What Next**

Check VIA_COVERAGE_OPTION_FILE and VIA_COVERAGE options in StarRC command file.

---

## SX-2588

(Warning) Can't find bridge via model for the via with width='%d', length='%d' level='%d', a default model for non-bridge via will be used.

**Description**

Can't find bridge via model for the via, a default model for non-bridge via will be used.

**What Next**

Check the models defined for bridge via.

---

## SX-2590

(Fatal) Could not write data to '%s'.

**Description**

StarRC is unable to write data to the specified file because of issues in the runtime environment.

**What Next**

Try running StarRC on a disk with ample space or contact your system administrator.

---

## SX-2592

(Fatal) Could not read file '%s' to completion.

**Description**

The specified file could not be read to completion.

**What Next**

Try rerunning StarRC. Contact the Synopsys Support Center if the error message persists.

---

## SX-2606

(Fatal) INTERNAL Error: attempt to write '%s' more than once in the flow.

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2607

(Fatal) INTERNAL Error: file '%s' does not exist.

**Description**

An internal consistency check has failed.

**What Next**

Please look for other errors/warnings in the sum file. Please try rerunning, if the original issue persists, please contact the Synopsys Support Center.

---

## SX-2609

(Information) Failed to open reference libraries for '%s' in '%s' mode.

**Description**

StarXtract is opening this reference library, but this operation is failed.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2627

(Warning) INTERNAL Warning: Invalid NUM_PARTS specification : '%d', assuming 1.

**Description**

This warning is for information only.

**What Next**

No actions is necessary.

---

## SX-2632

(Fatal) The value of NUM_PARTS (%d) leads to invalid cut coordinates.

Feedback

**Description**

The value of NUM_PARTS in the StarRC command file leads to an invalid partitioning of the layout.

**What Next**

Rerun StarRC with a reduced value of NUM_PARTS.

---

## SX-2636

(Warning) INTERNAL Warning: design BBOX is not initialized.

**Description**

An internal consistency check has failed.

**What Next**

Check the input file to make sure bounding box is initialiezed. Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

---

## SX-2637

(Fatal) INTERNAL Error: Cannot specify both cut file name and NUM_PARTS.

**Description**

This error message applies to an internal debugging feature only.

**What Next**

No action is necessary.

---

## SX-2640

(Fatal) INTERNAL Error: the layout partitioning scheme results in too many interface nodes.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-2643

(Fatal) INTERNAL Error: The number of pins in the design exceeds current limits in StarRC.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-2646

(Fatal) INTERNAL Error: Could not find mapping for '%d'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-2650

(Fatal) Via coverage parameters must meet Full >= Quarter : '%s'

**Description**

In via coverage checking, parameters of Full pattern must >= Quarter pattern.

**What Next**

Check the parameters defined in every pattern and rerun StarRC.

## SX-2652

(Fatal) Via coverage parameters must meet Full >= Quarter and Full >= Semi : '%s'

**Description**

In via coverage checking, parameters of Full pattern must >= Quarter pattern and Semi pattern.

**What Next**

Check the parameters defined in every pattern and rerun StarRC.

Feedback

## SX-2654

(Fatal) incorrect via size range: '%d'

**Description**

Invalid via size is detected in via coverage definition.

**What Next**

Check the via size and rerun StarRC.

## SX-2655

(Fatal) Find overlapping range for via coverage '%s'

**Description**

Overlapping range is set in via coverage definition and will cause error.

**What Next**

Correct the range definition and rerun StarRC.

## SX-2666

(Fatal) Invalid INSTANCE_PORT, NOT_CONDUCTIVE|CONDUCTIVE|EXPLODE can only be used alone.

**Description**

INSTANCE_PORT command can only be set to NOT_CONDUCTIVE, CONDUCTIVE, or EXPLODE. It cannot be set to more than one value.

**What Next**

Correct INSTANCE_PORT setting in StarRC command file.

## SX-2667

(Fatal) Invalid type combination in INSTANCE_PORT, Only CONDUCTIVE|SUPERCONDUCTIVE can be used together with MULTIPLE|CAPACITIVE|SUFFIXED.

**Description**

Only CONDUCTIVE|SUPERCONDUCTIVE can be used together with MULTIPLE|CAPACITIVE|SUFFIXED in INSTANCE_PORT command.

Feedback

**What Next**

Check StarRC command file setting.

---

## SX-2668

(Severe) BitMap Overflow CELL_EXTENTS=['%d','%d':'%d','%d']

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2673

(Fatal) Invalid xin bucket file name '%s'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2677

(Fatal) The layer_cut_info file is missing or corrupted!

**Description**

An internal consistency check has failed.

**What Next**

Turn off STARDIR_REDUCE_SIZE in your star command file and re-run. If the error still occurs, contact the Synopsys Support Center.

---

## SX-2678

(Fatal) Can't open xin file: %s

**Description**

An internal consistency check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2679

(Fatal) MAX_TRAP_SORT can not be less than MIN_TRAP_SORT.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2680

(Fatal) TRAP_SORT_STEP must be greater than 0.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2683

(Fatal) The input design exceeds internal limitations of StarRC. Please rerun with TEXT_ID_COMPRESSION: yes in the StarRC command file.

**Description**

This design is too big and exceeds StarRC internal limitations.

**What Next**

Add TEXT_ID_COMPRESSION:YES in StarRC command file to overcome this problem.

---

## SX-2684

(Fatal) Cannot open output file '%s'. '%s'

**Description**

An internal consistency check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2695

(Fatal) Could not open file '%s'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2700

(Fatal) Encountered polygon with negative width or height: ('%d' '%d'), ('%d' '%d')

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2701

(Fatal) '%s'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2702

(Fatal) Encountered polygon with large coordinates: ('%d' '%d'), ('%d' '%d'). After scaling, it will be out of the integer range.

**Description**

An internal consistency check has failed.

Feedback

**What Next**

Check whether the input database contains incorrect polygon coordinates. If not, contact the Synopsys Support Center.

---

## SX-2703

(Warning) Encountered polygon with large coordinates: ('%d' '%d'), ('%d' '%d'). After scaling, it will be out of the integer range. Polygon is ignored.

**Description**

An internal consistency check has failed.

**What Next**

Check whether the input database contains incorrect polygon coordinates. If not, contact the Synopsys Support Center.

---

## SX-2706

(Fatal) Could not convert '%s' to a signed long long integer: '%s'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2708

(Fatal) Error reading '%s'

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2709

(Fatal) Flush() must be explicitly called in this version of TrapMemSorter.

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2710

(Fatal) Could not write file '%s'

**Description**

An internal consistency check has failed.

**What Next**

Check whether the working directory is full. If not, contact the Synopsys Support Center.

---

## SX-2712

(Fatal) Failed to allocate memory for '%s' .

**Description**

An internal consistency check has failed.

**What Next**

Might be caused by different reasons. Try freeing up the memory on the current system and rerunning again. If the issue persists, please contact the Synopsys Support Center.

---

## SX-2714

(Fatal) ProbeTextTable version incompatible with this release.

**Description**

An internal consistency check has failed.

**What Next**

Rerun this case with -clean command line option. If this error still occurs, contact the Synopsys Support Center.

---

## SX-2717

(Fatal) Cannot open input file '%s'

Feedback

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2718

(Fatal) An error has occurred during disk access.

**Description**

The operating system has detected an error related to disk access. No further information is available.

**What Next**

Check if you have run out of disk space. If not, contact your system administrator or the Synopsys Customer Support Center.

---

## SX-2734

(Fatal) Unexpected event during xin creation.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2736

(Fatal) flush() must be explicitly called in this version of BucketTrapezoidWriter, please report this case to StarRC R&D.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-2739

(Information) Missing GDS/OASIS cell description for %s MACRO '%s'.

**Description**

Skip cell has definition from LEF/NDM cell only in GDS_FILE/OASIS_FILE flow.

**What Next**

Information only; no action needed

## SX-2740

(Fatal) %s: '%s' is a directory, not a file.

**Description**

A directory was specified in the command file, but a file name is required.

**What Next**

Correct the entry in the command file to be a file name, not a directory.

## SX-2741

(Warning) NONDEFAULTRULE '%s' is undefined (used in NET: '%s')

**Description**

The NONDEFAULTRULE used in NET is not defined in current DEF or LEF files. The default rule will be used to translate this NET. This won't cause errors during translation but it is possible to cause false opens/shorts if different wire width should be defined and adopted for the NET.

**What Next**

Check the NONDEFAULTRULE setting and if it's not required, you can ignore this message.

## SX-2742

(Information) Failed to open reference libraries by control file for '%s'.

**Description**

StarXtract is opening this main reference library, but this operation is failed.

Feedback

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2744

(Information) Could not determine '%s' attach file location. Milkyway '%s' is incomplete.

**Description**

StarXtract is accessing this attach file and it does not exist.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2748

(Information) Must specify (P)DIODE_TYPE in Hercules '%s' (P)DIODE definition.

**Description**

StarXtract finds this invalid data. The (P)DIODE_TYPE must be specified in Hercules '%s' (P)DIODE definition.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2749

(Information) Invalid (P)DIODE_TYPE '%s' in Hercules '%s' (P)DIODE defintion. Must be PN or NP.

**Description**

StarXtract finds this invalid data. It must be PN or NP.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2750

(Information) Not an LVS runset, cannot use XREF: YES/COMPLETE.

**Description**

XREF: YES/COMPLETE only supports LVS runset.

Feedback

**What Next**

Make sure that WRITE_EXTRACT_VIEW and COMPARE are both run in the same call to Hercules.

---

## SX-2751

(Information) CELL_TYPE: SCHEMATIC is only available with XREF: YES or COMPLETE.

**Description**

StarXtract finds invalid setting of CELL_TYPE.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2752

(Information) NET_TYPE: SCHEMATIC is only available with XREF: YES or COMPLETE.

**Description**

StarXtract finds invalid setting of NET_TYPE.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2753

(Information) NET_TYPE must be LAYOUT or SCHEMATIC.

**Description**

StarXtract finds invalid setting of NET_TYPE.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2754

(Information) Must use CASE_SENSITIVE: NO when IGNORE_CASE=TRUE in the Hercules runset.

Feedback

**Description**

Hercules runset has IGNORE_CASE=TRUE. The setting of CASE_SENSITIVE in the StarXtract command file must be NO.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2756

(Warning) Undefined LAYER '%s' in FILLS.

**Description**

FILLS on undefined LAYER will be ignored during translation.

**What Next**

Check the technology LEF for undefined LEF.

---

## SX-2757

(Information) RefLib Control File inconsistent.

**Description**

StarXtract finds RefLib control file inconsistecy.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2758

(Information) Element devices are not suppported in Milkyway XTR view.

**Description**

StarXtract does not support element devices.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2763

(Fatal) %s

Feedback

**Description**

Required parameters are missing. Correct usage: StarXtract -save_eco target_file_name or StarXtract -restore_eco source_file_name.

**What Next**

Issue the command with correct parameters.

---

## SX-2764

(Warning) Missing GDS/OASIS cell descriptions for some LEF MACROs.

**Description**

In GDS_FILE/OASIS_FILE flow, StarRC merges skip cell contents from both LEF and GDS/OASIS. If a skip cell only has defintion from LEF, StarRC will only translate its LEF and print out this warning. Normally, this won't cause translation error but it may incur design inconsistency for some cell definitions are not merged with proper GDS/OASIS cells.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2766

(Warning) PARSING Warning: %s near line %d near token %s in file %s

**Description**

A non-critical parsing check has failed. This warning message is printed for use by the Synopsys Support Center in case a program error occurs during StarRC's execution.

**What Next**

Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

---

## SX-2767

(Fatal) PARSING Error: %s near line %d near token %s in file %s

**Description**

A critical parsing check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2768

(Warning) dbuPerMicron in incremental LEF violates LEF specification.

**Description**

dbuPerMicron setting for the following MACRO LEFs is larger than technology LEF. This is a violation of LEF/DEF specification and may cause loss of accuracy during translation.

**What Next**

Correct the dbuPerMicron in the following MACRO LEFs.

---

## SX-2773

(Fatal) Invalid HN_NETLIST_SPICE_TYPE specification.

**Description**

The correct usage is; HN_NETLIST_SPICE_TYPE: <device model name> <netlist spice type>.

**What Next**

Correct the usage of HN_NETLIST_SPICE_TYPE.

---

## SX-2774

(Warning) Following option "JOIN" detected in Hercules/ICV runset is not supported in StarXtract.

**Description**

StarXtract finds this unsupported option in Hercules/ICV runset.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2775

(Warning) Following option "DETECT_PERMUTABLE_PORTS" detected in Hercules/ICV runset is not supported in StarXtract.

Feedback

**Description**

StarXtract finds this unsupported option in Hercules/ICV runset.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2776

(Warning) Following option "PUSH_DOWN_PINS" detected in Hercules/ICV runset is not supported in StarXtract.

**Description**

StarXtract finds this unsupported option in Hercules/ICV runset.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2777

(Warning) Following option "PUSH_DOWN_DEVICES" detected in Hercules/ICV runset is not supported in StarXtract.

**Description**

StarXtract finds this unsupported option in Hercules/ICV runset.

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2778

(Warning) Hercules RUNSET does not contain LAYOUT_POWER/ SCHEMATIC_POWER,...,etc layout/schematic power/ground nets setting and POWER_NETS option is empty

**Description**

StarXtract does not find any valid setting about layout/schematic power/ground nets.

Feedback

**What Next**

Confirm this is expected data. If it is not, confirm the procedures and settings to generate this data is correct, or re-generate this data.

---

## SX-2780

(Error) Failed to locate required cells.

**Description**

StarXtract is locating this cell, but this operation is failed.

**What Next**

Check the reference library tree for completeness. Note that dbSetLibRefCtrlFileMode flag must be set in Milkyway control window when write permission for the library is available to enable use of control file.

---

## SX-2781

(Information) DCM lookup for " %s " from library " %s " failed.

**Description**

StarXtract is doing the DCM lookup, but this operation is failed.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2782

(Severe) %s

**Description**

StarXtract could not locate this cell in this library.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2783

(Fatal) %s

Feedback

**Description**

StarXtract could not locate this cell in this library.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

---

## SX-2784

(Warning) %s

**Description**

StarXtract could not locate this cell in this library.

**What Next**

Confirm this is expected data, or contact the Synopsys Support Center.

---

## SX-2785

(Information) %s

**Description**

StarXtract could not locate this cell in this library.

**What Next**

If this is expected data, it is information only. No action is needed.

---

## SX-2786

(Warning) Set DPT:YES but none of LAYER(s) in %s have MASK statements in their definitions.

**Description**

In DPT:YES flow, LAYER(s) in technology LEF and TCAD_GRD_FILE should have mask definition or the run may suffer from missing MASK(s).

**What Next**

Review technology LEF and TCAD_GRD_FILE and define missing MASK for LAYER(s) in question.

Feedback

## SX-2787

(Warning) The NDM design %s has critical data for physical sign-off tool behavior.

**Description**

The NDM design being opened has data that is critical for Physical Sign-off that StarRC does not understand. This happens when

- The schema of the opened NDM database is NEWER than the compiled-in version of NDM, AND
- There is new schema content, which will ignored by NDM as part of Forward-Compatibility support, is deemed critical for correct signoff-tool behavior, AND there is actually data in the ndmDesign representing such objects.

**What Next**

Contact the Synopsys Support Center.

## SX-2788

(Fatal) INTERNAL Error: %s

**Description**

An internal database access has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-2789

(Warning) INTERNAL Warning: %s

**Description**

An internal database consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-2790

(Information) INFORMATION: SMC automatic chosen default corner: %s

Feedback

**Description**

SMC worst corner selection

**What Next**

Please refer to StarRC manual.

---

## SX-2902

(Fatal) 3D_IC_TSV_COUPLING_EXTRACTION:CEFF should be used with OPERATING_FREQUENCY.

**Description**

3D_IC_TSV_COUPLING_EXTRACTION:CEFF should be used with OPERATING_FREQUENCY.

**What Next**

Set OPERATING_FREQUENCY in StarRC command file.

---

## SX-2903

(Fatal) 3D_IC_TSV_COUPLING_EXTRACTION:RCSUB should not be used with NETLIST_FORMAT:SPEF

**Description**

3D_IC_TSV_COUPLING_EXTRACTION:RCSUB could generate RC network between 2 different nets. That is not allowed in SPEF.

**What Next**

Reset NETLIST_FORMAT in StarRC command file.

---

## SX-2905

(Warning) CEFF_VS_FREQUENCY_AND_SPACING table is not defined in ITF file

**Description**

StarRC failed to find CEFF_VS_FREQUENCY_AND_SPACING table for 3D_IC_TSV_COUPLING_EXTRACTION:CEFF.

**What Next**

Check if the ITF file is correct or turn off 3D_IC_TSV_COUPLING_EXTRACTION:CEFF.

Feedback

## SX-2906

(Fatal) RLC model is not supported for NETLIST_FORMAT: SPEF

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-2907

(Warning) The command METAL_FILL_GDS_BLOCK would be removed in next release, use METAL_FILL_BLOCK_NAME instead

**Description**

The command METAL_FILL_GDS_BLOCK would be removed in next release, use METAL_FILL_BLOCK_NAME instead.

**What Next**

Use METAL_FILL_BLOCK_NAME instead of METAL_FILL_GDS_BLOCK.

## SX-2908

(Warning) The command METAL_FILL_GDS_MAG & METAL_FILL_OASIS_MAG would be removed in next release, please use METAL_FILL_MAG instead

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-2909

(Warning) The command METAL_FILL_GDS_OFFSET & METAL_FILL_OASIS_OFFSET would be removed in next release, please use METAL_FILL_OFFSET instead

**Description**

Not available.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-2910

(Warning) The command METAL_FILL_GDS_FILE_NET_NAME & METAL_FILL_OASIS_FILE_NET_NAME would be removed in next release, please use METAL_FILL_FILE_NET_NAME instead

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-2911

(Fatal) The starQTF flow does not support FS_VISUALIZATION :YES for the TCAD_GRD_FILE/FS_QTF_FILE

**Description**

The starQTF flow does not support FS_VISUALIZATION :YES for the TCAD_GRD_FILE/FS_QTF_FILE.

**What Next**

See user guide. For further details, contact the Synopsys Support Center to query what kind of TCAD_GRD_FILE/FS_QTF_FILE can be supported

---

## SX-2912

(Sereve) %s Please check %s: %s.

**Description**

The syntax of OA_Device_Mapping_file and Oa_Skip_Mapping_File need to check.

**What Next**

See user guide. For further details, contact the Synopsys Support Center to query the syntax of OA_Device_Mapping_file and Oa_Skip_Mapping_File.

Feedback

## SX-2913

(Warning) %s Please check %s: %s.

**Description**

The content of Oa_Layyer_Mapping_file need to check to make sure it is correct on token length.

**What Next**

See user guide. For further details, contact the Synopsys Support Center to query the syntax of Oa_Layyer_Mapping_file.

## SX-2973

(Information) Failed to open requested view '%s'

**Description**

StarXtract is opening the requested view that depends on option settings, but it does not exist.

**What Next**

If this is expected data, it is information only. No action is needed.

## SX-2981

(Fatal) file '%s' is corrupted!

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-2999

(Warning) COUPLE_NONCRITICAL_NETS is only supported in AGF and Milkyway flow.

**Description**

COUPLE_NONCRITICAL_NETS is only supported in AGF and Milkyway flow.

Feedback

**What Next**

Remove COUPLE_NONCRITICAL_NETS from StarRC command file.

---

## SX-3001

(Warning) Translating automated fill macro '%s' at (%d, %d, %s).

**Description**

Translating a fill macro specified for design automation at the location in the current cell.

**What Next**

Information only; no action required.

---

## SX-3002

(Warning) Automated fill macro '%s' is instantiated.

**Description**

Automated fill macro are instantiated in the METAL_FILL_GDS_FILE/ METAL_FILL_OASIS_FILE. Cells. Their instantiations will be re-constructed at Translate stage based on the design automation.

**What Next**

Information only; no action required.

---

## SX-3003

(Information) [%s <-> %s] => [%d <-> %d]

**Description**

A design/fill macro association is specified and its cell id association is constructed.

**What Next**

Information only; no action required.

---

## SX-3004

(Warning) %s macro '%s' doesn't exist in %s database. Ignore its automation.

Feedback

**Description**

The design and fill macros specified for design automation in the METAL_FILL_BLOCK_MAPPING_FILE doesn't exist in the design or metal fill database. Their automation will be ignored.

**What Next**

Information only; no action required.

---

## SX-3005

(Fatal) Syntax error at line %d of METAL_FILL_BLOCK_MAPPING_FILE.

**Description**

The METAL_FILL_BLOCK_MAPPING should have line syntax as follows,

<design_macro> <fill_macro>

to specify a mapping between design and fill for design automation.

**What Next**

Correct the offending line.

---

## SX-3006

(Fatal) Automated hierarchical fill macro '%s' is instantiated in another automated hierarchical fill macro '%s'.

**Description**

If a fill macro is targeted for hierarchical design flow, it can't be referenced in another hierarchical fill macro.

**What Next**

Remove the offending instantiation in the hierarchical fill macro.

---

## SX-3007

(Fatal) The metal fill design automation METAL_FILL_BLOCK_MAPPING_FILE is not supported in this flow.

**Description**

The metal fill design automation METAL_FILL_BLOCK_MAPPING_FILE is only supported in LEF/DEF flow with METAL_FILL_GDS_FILE/METAL_FILL_OASIS_FILE.

Feedback

### What Next

Correct the StarRC command file.

---

## SX-3008

(Fatal) IGNORE_CAPACITANCE must be set to NONE, DIFF or ALL RETAIN_GATE_DIFFUSION_COUPLING when COUPLE_TO_GROUND: YES RETAIN_GATE_CONTACT_AND_DIFFUSION_COUPLING.

### Description

If the StarRC command file option COUPLE_TO_GROUND is set to YES RETAIN_GATE_CONTACT_AND_DIFFUSION_COUPLING, StarRC expects to extract the gate to contact and the gate to diffusion coupling capacitances. Therefore, the IGNORE_CAPACITANCE must be set to NONE, DIFF or ALL RETAIN_GATE_DIFFUSION_COUPLING to do so. If the gate to contact and the gate to diffusion coupling capacitances are ignored, the StarRC command file option COUPLE_TO_GROUND must be set to YES or NO.

### What Next

Modify one of the two StarRC command file option, IGNORE_CAPACITANCE or COUPLE_TO_GROUND.

---

## SX-3009

(Warning) RETAIN_GATE_CONTACT_COUPLING and RETAIN_GATE_CONTACT_AND_DIFFUSION_COUPLING are both set in FS flow. RETAIN_GATE_CONTACT_AND_DIFFUSION_COUPLING is enabled instead of RETAIN_GATE_CONTACT_COUPLING.

### Description

When RETAIN_GATE_CONTACT_COUPLING: YES is specified and COUPLE_TO_GROUND: YES RETAIN_GATE_CONTACT_AND_DIFFUSION_COUPLING is also specified, StarRC will retain the coupling from gate to contact and diffusion, not the coupling between gate and contact.

### What Next

If you want to retain coupling from gate to contact and diffusion, you don't have to take any action; if you just want to retain the coupling between gate and contact but not diffusion, you need to set COUPLE_TO_GROUND: YES RETAIN_GATE_CONTACT_COUPLING.

Feedback

## SX-3010

(Fatal) map_qtf_layers section is missing in StarRC mapping file when running StarQTF flow.

### Description

StarQTF flow (when FS_QTF_FILE is used) needs 2 additional sections in StarRC mapping file: map_qtf_layers: this section defines mappings between input database layers to QTF layers defined in QTF file. qtf_layers: this section defines QTF layer names for device layers (layers below metal1).

If you use FS_QTF_FILE command but don't define map_qtf_layers section in StarRC mapping file, StarRC will give this error.

### What Next

You should use a StarRC mapping file containing map_qtf_layers section.

## SX-3011

(Fatal) qtf_layers section is missing in StarRC mapping file when running StarQTF flow.

### Description

StarQTF flow (when FS_QTF_FILE is used) needs 2 additional sections in StarRC mapping file: map_qtf_layers: this section defines mappings between input database layers to QTF layers defined in QTF file. qtf_layers: this section defines QTF layer names for device layers (layers below metal1).

If you use FS_QTF_FILE command but don't define qtf_layers section in StarRC mapping file, StarRC will give this error.

### What Next

You should use a StarRC mapping file containing qtf_layers section.

## SX-3012

(Fatal) TCAD_GRD_FILE in CORNERS_FILE must use absolute path when CORNERS_FILE is specified out of current working directory.

### Description

You receive this message because TCAD_GRD_FILE defined in CORNERS_FILE does not use an absolute path to specify the Tcad file when CORNERS_FILE is specified out of current working directory.

Feedback

**What Next**

Move CORNERS_FILE into current working directory or use an absolute path to specify TCAD_GRD_FILE.

---

## SX-3013

(Warning) Library %s has no reference libraries.

**Description**

NDM_DATABASE doesn't specify any reference libraries. The cells in those reference libraries cannot be found.

**What Next**

Check your reference library setting in NDM database to see whether you've used command 'set_ref_libs' in ICC2 when you created the NDM library.

---

## SX-3014

(Warning) Implicit connected database layer "%s" does not have a valid ITF layer. Will remove this layer.

**Description**

StarRC gives this warning once it finds the shown layer is defined in database and has implicit connections (connections based on layer operations), but it is not defined in StarRC mapping file.

**What Next**

If you don't need this layer, nothing needs to be done. Otherwise, you should define mapping for this layer in StarRC mapping file.

---

## SX-3015

(Warning) Cannot find design

**Description**

NDM_DATABASE doesn't contain this design.

**What Next**

Check your NDM database setting to make sure the designs exist in main NDM library or reference libraries.

Feedback

## SX-3016

(Warning) Maskable user-defined layer '%s' is not defined in MAPPING_FILE and removed.

**Description**

A maskable user-defined layer must be defined in the MAPPING_FILE with a valid ITF layer.

**What Next**

Define the user-defined layer in the MAPPING_FILE and run again.

## SX-3017

(Fatal) database layer '%s' can not be a remove layer, because the database layer is mapped to a QTF layer, and this QTF layer is in the qtf_layers section. Remove this database layer from remove_layers section.

**Description**

If a database layer is mapped to a QTF layer in map_qtf_layers section and the QTF layer is included in qtf_layers section, StarRC needs this database layer. You can't put that database layer in remove_layers section.

**What Next**

You should remove the shown layer in remove_layers section.

## SX-3018

(Fatal) the qtf_layers in starRC mapping file are not consecutive, please add qtf layer: '%s' into the qtf_layers section.

**Description**

StarRC+QTF flow need to use all the layers stack from one ITF layer to the bottom. So StarRC need all the ITF layer which mapped to the DB layers defined in qtf_layers section are consecutive.

**What Next**

You should add the DB layer name in this message to qtf_layers section.

## SX-3019

(Warning) Attempt to sleep for '%lf' sec. failed: '%s'

Feedback

**Description**

An internal operating system call failed.

**What Next**

Please look for other errors/warning in the sum file. Please try rerunning, if the original issue persists, please contact the Synopsys Support Center.

---

## SX-3020

(Warning) Unable to test lock on file '%s', error status '%s'

**Description**

StarRC is unable to determine whether or not a file is locked because of issues in the runtime environment.

**What Next**

No action is necessary if StarRC successfully ran to completion. This warning may indicate the source of a problem if StarRC terminated abnormally. Contact your system administrator if necessary.

---

## SX-3021

(Fatal) View only layer '%s' can not be in the qtf_layers section

**Description**

If a database layer is mapped to a QTF layer in map_qtf_layers section and the QTF layer is included in qtf_layers section, you can't put that database layer in viewonly_layers section.

**What Next**

You should remove this layer from viewonly_layers section.

---

## SX-3022

(Warning) NDM design '%s' has references bound to unsupported views.

**Description**

StarRC supports frame and design views. If a design is bound to an unsupported view, StarRC will try to force open frame/design view based on the SKIP_CELLS/ NDM_DESIGN_VIEW options in the Star command file.

Feedback

However, in hierarchical design, macros may be bound to unsuported abstract views. These macros will be extracted with design/frame views instead of abstract views.

However, if these unresolved design views can't be inferred based on the options , their instantiations are ignored and may introduce accuracy issues. In such situation, SX-3015 will be issued and NDM_CELL_REPORT_FILE will report these designs.

**What Next**

Check NDM_CELL_REPORT_FILE and SX-3015 for unresolved designs. If unresolved designs found, please fix these errors to avoid possible accuracy problems. If not, this warning can be safely ignored.

---

## SX-3023

(Warning) NDM design '%s' without bounding box cached in its library will degrade Setup performance

**Description**

A NDM library with cached bouning box can speed up StarRC's Setup time. StarRC doesn't need to open top block for bounding box.

**What Next**

Update the library with bounding box by latest IC Compiler II.

---

## SX-3024

(Warning) NDM design '%s' with SHORT_PINS:NO will degrade Setup performance.

**Description**

SHORT_PINS:NO will force StarRC to read into Blk-aspect of NDM database which degrades its Setup performance.

**What Next**

If SHORT_PINS:NO is not required in the run, setting it YES will improve Setup performance.

---

## SX-3025

(Fatal) NDM streaming cache '%s' is not generated.

**Description**

Streaming cache must be generated at Layers_DP stage.

Feedback

### What Next

Contact Synopsys support.

---

## SX-3026

(Warning) A single huge METAL_FILL_GDS_FILE/METAL_FILL_OASIS_FILE is degrading metal fill import performance.

### Description

A single large METAL_FILL_GDS_FILE or METAL_FILL_OASIS_FILE with several performance-critical cells is downgrading StarRC's performance for metal fill import. To get better import performance, separate these performance-critical cells into different files and list them in the METAL_FILL_GDS_FILE/METAL_FILL_OASIS_FILE.

### What Next

Check the associated STAR/summary/.<stage>.messages and move reported big cells into different files.

---

## SX-3027

(Warning) NDM fills will be ignored because NDM_MULTIPLE_FILL_SOURCES is set to NO.

### Description

When NDM_MULTIPLE_FILL_SOURCES is set to NO, StarRC will *NOT* translate NDM fills in the presence of METAL_FILL_GDS_FILE/METAL_FILL_OASIS_FILE.

- For StarRC N-2017.12, this option is set to *NO* by default. If the metal fills from NDM and GDS/OASIS files should be included in the translation, this option must be set to YES.
- For StarRC O-2018.06 and above, this option is *NOT* available. Metal fills from NDM and GDS/OASIS files are automatically translated if they are specified in the StarRC command file.

### What Next

Please check your StarRC command file and make sure the NDM fills should be dropped in your run.

Feedback

## SX-3028

(Warning) UPDATE_XYTRANSFORM_WITH_FOREIGN doesn't support FOREIGN with <orient> in LEF MACRO '%s'

**Description**

UPDATE_XYTRANSFORM_WITH_FOREIGN doesn't support LEF FOREIGN with orient. The XY offset are still applied but orient will be ignored in the xform messages.

**What Next**

Information only

## SX-3029

(Warning) Option %s is ignored for it is supported only for XREF: COMPLETE.

**Description**

Option displayed in the warning message can only work under XREF:COMPLETE.

**What Next**

Disable the option in the message or change XREF:COMPLETE to other settings.

## SX-3031

(Fatal) INTERNAL Error: Error found (invalid orientation) while processing Cfidata.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-3032

(Warning) More than one boundary element defined in the cell %s

**Description**

During parsing input databases to generate PLACEMENT_XYV_FILE, StarRC may take GDS cell boundary element defined at each cell in the input database as cell boundary.

If there are more than one boundary element defined for a cell, StarRC will only take the first one and ignore the rest.

Feedback

**What Next**

Contact the Synopsys Support Center.

---

## SX-3033

(Information) Cell definition for '%s' is read-in from '%s'.

**Description**

StarRC takes the cell definition from file.

**What Next**

Information only; no action needed.

---

## SX-3034

(Warning) Missing reference library '%s'

**Description**

A reference library is still missing after NDM_DATABASE and library paths in NDM_SEARCH_PATH being searched. Missing libraries can introduce polygon drops and lead to problems in extraction.

**What Next**

If it is intentional, the warning can be ignored. If not, please update the reference library paths in NDM_DATABASE or provide NDM_SEARCH_PATH.

---

## SX-3035

(Warning) Unable to remove file '%s': %s

**Description**

StarRC was not able to remove a file during execution.

**What Next**

Check to make sure you have disk permissions and that disk performance is adequate.

---

## SX-3036

(Fatal) Invalid option '%s' of TRANSLATE_RETAIN_BULK_LAYERS. Valid Values are: [NO] | YES | CONLY.

Feedback

**Description**

Valid values of command TRANSLATE_RETAIN_BULK_LAYERS are: [NO] | YES | CONLY. The value you used in invalid

**What Next**

You should use NO or YES or CONLY as value of command TRANSLATE_RETAIN_BULK_LAYERS.

---

## SX-3037

(Fatal) No %s defined for BLOCK '%s' in %s

**Description**

StarRC needs connectivity and physical information for BLOCK in order to extract successfully.

**What Next**

Review the BLOCK in StarRC command file or input files.

---

## SX-3038

(Warning) Encountered port "%s" in PORT TABLE CELLS WRITE which does not exist in the LAYOUT NETLIST WRITE in query_cmd. This entry will be ignored.

**Description**

A consistency check has failed.

**What Next**

Check the input files PORT TABLE CELLS WRITE and LAYOUT NETLIST WRITE in query_cmd. Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

---

## SX-3039

(Warning) The value of the %s option cannot be a negative number. A value of zero will be used internally.

**Description**

The value of the given option in the StarRC command file is a negative number. The option accepts positive numbers only.

Feedback

**What Next**

Change the value of the specified option to a positive number in the StarRC command file.

---

## SX-3043

(Fatal) SIMULTANEOUS_MULTI_CORNER only support TEMPERATURE_COEFFICIENT output in NETLIST_FORMAT: SPF | NETNAME | STAR | OA.

**Description**

In SIMULTANEOUS_MULTI_CORNER flow, TEMPERATURE_COEFFICIENT can be specified in intended corners for TC1/TC2 temperature coefficient output. The feature can only support limited NETLIST_FORMAT of SPF, NETNAME, STAR, OA.

**What Next**

Change NETLIST_FORMAT to SPF|NETNAME|STAR|OA if TEMPERATURE_COEFFICIENT is required.

---

## SX-3044

(Fatal) In SIMULTANEOUS_MULTI_CORNER merged-output format, NOMINAL corner type is needed for TEMPERATURE_COEFFICIENT output

**Description**

The corner type must be NOMINAL if the corner is selected for TEMPERATURE_COEFFICIENT output.

**What Next**

Modify corner type or select a NOMINAL corner.

---

## SX-3046

(Fatal) Duplicated TCAD_GRD files are used for TEMPERATURE_COEFFICIENT output. Please remove duplicated corners.

**Description**

The selected corners have same TCAD_GRD file, which is not allowed for TEMPERATURE_COEFFICIENT output.

**What Next**

Remove the duplicated corners.

Feedback

## SX-3047

(Fatal) Only REDUCTION:NO|LAYER is supported to TEMPERATURE_COEFFICIENT output in SIMULTANEOUS_MULTI_CORNER.

**Description**

In SIMULTANEOUS_MULTI_CORNER flow, TEMPERATURE_COEFFICIENT can be specified in intended corners for TC1/TC2 temperature coefficient output. The feature needs to set REDUCTION to NO or LAYER to ensure the correctness of TC1/TC2 values. The REDUCTION setting of the run is neither NO or LAYER, it caused the error.

**What Next**

Modify REDUCTION setting to either NO or LAYER for using TEMPERATURE_COEFFICIENT output in SIMULTANEOUS_MULTI_CORNER.

## SX-3048

(Warning) No device property match command PARAMETERIZED_DEVICE_PROPERTY.

**Description**

No property match settings in command PARAMETERIZED_DEVICE_PROPERTY. Please check settings and database for correcting.

**What Next**

Check setttings of command PARAMETERIZED_DEVICE_PROPERTY in StarRCXT cmd file.

## SX-3050

(Warning) File '%s' does not exist, sleeping for %d sec. before checking again.

**Description**

An intermediate file produced by StarRC on one host may not be accessible on another host because of issues with the file system. An attempt will be made to access the file again later to allow for latencies related to disk access.

**What Next**

No action is necessary if StarRC completes successfully. This message may indicate the source of a problem if StarRC does not run to completion. In this case, try re-running StarRC on a lightly loaded disk or network.

Feedback

## SX-3051

(Warning) Could not find file '%s' after %d attempts.

**Description**

StarRC is unable to access an intermediate file on one host that was written on another host because of issues with the file system.

**What Next**

No action is necessary if StarRC completes successfully. This message may indicate the source of a problem if StarRC does not run to completion. In this case, try re-running StarRC on a lightly loaded disk or network.

## SX-3052

(Warning) %s '%s' does not exist.

**Description**

An expected input file does not exist. The file could be an input file specified by the user in the StarRC command file or an internally generated intermediate file.

## SX-3053

(Fatal) Wrong mask ID is specified in the layer mapping file. Please specify a mask ID in interval (0, NUMBER_OF_MASKS in ITF file]. Line: %s

**Description**

Once you use mask=value parameter for a conductor in StarRC mapping file, the value should be a positive integer not larger than NUMBER_OF_MASKS value defined in ETCH_VS_WIDTH_AND_SPACING table in ITF file.

**What Next**

You should use an integer from 1 to the NUMBER_OF_MASKS value defined in ETCH_VS_WIDTH_AND_SPACING table in ITF file as value of mask parameter in this line.

## SX-3055

(Fatal) NETLIST_SMC_FORMULA does not work with TEMPERATURE_COEFFICIENT output in SIMULTANEOUS_MULTI_CORNER.

Feedback

**Description**

In SIMULTANEOUS_MULTI_CORNER flow, some corners can define GLOBAL_TEMP to enable TEMPERATURE_COEFFICIENT output. This feature cannot work with NETLIST_SMC_FORMULA because the formula cannot handle TC1/TC2 in a formula way.

**What Next**

Either disable NETLIST_SMC_FORMULA or disable TEMPERATURE_COEFFICIENT in selected corners.

---

## SX-3057

(Warning) The pre-defined NONDEFAULTRULE '%s' in LEF is covered by definition of DEF.

**Description**

NONDEFAULTRULE from LEF is redefined in DEF. StarRC will use the version in DEF to translate.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3058

(Fatal) NETLIST_MINRES_HANDLING:MERGE with non-zero NETLIST_MINRES_THRESHOLD is not supported for TEMPERATURE_COEFFICIENT output in SIMULTANEOUS_MULTI_CORNER.

**Description**

In SIMULTANEOUS_MULTI_CORNER flow, TEMPERATURE_COEFFICIENT can be specified in intended corners for TC1/TC2 temperature coefficient output. The feature does not support NETLIST_MINRES_HANDLING:MERGE and NETLIST_MINRES_THRESHOLD:val when val is set as positive value. The merging behavior may perturb the correct value of TC1/TC2 for each corner.

**What Next**

Turn off NETLIST_MINRES_HANDLING:MERGE or NETLIST_MINRES_THRESHOLD to enable TEMPERATURE_COEFFICIENT output in SIMULTANEOUS_MULTI_CORNER.

Feedback

## SX-3059

(Fatal) MAPPING_FILE in CORNERS_FILE must use absolute path when CORNERS_FILE is specified out of current working directory.

**Description**

You receive this message because MAPPING_FILE defined in CORNERS_FILE does not use an absolute path to specify the mapping file when CORNERS_FILE is specified out of current working directory.

**What Next**

Move CORNERS_FILE into current working directory or use an absolute path to specify MAPPING_FILE.

## SX-3060

(Fatal) Cannot open MAPPING_FILE '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

You receive this message because StarRC failed to open the mapping file specified by MAPPING_FILE.

**What Next**

Make sure that the file specified by MAPPING_FILE isn't corrupted or missing and StarRC has permission to access it.

## SX-3061

(Fatal) Mapping file %s and mapping file %s are inconsistent.

**Description**

The error message informs you that the two mapping files reported in the message are inconsistent. The mapping files for different corners should be the same except the value of RPSQ and RPV.

**What Next**

Check the two mapping files reported in the message and make sure they are consistent.

## SX-3062

(Warning) Number of shorts exceeds %s: %d

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3063

(Warning) REPORT_METAL_FILL_STATISTICS incurs performance degradation

**Description**

REPORT_METAL_FILL_STATISTICS collects and reports fill information in the summary file and it will incur performance degradation. StarRC suggests to use this option only for debugging purpose.

**What Next**

Information only; no action is needed.

---

## SX-3064

(Warning) NDM_DB_READ_MEMORY_REDUCTION will incur performance degradation (NUM_CORES:%d reduced to %d for Cells).

**Description**

NDM_DB_READ_MEMORY_REDUCTION uses less cores for memory intensive NDM input DB read stages and sacrifice performance as a result. The memory reduction will be effective only when NUM_CORES >= 4.

The possible value for this option,

- NO: The default value.
- YES: 2X less cores are used at Cells_DP.
- HIGH: 4X less cores are used at Cells_DP if NUM_CORES >= 16. If NUM_CORES < 16, this mode is downgraded to YES which uses 2X less cores.
- AGGRESSIVE: Force only 1 core to process top cell at Cells_DP and leave other data types, s.t., macro cells and standard cells, unchanged.

**What Next**

Information only; no action is needed.

Feedback

## SX-3065

(Warning) FAST_RONLY_POWER_EXTRACTION is only supported with POWER_EXTRACT:RONLY and EXTRACTION:R. Normal power extraction is performed.

**Description**

You receive this message because you are using FAST_RONLY_POWER_EXTRACTION:YES, but POWER_EXTRACT:RONLY and EXTRACTION:R are not used. StarRC will perform normal power extraction flow. FAST_RONLY_POWER_EXTRACTION:YES is ignored.

**What Next**

If you want to use FAST_RONLY_POWER_EXTRACTION:YES, please set POWER_EXTRACT:RONLY and EXTRACTION:R. Otherwise you can ignore this message. It is only affect runtime.

## SX-3066

(Fatal) ECO_FILE option must be used with ECO_MODE: YES.

**Description**

Incremental extraction is required if an Eco file is input as a StarRC command option.

**What Next**

Please refer to section on ECO extraction in the StarRC user guide.

## SX-3067

(Fatal) Wrong mask ID is specified in the layer mapping file. Please specify a mask ID in interval (0, NUMBER_OF_MASKS in ITF file]. MASK=%d is specified on %s on %s while NUMBER_OF_MASKS is %d in ITF file.

**Description**

Once you use mask=value parameter for a conductor in StarRC mapping file, the value should be a positive integer not larger than NUMBER_OF_MASKS value defined in GATE_TO_DIFFUSION_ADJUSTMENT_CAP table in ITF file.

**What Next**

You should use an integer from 1 to the NUMBER_OF_MASKS value defined in GATE_TO_DIFFUSION_ADJUSTMENT_CAP in ITF file as value of mask parameter in this line.

Feedback

## SX-3068

(Fatal) No Cfi silicon marker layer is specified for %s with ITF=%s of MASK=%d in the layer mapping file.

**Description**

All non-zero MASK values of a Cfi table must be covered by silicon marker layers in the layer mapping file.

**What Next**

Please check correctness of the layer mapping file.

## SX-3069

(Fatal) No Cfi silicon marker layer for %s is found in the design and the layer is not covered by any silicon markers.

**Description**

No associated silicon marker layer for the specific gate layer, which has non-zero NUMBER_OF_MASKS Cfi tables, is found in the input database.

**What Next**

Please check correctness of the input database.

## SX-3070

(Warning) LVS Black Box cell '%s' is added to %s list automatically.

**Description**

The LVS black box cell is added to skip cell list.

**What Next**

Information only; no action is needed.

## SX-3071

(Warning) REPORT_SMIN_VIOLATION:YES may not report accurate SMIN violations. Refer to pre-flow DesignRuleCheck for accurate reporting.

Feedback

**Description**

REPORT_SMIN_VIOLATION:YES is used to report SMIN violation during extraction. However, the reporting may not be extremely accurate in StarRC parasitic extraction tool during RC extraction. It is suggested to use intended DesignRuleCheck (DRC) tool to accurately report the violation.

**What Next**

Use the SMIN violation report file only as estimated reference and refer to DRC tool for accurate violation.

---

## SX-3072

(Severe) Cannot map the marker layer "%s" to a valid GRD layer.

**Description**

Marker layer not mapped to a GRD layer and do not have layer connection with other GRD layer. So StarRC can not map the marker layer "%s" to a validate GRD layer.

**What Next**

You should revise your mapping file to add connection on marker layer or map to marker layer to a grd layer.

---

## SX-3073

(Warning) LVS_EXTRACTION_REPORT_FILE contains invliad ALIAS statement, ALIAS statement needs at least 2 layers. Invliad ALIAS statement will be ignored.

**Description**

LVS_EXTRACTION_REPORT_FILE contains invliad ALIAS statement, ALIAS statement needs at least 2 layers. Invliad ALIAS statement will be ignored.

**What Next**

You should check the ALIAS statement in LVS_EXTRACTION_REPORT_FILE and make ALIAS statement contains at least 2 layers.

---

## SX-3074

(Severe) Layer '%s' is in multiple ALIAS statements in LVS_EXTRACTION_REPORT_FILE.

Feedback

**Description**

Layer '%s' is in multiple ALIAS statements in LVS_EXTRACTION_REPORT_FILE.

**What Next**

You should check the layer name mentioned in this message in ALIAS statements in LVS_EXTRACTION_REPORT_FILE and revise it only in one ALIAS statement.

---

## SX-3076

(Information) Creating EcoFile for partition '%d'.

**Description**

During IncrementalDP stage, eco_file is generated by partition.

**What Next**

This message is for information only, no further action is needed.

---

## SX-3078

(Warning) EXTRACT_MESH_RES is only effective in transistor-level extraction. This option is ignored.

**Description**

EXTRACT_MESH_RES is a feature to enable mesh-Res extraction. This feature is limited at transistor-level only. The run is at gate-level, so the option is ignored.

**What Next**

Remove EXTRACT_MESH_RES from StarRC command file.

---

## SX-3079

(Fatal) VIA_COVERAGE_OPTION_FILE is mandatory for all corners if any corner has it specified in CORNERS_FILE.

**Description**

This error message is issued when some corners have VIA_COVERAGE_OPTION_FILE but the other corners don't have this field in CORNERS_FILE.
VIA_COVERAGE_OPTION_FILE should be specified for ALL or NONE of the corners for correct extraction handling.

Feedback

**What Next**

Correct the content CORNERS_FILE and restart. VIA_COVERAGE_OPTION_FILE should be specified for ALL or NONE of the corners in CORNERS_FILE. If the same VIA_COVERAGE_OPTION_FILE is applied to all corners, you can also choose to only specify it in the star command file..

---

## SX-3080

(Fatal) Different VIA_COVERAGE_OPTION_FILE '%s' and '%s' specified for the same nxtgrd file '%s' on its temperature corners;

**Description**

Same VIA_COVERAGE_OPTION_FILE value must be specified for the different temperature corners that use the same nxtgrd file.

**What Next**

Please check and make sure that the same VIA_COVERAGE_OPTION_FILE value is specified for the different temperature corners that use the same nxtgrd file.

---

## SX-3081

(Fatal) VIA_COVERAGE_OPTION_FILE in CORNERS_FILE must use absolute path when CORNERS_FILE is specified out of current working directory.

**Description**

You receive this message because VIA_COVERAGE_OPTION_FILE defined in CORNERS_FILE does not use an absolute path to specify the via coverage option file when CORNERS_FILE is specified out of current working directory.

**What Next**

Move CORNERS_FILE into current working directory or use an absolute path to specify VIA_COVERAGE_OPTION_FILE.

---

## SX-3082

(Fatal) Cannot open VIA_COVERAGE_OPTION_FILE '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

You receive this message because StarRC failed to open the via coverage option file specified by VIA_COVERAGE_OPTION_FILE.

Feedback

### What Next

Make sure that the file specified by VIA_COVERAGE_OPTION_FILE isn't corrupted or missing and StarRC has permission to access it.

---

## SX-3083

(Fatal) SMC via_coverage_option_file corrupted: cannot load corner via_coverage codes in sav section.

### Description

Failed to load sav dependent via_coverage code in SMC flow.

### What Next

Check and correct the VIA_COVERAGE_OPTION_FILE for each corner, and restart. If error persists, contact Synopsys Support Center.

---

## SX-3084

(Fatal) SMC via_coverage_option_file corrupted on layer '%d': cannot find corresponding codes in sav section.

### Description

Corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow should have consistent entries cross corners. VIA_COVERAGE_OPTION_FILE has discrepancy on the highlighted item from corner to corner, StarRC cannot process the data.

### What Next

Correct the input files for VIA_COVERAGE_OPTION_FILE and restart.

---

## SX-3085

(Fatal) SMC via_coverage_option_file corrupted on layer '%d' and sav key '%d': RPV discrepancy detected.

### Description

Corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow should have consistent entries cross corners. RPV has discrepancy on the highlighted item from corner to corner, StarRC cannot process the data.

### What Next

Correct the input files for VIA_COVERAGE_OPTION_FILE and restart.

Feedback

## SX-3086

(Fatal) SMC via_coverage_option_file corrupted on layer '%d': RPV table size is different cross corners.

### Description

Corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow should have consistent entries cross corners. The RPV table on the highlighted layer has different size from corner to corner.

### What Next

Correct the input files for VIA_COVERAGE_OPTION_FILE and restart.

## SX-3087

(Fatal) SMC via_coverage_option_file corrupted on layer '%d': RPV value '%f' and '%f' discrepancy cross corners.

### Description

Corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow should have consistent entries cross corners. Highlighted discrepancy is detected, StarRC cannot process the data.

### What Next

Correct the input files for VIA_COVERAGE_OPTION_FILE and restart.

## SX-3088

(Fatal) SMC via_coverage_option_file corrupted: some RPV values are missing from secondary corners.

### Description

Corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow should have consistent entries cross corners. Missing RPV values are detected on secondary corners while they present in the primary corner, StarRC cannot process the data.

### What Next

Correct the input files for VIA_COVERAGE_OPTION_FILE and restart.

## SX-3089

(Fatal) SMC via_coverage_option_file corrupted: RPV table size is different cross corners.

Feedback

**Description**

When using corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow, each RPV table should have consistent number of entries across corners.

**What Next**

Correct the input files for VIA_COVERAGE_OPTION_FILE and restart.

---

## SX-3090

(Fatal) SMC via_coverage_option_file corrupted.

**Description**

Failed to load corner-dependent VIA_COVERAGE_OPTION_FILE in SMC flow.

**What Next**

Make sure that each corner in CORNERS_FILE has correct VIA_COVERAGE_OPTION_FILE and restart. If error persists, contact Synopsys Support Center.

---

## SX-3091

(Fatal) SMC via_coverage_option_file corrupted: cannot load corner via_coverage codes.

**Description**

Failed to load via_coverage_option_file for one corner in SMC flow. It is usually caused by discrepancy on the input files.

**What Next**

Check and correct the VIA_COVERAGE_OPTION_FILE, and restart. If error persists, contact Synopsys Support Center.

---

## SX-3092

(Fatal) SMC via_coverage_option_file corrupted: cannot load corner via_coverage entry.

**Description**

Failed to load via_coverage entry from one of the corner-dependent VIA_COVERAGE_OPTION_FILE files. It is usually caused by discrepancy on input files.

Feedback

**What Next**

Check and correct VIA_COVERAGE_OPTION_FILE, and restart. If error persists, contact Synopsys Support Center.

---

## SX-3093

(Fatal) SMC via_coverage_option_file corrupted: different via_coverage dbu is detected.

**Description**

Different unit is used in various VIA_COVERAGE_OPTION_FILE in SMC flow.

**What Next**

Set same unit in each VIA_COVERAGE_OPTION_FILE.

---

## SX-3094

(Warning) ICV GDS flow does not need MILKYWAY_DATABASE.

**Description**

StarXtract finds this is ICV GDS flow. The setting of MILKYWAY_DATABASE is not needed for it.

**What Next**

Remove the setting of MILKYWAY_DATABASE.

---

## SX-3095

(Warning) Too old version of TCAD_GRD_FILE version is being used, it can result in accuracy loss. Please regenerate nxtgrd file.

**Description**

StarRC has general one-year recommendation on TCAD_GRD_FILE compatibility with StarRC executables. The version of TCAD_GRD_FILE is detected much older than the recommendation. Since TCAD_GRD_FILE provides models for extraction, this old TCAD_GRD_FILE can have impact final accuracy.

**What Next**

Recommend to regenerate TCAD_GRD_FILE as StarRC TCAD_GRD_FILE compatibility recommendation.

Feedback

## SX-3096

(Fatal) INTERNAL Error: inconsistency in DP schedule generation.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-3097

(Fatal) Explicit setting of TEMPERATURE_SENSITIVITY:NO should not be set in SIMULTANEOUS_MULTI_CORNER(SMC) flow for temperature coefficient output

**Description**

You receive this message because the command TEMPERATURE_SENSITIVITY:NO is set in a SIMULTANEOUS_MULTI_CORNER(SMC) flow for temperature coefficient output

**What Next**

Remove the command "TEMPERATURE_SENSITIVITY:NO" from StarRC command file and run the flow again.

## SX-3098

(Warning) Reset the FS convergence goal of %s from %f to %f because only the license key StarRC2-MGR-INTEROP is available.

**Description**

Running with Interoperability license does not allow user to specify FS convergence goal.

**What Next**

For further details, contact the Synopsys Support Center.

## SX-3099

(Warning) FS option %s will be ignored because only the license key StarRC2-MGR-INTEROP is availabe.

Feedback

**Description**

When running with the StarRC2-MGR-INTEROP licnese, some field solver options cannot be specified or overridden.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3100

(Warning) FS convergence goal is set to -perc_self 10 because only the license key StarRC2-MGR-INTEROP is availabe.

**Description**

When using the StarRC2-MGR-INTEROP license, FS convergence goal cannot be set lower than 10 percent.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3101

(Fatal) StarRC only supports design view for top block. 'BLOCK: %s' in the command file is not supported.

**Description**

StarRC only supports design view for BLOCK and it can be specified explicitly or implicitly s.t.,

BLOCK: <your_block_name>.design OR BLOCK: <your_block_name>

Any other view name for top BLOCK is not supported and StarRC will error out.

**What Next**

Correct the BLOCK setting in the StarRC command file.

---

## SX-3102

(Warning) Suggest to adjust LEF_USE_OBS/TRANSLATE_DEF_BLOCKAGE for TSMC <= N7 process.

Feedback

**Description**

At TSMC advanced nodes (N7/N6/N5/N5P/N4/N3),

- OBS(s) in a LEF macro will be translated if considered as metal or dropped if considered as routing blockage automatically.
- BLOCKAGE(s) in a DEF macro should be dropped.

Suggests to use

```
LEF_USE_OBS: SHRINK
TRANSLATE_DEF_BLOCKAGE: NO
```

at these advanced nodes to avoid accuracy problem.

**What Next**

Information only

---

## SX-3103

(Fatal) Attempting to run StarRC feature unrelated to field solver. Only field solver features are available with the StarRC2-MGR-INTEROP license.

**Description**

Only FS flows can be launched with the license key StarRC2-MGR-INTEROP.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3104

(Fatal) Attempting to run FS with selected option. This option is not available with the StarRC2-MGR-INTEROP license.

**Description**

Only FS all nets extraction is allowed for "FS_EXTRACT_NETS" with the license key StarRC2-MGR-INTEROP.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-3105

(Information) Successfully copied file %s to %s.

**Description**

StarRC is successfully able to copy a file that could not be renamed earlier.

**What Next**

No action is necessary.

## SX-3106

INTENAL:(Warning) Manually set the CALIBRE_AGF_CELL_EXTENTS larger or smaller than the calibre runset may cause bad performance in StarRC

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

## SX-3107

(Information) No logical or physical changes detected. Skipping extraction and netlisting.

**Description**

If there are no logical or physical changes when comparing against a baseline layout, there is no need to perform incremental extraction. StarRC will exit without producing a netlist.

**What Next**

Information only; no action is needed.

## SX-3108

(Warning) XIN_ABUTT: YES is not supported for fast extraction mode.

**Description**

XIN_ABUTT: YES is not supported for fast extraction mode.

Feedback

**What Next**

You can ignore this message and StarRC will set XIN_ABUTT to NO.

---

## SX-3109

(Information) [STAR_MAIN_SUMMARY]Found '%s' percent ECO net change. Performing full extraction.

**Description**

When number of net changes is large, a full extraction, instead of incremental extraction, is performed.

**What Next**

This message is for information only, no further action is needed.

---

## SX-3111

(Fatal) PRINT_THICKNESS_INFO is not supported for this process.

**Description**

PRINT_THICKNESS_INFO can be used to output thickness variation as netlist tail comments. In the process under running, this feature is prohibited.

**What Next**

Remove PRINT_THICKNESS_INFO from StarRC command file. Or if PRINT_THICKNESS_INFO is needed, contact Synopsys or Foundry for more information.

---

## SX-3112

(Fatal) Invalid OPERATING_TEMPERATURE is specified. Floating number (-200~300 in unit of CELSIUS) is expected.

**Description**

OPERATING_TEMPERATURE has predefined range from -200 to 300 (unit:Celsius). In this run the temperature specified is out of the range, hence the extraction aborts.

**What Next**

Change the OPERATING_TEMPERATURE to in range of -200 to 300 (unit:Celsius).

Feedback

## SX-3113

(Fatal) Invalid OPERATING_TEMPERATURE is specified in corner: %s . Floating number (-200~300 in unit of CELSIUS) is expected.

**Description**

OPERATING_TEMPERATURE has predefined range from -200 to 300 (unit:Celsius). In some corner run, the temperature specified is out of the range, hence the extraction aborts.

**What Next**

Change the OPERATING_TEMPERATURE to in range of -200 to 300 (unit:Celsius).

## SX-3114

(Fatal) Specified NETLIST_CORNER_FILE does not exist!

**Description**

In TEMPERATURE_SENSITIVITY flow, NETLIST_CORNER_FILE is a necessary input. The input of this file cannot be accessed.

**What Next**

Correct the input file of NETLIST_CORNER_FILE and ensure it is readable.

## SX-3115

(Fatal) Cannot determine device gate direction.

**Description**

Some of the device gates in this design are in X direction while some of them are in Y direction. StarRC QTF flow only support one device gate direction in a design.

**What Next**

Make sure all device gates are in the same direction.

## SX-3116

(Warning) The DIEAREA syntax in TOP_DEF_FILE is not specified!

Feedback

**Description**

StarRC relies on DIEAREA syntax in DEF file to estimate the size of the design. If it's not available, it may affect StarRC performance.

**What Next**

Check whether DEF file is correct. Usually the front-end tools will generate this syntax in DEF file. If this DEF file is manually modified by users, please provide DIEAREA syntax if possible.

---

## SX-3117

(Warning) Instance '%s:%s' is UNPLACED in the design '%s'.

**Description**

An instance is UNPLACED in the design. UNPLACED and connected instances may cause peformacnce issue as they may congest in small area and introduce huge amount of polygons in that area at later extration stages.

For performance consideration, StarRC only reports few unplaced instances.

**What Next**

Information only; no action needed.

---

## SX-3118

(Information) Performing full extraction with ECO_MODE because %s.

**Description**

Perform full extraction for ECO_MODE for the given reason.

**What Next**

Information only; no action is needed.

---

## SX-3119

(Information) Backing up files required by ECO extraction.

**Description**

StarRC ECO extraction requires backing up extraction critical files following successful extraction. These files are required for subsequent iterations of ECO extraction.

Feedback

**What Next**

No action is necessary.

---

## SX-3120

(Information) Performing full extraction in ECO_MODE.

**Description**

Running full extraction because ECO_MODE is set to "RESET".

**What Next**

See StarRC user guide.

---

## SX-3121

(Fatal) ICC signature mismatch. Previous iteration signature '%s' does not match current iteration last signature '%s'

**Description**

StarRC Galaxy ECO flow requires consistency of the ICC2 signature between ECO iterations. There must be a match between the 'last' signature of the current iteration vs. the signature of the previous iteration.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3122

(Warning) StarRC is unable to map LEE_BLK layer %s with maskName=%s to its real metal layer - more than one real metal layer found!

**Description**

ICC2 implements LEE_BLK mark shapes on the layers defined in technology database as below

Layer "LEE_BLK_7" { layerNumber = 2307 maskName = "metal8RCBlockage" blockLineEndExtensionMarkerWidth = 0.0038 ... }

To translate LEE_BLK_7 marker shapes on real metal layer, StarRC will need to obtain real metal layer from LEE_BLK_7's maskName.

Feedback

If more than one tech layers are given with same maskName (metal8 in this example), StarRC will only use the first one to translate LEE_BLK_7 and it might leads to wrong translation.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3123

(Fatal) Unsupported CDB equivalence type: '%c'.

**Description**

Invalid equivalence type is found in equiv file.

**What Next**

Check data generated by ICV.

---

## SX-3124

(Information) [STAR_MAIN_SUMMARY]Performing incremental extraction on '%s' percent ECO change.

**Description**

Incremental extraction re-extracts those modified or added nets. This information shows the percentage of re-extracted nets.

**What Next**

Information only; no action is needed.

---

## SX-3125

(Fatal) INTERNAL Error: Invalid XOUT_NN_STITCH specification '%s', valid choices are any combination of %s.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-3126

(Warning) Missing HN port for SPICE port '%s'

**Description**

Ports in input database might not be defined in SPICE_SUBCKT_FILE.

**What Next**

Contact the Synopsys Support Center.

## SX-3127

(Information) [STAR_MAIN_SUMMARY]Using -clean option in ECO mode because StarRC command option(s) have changed.

**Description**

StarRC is running with the -clean option in ECO mode because some StarRC command options have changed since the previous run.

**What Next**

See StarRC user guide.

## SX-3128

(Warning) LEE (Line End Extension) blockage from GDS_FILE/OASIS_FILE is not supported in LEF/DEF flow.

**Description**

Not supported.

**What Next**

Contact the Synopsys Support Center.

## SX-3130

(Fatal) FILL_COUPLING_THRESHOLD is recommended in transistor-level flow only.

**Description**

FILL_COUPLING_THRESHOLD is used for configurate the metal fill extraction accuracy. This option is intended for transistor-level flow only. As the run is gate run, it errors out to avoid any unexpected issue.

Feedback

**What Next**

Remove this option for the run.

---

## SX-3131

(Fatal) The process %s is not supported for extraction in 2014.06 or newer versions of StarRC.

**Description**

StarRC does not support the specified process since the 2014.06 version.

**What Next**

Use a StarRC version 2013.12 or older.

---

## SX-3135

(Warning) ECO_MODE_ACCURACY level not set to either NORMAL or HIGH. Setting value to NORMAL.

**Description**

Incremental (ECO) extraction accuracy vs. runtime tradeoff can be controlled by the ECO_MODE_ACCURACY level. The default value is HIGH, which provides the highest deegree of accuracy with minimal runtime impact. The NORMAL setting provides additional speedup in cases where the highest degree of accuracy is not required.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

If the NORMAL setting is acceptable, no action is needed.

---

## SX-3136

(Fatal) ECO_MODE requires NETLIST_FORMAT: SPEF.

**Description**

Incremental (ECO) extraction only supports SPEF as the output parasitic file format.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the NETLIST_FORMAT command to specify a SPEF netlist.

Feedback

## SX-3138

(Fatal) ECO_MODE does not support the CCP flow.

**Description**

Incremental (ECO) extraction does not support the CCP flow due to additional requirements on interface layer parasitics.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to run either the CCP flow or ECO extraction, but not both.

## SX-3139

(Warning) ECO_MODE requires COUPLE_TO_GROUND: NO. Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction requires that the COUPLE_TO_GROUND command be set to NO. Switching to ECO_MODE:NO full extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to include the COUPLE_TO_GROUND: NO command.

## SX-3140

(Warning) ECO_MODE does not support the FS_EXTRACT_NETS flow. Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction does not support Field Solver flows. Switching to ECO_MODE:NO full extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to remove all Field Solver commands.

Feedback

## SX-3141

(Warning) ECO_MODE does not support EXTRACTION: FSCOMPARE. Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction does not support Field Solver flows. Switching to ECO_MODE:NO full extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to remove all Field Solver commands.

## SX-3142

(Warning) ECO_MODE does not support the POWER_EXTRACT flow. Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction does not support power extraction. Switching to ECO_MODE:NO full extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to remove the POWER_EXTRACT command (it defaults to NO) or include an explicit POWER_EXTRACT: NO command.

## SX-3143

(Fatal) ECO_MODE does not support the 3D IC flow.

**Description**

Incremental (ECO) extraction does not support 3D IC extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command flow to remove the 3D_IC command (it defaults to NO) or include an explicit 3D_IC: NO command.

Feedback

## SX-3144

(Fatal) ECO_MODE requires EXTRACTION: RC. Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction extracts both parasitic resistances and capacitances and produces a consolidated RC network, which describes the layout.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to remove the EXTRACTION command (it defaults to RC) or include an explicit EXTRACTION: RC command.

## SX-3145

(Fatal) ECO_MODE detected an unsupported clean option.

**Description**

StarRC has detected a clean option that is not compatible with incremental (ECO) extraction. Only the -clean and -cleanN options are supported.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Repeat the StarRC run with one of the supported options.

## SX-3146

(Fatal) ECO_MODE does not support transistor-level extraction.

**Description**

Incremental (ECO) extraction does not support transistor-level extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to either perform a gate-level extraction or to disable ECO extraction.

Feedback

## SX-3147

(Fatal) Mapping file in CDLOut run directory does not exists.

**Description**

You receive this message because of the absence of the mapping files in CDLOut run directory while you specifed OA_CDLOUT_RUNDIR to use ihnl or cnl dir to map back to schematic net names in the OA extracted view.

**What Next**

Make sure that the mapping files in sub_directories of CDLOut run directory exist.

## SX-3148

(Fatal) Wrong format of net definition in CDLOut run directory.

**Description**

You receive this message because of the absence of the mapping files in CDLOut run directory while you specifed OA_CDLOUT_RUNDIR to use ihnl dir to map back to schematic net names in the OA extracted view.

**What Next**

Make sure that the format of net definition in both the file "globalmap" in CDLOut run directory and the files "map" in sub_directories of CDLOut run directory are correct.

The correct formats are:

>>In "globalmap": >>>>>>>>>>>>>>>>>>> $net net_name net_name_1 $endnet

>>In "map" at sub_directoires: >>>>>>>> (net (net_name net_name_1) //or: ("net_name" "net_name_1") )

## SX-3149

(Warning) Galaxy Parasitic Data (GPD) does not support the direct ITF flow with command ITF_FILE.

**Description**

Galaxy Parasitic Data (GPD) does not support the direct ITF flow. StarRC will run the non-GPD flow.

Feedback

**What Next**

Remove the ITF_FILE command to run StarRC with GPD netlisting or the non-GPD flow will run.

---

## SX-3150

(Warning) Galaxy Parasitic Data (GPD) is turned off for the StarQTF flow. Extraction is reverted to XOUT mode.

**Description**

Galaxy Parasitic Data (GPD) is turned off for StarQTF flow. StarRC will run the non-GPD flow.

**What Next**

To enable GPD in StarQTF flow, add option XTOR_GPD: YES or STARQTF_GPD:1 in star_cmd.

---

## SX-3151

(Warning) Mapping file in CDLOut run directory does not exists.

**Description**

You receive this message because of the absence of the mapping files in CDLOut run directory while you specifed OA_CDLOUT_RUNDIR to use ihnl or cnl dir to map back to schematic net names in the OA extracted view.

**What Next**

Make sure that the mapping files is in CDLOut run directory.

---

## SX-3192

(Fatal) EXTRACTION: RC must be specified with CLOCK_NETS option"

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-3197

(Warning) Some blocking regions are not blocked any port, device terminal, or probe_text.

**Description**

At least one port, device terminal or probe_text need to be located in blocking regions with blocking layer methodology(defined in SKIP_PCELL_LAYERS_FILE). If not, the accuracy of capacitance which across the blocking region is not guaranteed.

**What Next**

Include a port, device terminal, or probe_text in the blocking boundary. The detailed information is in summary/pcelllayers.sum which have the bounding box of each blocking region do not have any port, terminal, or probe_text.

## SX-3198

(Fatal) ASCII_DESIGN_FILE is empty. There is no physical shape.

**Description**

ASCII_DESIGN_FILE is empty. There is no physical shape.

**What Next**

Confirm ASCII_DESIGN_FILE is not broken.

## SX-3199

(Fatal) The BBOX of "%s" is invalid. BBOX(%fum, %fum) (%fum, %fum).

**Description**

The cell boundary is not valid.

**What Next**

Confirm the Milkyway data is not broken or re-generate the Milkyway data.

## SX-3200

(Warning) No physical layer described for non-conductor layer Line: %s

**Description**

In ccp_reserved_layers section, you need to map the non-conductor database layer to a physical layer. If you only list the database layer name, StarRC will give this error.

Feedback

**What Next**

You should map the non-conductor database layer to a physical layer.

---

## SX-3201

(Fatal) INTERNAL Error: Cannot use coordinate-based stitcher because %s.

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3202

(Fatal) CCP SMC: Cannot get skew name. Please define PROCESS_CORNER_NAME in ITF files and re-generate nxtgrd files.

**Description**

In order to use SIMULTANEOUS_MULTI_CORNER:YES in CCP flow, all the nextgrd files must have PROCESS_CORNER_NAME field set. This is required by CCP engine to get the mapping between nxtgrd files and the UP corners.

**What Next**

Modify the ITF files and regenerate nxtgrd files for all the related corners.

---

## SX-3203

(Fatal) In the CCP simultaneous multicorner flow, OPERATING_TEMPERATURE is only set for some of the corners in the CORNERS_FILE.

**Description**

When SIMULTANEOUS_MULTI_CORNER:YES is used in the CCP flow, if any corner listed in SELECTED_CORNERS sets OPERATING_TEMPERATURE in the CORNERS_FILE, all of the corners listed in SELECTED_CORNERS must set OPERATING_TEMPERATURE in the CORNERS_FILE as well.

If OPERATING_TEMPERATURE is varied across corners, each and every corner must have OPERATING_TEMPERATURE set in the CORNERS_FILE. If all corners are using the same OPERATING_TEMPERATURE, the temperature can be set either in the CORNERS_FILE or in the command file.

Feedback

**What Next**

Modify either the command file or the CORNERS_FILE to specify the operating temperature (or temperatures) correctly.

---

## SX-3204

(Fatal) In the CCP simultaneous multicorner flow, OPERATING_TEMPERATURE is not set in either the command file or the CORNERS_FILE.

**Description**

When SIMULTANEOUS_MULTI_CORNER:YES is used in the CCP flow and OPERATING_TEMPERATURE is not defined in the CORNERS_FILE, OPERATING_TEMPERATURE must be specified in the command file.

If OPERATING_TEMPERATURE is varied across corners, each and every corner must have OPERATING_TEMPERATURE set in the CORNERS_FILE. If all corners are using the same OPERATING_TEMPERATURE, the temperature can be set either in the CORNERS_FILE or in the command file.

**What Next**

Modify either the command file or the CORNERS_FILE to specify the operating temperature (or temperatures) correctly.

---

## SX-3205

(Warning) Blocking layer '%s' in SKIP_PCELL_LAYERS_FILE is not defined in either GDS_MAP or devtab.

**Description**

Block layer name '%s' in SKIP_PCELL_LAYERS_FILE is not match any layer name in either GDS_MAP or devtab in CCI flow.

**What Next**

There have some mismatch between layer name in SKIP_PCELL_LAYERS_FILE and calibre runset. You should check you SKIP_PCELL_LAYERS_FILE is compatible with the calibre runset.

---

## SX-3206

(Warning) Command CHECK_SKIP_PCELL_LAYER_NAMES can not be used in non-CCI flow, will be ignored.

Feedback

**Description**

Command CHECK_SKIP_PCELL_LAYER_NAMES can not be used in non-CCI flow, will be ignored.

**What Next**

CHECK_SKIP_PCELL_LAYER_NAMES is only for CCI flow. If you are going to use this command, use it in CCI flow, or it will be ignored.

---

## SX-3207

(Fatal) INTERNAL Error: Cannot use DP_STITCHING: yes without specifying XOUT_NN_STITCH.

**Description**

An internal consitency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3208

(Warning) DIELECTRIC_FILL_GDS_FILE does not contain any cell definition for BLOCK %s . HPB objects must reside in same name cell as BLOCK.

**Description**

DIELECTRIC_FILL_GDS_FILE doesn't contain any cell that matches BLOCK. The DIELECTRIC_FILL_GDS_FILE should be associated with the original design by having the same top cell.

**What Next**

Provide DIELECTRIC_FILL_GDS_FILE that contains a cell with name equals to BLOCK.

---

## SX-3209

(Information) Applied GDS/OASIS file to cell '%s'.

**Description**

Add contents from GDS/OASIS file into the cell.

**What Next**

This is an informational message only. No action is required on your part.

Feedback

## SX-3210

(Fatal) The net name '%s' has hierarchy separator '%c' at first char.

**Description**

This kind of net name is not acceptable.

**What Next**

Correct this net name.

## SX-3211

(Warning) %s OBS on %s layer %s in LEF macro %s - '%s'

**Description**

At TSMC advanced nodes (N7/N6/N5/N5P/N4/N3), OBS(s) in a LEF macro will be translated if considered as metal or dropped if considered as routing blockage automatically.

When an OBS is defined on a DB layer mapped to a color ITF layer,

- If OBS is colored, the one with SPACING=0 is considered routing blockage:
  - Translated as metal if OBS has no SPACING.
  - Dropped as routing blockage if OBS has SPACING=0.
  - Translated as metal if OBS has SPACING > 0
    - If OBS is not colored, it is considered routing blockage:
      - This is not allowed and error out by default. When DEBUG_NON_COLOR_POLYGON:YES, this error is lifted and become a warning.
      - Dropped as routing blockage if OBS has SPACING >= 0.

        When an OBS is defined on a DB layer mapped to a non-color ITF layer,

        - Translated as metal if OBS has no SPACING.
        - Dropped as routing blockage if OBS has SPACING>=0.

          For performance consideration, this warning will be issued only once for each polygon dropping case above.

Feedback

**What Next**

Information only

---

## SX-3212

(Warning) Missing GDS/OASIS cell description for some cells.

**Description**

StarXtract reports the data information.

**What Next**

Confirm this is the expected data. If it is not, check the input data about it in the StarXtract command file.

---

## SX-3213

(Fatal) Memory allocation limit exceeded.

**Description**

StarRC was not able allocate sufficient memory to continue the job.

**What Next**

Contact your system administrator to see how much memory is available. If StarRC is using excessive amount of memory, contact Synopsys Customer Support.

---

## SX-3214

(Warning) Number of masks, %d, specified in LEF layer "%s" does not equal number of masks, %d, defined in GRD layer "%s".

**Description**

The number of masks defined in LEF_FILE (MASK) does not match the number of masks in TCAD_GRD_FILE (NUMBER_OF_MASK).

**What Next**

This is process-dependent (<=7nm). GRD contains all mask information for the layers. Layout (LEF) may use fewer masks than those in GRD. Please check if the number of masks mismatched is reasonable. If not clear, please contact the Synopsys Support Center.

Feedback

## SX-3215

(Warning) Redefinition of LAYER %s attribute %s

### Description

The LAYER is defined in multiple LEF(s) and the attribute is given differnent value than previous definition. The multiple defintions of a LAYER won't cause any error in DEF translation, but it may cause unexepected wire widths in the final database and thus false opens. It also introduces extra maintenance difficulty in the design flow.

### What Next

To keep the integrity of design input sources, StarRC suggests to define LAYER(s) only in your technology LEF.

## SX-3216

(Warning) MACRO_DEF_FILE "%s" contains the same DESIGN name as "%s".

### Description

The macro DEF defines same DESIGN with previouly parsed DEF and parsing of it may corrupt the main design data. It will be ignored during translation.

### What Next

Check the macro DEF. If it contains same design data with others, you can ignore this message or remove it from MACRO_DEF_FILE in the command file. If it should be parsed, you should correct the DESIGN and reference it corectly in the TOP_DEF_FILE or other macro DEF(s).

## SX-3217

(Fatal) MACRO_DEF_FILE "%s" contains the same DESIGN name "%s" as in TOP_DEF_FILE

### Description

The macro DEF defines same DESIGN name as in TOP_DEF_FILE.

### What Next

Check the macro DEF and TOP_DEF_FILE. Correct the DESIGN in the macro DEF file and its references in the TOP_DEF_FILE or other macro DEF(s).

Feedback

## SX-3218

(Warning) StarRC ignores the definition of cell '%s' in '%s' as there is no metal routing defined in it.

**Description**

The cell definition in the GDS_FILE/OASIS_FILE has no metal routing in it that can influence accuracy so that StarRC doesn't translate it.

This can be caused by empty GDS/OASIS cell or the GDS/OASIS cell doesn't define metals on the layers mapped in GDS_LAYER_MAP_FILE/OASIS_LAYER_MAP_FILE.

**What Next**

Information only; no action needed.

## SX-3219

(Warning) PROBE_TEXT_FILE is ignored in EXTRACTION: C.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3220

(Fatal) NETLIST_INDUCTANCE_UNIT is not supported with NETLIST_FORMAT:SPF

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3221

(Warning) There is long active fill %d, %d, %d, %d in the design

**Description**

The new METAL_FILL_RECONNECT does not support active fill whose length is larger than 2 um.

Feedback

**What Next**

Check if that's expected to have such long active fill in input data.

---

## SX-3222

(Warning) Old metal fill reconnection (UNIMPORTANT_NETS) is invoked with via fills.

**Description**

Old metal fill reconnection (UNIMPORTANT_NETS) is invoked with via fills.

**What Next**

Information only; no action is needed.

---

## SX-3223

(Warning) New MFR is not supported in FS flow, old reconnect is used for metal fill reconnect.

**Description**

New MFR is not supported in FS flow, old reconnect is used for metal fill reconnect.

**What Next**

Information only; no action is needed.

---

## SX-3224

(Warning) New metal fill reconnection is invoked with active via fill. The new architecture does not handle via fill and can lead to accuracy issue. Please clean up the input data or use the old reconnectino flow.

**Description**

New metal fill reconnection is invoked with active via fill. The new architecture does not handle via fill and can lead to accuracy issue. Please clean up the input data or use the old reconnection flow.

**What Next**

Check the design to see if it's untended. Then clean up the input data and rerun StarRC or use the old reconnection flow.

Feedback

## SX-3225

(Warning) Fast MFR is not recommended for general usage when layout fills do not conform to the feature limitations, may impact extraction accuracy. Please refer to StarRC reference manual.

**Description**

Fast metal fill reconnect is enabled. In this mode, metal fill is considered only if it comes from a GDSII or OASIS file and is marked as active fill in the mapping file. This mode has a set of limitations including active fill polygon size, the sequence of active fill interaction with signal nets, and it does not consider via fills regardless of the setting of the TRANSLATE_VIA_FILLS command. Please refer to StarRC reference manual for more details.

**What Next**

Study StarRC reference manual to understand the limitations. Rerun StarRC using UNIMPORTANT_NETS for MFR if necessary.

## SX-3226

(Fatal) NETLIST format %s is not supported with CLOCK_NETS option; must be SPF or DSPF

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3227

(Warning) ANALOG_SYMMETRIC_NETS is not needed for this extraction. It is ignored.

**Description**

ANALOG_SYMMETRIC_NETS can be set in certain process to improve the extraction accuracy. However at the process of this run, it is automatically detected that ANALOG_SYMMETRIC_NETS is no longer needed for accuracy purpose. The option is ignored.

**What Next**

Remove ANALOG_SYMMETRIC_NETS from the StarRC command file.

Feedback

## SX-3228

(Warning) All nets specified as clock nets for clock net inductance extraction.

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3229

(Warning) Could not find any cell for wildcard set of MILKYWAY_CELL_VIEW.

**Description**

StarXtract cannot find any cell name for the wildcard set of MILKYWAY_CELL_VIEW.

**What Next**

Confirm the setting for MILKYWAY_CELL_VIEW is correct or expected.

## SX-3230

(Warning) DENSITY polygons are %s in the %s macro '%s'

**Description**

Real metal shapes always have higher precedence over DENSITY for sign-off extraction. If OBS or blockage polygons are defined in a LEF/NDM cell, StarRC will ignore its DENSITY polygons in the extraction.

DENSITY polygons can only be used in the extraction which real cell content is not given (OBS is not defined).

**What Next**

Information only.

## SX-3231

(Fatal) CALIBRE_REMOVE_ANALOG_DEVICES only supports CCI database and SPEF output format

Feedback

**Description**

CALIBRE_REMOVE_ANALOG_DEVICES:YES can only be used with CCI database as input database and SPEF format as output format.

**What Next**

You should use CCI database as input database and set NETLIST_FORMAT: SPEF. Otherwise, you can't use CALIBRE_REMOVE_ANALOG_DEVICES:YES in StarRC command file.

---

## SX-3232

(Fatal) INTERNAL Error: Can't generate file "ana_device_remove_info", CALIBRE_REMOVE_ANALOG_DEVICES fail to remove analog devices

**Description**

An internal consistency check has failed.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3233

(Warning) %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3234

(Fatal) TEMPERATURE_SENSITIVITY with NETLIST_CORNER_NAMES and NETLIST_CORNER_FILE is discontinued. Use SIMULTANEOUS_MULTI_CORNERS flow.

**Description**

Using TEMPERATURE_SENSITIVITY to generate multiple temperature netlist files is obsolete. SIMULTANEOUS_MULTI_CORNERS flow is recommended to generate multiple temperature netlist files.

Feedback

**What Next**

see option SIMULTANEOUS_MULTI_CORNERS for more information.

---

## SX-3235

(Information) CapCompare: (Total) Avg %s ; StdDev %s ; Range %s to %s.

**Description**

This is an information message. It reports the summary of FSCOMPARE total results, including average error, standard deviation and the range of the error.

**What Next**

You need to do nothing about this message.

---

## SX-3236

(Fatal) Cannot use FS_EXTRACT_NETS:<sch_net_name> when NET_TYPE:SCHEMATIC and XREF:NO are specified.

**Description**

You receive this message because NET_TYPE is set to SCHEMATIC and XREF is set to NO. This will cause a conflict in the net name type.

**What Next**

Specify NET_TYPE: SCHEMATIC and XREF: YES, then in FS_EXTRACT_NETS use schematic net name; or specify NET_TYPE: LAYOUT and XREF: NO, in FS_EXTRACT_NETS use layout net name.

---

## SX-3237

(Fatal) Version mismatch for internal file '%s': '%s' vs. '%s'.

**Description**

The current version of StarRC cannot read the specified file that was produced by an earlier version because of a change in the format of the file between two versions.

**What Next**

Rerun StarRC from an empty run directory.

Feedback

## SX-3238

(Fatal) Specified value for option '%s': '%s' is invalid.

**Description**

The executable name specified as the value of the given option in the StarRC command file was not found in the runtime environment.

**What Next**

Ensure that the executable is correctly specified by checking its spelling and verifying that it can be found from the PATH environment variable. If the value is specified using an absolute path, verify the path to the file.

Also verify that the user has the required privileges to execute the command.

## SX-3239

(Fatal) Specified layer for MARKER_LAYER: '%s' is invalid.

**Description**

The database layer specified in MARKER_LAYER must exist in the database.

**What Next**

Make sure the layer exists in the database

## SX-3240

(Fatal) Unable to open %s '%s' for %s.

**Description**

StarRC is unable to open a file because of conditions in the runtime environment.

**What Next**

Check your file system for errors and problem conditions such as running out of disk space. Contact your system administrator if necessary.

## SX-3241

(Fatal) Unable to open %s '%s' for %s, error status: '%s'

**Description**

StarRC is unable to open a file because of conditions in the runtime environment.

Feedback

**What Next**

Carry out remedial actions based on the error status indicated by the operating system. Contact your system administrator if necessary.

---

## SX-3242

(Warning) CALIBRE_REMOVE_ANALOG_DEVICES is not supported in Field Solver flow. This command will be ignored.

**Description**

Command CALIBRE_REMOVE_ANALOG_DEVICES is not supported in Field Solver flow. StarRC will set CALIBRE_REMOVE_ANALOG_DEVICES to NO automatically once it finds this is Field Solver flow and give this warning.

**What Next**

If you don't need CALIBRE_REMOVE_ANALOG_DEVICES: YES, nothing need to be done. Otherwise, you should remove any Field Solver flow related commands such as FS_EXTRACT_NETS or EXTRACTION: FSCOMPARE.

---

## SX-3243

(Fatal) Command %s is not supported in CCP flow.

**Description**

The highlighted command setup is not supported in CCP flow.

**What Next**

Change the StarRC command file and restart.

---

## SX-3244

(Warning) Command %s will be ignored in CCP flow.

**Description**

The highlighted command setup is related with device layers which is controlled by CCP extraction engine.

**What Next**

This is a warning message for information purpose. The program will not abort.

Feedback

## SX-3245

(Warning) Support of command %s in CCP flow is restricted to StarRC extracted interconnect layers.

**Description**

The highlighted command setup can only be applied on interconnect layers extracted by StarRC engine. It cannot impact the devicer layers which are extracted by CCP engine.

**What Next**

This is a warning message for information purpose. The program will not abort.

## SX-3246

(Error) MERGE_VIA_NODES: NO must be used with REDUCTION: NO.

**Description**

MERGE_VIA_NODES: NO keep all via nodes and the resistance between them. It requires REDUCTION: NO.

**What Next**

set REDUCTION: NO in the StarRC command file.

## SX-3247

(Warning) Rename conflicting pin %s to %s in cell %s

**Description**

In multi-pin flow, if a pin has name conflicted with other ports in the cell. StarRC will rename this pin to <port_name>_<pin_name>_<pin id>.

**What Next**

Information only.

## SX-3250

(Fatal) Specified value of command %s must be >= %d

**Description**

StarRC command value must be an integer above a threshold.

Feedback

**What Next**

Fix StarRC command value to conform to the permissible range.

---

## SX-3251

(Fatal) Invalid entry in command %s: %s

**Description**

Invalid entry for StarRC command

**What Next**

Fix StarRC command value to valid entry. Please consult the StarRC user guide or contact Synopsys Support Center.

---

## SX-3252

(Warning) Specified error suppression limit of %d for %s exceeds the maximum permitted value of %d. Resetting to the maximum recommended value.

**Description**

Large error suppression limit can significantly increase StarRC runtime and use more disk space.

**What Next**

See StarRC user guide description of the MESSAGE_SUPPRESSION command.

---

## SX-3253

(Warning) Specified message suppression limit of %d is larger than the recommended maximum of %d. As a result, StarRC runtime may increase significantly.

**Description**

Repeated output of messages can increase StarRC runtime significantly.

**What Next**

If StarRC runtime is too long, reduce the message suppression limit. Consult user guide for more details on the MESSAGE_SUPPRESSION_LIMIT command.

---

## SX-3254

(INTERNAL Warning) fs_assisted flow is not turned on for RANDOM ACCESS XOUT

Feedback

**Description**

fs_assisted flow is not turned on for RANDOM ACCESS XOUT

**What Next**

Nothing needs to be done. StarRC extracts all nets instead of activating fs_assisted flow.

---

## SX-3255

(Warning) KEEP_VIA_NODES is not supported with reduction HIGH and has been disabled.

**Description**

Using KEEP_VIA_NODES:YES results in so many nodes being preserved that REDUCTION:HIGH cannot function, so KEEP_VIA_NODES had been disabled.

**What Next**

If preservation of via nodes is required use REDUCTION:YES, NO or NO_EXTRA_LOOPS.

---

## SX-3258

(Warning) Device

**Description**

Once you use command CALIBRE/ICV_LVS_DEVICE_TYPE_MOS to re-cast a user-defined device as MOS, StarRC needs to map terminals of the user-defined device to standard terminals of a MOS device. For example, if a user-defined device "UD" has 4 terminals: A, B, C, D, and the device "UD" is re-casted as a MOS device through command CALIBRE_LVS_DEVICE_TYPE_MOS, StarRC needs to know how the terimal A, B, C, D is mapped to standard terminal (DRAIN, GATE, SOURCE, BULK) of a MOS device. StarRC has 2 mechanisms to do the mappings: <1 if the terminal names of the user-defined device are exactly D, G, S, B or DRAIN, GATE, SOURCE, BULK, StarRC will do mappings based on the terminal names; <2 You can define terminal mappings for this device in a optional pin file (CALIBRE/ICV_OPTIONAL_DEVICE_PIN_FILE), and StarRC will map terminals based on the mappings defined in that file.

If the user-defined device has no standard terminal names, and CALIBRE/ICV_OPTIONAL_DEVICE_PIN_FILE doesn't contain mapping information for this device, StarRC won't know the correct mappings of the device terminals. If the mappings are not correct, the result may be incorrect. So StarRC will not re-cast that device and give this warning.

Feedback

**What Next**

You should check whether you use a correct optional pin file through StarRC command CALIBRE/ICV_OPTIONAL_DEVICE_PIN_FILE. All devices in command CALIBRE/ICV_LVS_DEVICE_TYPE_MOS but have no standard terminal names should be included in the optional pin file.

---

## SX-3261

(Warning) TRANSLATE_VIA_FILLS is only effective in transistor-level extraction. This option is ignored.

**Description**

TRANSLATE_VIA_FILLS is a feature to enable translation of floating fill vias and accounting for them during floating fill reduction. This feature is limited at transistor-level only. The run is at gate-level, so the option is ignored.

**What Next**

Remove TRANSLATE_VIA_FILLS from StarRC command file.

---

## SX-3262

(Warning) A via fill %d, %d, %d, %d touches net id %d. This via is ignored.

**Description**

TRANSLATE_VIA_FILLS option does not support via fills touching signal nets. This via is ignored and will cause no effect.

**What Next**

Check the input data for errors.

---

## SX-3263

(Warning) A fill polygon %d, %d, %d, %d touches net id %d. This polygon is ignored

**Description**

Touching of fill polygons to signal nets is ignored. This fill polygon will cause no effect.

**What Next**

Check the input data for errors.

Feedback

## SX-3264

(Warning) TRANSLATE_RETAIN_BULK_LAYERS_CONLY_FORCE will be obsolete in next release

**Description**

TRANSLATE_RETAIN_BULK_LAYERS_CONLY_FORCE will be obsolete in next release

**What Next**

Remove TRANSLATE_RETAIN_BULK_LAYERS_CONLY_FORCE in StarRC command file

## SX-3265

(Fatal) Option %s should not be mixed with NDM/LEFDEF option %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3266

(Fatal) Option %s should not be mixed with NDM/MILKYWAY option %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3267

(Fatal) Option %s should not be mixed with NDM/HERCULES option %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

Feedback

## SX-3268

(Fatal) Option %s should not be mixed with NDM/CALIBRE option %s

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3269

(Fatal) This function %s should not be mixed with NDM option

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

## SX-3280

(Warning) Gate layer %s and diff layer %s are in ignore_cap_layers, the coupling between them will be ignored.

**Description**

In StarRC command file, IGNORE_CAPACITANCE: ALL RETAIN_GATE_DIFFUSION_COUPLING is set. But the gate layer and diff layer reported in the message is also under ignore_cap_layers in mapping file. StarRC will ignore the coupling between the reported gate layer and diff layer.

**What Next**

If you want to ignore the coupling between the gate and diff layers, you don't need to do anything. If you want to extract the coupling between the gate and diff layers, remove them from ignore_cap_layers in mapping file.

## SX-3281

(Warning) NET_SEGMENT_CUT_LENGTH option will be obsolete for this flow in StarRC 2016.12 release. Please change your command file to reflect this change.

Feedback

**Description**

The option will be obsolete for gate-level flows in 2016.12 release.

**What Next**

Change your command file to avoid the warning.

---

## SX-3283

(Fatal) Macro '%s' specified in command 'DEF_ATTRIBUTE_FROM_LEF' is not found.

**Description**

The macro specified in the option is missing.

**What Next**

Checck if the macro is specified correctly.

---

## SX-3284

(Fatal) File '%s' specified in command 'DEF_ATTRIBUTE_FROM_LEF' is not found.

**Description**

The file specified in the option is missing.

**What Next**

Check if the file is specified correctly.

---

## SX-3285

(Fatal) Attribute '%s' specified in 'DEF_ATTRIBUTE_FROM_LEF' is not supported.

**Description**

The attribute specified in the option is not supported. Supported attributes are,

- *WIDTH*
- *WRONGDIRECTION*

**What Next**

Check if the attribute is specified correctly.

Feedback

## SX-3286

(Warning) Layer based NET_SEGMENT_CUT_LENGTH is no longer accepted. Please change your mapping file to reflect this change.

**Description**

Layer based NET_SEGMENT_CUT_LENGTH in the mapping file is obsolete in 2016.06 release.

**What Next**

Change your mapping file to avoid the warning.

## SX-3287

(Fatal) DEF cell '%s' specified in DEF_ATTRIBUTE_FROM_LEF must have only one LEF file.

**Description**

DEF_ATTRIBUTE_FROM_LEF supports the syntax as follows,

- DEF_ATTRIBUTE_FROM_LEF: WIDTH/WRONGDIRECTION <DEF cell> <LEF file>
- DEF_ATTRIBUTE_FROM_LEF: WIDTH <DEF cell 1> <LEF file> WRONGDIRECTION <DEF cell 2> <LEF file>

However, for a DEF cell, it is not allowed to have multiple LEF sources. For instance, the following specification is *not* allowed. DEF_ATTRIBUTE_FROM_LEF: WIDTH <DEF cell X> <LEF file> WRONGDIRECTION <DEF cell X> <LEF file>

Even though the LEF files are actually the same for DEF cell X.

**What Next**

Check if the attributes are specified correctly.

## SX-3288

(Warning) Gate layer %s and diff layer %s are in ignore_cap_layers, the coupling between them will be ignored.

**Description**

There is GATE_TO_LAYER_CAPS defined for layers mentioned above in ITF. But the gate layer and diff layer reported in the message is also under ignore_cap_layers in mapping file. StarRC will ignore the coupling between the reported gate layer and diff layer.

Feedback

**What Next**

If you want to ignore the coupling between the gate and diff layers, you don't need to do anything. If you want to extract the coupling between the gate and diff layers, remove them from ignore_cap_layers in mapping file.

---

## SX-3542

(Fatal) Incorrect Probe Text Coordinates: line %d: %s.

**Description**

StarXtract finds this incorrect probe text coordinates. The coordinates are too big or out of layout range.

**What Next**

fix the probe text coordinates.

---

## SX-3543

(Error) StarRC is not complete due to task error(s).

**Description**

StarRC has failed to complete successfully due to task error(s).

**What Next**

Check the errors shown in the summary file. Contact Synopsys Support Center if you need further help.

---

## SX-3544

(Fatal) Cannot use CCP_EXTRACTION_FILE and FS_QTF_FILE in the same case.

**Description**

StarRC command CCP_EXTRACTION_FILE and FS_QTF_FILE cannot be used at the same time.

**What Next**

Remove redundant syntax in StarRC command file

---

## SX-3545

(Fatal) The SDP feature is not supported during GPD conversion.

Feedback

**Description**

Use of the Synopsys Diagnostic Platform (SDP) is not supported during the conversion of a Galaxy Parasitic Database (GPD) to an ASCII netlist format.

**What Next**

Unset the SDP_ENABLED environment variable if set and run StarRC again.

---

## SX-3546

(Fatal) GPD converter usage error: %s

**Description**

Options specified to the Galaxy Parasitic Database (GPD) converter utility were incorrectly specified as indicated in the error message.

**What Next**

Specify the correct set of options for GPD conversion. Refer to the StarRC User Guide for more information.

---

## SX-3547

(Warning) No tech_file found inside GPD directory '%s', using default conversion options.

**Description**

The directory containing the Galaxy Parasitic Database (GPD) is expected to contain a file called tech_file, which is used to obtain options for converting the GPD to an ASCII netlist format.

The conversion proceeds with the default conversion options in a tech_file is not found inside the GPD directory.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3548

(Warning) SNAP_RESISTOR_WIDTH is set to NO for NETLIST_TAIL_COMMENTS: NO.

**Description**

SNAP_RESISTOR_WIDTH:YES is to snap width to WMIN in the netlist tail comments, thus NETLIST_TAIL_COMMENTS needs to be set to YES.

Feedback

**What Next**

Set NETLIST_TAIL_COMMENTS to YES.

---

## SX-3550

(Fatal) When setting FSCOMPARE_TOTAL_COUPLING_THRESHOLD, COUPLING_ABS_THRESHOLD and COUPLING_REL_THRESHOLD should be set to 0.

**Description**

If using FSCOMPARE_TOTAL_COUPLING_THRESHOLD, COUPLING_ABS_THRESHOLD and COUPLING_REL_THRESHOLD should both be set to 0.

**What Next**

Set COUPLING_ABS_THRESHOLD and COUPLING_REL_THRESHOLD to 0 if you want to use FSCOMPARE_TOTAL_COUPLING_THRESHOLD.

---

## SX-3551

(Information) CapCompare: (Total Coupling) Avg %s ; StdDev %s ; Range %s to %s.

**Description**

This is an information message. It reports the summary of FSCOMPARE total coupling results, including average error, standard deviation and the range of the error.

**What Next**

You need to do nothing about this message.

---

## SX-3552

(Warning) Running StarRC in single corner mode will result in degraded runtime for design flows where multiple corners are used. For optimal runtime, add the necessary commands to configure the Simultaneous Multicorner flow (CORNERS_FILE and SELECTED_CORNERS).

---

## SX-3553

(Warning) Running StarRC in single corner mode will result in degraded runtime for design flows where multiple corners are used. For optimal runtime, add the necessary commands to configure the Simultaneous Multicorner flow (CORNERS_FILE and SELECTED_CORNERS) and remove the SIMULTANEOUS_MULTI_CORNER command.

Feedback

## SX-3554

(Fatal) When setting FSCOMPARE_TOTAL_COUPLING_THRESHOLD, POWER_EXTRACT should be set to NO.

**Description**

If using FSCOMPARE_TOTAL_COUPLING_THRESHOLD, POWER_EXTRACT should be set to NO.

**What Next**

Set POWER_EXTRACT to NO if you want to use FSCOMPARE_TOTAL_COUPLING_THRESHOLD.

## SX-3555

(Warning) When setting FSCOMPARE_TOTAL_COUPLING_THRESHOLD, if NETS is not set to *, fscomptotcoup report will not be generated.

**Description**

If using FSCOMPARE_TOTAL_COUPLING_THRESHOLD, NETS should also be set to *. If NETS is not set to *, fscomptotcoup report will not be generated, but fscomptot and fscompcoup reports will be generated as usual.

**What Next**

Set NETS to * if you want to generate fscomptotcoup report. For large design, you can select nets with FS_EXTRACT_NETS option.

## SX-3556

(Warning) Running StarRC with metal fill GDS files will result in degraded runtime. For optimal runtime, use the METAL_FILL_OASIS_FILE to include metal fills during extraction.

## SX-3560

(Fatal) When setting FSCOMPARE_TOTAL_COUPLING_THRESHOLD, COUPLE_TO_GROUND should be set to NO.

**Description**

If using FSCOMPARE_TOTAL_COUPLING_THRESHOLD, COUPLE_TO_GROUND should be set to NO.

Feedback

**What Next**

Set COUPLE_TO_GROUND to NO if you want to use FSCOMPARE_TOTAL_COUPLING_THRESHOLD.

---

## SX-3561

(Fatal) Transistor level design doesn't support FSCOMPARE_TOTAL_COUPLING_THRESHOLD.

**Description**

Only gate level design supports FSCOMPARE_TOTAL_COUPLING_THRESHOLD now.

**What Next**

If you are running a transistor level design, remove FSCOMPARE_TOTAL_COUPLING_THRESHOLD from StarRC command file.

---

## SX-3562

(Warning) Could not find any net for wildcard set '%s' in RETAIN_FLOATING_NETS.

**Description**

Could not find any net for wildcard set %s in RETAIN_FLOATING_NETS. The nets in RETAIN_FLOATING_NETS should be a floating net.

**What Next**

You should double check your case and revise the wildcard in RETAIN_FLOATING_NETS.

---

## SX-3563

(Warning) Could not find net '%s' in RETAIN_FLOATING_NETS.

**Description**

Could not find net %s in RETAIN_FLOATING_NETS. The nets in RETAIN_FLOATING_NETS should be a floating net.

**What Next**

You should double check your case and revise net name in RETAIN_FLOATING_NETS.

Feedback

## SX-3564

(Warning) StarRC's runtime could have been affected by adverse conditions in the runtime environment, see sml.sum in the STAR directory for more information.

### Description

StarRC's runtime can be affected by adverse conditions in the runtime environment such as high CPU loads, lack of sufficient memory on a host, network degradation and so on.

Diagnostic information about adverse conditions detected during a run is collected in the sml.sum file in the STAR directory.

### What Next

Users can refer to the sml.sum file and take remedial actions as necessary, such as running on a host with less load or hosts with higher memory.

Refer to the man pages for messages in the sml.sum file for additional information.

## SX-3565

(Warning) Galaxy Parasitic Data (GPD) does not support the CCP flow.

### Description

Galaxy Parasitic Data (GPD) does not support the CCP flow. StarRC will run the non-GPD flow.

### What Next

Remove the commands for the CCP flow to run StarRC with GPD netlisting or the non-GPD flow will run.

## SX-3567

(Warning) Galaxy Parasitic Data (GPD) only supports the RC, C or FSCOMPARE extraction modes for transistor level extraction.

### Description

Galaxy Parasitic Data (GPD) only supports the RC, C or FSCOMPARE extraction modes for transistor level extraction. StarRC will run the non-GPD flow.

### What Next

Set EXTRACTION: RC, C or FSCOMPARE to run StarRC with GPD netlisting or the non-GPD flow will run.

Feedback

## SX-3568

(Warning) Galaxy Parasitic Data (GPD) only supports POWER_EXTRACT: NO/YES

**Description**

Galaxy Parasitic Data (GPD) only supports POWER_EXTRACT: NO/YES

**What Next**

Set POWER_EXTRACT to YES/NO to run StarRC with GPD netlisting or the non-GPD flow will run.

## SX-3569

(Warning) Galaxy Parasitic Data (GPD) does not support the 3D IC flow.

**Description**

Galaxy Parasitic Data (GPD) does not support the 3D IC flow. StarRC will run the non-GPD flow.

**What Next**

Remove the 3D_IC command to run StarRC with GPD netlisting or the non-GPD flow will run.

## SX-3572

(Warning) Galaxy Parasitic Data (GPD) does not support NEW_IP_HANDLING: YES

**Description**

Galaxy Parasitic Data (GPD) does not support NEW_IP_HANDLING: YES

**What Next**

Remove the NEW_IP_HANDLING: YES command to run StarRC with GPD netlisting or the non-GPD flow will run.

## SX-3573

(Warning) Galaxy Parasitic Data (GPD) does not support the %s command

**Description**

Galaxy Parasitic Data (GPD) does not support the highlighted commmand

Feedback

**What Next**

Remove/change the highlighted command to run the GPD flow or the non-GPD flow will run.

---

## SX-3574

(Warning) Galaxy Parasitic Data (GPD) only supports SPEF/SPF formats.

**Description**

Galaxy Parasitic Data (GPD) only supports SPEF or SPF formats.

**What Next**

Set NETLIST_FORMAT: SPEF or SPF if you intend to run StarRC with GPD enabled.

---

## SX-3575

(Warning) Galaxy Parasitic Data (GPD) does not support CLOCK_NET_INDUCTANCE command

**Description**

Galaxy Parasitic Data (GPD) does not support CLOCK_NET_INDUCTANCE command.

**What Next**

Remove CLOCK_NET_INDUCTANCE if you intend to run StarRC with GPD netlisting.

---

## SX-3576

(Warning) Galaxy Parasitic Data (GPD) INSTANCE_PORT does not suuport option %s

**Description**

Galaxy Parasitic Data (GPD) INSTANCE_PORT does not support options EXPLODE, NOT_CONDUCTIVE, SUFFIXED, or MULTIPLE.

**What Next**

Remove unsupported option if you intend to run StarRC with GPD netlisting.

---

## SX-3577

(Warning) Galaxy Parasitic Data (GPD) does not support the transistor level extraction flow.

Feedback

**Description**

Galaxy Parasitic Data (GPD) only does not support the transistor level extraction flow.

**What Next**

None at your side.

---

## SX-3578

(Warning) Galaxy Parasitic Data (GPD) does not support the TEMPERATURE_SENSITIVITY extraction flow.

**Description**

Galaxy Parasitic Data (GPD) only does not support the TEMPERATURE_SENSITIVITY extraction flow.

**What Next**

None at your side.

---

## SX-3579

(Warning) Galaxy Parasitic Data (GPD) does not support one or more StarRC command options.

**Description**

Galaxy Parasitic Data (GPD) does not support one or more StarRC command options.

**What Next**

None at your side.

---

## SX-3580

(Fatal) NETLIST_FORMAT: GPD is not valid.

**Description**

NETLIST_FORMAT: GPD is not valid.

**What Next**

Set NETLIST_FORMAT to a different option and try to run StarRC again.

Feedback

## SX-3581

(Fatal) Commands -cleanT, -cleanXREF, -cleanX, -cleanFS, -cleanTFS, and -cleanXFS are obsoleted starting 2016.06 version.

**Description**

The highlighted commands are obsoleted starting 2016.06 version.

**What Next**

Please remove the obsoleted command and try again.

## SX-3582

(Warning) Command -clean is obsoleted for GATE level extraction and turned on by default.

**Description**

The -clean command is obsoleted for GATE level extraction and turned on by default.

**What Next**

This is a warning message for information purpose. The program will not abort.

## SX-3583

(Fatal) Command -cleanD is obsoleted starting 2016.06 version.

**Description**

The -cleanD command is obsoleted starting 2016.06 version.

**What Next**

Please remove the obsoleted command and try again.

## SX-3584

(Fatal) Command -cleanN is obsoleted for the GATE level extraction starting 2016.06 version.

**Description**

The -cleanN command for the GATE level extraction is obsoleted starting 2016.06 version.

Feedback

**What Next**

Please remove the obsoleted command and try again.

---

## SX-3585

(Warning) Netlist format %s is deprecated and will be obsoleted in the 2016.06 version.

**Description**

The highlighted netlist format is deprecated and will be obsoleted in the 2016.06 version.

**What Next**

This is a warning message for information purpose. The program will not abort.

---

## SX-3586

(Fatal) Netlist format %s is obsoleted.

**Description**

The highlighted netlist format is obsoleted.

**What Next**

Change the NETLIST_FORMAT setting and try again.

---

## SX-3587

(Fatal) Command CAPACITOR_TAIL_COMMENTS:YES can only be used in Calibre-StarRC or ICV-StarRC flow

**Description**

When command CAPACITOR_TAIL_COMMENTS: YES is used, you must use CCI or ICV output as StarRC input. Otherwise, StarRC will give this error message.

**What Next**

If you are not running a Calibre-StarRC or ICV-StarRC flow, remove this command from StarRC command file.

---

## SX-3588

(Fatal) Command CAPACITOR_TAIL_COMMENTS:YES can only be used when output netlist format is SPF/STAR/NETNAME

Feedback

### Description

Command CAPACITOR_TAIL_COMMENTS: YES only supports SPF/STAR/NETNAME formats. If other netlist format is specified, such as SPEF, StarRC will give this error message.

### What Next

You should change NETLIST_FORMAT to one of the supported formats, or remove this command from StarRC command file.

---

## SX-3589

(Fatal) Command CAPACITOR_TAIL_COMMENTS:YES can not be used in Field Solver flow except for FS_EXTRACT_NETS.

### Description

Command CAPACITOR_TAIL_COMMENTS:YES doesn't support Field Solver flow except for FS_EXTRACT_NETS. StarRC will give this error message when you run Field Solver flow with this command.

### What Next

If you want to run Field Solver flow, remove this command from StarRC command file.

---

## SX-3590

(Fatal) Only REDUCTION:NO|LAYER|LAYER_NO_EXTRA_LOOPS can be set when CAPACITOR_TAIL_COMMENTS:YES is used in a RC extraction run

### Description

When command CAPACITOR_TAIL_COMMENTS: YES is used in a RC extraction run (EXTRACTION: RC), you can only use REDUCTION:NO|LAYER| LAYER_NO_EXTRA_LOOPS as reduction setting. If other option is used, StarRC will give this error message.

### What Next

If you want to use command CAPACITOR_TAIL_COMMENTS: YES, change reduction setting to one of the supported options. If you don't need that command, remove it from command file.

Feedback

## SX-3591

(Information) [STAR_MAIN_SUMMARY] Found '%s' percent ECO net change for this iteration and totally '%s' percent ECO net change accumulated since last full chip extraction. Performing incremental extraction.

**Description**

When number of net changes is not large, incremental extraction is performed.

**What Next**

This message is for information only, no further action is needed.

## SX-3592

(Information) [STAR_MAIN_SUMMARY] Found '%s' percent ECO net change for this iteration and totally '%s' percent ECO net change accumulated since last full chip extraction. Performing full extraction.

**Description**

When number of net changes is large, a full extraction, instead of incremental extraction, is performed.

**What Next**

This message is for information only, no further action is needed.

## SX-3593

(Fatal) %s name '%s' is longer than %d characters.

**Description**

The length of the name string exceeds the limit.

**What Next**

Reduce the length of the string.

## SX-3595

(Information) [STAR_MAIN_SUMMARY] TCAD_GRD_FILE (nxtgrd file) generated by >4 years older version than the StarRC version is used for this extraction.

Feedback

**Description**

When the TCAD_GRD_FILE was generated by >4 years older version than StarRC version currently you run. This may or may not impact RC extraction accuracy depending on process being used.

**What Next**

Update TCAD_GRD_FILE to within 4 year of the StarRC version you currently run, or contact foundry for information

---

## SX-3596

(Fatal) Simultaneous multi-corner TC1/TC2 output only supports transistor level flow.

**Description**

Simultaneous multi-corner TC1/TC2 output only supports transistor level flow.

---

## SX-3597

(Warning) TEMPERATURE_SENSITIVITY will not be supported at gate-level flow. Switch to SIMULTANEOUS_MULTI_CORNER flow. TEMPERATURE_SENSITIVITY will be ignored in future release.

**Description**

TEMPERATURE_SENSITIVITY for outputting multiple netlist can be supported through SIMULTANEOUS_MULTI_CORNER flow. Single output with temperature coefficient is not supported at gate-level is not supported at gate-level is not supported at gate-level is not supported at gate-level.

---

## SX-3598

(Fatal) The setting of NETLIST_TAIL_COMMENTS:ADVANCED is obsolete since 2016.06.

**Description**

Since 2015.12, NETLIST_TAIL_COMMENTS: ADVANCED is deprecated. $m is printed in the tail comments on colored layer when NETLIST_TAIL_COMMENTS: YES. ITF layers are always printed in the LAYER_MAP section of the netlist file. It is obsolete since 2016.06

**What Next**

Set NETLIST_TAIL_COMMENTS: YES

Feedback

## SX-3599

(Fatal) The %s run is GPD which does not support %s command.

**Description**

GPD does not support -clean[N|X|T] command.

**What Next**

Remove -clean[N|X|T] from the command and try again.

## SX-3601

(Warning) Length dependent LATERAL_CAP_SCALING_VS_SI_SPACING will not be supported in 2016.06 and be replaced by DIELECTRIC_FILL_EMULATION_VS_SI_SPACING.

**Description**

Length dependent LATERAL_CAP_SCALING_VS_SI_SPACING is present in ITF. It will be be supported in 2016.06.

**What Next**

Consider using DIELECTRIC_FILL_EMULATION_VS_SI_SPACING.

## SX-3602

(Warning) Option 'NO' for TRANSLATE_RETAIN_BULK_LAYERS will become obsolete from the next release. Recommend to use 'CONLY'.

**Description**

Option 'NO' for TRANSLATE_RETAIN_BULK_LAYERS will become obsolete from the next release. Recommend to use 'CONLY'.

**What Next**

Consider using TRANSLATE_RETAIN_BULK_LAYERS: CONLY.

## SX-3603

(Fatal) The ITF_FILE option is supported in transistor-level and wafer-on-wafer extraction flows only.

Feedback

**Description**

The direct ITF flow with the ITF_FILE option is supported for transistor-level and wafer-on-wafer extraction flows only. It is not supported in general gate-level flows.

**What Next**

Use StarRC version 2015.06 or earlier to run with the ITF_FILE option in the gate-level flow.

---

## SX-3604

(Warning) Database resolution (dbu = %d) finer than 0.1 nm. Converting resolution to 0.1 nm (dbu = 10000) for extraction.

**Description**

The maximum resolution for extraction is 0.1 nm.

**What Next**

Use a database unit less than or equal to 10000.

---

## SX-3605

(Warning) Galaxy Parasitic Data (GPD) does not support NETLIST_COMPRESS_COMMAND and NETLIST_POSTPROCESS_COMMAND to be used together.

**Description**

Galaxy Parasitic Data (GPD) does not support the highlighted 2 commmands to be used together.

**What Next**

Remove/change one of the highlighted commands to run the GPD flow or the non-GPD flow will run.

---

## SX-3606

(Warning) Could not load netlist options from GPD (Galaxy Parasitic Data) directory "%s".

**Description**

When standalone GPD (Galaxy Parasitic Data) converter can't load netlist options stored in GPD directory, StarRC will give this warning.

Feedback

**What Next**

Check whether the specified GPD directory is correct and complete.

---

## SX-3607

(Warning) EM_DISABLE_REFINED_TRENCH_CONTACT_SEGMENTATION is only supported under REDUCTION:NO.

**Description**

EM_DISABLE_REFINED_TRENCH_CONTACT_SEGMENTATION is used to turn off the additional segmentation at trench contact ending segement. It is only supported under REDUCTION:NO for EM analysis purpose. This option is disabled if REDUCTION is set other than NO.

**What Next**

Change reduction to NO if EM_DISABLE_REFINED_TRENCH_CONTACT_SEGMENTATION is intended to be used for EM flow

---

## SX-3608

(Fatal) The bounding box defined in the cell_extents_file in this design is too large(over 100mm by 100mm). StarRC can not extract this kind of large design.

**Description**

The bounding box defined in the cell_extents_file is too large, and over 100mm by 100mm. It is not a resonable design bounding box.

**What Next**

You should check the cell_extents_file in the ICV_RUNSET_REPORT_FILE, and changed to a reasonable bounding box.

---

## SX-3609

(Fatal) HIERARCHICAL_COUPLING_REPORT_FILE has the same name as the netlist file.

**Description**

The value for the HIERARCHICAL_COUPLING_REPORT_FILE option in the StarRC command file is identical to the value of the NETLIST_FILE option.

Feedback

**What Next**

Modify the StarRC command file to use different values for the HIERARCHICAL_COUPLING_REPORT_FILE and NETLIST_FILE options.

---

## SX-3610

(Fatal) HIERARCHICAL_COUPLING_REPORT_FILE has the same name as COUPLING_REPORT_FILE.

**Description**

The value for the HIERARCHICAL_COUPLING_REPORT_FILE option in the StarRC command file is identical to the value of the COUPLING_REPORT_FILE option.

**What Next**

Modify the StarRC command file to use different values for the HIERARCHICAL_COUPLING_REPORT_FILE and COUPLING_REPORT_FILE options.

---

## SX-3611

(Fatal) HIERARCHICAL_COUPLING_REPORT_NUMBER must be greater than zero.

**Description**

This error message informs you that HIERARCHICAL_COUPLING_REPORT_NUMBER is set to a number less than zero.

**What Next**

Reset HIERARCHICAL_COUPLING_REPORT_NUMBER to an integer greater than zero.

---

## SX-3612

(Warning) HIERARCHICAL_COUPLING_REPORT_FILE command is designed only for gate level cases, and thus, is voided for transistor level cases.

**Description**

HIERARCHICAL_COUPLING_REPORT_FILE command is only designed for gate level cases. For transistor level cases, it will be voided and will not be effective.

**What Next**

If it is needed to produce skip cell coupling report files for transistor level cases, please contact StarRC team.

Feedback

## SX-3613

(Fatal) Invalid value for NFS_COHERENCY_DELAY %d, expected a value greater than zero and less than 200.

### Description

The NFS_COHERENCY_DELAY option is used to add delays in StarRC's distributed processing schedule to account for lag times in NFS coherency. The expected value (in seconds) must be greater than zero and less than 200.

### What Next

Change the value of this option to be in the specified range and rerun StarRC.

## SX-3614

(Warning) TRANSLATE_RETAIN_BULK_LAYERS will be ignored since it is not compatible with RVTV flow

### Description

StarRC command TRANSLATE_RETAIN_BULK_LAYERS will be ignored for processes using RVTV conductors, because such processes does not have BULK.

### What Next

Remove TRANSLATE_RETAIN_BULK_LAYERS from the StarRC command file

## SX-3615

(Warning) Use of the NFS_COHERENCY_DELAY option can lead to excessively long run times. Use this option only when coherency issues are observed in the network file system (NFS).

### Description

The NFS_COHERENCY_DELAY option is used to add delays in StarRC's distributed processing schedule to account for lag times in NFS coherency. Setting this option can lead to increases in run time, therefore this option is to be used only if file coherency delays in NFS are suspected.

One manifestation of a file coherency delay is when StarRC errors out with an error message that a file cannot be opened for reading when the file is actually found to exist.

Feedback

**What Next**

Remove this option from the StarRC command file if you are not experiencing coherency delays with NFS. Contact your system administrator for more information.

---

## SX-3617

(Fatal) POWER_EXTRACT:YES NONBULK_LAYERS doesn't work with LEFDEF flow.

**Description**

POWER_EXTRACT:YES NONBULK_LAYERS doesn't work in LEFDEF flow. StarRC gives this error once it finds the input database if LEFDEF but POWER_EXTRACT:YES NONBULK_LAYERS is used.

**What Next**

You should use other options for command POWER_EXTRACT in LEFDEF flow.

---

## SX-3618

(Fatal) POWER_EXTRACT:YES NONBULK_LAYERS doesn't work with Milkyway flow.

**Description**

POWER_EXTRACT:YES NONBULK_LAYERS doesn't work in Milkyway flow. StarRC gives this error once it finds the input database if Milkyway but POWER_EXTRACT:YES NONBULK_LAYERS is used.

**What Next**

You should use other options for command POWER_EXTRACT in Milkyway flow.

---

## SX-3619

(Fatal) Value of the INTRANET_CAPS option can be set to YES for transistor-level extractions only.

**Description**

Intranet capacitance is only applicable for high frequency simulation in analog / RF applications. It is not needed (or appropriate) for downstream analyses performed for gate-level designs such as timing or rail analysis.

**What Next**

Set the value of INTRANET_CAPS to NO in the StarRC command file.

Feedback

## SX-3620

(Warning) MILKYWAY_SHOW_CELL_INFO_DETAIL is a DEBUG ONLY command, subject to user interface and functionality change in future. Please avoid using this command in production flow.

### Description

MILKYWAY_SHOW_CELL_INFO_DETAIL is a DEBUG ONLY command, subject to user interface and functionality change in future. Please avoid using this command in production flow.

### What Next

Information only; no action is needed.

## SX-3621

(Fatal) MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE: YES and MOS_GATE_DELTA_RESISTANCE_LAYERS can not be used together. Only one of Rg modeling methods can be used.

### Description

MOS_GATE_DELTA_RESISTANCE/MOS_GATE_DELTA_RESISTANCE_LAYERS are used to extract gate resistance in delta topology (with negative resistors), and MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE is used to extract gate resistance without negative resistors but equal to delta topology. You should only use one setting for gate resistance extraction. They can't be used togther.

### What Next

Remove one of these 2 commands from StarRC command file.

## SX-3622

(Warning) Layer %s listed in MOS_GATE_DELTA_RESISTANCE_LAYERS is not mapped to an ITF layer with LAYER_TYPE=GATE. No delta resistance modifiaction will be applied on this layer.

### Description

Delta resistance modification is only allowed on gate layers. When you use MOS_GATE_DELTA_RESISTANCE_LAYERS to list layers to apply delta resistance modification, all the listed layers should be used by gate terminal and mapped to an ITF layer with LAYER_TYPE=GATE. If StarRC finds some layers in this command are NOT

Feedback

mapped to an ITF layer with LAYER_TYPE=GATE, StarRC will give this warning and doesn't do delta resistance modification on this layer.

**What Next**

You should map the reported layer to an ITF layer with LAYER_TYPE=GATE in StarRC mapping file. Or remove it from command MOS_GATE_DELTA_RESISTANCE_LAYERS if you don't want to have delta resistance modification on this layer.

---

## SX-3623

(Fatal) INCR_MAX_TCAP_ERROR_PCT: <value>, value must locate inside [0, 50].

**Description**

INCR_MAX_TCAP_ERROR_PCT is used in incremental extraction. It defines the threshold of relative tcap error in percentage for identifying eco affected nets. A ratio is calculated by summation of changed coupling caps for one net before and after eco divided by the pre-eco total cap of the net. If the ratio is less than INCR_MAX_TCAP_ERROR_PCT, the net is skipped as an eco affected net.

**What Next**

Change the value inside [0, 50]

---

## SX-3624

(Warning) HIERARCHICAL_COUPLING_REPORT_FILE is not compatible with COUPLE_TO_GROUND = YES, and thus, is voided.

**Description**

HIERARCHICAL_COUPLING_REPORT_FILE command is only compatible with COUPLE_TO_GROUND = NO. For COUPLE_TO_GROUND = YES, HIERARCHICAL_COUPLING_REPORT_FILE will be voided and will not be effective.

**What Next**

If it is needed to produce skip cell coupling report files for COUPLE_TO_GROUND = YES, please contact StarRC team.

---

## SX-3625

(Warning) The incremental NDM is not found. StarRC will detect ECO changes automatically.

Feedback

**Description**

There is no incremental NDM design as known as scratch view design in NDM library directory. StarRC performs XOR based incremental extraction flow to detect ECO changes by itself.

**What Next**

See StarRC user guide.

---

## SX-3626

(Information) The incremental NDM is found. StarRC will read incremental NDM directly.

**Description**

There is incremental NDM design as known as scratch view design in NDM library directory. StarRC performs fast incremental extraction flow by NDM ECO information.

**What Next**

See StarRC user guide.

---

## SX-3627

(Warning) Unable to unlock file '%s', error status '%s', host '%s', working directory '%s'

**Description**

StarRC is unable to unlock a file because of issues in the runtime environment.

**What Next**

This warning is benign unless a StarRC run with distributed processing fails in which case this message may indicate the source of the problem.

---

## SX-3628

(Warning) HIERARCHICAL_COUPLING_REPORT_FILE does not yet support NDM input, and thus, is voided.

**Description**

HIERARCHICAL_COUPLING_REPORT_FILE command is not compatible with NDM input yet. For NDM cases, HIERARCHICAL_COUPLING_REPORT_FILE will be voided and will not be effective.

Feedback

**What Next**

NDM support is already planned for HIERARCHICAL_COUPLING_REPORT_FILE.

---

## SX-3629

(Error) Invalid line '%s', line number = %d in input file '%s'.

**Description**

The line in input file is not valid based on file format.

**What Next**

Fix the input file based on the StarRC user guide and run again.

---

## SX-3630

(Warning) Incorrect silicon marker description Line: %s

**Description**

Each line in silicon_marker_layers section in StarRC mapping file should contain the silicon marker layer name and the layer it marks for. Any other description is invalid and will trigger this warning.

**What Next**

You should list the silicon marker layer and the layer it marks for.

---

## SX-3631

(Error) Option '%s' is not supported in FS flow (FSCOMPARE or FS_EXTRACT_NETS)

**Description**

This option is not supported in FS flow.

**What Next**

Remove the option and run again.

---

## SX-3633

(Fatal) TRANSLATE_RETAIN_BULK_LAYERS:CONLY is not supported for gate level flow

**Description**

TRANSLATE_RETAIN_BULK_LAYERS:CONLY is not supported for gate level flow

Feedback

**What Next**

Please remove command TRANSLATE_RETAIN_BULK_LAYERS

---

## SX-3634

(Fatal) Layer '%s' in silicon_marker_layers section in MAPPING_FILE does not have RPV_VS_AREA, RPV_VS_WIDTH_AND_LENGTH, RPV_VS_SI_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH_AND_EXTENSION table.

**Description**

This layer apeared in silicon_marker_layers section in MAPPING FILE. The silicon marker layer can only be mapped to a fake via layer with RPV_VS_AREA, RPV_VS_WIDTH_AND_LENGTH, RPV_VS_SI_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH_AND_EXTENSION table specified.

**What Next**

Specify RPV_VS_AREA, RPV_VS_WIDTH_AND_LENGTH, RPV_VS_SI_WIDTH_AND_LENGTH or RPV_VS_SI_WIDTH_AND_LENGTH_AND_EXTENSION table on this layer in the ITF file.

---

## SX-3635

(Fatal) GPD comand must be set for ECO_MODE YES or RESET

**Description**

GPD comand must be set for ECO_MODE YES or RESET

**What Next**

Please add GPD to StarRC command file

---

## SX-3636

(Information) StarXtract process for core %d terminated early because the number of cores used is reverted to %d.

**Description**

When the optimal number of partitions determined by StarRC is less than the value of NUM_CORES specified in the StarRC command file, the value of NUM_CORES is internally changed to match the number of partitions required. When this happens unneeded processes are terminated early to conserve compute resources.

Feedback

For example, if a user launches a job with NUM_CORES: 8 and the actual number of cores used is reverted to 3, processes for cores 4 through 8 will be terminated early.

**What Next**

This message is for information only. No action is necessary, but users can change the NUM_CORES value in the StarRC command file to the number of cores used as reported by this message to prevent StarRC from producing this message in subsequent runs.

---

## SX-3637

(Fatal) DIRECT_GPD cannot be set to 0 for ECO_MODE YES or RESET

**Description**

DIRECT_GPD cannot be set to 0 for ECO_MODE YES or RESET

**What Next**

Please set DIRECT_GPD to 1 or don't set DIRECT_GPD in StarRC command file

---

## SX-3638

(Warning) Galaxy Parasitic Data (GPD) does not support one or more StarRC command options. Extraction is reverted to Xout mode.

**Description**

Galaxy Parasitic Data (GPD) does not support one or more StarRC command options. Extraction is reverted to Xout mode.

**What Next**

None at your side.

---

## SX-3639

(Warning) ECO mode requires Galaxy Parasitic Data (GPD). Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction requires Galaxy Parasitic Data (GPD). Switching to ECO_MODE:NO full extraction.

**What Next**

None at your side.

Feedback

## SX-3640

(Warning) Galaxy Parasitic Data (GPD) does not support pipeline NETLIST_COMPRESS_COMMAND.

**Description**

Galaxy Parasitic Data (GPD) does not support pipeline NETLIST_COMPRESS_COMMAND.

**What Next**

Change NETLIST_COMPRESS_COMMAND to run the GPD flow or the non-GPD flow will run.

## SX-3641

(Warning) ENHANCED_SHORT_REPORTING is not supported for transistor level flow.

**Description**

ENHANCED_SHORT_REPORTING which is used to report shorts between signal and blockage, skip cell, unselectable, non-selected net is currently not supported for transistor level flow.

**What Next**

This is a warning message, nothing needs to be done from the user side. We will enhance the option to be supported for transistor level flow in future StarRC release.

## SX-3642

(Warning) StarXtract process for core %d terminated early because its parent process died.

**Description**

This message is produced when a worker process in StarRC's automatic distributed processing feature (enabled with STARRC_DP_STRING) terminates without killing all of its descendant processes. This usually indicates issues with the host on which the process was running.

Under these circumstances, the child process of the worker terminates itself and its descendants to prevent that StarRC process from continuing under abnormal environmental conditions.

Feedback

**What Next**

This message is for information only. A StarRC run may complete successfully even if this warning appears in the summary file because of in-built fault tolerance mechanisms.

---

## SX-3643

(Warning) SNAP_RESISTOR_WIDTH is set to NO because DETECT_FUSE: YES.

**Description**

SNAP_RESISTOR_WIDTH and DETECT_FUSE can not be used together.

**What Next**

Turn off SNAP_RESISTOR_WIDTH.

---

## SX-3644

(Fatal) The StarRC command ENHANCED_SHORT_REPORTING set to COMPLETE is not supported with the StarRC command %s.

**Description**

The StarRC command ENHANCED_SHORT_REPORTING set to COMPLETE is not supported with the StarRC command SKIP_CELLS_COUPLE_TO_NET or COUPLE_NONCRITICAL_NETS.

**What Next**

Remove the StarRC command SKIP_CELLS_COUPLE_TO_NET/ COUPLE_NONCRITICAL_NETS or set the StarRC command ENHANCED_SHORT_REPORTING to YES

---

## SX-3645

(fatal) DPT:SHIFT is discontinued. Please remove it from the command file and restart extraction.

**Description**

Stand alone DPT:SHIFT is discontinued from 2016.12 release. DPT:SHIFT will function only with FS_EXTRACT_NETS.

**What Next**

Either (1) remove the DPT:SHIFT command or (2) add FS_EXTRACT_NETS.

Feedback

## SX-3646

(Warning) DPT_MAX_SHIFT in ITF is not supported.

**Description**

DPT_MAX_SHIFT is not supported. The keyword DPT_MAX_SHIFT in the ITF (nxtgrd) file will have no effect on the extraction results.

**What Next**

This message is for information only. A StarRC run may complete successfully even if this warning appears in the summary file because of in-built fault tolerance mechanisms.

## SX-3647

(Fatal) Could not find executable for command '%s' used in %s

**Description**

The executable for the command specified to launch multiple StarRC jobs for distributed processing could not be found. The command should either be an absolute path to an existing executable or an executable with the given name should be found in the directories listed in the user's PATH environment variable.

**What Next**

Specify the correct path to an existing executable or modify the PATH environment variable so that the command is found in one of its component directories. Consult your system administrator for more information.

## SX-3648

(Fatal) Layer '%s' in silicon_marker_layers section in MAPPING_FILE does not map to a trench contact fake via layer.

**Description**

This layer apeared in silicon_marker_layers section in MAPPING FILE. The silicon marker layer can only be mapped to a trench contact fake via layer.

**What Next**

Modify the mapping file.

## SX-3649

(Warning) Unable to open res-excluded net file %s - ignore res-excluded nets

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3650

(Warning) Unable to open cap-excluded net file %s - ignore cap-excluded nets

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3651

(Fatal) Fail to open file %s.

**Description**

StarRC is unable to open an input file.

**What Next**

Check the input file and try again

---

## SX-3652

(Fatal) Invalid line ' %s '.

**Description**

Invalid line in netlist file

**What Next**

Check the netlist file and try again

---

## SX-3653

(Warning) Huge resistor (%EOhm) found in net %s. P2Ps of this net might be incorrect.

Feedback

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3654

(Warning) Unable to open rcNet file %s - ignore selected RC nets

**Description**

Not available.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3655

(Fatal) CCP flow does not support SIMULTANEOUS_MULTI_CORNER(SMC) with Temperature Sensitivity.

**Description**

CCP flow does not support SIMULTANEOUS_MULTI_CORNER(SMC) with Temperature Sensitivity.

**What Next**

Use single-corner CCP flow to output Temperature Sensitivity.

---

## SX-3656

(Fatal) NETLIST_SMC_FORMULA cannot be used with Temperature Sensitivity.

**Description**

Temperature Sensitivity flow does not support NETLIST_SMC_FORMULA.

---

## SX-3657

(Warning) Connectivity of VIA layer "%s" is incorrectly assigned. Check Technology (e.g. LEF) or Mapping file.

Feedback

**Description**

The layer DB in the current configuration has led to wrong connectivity in the corresponding VIA layer. Check and see if the Tech file (e.g., LEF) or the corresponding mapping file is directing to the correct layers.

**What Next**

You should check your technology files (e.g., LEF) and mapping files and see if those files are designed correctly.

---

## SX-3658

(Warning) ECO_MODE does not support NETLIST_FORMAT: SPF. Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction does not support SPF format output. Switching to ECO_MODE:NO full extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Modify the command file to use NETLIST_FORMAT: SPEF or NETLIST_FORMAT: GPD.

---

## SX-3659

(Fatal) The layer mapped to silicon marker layer '%s' is not defined in the conductor layer section in MAPPING_FILE

**Description**

The silicon_marker_layers should be mapped to the real database layer. This real database layer should be defined in the mapping file and input database.

**What Next**

1.You should add this database layer conductor_layers section. 2.You should make sure this database layer defined in the input database.

---

## SX-3660

(Fatal) The ITF layer '%s' defined in the silicon marker layer '%s' is not validate in the TCAD_GRD_FILE.

Feedback

**Description**

The ITF layer defined in the silicon_marker_layers "ITF=" section should be a valid ITF layer. This ITF layer should be defined in the TCAD_GRD_FILE.

**What Next**

You should make sure the ITF layer name is correct and defined in the TCAD_GRD_FILE.

---

## SX-3661

(Warning) Galaxy Parasitic Data (GPD) does not support StarRC command '%s'. Extraction is reverted to Xout mode.

**Description**

Galaxy Parasitic Data (GPD) does not support one or more StarRC command options. Extraction is reverted to Xout mode.

**What Next**

Remove the command to run StarRC with GPD netlisting or Xout flow will run.

---

## SX-3662

(Warning) Internally setting the 3D_IC option to NO since nxtgrd file '%s' does not have a TSV specification.

**Description**

The 3D_IC extraction feature of StarRC can be used only when the nxtgrd file contains a TSV statement. The 3D_IC feature will be automatically disabled internally if the user's nxtgrd file does not contain a TSV statement.

**What Next**

If 3D_IC extraction is desired, use a nxtgrd file that contains a TSV statement. Otherwise, remove the 3D_IC: yes specification from the StarRC command file in order to prevent this warning from being reported.

Refer to the StarRC User Guide for more information.

---

## SX-3663

(Warning) Layer %d contains a ranged VIA model whose minimum size is not zero, or multiple VIA models including one or many ranged VIA models. ENHANCED_VIA_MODEL_ASSIGNMENT_FOR_COVERAGE is thus turned off, which might affect VIA coverage accuracy.

Feedback

**Description**

A ranged VIA model is a VIA model where Xrange and Yrange are presented by a range [min_size, max_size]. ENHANCED_VIA_MODEL_FOR_VIA_COVERAGE supports only one ranged VIA model in which min_size must be 0. Furthermore, if a layer contains a ranged VIA model, it cannot contain other VIA models.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3664

(Fatal) The syntax '%s' is not supported in silicon_marker_layers

**Description**

The silicon_marker_layers only accept "ITF=", "MASK=". Any other field is not acceptable for silicon_marker_layers.

**What Next**

You should remove all the fields which are not acceptable for the silicon_marker_layers.

---

## SX-3665

(Warning) ECO_MODE does not support NETLIST_INSTANCE_SECTION: YES. Switching to ECO_MODE:NO full extraction.

**Description**

Incremental (ECO) extraction does not support NETLIST_INSTANCE_SECTION: YES (Output instance section information to GPD directory) Switching to ECO_MODE:NO full extraction.

For more information on ECO extraction, see the StarRC user guide.

**What Next**

Remove NETLIST_INSTANCE_SECTION: YES from StarRC command file if you want to run incremental extraction.

---

## SX-3666

(Warning) NETLIST_INSTANCE_SECTION:YES doesn't support command: %s.

Feedback

**Description**

NETLIST_INSTANCE_SECTION:YES (Output instance section information to GPD directory) doesn't support the command specified in this message.

**What Next**

If you only need to generate SPEF (no instance section) from the GPD, please remove NETLIST_INSTANCE_SECTION: YES from StarRC command file. If you need to generate SPF with instance section from the GPD, please remove the specified command.

---

## SX-3667

(Warning) This is %s flow. NDM_CELL_REPORT_FILE command will be ignored.

**Description**

The command NDM_CELL_REPORT_FILE is only used for NDM flow.

**What Next**

Since this command is only used to generate cell log in NDM flow. When the flow is not NDM, the StarXtract will ignore this command.

---

## SX-3668

(Warning) There are no nets defined in the NETS and SPECAILNETS sections of cell '%s'.

**Description**

No nets defined in the cell. The final netlist may be empty.

**What Next**

Check the design to see whether missing nets in NETS and SPECAILNETS is expected.

---

## SX-3669

(Warning) Setting SMART_OPENS_RCG_LIMIT to a value > 1000 can lead to very long runtimes.

**Description**

StarRC runtime during extraction and post-extraction can be very long if the SMART_OPENS_RCG_LIMIT option is set to a large value.

Feedback

**What Next**

Remove or comment out this option from the StarRC command file or set it to a value less than 1000.

---

## SX-3670

(WARNING) MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE_TAIL_COMMENT: YES can only be use with MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE: YES and NETLIST_TAIL_COMMENTS: YES, command reset to NO.

**Description**

MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE_TAIL_COMMENT is used to add "$gate_drv" in resistor tail comment to distinguish single ended model or double ended model, and can not be set alone. You should set MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE: YES and NETLIST_TAIL_COMMENT: YES.

**What Next**

Set two commands in StarRC command file.

---

## SX-3671

(Warning) The option EM_PARAM_MAPPING_FILE is not supported in gate level flows.

**Description**

Currently EM_PARAM_MAPPING_FILE is only supported in transistor level flows, not gate level flows.

**What Next**

If this is acceptable, no action is needed otherwise contact the Synopsys Support Center.

---

## SX-3673

(Warning) MERGE_VIAS_IN_ARRAY is forced to NO when via coverage is used.

**Description**

When via coverage is used, StarRC does not merge vias in via arrays.

**What Next**

If this is acceptable, no action is needed otherwise contact the Synopsys Support Center.

Feedback

## SX-3674

(Fatal) STARRC_COUPLES_TO_BASELAYERS option is supported only in FS-CCP flow with FS_EXTRACT_NETS:*

**Description**

To use STARRC_COUPLES_TO_BASELAYERS option, both CCP_EXTRACTION_FILE and FS_EXTRACT_NETS: * must be specified.

**What Next**

Specify CCP_EXTRACTION_FILE and FS_EXTRACT_NETS:*

## SX-3675

(Information) WIDE_DEVICE_TERM_RESISTANCE:RES requires RES device to separate terminal layers from regular routing layers for correct current direction detection and resistance extraction. Not separating RES device terminal layers can lead to inaccuracy of resistance extraction.

**Description**

WIDE_DEVICE_TERM_RESISTANCE:RES requires RES device to separate terminal layers from regular routing layers for correct current direction detection and resistance extraction. If not separated from routing layer, the RES device terminal may not have proper current direction detection, this can impact overall resistance extraction accuracy on such layer.resistance

**What Next**

Confirm the RES device definition in LVS rule file has separated terminal layers from regular routing layers. If not please separate it in LVS. Contact StarRC suppor team for confirming this operation.

## SX-3676

(Fatal) the layer operation line "%s" is not supported in ADDITIONAL_LAYER_GENERATION_FILE.

**Description**

The layer operation is not complete and the syntax is not correct in ADDITIONAL_LAYER_GENERATION_FILE.

**What Next**

You should revise the layer operation.

Feedback

## SX-3677

(Fatal) The "%s" option is not suppored in SIZE operation in ADDITIONAL_LAYER_GENERATION_FILE.

**Description**

SIZE operation in ADDITIONAL_LAYER_GENERATION_FILE only support "-by" "-direction".

**What Next**

You should revise the layer operation.

## SX-3678

(Fatal) The Layer "%s" in ADDITIONAL_LAYER_GENERATION_FILE is not a validate layer which should be mapped to a ITF layer.

**Description**

The operating layer should be a phyiscal layer and mapping to a ITF layer.

**What Next**

You should revise the layer operation.

## SX-3679

(Fatal) Inconsistent format of nxtgrd files specified with CORNERS_FILE and SELECTED_CORNERS commands. Please regenerate nxtgrd files for all the related corners with the same grdgenxo version.

**Description**

In SMC flow, the nxtgrd files for all the selected corners must be consistent and have the same format.

**What Next**

Regenerate nxtgrd files for all the related corners with the same grdgenxo version.

## SX-3681

(Warning) The power net names in the short summary when StarRC commands POWER_EXTRACT is set to NO and ENHANCED_SHORT_REPORTING is set to YES or COMPLETE, is not supported with the StarRC command '%s'.

Feedback

**Description**

The short summary shorts_all.sum reports the shorts with power nets as shorts with unselectable.

**What Next**

Nothing to do.

---

## SX-3682

(Fatal) SUBSTRATE_ISLAND_SQUARE_WIDTH can only be used with TRANSLATE_RETAIN_BULK_LAYERS:CONLY [ALL_TO_CLOSEST_CONTACT].

**Description**

SUBSTRATE_ISLAND_SQUARE_WIDTH can be only used with TRANSLATE_RETAIN_BULK_LAYERS:CONLY [ALL_TO_CLOSEST_CONTACT].

**What Next**

Use TRANSLATE_RETAIN_BULK_LAYERS:CONLY [ALL_TO_CLOSEST_CONTACT] to enable SUBSTRATE_ISLAND_SQUARE_WIDTH behavior.

---

## SX-3683

(Warning) The TSV mapping is undefined in tsvFrontBackMap, use first tsv layer id instead.

**Description**

To map TSV to TSV layer, we read information from tsvFrontBackMap. However, this mapping seems not exist

**What Next**

Check tsvFrontBackMap and tsv mapping

---

## SX-3684

(Fatal) Host %s supports both IPv4 and IPv6 internet protocol addressing. StarRC requires the user to resolve this ambiguity by setting the %s option. Set %s: NO to use IPv4 addressing and %s: YES to use IPv6 addressing. Consult your system administrator on which IP address mode to use.

Feedback

**Description**

Addresses of hosts on the Internet can be specified using either 32 bits (IPv4) or 128 bits (IPv6). Usually a host supports only one addressing mode. For hosts that support both addressing modes, StarRC needs to know which addressing mode to use for interprocess communication during distributed processing. Set the option given in the error message to YES to use IPv6 and NO to use IPv4.

**What Next**

Contact your IT department to get guidance on which IP addressing protocol should be used.

---

## SX-3685

(Fatal) Hosts specified in %s support different internet protocol addressing modes.

**Description**

Addresses of hosts on the Internet can be specified using either 32 bits (IPv4) or 128 bits (IPv6). All hosts specified in the DP string option should support the same type of addressing otherwise interprocess communication will fail.

**What Next**

Change the DP string option to specify hosts that have the same addressing mode. Contact your IT department to get information on the addressing modes supported by hosts in your compute environment.

---

## SX-3686

(Fatal) Wrong usage. Using single GLOBAL_TEMP corner with TEMPERATURE_SENSITIVITY:YES is not supported.

**Description**

Using single GLOBAL_TEMP corner with TEMPERATURE_SENSITIVITY:YES is not supported.

**What Next**

Use either single corner temperature sensitivity flow or replace the keyword GLOBAL_TEMP with a specific temperature in the corner definition to output TC1/TC2.

---

## SX-3687

(Fatal) Invalid host name '%s' specified in %s

Feedback

**Description**

One of the host names specified in the a DP string option is incorrect.

**What Next**

Verify that the host name is correct and rerun StarRC after updating the DP string specification in the StarRC command file.

---

## SX-3688

(Fatal) Cannot use %s: %s for hosts that support the %s addressing mode only.

**Description**

Addresses of hosts on the Internet can be specified using either 32 bits (IPv4) or 128 bits (IPv6). StarRC automatically detects the addressing mode on the submit host when the STARRC_DP_STRING option is used and selects the appropriate addressing mode internally. The ENABLE_IPV6 option should be used only to specify the desired addressing mode when a host supports both IPv4 and IPv6. Specifying a value for ENABLE_IPV6 that is in conflict with the addressing mode of the submit host will result in this error message.

**What Next**

Change the value of the ENABLE_IPV6 option based on information provided by the error message. If the submit host supports IPV6, set ENABLE_IPV6 to YES, otherwise set it to NO.

Unless the host supports both IPv4 and IPv6, the ENABLE_IPV6 option need not be specified. Consult your IT department for more information about the IP address modes supported in your environment.

---

## SX-3689

(Fatal) ACTIVE_FILL_FROM_NDM_DESIGN_VIEW_ONLY option is supported only with '%s'.

**Description**

To use ACTIVE_FILL_FROM_NDM_DESIGN_VIEW_ONLY option, required option must be specified.

**What Next**

Specify the required option.

Feedback

## SX-3690

(Fatal) ACTIVE_FILL_FROM_NDM_DESIGN_VIEW_ONLY option is not supported with '%s'.

**Description**

To use ACTIVE_FILL_FROM_NDM_DESIGN_VIEW_ONLY option, unsupported option must be removed.

**What Next**

Remove unsupported option.

## SX-3691

(Severe) INDESIGN_VIRTUAL_SHIELDING option is supported only with '%s'.

**Description**

To use INDESIGN_VIRTUAL_SHIELDING option, required option must be specified.

**What Next**

Specify the required option.

## SX-3692

(Warning) A %s operation on file %s on host %s, working directory %s failed with system error '%s', attempting operation again.

**Description**

A file locking operation failed as indicated in the warning. This usually happens because of intermittent issues with file locking on NFS. StarRC attempts the file locking operation multiple times until it can be completed successfully based on internal criteria. In some cases, StarRC may terminate with an error message if all these attempts fail.

**What Next**

Check with your system administrator if there are any issues with NFS for the host given in the warning message and the disk from which files are being accessed.

## SX-3693

(Information) IC Compiler II InDesign StarRC's Virtual shielding feature is invoked. Virtual shielding is not meant for final signoff flow because virtual shielding may not represent the actual final shielding in a design.

Feedback

**Description**

The command INDESIGN_VIRTUAL_SHIELDING is used internally by IC Compiler II. Later in the flow, and in particular for final signoff, real shielding must be used.

**What Next**

Refer to IC Compiler II documentation to see how to create real shielding shapes.

---

## SX-3694

(Fatal) The NETLIST_FORMAT: PARAMETERIZED_SPICE option can be used only in the GPD flow.

**Description**

The NETLIST_FORMAT: PARAMETERIZED_SPICE option is intended to be used only for flows in which StarRC produces a Galaxy Parasitic Database (GPD). StarRC internally enables the GPD flow based on options in the command file. Users cannot enable or disable the GPD flow directly.

**What Next**

If the NETLIST_FORMAT: PARAMETERIZED_SPICE feature is not needed, remove it from the command-file or set its value to NO. If this feature is needed, contact StarRC customer support for information about the NETLIST_FORMAT: PARAMETERIZED_SPICE option and conditions under which it can be used.

---

## SX-3695

(Fatal) Use of the NETLIST_FORMAT: PARAMETERIZED_SPICE option requires %s (atleast two corners)

**Description**

The NETLIST_FORMAT: PARAMETERIZED_SPICE option can be used only when certain other options are set in the StarRC command file. This error message indicates the option that needs to be set in order to use NETLIST_FORMAT: PARAMETERIZED_SPICE.

**What Next**

Add the option mentioned in the error message to the StarRC command file. Contact StarRC customer support for more information about the NETLIST_FORMAT: PARAMETERIZED_SPICE option and conditions under which it can be used.

Feedback

## SX-3696

(Warning) fill shape {{%d %d} {%d %d}} on db layer '%s' intersects with shape {{%d %d} {%d %d}} on db layer '%s'.

### Description

This message indicates that fill shape intersects with another shape.

### What Next

This is a warining message, and not action is needed.

## SX-3697

(Fatal) Use of the NETLIST_FORMAT: PARAMETERIZED_SPICE option does not allow the use of %s

### Description

Some options in the StarRC command file cannot be used with the NETLIST_FORMAT: PARAMETERIZED_SPICE option. This error message indicates the option setting that is incompatible with the NETLIST_FORMAT: PARAMETERIZED_SPICE option.

### What Next

Remove or modify the option mentioned in the error message in the StarRC command file. Contact StarRC customer support for more information about the NETLIST_FORMAT: PARAMETERIZED_SPICE option and conditions under which it can be used.

## SX-3698

(Warning) Internally set option %s to %s for use with option %s

### Description

Use of some options in the StarRC command file results in other options being set internally, resetting their user-specified values if the option has been specified in the command file. This warning states the option whose value has been set or reset internally and the option setting which caused this change to occur.

### What Next

This is a warning message only, no action is necessary.

Feedback

## SX-3699

(Fatal) EEQ_CELL_PORT_FILE is not supported in gate level flow. This option is only used with ICV/CCI flow.

**Description**

EEQ_CELL_PORT_FILE can only be used with transistor level flow. Gate level flow can not be used with this option.

**What Next**

Remove the EEQ_CELL_PORT_FILE in the StarRC command file. Contact StarRC customer support for more information about the EEQ_CELL_PORT_FILE option and conditions under which it can be used.

## SX-3700

(Fatal) EEQ_CELL_PORT_FILE can not be used with PIN_CUT_THRESHOLD,PIN_CUT_LOCATION_CENTER or SPICE_SUBCKT_FILE.

**Description**

PIN_CUT_THRESHOLD,PIN_CUT_LOCATION_CENTER or SPICE_SUBCKT_FILE is not supported with EEQ_CELL_PORT_FILE option.

**What Next**

Remove the PIN_CUT_THRESHOLD,PIN_CUT_LOCATION_CENTER and SPICE_SUBCKT_FILE in the StarRC command file. Contact StarRC customer support for more information about the EEQ_CELL_PORT_FILE option and conditions under which it can be used.

## SX-3701

(Fatal) The syntax of EEQ_CELL_PORT_FILE is not correct at line '%s'.

**Description**

The syntax of EEQ_CELL_PORT_FILE is not correct.

**What Next**

The syntax of EEQ_CELL_PORT_FILE is not correct. Follow the syntax description in StarRC user guide.

Feedback

## SX-3702

(Warning) Gate-level Mutli-corner Temperature Sensitivity flow does not support Galaxy Parasitic Data (GPD) output. GPD output has been turned off.

**Description**

GPD output is not supported by Gate-level Multi-corner Temperature Sensitivity flow. GPD is automatcically turned off.

## SX-3703

(Fatal) EEQ_CELL_PORT_FILE can only be used with NETLIST_FORMAT:SPEF.

**Description**

EEQ_CELL_PORT_FILE can only be used with NETLIST_FORMAT:SPEF

**What Next**

Revise NETLIST_FORMAT to SPEF in StarRC command file. Contact StarRC customer support for more information about the EEQ_CELL_PORT_FILE option and conditions under which it can be used.

## SX-3704

(Fatal) INDESIGN_OPEN_NETS option is supported only with '%s'.

**Description**

To use INDESIGN_OPEN_NETS option, required option must be specified.

**What Next**

Specify the required option.

## SX-3705

(Fatal) RC scaling coefficients are supported only with '%s'.

**Description**

To use RC scaling feature, required option must be specified.

**What Next**

Specify the required option.

Feedback

## SX-3706

(Fatal) Scaling coefficient specified in the option '%s' of the corners file has to be positive.

**Description**

Scaling of RC parasitic values according to the specified coefficients.

**What Next**

Modify coefficient accordingly.

## SX-3707

(Warning) The GPD_IN_NDM command will be ignored because NDM_DATABASE is not defined.

**Description**

NDM_DATABASE does not be set when GPD_IN_NDM command is set as YES. GPD_IN_NDM is ignored.

## SX-3708

(Warning) The GPD command will be ignored because GPD_IN_NDM command is enabled.

**Description**

Ignoring the GPD command setting when GPD_IN_NDM is set as YES. The GPD directory name is design.<block_name>.gpd located in NDM attachement directory.

## SX-3709

(Fatal) MULTI_PHYSICAL_PINS_PREFIX option is supported only with '%s'.

**Description**

To use MULTI_PHYSICAL_PINS_PREFIX option, required option must be specified.

**What Next**

Specify the required option.

## SX-3710

(Warning) Incorrect %s pin position of transistor %s.

Feedback

**Description**

StarRC uses source/drain/gate-pin positions to detect gate direction (vertical or horizontal). Incorrect pin position may lead to incorrect gate direction.

**What Next**

Check the pin positions of input database.

---

## SX-3711

(Fatal) License error: %s

**Description**

StarRC encountered an error which checking out a license.

**What Next**

Check if (a) the LM_LICENSE_FILE environment variable is set correctly, (b) your license server is setup and working correctly and (c) You have enough available licenses to run StarRC using options specified in the command file. The use of some features of StarRC may have additional licensing requirements.

Contact Synopsys technical support for more information.

---

## SX-3712

(Fatal) POWER_EXTRACT:CONLY can only work with Transistor level Galaxy Parasitic Data(GPD).

**Description**

POWER_EXTRACT:CONLY can only work with Transistor level Galaxy Parasitic Data(GPD)

**What Next**

Specify the required option.

---

## SX-3713

(Fatal) There do not have any cell name in EEQ_CELL_PORT_FILE match current BLOCK '%s'.

**Description**

There do not have any cell name in EEQ_CELL_PORT_FILE match current BLOCK.

Feedback

**What Next**

Use the correct EEQ_CELL_PORT_FILE.

---

## SX-3714

(Fatal) SHORT_PINS:NO is not supported for NORC extraction.

**Description**

SHORT_PINS:NO is not supported for NORC extraction.

**What Next**

Specify the required option.

---

## SX-3721

(Warning) Net specified with netlist_connect_open command doesn't exist in the design.

**Description**

Net specified with the netlist_connect_open command doesn't exist in the design. This net will be ignored from further cosideration.

**What Next**

By default, we connect opens of nets in the design. NCO command is used to further narrow down this mechanism and should be used with real nets. This is a warning message telling that the design doesn't contain this net. Please be aware of this.

---

## SX-3722

(Warning) Distributed metal fill reconnect is invoked.

**Description**

Distributed metal fill reconnect is invoked instead of fast metal fill reconnect.

**What Next**

Information only. No action is needed.

---

## SX-3724

(Warning) NETLIST_INSTANCE_SECTION: %s is not supported with Virtual Block input, using NETLIST_INSTANCE_SECTION: NO.

Feedback

**Description**

The NETLIST_INSTANCE_SECTION feature is not supported for StarRC runs with Virtual Block input. StarRC will internally set the value of this option to NO to allow the run to continue.

**What Next**

Set NETLIST_INSTANCE_SECTION: no in the StarRC command file to prevent this warning from showing up.

---

## SX-3725

(Warning) PIN '%s' in DEF contains zero width/hieght RECT (%d, %d) (%d, %d). The polygon will be ignored.

**Description**

StarRC detects invalid zero width/height polygons.

**What Next**

See if the zero width/height polygon is reasonable.

---

## SX-3726

(Warning) File '%s' does not exist. It is ignored.

**Description**

StarRC detects a file that does not exist. The file is ignored.

---

## SX-3727

(Error) Cannot find INTER_DIE_BLOCK in NDM library

**Description**

StarRC cannot find INTER_DIE_BLOCK in NDM library

---

## SX-3728

(Warnning) StarRC read an empty TSV cell, will drop this cell.

**Description**

StarRC read an empty TSV cell, will drop this cell.

Feedback

**What Next**

Check the NDM database about the TSV design

---

## SX-3729

(Fatal) The syntax in VIA_ARRAY_COUNT_FILE: %s is invalid.

**Description**

VIA_ARRAY_COUNT_FILE has syntax error.

**What Next**

Modify the file according to the StarRC user's guide.

---

## SX-3730

(Warning) The layer %s in the VIA_ARRAY_COUNT_FILE: %s is not a via layer, ignored.

**Description**

The first column in the VIA_ARRAY_COUNT_FILE should be a database via layer.

**What Next**

Modify the VIA_ARRAY_COUNT_FILE file.

---

## SX-3731

(Fatal) The second column of "%s" in the VIA_ARRAY_COUNT_FILE: %s is invalid.

**Description**

The MAX_VIA_ARRAY_NUMBER must be a positive number.

**What Next**

Modify the VIA_ARRAY_COUNT_FILE file.

---

## SX-3732

(Warning) The MAX_VIA_ARRAY_SPACING and MAX_VIA_ARRAY_LENGTH are ignored on layer "%s" since MAX_VIA_ARRAY_NUMBER is specified in the VIA_ARRAY_COUNT_FILE.

Feedback

**Description**

The MAX_VIA_ARRAY_NUMBER in the VIA_ARRAY_COUNT_FILE has higher priority than MAX_VIA_ARRAY_SPACING and MAX_VIA_ARRAY_LENGTH in StarRC mapping file.

**What Next**

Remove MAX_VIA_ARRAY_SPACING and MAX_VIA_ARRAY_LENGTH from the StarRC mapping file.

---

## SX-3733

(Warning) %s is ignored by VIA_COVERAGE_OPTION_FILE or VIA_COVERAGE.

**Description**

%s cannot be specified together with VIA_COVERAGE_OPTION_FILE or VIA_COVERAGE.

**What Next**

Remove %s from StarRC command file.

---

## SX-3734

(Warning) %s is ignored in gate level flow.

**Description**

%s cannot be specified in gate level flow.

**What Next**

Remove %s from StarRC command file.

---

## SX-3735

(Warning) Value of the 3D_IC_FILTER_DEVICE option will be replaced with the value of the port_connector_name option from the ICV runset report file.

**Description**

If a port_connector_name option is specified in the ICV runset report file, its value will be used to replace the value of the 3D_IC_FILTER_DEVICE option from the StarRC command-file.

Feedback

### What Next

Remove the 3D_IC_FILTER_DEVICE option from the StarRC command-file to prevent this warning from appearing again.

---

## SX-3736

(Fatal) Target layer for connect inheritance %s has multiple implicit connects to source layer.

### Description

The CCI LVS extraction report file or ICV runset report file contains target layers for connect inheritance. In CCI LVS rextraction report file, target layers have layer type LVS_DB_CONNECTIVITY_LAYER. One target layer should be present once and only once in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> In ICV runset report file, target layers should be present in implicit_connect statement like this: implicit_connect <source_layer> <target_layer1> <target_layer2> ... StarRC will pass connectivity of source layer to target layer. One target layer should be present in only one impclit_connect. If a target layer presents in more than one implicit connects, StarRC will give this error message.

### What Next

Check Calibre/ICV runset to see whether the target layer is derived from more than one source layers or not.

---

## SX-3737

(Fatal) Target layer for connect inheritance %s has implicit connect to layers other than source layers.

### Description

The CCI LVS extraction report file contains target layers for connect inheritance (with layer type LVS_DB_CONNECTIVITY_LAYER). A target layer should be present once and only once in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> so that StarRC is able to find the source layer of the target layer and pass connectivity of source layer to target layer. Besides the implicit connect to source layer, target layer should not have any other connects or implicit connects. If target layer has implicit connect to layer other than source layer, StarRC will give this error message.

### What Next

Check Calibre runset to see whether there are any layers derived from this target layer or not.

Feedback

## SX-3738

(Fatal) Target layer for connect inheritance %s already has explicit connects.

### Description

The CCI LVS extraction report file or ICV runset report file contains target layers for connect inheritance. In CCI LVS rextraction report file, target layers have layer type LVS_DB_CONNECTIVITY_LAYER. One target layer should be present once and only once in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> In ICV runset report file, target layers should be present in implicit_connect statement like this: implicit_connect <source_layer> <target_layer1> <target_layer2> ... StarRC will pass connectivity of source layer to target layer. Besides the implicit connect to source layer, target layer should not have any other connects or implicit connects. If target layer has explicit connects defined in LVS extraction report file or ICV runset report file, StarRC will give this error message.

### What Next

Calibre/ICV runset should have no connects defined for a target layer. Check Calibre/ICV runset to see whether there are any connects defined for this target layer or not.

## SX-3739

(Fatal) Target layer for connect inheritance %s is not defined as a conductor or via or remove layer in StarRC mapping file.

### Description

The CCI LVS extraction report file or ICV runset report file contains target layers for connect inheritance. In CCI LVS rextraction report file, target layers have layer type LVS_DB_CONNECTIVITY_LAYER. One target layer should be present once and only once in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> In ICV runset report file, target layers should be present in implicit_connect statement like this: implicit_connect <source_layer> <target_layer1> <target_layer2> ... StarRC will pass connectivity of source layer to target layer. A target layer should be defined in conducting_layers or via_layers or remove_layers section in StarRC mapping file. Otherwise, StarRC will give this error message.

### What Next

Define this target layer in conducting_layers or via_layers or remove_layers section in StarRC mapping file.

Feedback

## SX-3740

(Fatal) Source layer for connect inheritance %s is not CONNECT type.

### Description

The CCI LVS extraction report file contains source layers for connect inheritance. A source layer should be present in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> where the target layer is a layer with layer type LVS_DB_CONNECTIVITY_LAYER. StarRC will pass connectivity of source layer to target layer. Source layer should have layer type CONNECT. Otherwise, StarRC will give this error message.

### What Next

Calibre runset should have explicit connect defined for source layer. Check Calibre runset to see whether there are connect defined for this source layer.

## SX-3741

(Fatal) Source layer for connect inheritance %s is also a target layer.

### Description

The CCI LVS extraction report file or ICV runset report file contains source layers for connect inheritance. In CCI LVS rextraction report file, a source layer should be present in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> where the target layer is a layer with layer type LVS_DB_CONNECTIVITY_LAYER. In ICV runset report file, a source layer should be present in implicit_connect statement like this: implicit_connect <source_layer> <target_layer1> <target_layer2> ...

StarRC will pass connectivity of source layer to target layer. A source layer should not be a target layer (with layer type LVS_DB_CONNECTIVITY_LAYER in CCI LVS extraction report file, or in other implicit_connect statement as target layer in ICV runset report file) derived from other source layer. Otherwise, StarRC will give this error message.

### What Next

Check Calibre/ICV runset to see whether this source layer is also derived from other source layer.

## SX-3742

(Fatal) Source layer for connect inheritance %s has implicit connect to layer without LVS_DB_CONNECTIVITY_LAYER type.

Feedback

### Description

The CCI LVS extraction report file contains source layers for connect inheritance. A source layer should be present in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> where the target layer is a layer with layer type LVS_DB_CONNECTIVITY_LAYER. StarRC will pass connectivity of source layer to target layer. Source layer should only have implicit connects to target layers (layer with LVS_DB_CONNECTIVITY_LAYER type). Otherwise, StarRC will give this error message.

### What Next

Check Calibre runset to see whether there are any layers not defined as LVS DB CONNECTIVITY LAYER are also derived from this source layer.

---

## SX-3743

(Fatal) Source layer for connect inheritance %s has no explicit connect.

### Description

The CCI LVS extraction report file or ICV runset report file contains source layers for connect inheritance. In CCI LVS rextraction report file, a source layer should be present in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> where the target layer is a layer with layer type LVS_DB_CONNECTIVITY_LAYER. In ICV runset report file, a source layer should be present in implicit_connect statement like this: implicit_connect <source_layer> <target_layer1> <target_layer2> ...

StarRC will pass connectivity of source layer to target layer. Source layer should have explicit connect. Otherwise, StarRC will give this error message.

### What Next

Calibre/ICV runset should have explicit connect defined for source layer. Check Calibre/ICV runset to see whether there are connect defined for this source layer.

---

## SX-3744

(Fatal) Source layer for connect inheritance %s is not in remove_layers section in StarRC mapping file.

### Description

The CCI LVS extraction report file or ICV runset report file contains source layers for connect inheritance. In CCI LVS rextraction report file, a source layer should be present in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT

Feedback

<target_layer> <source_layer> where the target layer is a layer with layer type LVS_DB_CONNECTIVITY_LAYER. In ICV runset report file, a source layer should be present in implicit_connect statement like this: implicit_connect <source_layer> <target_layer1> <target_layer2> ...

StarRC will pass connectivity of source layer to target layer. Source layer should not participate in parasitic extraction and should be defined as remove layer in StarRC mapping file. Otherwise, StarRC will give this error message.

**What Next**

Add this source layer to remove_layers section in StarRC mapping file.

---

## SX-3745

(Fatal) Target layer for connect inheritance %s has no implicit connect to source layer.

**Description**

The CCI LVS extraction report file contains target layers for connect inheritance (with layer type LVS_DB_CONNECTIVITY_LAYER). A target layer should be present once and only once in IMPLICIT_CONNECTIVITY section like this: IMPLICIT_CONNECT <target_layer> <source_layer> so that StarRC is able to find the source layer of the target layer and pass connectivity of source layer to target layer. If there is no implicit connect from this target layer to source layer, StarRC will give this error message.

**What Next**

Check Calibre runset to see whether the target layer is derived from a source layer or not.

---

## SX-3746

(Warning) The RDL block name %s, in %s, does not match TOP block name %s. Using the %s cell as the context/environment for block %s.

**Description**

For RDL pushdown, we assume the RDL block name should be same with TOP block name.

**What Next**

Check the RDL design name and TOP design name.

---

## SX-3747

(Fatal) SMC via_coverage from ITF corrupted: cannot load corner via_coverage entry.

Feedback

**Description**

Failed to load via_coverage entry from one of the corner-dependent via_coverage from ITF. It is usually caused by discrepancy on input ITF.

**What Next**

Check and correct via_coverage in ITF, and restart. If error persists, contact Synopsys Support Center.

---

## SX-3748

(Fatal) failed to check out licenses

**Description**

NETLIST_FORMAT: PARAMETERIZED_SPICE requires STAR-RC2-AG-TECHNOLOGY and STAR-RC_ULTRA_MANAGER license.

**What Next**

Check to make sure you have sufficient StarRC licenses, and that the license servers are running.

---

## SX-3749

(Fatal) COUPLE_TO_SPECIFIED_PCELL_PINS: '%s' uses invalid type.

**Description**

Invalid type for COUPLE_TO_SPECIFIED_PCELL_PINS command. Currently supported types are: < NO | YES | YES KEEP_CG | YES IGNORE_CG | YES AUTOMATIC_CG_HANDLING>.

**What Next**

Change type to the one of the supported.

---

## SX-3750

(Fatal) TCAD_GRD_FILE defined in CORNERS_FILE should be consistent in same format property.

**Description**

TCAD_GRD_FILE defined in CORNERS_FILE should be all non-compressed NXTGRD or all compressed NXTGRD. Mixed usage is not supported.

Feedback

**What Next**

Please make sure all TCAD_GRD_FILE defined in CORNERS_FILE are all non-compressed NXTGRD or all compressed NXTGRD.

---

## SX-3751

(Warning) DP_RECONNECT is not supported for %s. Metal fill reconnect is reverted to DP_RECONNECT: NO

**Description**

DP_RECONENECT is not supported. Metal fill reconnect is reverted to DP_RECONNECT: NO

**What Next**

This is a warning message only, no action is necessary.

---

## SX-3752

(Warning) TRANSLATE_VIA_FILLS is set to NO for transistor level designs in TSMC N5 process. This is not recommended due to accuracy concerns.

**Description**

TRANSLATE_VIA_FILLS is explicitly set to NO in the StarRC command file. There might be accuracy concerns. If not set, this options is automatically set to YES by default for transistor level designs in TSMC N5 process.

**What Next**

This is a warning message only, no action is necessary.

---

## SX-3753

(Fatal) Layer '%s' in silicon_marker_layers section in MAPPING_FILE must be the trench contact virtual via.

**Description**

This layer apeared in silicon_marker_layers section in MAPPING FILE. This type of silicon marker layer can only be mapped to a trench contact virtual via.

**What Next**

Revise silicon_marker_layers section in mapping file.

Feedback

## SX-3754

(Warning) Layer '%s' in silicon_marker_layers section in MAPPING_FILE have the same ITF layer with ITF= '%s'. StarRC removes this silicon marker layer.

**Description**

This layer apeared in silicon_marker_layers section in MAPPING FILE. This type of silicon marker layer mapped to the ITF layer is the same as "ITF=" in later section. So this type of silicon marker layer is not necessary.

**What Next**

Revise silicon_marker_layers section in mapping file.

## SX-3755

(Warning) Use of the '%s' option can result in a large increase in run time and disk usage of StarRC.

**Description**

Using the option mentioned in the message can result in a large increase in run time and disk usage of StarRC. This option is intended for use by Synopsys support staff only for troubleshooting purposes. It should not be used in production runs of the tool.

**What Next**

Remove the option for the StarRC command file to prevent this warning from showing up in future runs of the tool.

## SX-3756

(Warning) NETLIST_CONNECT_OPENS specified a net: %s that is not existent in the design. The non-existent net is ignored.

**Description**

If NETLIST_CONNECT_OPENS specified a net that is not existent in the design, it may have undesirable consequences. This may cause unpredicatble behavior including failure to connect short equivalent nodes.

**What Next**

Please correct the net name(s) in NETLIST_CONNECT_OPENS to avoid this warning and possible future issues in the design.

Feedback

## SX-3757

(Warning) The %s option should not be used in signoff production runs of StarRC.

**Description**

The option mentioned in the warning message is intended for use in experimental runs of StarRC or as to work around specific issues with the tool. It should not be used in signoff production runs.

## SX-3758

(Fatal) The %s option is supported in the transistor-level extraction flow only.

**Description**

The option listed in the error message can be used in the transistor-level extraction flow only. It should not be used in the gate-level extraction flow.

**What Next**

If the stated option is specified in the StarRC command file, remove it from the command file. If the option is a command-line option, do not specify this option on the command-line.

## SX-3759

(Fatal) The %s option cannot be used because the %s file does not exist inside the STAR directory.

**Description**

The option listed in the error message cannot be used because the file specified in the error message does not exist in the STAR directory.

**What Next**

Check the contents of the STAR directory. Regenerate the STAR directory by running StarRC without the option specified in the error message.

## SX-3760

(Fatal) XREF input database database has changed. Cannot reuse XREF result.

**Description**

The input database has changed. StarRC cannot reuse the XREF result.

Feedback

**What Next**

Remove -reuse_xref form the command options.

---

## SX-3761

(Warning) Ignoring multiply used StarRC command file '%s'

**Description**

If multiple files are used to specify options to StarRC, only the first occurrence of each file is parsed and subsequent uses of the file are ignored.

**What Next**

Examine the command-line options to StarRC and the INCLUDE_FILE options specified in each file. This warning will appear when a file name appears more than once in the combined set of files from command-line and INCLUDE_FILE options.

---

## SX-3762

(Warning) The layer %s in %s is not a via layer, ignored.

**Description**

The layer in the command should be a database via layer.

**What Next**

Modify the cmd.

---

## SX-3763

(Warning) The StarRC command ADD_GATE_ADJUSTMENT_RESISTANCE is turned off since there is not GATE_RESISTANCE_ADJUSTMENT_FACTOR defined in the nxtgrd file.

**Description**

The StarRC command ADD_GATE_ADJUSTMENT_RESISTANCE is turned off since there is not GATE_RESISTANCE_ADJUSTMENT_FACTOR defined in the nxtgrd file.

**What Next**

Remove ADD_GATE_ADJUSTMENT_RESISTANCE from StarRC command file.

Feedback

## SX-3764

(Fatal) The number "%s" in %s is invalid.

**Description**

The number in the command must be a positive number.

**What Next**

Modify the cmd.

## SX-3765

(Warning) MARKER_GENERATION: USER can not be used in ICV AGDS flow with cell_port_file. Change the setting to MARKER_GENERATION: AUTOMATIC

**Description**

For ICV AGDS flow with cell_port_file, all marker layers are removed and the ports are directly put on conductors in cell_port_file. Since all marker layers are removed, MARKER_GENERATION: USER can not be used.

**What Next**

No action is needed. StarRC will automatically generate the pin shapes based on connectivity.

## SX-3766

(Warning) XREF_REMOVE_ICV_MPROP_SUFFIX:YES is ignored when XREF_ICV_COMPOSITE_HANLDING:FLATTEN is used.

**Description**

XREF_REMOVE_ICV_MPROP_SUFFIX:YES cannot be used with XREF_ICV_COMPOSITE_HANLDING:FLATTEN.

**What Next**

Check if XREF_ICV_COMPOSITE_HANLDING:LEVEL_BY_LEVEL should be used.

## SX-3767

(Fatal) Option '%s' is not supported with enabled ENHANCED_CCP_FLOW command

Feedback

**Description**

This option is not supported in new CCP flow.

**What Next**

Remove the option and run again.

---

## SX-3768

(Fatal) ADJUST_RPV_BY_VIA_COUNT can only be set to YES in transistor flow.

**Description**

When ADJUST_RPV_BY_VIA_COUNT is set to YES, the flow must be a transistor-level flow.

**What Next**

If you are running gate-level flow, please remove this command.

---

## SX-3769

(Warning) The StarRC command ADJUST_RPV_BY_VIA_COUNT is turned off since there is no RPV_ADJUSTMENT_FACTOR_VS_VIA_COUNT defined in the nxtgrd file.

**Description**

The StarRC command ADJUST_RPV_BY_VIA_COUNT is turned off since there is no RPV_ADJUSTMENT_FACTOR_VS_VIA_COUNT defined in the nxtgrd file.

**What Next**

Remove ADJUST_RPV_BY_VIA_COUNT command in StarRC command file.

---

## SX-3770

(Warning) PREXTRACT_NONMANHATTAN_HANDLING is applied to '%s' layer.

**Description**

N/A

**What Next**

N/A

Feedback

## SX-3771

(Warning) Layer %s listed in MESH_RESISTANCE_EXTRACTION_LAYERS does not exist.

**Description**

Only db layer can be set in MESH_RESISTANCE_EXTRACTION_LAYERS command in StarRC command file.

**What Next**

Modify MESH_RESISTANCE_EXTRACTION_LAYERS setting in StarRC command file.

## SX-3772

(Fatal) Option '%s' is not supported with ENHANCED_VIA_EXTRACTION command

**Description**

This option is not supported with ENHANCED_VIA_EXTRACTION command.

**What Next**

Remove this option or turn off ENHANCED_VIA_EXTRACTION and run again.

## SX-3773

(Fatal) ENHANCED_GPD_POWER_REDUCTION:YES can only work with Transistor level Galaxy Parasitic Data(GPD).

**Description**

ENHANCED_GPD_POWER_REDUCTION:YES can only work with Transistor level Galaxy Parasitic Data(GPD).

**What Next**

Specify the required option.

## SX-3774

(Warning) IC Compiler II InDesign StarRC NDM_ZERO_SPACING_BLOCKAGE_RATIO option is invoked. NDM_ZERO_SPACING_BLOCKAGE_RATIO is not meant for final signoff flow because aggregate ratio is reflective of the reality of each macro gray material situation.

Feedback

**Description**

NDM_ZERO_SPACING_BLOCKAGE_RATIO is not meant for final signoff flow because aggregate ratio is reflective of the reality of each macro gray material situation.

**What Next**

Just take care

---

## SX-3775

(Warning) NDM_ZERO_SPACING_BLOCKAGE_RATIO %.6g should be smaller than or equal to 1, automaticall adjust the value to 1

**Description**

NDM_ZERO_SPACING_BLOCKAGE_RATIO should larger than 0 and smaller or equal to 1

**What Next**

adjust the ratio value

---

## SX-3776

(Warning) NDM_ZERO_SPACING_BLOCKAGE_RATIO %.6g should be larger than 0, so the ratio value is dropped.

**Description**

NDM_ZERO_SPACING_BLOCKAGE_RATIO should larger than 0 and smaller or equal to 1

**What Next**

adjust the ratio value

---

## SX-3777

(Error) NDM_ZERO_SPACING_BLOCKAGE_RATIO can only be used for NDM flow

**Description**

NDM_ZERO_SPACING_BLOCKAGE_RATIO cannot use in other flow.

**What Next**

remove the command or change flow.

Feedback

## SX-3778

(Warining) cell '%s' is not skip cell. It is ignored from NETLIST_LOCATION_TRANSFORMS_ADDITIONAL_CELLS.

**Description**

Cells must be skip cells to output netlist location transformation factors

**What Next**

Specify skip cells only for NETLIST_LOCATION_TRANSFORMS_ADDITIONAL_CELLS.

## SX-3779

(Fatal) Invalid negative cap scale value. CAP_SCALE value can be 0, or any positive value. Line: %s

**Description**

You receive this message because StarRC find the value for cap_scale parameter a negative value in StarRC mapping file. The valid value for cap_scale is 0, or any positive value.

**What Next**

You should correct the cap_scale value with a valid value.

## SX-3780

(Fatal) CAP_SCALE value must be defined with PRECEDENCE, Line: %s

**Description**

You receive this message because StarRC find cap_scale parameter not defined with PRECEDENCE value in StarRC mapping file. The CAP_SCALE parameter must be defined with PRECEDENCE.

**What Next**

You should add PRECEDENCE for this layer in StarRC mapping file

## SX-3781

(Fatal) CAP_SCALE parameter must be defined on the SUBSTRATE layers.Line: %s

Feedback

**Description**

You receive this message because StarRC find cap_scale parameter defined in non-SUBSTRATE layers in StarRC mapping file. The CAP_SCALE parameter must be defined on SUBSTRATE layers .

**What Next**

The CAP_SCALE parameter must be defined on SUBSTRATE layers .

---

## SX-3782

(Fatal) Directory '%s' is not a recognized GPD format

**Description**

StarXtract is unable to recognize directory '%s' as containing GPD formatted data.

**What Next**

Please check for the existence and contents of the README file contained in the GPD directory. If the README file is missing, the directory is either of some other type or the GPD directory is corrupt.

---

## SX-3783

(Fatal) Incorrect corner configuration. %s.

**Description**

A parasitic corner configuration error has been detected. Please check the detailed message for more information.

**What Next**

Please correct the problem(s) as described in the error message detail.

---

## SX-3784

(Information) %s.

**Description**

General information message generated during parasitic data processing.

**What Next**

No action required.

Feedback

## SX-3785

(Fatal) File operation error, %s for '%s'.

**Description**

A general file operation error occured during StarRC extraction.

**What Next**

Please correct the problem(s) as described in the error message detail.

## SX-3786

(Fatal) The syntax on POWER_EXTRACT is not correct .Line: %s

**Description**

You receive this message because StarRC find the syntax on POWER_EXTRACT option is not correct. The BOUNDRY parameter must have validate ITF layer .

**What Next**

The BOUNDRY parameter in POWER_EXTRACT must have validate ITF layer .

## SX-3787

(Fatal) The boundary ITF layer %s in POWER_EXTRACT option is not validate.

**Description**

You receive this message because StarRC find the boundary ITF layer in POWER_EXTRACT option is not correct. The BOUNDRY parameter must have validate ITF layer .

**What Next**

The BOUNDRY parameter in POWER_EXTRACT must have validate ITF layer .

## SX-3788

(Warning) Copying netlist file %s to %s across two disks. Cross-disk copying of large files may result in extraordinarily long run times for StarRC.

Feedback

**Description**

When the output file path specified for the NETLIST_FILE option is on a disk that is different from the disk used to run StarRC, StarRC has to copy netlist files between disks which can take a very long time depending on the disk and network configuration.

Using the same disk to run StarRC and store output files is recommended.

**What Next**

Modify the value of the NETLIST_FILE file option to use the same disk as the one used to run StarRC.

---

## SX-3789

(Fatal) Temperature sensitivity range requires valid lower and upper temperature bounds.

**Description**

You receive this message because the TEMPERATURE_SENSITIVITY_RANGE is not correctly set.

**What Next**

Check the setting of TEMPERATURE_SENSITIVITY_RANGE to be valid. Make sure lower and upper temperature bounds are valid numerical values.

---

## SX-3791

(Severe) input value to %s writer is '%s'.

**Description**

The input value to GPD/XOUT writer is not a number or is infinite.

**What Next**

Contact the Synopsys Support Center.

---

## SX-3792

(Warning) MESH_RESISTANCE_EXTRACTION_LAYERS is ignored for gate level flow.

**Description**

MESH_RESISTANCE_EXTRACTION_LAYERS is designed only for transistor level flow.

Feedback

**What Next**

remove MESH_RESISTANCE_EXTRACTION_LAYERS from StarRC command file.

---

## SX-3793

(Fatal) Could not find executable %s under directory %s : error code %s.

**Description**

The executable specified in the error message was not found in the specified directory. This usually indicates a problem with the StarRC installation.

**What Next**

Check your StarRC installation directory.

---

## SX-3794

(Fatal) Invalid %s specification '%s', need to use ssh when running under a container environment.

**Description**

The ssh protocol must be used When distributing jobs across multiple hosts using the "STARRC_DP_STRING: list ..." syntax under a container environment (i.e. either the SNPS_CONTAINER environment variable is set or StarXtract is launched with the -container option).

**What Next**

If no protocol is specified, the default protocol is rsh, so ssh must be specified explicitly. That is, replace

STARRC_DP_STRING: list hostA:1 hostB:2

with

STARRC_DP_STRING: list ssh hostA:1 hostB:2

If a protocol other than ssh is used, replace that with ssh. That is, replace

STARRC_DP_STRING: list rsh hostA:1 hostB:2

with

STARRC_DP_STRING: list ssh hostA:1 hostB:2

The above description applies to both STARRC_DP_STRING and GRDGENXO_DP_STRING.

Feedback

## SX-3795

(Warning) Only front stack of the design is extracted when TSV mapping/nxtgrd files are deteced without 3D_IC:YES.

### Description

When 3D_IC:NO is used together with TSV-mapping/nxtgrd files, only front stack of the design is extracted.

### What Next

This is a warning message only, no action is necessary.

## SX-3796

(Warning) Layer %s has no WMIN and SMIN specified in ITF or star cmd, use default %f um as max spacing to merge vias on this layer.

### Description

This is used for via merge in EM flows. If a via layer doesn't have WMIN and SMIN specified, then use StarRC's default max spacing as in timing flow.

### What Next

Specify WMIN and SMIN for the layer if want to use 1.25*(WMIN+SMIN) as max via merge spacing.

## SX-3799

(Fatal) Density outside block specified in the option '%s' of the corners file has to be between 0 and 1.

### Description

Density outside block specified in the corner file has to be between 0 and 1.

### What Next

Modify DENSITY_OUTSIDE_BLOCK in the corner file accordingly.

## SX-3800

(Warning) Galaxy Parasitic Data (GPD) does not support EXTRACTION: RFSCOMPARE flow.

Feedback

**Description**

Galaxy Parasitic Data (GPD) does not support resistance field solver (RFS) flow. StarRC will run the non-GPD flow.

**What Next**

Remove EXTRACTION: RFSCOMPARE to run StarRC with GPD netlisting or the non-GPD flow will run.

---

## SX-3801

(Fatal) Invalid syntax in PARTIAL_SECOND_GROUND_AREAS: %s

**Description**

There is a synatx error in the command.

**What Next**

Check if the command is written correctly.

---

## SX-3802

(Error) The command %s must have the same number of arguments than the number of bins %d specified by BINS_TCAP_THRESHOLD. Follow the guideline: %s.

**Description**

The syntax of the command is not right.

**What Next**

Follow the syntax of the command.

---

## SX-3803

(Fatal) The command ESTIMATED_CONNECT_OPENS must have three arguments (x-layer y-layer small-gap-threshold).

**Description**

The syntax of the command is not right.

**What Next**

Follow the syntax of the command.

Feedback

## SX-3804

(Warning) INSTANCE_PORT_LOCATION_CLOSER_TO_DRIVER is not supported for transistor level flow.

### Description

INSTANCE_PORT_LOCATION_CLOSER_TO_DRIVER which is used to assign instance port location closer to the driver is currently not supported for transistor level flow.

### What Next

This is a warning message, nothing needs to be done from the user side. We will enhance the option to be supported for transistor level flow in future StarRC release.

## SX-3805

(Fatal) Parasitic explorer (PE) analysis is on and XREF is not set to YES (PE only supports XREF: YES)

### Description

If XREF is not set to YEs, extracted names from layout may have format/syntactical issues which result in incorrect behavior. Therefore, only XREF: YES is supported

### What Next

Change setup for the extraction with proper settings with XREF:YES. Either disable Parasitic explorer analysis or change set up for XREF:YES

## SX-3806

(Warning) The TSV_TEMPERATURE_RESISTANCE_SCALING option is ignored when TEMPERATURE_SENSITIVITY: yes is used.

### Description

The TSV_TEMPERATURE_RESISTANCE_SCALING option is used to scale resistors in the prescribed TSV models by CRT1/CRT2 from the nxtgrd file. This option is ignored if the TEMPERATURE_SENSITIVITY option is set to YES since model resistors are handled differently to output TC1/TC2 parameters to the netlist in this case.

### What Next

Remove one of TSV_TEMPERATURE_RESISTANCE_SCALING or TEMPERATURE_SENSITIVITY: yes in the StarRC option file to make this warning go away.

Feedback

## SX-3807

(Warning) The TSV_TEMPERATURE_RESISTANCE_SCALING option is ignored if OPERATING_TEMPERATURE is not set.

### Description

The TSV_TEMPERATURE_RESISTANCE_SCALING option is used to scale resistors in the prescribed TSV models by CRT1/CRT2 from the nxtgrd file. The resitance scaling calculation requires the OPERATING_TEMPERATURE to be specified and hence the TSV_TEMPERATURE_RESISTANCE_SCALING option is ignored if OPERATING_TEMPERATURE is not set.

### What Next

Remove TSV_TEMPERATURE_RESISTANCE_SCALING from the StarRC command file or set the OPERATING_TEMPERATURE option to make this warning go away.

## SX-3808

(Warning) VMF parameterization/option file is specified but VIRTUAL_METAL_FILL_POLYGON_HANDLING is not set or set to IGNORE. VMF flow will be disabled.

### Description

VMF parameterization/option file is specified but VIRTUAL_METAL_FILL_POLYGON_HANDLING is not set or set to IGNORE. VMF flow will be disabled.

### What Next

Revise the syntax of the star command and specify VIRTUAL_METAL_FILL_POLYGON_HANDLING: ATTACKER/FLOATING/GROUNDED if you want to enable VMF engine.

## SX-3809

(Warning) Layer %s for which VMF parameterization is defined is not present in the database.

### Description

Message informs the user that Virtual Metal Fill flow has been disabled since layer %s for which VMF parameterization is defined is not present in the database.

Feedback

### What Next

If this is expected, there is nothing to be done. If unexpected, revise MF settings in star command file.

---

## SX-3810

(Warning) VMF flow will be disabled since real MF polygons are present in the design.

### Description

Virtual Metal Fill flow is supported only when running StarRC on designs where real Metal Fill polygons are not specified.

### What Next

VMF flow will be disabled and real MF polygons will be extracted. In order to run the case with VMF, remove MF polygons from the database.

---

## SX-3811

(Fatal) VMF parameterization file '%s' not specified, not found or in invalid format. Please specify a valid VMF parameterization file using VIRTUAL_METAL_FILL_PARAMETER_FILE option, when using VIRTUAL_METAL_FILL_POLYGON_HANDLING:FLOATING/GROUNDED.

### Description

Virtual Metal Fill parameter file %s specified by option VIRTUAL_METAL_FILL_PARAMETER_FILE is not accessible or in invalid format.

### What Next

Revise the syntax or the path of the file in VIRTUAL_METAL_FILL_PARAMETER_FILE or disable VMF flow by setting VIRTUAL_METAL_FILL_POLYGON_HANDLING: IGNORE.

---

## SX-3812

(Warning) Virtual Metal Fill flow is enabled with mode '%s'.

### Description

Message warns the user that Virtual Metal Fill flow is enabled.

### What Next

Nothing to be done.

Feedback

## SX-3813

(Warning) Virtual Metal Fill flow for layer '%s' will be disabled as VMF properties are not declared for such a layer.

**Description**

Message informs the user that Virtual Metal Fill flow is disabled for layer '%s' since there is no VMF property defined for the such a layer.

**What Next**

Revise properties in VMF file if the warning is unexpected.

## SX-3814

(Fatal) Unknown selection

**Description**

Error message informs the user that VIRTUAL_METAL_FILL_POLYGON_HANDLING command is badly set. Allowed modes for VMF are IGNORE (default), FLOATING or GROUNDED.

**What Next**

User should correctly set VIRTUAL_METAL_FILL_POLYGON_HANDLING command with IGNORE (default), FLOATING or GROUNDED modes.

## SX-3815

(Fatal) VMF parameterization file has invalid spacings and widths for layer '%s'.

**Description**

Message informs the user that VMF parameterization file has invalid spacings and widths for layer '%s'.

**What Next**

Revise properties in VMF file for the indicated layer, making sure that all parameters are respecting criteria indicated in the user guide (>WMIN and >SMIN).

## SX-3816

(Warning) Virtual Metal Fill flow has been enabled on a design with real MF.

Feedback

### Description

Message warns the user that Virtual Metal Fill flow has been enabled on a design with real MF.

### What Next

If this is expected, there is nothing to be done. If not intentional, revise MF settings in star command file (disable RF with METAL_FILL_POLYGON_HANDLING:IGNORE or disable VMF with VIRTUAL_METAL_FILL_POLYGON_HANDLING:IGNORE).

---

## SX-3817

(Fatal) NETLIST_NODENAME_NETNAME: YES must be set when using NODENAME_NETNAME_ON_DANGLING_PORTS: YES.

### Description

NODENAME_NETNAME_ON_DANGLING_PORTS: YES must be used along with NETLIST_NODENAME_NETNAME: YES. If NETLIST_NODENAME_NETNAME: YES is not set when NODENAME_NETNAME_ON_DANGLING_PORTS: YES is used, StarRC will give this error.

### What Next

You should either set NETLIST_NODENAME_NETNAME: YES in the command file or set NODENAME_NETNAME_ON_DANGLING_PORTS to NO.

---

## SX-3818

(Warning) NODENAME_NETNAME_ON_DANGLING_PORTS: YES is not supported in non-GPD flow. Set this command to NO.

### Description

NODENAME_NETNAME_ON_DANGLING_PORTS: YES is only supported in GPD flow. If non-GPD flow is run, StarRC will give this message and set this command to NO.

### What Next

If you use XTOR_GPD: NO to force StarRC to run non-GPD flow, you can remove XTOR_GPD: NO. Otherwise, you can check messages in StarRC summary file to find out which command make StarRC to revert to non-GPD flow and remove that command.

Feedback

## SX-3819

(Warning) No second ground is found in %s. Settings of IGNORE_ITF_LAYER_CAPS_TO_SECOND_SUBSTRATE are ignored by StarRC.

**Description**

IGNORE_ITF_LAYER_CAPS_TO_SECOND_SUBSTRATE have no effect in the processes without second ground.

**What Next**

Check if the command is written correctly.

## SX-3820

(Warning) Layer "%s" specified in IGNORE_ITF_LAYER_CAPS_TO_SECOND_SUBSTRATE cannot be found in ITF.

**Description**

A layer specified in IGNORE_ITF_LAYER_CAPS_TO_SECOND_SUBSTRATE cannot be found in ITF.

**What Next**

Check if the command is written correctly.

## SX-3821

(Warning) Layer "%s" found in IGNORE_ITF_LAYER_CAPS_TO_SECOND_SUBSTRATE is not supported and will be skipped.

**Description**

IGNORE_ITF_LAYER_CAPS_TO_SECOND_SUBSTRATE only supports conducting layers in ITF.

**What Next**

Check if the command is written correctly.

## SX-3822

(Warning) PARASITIC_EXPLORER_ENABLE_ANALYSIS is set to YES. However GPD flow is hindered, possibly due to unsupported GPD command.

Feedback

### Description

PE analysis requires GPD to be generated. However, GPD flow is hindered possibly due to the presence of an unssported command in command file.

### What Next

To complete extraction, you can set PARASITIC_EXPLORER_ENABLE_ANALYSIS: NO. If you would like to run PE after extraction, you need to remove the command not supported by GPD (specified at the end of the summary file).

---

## SX-3823

(Fatal) The command ESTIMATED_CONNECT_OPEN_NET can only be used if ESTIMATED_CONNECT_OPENS is also used.

### Description

The command ESTIMATED_CONNECT_OPEN_NET can only be used if ESTIMATED_CONNECT_OPENS is also used.

### What Next

Add ESTIMATED_CONNECT_OPENS to StarRC command file.

---

## SX-3824

(Fatal) TABLE_NAME %s is provided for %s layer in Mapping file, but is not found in ITF file.

### Description

There are a few tables which contains multiple sub-tables in ITF file, such as GATE_TO_DIFFUSION_CAP and GATE_TO_DIFFUSION_CHANNEL_CAP. If in StarRC mapping file, a database layer is mapped to an ITF layer which contains such kind of table, you should specify which sub-table should be used through parameter TABLE_NAME. The possible tables which contain multiple sub-tables are: ETCH_VS_CONTACT_AND_GATE_SPACINGS GATE_TO_DIFFUSION_CAP GATE_TO_DIFFUSION_CHANNEL_CAP ER_TABLE RAISED_DIFFUSION_TO_GATE_SMIN_TABLE SIDE_TANGENT_VS_SI_WIDTH_AND_CCO_SPACING UPPERDIFF_TO_CONTACT_CAP RAISED_DIFFUSION_TO_GATE_SMIN_TABLE RAISED_DIFFUSION_ETCH_TABLE If TABLE_NAME is defined in StarRC mapping file for a gate or diffusion layer, but StarRC finds the corresponding sub-table are not defined in ITF file or nxtgrd file, StarRC will give this warning.

Feedback

**What Next**

You should check whether the table name is correct or not, and use table name which exists in the ITF file or nxtgrd file.

---

## SX-3825

(Warning) Galaxy Parasitic Data (GPD) does not support Hercules database as input.

**Description**

Galaxy Parasitic Data (GPD) only does not support the Hercules flow.

**What Next**

None at your side.

---

## SX-3826

(Fatal) Error: %s '%s' specified in silicon_marker_layer '%s' in MAPPING_FILE is not found.

**Description**

The specified DAMAGE_THICKNESS_TABLE or RPSQ_VS_SI_WIDTH table is not found in the NXTGRD.

**What Next**

Check if the MAPPING_FILE is written correctly and consistent with the ITF.

---

## SX-3827

(Fatal) Invalid %s specification '%s': '%s'

**Description**

The value specified for the min cores option is incorrect as described in the error message.

**What Next**

Rectify the option value based on the hints provided in the error message. Refer to the StarRC User Guide for more information.

---

## SX-3828

(Warning) Setting of the %s option is ignored because %s

Feedback

### Description

Setting of the option to specify the minimum number of cores needed to begin a DP run is ignored because of the reason given in the message.

### What Next

Take action based on the warning message.

---

## SX-3829

(Fatal) Value for the %s option "%s" is incorrect, expected timeout in minutes followed by an optional job submission timeout value in minutes. All prescribed values should be non-negative integers.

### Description

The value of the DP timeout option is the number of minutes after which a StarRC run should abort if the number of live workers is less than the value prescribed in the corresponding min cores option. If not prescribed, StarRC will wait indefinitely for at least one worker to go live.

Optionally, the timeout value can be followed by another value prescribing the number of minutes StarRC should wait for job submission commands to complete. If not prescribed, StarRC will terminate execution if job submission commands do not complete within 1 minute.

### What Next

Set the timeout option values as described above and run StarRC again.

---

## SX-3830

(Fatal) Both %s and %s must be set to enable the DP timeout feature.

### Description

Both the min cores and timeout options must be set in order to use the DP timeout features.

### What Next

Set both the options in the StarRC command file to use the DP timeout feature, or remove both of them to disable it.

Feedback

## SX-3831

(Warning) Found non-color polygon on multi-patterning layer '%s'. BBox=(%g,%g),(%g, %g) %s

### Description

There is a non-color polygon found on the layer.

At TSMC advanced nodes, different behavior will be applied for non-color polygons automatically based on the process node.

- For TSMC N7/N6: StarRC drops non-color polygons (NON_COLOR_POLYGON_HANDLING:DROP).
- For TSMC N5/N5P/N4/N3: StarRC errors out when a non-color polygon is found (NON_COLOR_POLYGON_HANDLING:ERROR).

You can manually control the behavior by NON_COLOR_POLYGON_HANDLING in StarRC command file. Valid values,

- NONE - Disable the feature. Issue a SX-3931 warning if non-color polygon detected.
- DROP - Drop each non-color polygon. Issue a SX-3931 warning if non-color polygon detected.
- WARN - Issue this warning for each non-color polygon.
- DROP_AND_WARN - Drop and issue this warning for each non-color polygon.
- ERROR - Error out when a non-color polygon is found.

  In addition, StarRC provides a hidden option, DEBUG_NON_COLOR_POLYGON: {NO|YES} to ease the debugging of non-color polygons for NON_COLOR_POLYGON_HANDLING: ERROR. With the option set, StarRC will report non-color polygons in the summary file until Cells stage exit. To report all non-color polygons, please also increase message suppression limit for SX-3831 by MESSAGE_SUPPRESSION.

### SELL ALSO

```
SX-3214
SX-3831
SX-3931
NON_COLOR_POLYGON_HANDLING
DEBUG_NON_COLOR_POLYGON: YES
```

### What Next

See if the non-color polygon is expected.

Feedback

## SX-3832

(Warning) There are two nets with different net id has the same netname net1: %s net_id: %ld, net2: %s net_id: %ld. if they are different actually, please set CASE_SENSITIVE: YES.

**Description**

if case_sensitive:no, we think net1 and NET2 are the same.

**What Next**

Set CASE_SENSITIVE:YES

## SX-3833

(Warning) License information: %s

**Description**

StarRC has a status update for checking out a license.

**What Next**

Check if (a) the LM_LICENSE_FILE environment variable is set correctly, (b) your license server is setup and working correctly and (c) You have enough available licenses to run StarRC using options specified in the command file. The use of some features of StarRC may have additional licensing requirements.

Contact Synopsys technical support for more information.

## SX-3834

(Fatal) Incorrect formatting of file passed with option NETLIST_TERMINAL_MAPPING_FILE: %s.

**Description**

The formatting of the file passed with option NETLIST_TERMINAL_MAPPING_FILE is incorrect.

**What Next**

Follow the correct formatting of the file passed with option NETLIST_TERMINAL_MAPPING_FILE.

Feedback

## SX-3835

(Fatal) More than one terminal name mapping for model '%s' in NETLIST_TERMINAL_MAPPING_FILE: %s.

**Description**

Only one mapping is allowed for each device terminal name.

**What Next**

Ensure each terminal name has only one mapping.

## SX-3836

(Fatal) NETLIST_TERMINAL_MAPPING_FILE can only be used with XREF:YES.

**Description**

The NETLIST_TERMINAL_MAPPING_FILE command can only be used with XREF:YES command.

**What Next**

Use XREF:YES in order to use NETLIST_TERMINAL_MAPPING_FILE in the StarRC command file.

## SX-3837

(Fatal) NETLIST_TERMINAL_MAPPING_FILE cannot be used with XREF_USE_LAYOUT_DEVICE_NAME:YES.

**Description**

The NETLIST_TERMINAL_MAPPING_FILE command cannot be used with XREF_USE_LAYOUT_DEVICE_NAME:YES command.

**What Next**

Remove XREF_USE_LAYOUT_DEVICE_NAME:YES in order to use NETLIST_TERMINAL_MAPPING_FILE in the StarRC command file.

## SX-3838

(Fatal) NETLIST_TERMINAL_MAPPING_FILE cannot be used with XREF_USE_LAYOUT_TERMINAL_NAME:YES.

Feedback

**Description**

The NETLIST_TERMINAL_MAPPING_FILE command cannot be used with XREF_USE_LAYOUT_TERMINAL_NAME:YES command.

**What Next**

Remove XREF_USE_LAYOUT_TERMINAL_NAME:YES in order to use NETLIST_TERMINAL_MAPPING_FILE in the StarRC command file.

---

## SX-3839

(Fatal) Found non-color polygons in the design.

**Description**

There are non-color polygons found in the design.

**SEEL ALSO**

SX-3831

---

## SX-3840

(Fatal) Get a non-expected negative width value for net width from DEF file, value %d

**Description**

The width of a net should be non-negative value.

**What Next**

Update the DEF database

---

## SX-3841

(Error) Invalid setting for NETLIST_DEVICE_LOCATION_ORIENTATION! Please set it as 'NO' or re-run StarRC with YES/COMMENT.

**Description**

-clean_converter do not support NETLIST_DEVICE_LOCATION_ORIENTATION:YES|COMMENT if pre run is NO

**What Next**

set it as NO or rerun without -clean_converter option

Feedback

## SX-3842

(Information) ... Waiting for %s license (%d attempts).

**Description**

StarRC is making repeated attempts to check out a license.

**What Next**

If license checkout fails or is unduly delayed, please make sure sufficient StarRC licenses are available.

## SX-3843

(Warning) EXTRACT_RES_BODY_RESISTANCE is turned off because EXTRACT_RES_BODY_COUPLING is off.

**Description**

EXTRACT_RES_BODY_RESISTANCE must be set together with EXTRACT_RES_BODY_COUPLING.

**What Next**

Remove EXTRACT_RES_BODY_RESISTANCE from or add EXTRACT_RES_BODY_COUPLING: YES to StarRC command file.

## SX-3844

(Warning) RC_SCALING_FILE is ignored for field solver flow.

**Description**

RC_SCALING_FILE is not supported in field solver flow.

**What Next**

remove RC_SCALING_FILE from StarRC command file.

## SX-3845

(Warning) EXCLUDE_SADP_SHORTS_FROM_VIOLATION_REPORT is YES which suppresses violation reports of any shorts to SADP fill.

**Description**

Not available.

Feedback

**What Next**

EXCLUDE_SADP_SHORTS_FROM_VIOLATION_REPORT: NO if this violation filter is not intended.

---

## SX-3846

(Warning) clean_converter do not support %s : %s if original value is %s.

**Description**

-clean_converter

**What Next**

rerun without -clean_converter option

---

## SX-3847

(Error) Wrong syntax for CONTEXT_DEF/OASIS/GDS_FILE command usage.

**Description**

The usage of CONTEXT_DEF/OASIS/GDS_FILE should be follow with block or placement.

**What Next**

update command or remove it

---

## SX-3848

(Fatal) -clean_converter do not support %s.

**Description**

rerun full flow

**What Next**

set it as NO or rerun without -clean_converter option

---

## SX-3849

(Warning) RC_SCALING_FILE is set in StarRC command file. It is not meant for final signoff flow.

Feedback

**Description**

RC_SCALING_FILE is set in StarRC command file. RC values in the final netlist are scaled based on the scaling factor set in that file.

**What Next**

Make sure this option is not used during sign-off.

---

## SX-3850

(Fatal) Unable to perform a %s operation on file '%s', error status '%s', host '%s', working directory '%s'

**Description**

StarRC is unable to lock a file because of issues in the runtime environment.

**What Next**

Try running StarRC again or contact your system administrator.

---

## SX-3851

(Information) A %s operation on file '%s' completed after %d attempts

**Description**

This message is output when StarRC is able to complete locking operations on a file after multiple attempts if the first attempt had failed.

**What Next**

This message is informational, no further actions are required.

---

## SX-3852

(Warning) Unable to close file '%s', error status '%s'

**Description**

StarRC is unable to close a file because of conditions in the runtime environment.

---

## SX-3853

(Information) Failed to get ultraplus type licenses. Will release ultraplus type licenses and try again.

Feedback

**Description**

Not all the Ultraplus type licenses needed were checked out. All the Ultraplus_type licenses that have been checked out will be released and StarRC will try again to get the required licenses. If this happens frequently, more Ultraplus type licenses maybe needed on the server to meet demand.

---

## SX-3854

(Warning) INSTANCE_PORT_LOCATION_CLOSER_TO_DRIVER in transistor level flow needs SKIP_CELL_PORT_PROP_FILE

**Description**

INSTANCE_PORT_LOCATION_CLOSER_TO_DRIVER which is used to assign instance port location closer to the driver needs instance port direction information from SKIP_CELL_PORT_PROP_FILE.

**What Next**

This is a warning message, nothing needs to be done from the user side. We will enhance the option to be supported for transistor level flow in future StarRC release.

---

## SX-3860

(Warning) INPUT_NAMES_ESCAPE_REMOVAL is enabled, please make sure that the net select commands remove the escape at the same time.

**Description**

INPUT_NAMES_ESCAPE_REMOVAL command open by default.

---

## SX-3861

(Warning) GROUND_CAP_DISTRIBUTION_MODE is supported in transistor-level flows only.

**Description**

GROUND_CAP_DISTRIBUTION_MODE allows to control the distribution of the ground cap to power nets. This feature is limited at transistor-level only. The run is at gate-level, so the option is ignored.

**What Next**

Remove GROUND_CAP_DISTRIBUTION_MODE from StarRC command file.

Feedback

## SX-3862

(Warning) GROUND_CAP_DISTRIBUTION_MODE has no effect when TRANSLATE_RETAIN_BULK_LAYERS is set to NO.

**Description**

GROUND_CAP_DISTRIBUTION_MODE allows to control the distribution of the ground cap to power nets. This feature has an impact only when the substrate layers are translated. TRANSLATE_RETAIN_BULK_LAYERS is set to NO so the option is ignored.

**What Next**

Remove GROUND_CAP_DISTRIBUTION_MODE from StarRC command file or set TRANSLATE_RETAIN_BULK_LAYERS to appropriate value.

## SX-3863

(Fatal) Invalid option '%s' of GROUND_CAP_DISTRIBUTION_MODE. Valid values are: [NETLIST_GROUND_NODE_NAME], CLOSEST, FURTHEST or ALL

**Description**

GROUND_CAP_DISTRIBUTION_MODE allows to control the distribution of the ground cap to power nets. Valid values are: [NETLIST_GROUND_NODE_NAME], CLOSEST, FURTHEST or ALL

**What Next**

Remove GROUND_CAP_DISTRIBUTION_MODE from StarRC command file or set to valid value.

## SX-3864

(Warning) Field solver flows are not supported with non-default setting of GROUND_CAP_DISTRIBUTION_MODE.

**Description**

GROUND_CAP_DISTRIBUTION_MODE allows to control the distribution of the ground cap to power nets. By redistributing intentionally some ground caps to specific substrate shapes, power net accuracy can be impacted and correlation with field solver results is not ensured.

**What Next**

Remove GROUND_CAP_DISTRIBUTION_MODE from StarRC command file or disable field solver flows (EXTRACTION:FSCOMPARE, FS_EXTRACT_NETS).

Feedback

## SX-3865

(Fatal) Options %s are mutually exclusive.

**Description**

The options are listed in the error message cannot be used at the same time.

**What Next**

Use only one of the options.

## SX-3866

(Fatal) Valid value for '%s' are '%s'.

**Description**

Only listed values are valid for this command.

**What Next**

Use only valid values.

## SX-3867

(Fatal) %s is missing in %s file.

**Description**

Necessary setting is missing in the file.

**What Next**

specify all necessary settings in the file.

## SX-3868

(Fatal) layout does not meet restricted mode's feture restrictions.

**Description**

The layout would require features that are outside of the features enabled by STAR-RC2_ULTRA_MANAGER, STAR-RC2-AGP and/or STAR-RC2_AG3, and restricted mode only enables features under these 3 licenses.

**What Next**

Restart interactive mode in unrestricted mode or modify layout to meet restrictions.

Feedback

## SX-3869

(Fatal) layout does not meet restricted mode's restrictions.

**Description**

The layout has more than 10 nets in the xin file for extraction and restricted mode allows a maximum of 10 nets in the xin file.

**What Next**

Restart interactive mode without restrictions or modify layout to meet restrictions.

## SX-3870

(Fatal) File %s specified in TCNR_SIMULATION_SETUP_FILE is not executable.

**Description**

File specified for HSPICE_EXECUTABLE needs to be an executable file.

**What Next**

specify an executable file for HSPICE_EXECUTABLE in TCNR_SIMULATION_SETUP_FILE.

## SX-3871

(Fatal) %s specified in TCNR_SIMULATION_SETUP_FILE is not a directory.

**Description**

CMI_PATH needs to be a directory.

**What Next**

specify a directory for CMI_PATH in TCNR_SIMULATION_SETUP_FILE.

## SX-3872

(Fatal) entry name is missing in HSP_FILE specified in TCNR_SIMULATION_SETUP_FILE.

**Description**

entry name is missing in HSP_FILE specified in TCNR_SIMULATION_SETUP_FILE.

Feedback

**What Next**

specify hsp file name and entry name after HSP_FILE in TCNR_SIMULATION_SETUP_FILE.

---

## SX-3873

(Fatal) wrong syntax %s in TCNR_SIMULATION_SETUP_FILE.

**Description**

The syntax is not supported in TCNR_SIMULATION_SETUP_FILE.

**What Next**

correct the syntax in TCNR_SIMULATION_SETUP_FILE.

---

## SX-3874

(Fatal) TCNR simulation failed.

**Description**

TCNR_SIMULATION_SETUP_FILE is specified in StarRC command file. StarRC calls HSPICE to simulate TCNR but the simulation failed.

**What Next**

Check if TCNR_SIMULATION_SETUP_FILE has correct version of HSPICE executable and libraries. Check tcnr_spice.hspice.log under the star directory for more info on HSPICE simulation.

---

## SX-3875

(Fatal) The command ESTIMATED_CONNECT_OPENS_VIAR_SCALE must have one argument (scale).

**Description**

The syntax of the command is not right.

**What Next**

Follow the syntax of the command.

Feedback

## SX-3876

(Fatal) The command ESTIMATED_CONNECT_OPEN_VIAR_SCALE_NET can only be used if ESTIMATED_CONNECT_OPENS_VIAR_SCALE is also used.

**Description**

The command ESTIMATED_CONNECT_OPEN_VIAR_SCALE_NET can only be used if ESTIMATED_CONNECT_OPENS_VIAR_SCALE is also used.

**What Next**

Add ESTIMATED_CONNECT_OPENS_VIAR_SCALE to StarRC command file.

## SX-3877

(Fatal) The StarRC command %s should be set to either %s.

**Description**

The StarRC command is set to an unavailable choice.

**What Next**

Set the StarRC command to one of the available choices or unset it.

## SX-3878

(Fatal) SPICE_FILE: %s specified in TCNR_SIMULATION_SETUP_FILE does not have any device.

**Description**

SPICE_FILE specified in TCNR_SIMULATION_SETUP_FILE is used for TCNR simulation by HSPICE. HSPICE cannot simulate if there is no content.

**What Next**

modify or remove SPICE_FILE in TCNR_SIMULATION_SETUP_FILE.

## SX-3879

(Information) TCNR simulation is skipped since there is no transistor in the layout.

**Description**

Spice file is not generated if there is no transistor in the layout. TCNR simulation is not needed.

Feedback

**What Next**

Information only.

---

## SX-3880

(Warning) The %s violations are not checked and the %s not reported. A non-existing % summary file is not ensuring there is no violation.

**Description**

SKIP_VIOLATION_REPORT is set to OPENS, SHORTS or BOTH, or one of the options of the StarRC command file is setting SKIP_VIOLATION_REPORT to OPENS, SHORTS or BOTH.

**What Next**

If it's not intentional, remove SKIP_VIOLATION_REPORT in the StarRC command file or add SKIP_VIOLATION_REPORT set to NO to the StarRC command file.

---

## SX-3881

(Warning) EXTRACT_RES_BODY_RESISTANCE can not work for res bodys device %s on superconductive substrate.

**Description**

EXTRACT_RES_BODY_RESISTANCE must be set for res body when available R value.

**What Next**

Remove reported devices from EXTRACT_RES_BODY_RESISTANCE.

---

## SX-3883

(Warning) Nets have duplicate name '%s' are combined. INPUT_NAMES_ESCAPE_REMOVAL command can cause duplicate net names.

**Description**

Nets have duplicate name are combined. INPUT_NAMES_ESCAPE_REMOVAL command can cause duplicate net names.

**What Next**

Check net names and INPUT_NAMES_ESCAPE_REMOVAL command

Feedback

## SX-3888

(Fatal) Unsupported option for TRBL_GENDEV command: only one option - MOSLIKE or ALL - allowed.

**Description**

Unsupported option for TRBL_GENDEV command: only one option - MOSLIKE or ALL - allowed.

**What Next**

Please refer to user manual for supported options for TRBL_GENDEV command.

## SX-3889

(Fatal) TRBL_GENDEV command can only be used with TRANSLATE_RETAIN_BULK_LAYERS:CONLY.

**Description**

TRBL_GENDEV command can only be used with TRANSLATE_RETAIN_BULK_LAYERS:CONLY.

**What Next**

Please refer to user manual for supported options for TRBL_GENDEV command.

## SX-3890

(Fatal) %s parse error: %s

**Description**

There was a problem parsing the command.

**What Next**

Check the command syntax and fix the error.

## SX-3891

(Fatal) failed to submit %s %s

**Description**

A job could not be submitted to the farm. The tool may have produced more information that could help diagnose the reason for failure.

Feedback

**What Next**

This can happen because of errors in the GPD_DP_STRING option used for GPD conversion or STARRC_DP_STRING for regular StarRC runs. Check those options for errors.

---

## SX-3892

(Information) %s is ignored when TMIRC is set to NO.

**Description**

TMIRC related setting in StarRC command file is ignored since TMIRC is set to NO.

**What Next**

Information only.

---

## SX-3893

(Fatal) %s is missing when TMIRC is on.

**Description**

TMIRC related setting in StarRC command file is necessary when TMIRC is on.

**What Next**

Set necessary TMIRC related settings in StarRC command file.

---

## SX-3894

(Fatal) %s and %s must be set together.

**Description**

Two commands must be set together.

**What Next**

modify StarRC command file.

---

## SX-3895

(Warning) RCAPI is turned off for missing RCAPI_LIBRARY_NAME in the NXTGRD file.

Feedback

**Description**

RCAPI is specified in StarRC command file, but there is no RCAPI library specified in the NXTGRD file.

**What Next**

remove RCAPI in the StarRC command file or use an NXTGRD file with RCAPI library specified.

---

## SX-3896

(Fatal) Gate direction needs to be determined for etching trench contact layers with TC_ETCH_VS_WIDTH_AND_LENGTH table, this info is missing.

**Description**

Gate direction was not determined.

**What Next**

Gate direction needs to be determined.

---

## SX-3897

(Fatal) Invalid value %s for option %s, expected %s.

**Description**

The value specified for an option in the StarRC command file is invalid.

**What Next**

Change option value based on the error message.

---

## SX-3898

(Fatal) A %s operation with %s on host %s, directory %s, pid %d has timed out after %d seconds at %s. This indicates an issue with with the filesystem. Refer this to your IT department.

**Description**

This error message is generated whenever StarRC is run with DP_LOCK_TIME_OUT set and the run encounters a system issue while performing file locking operations. This indicates a problem with the filesystem and the error message is intended to provide maximum diagnostics in order for IT to investigate the problem.

Feedback

**What Next**

Refer the error message to your IT department.

---

## SX-3899

(Fatal) INTERNAL Error: CORNER_TYPE has been discontinued from 2020.06 release.

**Description**

CORNER_TYPE (one of CORNER options) has been discontinued from 2020.06 release.

**What Next**

Please don't use CORNER_TYPE, it has been discontinued.

---

## SX-3900

(Information) Failed to checkout %s licenses. Will release all licenses and try again in 5 min.

**Description**

Not all the licenses needed were checked out. All the ultra_manager and addon licenses will be released and StarRC will try again to get the required licenses. If this happens frequently, more licenses of the named type might be needed on the server to meet demand.

---

## SX-3901

(Information) %i attempts.

**Description**

Licenses have been attempted some number of times.

---

## SX-3902

(Fatal) RAPHAEL_NETS can only be used together with unencrypted itf in non SMC FSCOMPARE flow.

**Description**

RAPHAEL_NETS can only be used together with unencrypted itf in non SMC FSCOMPARE flow.

Feedback

**What Next**

RAPHAEL_NETS can only be used together with unencrypted itf in non SMC FSCOMPARE flow.

---

## SX-3903

(Warning) NETLIST_SKIP_RESSTAR_MODEL is only supported when TEMPERATURE_SENSITIVITY is set.

**Description**

NETLIST_SKIP_RESSTAR_MODEL is intended to remove resStar model in netlist when TEMPERATURE_SENSITIVITY is set.

**What Next**

Please confirm if TEMPERATURE_SENSITIVITY option is set correctly. Otherwise, you can ignorethis message.

---

## SX-3904

(Warning) very high CPU utilization %.1f%% on host %s at %s

**Description**

The host on which StarRC is running is experiencing heavy CPU load. This may lead to increased runtime.

**What Next**

This message is informational only. If runtime is critical, StarRC processes should be run on lightly loaded hosts. Consult your IT department for more information.

---

## SX-3905

(Warning) only %.2f GB %s available (%.1f%% of total) on host %s at %s

**Description**

The host on which StarRC is running has very little RAM or swap space available as indicated in the message. This may have a detrimental impact on StarRC's performance.

**What Next**

This message is informational only. If runtime is critical, StarRC processes should be run on lightly loaded hosts. Consult your IT department for more information.

Feedback

## SX-3906

(Warning) file system %s mounted on %s is full at %s

### Description

The file system on which StarRC's working directory resides is full. This could cause StarRC runs to terminate abnormally or produce unexpected results.

### What Next

This message is informational only. Move the StarRC run to another file system to prevent unexpected program behavior. Consult your IT department for more information.

## SX-3907

(Warning) only %.2f GB of space (%.1f%% of total) is available on file system %s mounted on %s at %s

### Description

This on which StarRC is running has very little space available, which can cause runs to terminate abnormally or produce unexpected results.

### What Next

This message is informational only. Move the StarRC run to another file system to prevent unexpected program behavior. Consult your IT department for more information.

## SX-3908

(Error) found polygon with net ID %d which exceeds StarRC's maximum net ID %d.

### Description

The number of nets in the design exceeds StarRC's maximum net ID limit or StarRC has internally assigned a net ID larger than the maximum net ID.

### What Next

Contact Synopsys support.

## SX-3909

(Warning) NETLIST_REMOVE_DANGLING_BRANCHES is reset to NO, when CAPACITOR_TAIL_COMMENTS: YES.

Feedback

**Description**

If NETLIST_REMOVE_DANGLING_BRANCHES: YES is
set along with CAPACITOR_TAIL_COMMENTS: YES, reset
NETLIST_REMOVE_DANGLING_BRANCHES to NO to avoid dangling branches being pruned on the net connected to the GATE, therefore coupling caps wouldn't get moved to the gate.

**What Next**

If you want to use command CAPACITOR_TAIL_COMMENTS: YES, please change NETLIST_REMOVE_DANGLING_BRANCHES to NO. If you don't need that command, remove it from command file.

---

## SX-3910

(Information) map_qtf_layers and qtf_layers sections will be generated from QTF_MAPPING_FILE.

**Description**

When QTF_MAPPING_FILE is specified in star_cmd for StarQTF low, the above two sections will be generated from QTF_MAPPING_FILE and then used for StarQTF flow.

**What Next**

Information only.

---

## SX-3911

(Warning) map_qtf_layers and qtf_layers sections in MAPPING_FILE will be overwritten.

**Description**

When QTF_MAPPING_FILE is specified in star_cmd, map_qtf_layers and qtf_layers will be generated from QTF_MAPPING_FILE even if they exist in the input MAPPING_FILE.

**What Next**

If you want to use the map_qtf_layers and qtf_layers sections defined in the input MAPPING_FILE for StarQTF flow, please remove QTF_MAPPING_FILE option from star_cmd.

---

## SX-3912

(Warning) failed to submit job using '%s', check your %s option for possible errors.

Feedback

**Description**

StarRC is unable to submit a job to the compute farm using a command based on a DP option provided by the user. This message indicates a possible error in the job submission command provided by the user or an issue with the user's compute farm management system.

**What Next**

Check the job submission command or consult your IT department.

---

## SX-3913

(Fatal) failed to launch GPD converter jobs.

**Description**

StarRC could not launch GPD converter jobs to resources specified using GPD_DP_STRING. This message should have been preceeded with other warnings to indicate what the problem may be.

**What Next**

Take actions based on warnings produced by StarRC before this error message.

---

## SX-3914

(Warning) command '%s' failed to complete in %d seconds.

**Description**

An external program launched by StarRC failed to complete in a stipulated interval of time.

StarRC sets a timeout value when it expects the programs that it launches to complete very quickly, ideally in fractions of a second. This error message indicates system overload or a problem with the program being executed.

**What Next**

Check for system overload or problems with the command being executed. Contact your IT department for more information if necessary.

---

## SX-3915

(Fatal) invalid %s value %s, expected %s.

**Description**

The value of specified for an option is incorrect as stated in the error message.

Feedback

**What Next**

Correct the option value based on recommendations in the error message.

---

## SX-3916

(Fatal) FSCOMPARE_OPTIONS: -fs_relax_co value cannot be smaller than 1.

**Description**

fs_relax_co value cannot be smaller than 1.

**What Next**

Define fs_relax_co larger than 1 or use the default value of 10.

---

## SX-3919

(Warning) NETLIST_TYPE is reset to RCC, when CAPACITOR_TAIL_COMMENTS: YES and EXTRACTION is C.

**Description**

If NETLIST_TYPE is set along with CAPACITOR_TAIL_COMMENTS: YES and EXTRACTION: C, reset it to RCC.

**What Next**

If you want to use command CAPACITOR_TAIL_COMMENTS: YES, please change NETLIST_TYPE to RCC. If you don't need that command, remove it from command file.

---

## SX-3920

(Warning) NETLIST_TYPE is reset to RCC, when CAPACITOR_TAIL_COMMENTS: YES and EXTRACTION is RC.

**Description**

If NETLIST_TYPE is set along with CAPACITOR_TAIL_COMMENTS: YES and EXTRACTION: RC, reset it to RCC.

**What Next**

If you want to use command CAPACITOR_TAIL_COMMENTS: YES, please change NETLIST_TYPE to RCC. If you don't need that command, remove it from command file.

Feedback

## SX-3931

(Warning) Polygon without MASK info detected on a layer with MASK info in ITF; Please check StarRC User Guide and run with NON_COLOR_POLYGON_HANDLING: %s to get list of polygons without MASK information.

### Description

Non-color polygon (polygon without MASK info) found on a color layer. Please check StarRC User Guide and run with NON_COLOR_POLYGON_HANDLING: WARN or DROP_AND_WARN to get list of polygons without MASK information.

At TSMC advanced nodes, different behavior will be applied for non-color polygons automatically based on the process node.

- For TSMC N7/N6: StarRC drops non-color polygons (NON_COLOR_POLYGON_HANDLING:DROP).
- For TSMC N5/N5P/N4/N3: StarRC errors out when a non-color polygon is found (NON_COLOR_POLYGON_HANDLING:ERROR).

You can manually control the behavior by NON_COLOR_POLYGON_HANDLING in StarRC command file. Valid values,

- NONE - Disable the feature. Issue this warning if non-color polygon detected.
- DROP - Drop each non-color polygon. Issue this warning if non-color polygon detected.
- WARN - Issue SX-3831 warning for each non-color polygon.
- DROP_AND_WARN - Drop and issue SX-3831 warning for each non-color polygon.
- ERROR - Error out when a non-color polygon is found.

  In addition, StarRC provides a hidden option, DEBUG_NON_COLOR_POLYGON: {NO|YES} to ease the debugging of non-color polygons for NON_COLOR_POLYGON_HANDLING: ERROR. With the option set, StarRC will report non-color polygons in the summary file until Cells stage exit. To report all non-color polygons, please also increase message suppression limit for SX-3831 by MESSAGE_SUPPRESSION.

### SELL ALSO

```
SX-3214
SX-3831
SX-3931
NON_COLOR_POLYGON_HANDLING
DEBUG_NON_COLOR_POLYGON: YES
```

Feedback

**What Next**

See if the non-color polygon is expected.

---

## SX-3932

(Fatal) OA_SEPARATE_PARASITICS cannot be set with OA_SEPARATE_INSTANCES.

**Description**

OA_SEPARATE_PARASITICS and OA_SEPARATE_INSTANCES can not be set simultaneously in StarRC command file.

**What Next**

Set either OA_SEPARATE_PARASITICS or OA_SEPARATE_INSTANCES in StarRC command file.

---

## SX-3933

(Fatal) invalid %s value '%s' : %s.

**Description**

The value of specified for an option is incorrect as stated in the error message.

**What Next**

Correct the option value based on recommendations in the error message.

---

## SX-3934

(Fatal) cannot set value for option %s without setting value for option %s.

**Description**

Some of the options in a StarRC configuration file can be used only when another option is used. This error message indicates an attempt to set the value of an option without setting the value of another option that is required to be set.

**What Next**

Correct the option values based on recommendations in the error message.

---

## SX-3935

(Fatal) invalid value %s for option %s, expected %s.

Feedback

**Description**

The value specified for an option in a StarRC configuration file is invalid.

**What Next**

Correct the option value based on recommendations in the error message.

---

## SX-3937

(Fatal) Recursive cell reference (cell name: '%s') in NDM library is detected. Duplicate cell names can cause this error.

**Description**

Recursive cell reference is illegal for NDM. Duplicate cell names in NDM library can also cause this error. StrRC cannot handle duplicate cell names and will lead to unexpected problems.

**What Next**

Check NDM library and cell names. If there is cell name duplicated, rename the duplicte cell name.

---

## SX-3938

(Warning) Galaxy Parasitic Data (GPD) does not support the %s command with %s

**Description**

Galaxy Parasitic Data (GPD) does not support the highlighted command when other options are used.

**What Next**

Remove/change the highlighted commands to run the GPD flow or the non-GPD flow will run.

---

## SX-3939

(Fatal) Unable to ID from CLL, caught exception: %s

**Description**

An error occurred while obtaining an ID from the CLL system.

**What Next**

Contact Synopsys support for more information.

Feedback

## SX-3940

(Fatal) The socket-based DP flow is not supported on the linuxppc64 platform.

**Description**

The socket-based DP feature is not supported on the linuxppc64 platform.

**What Next**

Remove SOCKET_BASED_DP: yes from the StarRC command file to get past this error.

## SX-3941

(Warning) call to system function %s failed: %s [%s], retrying.

**Description**

The call to a function provided by the operating system interface failed. This function call will be retried.

**What Next**

This warning message may indicate an issue with the runtime environment.

## SX-3942

(Fatal) call to system function %s failed: %s [%s] after multiple attempts.

**Description**

The call to a function provided by the operating system interface failed after multiple attempts.

**What Next**

This error message may indicate an issue with the runtime environment, consult your IT team.

## SX-3944

(Fatal) a %s operation on file %s has failed, see %s for more information.

**Description**

An operation performed by StarRC has failed, see the file mentioned in the error message for more information.

Feedback

**What Next**

Such issues usually occur intermittently because of instabilities in the runtime environment. Contact Synopsys support if this issue can be reproduced consistently.

---

## SX-3946

(Warning) FS_BOUNDARY_CONDITION_ON_RESISTANCE is turned off since there is no FS_BOUNDARY_BOX or FS_BOUNDARY_CONDITION specified.

**Description**

FS_BOUNDARY_CONDITION_ON_RESISTANCE only works when FS_BOUNDARY_BOX and FS_BOUNDARY_CONDITION are specified.

**What Next**

Remove FS_BOUNDARY_CONDITION_ON_RESISTANCE from StarRC command file.

---

## SX-3947

(Warning) FS_BOUNDARY_CONDITION_ON_RESISTANCE is turned off for non-FS flow.

**Description**

FS_BOUNDARY_CONDITION_ON_RESISTANCE only works for FS flow.

**What Next**

Remove FS_BOUNDARY_CONDITION_ON_RESISTANCE from StarRC command file.

---

## SX-3948

(Warning) FS_BOUNDARY_CONDITION is not applied in resistance extraction on big design.

**Description**

FS_BOUNDARY_CONDITION can only be applied in resistance extraction on small layout.

**What Next**

N/A

---

## SX-3949

(Warning) GDS SEED PROPERTY DEVICE ORIGINAL is not set in query file.

Feedback

**Description**

GDS SEED PROPERTY DEVICE ORIGINAL is not set in the query file, while EM_PARAM_MAPPING_FILE is used. Device region cannot be extracted without this query command.

**What Next**

You should add "GDS SEED PROPERTY DEVICE ORIGINAL" in the calibre query file.

---

## SX-3950

(Warning) The StarRC version is older than the nxtgrd file (grdgenxo version %s). It may cause unexpected extraction result.

**Description**

The nxtgrd file is generated by a newer version of grdgenxo than the StarXtract used for extraction, which may cause unexpected extraction result.

**What Next**

Use the StarRC version newer than the version of grdgenxo which generated the nxtgrd file.

---

## SX-3951

(Fatal) Via layer "%s" is not defined in ITF file.

**Description**

StarRC gives this error once it finds a via layer is not defined in ITF file.

**What Next**

You should modify the mapping file.

---

## SX-3952

(Warning) %s when TMIRC is set to YES.

**Description**

The StarRC command setting is not compatible with TMIRC. It is changed accordingly when TMIRC is on.

**What Next**

Change the StarRC command accordingly in the StarRC command file.

Feedback

## SX-3953

(Fatal) OA_USE_LAYOUT_DEVICE_NAME can only be used with XREF:YES.

**Description**

The OA_USE_LAYOUT_DEVICE_NAME command can only be used with XREF:YES command.

**What Next**

Use XREF:YES in order to use OA_USE_LAYOUT_DEVICE_NAME in the StarRC command file.

## SX-3954

(Fatal) OA_USE_LAYOUT_DEVICE_NAME cannot be used with XREF_USE_LAYOUT_DEVICE_NAME:YES.

**Description**

The OA_USE_LAYOUT_DEVICE_NAME command cannot be used with XREF_USE_LAYOUT_DEVICE_NAME:YES command.

**What Next**

Remove XREF_USE_LAYOUT_DEVICE_NAME:YES in order to use OA_USE_LAYOUT_DEVICE_NAME in the StarRC command file.

## SX-3956

(Fatal) THERMAL_PARAMETER_FILE is mandatory for all corners if any corner has it specified in CORNERS_FILE.

**Description**

This error message is issued when some corners have THERMAL_PARAMETER_FILE but the other corners don't have this field in CORNERS_FILE.
THERMAL_PARAMETER_FILE should be specified for ALL or NONE of the corners for correct extraction handling.

**What Next**

Correct the content CORNERS_FILE and restart. THERMAL_PARAMETER_FILE should be specified for ALL or NONE of the corners in CORNERS_FILE. If the same THERMAL_PARAMETER_FILE is applied to all corners, you can also choose to only specify it in the star command file.

Feedback

## SX-3957

(Fatal) Cannot open THERMAL_PARAMETER_FILE '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

You receive this message because StarRC failed to open the thermal parameter file specified by THEMRAL_PARAMETER_FILE.

**What Next**

Make sure that the file specified by THERMAL_PARAMETER_FILE isn't corrupted or missing and StarRC has permission to access it.

## SX-3958

(Fatal) THERMAL_PARAMETER_FILE in CORNERS_FILE must use absolute path when CORNERS_FILE is specified out of current working directory.

**Description**

You receive this message because THERMAL_PARAMETER_FILE defined in CORNERS_FILE does not use an absolute path to specify the via coverage option file when CORNERS_FILE is specified out of current working directory.

**What Next**

Move CORNERS_FILE into current working directory or use an absolute path to specify THERMAL_PARAMETER_FILE.

## SX-3960

(Error) NETLIST_COUPLE_UNSELECTED_NETS: ADVANCED must be used with NETLIST_FORMAT: SPEF.

**Description**

NETLIST_COUPLE_UNSELECTED_NETS: ADVANCED only works when NETLIST_FORMAT is SPEF.

**What Next**

set NETLIST_FORMAT: SPEF in the StarRC command file, or set NETLIST_COUPLE_UNSELECTED_NETS to NO, IDEAL or COMPLETE.

Feedback

## SX-3961

(WARNING) MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE_NETS can only be used with MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE: YES/NOPG, command is ignored.

**Description**

MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE_NETS can only be used when MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE is set to YES or NOPG.

**What Next**

Set MOS_GATE_NON_NEGATIVE_DELTA_RESISTANCE_NETS to YES/NOPG in StarRC command file.

## SX-3962

(Warning) REMOVE_SCHEDULER_FILES will be ignored when NUM_CORES is greater than 1 and STARRC_DP_STRING is not used.

**Description**

The REMOVE_SCHEDULER_FILES option removes used by StarRC's DP scheduler at the end of a run. This cannot be reliably done if the value of NUM_CORES is greater than 1 and STARRC_DP_STRING is not set as that implies running StarRC DP by launching multiple jobs on the command-line. Scheduler files cannot be reliably removed in this use model.

**What Next**

Use STARRC_DP_STRING to run StarRC DP. If this is not possible, remove or set REMOVE_SCHEDULER_FILES to in the StarRC command file.

## SX-3963

(Information) TMIRC_LIBRARY_VERSION=%s

**Description**

Information of TMIRC library version.

**What Next**

Information only.

Feedback

## SX-3964

(Warning) fake via segmentation is turned off for INTEL native flow in P1278 and later process.

**Description**

fake via has special model in INTEL native flow which require it is not segmented.

**What Next**

Remove TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO, TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO_FOR_POWER, and/or MAX_VIRTUAL_VIA_SEGMENTATION_NUMBER setting from StarRC command file.

## SX-3965

(Warning) Cell '%s' is not processed.

**Description**

Cell from metal fill file is not processed. It is not referenced in the design.

**What Next**

Information only; no action needed.

## SX-3966

(Information) Reading VMF file %s.

**Description**

StarRC is reading the option file in input.

**What Next**

Information only; no action needed.

## SX-3967

(Warning) Cell '%s' from '%s' may take lots of time to run GDS Donut flow in StarRC.

**Description**

It is not recommended to run GDS Donut flow in StarRC.

Feedback

**What Next**

Consider to use other tools to pre-run GDS Donut first.

---

## SX-3968

(Information) Using disk-based mechanisms for DP synchronization.

**Description**

StarRC will internally switch to using disk-based mechanisms for DP synchronization if the maximum number of open file descriptors per process supported on the host running the coordinator process is insufficient to support a large number of workers.

More information will be available in the dp_logs/star_logs/master.log file.

**What Next**

Set the NUM_CORES value to be less than the value prescribed in the dp_logs/star_logs/master.log file.

---

## SX-3969

(Warning) There is no fill shapes on layer '%s' and mask '%d' reading from input GDS(OASIS) files.

**Description**

Fill shapes on layer are empty. Layer may be undefined or wrong layer number in LAYER_MAP_FILE.

**What Next**

Verify the layer number in LAYER_MAP_FILE.

---

## SX-3970

(Severe) NETLIST_INSTANCE_SECTION:NO/SELECTED/not_set can only be used when at least one net is selected by NETS command.

**Description**

NETLIST_INSTANCE_SECTION:NO/SELECTED/not_set can only be used when at least one net is selected by NETS command.

**What Next**

Please check your NETS command, or set NETLSIT_INSTANCE_SECTION to YES.

Feedback

## SX-3971

(Warning) FS_EXTRACT_TALL_VIA_COUPLING is set, but FS_EXTRACT_NETS or EXTRACTION: FSCOMPARE is not set. FS_EXTRACT_TALL_VIA_COUPLING will do nothing when only StarRC is used.

**Description**

FS_EXTRACT_TALL_VIA_COUPLING is set, but FS_EXTRACT_NETS or EXTRACTION: FSCOMPARE is not set. FS_EXTRACT_TALL_VIA_COUPLING will do nothing when only StarRC is used.

**What Next**

No action is required.

## SX-3972

(Fatal) Inductance EM mode not recognized.

**Description**

Inductance_mode in star_cmd file does not have an acceptable value.

**What Next**

Check Inductance_mode setting.

## SX-3973

(Warning) GDS creation has pins that are points

**Description**

layout has pins that are points

**What Next**

no action needed, they will be given an area based on the containing polygon.

## SX-3974

(Fatal) Issue in inductance GDS creation.

**Description**

umbrella error to report issue in GDS creation

Feedback

**What Next**

report error to StarRC.

---

## SX-3976

(Fatal) INDUCTANCE_S_PARAM_FREQUENCY is not set.

**Description**

The EM flow for inductance only supports the INDUCTANCE_S_PARAM_FREQUENCY setting.

**What Next**

Check INDUCTANCE_S_PARAM_FREQUENCY is set.

---

## SX-3977

(Fatal) INDUCTANCE_S_PARAM_FREQUENCY is not set correctly.

**Description**

The EM flow for inductance only supports select modes of the INDUCTANCE_S_PARAM_FREQUENCY setting. Currently just LIN and DEC.

**What Next**

Check that INDUCTANCE_S_PARAM_FREQUENCY is set correctly with modes LIN or DEC.

---

## SX-3978

(Fatal) Absolute path '%s' is not permitted for star_cmd option SUMMARY_FILE.

**Description**

Absolute path is not permitted for star_cmd option SUMMARY_FILE, and only relative path is accepted.

**What Next**

Use relative path for star_cmd option SUMMARY_FILE.

---

## SX-3979

(Fatal) Cannot support the format of '%s %s'.

Feedback

**Description**

Only specific format is permitted for star_cmd option FSCOMPARE_OPTIONS -perc_coup and FSCOMPARE_OPTIONS -perc_slef.

**What Next**

Use correct format for star_cmd option FSCOMPARE_OPTIONS -perc_coup and FSCOMPARE_OPTIONS -perc_slef.

---

## SX-3980

(Fatal) No pins found.

**Description**

The EM flow for inductance requires pins. Please make sure there are pins in the nets to be extracted.

**What Next**

Check that the layout contains pins. Check that there are pins in the nets selected by INDUCTANCE_SELECT_NET.

---

## SX-3981

(Fatal) EM_Solver phase had errors.

**Description**

The Engine used by the EM_Solver phase did not compleate successfuly.

**What Next**

Check the inductance engine's logs for reported errors.

---

## SX-3982

(Fatal) 3D_IC_SUBCKT_FILE in CORNERS_FILE must use absolute path when CORNERS_FILE is specified out of current working directory.

**Description**

You receive this message because 3D_IC_SUBCKT_FILE defined in CORNERS_FILE does not use an absolute path to specify the via coverage option file when CORNERS_FILE is specified out of current working directory.

Feedback

**What Next**

Move CORNERS_FILE into current working directory or use an absolute path to specify 3D_IC_SUBCKT_FILE.

---

## SX-3983

(Fatal) StarRC gpd ran to completion but writing of the .gpd_complete file failed: '%s'

**Description**

A file opening problem was encountered when writing the .gpd_complete file.

**What Next**

Check to see if file system has sufficent space that disk performance is good.

---

## SX-3984

(Fatal) Found different TSV model '%s' from 3D_IC_SUBCKT_FILE '%s' in CORNERS_FILE '%s'

**Description**

You receive this message because StarRC found different TSV model settings in different 3D_IC_SUBCKT_FILE

**What Next**

Make sure that the TSV specified by 3D_IC_SUBCKT_FILE isn't corrupted or missing

---

## SX-3985

(Fatal) 3D_IC_SUBCKT_FILE should specify the same number of res and cap. \nStarRC only supports 1Res, or 2Res, or 2Res+1Cg models.

**Description**

You receive this message because StarRC found the different TSV settings specified by different 3D_IC_SUBCKT_FILE.

**What Next**

Make sure that the TSVs specified by 3D_IC_SUBCKT_FILE in different corners are set as the same res/cap number.

Feedback

## SX-3986

(Warning) Negative %s is specified for layer %s, which will be ignored.

**Description**

The specified value for the layer in layer mapping file should be non-negative. It will be ignored.

**What Next**

Check the value setting in layer mapping file.

## SX-3987

(Warning) %s of layer %s is %s than %s, it may introduce violations.

**Description**

The specified value in layer mapping file is larger than min_spacing or less than min_width of the layer. Though final line end extension may not trigger real violations, users still need to pay attention to the setting.

## SX-3988

(Fatal) Cannot open 3D_IC_SUBCKT_FILE '%s' found on line '%d' in CORNERS_FILE '%s'

**Description**

You receive this message because StarRC failed to open 3D_IC_SUBCKT_FILE specified in corner file.

**What Next**

Make sure that the file specified by 3D_IC_SUBCKT_FILE isn't corrupted or missing and StarRC has permission to access it.

## SX-3989

(Fatal) FS_QTF_FILE must be included for FS_ASSISTED_ESD

**Description**

FS_QTF_FILE is needed for FS_ASSISTED_ESD flow.

Feedback

**What Next**

Please include FS_QTF_FILE in star_cmd file.

---

## SX-3990

(Warning) Pin %s was dropped.

**Description**

This pin did not have a parent trapazoid/polygon.

**What Next**

check location of pin and make sure it is in or on the edge of a polygon.

---

## SX-3991

(Warning) GPD checker usage warning: Invalid check option "%s" found in check_options file, option skipped

**Description**

Undefined checker options found in user_defined check options file

**What Next**

Undefined checker options will be ignored

---

## SX-3992

(Fatal) GPD Checker usage error: %s

**Description**

Options specified to the Galaxy Parasitic Database (GPD) checker utility were incorrectly specified as indicated in the error message.

**What Next**

Specify the correct set of options for GPD checker. Refer to the StarRC User Guide for more information.

---

## SX-3993

(Warning) PRINT_VIA_VARIATION_MODEL is set to NO for NETLIST_TAIL_COMMENTS: NO.

Feedback

**Description**

PRINT_VIA_VARIATION_MODEL:YES print $vc_model in the netlist tail comments. NETLIST_TAIL_COMMENTS needs to be set to YES.

**What Next**

Set NETLIST_TAIL_COMMENTS to YES if $vc_model is needed.

---

## SX-3994

(Warning) Pin %s and Pin %s are to close on the same pic layer, pin %s was dropped.

**Description**

While creating area for pins, this pin was detected to have overlap with another pin that was kept or was not inside a parent polygon.

**What Next**

check location of pin and its neighbors on the same pic level.

---

## SX-3995

(Warning) Pin %s is on a via layer and was dropped.

**Description**

The pin was on a via layer and the selected inductance engine does not support via pins. This pin was dropped to enable continued running but should be addressed.

**What Next**

check location of pin place it on a non via layer.

---

## SX-3996

(Warning) Expected touchstone with %d pins but found one with %d pins.

**Description**

A pin was dropped by iris that was not anticipated.

**What Next**

investigate missing pin.

Feedback

## SX-3997

(Fatal) could not find valid touchstone file.

**Description**

something happened in EM solver that prevented creation of touchstone file.

**What Next**

investigate EM Solver logs.

## SX-3998

(Information) PRINT_VIA_VARIATION_MODEL is set to NO when the CCP_EXTRACTION_FILE is set in the StarRC command file.

**Description**

PRINT_VIA_VARIATION_MODEL is only supported in non-CCP flows.

**What Next**

Information only

## SX-3999

(Fatal) Unexpected error durring EM Flow stitching.

**Description**

umbrella error to report issue in touchstone spf stitching.

**What Next**

report error to StarRC

## SX-4000

(Warning) ITF layer "%s" specified in RESISTANCE_SCALING_VARIABLE_BY_LAYER is not found and will be skipped.

**Description**

Layer specified by RESISTANCE_SCALING_VARIABLE_BY_LAYER is not found.

**What Next**

Check if the command is written correctly.

Feedback

## SX-4001

(Warning) ITF layer "%s" has no scaling variable specified in RESISTANCE_SCALING_VARIABLE_BY_LAYER and will be skipped.

**Description**

Layer has no scaling variable specified by RESISTANCE_SCALING_VARIABLE_BY_LAYER.

**What Next**

Check if the command is written correctly. ITF layer and scaling variable should be in pair.

## SX-4005

(Fatal) ITF layer names and variable names are not in pairs in RESISTANCE_SCALING_VARIABLE_BY_LAYER

**Description**

ITF layer names and variable names must be defined by pairs in RESISTANCE_SCALING_VARIABLE_BY_LAYER

**What Next**

Change RESISTANCE_SCALING_VARIABLE_BY_LAYER setting in the StarRC command file.

## SX-4006

(Fatal) "%s" in RESISTANCE_SCALING_VARIABLE_BY_LAYER is not an ITF via layer name

**Description**

ITF via layer names and variable names must be defined by pairs in RESISTANCE_SCALING_VARIABLE_BY_LAYER

**What Next**

Change RESISTANCE_SCALING_VARIABLE_BY_LAYER setting in the StarRC command file.

## SX-4007

(Fatal) "%s" in RESISTANCE_SCALING_VARIABLE_BY_LAYER is not a fake via layer connecting diffusion and trench contact.

Feedback

**Description**

RESISTANCE_SCALING_VARIABLE_BY_LAYER only be specified on the fake via layer between diffusion and trench contact.

**What Next**

Change RESISTANCE_SCALING_VARIABLE_BY_LAYER setting in the StarRC command file.

---

## SX-4008

(Warning) NETLIST_NODE_SECTION: NO is not supported with OA_MULTI_OUTPUT in GPD flow, changed to NETLIST_NODE_SECTION :YES.

**Description**

In GPD flow, the NETLIST_NODE_SECTION will be changed to YES always with OA format even if user set NETLIST_NODE_SECTION: NO.

---

## SX-4009

(Warning) %s for TSMC N2 process.

**Description**

The StarRC command setting is not compatible with TSMC N2 process. It is changed accordingly.

**What Next**

Change the StarRC command accordingly in the StarRC command file.

---

## SX-4010

(Warning) NETLIST_LOWERCASE and CASE_SENSITIVE are used together.

**Description**

NETLIST_LOWERCASE is set, netlist file will be in lower case format, regardless the setting of CASE_SENSITIVE.

**What Next**

Check if case_sensitive can be ignored in netlist file.

Feedback

## SX-4011

(Warning) The option FS_ENHANCED_SRAM_ACCURACY is not supported in gate level flows.

**Description**

Currently FS_ENHANCED_SRAM_ACCURACY is only supported in transistor level flows, not gate level flows.

**What Next**

If this is acceptable, no action is needed otherwise contact the Synopsys Support Center.

## SX-4012

(Warning) The star_cmd option FS_QTF_FILE is not set in FS run. This might lead to cap inaccuracy for transistor-level case with TSMC advanced process.

**Description**

For transistor-level cases with TSMC advanced process, FS_QTF_FILE is needed for FS run to get accurate cap results.

**What Next**

Add FS_QTF_FILE in star_cmd file.

## SX-4013

(Warning) The star_cmd option NETLIST_MAX_LINE is ignored in GPD flow. This might have no action.

**Description**

For tx level cases with GPD flow, NETLIST_MAX_LINE has been ignored.

**What Next**

Delete NETLIST_MAX_LINE in star_cmd file.

## SX-4014

(Warning) The star_cmd option NETLIST_SWAP_TERMINAL is ignored in GPD flow. This might be useless.

Feedback

**Description**

Currently NETLIST_SWAP_TERMINAL has been ignored with tx level cases in GPD flow. For future supporting, it would be valid.

**What Next**

Delete NETLIST_SWAP_TERMINAL in star_cmd.

---

## SX-4015

(Warning) The star_cmd option %s is ignored when %s is set.

**Description**

Two options are confilct.

**What Next**

Take action based on the warning message.

---

## SX-4016

(Fatal) The REFERENCE_DIRECTION is not set when PARALLEL_TO_REFERENCE_ITF_LAYERS or PERPENDICULAR_TO_REFERENCE_ITF_LAYERS is set.

**Description**

The REFERENCE_DIRECTION is needed when PARALLEL_TO_REFERENCE_ITF_LAYERS or PERPENDICULAR_TO_REFERENCE_ITF_LAYERS is set.

**What Next**

set REFERENCE_DIRECTION in StarRC command file or ITF file.

---

## SX-4017

(Fatal) Detect 'R', 'RC', or 'RLC' in 3D_IC_SUBCKT_FILE. \nPlease setup 3D_IC_SUBCKT_FILE_TYPE for StarRC to select the correct subcircuit.

**Description**

You receive this message because StarRC found that users didnot setup 3D_IC_SUBCKT_FILE_TYPE.

Feedback

**What Next**

Make sure that users correctly setup 3D_IC_SUBCKT_FILE_TYPE.

---

## SX-4018

(Fatal) Specified layer for IRREGULAR_SHAPE_INTERFACE_LAYER: '%s' is invalid.

**Description**

The database layer specified in IRREGULAR_SHAPE_INTERFACE_LAYER must exist in the database.

**What Next**

Make sure the layer exists in the database

---

## SX-4019

(Fatal) IRREGULAR_SHAPE_INTERFACE_LAYER cannot work with MODEL_BASED_SHORT_HANDLING.

**Description**

StarRC command IRREGULAR_SHAPE_INTERFACE_LAYER cannot work with StarRC command MODEL_BASED_SHORT_HANDLING.

**What Next**

Remove improper StarRC command.

---

## SX-4021

(Fatal) StarRC does not allow using different kinds of ubump with size definitions, which are defined in 3D_IC_SUBCKT_FILE, in different corners.

**Description**

You receive this message because StarRC failed to find the same kind of ubump with size subcircuits in other corners.

**What Next**

Make sure that the file specified by 3D_IC_SUBCKT_FILE for each corner is correct.

---

## SX-4022

(Warning) virtual via segmentation is turned off in gate level.

Feedback

**Description**

In gate level flows, a single via resistor is extracted on a virtual via.

**What Next**

Remove TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO, TRENCH_CONTACT_VIRTUAL_VIA_SEGMENTATION_RATIO_FOR_POWER, and/or MAX_VIRTUAL_VIA_SEGMENTATION_NUMBER setting from StarRC command file.

---

## SX-4023

(Fatal) The total number of %s exceeds the upper limit, and may subsequently lead to crashes or inaccuracy at a later stage.

**Description**

StarRC temporarily only supports a design or process with total number of nets not exceeding 2 billion, any violations may cause crashes during xtract or stitch stages.

**What Next**

This message is a reminder of the cause when meeting unexpected internal errors due to limit exceeding.

---

## SX-4024

(Information) LAYER_TYPE=STACKED_CONDUCTOR in the nxtgrd file is ignored in gate level flows.

**Description**

LAYER_TYPE=STACKED_CONDUCTOR in the nxtgrd file is not supported in gate level flows.

**What Next**

Information only

---

## SX-4025

(Fatal) REDUCTION_NETS usage: %s

**Description**

There was an issue when parsing a REDUCTION_NETS command. See error message for details.

Feedback

**What Next**

Reexamine REDUCTION_NETS commands for issues.

---

## SX-4026

(Warning) SHORT_PINS was used in REDUCTION_NETS, use the SHORT_PINS command instead.

**Description**

SHORT_PINS is not supported on a net by net basis in the REDUCTION_NETS command. Use the global SHORT_PINS command instead.

**What Next**

Remove the SHORT_PINS option from all REDUCTION_NET commnds and add the SHORT_PINS command to your star_cmd file.

---

## SX-4027

(FATAL) IDEAL was used in REDUCTION_NETS, use the NETLIST_TYPE or EXTRACTION command instead.

**Description**

IDEAL is not supported on a net by net basis in the REDUCTION_NETS command. Use the NETLIST_TYPE command instead for net-by-net support or EXTRACTION for global support..

**What Next**

Remove the IDEAL setting from all REDUCTION_NET commnds and add the NETLIST_TYPE or EXTRACTION command to your star_cmd file.

---

## SX-4028

(FATAL) RONLY was used in REDUCTION_NETS, use the NETLIST_TYPE or EXTRACTION command instead.

**Description**

RONLY is not supported on a net by net basis in the REDUCTION_NETS command. Use the NETLIST_TYPE command instead for net-by-net support or EXTRACTION for global support.

Feedback

**What Next**

Remove the RONLY setting from all REDUCTION_NET commnds and add the NETLIST_TYPE or EXTRACTION commands to your star_cmd file.

---

## SX-4029

(Warning) Using NETLIST_NODENAME_NETNAME together with SPEF format might result in netlist reading issue.

**Description**

Using NETLIST_NODENAME_NETNAME together with SPEF format might result in netlist reading issue.

**What Next**

Use supported NETLIST_FORMAT (NETNAME|SPF|STAR|OA) for NETLIST_NODENAME_NETNAME or set NETLIST_NODENAME_NETNAME to NO

---

## SX-4030

(Fatal) The StarRC command %s must be set for %s.

**Description**

The StarRC command must be set for a specific scenario or flow.

**What Next**

Set the StarRC command with correct argument.

---

## SX-4031

(Warning) Internally setting the MODEL_BASED_SHORT_HANDLING option to NO for replacing backside bump layer's subcircuit.

**Description**

Disable MODEL_BASED_SHORT_HANDLING to resolve crash in 3dic flow for replacing backside bump.

**What Next**

Plan to fix this workaround afterwards.

Feedback

## SX-4032

(Information) All memory statistics reported in the run refers to peak memory used by one core during respective stage.

**Description**

Description of memory statistics.

**What Next**

Information only

## SX-4033

(Severe) Invalid value for option DISABLE_ASPECT_RATIO, %s'%s'

**Description**

Must specify correct orientation for option DISABLE_ASPECT_RATIO

**What Next**

Please check DISABLE_ASPECT_RATIO in command file

## SX-4034

(Fatal) NUM_CORES_FOR_HIGH_MEM_TASKS and STARRC_DP_STRING_FOR_HIGH_MEM_TASKS must be specified at the same time.

**Description**

NUM_CORES_FOR_HIGH_MEM_TASKS and STARRC_DP_STRING_FOR_HIGH_MEM_TASKS must be specified at the same time.

**What Next**

Specify both of NUM_CORES_FOR_HIGH_MEM_TASKS and STARRC_DP_STRING_FOR_HIGH_MEM_TASKS, or none of them.

## SX-4035

(Fatal) NUM_CORES_FOR_HIGH_MEM_TASKS/ STARRC_DP_STRING_FOR_HIGH_MEM_TASKS is only supported with socket based DP flow.

Feedback

**Description**

NUM_CORES_FOR_HIGH_MEM_TASKS/ STARRC_DP_STRING_FOR_HIGH_MEM_TASKS can only be specified with socket based DP flow.

**What Next**

Specify NUM_CORES_FOR_HIGH_MEM_TASKS/ STARRC_DP_STRING_FOR_HIGH_MEM_TASKS only with socket based DP flow.

---

## SX-4036

(Warning) Using SKIP_FULL_DEBUG: YES would leads to REPORT_METAL_FILL_STATISTICS, SKIP_VIOLATION_REPORT and PARASITIC_EXPLORER_ENABLE_ANALYSIS inconsistent with orignal setting in tech file.

**Description**

SKIP_FULL_DEBUG: YES should be equivalant with PARASITIC_EXPLORER_ENABLE_ANALYSIS: NO, SKIP_VIOLATION_REPORT: BOTH and REPORT_METAL_FILL_STATISTICS: NO, please monitor their consistency.

**What Next**

Check if the debug report is expected, else please remove SKIP_FULL_DEBUG from tech file.

---

## SX-4037

(Error) Cannot found skip cell '%s' in ICV_ANNOTATED_CELL_PORTS '%s'.

**Description**

All cells listed in SKIP_CELLS should be specified in ICV_ANNOTATED_CELL_PORTS when ICV_ENHANCED_CELL_PORT_FILE is set to YES.

**What Next**

check the ICV_ANNOTATED_CELL_PORTS.

---

## SX-4038

(Warning) Change ISOLATE_PINS_IN_CELLS to YES because ICV_ENHANCED_CELL_PORT_FILE is set.

Feedback

**Description**

ISOLATE_PINS_IN_CELLS has to be YES to support outputing multiple pins when ICV_ENHANCED_CELL_PORT_FILE is YES.

**What Next**

Delete ISOLATE_PINS_IN_CELLS in star_cmd file.

---

## SX-4039

(Warning) The StarRC command INCLUDE_SHORT_CATEGORIES is set and the StarRC command CLASSIFIED_SHORT_REPORTING is not set. Setting the StarRC command CLASSIFIED_SHORT_REPORTING to YES.

**Description**

The StarRC command CLASSIFIED_SHORT_REPORTING is set to YES for the StarRC command INCLUDE_SHORT_CATEGORIES to work.

**What Next**

This is info. If you don't want the classified short reporting please set the StarRC command CLASSIFIED_SHORT_REPORTING to NO.

---

## SX-4040

(Warning) The StarRC command INCLUDE_SHORT_CATEGORIES is set and the StarRC command CLASSIFIED_SHORT_REPORTING is set to NO. The StarRC command INCLUDE_SHORT_CATEGORIES is ignored.

**Description**

The StarRC command INCLUDE_SHORT_CATEGORIES is set and the StarRC command CLASSIFIED_SHORT_REPORTING is set to NO. The StarRC command INCLUDE_SHORT_CATEGORIES is ignored.

**What Next**

This is info.

---

## SX-4041

(Fatal) The argument %s provided to the StarRC command INCLUDE_SHORT_CATEGORIES %s. This command accepts only integer values within 0 and %s.

Feedback

**Description**

The argument provided to the StarRC command INCLUDE_SHORT_CATEGORIES is not an integer or not within the allowed range.

**What Next**

Please change the arguments of the StarRC command INCLUDE_SHORT_CATEGORIES or remove it from the starRC command file.

---

## SX-4042

(Fatal) the StarRC command CLASSIFIED_SHORT_REPORTING is not compatible with the StarRC command %s.

**Description**

The two StarRC commands are not supported together.

**What Next**

Please remove or unset one of the two StarRC command. Contact Synopsys for supporting both options together.

---

## SX-4043

(Fatal) HIGH_MEM_TASKS works only when NUM_CORES_FOR_HIGH_MEM_TASKS/ STARRC_DP_STRING_FOR_HIGH_MEM_TASKS are specified.

**Description**

HIGH_MEM_TASKS works only when NUM_CORES_FOR_HIGH_MEM_TASKS/ STARRC_DP_STRING_FOR_HIGH_MEM_TASKS are specified.

**What Next**

Specify NUM_CORES_FOR_HIGH_MEM_TASKS/ STARRC_DP_STRING_FOR_HIGH_MEM_TASKS.

---

## SX-4044

(Warning) The argument %s provided to the StarRC command INCLUDE_SHORT_CATEGORY is not a valid category of short when the StarRC command ENHANCED_SHORT_REPORTING is set to %s. Please set the StarRC command ENHANCED_SHORT_REPORTING to %s to report this category of shorts.

Feedback

**Description**

Please check with the Table of classified shorts and set the StarRC command ENHANCED_SHORT_REPORTING and the StarRC command INCLUDE_SHORT_CATEGORY accordingly.

**What Next**

Please remove the argument from the StarRC command INCLUDE_SHORT_CATEGORY or change the setting of the StarRC command ENHANCED_SHORT_REPORTING.

---

## SX-4045

(Fatal) Memory specified by STARRC_DP_STRING_FOR_HIGH_MEM_TASKS('%d') must be larger than memory specified by STARRC_DP_STRING('%d').

**Description**

Memory specified by STARRC_DP_STRING_FOR_HIGH_MEM_TASKS must be larger than memory specified by STARRC_DP_STRING.

**What Next**

Specify larger memory with STARRC_DP_STRING_FOR_HIGH_MEM_TASKS.

---

## SX-4046

(Warning) Add entry fail!! %s

**Description**

IXF entry not used in xref table

**What Next**

Check if IXF file is wirtten correctly

---

## SX-4047

(FATAL) RONLY_KEEPC was used in REDUCTION_NETS, use the NETLIST_TYPE or EXTRACTION commands instead.

**Description**

RONLY_KEEPC is not supported on a net by net basis in the REDUCTION_NETS command. Use the NETLIST_TYPE command instead for net-by-net support or EXTRACTION for global support.

Feedback

### What Next

Remove the RONLY_KEEPC setting from all REDUCTION_NET commnds and add the NETLIST_TYPE or EXTRACTION commands to your star_cmd file.

---

## SX-4093

(Warning) The short could be on the db layer or other db layers with the same height in star/short_all.sum.

### Description

For some nets, they don't have any polygon on the layer which reported short, it maybe caused by other same height db layers.

### What Next

This is just information for your reference. Please check other layers with same height.

---

## SX-4989

(Warning) GATE_TO_DIFFUSION_CAP_ABUTMENT_ONE_SIDE disabled for layer %s because it is not device gate layer.

### Description

If you use StarRC command GATE_TO_DIFFUSION_CAP_ABUTMENT_ONE_SIDE to enable one side cf table for a few layers, you should make sure that these layers are device gate layer. StarRC will not apply one side cf table for those layers without IS_GATE in StarRC layer_info and give this warning.

### What Next

If you need to apply one side cftable, you can use CALIBRE_LVS_DEVICE_TYPE_MOS and CAALIBRE_OPTIONAL_DEVICE_PIN_FILE to define device gate layers.

---

## SX-4990

(Warning) ABUTMENT_ONE_SIDE is specified for non-gate_to_diffusion_cap_table layer %s in the mapping file. ABUTMENT_ONE_SIDE for this layer will be ignored.

### Description

In StarRC mapping file, ABUTMENT_ONE_SIDE parameter can only be used for gate layers with GATE_TO_DIFFUSION_CAP TABLE. If StarRC finds ABUTMENT_ONE_SIDE parameter is used on a layer other than gate layers with GATE_TO_DIFFUSION_CAP, StarRC will give this warning and ignore the ABUTMENT_ONE_SIDE setting on this layer.

Feedback

**What Next**

If ABUTMENT_ONE_SIDE is not needed for this layer, nothing needs to be done. Otherwise, you should check why this layer is not mapped to a gate layer with GATE_TO_DIFFUSION_CAP TABLE.

---

## SX-4991

(Information) Force single partition for TMIRC in TSMC N2 process.

**Description**

This is to enable arbitrary TMIRC Rg network before it is supported in multiple partition flow.

**What Next**

Information only

---

## SX-4992

(Warning) the qtf_layers in starRC mapping file are not consistent with qtf file, please check qtf layer: '%s' into the qtf_layers section.

**Description**

StarRC+QTF flow: qtf_layers section are consistent with qtf layeralias.

**What Next**

You should check the qtf_layers or qtf file layer Alias name

---

## SX-4995

(Fatal) NETLIST_NPHY_COMMENTS: YES is only allowed with %s.

**Description**

NETLIST_NPHY_COMMENTS:YES is only allowed with the following commands combination: NETLIST_TAIL_COMMENS:YES REDUCTION:NO EXTRA_GEOMETRY_INFO:RES or NODE RES

**What Next**

Modify the StarRC command file to use an allowable combination of commands.

Feedback

## SX-4996

(Fatal) Syntax error at line %d of GDS_CELL_MAPPING_FILE.

**Description**

The GDS_CELL_MAPPING should have line syntax as follows:

1. starrc style lef_cell_name gds_cell_name
2. tsmc style <MASKSHIFTLAYER> m1 m0 </MASKSHIFTLAYER> <MASKSHIFTPATTERN> 00 10 01 11 </MASKSHIFTPATTERN> <CELLMAP> lef_cell_name None gds_cell_name None </CELLMAP>

**What Next**

Correct the offending line.

## SX-4997

(Warning) SCALE_RC_ON_ISO_IMPACTED_POLYGONS_ONLY is not supported in transistor level flow. RC_SCALING_FILE is applied to all polygons.

**Description**

SCALE_RC_ON_ISO_IMPACTED_POLYGONS_ONLY is only supported in gate level flow.

**What Next**

Remove the SCALE_RC_ON_ISO_IMPACTED_POLYGONS_ONLY command in the StarRC command file.

## SX-4998

(Fatal) RC_SCALING_FILE is not specified when SCALE_RC_ON_ISO_IMPACTED_POLYGONS_ONLY:YES

**Description**

SCALE_RC_ON_ISO_IMPACTED_POLYGONS_ONLY must be specified togehter with RC_SCALING_FACTOR.

**What Next**

Modify the StarRC command file to use an allowable combination of commands.

Feedback

## SX-9996

(Warning) SYSTEM Error: %s

**Description**

A system error has occured, the operation may be attempted later.

**What Next**

Contact your System Administrator.

## SX-9997

(Fatal) SYSTEM Error: %s

**Description**

A system error has occured.

**What Next**

Contact your System Administrator.

## SX-9998

(Warning) INTERNAL Warning: %s

**Description**

A non-critical internal consistency check has failed. This warning message is printed for use by the Synopsys Support Center in case a program error occurs during StarRC's execution.

**What Next**

Contact the Synopsys Support Center if StarRC terminates abnormally or other issues are found.

## SX-9999

(Fatal) INTERNAL Error: %s

**Description**

A internal consistency check has failed.

Feedback

**What Next**

Contact the Synopsys Support Center.

# TCK

## TCK-001

(Warning) The reported endpoint '%s' is unconstrained. Reason: %s.

**Description**

The error message occurs when there are unconstrained endpoints in the design. The design is not fully constrained. There are several reasons for the unconstrained endpoints: false path, no check, unclocked, disabeld check, case constant, or no arrival path.

**What Next**

The violation message identifies the unconstrained endpoint and the reason. You could check whether it is a expected behavior.

## TCK-002

(Warning) The register clock pin %s has no fanin clocks.

**Description**

The error message occurs when the register clock pin does not have a clock signal propagating to it.

**What Next**

The violation message identifies the clock pin that does not have a clock reaching it.There are several possible causes for this violation: the clock definition is missing, a generated clock is not expanded or the pin is blocked by a set_case_analysis, set_disable_timing, or some other constraint.

## TCK-003

(Info) The register clock pin '%s' has '%d' fanin clocks '%s'.

**Description**

The reported register clock pin has multiple clocks propating to it. There is a risk that the timing analysis will run slower and take more memory for a set of constraints with many clocks propagating to the same registers. There is also a risk that the design is not

Feedback

constrained for the functional modes as expected. The large number of clocks could also be due to an error in the case analysis settings for clock definitions in the design

**What Next**

The message provides the names of the clocks at the register clock pin. You coulc check the clock network to the register in the violation.

---

## TCK-004

(Warning) The generated clock '%s' has no path from master clock '%s'.

**Description**

This violation occurs whenever the clock network traversal can not find a path from the master clock to the generated clock. The master clock did exists at the -source pin of the generated clock, but there is no path to the generated clock.

**What Next**

Check the path between the master to the generated clock. Is there case values disabling the path? Is there unresolved library cell references blocking the path? Either fix the path or remove the generated clock.

---

## TCK-005

(Warning) The generated clocks '%s' form a loop.

**Description**

This violation occurs whenever the clock network traversal finds generated clocks in the design form a loop. For example, when the source pin of G_CLK1 is the definition point of G_CLK2, meanwhile the source pin of G_CLK2 is the definition point of G_CLK1, the tow generated clocks form a loop.

**What Next**

Check the definition of the violated generated clocks.

---

## TCK-006

(Warning) The '%s' of generated clock '%s' with source pin '%s' is not satisfiable

**Description**

This is an error message whenever the clock network traversal can not find a path which satisfies the sense relationship defined by create_generated_clock command.

Feedback

### What Next

Check for the generated clock definition to see if the generated clock is correctly defined. One example is that a divided_by 2 generated clock is driven by a inverter only. In this case, generated clock should be redefined with -invert with -divided_by 1. Another example is a divided_by 2 generated clock with preinverting. If master clock source pin is used as generated clock source pin, the warning message will be issued. In this case, generated clock source pin should be redefined to clock pin of divider.

---

## TCK-007

(Warning) The generated clock '%s' has not been expanded.

### Description

A generated clock will not expand if the master clock from which it is generated has not been created or activated. Also if the master clock was given with a -master_clock but does not reach the pin given with -source, this message will be given.

### What Next

Please create or activate the master of the generated clock or change the -source pin given. Use the *report_clock* command to see if the master clock is created or inactive.

---

## TCK-008

(Warning) The generated clock '%s' has no period specified.

### Description

This violation occurs whenever the generated clock has no clock period.

### What Next

Check the definition of the generated clock. Please create or activate the master of the generated clock or change the -source pin given. Use the *report_clock* command to see if the master clock is created or inactive.

---

## TCK-009

(Warning) The data check reference pin '%d' is driven by '%d' clocked signals '%s'

### Description

This warning message occurs when check_timing command finds no clocked signal or multiple clocked signal reach a data check register reference pin.

Feedback

### What Next

Check the clock propagating to the reported data check reference pin.

---

## TCK-010

(Warning) The register launch clock '%s' and capture clock '%s' are from different domains

### Description

This Warning message occurs whenever check_timing command finds clock interactions. If a clock launches one or more paths, which are captured by other clocks, it will be reported. If the two clocks are exclusive or asynchronous clocks(defined as exclusive/asyn clocks by set_clock_group), the path is marked with an asterisk (*). If the two clocks are set false path (set_false_path from clk1 to clk2), the path is marked with an asterisk (*).

### What Next

Check the propagating of reported clock to identify the clock interactions

---

## TCK-011

(Warning) A loop '%s' is detected, disable the arc '%s' to break the loop.

### Description

There is a combinational feedback loop in the design that was broken by the tool. THe message will give the pins that make up the combinational feedback loop and the disabled arc.

### What Next

Look at the combinational loop and determine the best location for it to be broken for this scenario. The *report_disable_timing* command can be used to see the disabled timing arcs in the design. Items in the report with the attribute l are disabled due to loop breaking.

---

## TCK-012

(Warning) The input port '%s' has no clock_relative delay specified.

### Description

The reported input port is not a clock source. The port does not have an input delay value, and it also has paths from it which are not disabled or false paths. In order to enable proper constraining of paths from the port, a realistic input delay needs to be provided for all data input ports.

Feedback

### What Next

The violation message will give you the input port which has no input delay specified. To resolve this issue, consider specifying input delay for each non-clock source input port. This input delay should also be relative to a clock in the design.

---

## TCK-013

(Warning) The clocks '%s' at reported gated clock point '%s' don't reach any register clock pins nor any output ports.

### Description

The error message occurs when the gated clock doesn't reach any register clock pins nor any output ports. This rule only check for ICG cells.

### What Next

Check the fanout of the reported clock point.

---

# TECH

---

## TECH-001

(warning) %s line %d, unsupported technology file section '%s'. It will be ignored.

### Description

The technology file section is ignored because it is not supported. In the case of incremental tech file update, only the following sections are supported in the tech file to be merged: Layer, ContactCode, DesignRule, ViaRule, DensityRule and LayerDataType. Other sections will be ignored, i.e. not merged.

### What Next

Check the technology file for possible errors.

---

## TECH-002

(warning) %s line %d, unsupported syntax '%s' in '%s' section. It will be ignored.

### Description

The syntax is ignored because it is not supported

Feedback

**What Next**

Check the technology file for possible errors.

---

## TECH-002e

(error) %s line %d, unsupported syntax '%s' in '%s' section.

**Description**

The syntax is not supported, and will error out.

**What Next**

Fix the syntactical errors within the technology file.

---

## TECH-003

(warning) %s line %d, layer '%s' referenced by '%s' is undefined. This rule will be ignored.

**Description**

The referenced layer hasn't been defined. The rule will be ignored.

**What Next**

Add the missing layer or remove the reference.

---

## TECH-003e

(error) %s line %d, layer '%s' referenced by '%s' is undefined. This rule will be ignored.

**Description**

The referenced layer hasn't been defined. The rule will be ignored.

**What Next**

Add the missing layer or remove the reference.

---

## TECH-004

(error) No technology information.

**Description**

There is no technology information.

Feedback

## TECH-005

(error) %s line %d, '%s' is not a valid value for property '%s'. It must be '%s'. This property will be ignored.

**Description**

The input value is not valid for the property. The property will be ignored.

**What Next**

Input a valid value.

## TECH-005w

(warning) %s line %d, '%s' is not a valid value for property '%s'. It must be '%s'. This property will be ignored.

**Description**

The input value is not valid for the property. The property will be ignored.

**What Next**

Input a valid value.

## TECH-006

(error) %s line %d, syntax error. This rule will be ignored.

**Description**

There is a syntax error. This rule will be ignored.

**What Next**

Fix the syntax error.

## TECH-007

(error) %s line %d, due to property '%s' not yet defined, property '%s' has unknown table size and will be ignored.

**Description**

The property is a table but its table size is not yet defined. The property will be ignored.

Feedback

**What Next**

Add related table size property before this property.

---

## TECH-008

(error) %s line %d, the table size defined by property '%s' is '%d'. However, the actual table size of property '%s' is '%d'. This property will be ignored.

**Description**

The property table size differs from the value of the property that defines this table size. The property will be ignored.

**What Next**

Correct the table size.

---

## TECH-008w

(warning) %s line %d, the table size defined by property '%s' is '%d'. However, the actual table size of property '%s' is '%d'. This property will be ignored.

**Description**

The property table size differs from the value of the property that defines this table size. The property will be ignored.

**What Next**

Correct the table size.

---

## TECH-009

(warning) %s line %d, '%s' is not a valid value for this property type. The value must be between '%d' and '%d'. This property will be ignored.

**Description**

The input value is not within legal range for the property. The property will be ignored.

**What Next**

Please make sure that the distance value is within the limit.

---

## TECH-010

(error) %s line %d, '%s' is not a valid value for property '%s'. It must be '%s'.

Feedback

**Description**

The input value is not valid for the property.

**What Next**

Input a valid value.

---

## TECH-011

(error) %s line %d, '%s' is not a valid value for this property type. The value must be between '%d' and '%d'.

**Description**

The input value is not within legal range for the property.

**What Next**

Please make sure that the input value is within the limit.

---

## TECH-012

(warning) %s line %d, syntax '%s' in '%s' section is obsolete and is replaced by '%s'. It will be ignored.

**Description**

The syntax is ignored because it is obsolete.

**What Next**

Use the new syntax.

---

## TECH-013

(warning) ContactCode not found for %s on Layer '%s'

**Description**

This warning message occurs when a valid contactCode is not found in the tech file for the width threshold range from enclosureTbl or when a valid contactCode is not found that is equivalent to or larger than the enclosures in enclosureTbl.

**What Next**

Please add a contactCode according to the enclosureTbl values or adjust enclosure width/height values in enclosureTbl. After making your changes, run the command again.

Feedback

## TECH-014

(warning) %sduplicate definition '%s = %s', line %d.

**Description**

This warning message occurs when a duplicate purpose name or purpose number definition is found in the technology file.

**What Next**

Check and correct the purpose definition, then reload the file.

## TECH-015

(warning) %smaskName = '%s' has been defined in layer '%s', line %d ignored.

**Description**

This warning message occurs when a duplicate maskName definition is found in the technology file.

## TECH-016

(warning) contactCodeNumber = '%d' has been defined in ContactCode '%s', ignored this ContactCode.

**Description**

This warning message occurs when a duplicate contactCodeNumber definition is found in the technology file.

## TECH-016e

(error) contactCodeNumber = '%d' has been defined in ContactCode '%s', ignored this ContactCode.

**Description**

This warning message occurs when a duplicate contactCodeNumber definition is found in the technology file. This can be in an incremental tech file.

## TECH-017

(warning) Skipped duplicate layer purpose number '%d' definition for layerNumber = %d.

Feedback

### Description

This warning message occurs when a duplicate layer purpose number definition is found in same layer.

### What Next

Check and correct the layer purpose number definition, then reload the file.

---

## TECH-018

(error) Line contains nested comments. (%s line %d)

### Description

This error message occurs when the technology file contains a nested comment starting on the specified line. Nested comments are not allowed in the technology file.

The following is an example of a nested comment and the resulting error message.

```
Line 10:
Line 11: ContactCode "via1Fat" {
Line 12:     contactCodeNumber = 12
Line 13: /*  isDefaultContact = 1 /* this is a nested comment */ */
Line 14:     isFatContact =1
Line 15: }
Line 16:

Error : Line contains nested comments. (line 13) (TECH-018)
```

### What Next

Remove the nested comment on the specified line and then rerun the command.

---

## TECH-019

(warning) Skipped conflict LayerDataType name definition %s.

### Description

This warning message occurs when a LayerDataType name has been defined for other LayerDataType or layer.

### What Next

Check and correct the name definition ,then reload the file.

Feedback

## TECH-020

(warning) %s '%s' '%s' and '%s' coexist.

### Description

This warning message occurs when two rules or attributes coexist in the technology file.

If both the minSpacingCornerKeepoutWidth attribute and the minSpacingXParallelLengthThresholdTbl and minSpacingYParallelLengthThresholdTbl attributes are defined for the same cut layer, the router honors the latter and ignores the former.

For RC blockage marker generation, clipTbl and endToZWireSpace rules can only be defined once in either LEE blockage marker layer (e.g. metal5RCBlockage) or its associated Metal Layer (metal5).

The following is an example of the warning message:

```
Warning: Layer 'V2' 'minSpacingCornerKeepoutWidth' and
'minSpacingXParallelLengthThresholdTbl' coexist. (TECH-020)
```

### What Next

You should remove the first rule, which is ignored from the technology file, and reload it.

## TECH-021

(warning) the size of '%s' is '%d' while the expected size is '%d' according to '%s', in Layer %s.

### Description

This error message occurs when the size of a table is conflict with its size definition.

### What Next

Check and correct the table size and reload it.

## TECH-022

(error) The specified technology database is in a lib_cell library. It is not editable with '%s'.

### Description

Lib-cell library data, including technology data, can only be edited in the Library Manager.

### What Next

If you want to edit the data in this technology database, use the Library Manager.

Feedback

## TECH-023

(error) %s line %d, Unsupported syntax '%s' in '%s' section.

**Description**

The tool cannot read the technology file because it contains unsupported syntax.

**What Next**

Remove the specified attribute from the technology file and then read the file again.

## TECH-024

(error) The specified library does not have an associated tech database.

**Description**

The library does not have a tech database or a tech reference. Tech editing operations cannot be performed on this library.

**What Next**

Use create_tech to create a tech database in the library or set its tech_lib to point to a library with an associated tech database.

## TECH-025

(warning) %s '%s' '%s' and '%s' coexist.

**Description**

This message occurs when two conflicting rules/attributes coexist.

For example, if uShapeMinSpacing attribute and uShapeExcludedLengthRange coexist, router does not know which rule to apply.

The following is an example of the warning message:

```
Warning: Layer 'M1' 'uShapeExcludedLengthRange' and 'uShapeMinSpacing'
 coexist. (TECH-025)
```

**What Next**

It is recommended that you choose the rule/attribute that you want and remove the other.

## TECH-026

(warning) %s '%s' is missing the attribute '%s'. (%s line %d)

Feedback

### Description

This warning message occurs when the specified object of the specified section is missing an important optional attribute, or partial attributes of a rule are specified. If the attribute is not specified in the technology file, the attribute has a default value of 0 or an empty string.

The following is an example of the warning message:

```
Warning : Layer 'M1' is missing the attribute 'uShapeMinLength'. (line
 758) (TECH-026)
```

### What Next

This is only a warning message. No action is required.

However, if you do not want to the use the default for the attribute, add the attribute with the desired value to the specified section of the technology file and then rerun the command.

---

## TECH-026e

(error) %s '%s' is missing the attribute '%s'. (%s line %d)

### Description

This error message occurs when the specified object of the specified section is missing an important attribute, or partial attributes of a rule are specified. If the attribute is not specified in the technology file, the attribute has a default value of 0 or an empty string.

The following is an example of the error message:

```
Error : Layer 'M1' is missing the attribute 'uShapeMinLength'. (line 758)
 (TECH-026e)
```

### What Next

Add the required attribute to the specified section and rerun the command.

---

## TECH-026i

(information) %s '%s' is missing the attribute '%s'. (%s line %d)

### Description

This information message occurs when the specified object of the specified section is missing an optional attribute, or partial attributes of a rule are specified. If the attribute is not specified in the technology file, the attribute has a default value of 0 or an empty string.

Feedback

The following is an example of the message:

```
Information: Layer 'M1' is missing the attribute 'uShapeMinLength'. (line
 758) (TECH-026i)
```

### What Next

This is only an information message. No action is required.

However, if you do not want to the use the default for the attribute, add the attribute with the desired value to the specified sec tion of the technology file and then rerun the command.

---

## TECH-027

(information) %s Non-metal layer '%s' has the metal layer attribute '%s', line %d.

### Description

This information message occurs when the specified Layer section is not a metal or poly layer, but it contains a metal layer attribute that is ignored.

The following are metal and poly layer attributes:

```
sameNetMinSpacing
stubThreshold
stubSpacing
maxLength
maxNumMinEdge
minEdgeLength
minArea
minEnclosedArea
maxWidth
fatContactThreshold
fatWireThreshold
fatThinMinSpacing
fatFatMinSpacing
fatWireExtensionRange
fatTblSpacing
fatTblParallelLength
fatTblMinEnclosedArea
```

The following is an example of the information message:

```
Information : Non-metal layer 'VIA12' has the metal layer
attribute 'fatTblMinEnclosedArea'. (line 740) (TECH-027)
```

### What Next

This is only an informational message. No action is required.

Feedback

However, if the result is not what you intended, you can either remove the specified attribute or change the mask name of the layer to a metal mask name, such as poly, metal1, metal2, or metal3.

---

## TECH-028

(warning) The rule attribute '%s' has a value of %s. This property will be ignored. (%s line %d)

### Description

s warning message occurs when the value of the specified rule attribute may not be optimal.

The value of the *minEnclosedArea* attribute for default metal layers should be greater than 0. Other values can affect the quality of the application results and can cause excessive design rule constraint violations during physical verification.

For a set of rule, completeness of rule parameters should be maintained:

For U-shape rule, if you specify uShapeMinLength or uShapeMinSpacing, you should also specify uShapeDepthThreshold and minSpacing. And uShapeMinSpacing > minSpacing.

For enclosed via minEdgeLength rule, if you specify enclosedViaMinEdgeLength, you must also specify a value for minEdgeLength that is within (0, enclosedViaMinEdgeLength) and a positive value for enclosedViaAdjacentEdgeLength.

For nonpreferred direction rule, the following should be met: nonPreferredWidth > defaultWidth, and nonPreferredMaxLength > nonPreferredWidth-defaultWidth

For multiple minArea rule, you should specify minArea if you specify specialMinArea, and specialMinArea > minArea.

For stubThreshold associated rules, you should specify stubThreshold if you specify stubMinLength, stubToStubSpacing, stubSpacing or endOfLineSideKeepoutLength.

For wire jog corner to corner width rule, the following should be met: alignedJogWidth >= minWidth and unalignedJogDiagWidth >= minWidth

For legal width rule, defaultWidth and nonPreferredWidth should be specifies and their values are in LegalWidthTbl.

defaultWidth >= minWidth for all layers.

The following is an example of the warning message:

```
Warning : Layer 'metal3' attribute 'minEnclosedArea' has a
value of 0. (TECH-028)
```

Feedback

### What Next

This is only a warning message. No action is required.

However, it is best practice to check the attribute value of the specified layer, and then change the value to a value greater than 0, if necessary. After making your changes, run the command again.

---

## TECH-029

(information) Non-via layer '%s' has the via layer attribute '%s'. (%s line %d)

### Description

This information message indicates that the specified Layer section does not define a via or poly contact layer, but it contains a via layer attribute, which is ignored.

The following are via and poly contact layer attributes:

```
cornerMinSpacing
maxStackLevel
fatTblExtensionContactNumber
fatTblExtensionMinCuts
fatTblFatContactNumber
fatTblFatContactMinCuts
maxNumAdjacentCut
adjacentCutRange
enclosedCutNumNeighbor
enclosedCutNeighborRange
enclosedCutMinSpacing
enclosedCutToNeighborMinSpacing
```

The following is an example of the information message:

```
Information : Non-via layer 'METAL2' has the via layer attribute
\'enclosedCutToNeighborMinSpacing'. (line 294) (TECH-029)
```

### What Next

This is only an informational message. No action is required.

However, if the result is not what you intended, you can either remove the specified attribute, or change the mask name of the layer to a via mask name, such as polyCont, via1, via2, or via3.

---

## TECH-030

(warning) Skipped LayerDataType '%s' since its layerNumber '%d' is invalid.

Feedback

### Description

This warning message occurs when a layerNumber of a LayerDataType is not defined.

### What Next

Define the layerNumber in the corresponding Layer section.

---

## TECH-031

(warning) %s '%s' attribute '%s' is assigned a list with an incorrect number of elements. (%s line %d)

### Description

This warning message occurs when the array attribute of the specified section does not have the correct number of elements, or the values are not separated by comma. minSpacingUpperEncCheckTbl table size should be cut1TblSize* cut2TblSize if used in cut to cut spacing rule and cutTblSize if used in cut to metal spacing rule.

The following is an example of the warning message:

```
Warning : Layer 'VIA12' has an incorrect number of elements listed
for array attribute 'fatTblExtensionMinCuts'. (line 753) (TECH-031)
```

For layer sections, the following array attributes must contain the indicated number of elements, based on the *fatTblDimension* attribute:

```
Attribute:                    Valid Number Of Elements:
    ------------------------------------------------------------
    fatTblThreshold              fatTblDimension
    fatTblSpacing                fatTblDimension x fatTblDimension
    fatTblParallelLength         fatTblDimension
    fatTblExtensionRange         fatTblDimension
    fatTblMinEnclosedArea        fatTblDimension
    fatTblFatContactNumber       fatTblDimension
    fatTblFatContactMinCuts      fatTblDimension
    fatTblExtensionContactNumber fatTblDimension
    fatTblExtensionMinCuts       fatTblDimension
```

For capacitance table sections, the array attribute must have the following number of elements, based on the wire width and spacing size:

```
Attribute      Valid Number Of Elements
    ---------------------------------------------
    wireWidth      wireWidthSize
    wireSpacing    wireSpacingSize
    capValue       wireWidthSize x wireSpacingSize
```

Feedback

For resistance models, the array attribute must have the following number of elements shown below, based on the size:

```
Attribute      Valid Number Of Elements
    -------------------------------------------
    wireWidth      size
    tempCoeff      size
    minRes         size
    nomRes         size
    maxRes         size
```

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change the table dimension(s) or add or remove elements from the specified array attribute.

---

## TECH-032

(warning) %s '%s' has invalid table values '%s'. (%s line %d)

**Description**

This warning message occurs when the specified section contains an invalid table value list, e.g. thresholds. The value list must meet the following requirements:

- The number of the values must match the table dimension.
- All values must be nonnegative numbers and listed in ascending order.
- The first threshold value must be between 0 and minWidth inclusively.
- The second threshold value must be greater than the layer minWidth. •
  The first spacing value must not be smaller than minSpacing, and the first maxSpacingCheckRange value must not be smaller than minSpacing * 2 + minWidth.
- In 2-D spacing table between the same layer, the values must be symmetrical.

  In minCutsTbl, if area is specified, extension should be specified. In enclosureTbl, if no lower/upper width is specified or an equivalent ContactCode to the specified enclosures is not found, this message will occur.

In generalized cut spacing rule with parallel length, if minSpacingDiagonalCheckTbl[i][j] = 1, at least one of minSpacingXParallelLengthThresholdTbl[i][j] and minSpacingYParallelLengthThresholdTbl[i][j] should be < 0; otherwise, TECH-032 will be issued to ignore minSpacingDiagonalCheckTbl[i][j]. If minSpacingXParallelLengthThresholdTbl or minSpacingYParallelLengthThresholdTbl is defined, orthoSpacingExcludeCornerTbl[i][j] should be 1; otherwise, TECH-032 will be issued to warn users that the corners will be checked by x/y spacing.

Feedback

For the table of fatTblExtensionRange, if fatTblExtensionRangeDimension defined, the value list must meet the following requirements:

- The number of the values must match the dimension.
- All values must be larger than 0 and listed in ascending order.

  For fatWireViaEnc rule, fatWireViaEncMinWidthThresholdTbl is recommended to be in ascending order. However, the tool accepts this table even it is not in ascending order as long as the min and max thresholds are paired in fatWireViaEncMinWidthThresholdTbl and fatWireViaEncMaxWidthThresholdTbl. Furthermore, if missing a width range between fatWireViaEncMinWidthThresholdTbl and fatWireViaEncMaxWidthThresholdTbl, this message will be issued.

  For maxStackLevel rule, the value in maxStackLevelCutAsViaArrayTbl for the smallest squared cut should be 0.

  For separatedCut spacing rule, if defined between the same cut layer, the following should hold: 1) separatedCut1NameTbl=separatedCut2NameTbl 2) separatedCut1ToUpperMetalExcludedSpacingTbl=separatedCut2ToUpperMetalExcludedSpacingTbl 3) the 2D spacing tables separatedCutXMinSpacingTbl and separatedCutYMinSpacingTbl should be symmetrical.

  x|yLegalDimensionTbl table values should be in ascending order. voltageAreaThresholdTbl values should be in ascending order.

  For fatTblSpacing Layer property, each of its values must be greater than or equal to minSpacing value.

  The following is an example of the warning message:

```
Warning : Layer 'METAL1' has invalid table values '(0, 0,
1.505, 3.005, 4.505, 7.505)'. (line 225) (TECH-032)
```

**What Next**

Please change the value list of the specified section to meet the above requirements. After making your changes, run the command again.

---

## TECH-032e

(error) %s '%s' has invalid table values '%s'. (%s line %d)

Feedback

### Description

This error message occurs when the specified section contains an invalid table value list, e.g. thresholds. The value list must meet the following requirements:

- The number of the values must match the table dimension.
- All values must be nonnegative numbers and listed in ascending order.
- The first threshold value must be between 0 and minWidth inclusively.
- The second threshold value must be greater than the layer minWidth. • The first spacing value must not be smaller than minSpacing, and the first maxSpacingCheckRange value must not be smaller than minSpacing * 2 + minWidth.
- In 2-D spacing table between the same layer, the values must be symmetrical.

  In minCutsTbl, if area is specified, extension should be specified. In enclosureTbl, if no lower/upper width is specified or an equivalent ContactCode to the specified enclosures is not found, this message will occur.

In generalized cut spacing rule with parallel length, if minSpacingDiagonalCheckTbl[i][j] = 1, at least one of minSpacingXParallelLengthThresholdTbl[i][j] and minSpacingYParallelLengthThresholdTbl[i][j] should be < 0; otherwise, TECH-032e will be issued to ignore minSpacingDiagonalCheckTbl[i][j]. If minSpacingXParallelLengthThresholdTbl or minSpacingYParallelLengthThresholdTbl is defined, orthoSpacingExcludeCornerTbl[i][j] should be 1; otherwise, TECH-032e will be issued to warn users that the corners will be checked by x/y spacing.

For the table of fatTblExtensionRange, if fatTblExtensionRangeDimension defined, the value list must meet the following requirements:

- The number of the values must match the dimension.
- All values must be larger than 0 and listed in ascending order.

  For fatWireViaEnc rule, fatWireViaEncMinWidthThresholdTbl is recommended to be in ascending order. However, the tool accepts this table even it is not in ascending order as long as the min and max thresholds are paired in fatWireViaEncMinWidthThresholdTbl and fatWireViaEncMaxWidthThresholdTbl. Furthermore, if missing a width range between fatWireViaEncMinWidthThresholdTbl and fatWireViaEncMaxWidthThresholdTbl, this message will be issued.

  For maxStackLevel rule, the value in maxStackLevelCutAsViaArrayTbl for the smallest squared cut should be 0.

  For separatedCut spacing rule, if defined between the same cut layer, the following should hold: 1) separatedCut1NameTbl=separatedCut2NameTbl 2) separatedCut1ToUpperMetalExcludedSpacingTbl=separatedCut2ToUpperMetalExcludedSpacingTbl

Feedback

3) the 2D spacing tables separatedCutXMinSpacingTbl and separatedCutYMinSpacingTbl should be symmetrical.

x|yLegalDimensionTbl table values should be in ascending order. voltageAreaThresholdTbl values should be in ascending order.

For fatTblSpacing Layer property, each of its values must be greater than or equal to minSpacing value.

The following is an example of the error message:

```
Error : Layer 'METAL1' has invalid table values '(0, 0,
1.505, 3.005, 4.505, 7.505)'. (line 225) (TECH-032e)
```

**What Next**

Please change the value list of the specified section to meet the above requirements. After making your changes, run the command again.

---

## TECH-033

(error) Layer '%s' has invalid fat table contact number %s of table value %s.

**Description**

This error message occurs when the fat metal via rule or fat metal via extension rule in the specified Layer section contains an invalid contact code number. This could be a ContactCodeNumber for different cut layer or a negative number. Please note number 0 is valid as it denotes any valid ContactCodeNumber.

A valid contact Code number must correspond to a contact code defined in the technology file, and the contact code must be defined for the specified cut layer.

And due to router limitation, if an asymmetrical contact code, defined by geometry tables or cut array, is referenced in fatTblFatContactNumber or fatTblExtensionContactNumber table, the error message will also be issued.

The following is an example of the error message:

```
Error : Layer 'VIA12' has invalid fat table contact number 20 of table
value"1 6 20 28 29". (TECH-033)
```

**What Next**

Change the table contact code number or define the contact code for the specified Layer section and then run the command again.

Feedback

## TECH-033w

(warning) Layer '%s' has invalid fat table contact number %s of table value %s.

### Description

This warning message occurs when the fat metal via rule or fat metal via extension rule in the specified Layer section contains an invalid contact code number. This warning occurs under end user mode only.

A valid contact Code number must correspond to a contact code defined in the technology file, and the contact code must be defined for the specified cut layer.

And due to router limitation (unable to instantiate such a via), if an asymmetrical contact code, defined by geometry tables or cut array, is referenced in fatTblFatContactNumber or fatTblExtensionContactNumber table, this message will also be issued.

The following is an example of the warning message:

```
Warning : Layer 'VIA12' has invalid fat table contact number "20 29" of
table value"1 6 20 28 29 ". (TECH-033w)
```

### What Next

Change the table contact code number or define the contact code for the specified Layer section and then run the command again.

## TECH-034

(warning) DesignRule is defined with non-consecutive layers '%s' and '%s'. (%s line %d)

### Description

This warning message occurs when the specified DesignRule section contains two metal layers or two via layers that do not have consecutive mask names. For example, the mask names via1 and via2 are valid consecutive mask names. The mask names via2 and via4 are not consecutive and cause the warning message to occur and the design rule to be ignored. For cut to metal spacing rule with minSpacingUpperMetalWidthThresholdTbl, the rule should be defined in DesignRule section between cut and lower metal layers (via_x and metal_x). For forbiddenCut and separatedCut spacing rule, the attributes should be defined in DesignRule section between same cut layer; otherwise, TECH-034 will be issued.

The following is an example of the warning message:

```
Warning : DesignRule is defined with non-consecutive layers 'VIA2'
and 'VIA4'. (line 1954) (TECH-034)
```

Feedback

### What Next

This is only a warning message. No action is required.

However, to avoid this warning message, change the layers of the DesignRule section so that the mask names of the layers are consecutive. After making your changes, run the command again.

---

## TECH-035

(warning) DesignRule is defined with invalid metal-to-via enclosure layers '%s' and '%s'. (%s line %d).

### Description

This warning message occurs when the DesignRule section specifies either a minimum or an end-of-line enclosure rule, for which one layer is not a via layer and/or the other layer is not a metal layer. The application ignores the design rule. Enclosure rules are only valid between a metal and via layer.

The following is an example of the warning message:

```
Warning : DesignRule is defined with invalid metal-to-via
enclosure layers 'via2' and 'via1'. (line 436). (TECH-035)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, change the layers of the DesignRule section so that one is a via layer and the other is a metal layer.

---

## TECH-036

(error) %s line %d, %s '%s' attribute '%s' has a row with an incorrect number of elements '%d'. It must be %s.

### Description

The specified two dimensional table at least has one row with incorrect number of elements.

### What Next

Verify that the number of elements for the specified table is correct.

Feedback

## TECH-037

(error) %s line %d, missing attribute '%s' in %s section '%s', the %s will be ignored.

**Description**

There is a missing attribute in the specified section. Either the attribute or the whole section will be ignored.

**What Next**

Verify that necessary attributes are specified for the section.

## TECH-038

(error) Layers '%s' and '%s' are not adjacent. (%s line %d)

**Description**

The error message indicates that layer1 and layer2 of a DesignRule section that can only be defined between two adjacent layers are not adjacent.

**What Next**

Correct the erroneous layer specifications in the tech file and run the command again.

## TECH-039

(error) Valid contact code is missing for via layer '%s'.

**Description**

This error message occurs when a ContactCode section meets one of following criteria:

- The ContactCode section is not defined for the specified via layer.
- The ContactCode section is defined for the specified via layer, but it is invalid.

A ContactCode section is defined for a particular via layer by assigning the *cutLayer* or *cutLayerNumber* attribute to the corresponding via layer name or number. At least one valid contact code must be defined for each via layer.

The following is an example of the error message:

```
Error : Valid contact code is missing for the via layer 'via4'.
(TECH-039)
```

Feedback

### What Next

Define or correct the invalid ContactCode section for the specified via layer and then run the command again.

---

## TECH-039w

(warning) Valid contact code is missing for via layer '%s'.

### Description

This warning message occurs when a ContactCode section meets one of following criteria:

- The ContactCode section is not defined for the specified via layer.
- The ContactCode section is defined for the specified via layer, but it is invalid.

A ContactCode section is defined for a particular via layer by assigning the *cutLayer* or *cutLayerNumber* attribute to the corresponding via layer name or number. At least one valid contact code must be defined for each via layer.

The following is an example of the error message:

```
Warning : Valid contact code is missing for the via layer 'via4'.
(TECH-039w)
```

### What Next

Define or correct the invalid ContactCode section for the specified via layer and then run the command again.

---

## TECH-040

(warning) Valid SAV%s is missing in viaRule section for via layer '%s' of DesignRule '%s'.

### Description

This warning message occurs when a SAV/SAV cluster is missing in viaRule section meets one of following criteria:

- DesignRule defined attribute 'diffNetNonSavCenterMinSpacingTbl' or 'nonSelfAlignedViaCenterMinSpacingTbl', valid SAV via on layer1 should be defined in ViaRule section.
- DesignRule defined attribute 'selfAlignedViaClusterCenterMinSpacingTbl', valid SAV cluster via on layer1 should be defined in ViaRule section.

Feedback

Reference example:

```
ViaRule SAV1 {
 cutLayerNameTblSize = 1
 cutLayerNameTbl = (V1) # via layer name
 cutNameTbl = (Vsm) # cut name
 selfAlignedViaUpperLayerEncTblSize = 2 # N
 selfAlignedViaUpperLayerEncTbl = (0.00, 0.01)
}
DesignRule {
  layer1 = "V1"
  layer2 = "V1"
  cut1TblSize = 1
  cut2TblSize = 1
  cut1NameTbl = (Vsm)
  cut2NameTbl = (Vsm)
  nonSelfAlignedViaCenterMinSpacingTbl = (S)
}
```

If SAV via 'SAV1' is not defined in viaRule section, then the warning message TECH-040 will be issued for designRule 'V1-V1'.

The following is an example of the warning message:

```
Warning: Valid SAV is missing in viaRule section for via layer 'V1' of
DesignRule 'V1-V1'. (TECH-040)
```

**What Next**

Define or correct the invalid SAV/SAV cluster in viaRule section for the specified via layer of the DesignRule and then run the command again.

---

## TECH-041

(error) Layer is missing with mask name '%s'.

**Description**

This error message occurs when a Layer section with the specified mask name is missing from the technology file. All metal and via layers up to the highest defined physical layer must be defined in the technology file.

For example, if only metal1, via1, metal2, via2, metal3, and metal4 are defined, then via3 is missing and the error message appears.

The following is an example of the error message:

```
Error : Layer is missing with mask name 'via3'. (TECH-041)
```

**What Next**

Define a Layer section with the specified mask name and then run the command again.

Feedback

## TECH-042

(Error) Attribute '%s' of %s %s has an invalid value. (%s line %d)

### Description

The message indicates that the value of the specified attribute very likely violates some of the following conditions:

For ContactCode attribute excludedForSignalRoute, excludedForSignalRoute and isDefaultContact of the same ContactCode section cannot both be set to true.

For ContactCode attributes minNumRows and minNumCol, the valid value range is 1 to 16.

For ContactCode attributes upperLayerEncWidth, upperLayerEncHeight, lowerLayerEncWidth, and lowerLayerEncHeight, the following conditions must be satisfied:

```
(upperLayerEncWidth * 2) + cutWidth >= 0
(upperLayerEncHeight * 2) + cutHeight >= 0
(lowerLayerEncWidth * 2) + cutWidth >= 0
(lowerLayerEncHeight * 2) + cutHeight >= 0
```

The following is an example of the error message:

```
Error: Attribute 'minNumRows' of ContactCode VIA12 has an invalid
value. (in.tf line 1653) (TECH-042)
```

### What Next

Correct the erroneous value. After making the change, run the command again.

## TECH-042w

(warning) Attribute '%s' of %s %s has an invalid value. (%s line %d)

### Description

The message indicates that the value of the specified attribute very likely violates some of the following conditions:

For ContactCode attribute excludedForSignalRoute, excludedForSignalRoute and isDefaultContact of the same ContactCode section cannot both be set to true.

For ContactCode attributes minNumRows and minNumCol, the valid value range is 1 to 16.

Feedback

For ContactCode attributes upperLayerEncWidth, upperLayerEncHeight, lowerLayerEncWidth, and lowerLayerEncHeight, the following conditions must be satisfied:

```
(upperLayerEncWidth * 2) + cutWidth >= 0
(upperLayerEncHeight * 2) + cutHeight >= 0
(lowerLayerEncWidth * 2) + cutWidth >= 0
(lowerLayerEncHeight * 2) + cutHeight >= 0
```

The following is an example of the warning message:

```
Warning: Attribute 'minNumRows' of ContactCode VIA12 has an invalid
value. (in.tf line 1653) (TECH-042w)
```

**What Next**

Correct the erroneous value. After making the change, run the command again.

---

## TECH-043

(warning) Attributes '%s' and '%s' of %s '%s' cannot both be set to %s. (%s line %d)

**Description**

The message indicates that there is a conflict between the settings of the specified properties.

**What Next**

Correct the erroneous setting. After making the change, run the command again.

---

## TECH-044

(warning) The %s entry of attribute %s should be specified as -1, The specified value will be ignored. (%s line %d)

**Description**

The specified entry of the specified attribute should be specified as -1 because there is no spacing requirement on the cut layer corresponding to the entry.

**What Next**

Correct the erroneous table entry. After making the change, run the command again.

---

## TECH-045

(warning) The cut size of ContactCode %s does not have a match in Layer section %s. (%s line %d)

Feedback

**Description**

The cut size (cutWidth x cutHeight) of a ContactCode must have a match in the cut size table of the cut layer that is specified by the cutLayer attribute of the ContactCode.

**What Next**

Correct the cut size of the specifed ContactCode and then run the command again.

---

## TECH-045e

(error) The cut size of ContactCode %s does not have a match in Layer section %s. (%s line %d)

**Description**

The cut size (cutWidth x cutHeight) of a ContactCode must have a match in the cut size table of the cut layer that is specified by the cutLayer attribute of the ContactCode.

**What Next**

Correct the cut size of the specifed ContactCode and then run the command again.

---

## TECH-046

(warning) Cut name %s in DesignRule cut name table %s is not in the cut name table of layer %s. (%s line %d)

**Description**

Cut names specified in the cut1NameTbl attribute of a DesignRule must be defined in cutNameTbl of the cut layer that is specified by the layer1 attribute of the DesignRule and similarly cut names specified in cut2NameTbl of the DesignRule must be in cutNameTbl of the cut layer specified by layer2.

**What Next**

Correct the problematic cut name in the tech file and then run the command again.

---

## TECH-047

(information) CutMetal layer attribute %s is specified in layer %s which is not a cutMetal layer. (%s line %d)

**Description**

This informational message indicates that a cutMetal layer attribute is specified in a non-cutMetal layer section. The attribute specified in the message is ignored.

Feedback

### What Next

This is only an informational message. However, if the result is not what you intended, you can either remove the attribute or change the mask name of the layer to a cutMetal mask name such as cutMetal1, cutMetal2, cutMetal3, etc.

---

## TECH-048

(warning) Attribute %s is missing from the %s ContactCode section. The %s attribute will be ignored. (%s line %d)

### Description

In a ContactCode section if the lowerLayerMaskPattern attribte is specified, the lowerLayerRectTbl attribute of the same section must also be specified and if the upperLayerMaskPattern attribute is specified, the upperLayerRectTbl attribute must also be specified.

### What Next

Redefine the problematic ContactCode section. After making the change, run the command again.

---

## TECH-049

(warning) DesignRule is defined with different %s layers '%s' and '%s'. %s (%s line %d)

### Description

This warning message occurs when the specified DesignRule section must contain the same via layers or the same metal layers.

The following is an example of the warning message:

```
Warning : DesignRule is defined with different via layers 'VIA2'
and 'VIA4'. (line 1954) (TECH-049)
```

### What Next

If the result is not what you intended, Change the layers of the DesignRule section to make them the same.

---

## TECH-050

(warning) The value of the %s attribute of %s %s is invalid. Attribute %s %s attribute %s. (%s line %d)

Feedback

### Description

The message indicates that the value of the specified attribute violates some constraint as stated in the displayed message

The following is an example of the warning message:

```
Warning: The value of the maskEndTblSize attribute of Layer M2 is
 invalid.
Attribute maskEndTblSize should not be greater than attribute numMasks.
(line 225) (TECH-050)
```

### What Next

Correct the erroneous value. After making the change, run the command again.

---

## TECH-051

(warning) Value %s in attribute %s of %s %s is not one of the values specified by attribute %s. (%s line %d)

### Description

Sometimes the values specified by an attribute can only be values contained in a table attribute. The message indicates that such a rule is viaolated.

The following is an example of the warning message:

```
Warning: Value 0.05 in attribute sameColorSpanTblXExcludedSpacingRange of
 Layer
M1 is not one of the values specified by attribute
 sameColorSpanTblXThreshold.
(line 188) (TECH-051)
```

### What Next

Correct the erroneous value. After making the change, run the command again.

---

## TECH-052

(error) The table size of attribute %s %s, but its actual size is %d. This attribute is ignored. (%s line %d)

### Description

The tool issues this error message when the technology file contains an invalid number of entries for the specified attribute. The command ignores attributes with this error.

Feedback

**What Next**

Update the technology file to correct the number of entries for the specified attribute. After updating the technology file, rerun the command.

---

## TECH-053

(warning) Cut name %s in attribute %s of layer %s is not defined in cutNameTbl. (%s line %d)

**Description**

Any cut name specified in the attribute which is named by this message must be a cut name defined in the cutNameTbl attribute of the same layer. This message indicates that the above requirement is not met.

**What Next**

Correct the problematic cut name in the tech file and then run the command again.

---

## TECH-054

(warning) Cut %s in attribute %s of layer %s is a square cut. (%s line %d)

**Description**

Cuts specified in the attribute which is named by this message must be rectangular cuts.

**What Next**

Correct the error in the tech file and then run the command again.

---

## TECH-055

(error) Found invalid layer/layer stack for ContactCode '%s'. (line %d)

**Description**

The error message indicates that the multi-via-layer contact code has invalid layer/ layer stack. The multi-via-layer contact code syntax is as following: ContactCode "ccName" { contactCodeNumber = 312 layersRectTbl = (("MET1", "-0.100, ...", "0.035, ....") ("CUT12", "-0.100, ...", "0.035, ....") ("MET2", "-0.100, ...", "0.035, ....") ("CUT23", "-0.100, ...", "0.035, ....") ("MET3", "-0.100, ...", "0.035, ....")) } (1)The layers' name in property layersRectTbl must be valid layer name in layer section. (2)The layers‘ mask number order should be valid, it means the layer stack should be valid. For example: metal1,via1,metal2,via2,metal3 is valid, metal2,via1,metal3,via2,metal5 is not valid.

The contactcode doesn't meet the above criteria caused the error.

Here is an example of such contactcode: ContactCode "mcvTest" { contactCodeNumber = 3336 layersRectTbl = (("M1", "-0.01, -0.01, 0.01, 0.01", "0.1, 0.2, 0.3, 0.4") ("VIA1", "-0.0250, -0.0100, 0.0250, 0.0100") ("M2", "-0.0180, -0.0250, 0.0180, 0.0850,") ("VIA2", "-0.01, -0.01, 0.01, 0.01") ("M3", "-0.0250, -0.0100, 0.0250, 0.0100")) }

**What Next**

Correct the erroneous layer specifications of the ContactCode section and run the command again.

---

## TECH-055w

(warning) Found invalid layer/layer stack for ContactCode '%s'. (line %d)

**Description**

The warning message indicates that the multi-via-layer contact code has invalid layer/layer stack. The multi-via-layer contact code syntax is as following: ContactCode "ccName" { contactCodeNumber = 312 layersRectTbl = (("MET1", "-0.100, ...", "0.035, ....") ("CUT12", "-0.100, ...", "0.035, ....") ("MET2", "-0.100, ...", "0.035, ....") ("CUT23", "-0.100, ...", "0.035, ....") ("MET3", "-0.100, ...", "0.035, ....")) } (1)The layers' name in property layersRectTbl must be valid layer name in layer section. (2)The layers‘ mask number order should be valid, it means the layer stack should be valid. For example: metal1,via1,metal2,via2,metal3 is valid, metal2,via1,metal3,via2,metal5 is not valid.

The contactcode doesn't meet the above criteria caused the warning.

Here is an example of such contactcode: ContactCode "mcvTest" { contactCodeNumber = 3336 layersRectTbl = (("M1", "-0.01, -0.01, 0.01, 0.01", "0.1, 0.2, 0.3, 0.4") ("VIA1", "-0.0250, -0.0100, 0.0250, 0.0100") ("M2", "-0.0180, -0.0250, 0.0180, 0.0850,") ("VIA2", "-0.01, -0.01, 0.01, 0.01") ("M3", "-0.0250, -0.0100, 0.0250, 0.0100")) }

LONG TSV If cutLayer = "tsv" and lowerLayer is any metal including back metal, and upper layer is metal layer, even if the layers are not consecutive, this will not yield a TECH-055 since this is a "Long TSV". In this case, TECH-280 will be printed.

**What Next**

Correct the erroneous layer specifications of the ContactCode section and run the command again.

---

## TECH-056

(error) Ignore invalid layer shape %s of ContactCode '%s'.

Feedback

**Description**

The error message indicates that the multi-via-layer contact code has invalid layer shape. The multi-via-layer contact code syntax is as following: ContactCode "ccName" { contactCodeNumber = 312 layersRectTbl = (("MET1", "-0.100, ...", "0.035, ....") ("CUT12", "-0.100, ...", "0.035, ....") ("MET2", "-0.100, ...", "0.035, ....") ("CUT23", "-0.100, ...", "0.035, ....") ("MET3", "-0.100, ...", "0.035, ....")) } (1)One Rect shape value in layersRectTbl must be 4 numbers "d1,d2,d3,d4". So for the shapes in one layer, you can specify it as ("layer1", "d1, d2, d3, d4", "d5, d6, d7, d8", …) (2)One pair of parenthesis means the Rects of the layer.

The contactcode doesn't meet the above criteria caused the error.

Here is an example of such contactcode: ContactCode "mcvTest" { contactCodeNumber = 3336 layersRectTbl = (("M1", "-0.01, -0.01, 0.01, 0.01", "0.1, 0.2, 0.3, 0.4") ("VIA1", "-0.0250, -0.0100, 0.0250, 0.0100") ("M2", "-0.0180, -0.0250, 0.0180, 0.0850,") ("VIA2", "-0.01, -0.01, 0.01, 0.01") ("M3", "-0.0250, -0.0100, 0.0250, 0.0100")) }

**What Next**

Correct the erroneous layer shape specifications of the ContactCode section and run the command again.

---

## TECH-057

(error) Failed to create multiple via layers ContactCode '%s', the ContactCode will be ignored.

**Description**

The error message indicates that fail to create the multi-via-layer contact code.

**What Next**

Correct the TECH-055 and TECH-056 of the ContactCode section and run the command again.

---

## TECH-058

(error) Attribute %s is specified in a wrong Layer section. (%s line %d)

**Description**

Attributes maxLengthTblSize, maxLengthDataTypeTbl, and maxLengthTbl can be specified only in a Layer section whose mask name is either "metal0" or "poly". The message indicates that the attribute named in the message is specified in a Layer section that does not satisfy the mask name requirement.

Feedback

**What Next**

Correct the error in the tech file and then run the command again.

---

## TECH-059

(error) Layer2 of the DesignRule is not lower than Layer1. (%s line %d)

**Description**

This message indicates that the layer specified by layer2 of the DesignRule section that generated this message must be lower than the layer specified by layer1. However, the definition of this DesignRule does not satisfy this condition.

**What Next**

Correct the error in the tech file and then run the command again.

---

## TECH-060

(warning) The DesignRule is not between two consecutiv cut layer, nor is it between a cut layer and its adjacent metal layer. (%s line %d)

**Description**

This message indicates that this DesugnRule can be define only for two consecutive cut layers or a cut layer and its adjacent metal layer. However, the definition of this DesignRule does not satisfy this condition.

**What Next**

Correct the error in the tech file and then run the command again.

---

## TECH-061

(error) Attribute %s is not specified in a DesignRule section whose metal layer is a "hasRectangleOnly" layer. (%s line %d)

**Description**

This message indicates that the attribute named in the message can only be specified in metal-to-cut DesignRule sections and the "hasRectangleOnly" attribute of the metal layer must be 1. However, the definition of the DesignRule does not satisfy the condition.

**What Next**

Correct the error in the tech file and then run the command again.

Feedback

## TECH-062

(error) Attribute %s is specified in a DesignRule section that is not defined for two consecutive via layers. (%s line %d)

### Description

This message indicates that the attribute named in the message can only be specified in DesignRule sections that are defined for two consecutive via layers. However, the definition of the DesignRule that contains the attribute does not satisfy the condition.

### What Next

Correct the error in the tech file and then run the command again.

## TECH-063

(error) Attribute %s cannot be specified in ContactCode %s because the mask name of cut layer %s is not "tsv". The attribute will be ignored. (%s line %d)

### Description

The tsvKeepoutSpacing attribute can only be specified in ContactCode sections in which the cutLayer attribute specifies a layer whose mask name is "tsv". The display of this message indicates that the named ContactCode section, in which the tsvKeepoutSpacing attribute is specified, does not satisfy the requirement.

### What Next

Correct the error in the tech file and then run the command again.

## TECH-064

(error) Attribute %s cannot be specified in a tsv ContactCode. The attribute will be ignored. (%s line %d)

### Description

A ContactCode is a tsv ContactCode if the mask name of the layer specified by the cutLayer attribute of the ContactCode is "tsv". Attributes cutLayerRectTbl, lowerLayerRectTbl, upperLayerRectTbl, and layersRectTbl are not allowed to be specified in a tsv ContactCode.

### What Next

Correct the error in the tech file and then run the command again.

Feedback

## TECH-065

(error) The value specified by the tsvKeepoutSpacing attribute is invalid. ContactCode %s is ignored. (%s line %d)

### Description

The value of tsvKeepoutSpacing cannot be less than the value of upperLayerEncWidth, upperLayerEncHeight, lowerLayerEncWidth, or lowerLayerEncHeight.

### What Next

Correct the error in the tech file and then run the command again.

## TECH-066

(error) The technology file contains both noCutMetal and nonStdCellRegion attributes.

### Description

The set of noCutMetal* attributes and the set of nonStdCellRegion* attributes are mutually exclusive, hence cannot both be specified in the same technology file.

### What Next

Correct the error in the tech file and then run the command again.

## TECH-067

(information) Attribute '%s' is obsolete and is %s. (%s line %d)

### Description

Attributes constrainedCutPrefEncTblSize and constrainedCutPref*Tbl are obsolete.

If constrainedCutPrefEncTblSize and constrainedCutPrefEncNameTb are specified, they will be ignored.

If the constrainedCutPrefEncMaxWidthThresholdTbl attribute is specified, it will be replaced with the constrainedCutPrefEncMaxWidthThreshold attribute and the first entry of constrainedCutPrefEncMaxWidthThresholdTbl will be the value of constrainedCutPrefEncMaxWidthThreshold.

If the constrainedCutPrefEncConstrainingRangeTbl attribute is specified, it will be replaced with the constrainedCutPrefEncConstrainingRange attribute and the first entry of constrainedCutPrefEncConstrainingRangeTbl will be the value of constrainedCutPrefEncConstrainingRange.

Feedback

If the constrainedCutPrefEncConstrainingNumCutsTbl attribute is specified, it will be replaced with the constrainedCutPrefEncConstrainingNumCuts attribute and the first entry of constrainedCutPrefEncConstrainingNumCutstbl will be the value of constrainedCutPrefEncConstrainingNumCuts.

If the constrainedCutPrefEncMinEnclosureTbl attribute is specified, it will be replaced with the constrainedCutPrefEncMinEnclosure attribute and the first entry of constrainedCutPrefEncMinEnclosureTbl will be the value of constrainedCutPrefEncMinEnclosure.

**What Next**

No action is required.

---

## TECH-068

(information) Tech file attribute '%s' is obsolete and is %s.

**Description**

Tech file attributes constrainedCutPrefEncTblSize and constrainedCutPref*Tbl are obsolete.

If constrainedCutPrefEncTblSize and constrainedCutPrefEncNameTb are specified in the library, they will be ignored.

If the constrainedCutPrefEncMaxWidthThresholdTbl attribute is specified, it will be replaced with the constrainedCutPrefEncMaxWidthThreshold attribute and the first entry of constrainedCutPrefEncMaxWidthThresholdTbl will be the value of constrainedCutPrefEncMaxWidthThreshold.

If the constrainedCutPrefEncConstrainingRangeTbl attribute is specified, it will be replaced with the constrainedCutPrefEncConstrainingRange attribute and the first entry of constrainedCutPrefEncConstrainingRangeTbl will be the value of constrainedCutPrefEncConstrainingRange.

If the constrainedCutPrefEncConstrainingNumCutsTbl attribute is specified, it will be replaced with the constrainedCutPrefEncConstrainingNumCuts attribute and the first entry of constrainedCutPrefEncConstrainingNumCutstbl will be the value of constrainedCutPrefEncConstrainingNumCuts.

If the constrainedCutPrefEncMinEnclosureTbl attribute is specified, it will be replaced with the constrainedCutPrefEncMinEnclosure attribute and the first entry of constrainedCutPrefEncMinEnclosureTbl will be the value of constrainedCutPrefEncMinEnclosure.

**What Next**

No action is required.

Feedback

## TECH-069

(error) Attribute '%s' is specified in Layer '%s' whose mask name is not '%s'. (%s line %d)

**Description**

This message indicates that one of the following layer mask name requirements is not satisfied.

Layer section attributes "implantSubType", "vtGroupName", "vtGroupVerticalKeepoutParallelLength", and "vtGroupVerticalKeepoutSpacing" can be specified only in Layer sections whose mask name is "implant".

Layer section attributes "concaveConcaveMaxEdgeLength", "concaveConcaveMinEdgeLength", "convexConvexMaxEdgeLength", "convexConvexMinEdgeLength", "concaveConvexMaxEdgeLength", and "concaveConvexMinEdgeLength" can be specified only in Layer sections whose mask name is "diffusion".

Layer section attributes "jogSameLineContinuousMaxSpacing", "jogCrossLineContinuousMinParallelLength", "jogShapeEdgeLengthTblSize", "jogShapeWidthThresholdTbl", "jogTShapeMinEdgeLengthTbl", "jogCornerTShapeMinEdgeLengthTbl", "jogLShapeMinEdgeLengthTbl", "jogUShapeMinEdgeLengthTbl", and "jogUShapeMaxEdgeLengthTbl" can be specified only in Layer sections whose mask name is "diffusion".

Layer section attributes "widthTblSize", "widthThresholdTbl", "widthMaxLengthTbl", and "widthMaxRatioTbl" can be specified only in Layer sections whose mask name is "diffusion".

**What Next**

Correct the error in the tech file and then run the command again.

## TECH-070

(error) Values of attribute '%s' in Layer '%s' and '%s' are different.

**Description**

This message indicates that one of the following requirements is not satisfied.

All the "vtGroupName" attributes specified in the same tech file must have the the same value.

All the "vtGroupVerticalKeepoutParallelLength" attributes specified in the same tech file must have the same value.

Feedback

All the "vtGroupVerticalKeepoutSpacing" attributes specified in the same tech file must have the same value.

**What Next**

Correct the error in the tech file and then run the command again.

---

## TECH-071

(warning) Cannot find any valid mask specific ContactCode to pair with ContactCode %s. (%s line %d)

**Description**

If there is a ContactCode section in which the upperLayerMaskConstraint attribute is specified as either "mask1" or "mask2" and the isDefaultContact attribute is set to 1, then the ContactCode must be paired with another ContacCode for the same cut layer. The pair of ContactCode sections must have the same isDefaultContact attribute specification and the upperLayerMaskConstraint attribute is specified in both ContactCode sections with one being set to "mask1" and the other being set to "mask2".

**What Next**

Correct the error in the tech file and then run the command again.

---

## TECH-072

(warning) Cut name '%s' specified in DesignRule '%s' not found in the cut name table of the corresponding SAV ViaRule.

**Description**

This message is printed when a DesignRule contains self-aligned via (SAV) rule specification, and a cutName in this DesignRule was not found in any corresponding SAV ViaRule section.

**What Next**

Add the information of the cutName in the related SAV ViaRule section and/or correct the cutName specification in the DesignRule section.

---

## TECH-073

(warning) DesignRule missing cornerMinSpacing specification for entry %d of orthoSpacingExcludeCornerTbl. (%s line %d)

Feedback

### Description

This message is printed when a DesignRule contains orthoSpacingExcludeCornerTbl and for at least one of its non-zero entries, no valid cornerMinSpacing value was specified. This means that neither cornerMinSpacing property was specified with a non-zero value, nor was a non-zero value found at the corresponding position in any of the relevant *CornerMinSpacingTbl tables. These tables include the following : diffSegCenterMinSpacingTbl, sameSegCenterMinSpacingTbl, diffNetCornerMinSpacingTbl, diffNetCenterMinSpacingTbl, diffSegCornerMinSpacingTbl, sameSegCornerMinSpacingTbl, sameNetCenterMinSpacingTbl and sameNetCornerMinSpacingTbl.

### What Next

Either specify a valid non-zero value for cornerMinSpacing property, or a valid non-zero value at the corresponding position in the relevant *CornerMinSpacingTbl table property.

---

## TECH-074

(error) Attribute %s contains an incorrect number of entries. It should be a %s table. The attribute is ignored. (%s line %d)

### Description

The tool issues this error message when the technology file contains an invalid number of entries for the specified attribute. The command ignores attributes with this error.

### What Next

Update the technology file to correct the number of entries for the specified attribute. After updating the technology file, rerun the command.

---

## TECH-075

(warning) At lease one of the %s and %s attributes must be specified in the %s Layer section. (%sline %d)

### Description

The display of this message indicates that none of the following requirements is satisfied.

If the nonPrefLegalDimDiscreteLastValue attribute is specified in a Layer section and its value is 1, then at least one of the xLegalDimTbl and yLegalDimTbl attributes of the Layer section must be specified.

If the nonStdCellRegionNonPrefLegalDimDiscreteLastValue attribute is specified in a Layer section and its value is 1, then at least one of the nonStdCellRegionXLegalDimTbl and nonStdCellRegionYLegalDimTbl attributes of the Layer section must be specified.

Feedback

If the jogSameLineContinuousMaxSpacing and jogCrossLineContinuousMinParallelLength attributes are specified in a Layer section, at least one of the concaveConcaveMaxEdgeLength, convexConvexMaxEdgeLength, and concaveConvexMaxEdgeLength attributes must also be specified in the same Layer section.

**What Next**

Verify that necessary attributes are specified for the specified section.

---

## TECH-076

(error) Both viaShiftXDistance and viaShiftYDistance attributes of ContactCode %s are positive. Both attributes are ignored. (%s line %d)

**Description**

The viaShiftXDistance and viaShiftYDistance attributes of a ContactCode section cannot both be positive.

**What Next**

Correct the error in the tech file and then rerun the command.

---

## TECH-077

(error) %s is not a valid operator for the layerOperator attribute. (%s line %d)

**Description**

AND, OR, XOR, and NOT are the only valid operators that can be specified for the layerOperator attribute.

**What Next**

Correct the error in the tech file and then rerun the command.

---

## TECH-078

(error) %s is not a valid entry for the layerOperandTbl attribute. (%s line %d)

**Description**

Every entry in the layerOperandTbl table must be a layer name and the mask name of the layer must be "implant".

**What Next**

Correct the error in the tech file and then rerun the command.

Feedback

## TECH-079

(error) Layer %s is a virtual layer and its layerNumber attribute should not be specified. (%s line %d)

### Description

A virtual layers, such as an operated layer, cannot have a valid layer number. The display of this messge indicates that the layerNaumber attribute is specified in a virtual layer section.

### What Next

Correct the error in the tech file and then rerun the command.

## TECH-080

(warning) The stackViaCountUpperLayerOnly attribute is %s. (%s line %d)

### Description

The stackLevelForbiddenForMultipleViaTbl attribute can be specified in a Layer section only if the stackViaCountUpperLayerOnly attribute is specified in the Technology section and its value is 1.

### What Next

Correct the error in the tech file and then rerun the command.

## TECH-081

(warning) DesignRule is defined with non-distinct layers '%s' and '%s'. (line %d)

### Description

This warning message occurs when the layers of the specified DesignRule section are the same layer. The application ignores the design rule.

The following is an example of the warning message:

```
Warning : DesignRule is defined with non-distinct layers 'VIA3'
and 'VIA3'. (line 1960) (TECH-081)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change one of the layers of the DesignRule section and then run the command again.

Feedback

## TECH-082w

(warning) ContactCode '%s' has an invalid cut width %g that is less than the cut layer minWidth %g. (line %d)

### Description

This message indicates that the specified ContactCode section's cutWidth (or cutHeight) or corresponding cut layer's minWidth is invalid. Each contact code's cutWidth (cutHeight) should be greater than or equal to its cut layer's minimum width.

### What Next

Change either the specified ContactCode section's cutWidth and/or cutHeight or corresponding cut layer's minWidth to meet this requirement.

### Examples

Warning : ContactCode 'VIA78fF' has an invalid cut width 0.2 that is less than the cut layer minWidth 0.4. (line 1599) (TECH-082w)

## TECH-083w

(warning) Cut layer '%s' has a non-cross primary default ContactCode '%s'. (line %d)

### Description

This message occurs when the cut layer has multiple default ContactCodes and the primary default ContactCode is a non-cross one. For a given cut layer, the primary ContactCode is defined to be the first one that appears in the technology file, and the primary default ContactCode is the first default ContactCode.

A non-cross (minus '-' shaped) ContactCode is one that has the same longitudinal direction of enclosures in both upper and lower layers. And a cross (plus '+' shaped) ContactCode is one that has different longitudinal directions of enclosures in both upper and lower layers. A cross ContactCode is determined by upperLayerEncWidth >= upperLayerEncHeight and lowerLayerEncWidth <= lowerLayerEncHeight or upperLayerEncWidth <= upperLayerEncHeight and lowerLayerEncWidth >= lowerLayerEncHeight and a non-cross contactCode is one that does not meet either of the above conditions. i.e. it is determined by upperLayerEncWidth > upperLayerEncHeight and lowerLayerEncWidth > lowerLayerEncHeight or upperLayerEncWidth < upperLayerEncHeight and lowerLayerEncWidth < lowerLayerEncHeight

The following is an example of the warning message:

```
Warning:  Cut layer 'VIA1' has a non-cross primary default ContactCode
 'V10'.
(line 254) (TECH-083w)
```

Feedback

### What Next

When non-cross default ContactCode is in the first position, please choose from other default ContactCodes for this cut layer, if any, to get optimal routing performance.

---

## TECH-084

(information) ContactCode '%s' has a minimum cut spacing %g that is less than the cut layer minimum spacing %g. (line %d)

### Description

This message indicates that the specified ContactCode section's minimum cut spacing is less than the corresponding cut layer's minimum spacing. Each contact code's minimum cut spacing should be greater or equal to its cut layer's minimum spacing.

If it is via cell master in the contactCode, and cutArrayXSpacing/cutArrayYSpacing is smaller than cut layer minSpacing rule, this warning message will also be issued.

### What Next

This is only an informational message. No action is required.

However, if the result is not what you intended, you can change either the specified ContactCode section's minimum cut spacing or corresponding cut layer's minimum spacing to meet your requirement.

### Examples

Information : ContactCode 'VIA78fF' has a minimum cut spacing 0 that is less than the cut layer minimum spacing 0.4. (line 1599) (TECH-084)

---

## TECH-085e

(error) ContactCode '%s' on cut layer '%s' has unsupported type '%s' of %s defined. (line %d)

### Description

This error message occurs when the specified section has an unsupported value assigned to the specified attribute.

For cutArrayMaskPattern, currently zRouter cannot support pattern other than 'uniform' on cut layers with more than two masks.

Feedback

The following is an example of the error message:

```
Error : ContactCode 'VIA1_VH' on cut layer 'CUT12' has unsupported type
 'alternate'
of cutArrayMaskPattern defined. (line 661) (TECH-085e)
```

### What Next

Change the attribute value of the specified section to a valid value. After changing the value, run the command again.

---

## TECH-086w

(warning) Layer '%s' has insignificant differences between fat table thresholds '%s'. (%s line %d)

### Description

This warning message occurs when the threshold list of the specified Layer section contains insignificant differences between the threshold values. It is best practice to have thresholds differ by more than half of the minimum width and more than ten percent of the greater threshold. If they do not differ by these amounts, then the fat table can contain redundant data, be unnecessarily large, and increase router run-time dramatically.

The following is an example of the warning message:

```
Warning : Layer 'VIA4' has insignificant differences between
fat table thresholds '(0, 0.5, 0.55, 1.2, 2)'. (line 724) (TECH-086w)
```

### What Next

This is only a warning message. No action is required.

However, you can check the fat tables for redundant data. If you find redundant data, then reduce the table dimension and the number of threshold values. After making your changes, rerun the command.

---

## TECH-087w

(warning) Tile '%s' has a width %g that is not a multiple of the metal layer pitch %g or %g.

### Description

This warning message occurs when the width of the specified tile is inconsistent with pitch of the first two metal layers.

The following is an example of the warning message:

```
Warning : Tile 'unit' has a width 0.32 that is not a multiple
of the metal layer pitch 0.2 or 0.28. (TECH-087w)
```

Feedback

### What Next

This is a warning message only. No action is required.

However, it is best practice to either change the width attribute of the corresponding tile section to the suggested pitch, or change the pitch of the first vertical wire track layer. After making your changes, run the command again.

---

## TECH-088w

(warning) Layer '%s' attribute '%s' has an invalid value of %g.

### Description

This warning message occurs when the value of the specified attribute is invalid or inconsistent with related attributes.

The following is checked: Each value in cutWidthTbl/cutHeightTbl should be compared against the minWdith on the layer. The cutWidth and cutHeight values should not be less than the minWidth on the layer.

The following is an example of the warning message:

```
Warning : Layer 'V2' attribute 'cutWidthTbl' has an invalid value of
 0.05. (TECH-088w)
```

### What Next

It is best practice to check the attribute value of the specified section, and then change the value to a valid value that is consistent with other related attributes in the same set of rule. After making your changes, run the command again.

---

## TECH-089

(warning) The %s attribute is missing from the proper DesignRule section. (%s line %d)

### Description

If the stackLevelForbiddenForMultipleViaTbl attribute is specified in a cut Layer section, the stackViaXEdgeSpacingThreshold, stackViaYEdgeSpacingThreshold, and stackViaCornerSpacingThreshold attributes must also be specified in the DesignRule section that is for the layer on which stackLevelForbiddenForMultipleViaTbl is specified vs. the layer's upper adjacent cut layer.

### What Next

Correct the error in the tech file and then rerun the command.

Feedback

## TECH-090

(error) '%s' is not a valid string for the 'endOfLineType' attribute. (%s line %d)

### Description

Strings 'cutEndOnly' and 'cutAndNaturalEnd' are the only two valid string values that the 'endOfLineType' attribute can take. The display of the message indicates that an invalid string was specified in the tech file for the 'endOfLineType' attribute.

### What Next

Correct the error in the tech file and then rerun the command.

## TECH-091

(warning) The corresponding cut metal layer of metal layer '%s' is missing from the tech file. (%s line %d)

### Description

If the 'endOfLineType' attribute is specified in a metal Layer section, the corresponding cut metal Layer section of the metal Layer must also be specified in the same tech file. Assuming that the mask name of the metal layer is 'metalx', where x is an integer, then the corresponding cut metal layer of the metal layer is the layer whose mask name is 'cutMetalx'.

### What Next

Correct the error in the tech file and then rerun the command.

## TECH-092

(error) String '%s' is not a valid entry for the '%s' attribute. (%s line %d)

### Description

The display of the message indicates that there is an invalid entry in the attribute that is specified in the displayed message. The valid entries for the metalCutMetalMapMetalMaskTbl and metalCutMetalMapCutMetalMaskTbl tables are 'noMask', 'mask1', 'mask2', 'mask3', and 'mask4'. The valid entries for the sameColorCutMetalCheckMetalMaskTbl table are 'mask1', 'mask2', 'mask3', 'mask4', and 'all'.

### What Next

Correct the error in the tech file and then rerun the command.

Feedback

## TECH-093

(error) The sameColorCutMetalCheckMetalMaskTbl table contains string "all" and other entries. (%s line %d)

**Description**

If 'all' is specified in the sameColorCutMetalCheckMetalMaskTbl table, the table cannot have any other entry.

**What Next**

Correct the error in the tech file and then rerun the command.

## TECH-094

(error) String '%s' in sameColorCutMetalCheckMetalMaskTbl is not in the metalCutMetalMapMetalMaskTbl table. (%s line %d)

**Description**

Any of the 'mask1', 'mask2', 'mask3', and 'mask4' strings can be specified in the sameColorCutMetalCheckMetalMaskTbl table only if it is an entry of the metalCutMetalMapMetalMaskTbl table of the same Layer section.

**What Next**

Correct the error in the tech file and then rerun the command.

## TECH-095

(error) Table metalCutMetalMapCutMetalMaskTbl contains duplicate entries of '%s'. (%s line %d)

**Description**

All entries of the metalCutMetalMapCutMetalMaskTbl table must be unique.

**What Next**

Correct the error in the tech file and then rerun the command.

## TECH-098w

(warning) Layer '%s' has incomplete '%s' defined. (line %d)

Feedback

**Description**

This warning message occurs when some tables or values are not defined completely or properly. It includes these types of checks:

In Layer, 1) For rectMinAreaTbl rule, rectMinAreaWidthThresholdTbl should start from minWidth to cover all width ranges;

**What Next**

User should complete/fix the tables/attributes or related sections and run the command again.

---

## TECH-101e

(error) Color attribute '%s' is assigned an out-of-range color intensity %s. (%s line %d)

**Description**

This error message occurs when the specified Color section contains an invalid color intensity value assigned to the specified attribute. Color intensity values must be between 0 and 255 inclusive.

**What Next**

Change the attribute value to a valid color intensity number from 0 through 255 and then run the command again.

---

## TECH-101w

(warning) Color attribute '%s' is assigned an out-of-range color intensity %s. (%s line %d)

**Description**

This warning message occurs when the specified Color section contains an invalid color intensity value assigned to the specified attribute. Color intensity values must be between 0 and 255 inclusive.

**What Next**

Change the attribute value to a valid color intensity number from 0 through 255 and then run the command again.

---

## TECH-102e

(error) Multiple default layers exists with mask name '%s'.

Feedback

### Description

This error message occurs when there are multiple layer sections with the specified mask name that are marked as default. Each physical layer can have only one default layer.

The following is an example of the error message:

```
Error : Multiple default layers exists with mask name 'via9'.
(TECH-102e)
```

### What Next

Check all layers with the specified mask name and mark only one as the default layer. After making your changes, run the command again.

---

## TECH-102w

(warning) Multiple default layers exists with mask name '%s'.

### Description

This warning message occurs when there are multiple layer sections with the specified mask name that are marked as default. Each physical layer can have only one default layer.

The following is an example of the warning message:

```
Warning : Multiple default layers exists with mask name 'via9'.
(TECH-102w)
```

### What Next

Check all layers with the specified mask name and mark only one as the default layer. After making your changes, run the command again.

---

## TECH-200

(warning) %s line %d, comment is not terminated.

### Description

This message is displayed when there is an comment which is not terminated properly.

### What Next

Correct the tech-file by terminating the comment and re-run the command.

Feedback

## TECH-204

(warning) %s line %d, %s section does not need a title. Title '%s' will be ignored.

**What Next**

If you do not want to see this warning messagei, remove the title provided to section.

## TECH-205

(warning) %s line %d, %s section expects a title of '%s' type. Title '%s' is invalid. Ignoring the section.

**What Next**

If you do not want to see this warning message provide title of expected type for section.

## TECH-216

(info) %s line %d, Property '%s' in section '%s' is obsolete. Replacing it with property '%s'.

**Description**

Property provided in technology file is obsolete. It is replaced with a more up to date property.

**What Next**

If you do not want to see this message, please replacve the obsolete property in tecnology file with the up to date property.

## TECH-219

(warning) Property '%s' is defined on incorrect layer '%s'. (%s line:%d)

**Description**

This message is displayed when a property in a section is defined on incorrect layer section. For example, Property 'prefDirForViaGen' should be defined on metal layers but instead defined on cut layer VIA0. In this case, the property will not be used in the fownstream flows. Property 'isSacrificialLayer' can only be defined as 1 for the frontside most or backside most metal and via layers. 1) frontside most metal layer is highest metalN 2) frontside most via layer is highest viaN 3) backside most metal layer is lowest bmetalN 4) backside most via layer is lowest bviaN.

**What Next**

Move the property to a correct layer section.

Feedback

## TECH-220

(warning) Property %s is re-defined in section %s. Ignoring previous definition.(%s line: %d)

### Description

This message is displayed when a property in a section is re-defined. Previous value for the property is ignored and new value is considered.

### What Next

Correct the tech-file by replacing multiple definitions of property with a single definition

## TECH-221

(error) Property '%s' is re-defined in section '%s'. (%s line:%d)

### Description

This message is displayed when a key property (layerNumber or maskName) in the section is re-defined in an add-on tech file with a different value from the one in the library or previous tech file. In this case, the add-on tech file data cannot be merged to the previous one.

### What Next

Correct the conflict in the property in either the add-on tech-file or the previous one.

## TECH-221w

(warning) Property '%s' is re-defined in section '%s'. Using previous definition. (%s line: %d)

### Description

This message is displayed when a property in a section is re-defined in an add-on tech file with a different value from the one in the library or previous tech file. The previous value for the property is used and the new value is ignored.

### What Next

Correct the conflict in the property in either the add-on tech-file or the previous one.

## TECH-223

(warning) Pitch %f for layer %s is less than sum(%f) of minSpacing(%f) and minWidth(%f). (%s line:%d)

Feedback

**Description**

Pitch value for a layer should be greater than or equal to sum of minSpacing and minWidth properties for that layer.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-224

(warning) Mismatch in column widths for property table. Ignoring it. (%s line:%d)

**Description**

There are columns of different size for the property table which might be a typo.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-225

(warning) Invalid unit name provided for %s in Technology section. (%s line:%d)

**Description**

Unit name provided for property in Technology section is wrong. Below are valid unit names and the corresponding Technology properties. Valid unit names for property 1) unitTimeName are "fs", "ps", "ns", "us", "ms" and "s" 2) unitLengthName are "micron" and "mil" 3) unitVoltageName are "fV", "pV", "nV", "uV", "mV" and "V" 4) unitCurrentName are "fA", "pA", "nA", "uA", "mA" and "A" 5) unitPowerName are "fw", "pw", "nw", "uw", "mw" and "w" 6) unitResistanceName are "mohm", "ohm", "kohm" and "Mohm" 7) unitCapacitanceName are "ff", "pf", "nf", "uf", "mf" and "f" 8) unitInductanceName are "fh", "ph", "nh", "uh", "mh" and "h"

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-226

(error) Technology section is missing. (%s line:%d)

**Description**

Technology section is mandatory. If it is missing then its an error and loading of tech-file fails.

Feedback

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-227

(error) %s in section %s has invalid value. (%s line:%d)

**Description**

Value provided for the property in the given section is not valid.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-228

(error) Syntax error in section header. Ignoring it. (%s:%d)

**Description**

The beginning of section has a syntactical error. It could be either invalid section name, or invalid section value or a stray character etc

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-229

(error) Syntax error in property belonging to section %s. Ignoring it. (%s:%d)

**Description**

The property belonging to the section has a syntactical error. It could either be invalid property name, or invalid property value or a stray character etc

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-230

(warning) Missing value for property. Defaulting to empty string as property value. (%s:%d)

Feedback

**Description**

Value for the property is not specified. Only property name and "=" fields are specified. Property value is assumed to be empty string("").

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-231

(error) Missing comma in property table. (%s:%d)

**Description**

Values in property table are not separated by comma. These values are skipped.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-232

(error) Invalid element %s in property table. Ignoring the property table. (%s:%d)

**Description**

Property table element is invalid. It should be one of bool, integer, float or string.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-233

(error) Closing parentheses is missing for property table. (%s:%d)

**Description**

Property table has opening parentheses specified. But closing parentheses is not specified.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-234

(error) Invalid hexadecimal value for property. Ignoring it. (%s:%d)

Feedback

**Description**

Hexadecimal value provided for property is not valid.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-235

(error) Invalid octal value for property. Ignoring it. (%s:%d)

**Description**

Octal value provided for property is not valid.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-236

(error) Nested comment found. Ignoring it. (%s:%d)

**Description**

Comments are nested one inside the other which is invalid. Ignoring the nested comment characters.

**What Next**

Correct the error in the tech-file and then run the command again.

---

## TECH-237

(error) Technology filename provided is empty.

**What Next**

Provide a valid technology file name.

---

## TECH-238

(error) Technology filename provided contains only white-spaces.

**What Next**

Provide a valid technology file name.

Feedback

## TECH-239

(error) Pre-processing of technology file failed.

**What Next**

Check the pre-processor directives in the technology file and correct them if wrong. Also check whether the pre-processor executable is available/accessible.

## TECH-240

(error) String has an un-matched quotation mark. (%s:%d)

**What Next**

Correct the syntax error in the tech-file and run the command again.

## TECH-241

(warning) %s line %d, property %s needed by %s in %s %s is missing.

**What Next**

Correct the syntax error in the tech-file and run the command again.

## TECH-242

(error) %s line %d, property %s in %s %s has invalid cut name %s.

**What Next**

Correct the syntax error in the tech-file and run the command again.

## TECH-243

(warning) %s line %d, Section by name %s already exists.

**What Next**

Remove the duplicate section by deleting or merging their contents into a single section.

## TECH-244

(warning) %s line %d, Floating-point property %s is assigned %s which is too precise and will be truncated.

Feedback

**What Next**

Provide a correct value within the limits of precision.

---

## TECH-245

(warning) %s line %d, in Layer %s, defaultWidth(%f) is less than minWidth(%f).

**What Next**

Provide a correct value either for defaultWidth or minWidth and re-run the command.

---

## TECH-246

(warning) %s line %d, in Stipple %s, pattern has a non-boolean value.

**Description**

Tabular property 'pattern' in Stipple section is expected to contain boolean values only. When a non-zero, non-boolean value is provided, as in this case, it will be converted to boolean value 1 and used.

**What Next**

If the boolean value 1, used in place of non-boolean value provided, is incorrect, then provide the correct value. Otherwise ignore this message.

---

## TECH-246e

(error) %s line %d, in Stipple %s, pattern has a non-boolean value.

**Description**

Tabular property 'pattern' in Stipple section is expected to contain boolean values only. When a non-zero, non-boolean value is provided, as in this case, it will be converted to boolean value 1 and used.

**What Next**

If the boolean value 1, used in place of non-boolean value provided, is incorrect, then provide the correct value. Otherwise ignore this message.

---

## TECH-247

(error) %s line %d, routing layer %s cannot have a zero value for '%s'.

Feedback

**Description**

Property 'minWidth' in Layer section should have a value greater than 0, if the layer is a routing layer(i.e. layer is either a metal layer or a via layer).

**What Next**

Provide a valid non-zero value for the property 'minWidth' in the routing layer in technology file and re-run the command.

---

## TECH-248

(error) %s line %d, metal layer %s cannot have a zero value for '%s'.

**Description**

Property 'pitch', 'defaultWidth' and 'minSpacing' in 'Layer' section should have a value greater than 0, if the layer is a metal layer.

**What Next**

Provide a valid non-zero value for the property 'pitch', 'defaultWidth' and 'minSpacing' in metal layer in technology file and re-run the command.

---

## TECH-249

(error) Extra comma or missing element or missing comma in property table. (%s:%d)

**Description**

There is either an stray comma in the property table or element in property table is missing or a comma is missing.

**What Next**

Remove the extra comma or add the missing property element or comma and then run the command again.

---

## TECH-250

(warning) %s line %d, ContactCode '%s' has undefined or zero-enclosures.

**Description**

This warning message occurs when the specified ContactCode section contains undefined or zero metal enclosure dimensions. If the zero metal enclosure values are set intentionally, this warning can be ignored. Otherwise, the values may cause the router to

Feedback

create enclosures that violate design rule constraints, such as completely enclosed spaces or donuts.

The following is an example of the warning message:

```
Warning: test.tf line 1551, ContactCode 'VIA67f' has undefined or zero
 metal enclosures. (TECH-250)
```

**What Next**

This is only a warning message. No action is required. However, if the zero metal enclosure values are not intentional, you can set the upper and lower enclosures of the ContactCode section to avoid potential design rule violations.

---

## TECH-251

(error) %s line %d, '%s' in '%s' section has zero value.

**Description**

This error message is displayed when any one of properties 'finFetXPitch' and 'finFetYPitch' in Technology section has zero value.

The following is an example of the warning message:

```
Error: test.tf line 101, 'finFetXPitch' in 'Technology' section has zero
 value. (TECH-251)
```

**What Next**

You need to set the correct non-zero value for the erroneous property in technology file and re-run the command again.

---

## TECH-252

(warning) %s line %d, 'cutNameTbl' on Layer '%s' has cut name '%s' with no matching ContactCode found.

**Description**

This warning message is displayed when cut name defined in 'cutNameTbl' does not have a ContactCode section defined in technology file, which matches the 'cutHeight' and 'cutWidth' of the cut.

The following is an example of the warning message:

```
Warning: test.tf line 1101, 'cutNameTbl' on Layer 'VIA2' has cut name
 'Alg'
with no matching ContactCode found. (TECH-252)
```

Feedback

### What Next

You need to define a ContactCode section in technology file which is compatible with the height and width for the cut which is causing the issue.

---

## TECH-253

(warning) %s line %d, Layer '%s' has duplicate cut sizes defined for cuts '%s' and '%s'.

### Description

This warning message is displayed when cut-width and cut-height of 2 cuts in the same layer are same. This might be a redundancy or might be a typo and needs user attention. While comparing the cut-sizes for 2 cuts cut-width and cut-height can used interchangeably.

The following is an example of the warning message:

```
Warning: test.tf line 1101, Layer 'VIA2' has duplicate cut sizes defined
for cuts 'Vsm' and 'Vsm1'. (TECH-253)
```

### What Next

You need to remove one of the duplicate cuts or modify the cut-sizes of the cut so that they are unique.

---

## TECH-254

(warning) %s line %d, '%s' ContactCode '%s' on Layer '%s' has cut size, for which no matching cut name is found.

### Description

This warning message is displayed when there is a ContactCode section with some cut-size(cutWidth and cutHeight) defined. But there is no cut-name in the cut-layer corresponding to the ContactCode which has same cut-size(part of cutWidthTbl or cutHeightTbl).

The following are examples of the warning messages:

```
Warning: test.tf line 1101, Default ContactCode 'VIA01' on Layer 'CUT12'
has cut size, for which no matching cut name is found. (TECH-254)
Warning: test.tf line 1201, Non-default ContactCode 'VIA01a' on Layer
'CUT12' has cut size, for which no matching cut name is found. (TECH-254)
```

### What Next

You need to add a cut-name in the cut-layer with right cut-size for the ContactCode or remove the ContactCode section.

Feedback

## TECH-255

(warning) %s line %d, ContactCode has lowerLayer '%s' which is above upperLayer '%s'.

### Description

This warning message occurs when the maskName associated with lowerLayer is above the maskName associated with upperLayer. For example, the mask name associated with lowerLayer 'M3' can be 'metal3' and maskName associated with upperLayer 'M2' can be 'metal2'. This is incorrect because metal3 comes above metal2.

The following is an example of the warning message:

```
Warning: test.tf line 1954, ContactCode has lowerLayer 'M3' which is
 above
upperLayer 'M2'. (TECH-255)
```

### What Next

To avoid this warning message, swap the values of upperlayer and lowerLayer of the ContactCode section so that the mask names of the layers are in right order. After making this change, run the command again.

## TECH-256

(warning) %s line %d, Layer '%s' has invalid maskName '%s'.

### Description

This warning message occurs when the maskName associated with Layer is invalid. It has to be one pre-defined values like metal0, metal1, via0, via1, bmetal1, bvia1, poly etc

The following is an example of the warning message:

```
Warning: test.tf line 1954, Layer 'MB' has invalid maskName 'bmetal'.
 (TECH-256)
```

### What Next

To avoid this warning message, provide a valid value for maskName.

## TECH-257

(warning) Technology file preprocessor '%s' does not exist in your installation.

### Description

The preprocessor executable used to handle directives in the technology file could not be found. The preprocessor direvtives in the technology file will be ignored.

Feedback

### What Next

Check the installation directory for the preprocessor executable.

---

## TECH-258w

(warning) ContactCode has an invalid maskName. Layer '%s' is not a pre-defined maskName. (line %d)

### Description

This warning message occurs when the maskName associated with lowerLayer, upperLayer, or cutLayer is not in the pre-defined list of maskNames.

The following is an example of the warning message:

```
Warning: ContactCode has an invalid maskName. Layer 'polycon' is not a
pre-defined maskName. (line 1691) (TECH-258w)
```

### What Next

To avoid this warning message, fix the maskNames to a pre-defined maskName. After making this change, run the command again.

---

## TECH-259e

(error) Metal Layer '%s' has keepout region with invalid values. (line %d)

### Description

This warning message occurs when the 2 keepout regions formed by L1o/L2o/So and L1s/L2s/Ss have invalid values. In techfile, these values are default positive but both L1o/L2o can be specified as negative values. If negative, their absolute value must be smaller than L2o/L1o. (same as in L1s/L2s). For reference: endToEndSpaceSameDirKeepoutWidth = Ss endToEndSpaceSameDirKeepoutLength = L2s endToEndSpaceSameDirSideKeepoutLength = L1s endToEndSpaceOppositeDirKeepoutWidth = So endToEndSpaceOppositeDirKeepoutLength = L2o endToEndSpaceOppositeDirSideKeepoutLength = L1o

The following is an example of the warning message:

```
Error: Metal Layer 'M1' has keepout region with invalid values. (line
 881) (TECH-259e)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

Feedback

## TECH-259w

(warning) Metal Layer '%s' has keepout region with invalid values. (line %d)

### Description

This warning message occurs when the 2 keepout regions formed by L1o/L2o/So and L1s/L2s/Ss have invalid values. In techfile, these values are default positive but both L1o/L2o can be specified as negative values. If negative, their absolute value must be smaller than L2o/L1o. (same as in L1s/L2s). For reference: endToEndSpaceSameDirKeepoutWidth = Ss endToEndSpaceSameDirKeepoutLength = L2s endToEndSpaceSameDirSideKeepoutLength = L1s endToEndSpaceOppositeDirKeepoutWidth = So endToEndSpaceOppositeDirKeepoutLength = L2o endToEndSpaceOppositeDirSideKeepoutLength = L1o

The following is an example of the warning message:

```
Warning: Metal Layer 'M1' has keepout region with invalid values. (line
 881) (TECH-259w)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

## TECH-260w

(warning) Missing layer section with maskName 'mimtop' or 'mimbottom'.

### Description

This warning message occurs when 'mimmiddle1' maskName appears, but 'mimtop' and/or 'mimbottom' do not appear in the tech file.

The following is an example of the warning message:

```
Warning: Missing layer section with maskName 'mimtop' or 'mimbottom'.
 (TECH-260w)
```

### What Next

To avoid this warning message, add a layer section with proper maskName. After making this change, run the command again.

Feedback

## TECH-261w

(warning) Layer '%s' attributes 'isDefaultLayer' and 'isParasiticOnlyLayer' cannot both be specified to value of '1'. (line %d)

### Description

This warning message occurs when 'isDefaultLayer' and 'isParasiticOnlyLayer' on Layer section are both specified to value of 1.

The following is an example of the warning message:

```
Warning: Layer 'V1' attributes 'isDefaultLayer' and
 'isParasiticOnlyLayer'
cannot both be specified to value of '1'. (line 453) (TECH-261w)
```

### What Next

To avoid this warning message, fix the values of the properties. After making this change, run the command again.

## TECH-262w

(warning) ViaRule '%s' has incorrect attribute 'contactNumberTbl'. %s

### Description

This warning message occurs when there is an issue with contactNumberTbl.

The following is an example of the warning message:

```
Warning: ViaRule 'CompTSV_3x3_cuts' has incorrect attribute
 'contactNumberTbl'.
The table size has to be 2 or 3. (TECH-262w)
```

### What Next

To avoid this warning message, fix the values of the property. After making this change, run the command again.

## TECH-263w

(warning) '%s' is not a valid maskName.

### Description

This warning message occurs when the maskName is not in the pre-defined list of maskNames.

Feedback

The following is an example of the warning message:

```
Warning: 'active' is not a valid maskName. (TECH-263w)
```

**What Next**

To avoid this warning message, fix the maskNames to a pre-defined maskName. After making this change, run the command again.

---

## TECH-264w

(warning) Layer '%s' attribute 'minCutsFieldNameTbl' has values in the wrong order. The order must be {numCuts, cutName, lowerWidth, upperWidth, cutSpacing, extRange}. (line %d)

**Description**

This warning message occurs when the minCutsFieldNameTbl is not in the proper order.

The following is an example of the warning message:

```
Warning: Layer 'V1' attribute 'minCutsFieldNameTbl' has values in the
 wrong
order. The order must be {numCuts, cutName, lowerWidth, upperWidth,
 cutSpacing,
extRange}. (line 244) (TECH-264w)
```

**What Next**

To avoid this warning message, fix the maskNames to a pre-defined maskName. After making this change, run the command again.

---

## TECH-266w

(warning) At least one of the %s and %s attributes must be specified in the DesignRule section. (line %d)

**Description**

The display of this message indicates that none of the following requirements is satisfied.

If the sameSegOneLayerOnlyTbl attribute is specified, at least one of the sameSegCornerMinSpacingTbl, sameSegXMinSpacingTbl, or sameSegYMinSpacingTbl properties must be defined in the same DesignRule section.

**What Next**

Verify that necessary attributes are specified for the specified section.

Feedback

## TECH-267e

(error) Layer '%s' has incorrect value for 'isDefaultLayer'. For CompoundTSV, pseudo layers must specify 'isDefaultLayer = 0' while parallel routing layers must specify 'isDefaultLayer = 1'.

### Description

The display of this message indicates that none of the following requirements is satisfied.

In a compound TSV, a pseudo-layer is created with a maskName that is the same as its parallel routing layer. The pseudo-layer is marked with isDefaultLayer = 0 so that it will not be used for routing. The parallel routing layer then must have isDefault = 1, otherwise the compoundTSV cannot be created.

### What Next

Fix the necessary attributes for the specified section.

## TECH-267w

(warning) Layer '%s' has incorrect value for 'isDefaultLayer'. For CompoundTSV, pseudo layers must specify 'isDefaultLayer = 0' while parallel routing layers must specify 'isDefaultLayer = 1'.

### Description

The display of this message indicates that none of the following requirements is satisfied.

In a compound TSV, a pseudo-layer is created with a maskName that is the same as its parallel routing layer. The pseudo-layer is marked with isDefaultLayer = 0 so that it will not be used for routing. The parallel routing layer then must have isDefault = 1, otherwise the compoundTSV cannot be created.

### What Next

Fix the necessary attributes for the specified section.

## TECH-268e

(error) ViaRule '%s' specifies cut name '%s' which is not found in the cutNameTbl of any via layer.

### Description

This message is printed when a ViaRule contains a cutName in its cutNameTbl which does not exist in the cutNameTbl of any via layer in the tech file.

Feedback

### What Next

Check the cutName in the ViaRule sections and/or correct the cutName specification in the via layer sections.

---

## TECH-268w

(warning) ViaRule '%s' specifies cut name '%s' which is not found in the cutNameTbl of any via layer.

### Description

This message is printed when a ViaRule contains a cutName in its cutNameTbl which does not exist in the cutNameTbl of any via layer in the tech file.

### What Next

Check the cutName in the ViaRule sections and/or correct the cutName specification in the via layer sections.

---

## TECH-269w

(warning) Layer %s has incorrect table values in fatTblSpacingExcludedPGMaxParallelLength.

### Description

The display of this message indicates that none of the following requirements is satisfied.

For any value of the fatTblSpacingExcludedPGMaxParallelLength table which is non-zero, the corresponding value in the fatTblSpacingExcludedPG table must be 1.

### What Next

Verify that the conditions are met in the specified section.

---

## TECH-270e

(error) Metal Layer '%s' property %s has invalid values. %s (line %d)

### Description

This error message occurs when a metal layer property has invalid values.

The following is an example of the error message:

```
Error: Metal Layer 'M1' property sameNetRDLMetalToPadMinSpacing has
 invalid values. It must be greater than or equal to minSpacing. (line
 881) (TECH-270e)
```

Feedback

### What Next

To avoid this error message, fix the values. After making this change, run the command again.

---

## TECH-270w

(warning) Metal Layer '%s' property %s has invalid values. %s (line %d)

### Description

This warning message occurs when a metal layer property has invalid values.

Specifications for RDL routing: sameNetRDLMetalToPadMinSpacing >= minSpacing diffNetRDLMetalToPadMinSpacing >= minSpacing jogRDLKeepoutRange >= minSpacing

Specifications for layer: cutoutMinWidth <= cutoutMaxWidth < maxWidth

The following is an example of the warning message:

```
Warning: Metal Layer 'M1' property sameNetRDLMetalToPadMinSpacing has
 invalid values. It must be greater than or equal to minSpacing. (line
 881) (TECH-270w)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

---

## TECH-271w

(warning) Via Layer '%s' has different definitions for cutWidth/cutHeight in cutNameTbl and nonStdCellRegionCutNameTbl. (line %d)

### Description

This warning message occurs when for a given string(say, Vs) the cutWidth & cutHeight definition are different in cutNameTbl and nonStdCellRegionCutNameTbl.

The following is an example of the warning message:

```
Warning: Via Layer 'V3' has different definitions for cutWidth/cutHeight
 in cutNameTbl and nonStdCellRegionCutNameTbl. (line 176) (TECH-271w)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

Feedback

## TECH-273w

(warning) DesignRule property viaProjectedForbiddenCheckFullProjectionTbl has invalid values. If viaProjectedForbiddenFullProjectionNonPrefParallelLength is defined, viaProjectedForbiddenCheckFullProjectionTbl must have at least a '1'. (line %d)

### Description

The following is an example of the warning message:

```
Warning: DesignRule property viaProjectedForbiddenCheckFullProjectionTbl
 has invalid values. If
 viaProjectedForbiddenFullProjectionNonPrefParallelLength is defined,
 viaProjectedForbiddenCheckFullProjectionTbl must have at least a '1'.
 (line 881) (TECH-273w)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

## TECH-274w

(warning) Property 'forbidCutMetal' cannot be specified on both metal layers and cut-metal layers in the same tech file.

### Description

The following is an example of the warning message:

```
Warning: Property 'forbidCutMetal' cannot be specified on both metal
 layers and cut-metal layers in the same tech file. (TECH-274w)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

## TECH-275w

(warning) Design Rule layers '%s' and '%s' are incorrect. If stackViaKeepout rule is defined, the two layers must be the top/bottom most via layer and the top most via layer's upper adjacent via layer. (line %d)

### Description

If existing stackViaKeepout* rule is specified in a DesignRule section, layer1 and layer2 cannot be adjacent via layers. layer1 and layer2 must be one of the following: - Top most

Feedback

via layer in the stack via and its upper adjacent via layer - Bottom most via layer in the stack via and top most via layer's upper adjacent via layer

The following is an example of the warning message:

```
Warning: Design Rule layers 'MD' and 'GD' are incorrect. If
 stackViaKeepout rule is defined, the two layers must be the top/bottom
 most via layer and the top most via layer's upper adjacent via layer.
 (line 176) (TECH-275w)
```

**What Next**

To avoid this warning message, fix the values. After making this change, run the command again.

---

## TECH-276w

(warning) DesignRule layers '%s' and '%s' are incorrect. %s (line %d)

The following is an example of the warning message:

```
Warning: DesignRule layers 'MD' and 'GD' are incorrect. If
 cutout2MinEnclosure is defined, the two layers must be the MCtop and
 MCmid layers. (line 176) (TECH-276w)
```

**What Next**

To avoid this warning message, fix the values. After making this change, run the command again.

---

## TECH-277w

(warning) Layer '%s' has the attribute '%s', which can only be defined on a poly layer. (line %d)

**Description**

This information message occurs when the specified Layer section is not a cpode poly layer, but it contains a cpode poly layer attribute that is ignored.

The following is an example of the information message:

```
Warning : Layer 'M2' has the attribute 'yMaxLength', which can only be
 defined on a poly layer. (line %d) (TECH-277w)
```

**What Next**

This is only an informational message. No action is required.

Feedback

## TECH-279

(information) Non-mim layer '%s' has the mim layer attribute '%s'. (line %d)

### Description

This information message indicates that the specified Layer section does not define a mim layer, but it contains a mim layer attribute, which is ignored.

The following is an example of the information message:

```
Information: Non-mim layer 'METAL2' has the mim layer attribute
\'cutoutMinWidth'. (line 294) (TECH-279)
```

### What Next

This is only an informational message. No action is required.

## TECH-280

(information) Long TSV '%s' found. LowerLayer is '%s' and UpperLayer is '%s'.

### Description

This information message indicates that a long tsv was found, only when cut layer has mask name of "tsv"

The following is an example of the information message:

```
Information: Long TSV 'TSV_MB1S' found. LowerLayer is 'MB1S' and
 UpperLayer is 'M17'. (TECH-280)
```

### What Next

This is only an informational message. No action is required.

## TECH-281w

(warning) Prune Tech- %s.

### Description

This message occurs warnings/errors during prune_tech_file command.

The following is an example of the information message:

```
Warning: Prune Tech- Layer m13 which was specified in 'layers.txt' does
 not have a routingDirection set. It will be ignored. (TECH-281w)
```

Feedback

### What Next

This is only an informational message. No action is required.

---

## TECH-282w

(warning) Poly Layer '%s' property %s has invalid values. %s (line %d)

### Description

This warning message occurs when a poly layer property has invalid values.

If both yMaxLength and yForbiddenParallelLengthThreshold are present in the same section, yForbiddenParallelLengthThreshold value must be <= yMaxLength.

The following is an example of the warning message:

```
Warning: Poly Layer 'M1' property yForbiddenParallelLengthThreshold has
 invalid values. It must be less than or equal to 'yMaxLength'. (line
 881) (TECH-282w)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

---

## TECH-283w

(warning) Design Rule property %s has invalid values. %s (line %d)

### Description

This warning message occurs when a design rule property has invalid values.

The following is an example of the warning message:

```
Warning: Design Rule property
 stdCellRegionMaskEndToEndCutEncMaskNumTblSize has invalid values.
 'stdCellRegionMaskEndToEndCutEncMaskNumTblSize' cannot be greater than
 numMasks defined in the metal layer section. (line 881) (TECH-283w)
```

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

Feedback

## TECH-284w

(warning) Attribute '%s' cannot be specified in ContactCode %s because the mask name of cut layer %s is not 'tsv'. The attribute will be ignored. (%s line %d)

### Description

The following attributes can only be specified in ContactCode sections in which the cutLayer attribute specifies a layer whose mask name is "tsv". The display of this message indicates that the named ContactCode section, in which the attribute is specified, does not satisfy the requirement. 1) tsvExcludeTopRoutingBlockage 2) tsvExcludeBottomRoutingBlockage 3) tsvConnectWithinPin 4) tsvBulkCapKeepout 5) tsvToDiodeKeepoutSpacing

### What Next

Correct the warning in the tech file and then rerun the command

## TECH-285w

(warning) Layer '%s' property '%s' has an incorrect value. %s (line %d)

### Description

This warning message occurs for: 1) isSpecialMiddleEndOfLine is specified on layer whose mask name is not 'cutMetal0', 'metal0', or 'via0'.

The following is an example of the warning message:

```
Warning: Layer 'V0' property 'isSpecialMiddleEndOfLine' has an incorrect
 value. isSpecialMiddleEndOfLine can be specified only in layer
 sections whose maskName is 'metal0', 'via0' or 'cutMetal0'. (line 453)
 (TECH-285w)
```

### What Next

To avoid this warning message, fix the values of the properties. After making this change, run the command again.

## TECH-287e

(error) Core region name '%s' specified by the app_option does not exist in the techfile.

### Description

This error message occurs when the region name specified by the following app_options does not exist in the techfile: 1) file.tech.std_cell_region_name 2) file.tech.output_std_cell_region_name When a valid region name is specified and the

Feedback

original tech file has region dependent sections, the tech data for the tools will be specific to that region. If no region name is specified, i.e. an empty string, region dependent sections will be ignored and baselines will be used.

The following is an example of the error message:

```
Error: Core region name 'FB_D' specified by the app_option does not exist
 in the techfile. (TECH-287e)
```

**What Next**

To avoid this error message, fix the values of the app option. After making this change, run the read_tech_file or related command again.

---

## TECH-287w

(warning) Core region name '%s' specified by the app_option does not exist in the techfile.

**Description**

This warning message occurs when the region name specified by the following app_options does not exist in the techfile: 1) file.tech.std_cell_region_name 2) file.tech.output_std_cell_region_name When a valid region name is specified and the original tech file has region dependent sections, the tech data for the tools will be specific to that region. If no region name is specified, i.e. an empty string, region dependent sections will be ignored and baselines will be used. When the region name specified by file.tech.output_std_cell_region_name is not consistent with the one specified by std_cell_region_name, you will also see this message, and the region name specified by std_cell_region_name that exists in the tech file will be used. In the case of non-existent region name, the baseline tech will be kept.

The following is an example of the warning message:

```
Warning: Core region name 'FB_D' specified by the app_option does not
 exist in the techfile. (TECH-287w)
```

**What Next**

To avoid this warning message, fix the values of the app option. After making this change, run the read_tech_file or related command again.

---

## TECH-288

(error) Baseline %s '%s' section for region '%s' not defined.

**Description**

The baseline section is required when specifiying multi regions. This applies to Layer, DesignRule and ContactCode sections.

Feedback

The following is an example of the error message:

```
Error: Baseline Layer 'M1' section for region 'FB_A' not defined.
 (TECH-288)
```

**What Next**

To avoid this error message, fix the values of the properties. After making this change, run the command again.

---

## TECH-289

(warning) Property '%s' not defined in baseline %s '%s'.

**Description**

The superset of all rules/properties must be defined in baseline section when the property is defined in the multi region sections. This applies to Layer, DesignRule and ContactCode sections

The following is an example of the warning message:

```
Warning: Property 'minWidth' not defined in baseline Layer
 'M1' (TECH-289)
```

**What Next**

To avoid this warning message, fix the values of the properties. After making this change, run the command again.

---

## TECH-290

(error) %s '%s' is a region-dependent section and its %s attribute should not be specified. (line %d)

**Description**

Virtual layers, such as an operated layer and region dependent layers, cannot have a valid layerNumber or maskName specified. Region dependent ContactCode sections cannot have contactCodeNumber specified. The association of region dependent sections with their baseline sections is made by the section name.

**What Next**

Correct the error in the tech file and then rerun the command.

Feedback

## TECH-290w

(warning) %s '%s' is a region-dependent section and its %s attribute should not be specified. (line %d)

### Description

Virtual layers, such as an operated layer and region dependent layers, cannot have a valid layerNumber or maskName specified. Region dependent ContactCode sections cannot have contactCodeNumber specified. The association of region dependent sections with their baseline sections is made by the section name.

### What Next

Correct the warning in the tech file and then rerun the command.

## TECH-291w

(warning) ViaRule '%s' property %s has invalid values. %s (line %d)

### Description

This warning message occurs when a via rule property has invalid values.

### What Next

To avoid this warning message, fix the values. After making this change, run the command again.

## TECH-292

(warning) %s line %d, the size for entry %d of property %s is '%d'. However, the size for entry %d of property %s is '%d'. This property will be ignored.

### Description

The tool issues this warning message when the technology file contains an invalid size for the specified entry (entry number starts from 0) of property. The command ignores attributes with this warning.

### Examples

The following is an exmaple tech file syntax. The size for entry 3 of property is 2, but the size for entry 2 of property is 1.

```
fatTblFatContactNumber   = (4, 104, 1004,
                           "104, 1004", 1004, 1004)
fatTblFatContactMinCuts  = (1, 1, 1,
                           1, 1, 1)
```

Feedback

### Examples

Warning: fatContact.tf line 478, the size for entry 3 of property fatTblFatContactNumber is '2'. However, the size for entry 3 of property fatTblFatContactMinCuts is '1'. This property will be ignored. (TECH-292)

### What Next

Update the technology file to correct size for the specified entry of the property. After updating the technology file, rerun the command.

---

## TECH-293

(warning) Failed to set upper/lower/cut layer for TSV '%s'.

### Description

The warning message indicates that 1) the upper layer or lower layer is invalid. 2) the upper layer and lower layer in wrong order, which means maskName associated with lower layer is above the maskName associated with upper layer. For example, the mask name associated with lowerlayer 'M3' can be 'metal3' and maskName associated with upperLayer 'M2' can be 'metal2'. This is incorrect because metal3 comes above metal2. 3) the upper layer or lower layer is not default layer. For example, Layer "BTPM_MED" { layerNumber = 1230 ; maskName = "bmetal1" isDefaultLayer = 0 isParasiticOnlyLayer = 1 } Layer "BTSV_MED" { layerNumber = 1225 ; maskName = "tsv" } Layer "M0" { layerNumber = 180 ; maskName = "metal1" } ContactCode "VIABTSV_MED" { contactCodeNumber = 1503 cutLayer = "BTSV_MED" lowerLayer = "BTPM_MED" upperLayer = "M0" } Since layer "BTPM_MED" is marked with "isDefaultLayer = 0", tool issue the warning and customer must remove "isDefaultLayer = 0" or correct it as "isDefaultLayer = 1" to fix the issue.

### Examples

Warning: Failed to set upper/lower/cut layer for TSV '%s'.(TECH-293)

### What Next

Update the technology file to correct the ContactCode section or its corresponding layer section. After updating the technology file, rerun the command.

---

## TECH-293e

(error) Failed to set upper/lower/cut layer for TSV '%s'.

### Description

The error message indicates that 1) the upper layer or lower layer is invalid. 2) the upper layer and lower layer in wrong order, which means maskName associated with

Feedback

lower layer is above the maskName associated with upper layer. For example, the mask name associated with lowerlayer 'M3' can be 'metal3' and maskName associated with upperLayer 'M2' can be 'metal2'. This is incorrect because metal3 comes above metal2. 3) the upper layer or lower layer is not default layer. For example, Layer "BTPM_MED" { layerNumber = 1230 ; maskName = "bmetal1" isDefaultLayer = 0 isParasiticOnlyLayer = 1 } Layer "BTSV_MED" { layerNumber = 1225 ; maskName = "tsv" } Layer "M0" { layerNumber = 180 ; maskName = "metal1" } ContactCode "VIABTSV_MED" { contactCodeNumber = 1503 cutLayer = "BTSV_MED" lowerLayer = "BTPM_MED" upperLayer = "M0" } Since layer "BTPM_MED" is marked with "isDefaultLayer = 0", tool issue the warning and customer must remove "isDefaultLayer = 0" or correct it as "isDefaultLayer = 1" to fix the issue.

**Examples**

Error: Failed to set upper/lower/cut layer for TSV '%s'.(TECH-293e)

**What Next**

Update the technology file to correct the ContactCode section or its corresponding layer section. After updating the technology file, rerun the command.

---

## TECH-294

(error) %s line %d, END_PHYSICAL_RULE_SECTION is missing for PRF rule section.

**Description**

PRF rule section has opening token START_PHYSICAL_RULE_SECTION specified. But closing token END_PHYSICAL_RULE_SECTION is not specified.

**What Next**

Correct the error in the tech-file and then run the command again.

---

# TFCHK

---

## TFCHK-001

(error) Failed to read from file %s.

**Description**

This error message occurs when the specified file cannot be opened for read, or the file contain syntax error.

Feedback

The following is an example of this error message:

```
Error : Failed to read from file design.tf. (TFCHK-001)
```

**What Next**

Check that the specified file exists and is readable, and correct syntax errors and then run the command again.

---

## TFCHK-002

(error) Failed to write to file %s.

**Description**

This error message occurs when the specified file cannot be opened for writing.

The following is an example of this error message:

```
Error : Failed to write to file design.tf_backup. (TFCHK-002)
```

**What Next**

Check that the specified file exists and is writable, and then run the command again.

---

## TFCHK-003

(error) Technology file %s has a syntax error. (line %d)

**Description**

This error message occurs when the technology file contains a syntax error on or near the specified line. The following cases will cause syntax error: 1) illegal attribute name or section name 2) no space between = and value, such as minSpacing =0.1 3) missing or misplaced curly brackets {}, parentheses (), equal signs (=), and commas (,). 4) missing starting ; or # in comment that follows attribute value 5) missing comma between values in a table.

The following is an example of the error message:

```
Error : Technology file new.tf has a syntax error. (line 342) (TFCHK-003)
```

**What Next**

Check the specified line for syntax errors, such as missing or misplaced curly brackets {}, parentheses (), equal signs (=), and commas (,).

## TFCHK-003w

(warning) Technology file %s has a syntax error. (line %d)

### Description

This warning message occurs when the technology file contains a syntax error on or near the specified line. The following cases will cause this warning: 1) missing comma at the end of line in a table value list.

The following is an example of the error message:

```
Warning : Technology file new.tf has a syntax error. (line 342)
 (TFCHK-003w)
```

### What Next

Check the specified line for syntax errors, such as missing commas, and correct it.

## TFCHK-004

(error) Line exceeds %d characters. (line %d)

### Description

This error message occurs when the specified line in the technology file contains more than the maximum number of characters allowed.

The following is an example of the error message:

```
Error : Line exceeds 1024 characters. (line 342) (TFCHK-004)
```

### What Next

Reduce the number of characters on the specified line and then rerun the command.

## TFCHK-005

(error) Line contains nested comments. (line %d)

### Description

This error message occurs when the technology file contains a nested comment starting on the specified line. Nested comments are not allowed in the technology file.

The following is an example of a nested comment and the resulting error message.

```
Line 10:
Line 11: ContactCode "via1Fat" {
Line 12:     contactCodeNumber = 12
```

Feedback

```
Line 13: /*  isDefaultContact = 1 /* this is a nested comment */ */
Line 14:     isFatContact =1
Line 15: }
Line 16:

Error : Line contains nested comments. (line 13) (TFCHK-005)
```

### What Next

Remove the nested comment on the specified line and then rerun the command.

---

## TFCHK-006

(error) Line contains an open-ended comment. (line %d)

### Description

This error message occurs when the technology file contains an open-ended comment. If a comment begins with the /* string, it must end with the */ string. The open-ended comment is assumed to end on the specified line.

The example below shows an open-ended comment and the resulting error message.

```
Line 10:
Line 11: ContactCode "via1Fat" {
Line 12:     contactCodeNumber = 12
Line 13:     isDefaultContact = 1 /* this is an open-ended comment
Line 14:     isFatContact =1
Line 15: }
Line 16:

Error : Line contains an open-ended comment. (line 16) (TFCHK-006)
```

### What Next

Add the */ string to the end of the comment and then rerun the command.

---

## TFCHK-007

(warning) String has an unmatched quotation mark. (line %d)

### Description

This warning message occurs when the technology file contains unmatched quotation marks on the specified line. All quoted strings must begin and end with quotation marks ("). If unmatched quotation marks exist, the characters between the quotation marks and the next white space are interpreted as a string.

The following shows an example of unmatched quotation marks and the resulting warning message.

Feedback

```
Line 10:
Line 11: ContactCode "via1Fat {
Line 12:     contactCodeNumber = 12
Line 13:     isFatContact =1
Line 14: }
Line 15:

Warning : String has an unmatched quotation mark. (line 11) (TFCHK-007)
```

**What Next**

This is a only a warning message. No action is required.

However, if the result is not what you intended, you can add the closing quotation marks (") to the end of the string on the specified line and then rerun the command.

---

## TFCHK-008

(error) Section name '%s' is not a recognized section. (line %d)

**Description**

This error message occurs when the technology file contains an invalid section name on the specified line.

The following is an example of the error message:

```
Error : Section name 'CantactCade' is not a recognized section.
(line 312) (TFCHK-008)
```

**What Next**

Check the spelling of the section name, and either correct or remove the invalid section. After making your changes, rerun the command.

---

## TFCHK-009

(error) %s '%s' contains the unrecognized attribute '%s'. (line %d)

**Description**

This error message occurs when the specified section contains an unrecognized attribute name on the specified line of the technology file. For generalized metal to cut spacing rules in the DesignRule section, these three spacingTbl attributes are legal: diffNetXMinSpacingTbl, diffNetYMinSpacingTbl, and diffNetCornerMinSpacingTbl. Others such as same*MinSpacingTbl, diffSeg*MinSpacingTbl, and diffNetCenterMinSpacingTbl are illegal.

Feedback

The following is an example of the error message:

```
Error : ContactCode 'via1' contains the unrecognized attribute
 'isDefCnt'. (line 323) (TFCHK-009)
```

### What Next

Check the spelling of the attribute and either correct the spelling or remove the attribute from the specified section.

---

## TFCHK-009w

(warning) %s '%s' attribute '%s' is unrecognized and ignored. (line %d)

### Description

This error message occurs when the specified section contains an unrecognized attribute name on the specified line of the technology file. These attributes are not supported and so ignored in ICC/Milkyway but may be supported in other databases. These include: routingDirection routingOffset

The following is an example of the error message:

```
Warning: Layer 'M1' attribute 'routingDirection' is unrecognized and
ignored. (line 113) (TFCHK-009w)
```

### What Next

These unrecognized attributes are ignored just like they are not in the tech file. So you don't need to do anything.

---

## TFCHK-010

(informantion) %s '%s' contains the obsolete attribute '%s'. (line %d)

### Description

This information message occurs when the specified section contains an obsolete attribute. Obsolete attributes are ignored.

The *preferredDirection* attribute in the Layer section is obsolete and not valid in Astro. To specify preferred directions, use the *axgDefineWireTracks* scheme command instead of specifying the directions in the technology file.

The following is an example of the information message:

```
Information : Layer 'VIA12' contains the obsolete attribute
 'preferredDirection'.
(line 721) (TFCHK-010)
```

Feedback

### What Next

This is only a informational message. No action is required.

However, it is best practice to remove the obsolete attribute from the specified section and then run the command again.

---

## TFCHK-011

(error) %s is missing the attribute '%s'. (line %d)

### Description

This error message occurs when the specified section is missing a required attribute.

The following is an example of the error message:

```
Error : ContactCode is missing the attribute 'name'. (line 688)
 (TFCHK-011)
```

### What Next

Add the required attribute to the specified section and rerun the command.

---

## TFCHK-012

(warning) %s is missing the attribute '%s'. (line %d)

### Description

This warning message occurs when the specified section is missing an important attribute. If the attribute is not specified in the technology file, the default value is 0 for number attributes, or an empty string for string attributes.

Note: If the "minArea" attribute of a routing layer is missing, it will cause minimum area design rule violations in Astro.

For enclosed via minEdgeLength rule, if you specify enclosedViaMinEdgeLength, you must also specify a value for minEdgeLength that is within (0, enclosedViaMinEdgeLength) and a positive value for enclosedViaAdjacentEdgeLength.

For direction based minSpacing rule, Both xMinSpacing and yMinSpacing should be specified and the value should not be smaller than minSpacing.

In DesignRule section, minSpacing, minEnclosure and stackable should be specified. Otherwise, if none is specified, the whole section will not be dumped into tech file.

In DesignRule section, if 2-cut based rule is defined and orthoSpacingExcludeCornerTbl is specified, cornerMinSpacing should be specified.

Feedback

The following is an example of the warning message:

```
Warning : Technology section is missing the attribute 'currentPrecision'.
(line 19) (TFCHK-012)
```

**What Next**

If you do not want to use the default value for the attribute, add the attribute with the desired value to the specified section in the technology file and rerun the command.

---

## TFCHK-013

(error) %s '%s' is missing the attribute '%s'. (line %d)

**Description**

This error message occurs when the specified object of the specified section is missing a required attribute.

The following is an example of the error message:

```
Error : Default metal layer 'METAL5' is missing the attribute
 'minSpacing'.
(line 426) (TFCHK-013)
```

**What Next**

Add the required attribute to the specified section and then run the command again.

---

## TFCHK-014

(warning) %s '%s' is missing the attribute '%s'. (line %d)

**Description**

This warning message occurs when the specified object of the specified section is missing an important optional attribute, or partial attributes of a rule are specified. If the attribute is not specified in the technology file, the attribute has a default value of 0 or an empty string. In the case of a table attribute, if the associated table size attribute is not defined before the table attribute, this message may also occur.

In generalized cut spacing rule with parallel length, if minSpacingXParallelLengthThresholdTbl or minSpacingYParallelLengthThresholdTbl is defined, orthoSpacingExcludeCornerTbl[i][j] should be defined as 1. If missing, the corner will be checked by x/y spacing.

For fat metal via enclosure rule, 1) fatWireViaEnclosureTbl should be defined if fatWireViaEncCutNameTbl is defined. 2)

Feedback

fatWireViaEnclosureTbl/fatWireViaEnclosureOrthoTbl should be defined if fatWireViaEncSparseMinSpacingThresholdTbl is defined.

The following is an example of the warning message:

```
Warning : ContactCode 'RM6_M5_ND' is missing the attribute
\'unitMaxResistance'. (line 758) (TFCHK-014)
```

**What Next**

This is only a warning message. No action is required.

However, if you do not want to the use the default for the attribute, add the attribute with the desired value to the specified section of the technology file and then rerun the command.

---

## TFCHK-015

(error) %s '%s' attribute '%s' is assigned index %d, overriding %s '%s' previously assigned to the same index. (line %d)

**Description**

This error message occurs when the specified object of the specified section does not have the required unique index. The index is the same index as a previous section of the same type.

The Color, Layer, LayerDataType, ContactCode, and FringeCap sections must have unique index numbers. The index numbers must be unique among all sections of the same type. Sections of different types can have the same index.

The following example uses an index number more than once, and shows the resulting error message:

```
Line 30: ContactCode "via1" {
 Line 31:     contactCodeNumber = 1
 ...
 Line 50: ContactCode "via2" {
 Line 51:     contactCodeNumber = 1
 Line 52:
 ...

 Error : ContactCode 'via2' attribute 'contactCodeNumber' is assigned
 index 1, overriding ContactCode 'via1' previously assigned to the same
 index. (line 51) (TFCHK-015)
```

**What Next**

Change the index number on the specified section to a unique index number and then run the command again.

Feedback

## TFCHK-016

(error) %s attribute '%s' is assigned index %d, overriding the %s previously assigned to the same index. (line %d)

### Description

This error message occurs when the specified section does not have the required unique index. The index is the same index as a previous section of the same type.

The Color, Layer, LayerDataType, ContactCode, and FringeCap sections must have unique index numbers. The index numbers must be unique among all sections of the same type. Sections of different types can have the same index.

The following example uses an index number more than once, and shows the resulting error message.

```
Line 130: FringeCap 4 {
 Line 131:     layer1 = "M2"
 Line 132:     layer2 = "M2"
 ...
 Line 150: FringeCap 4 {
 Line 151:     layer1 = "M2"
 Line 152:     layer2 = "M3"
 ...

 Error : FringeCap attribute 'number' is assigned index 4, overriding the
 FringeCap previously assigned to the same index. (line 150) (TFCHK-016)
```

### What Next

Change the index number on the specified section to a unique index number and then run the command again.

## TFCHK-017

(error) %s '%s' attribute '%s' is assigned an out-of-range index %s. (line %d)

### Description

This error message occurs when the specified object of the specified section has an index that is either too small or too large.

The following table lists the valid ranges by section type:

```
Section Type            Valid Range
-------------------------------------
Color                   0 through 63
Layer                   1 through 255
LayerDataType           0 through 255
```

Feedback

```
ContactCode             1 through 255
FringeCap               1 or larger
```

The following is an example of an index that is too large and the error message that is generated.

```
Line 400: ContactCode "via2" {
 Line 401:     contactCodeNumber = 300
 ...

 Error : ContactCode 'via2' attribute 'contactCodeNumber' is assigned
 an out-of-range index 300. (line 401) (TFCHK-017)
```

### What Next

Change the index of the specified section index to a valid integer within the range specified in the table above, and then run the command again.

---

## TFCHK-017w

(warning) %s '%s' attribute '%s' is assigned an out-of-range index %s. (line %d)

### Description

This warning message occurs when the specified object of the specified section has an index that is either too small or too large. In ContactCode section, contactCodeNumber should be <256 in pre-2010.12 releases. In the Tech file, such contactCode's will be ignored when the variable suppress_TFCHK-017 is set to true. The following table lists the valid ranges by section type:

```
Section Type            Valid Range
-------------------------------------
Color                   0 through 63
Layer                   1 through 255
LayerDataType           0 through 255
ContactCode             1 through 255
FringeCap               1 or larger
```

The following is an example of an index that is too large and the message that is generated.

```
Line 400: ContactCode "via2" {
 Line 401:     contactCodeNumber = 300
 ...

 Warning : ContactCode 'via2' attribute 'contactCodeNumber' is assigned
 an out-of-range index 300. (line 401) (TFCHK-017w)
```

Feedback

### What Next

Change the index of the specified section index to a valid integer within the range specified in the table above, and then run the command again. Or simply ignore such a contactCode.

---

## TFCHK-018

(error) %s attribute '%s' is assigned an out-of-range index %s. (line %d)

### Description

This error message occurs when the specified section has an index that is either too small or too large.

The following table lists the valid ranges by section type:

```
Section Type            Valid Range
-------------------------------------
Color                   0 through 63
Layer                   1 through 255
LayerDataType           0 through 255
ContactCode             1 through 255
FringeCap               1 or larger
```

The following is an example of an index that is too small and the resulting error message.

```
Line 500: FringeCap -1 {
 Line 501:     layer1 = "M2"
 Line 502:     layer2 = "M3"
 ...

 Error : FringeCap attribute 'number' an out-of-range index -1. (line
 500)
 (TFCHK-018)
```

### What Next

Change the index of the specified section to a valid integer within the range specified above in the table above, and then run the command again.

---

## TFCHK-019

(warning) %s '%s' index attribute is reassigned from %d to %d. (line %d)

### Description

This warning message occurs when the index for the specified object of the specified section is reassigned to another index number. The reassignment occurs when the

Feedback

section's index is specified multiple times with different index numbers, or when another section has the same name but a different index number.

The following example shows the same index specified with two different index numbers and the resulting warning message.

```
Line 301: ContactCode "via12" {
 Line 202:     contactCodeNumber = 2
 ...
 Line 322:     contactCodeNumber = 3
 Line 323: }

 Warning : ContactCode 'via12' index attribute is reassigned from 2 to 3.
 (line 222) (TFCHK-019)
```

**What Next**

This is only a warning message. No action is required.

However, it is best practice to determine the cause of the index number reassignment. If the index is specified multiple times, you can remove the extra specifications. If another section exists with the same name but with a different index number, you can decide which section is correct and remove the incorrect section. After making the changes, run the command again.

---

## TFCHK-020

(warning) %s index attribute is reassigned from %d to %d. (line %d)

**Description**

This warning message occurs when the index for the specified section is reassigned to another index number. Reassignment occurs when the section's index is specified multiple times with different index numbers, or when another section has the same name but a different index number.

The following example shows an index reassignment and the resulting warning message:

```
Line 401: FringeCap 2 {
 Line 402:     number = 3
 ...
 Line 420: }

 Warning : FringeCap index attribute is reassigned from 2 to 3.
 (line 402) (TFCHK-020)
```

**What Next**

This is only a warning message. No action is required.

Feedback

However, it is best practice to determine the cause of the index number reassignment. If the index is specified multiple times, you can remove the extra specifications. If another section exists with the same name but with different index number, you can decide which section is correct and remove the incorrect section. After making the changes, run the command again.

## TFCHK-021

(error) %s '%s' attribute '%s' is assigned an invalid integer %s. (line %d)

### Description

This error message occurs when the specified section has a non-integer value assigned to the specified attribute, or an out-of-range integer value assigned to the specified attribute.

The range of the valid layer number for different objects are: DesignRule : The layers can be user layer that layer number is in range of [1, 187], or system layers. ContactCode: The layers can be user layer that layer number is in range of [1, 187] FringeCap : The layers can be user layer that layer number is in range of [1, 187] SlotRule : The layers can be user layer that layer number is in range of [1, 187] DensityRule: The layers can be user layer that layer number is in range of [1, 187]

The following is an example of the error message:

```
Error : Layer 'METAL1' attribute 'layerNumber' is assigned an invalid
integer 2.4. (line 46) (TFCHK-021)
```

The following are other examples of the error message, 1. when contactCode upperLayer is assigned an out-of-range layer that layer number is larger than 187 2. when onGrid is assigned an out-of-range value 2

```
Error: ContactCode 'VIA34' attribute 'upperLayer' is assigned an invalid
integer 334. (line 1338) (TFCHK-021)

Error: Layer 'M1L' attribute 'onGrid' is assigned an invalid
integer 2. (line 208) (TFCHK-021)
```

### What Next

Change the attribute value of the specified section to an integer value.The value cannot contain a decimal point, such as 16.0. Or Change the value to an integer value within the valid range. Such as 'onGrid' attribute has valid value 0 or 1 but not 2. After changing the value, run the command again.

## TFCHK-022

(error) %s attribute '%s' is assigned an invalid integer %s. (line %d)

Feedback

### Description

This error message occurs when the specified section has a non-integer value or an integer that is larger than MAX_INT (2147483647) assigned to the specified attribute.

The following is an example of this error message:

```
Error : Technology attribute 'inductancePrecision' is assigned an invalid
integer 100.01. (line 6) (TFCHK-022)
```

### What Next

Change the attribute value of the specified section to an integer value. The value cannot contain a decimal point, such as 16.0. After changing the value, run the command again.

---

## TFCHK-023

(error) %s '%s' attribute '%s' is assigned an invalid boolean %s. (line %d)

### Description

This error message occurs when the specified section has a non-Boolean value assigned to the specified attribute. All boolean attributes must have a 0 or 1 value.

The following is an example of this error message:

```
Error : ContactCode 'via2' attribute 'isDefaultContact' is assigned an
 invalid
boolean 2.5. (line 368) (TFCHK-023)
```

### What Next

Change the attribute value of the specified section to a 0 or 1 and run the command again.

---

## TFCHK-024

(warning) %s '%s' attribute '%s' is assigned an invalid boolean %s. (line %d)

### Description

This warning message occurs when the specified section has a non-Boolean value assigned to the specified attribute. All Boolean attributes must have a 0 or 1 value, or else the nonzero values default to 1.

The following is an example of this warning message:

```
Warning : ContactCode 'via2' attribute 'isDefaultContact' is assigned
an invalid boolean 2.5. (line 368) (TFCHK-024)
```

Feedback

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, change the attribute value of the specified section to a 0 or a 1 and then run the command again.

---

## TFCHK-025

(error) %s '%s' references layer '%s' which does not exist. (line %d)

### Description

This error message occurs when the specified section references another section that does not exist. The reference occurs on the specified line.

The following is an example of this error message:

```
Error : ContactCode 'M3_M2WEST_ND' references layer 'METAL2' which does
not exist. (line 680) (TFCHK-025)
```

### What Next

Define the missing section, or redirect the reference to an existing section, or remove the reference to the missing section. After making your changes, run the command again.

---

## TFCHK-026

(warning) %s '%s' references layer '%s' which does not exist. (line %d)

### Description

This message indicates that the specified section references another section that does not exist. The reference occurs on the specified line. The section will be ignored.

### What Next

Define the missing section or remove the reference.

### Examples

Warning : ContactCode 'M3_M2WEST_ND' references layer 'METAL2' which does not exist. (line 680) (TFCHK-026)

---

## TFCHK-027

(error) %s '%s' has a non-boolean pattern. (line %d)

Feedback

### Description

This error message occurs when the the pattern of the specified section is not a list of Boolean values. All patterns must be a list of Boolean values.

The following is an example of this error message:

```
Error : LineStyle 'line3' has a non-Boolean pattern. (line 94)
 (TFCHK-027)
```

### What Next

Change the pattern of the specified section to a list of Boolean values and then run the command again.

---

## TFCHK-028

(warning) %s '%s' has a non-boolean pattern. (line %d)

### Description

This warning message occurs when the pattern of the specified section is not a list of Boolean values. All patterns must be a list of Boolean values. If any value is not a Boolean, it is automatically changed to 1.

The following is an example of this warning message:

```
Warning : LineStyle 'line3' has a non-Boolean pattern. (line 94)
 (TFCHK-28)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change the pattern of the specified section to a list of Boolean values and then run the command again.

---

## TFCHK-029

(error) %s '%s' has a width and height that is not consistent with the pattern length. (line %d)

### Description

This error message occurs when the pattern length of the specified section does not match the size specified by the pattern width and height. The number of elements in the pattern list must equal the product of the pattern width and height.

Feedback

The following is an example of this error message:

```
Error : LineStyle 'line2' has a width and height that is not
consistent with pattern length. (line 89) (TFCHK-029)
```

### What Next

Change the width and height attribute values or add or remove Boolean values to the pattern list. After making your changes, run the command again.

---

## TFCHK-030

(warning) %s '%s' has a width and height that is not consistent with the pattern length. (line %d)

### Description

This warning message occurs when the pattern length of the specified section does not match the size specified by the pattern width and height. The number of elements in the pattern list must equal the product of the pattern width and height. The unexpected value of width or height are ignored, althought they are stored in the database.

The following is an example of this warning message:

```
Warning : LineStyle 'line2' has a width and height that is not consistent
with pattern length. (line 89) (TFCHK-030)
```

### What Next

This is a warning message only. No action is required.

However, if the result is not what you intended, change the width and height attribute values, or change the pattern list by adding or removing Boolean values, and then rerun the command.

---

## TFCHK-031

(error) %s '%s' attribute '%s' is assigned an out-of-range size %s. (line %d)

### Description

This error message occurs when the specified section has a invalid table size. The resistance model and capacitance table size must be between 1 and 16 inclusive.

The following is an example of this error message:

```
Error : CapTable 'poly_C_TOP_GP' has an out-of-range size 17
assigned to the attribute 'wireWidthSize'. (line 3231) (TFCHK-031)
```

Feedback

### What Next

Change the table size of the specified section to a value between 1 and 16 inclusive and run the command again.

---

## TFCHK-032

(warning) %s '%s' attribute '%s' is assigned an out-of-range size %s. (line %d)

### Description

This warning message occurs when the specified section has an invalid table size. The resistance model and capacitance table size must be between 1 and 16 inclusive. And some table sizes or dimensions have maximum 8 or 16. During open_mw_lib, any values in such tables that are beyond the max sizes will be cut out. For example, in 2010.03 releases, cutTblSize is expanded to 16 from 8; therefore, if you use an earlier version to load Milkyway library or design that are created using 2010.03 releases or later, the values in the related cut tables beyond 8th indexes wil be garbage.

The unexpected value of the table size is replaced by 1 if the value is less than 1, or by 16 if the value is more than 16. When enclosureTbl/minCutsTbl are defined, the converted fatTblThreshold should not have >32 values due to limitation on applications. In this case, only the first 32 values with fatTblDimension = 32 are used.

The following is an example of the warning message:

```
Warning : CapTable 'poly_C_TOP_GP' has an out-of-range size 17
assigned to the attribute 'wireWidthSize'. (line 3231) (TFCHK-032)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, change the table size of the specified section to a value between 1 and 16 inclusive and run the command again.

---

## TFCHK-033

(warning) %s '%s' attribute '%s' is assigned a list with an incorrect number of elements. (line %d)

### Description

This warning message occurs when the array attribute of the specified section does not have the correct number of elements, or the values are not separated by comma. minSpacingUpperEncCheckTbl table size should be cut1TblSize* cut2TblSize if used in cut to cut spacing rule and cutTblSize if used in cut to metal spacing rule.

Feedback

The following is an example of the warning message:

```
Warning : Layer 'VIA12' has an incorrect number of elements listed
for array attribute 'fatTblExtensionMinCuts'. (line 753) (TFCHK-033)
```

For layer sections, the following array attributes must contain the indicated number of elements, based on the *fatTblDimension* attribute:

```
Attribute:                    Valid Number Of Elements:
    ------------------------------------------------------------
    fatTblThreshold              fatTblDimension
    fatTblSpacing                fatTblDimension x fatTblDimension
    fatTblParallelLength         fatTblDimension
    fatTblExtensionRange         fatTblDimension
    fatTblMinEnclosedArea        fatTblDimension
    fatTblFatContactNumber       fatTblDimension
    fatTblFatContactMinCuts      fatTblDimension
    fatTblExtensionContactNumber fatTblDimension
    fatTblExtensionMinCuts       fatTblDimension
```

For capacitance table sections, the array attribute must have the following number of elements, based on the wire width and spacing size:

```
Attribute      Valid Number Of Elements
    ---------------------------------------------
    wireWidth      wireWidthSize
    wireSpacing    wireSpacingSize
    capValue       wireWidthSize x wireSpacingSize
```

For resistance models, the array attribute must have the following number of elements shown below, based on the size:

```
Attribute      Valid Number Of Elements
    ---------------------------------------------
    wireWidth      size
    tempCoeff      size
    minRes         size
    nomRes         size
    maxRes         size
```

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change the table dimension(s) or add or remove elements from the specified array attribute.

---

## TFCHK-034

(error) Floating-point attribute '%s' is assigned %s which is too large to store in the database. (line %d)

Feedback

### Description

This error message occurs when the specified floating-point value is too large to store in the database. When stored in the database, the floating-point number is scaled by multiplying the floating-point number by the corresponding unit precision. If an overflow results, then this error message is generated.

The following is an example of the error message:

```
Error : Floating-point attribute 'unitMinResistance' is assigned
8e06 which is too large to store in the database. (line 78) (TFCHK-034)
```

### What Next

Decrease the corresponding unit precision or reduce the size of the floating-point number and then run the command again.

---

## TFCHK-035

(warning) Floating-point attribute '%s' is assigned %s which is too precise and will be truncated to %g. (line %d)

### Description

This warning message occurs when the specified floating-point number cannot be completely stored in the database and must be rounded off.

When storing floating-point numbers in the database, the number is scaled by multiplying the floating-point number by the corresponding unit precision. Digits to the right of the decimal point are dropped. When nonzero digits are dropped, this message appears.

The following is an example of the warning message:

```
Warning : Floating-point attribute 'lowerLayerEncHeight' is
assigned 0.35 which is too precise and will be truncated to 0.3.
(line 346) (TFCHK-035)
```

### What Next

This is a warning message only. No action is required.

However, if the result is not what you intended, you can increase the corresponding unit precision or reduce the number of digits in the floating-point number, and then run the command again.

If floating point rounding is insignificant and does not affect the results, it is not necessary to modify the precision.

Feedback

If rounding is severe and affects the results, modify the precision in the main and ALL reference libraries. This may involve reloading the Cell Library Format (CLF) timing information in the reference libraries.

## TFCHK-036

(information) Technology attribute '%s' is assigned %d which causes several %s values to be truncated. The recommended %s precision is %d. (line %d)

### Description

This information message occurs when the specified unit precision is not precise enough and causes some floating-point numbers to be truncated. The recommended precision is the minimum required precision to completely store the floating-point numbers to the database.

The following is an example of the information message:

```
Information : Technology attribute 'lengthPrecision' is
assigned 10 which causes several length values to be truncated.
The recommended length precision is 100. (line 12) (TFCHK-036)
```

### What Next

This is only an informational message. No action is required.

However, it is considered best practice to increase the unit precision to the specified recommended precision.

If floating-point rounding is insignificant and does not affect the results, it is not necessary to modify the precision. If rounding is severe and does affect the results, modify the precision modified in the main and ALL reference libraries. This may require reloading the CLF timing information in the reference libraries.

## TFCHK-037

(error) Technology attribute '%s' is assigned an invalid unit name '%s'. (line %d)

### Description

This error message occurs when the Technology section contains an invalid unit name.

The following table lists the valid unit names for each attribute. The unit names are not case-sensitive.

```
Attribute Name          Valid Unit Names
    ------------------------------------------
    unitLengthName          micron, mil
    unitTimeName            fs, ps, ns, us, ms, s
```

Feedback

```
    unitCapacitanceName     ff, pf, nf, uf, mf, f
    unitResistanceName      mohm, ohm, kohm, Mohm
    unitInductanceName      fh, ph, nh, uh, mh, h
    unitPowerName           fw, pw, nw, uw, mw, w
    unitVoltageName         fV, pV, nV, uV, mV, V
    unitCurrentName         fA, pA, nA, uA, mA, A
```

The following is an example of the error message:

```
Error : Technology attribute 'unitResistanceName' is assigned
an invalid unit name 'pohm'. (line 13) (TFCHK-037)
```

### What Next

Change the attribute value to a valid unit name and then run the command again.

---

## TFCHK-038

(warning) Technology attribute '%s' is assigned an invalid unit name '%s'. (line %d)

### Description

This warning message occurs when the Technology section contains an invalid unit name. The invalid unit names are replaced with application-specific default unit names.

The following table lists the valid unit names for each attribute. The unit names are case-sensitive.

```
Attribute Name          Valid Unit Names
    ------------------------------------------
    unitLengthName          micron, mil
    unitTimeName            fs, ps, ns, us, ms, s
    unitCapacitanceName     ff, pf, nf, uf, mf, f
    unitResistanceName      mohm, ohm, kohm, Mohm
    unitInductanceName      fh, ph, nh, uh, mh, h
    unitPowerName           fw, pw, nw, uw, mw, w
    unitVoltageName         fV, pV, nV, uV, mV, V
    unitCurrentName         fA, pA, nA, uA, mA, A
```

The following is an example of the warning message:

```
Warning : Technology attribute 'unitPowerName' is assigned an
invalid unit name 'V'. (line 14) (TFCHK-038)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change the attribute value to a valid unit name and then run the command again.

Feedback

## TFCHK-039

(warning) Technology attribute '%s' is assigned an invalid mode %s. (line %d)

### Description

This warning message occurs when the Technology section contains an invalid mode. If an invalid mode is less than 0, the default mode of 0 is used. Application-specific defaults are used for all other invalid modes.

The following tables lists the valid modes by attribute name.

```
Attribute Name          Valid Modes
    ------------------------------------------
    fatTblSpacingMode       0, 1
    fatWireExtensionMode    0, 1, 2, 3
    minEdgeMode             0, 1, 2
```

The following is an example of the warning message:

```
Warning : Technology attribute 'minEdgeMode' is assigned an
invalid mode -1. (line 26) (TFCHK-039)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change the attribute value to a valid mode and run the command again.

## TFCHK-040

(error) Technology section is missing entirely. (line %d)

### Description

This error message occurs when the Technology section is missing from the technology file.

The following is an example of the error message:

```
Error : Technology section is missing entirely. (line 1) (TFCHK-040)
```

### What Next

Add the Technology section to the technology file and run the command again.

## TFCHK-041

(error) PrimaryColor attribute '%s' is assigned an out-of-range color intensity %s. (line %d)

Feedback

### Description

This error message occurs when the PrimaryColor section contains an invalid color intensity value assigned to the specified attribute. Color intensity values must be between 0 and 255 inclusive.

The following shows an example of the error message:

```
Error : PrimaryColor attribute 'mediumGreen' is assigned an
out-of-range color intensity 256. (line 35) (TFCHK-041)
```

### What Next

Change the attribute value to a valid color intensity number from 0 through 255, and then run the command again.

---

## TFCHK-042

(warning) PrimaryColor attribute '%s' is assigned an out-of-range color intensity %s. (line %d)

### Description

This warning message occurs when the PrimaryColor section has contains an invalid color intensity value assigned to the specified attribute. Color intensity values must be between 0 and 255 inclusive. Invalid values that are less than zero default to 0. Invalid values that are more than 255 default to 255.

The following is an example of this warning message:

```
Warning : PrimaryColor attribute 'mediumGreen' is assigned
an out-of-range color intensity 256. (line 35) (TFCHK-042)
```

### What Next

Change the attribute value to a valid color intensity number from 0 to 255 and then run the command again.

---

## TFCHK-043

(error) Color '%s' attribute '%s' is assigned an out-of-range color intensity %s. (line %d)

### Description

This error message occurs when the specified Color section contains an invalid color intensity value assigned to the specified attribute. Color intensity values must be between 0 and 255 inclusive.

Feedback

The following is an example of this error message:

```
Error : Color 'oblue' attribute 'blueIntensity' is assigned
an out-of-range color intensity 256. (line 52) (TFCHK-043)
```

### What Next

Change the attribute value to a valid color intensity number from 0 through 255 and then run the command again.

---

## TFCHK-044

(warning) Color '%s' attribute '%s' is assigned an out-of-range color intensity %s. (line %d)

### Description

This warning message occurs when the specified Color section contains an invalid color intensity value assigned to the specified attribute. Color intensity values must be between 0 and 255 inclusive. Invalid values less than 0 use the default value of 0. Invalid values more than 255 use the default value of 255.

The following is an example of the warning message:

```
Warning : Color 'oblue' attribute 'blueIntensity' is assigned
an out-of-range color intensity 256. (line 52) (TFCHK-044)
```

### What Next

Change the attribute value to a valid color intensity number from 0 through 255 and then run the command again.

---

## TFCHK-045

(information) Non-via layer '%s' has the via layer attribute '%s'. (line %d)

### Description

This information message indicates that the specified Layer section does not define a via or poly contact layer, but it contains a via layer attribute, which is ignored.

The following are via and poly contact layer attributes:

```
cornerMinSpacing
maxStackLevel
fatTblExtensionContactNumber
fatTblExtensionMinCuts
fatTblFatContactNumber
fatTblFatContactMinCuts
maxNumAdjacentCut
adjacentCutRange
```

Feedback

```
enclosedCutNumNeighbor
enclosedCutNeighborRange
enclosedCutMinSpacing
enclosedCutToNeighborMinSpacing
```

The following is an example of the information message:

```
Information : Non-via layer 'METAL2' has the via layer attribute
\'enclosedCutToNeighborMinSpacing'. (line 294) (TFCHK-045)
```

**What Next**

This is only an informational message. No action is required.

However, if the result is not what you intended, you can either remove the specified attribute, or change the mask name of the layer to a via mask name, such as polyCont, via1, via2, or via3.

---

## TFCHK-046

(information) Non-metal layer '%s' has the metal layer attribute '%s'. (line %d)

**Description**

This information message occurs when the specified Layer section is not a metal or poly layer, but it contains a metal layer attribute that is ignored.

The following are metal and poly layer attributes:

```
sameNetMinSpacing
stubThreshold
stubSpacing
maxLength
maxNumMinEdge
minEdgeLength
minArea
minEnclosedArea
maxWidth
fatContactThreshold
fatWireThreshold
fatThinMinSpacing
fatFatMinSpacing
fatWireExtensionRange
fatTblSpacing
fatTblParallelLength
fatTblMinEnclosedArea
```

The following is an example of the information message:

```
Information : Non-metal lyera 'VIA12' has the metal layer attribute
\'fatTblMinEnclosedArea'. (line 740) (TFCHK-046)
```

Feedback

### What Next

This is only an informational message. No action is required.

However, if the result is not what you intended, you can either remove the specified attribute or change the make name of the layer to a metal mask name, such as poly, metal1, metal2, or metal3.

---

## TFCHK-047

(warning) Nondefault metal layer '%s' has the default-only attribute '%s'.

### Description

This warning message occurs when the specified Layer section is not a default metal layer, but it contains a default metal layer attribute.

Multiple layers can be defined for each metal layer, but only one should be set as the default layer. The default layer contains the following attributes:

```
pitch
defaultWidth
minWidth
minSpacing
```

The following is an example of the error message:

```
Warning : Nondefault metal layer 'METAL1Extra' has the default-only
attribute 'minSpacing'. (TFCHK-047)
```

### What Next

This is only a warning message. No action is required.

However, it is best practice to remove the specified attribute.

---

## TFCHK-048

(warning) Layer '%s' has a pitch %g that is less than the minimum spacing and width sum %g. (line %d)

### Description

This warning message occurs when the specified Layer section contains an invalid pitch, minimum spacing or minimum width. The pitch must be greater than or equal to the sum of the layer's minimum spacing and minimum width.

Feedback

The following is an example of the error message:

```
Warning : Layer 'METAL1' has a pitch 0.2 that is less than the
minimum spacing and width sum 0.24. (line 239) (TFCHK-048)
```

### What Next

This is a warning message only. No action is required.

However, if the result is not what you intended, change the pitch, minimum spacing, or minimum width to meet the requirement that the pitch be greater than or equal to the sum of the layer's minimum spacing and minimum width.

---

## TFCHK-049

(warning) Layer '%s' has a pitch %g that does not match the recommended wire-to-via pitch %s.

### Description

This warning message occurs when the pitch of the specified layer does not match the recommended pitch. The wire-to-via pitch is the recommended pitch and provides the best wire track resources for routing.

The wire-to-wire pitch is more aggressive, the via-to-via is more conservative and neither are recommended. The metal layer pitch must match the wire-to-via pitch in the known routing direction, which is determined by the wire track directions of the unit tile.

The horizontal wire-to-via pitch is calculated as follows:

```
(min spacing) + (min width)/2 + (via metal width)/2

The vertical wire-to-via pitch is calculated as follows:

    (min spacing) + (min width)/2 + (via metal height)/2
```

The via metal width and height are based on the larger of the lower and upper default contact codes.

If the layer routing directions are unknown, then two pitches may be recommended. One pitch is recommended for the horizontal wire-to-via pitch, and one pitch for the vertical wire-to-via pitch. You can chose either pitch according to your design requirements.

The following is an example of the warning message:

```
Warning : Layer 'metal3' has a pitch 1.9 that does not match
the recommended wire-to-via pitch 1.3. (TFCHK-049)
```

### What Next

This is only a warning message. No action is required.

Feedback

You can leave the pitch of the specified layer at the current setting, or you can change the pitch of the layer to the recommended pitch.

---

## TFCHK-050

(warning) Layer '%s' has a pitch %g that does not match the doubled pitch %g or tripled pitch %g.

### Description

This warning message occurs when the pitch of the specified layer is not double or triple the pitch of the lower metal layer with the same routing direction. Doubling or tripling the pitch value, maximizes routing resources and minimizes overlap with other metal layers.

If you do not know the layer routing directions, then double or triple the pitch of the second lower metal layer's pitch. This assumes that the routing directions alternate between layers.

The following is an example of the warning message:

```
Warning : Layer 'metal3' has a pitch 1.9 that does not match
the doubled pitch 3.8 or tripled pitch 5.7. (TFCHK-050)
```

### What Next

This is only a warning message. No action is required.

You can either leave the pitch of the specified layer unchanged, or change the pitch to the doubled or tripled pitch and run the command again.

---

## TFCHK-051

(error) Layer is missing with mask name '%s'.

### Description

This error message occurs when a Layer section with the specified mask name is missing from the technology file. All metal and via layers up to the highest defined physical layer must be defined in the technology file.

For example, if only metal1, via1, metal2, via2, metal3, and metal4 are defined, then via3 is missing and the error message appears.

The following is an example of the error message:

```
Error : Layer is missing with mask name 'metal9'. (TFCHK-051)
```

### What Next

Define a Layer section with the specified mask name and then run the command again.

Feedback

## TFCHK-052

(error) Layer '%s' is missing the fat table attribute '%s'. (line %d)

### Description

This error message occurs when the specified Layer section contains a fat table that is missing the specified attribute.

The following is an example of the error message:

```
Error : Layer 'METAL2' is missing the fat table attribute
\'fatTblThreshold'. (line 197) (TFCHK-052)
```

### What Next

Add the missing attribute or remove the fat table and then run the command again.

## TFCHK-053

(error) %s '%s' attribute '%s' is assigned an out-of-range dimension %s. (line %d)

### Description

This error message occurs when the specified Layer section contains a fat table dimension that is too small or too large. The fat table dimension for fatTblDimension, cutTblSize, cut1TblSize and cut2TblSize must be between 1 and 16 inclusive. For all others, the fat table dimension must be between 1 and 8 inclusive.

The following is an example of the error message:

```
Error : Layer 'METAL3' attribute 'fatTblDimension' is assigned
an out-of-range dimension 17. (line 324) (TFCHK-053)
```

### What Next

Change the fat table dimension for the specified Layer section to a valid integer and then run the command again.

## TFCHK-054

(error) Layer '%s' has invalid fat table thresholds '%s'. (line %d)

### Description

This error message occurs when the specified Layer section contains an invalid fat table threshold list. The threshold list must meet the following requirements:

- The number of threshold values must match the table dimension.

Feedback

- All threshold values must be non-negative numbers and listed in ascending order.
- The first threshold value must between 0 and the default width inclusively.
- The second threshold value must be greater than the layer default width.

The following is an example of the error message:

```
Error : Layer 'METAL1' has invalid fat table thresholds
\'(0, 0, 1.505, 3.005, 4.505, 7.505)'. (line 225) (TFCHK-054)
```

**What Next**

Change the threshold list for the specified Layer section to meet the above requirements and then run the command again.

---

## TFCHK-055

(warning) Layer '%s' has rounded fat table thresholds '%s'. (line %d)

**Description**

This warning message occurs when the threshold list of the specified Layer section contains rounded values. It is best practice to avoid ending threshold values with a 0 digit in the most precise position. This practice minimizes the confusion between tools that interpret the thresholds as exclusive, rather than inclusive, lower bounds.

The following is an example of the warning message:

```
Warning : Layer 'METAL6' has rounded fat table thresholds
\'(0, 0.215, 1.5, 3.005, 4.51, 7.505)'. (line 464) (TFCHK-055)
```

**What Next**

This is only a warning message. No action is required.

However, you can either increase the rounded threshold value by one grid resolution value and run the command again, or you can leave the threshold value at the current setting.

You need also check the other layers for the same case.

---

## TFCHK-056

(warning) Layer '%s' has insignificant differences between fat table thresholds '%s'. (line %d)

Feedback

### Description

This warning message occurs when the threshold list of the specified Layer section contains insignificant differences between the threshold values. It is best practice to have thresholds differ by more than half of the minimum width and more than ten percent of the greater threshold. If they do not differ by these amounts, then the fat table can contain redundant data, be unnecessarily large, and increase router run-time dramatically.

The following is an example of the warning message:

```
Warning : Layer 'VIA4' has insignificant differences between
fat table thresholds '(0, 0.5, 0.55, 1.2, 2)'. (line 724) (TFCHK-056)
```

### What Next

This is only a warning message. No action is required.

However, you can check the fat tables for redundant data. If you find redundant data, then reduce the table dimension and the number of threshold values. After making your changes, rerun the command.

---

## TFCHK-057

(error) Layer '%s' has an asymmetric fat table spacing array. (line %d)

### Description

This error message occurs when the fat table spacing array of the specified Layer section is not symmetric. Spacing arrays are two-dimensional and must be symmetric about the diagonal that connects the upper-left and lower-right corners.

The following is an example of the error message:

```
Error : Layer 'VIA12' has an asymmetric fat table spacing array.
(line 738) (TFCHK-057)
```

### What Next

Check that the fat table dimension of the specified layer is correct and then modify the spacing table to make it symmetric. After making your changes, run the command again.

---

## TFCHK-058

(error) Layer '%s' has an invalid fat table contact number %d.

### Description

This error message occurs when the fat metal via rule or fat metal via extension rule in the specified Layer section contains an invalid contact code number.

Feedback

A valid contact Code number must correspond to a contact code defined in the technology file, and the contact code must be defined for the specified cut layer.

And due to router limitation, if an asymmetrical contact code, defined by geometry tables or cut array, is referenced in fatTblFatContactNumber or fatTblExtensionContactNumber table, the error message will also be issued.

The following is an example of the error message:

```
Error : Layer 'VIA12' has an invalid fat table contact number 20.
 (TFCHK-058)
```

**What Next**

Change the table contact code number or define the contact code for the specified Layer section and then run the command again.

**SEE AISO**

```
cmCheckLibrary(2)
cmCreateLib(2)
cmReplaceTech(2)
dbCreateLib(2)
dbReplaceTechFile(2)
```

---

## TFCHK-058w

(warning) Layer '%s' has an invalid fat table contact number %d.

**Description**

This warning message occurs when the fat metal via rule or fat metal via extension rule in the specified Layer section contains an invalid contact code number. This warning occurs under end user mode only.

A valid contact Code number must correspond to a contact code defined in the technology file, and the contact code must be defined for the specified cut layer.

And due to router limitation (unable to instantiate such a via), if an asymmetrical contact code, defined by geometry tables or cut array, is referenced in fatTblFatContactNumber or fatTblExtensionContactNumber table, this message will also be issued.

The following is an example of the warning message:

```
Warning : Layer 'VIA12' has an invalid fat table contact number 20.
 (TFCHK-058w)
```

**What Next**

Change the table contact code number or define the contact code for the specified Layer section and then run the command again.

Feedback

### SEE AISO

```
cmCheckLibrary(2)
cmCreateLib(2)
cmReplaceTech(2)
dbCreateLib(2)
dbReplaceTechFile(2)
```

---

## TFCHK-059

(error) Multiple default layers exists with mask name '%s'.

### Description

This error message occurs when there are multiple layer sections with the specified mask name that are marked as default. Each physical layer can have only one default layer.

The following is an example of the error message:

```
Error : Multiple default layers exists with mask name 'via9'.
(TFCHK-059)
```

### What Next

Check all layers with the specified mask name and mark only one as the default layer. After making your changes, run the command again.

---

## TFCHK-060

(warning) Multiple default layers exists with mask name '%s'.

### Description

This warning message occurs when there are multiple layer sections with the specified mask name that are marked as default. Each physical layer is allowed only one default layer. When multiple default layers exist, the default layer with the lowest layer number becomes the actual default layer.

The following is an example of the warning message:

```
Warning : Multiple default layers exists with mask name 'via9'.
(TFCHK-060)
```

### What Next

This is only a warning message. No action is required.

However, it is best practice to check all layers with the specified mask name, and mark only one as the default layer.

Feedback

## TFCHK-061

(error) Layer '%s' has a default width %g that is less than its minimum width %g. (line %d)

### Description

This error message occurs when the default width or minimum width of the specified Layer section is invalid. The default width of each layer must be greater than or equal to its minimum width.

The following is an example of the error message:

```
Error : Layer 'METAL6' has a default width 0.12 that is less
than its minimum width 0.14. (line 473) (TFCHK-061)
```

### What Next

Change the default or minimum width of the specified Layer section so that the default width is greater than or equal to the minimum width. After making your changes, run the command again.

## TFCHK-062

(information) Layer '%s' has a same-net spacing %g that is greater than its minimum spacing %g. (line %d)

### Description

This information message occurs when the same-net spacing is greater than minimum spacing of the specified Layer. Usually, the same-net minimum spacing of each layer should be less than or equal to its minimum spacing. When sameNetSpacing greater than minSpcaing, U-shaped metal spacing rule is triggered. It requires bigger spacing between a net and a neighbour net with small notch. this is a new design rule introduced in 65nm technology to prevent or eliminate small notches.

The following is an example of the information message:

```
Information : Layer 'METAL6' has a same-net spacing 0.16 that is
greater than its minimum spacing 0.14. (line 473) (TFCHK-062)
```

### What Next

This is only an informational message. No action is required.

However, it is best practice to ensure that the correct values are specified for the same-net spacing and the minimum spacing of the specified Layer section.

Feedback

## TFCHK-063

(error) Layer '%s' attribute '%s' has an invalid value %g.

### Description

This error message occurs when the value of the specified layer attribute is invalid.

Default metal layers must have nonzero, positive values for the following attributes:

```
pitch
defaultWidth
minWidth
minSpacing
```

For enclosed via minEdgeLength rule, if you specify enclosedViaMinEdgeLength, you must also specify a value for minEdgeLength that is within (0, enclosedViaMinEdgeLength).

The following is an example of the error message:

```
Error : Layer 'METAL5' attribute 'minSpacing' has an invalid value 0.
(TFCHK-063)
```

### What Next

Change the attribute value of the specified layer to a nonzero, positive value and then run the command again.

## TFCHK-064

(warning) Layer '%s' attribute '%s' has a value of %g.

### Description

This warning message occurs when the value of the specified layer attribute may not be optimal.

The value of the *minEnclosedArea* attribute for default metal layers should be greater than 0. Other values can affect the quality of the application results and can cause excessive design rule constraint violations during physical verification.

For a set of rule, completeness of rule parameters should be maintained:

For U-shape rule, if you specify uShapeMinLength or uShapeMinSpacing, you should also specify uShapeDepthThreshold and minSpacing. And uShapeMinSpacing > minSpacing.

For enclosed via minEdgeLength rule, if you specify enclosedViaMinEdgeLength, you must also specify a value for minEdgeLength that is within (0, enclosedViaMinEdgeLength) and a positive value for enclosedViaAdjacentEdgeLength.

Feedback

For nonpreferred direction rule, the following should be met: nonPreferredWidth > defaultWidth, and nonPreferredMaxLength > nonPreferredWidth-defaultWidth

For multiple minArea rule, you should specify minArea if you specify specialMinArea, and specialMinArea > minArea.

For stubThreshold associated rules, you should specify stubThreshold if you specify stubMinLength, stubToStubSpacing, stubSpacing or endOfLineSideKeepoutLength.

For wire jog corner to corner width rule, the following should be met: alignedJogWidth >= minWidth and unalignedJogDiagWidth >= minWidth

For legal width rule, defaultWidth and nonPreferredWidth should be specifies and their values are in LegalWidthTbl.

defaultWidth >= minWidth for all layers. For Metal layer, refer to TFCHK-061.

The following is an example of the warning message:

```
Warning : Layer 'metal3' attribute 'minEnclosedArea' has a
value of 0. (TFCHK-064)
```

**What Next**

This is only a warning message. No action is required.

However, it is best practice to check the attribute value of the specified layer, and then change the value to a value greater than 0, if necessary. After making your changes, run the command again.

---

## TFCHK-065

(warning) Tile '%s' has dimensions %g x %g that does not match the '%s' cell's dimensions %g x %g. (line %d)

**Description**

This warning message occurs when the dimensions of the specified Tile section are inconsistent with the PR (place and route) boundary dimensions of the corresponding tile cell.

The following is an example of the warning message:

```
Warning : Tile 'unit' has dimensions 1.9 x 11.4 that does not match
the 'unitTile' cell's dimensions 1.9 x 22.8. (line 59) (TFCHK-065)
```

**What Next**

This is only a warning message. No action is required.

Feedback

However, it is best practice to either change the dimension attributes of the specified Tile section or regenerate the tile cell, and then run the command again.

## TFCHK-066

(warning) Tile '%s' has a width %g that is not a multiple of the metal layer pitch %s.

### Description

This warning message occurs when the width of the specified tile is inconsistent with pitch of the metal layer. The width of each tile must match the pitch of the first vertical wire track layer in the tile cell.

If the tile cell does not exist or its wire tracks have not been created, then two suggested pitch values appear in the warning message. The suggested pitch values are derived from the metal1 and metal2 layer pitches.

The following is an example of the warning message:

```
Warning : Tile 'unit' has a width 0.32 that is not a multiple
of the metal layer pitch 0.2 or 0.28. (TFCHK-066)
```

### What Next

This is a warning message only. No action is required.

However, it is best practice to either change the width attribute of the corresponding tile section to the suggested pitch, or change the pitch of the first vertical wire track layer. After making your changes, run the command again.

## TFCHK-067

(warning) FringeCap %d attribute '%s' is assigned a non-metal, non-poly layer '%s'. (line %d)

### Description

This warning message occurs when the specified FringeCap section does is not assigned a metal or poly layer. Unless corrected, this inaccurate information is stored in the database.

The following is an example of the warning message:

```
Warning : FringeCap 3 attribute 'layer2' is assigned a non-metal,
non-poly layer 'VIA2'. (line 1626) (TFCHK-067)
```

### What Next

This is only a warning message. No action is required.

Feedback

However, it is best practice to change the specified attribute to a metal or poly layer and then run the command again.

## TFCHK-068

(error) ContactCode '%s' has non-distinct lower and upper layer names '%s' and '%s'. (line %d)

### Description

This error message occurs when the lower and upper layers of the specified ContactCode section are the same layer. The ContactCode section is invalid and the command does not complete.

The following is an example of the error message:

```
Error : ContactCode 'VIA12A' has non-distinct lower and upper
layer names 'METAL2' and 'METAL2'. (line 1258) (TFCHK-068)
```

### What Next

Change one of the layers to another layer and then run the command again.

### Examples

```
cmCheckLibrary(2)
cmCreateLib(2)
cmReplaceTech(2)
dbCreateLib(2)
dbReplaceTechFile(2)
```

## TFCHK-069

(warning) ContactCode '%s' has non-distinct lower and upper layer names '%s' and '%s'. (line %d)

### Description

This warning message occurs when the lower and upper layers of the specified ContactCode section are the same layer. This ContactCode section is invalid and is ignored.

The following is an example of the warning message:

```
Warning : ContactCode 'VIA12A' has non-distinct lower and upper
layer names 'METAL2' and 'METAL2'. (line 1258) (TFCHK-069)
```

### What Next

This is only a warning message. No action is required.

Feedback

However, if the result is not what you intended, you can change one of the layers to another layer and then run the command again.

## TFCHK-070

(error) ContactCode '%s' has an invalid cut layer '%s' that does not correspond to a via layer between the lower and upper metal layers '%s' and '%s'. (line %d)

### Description

This error message occurs when the cut layer of the specified ContactCode section does not correspond to the via layer between the specified lower and upper metal layers. The ContactCode section is invalid and the command does not complete.

The following is an example of the error message:

```
Error : ContactCode 'via8_fat' has an invalid cut layer 'VIA89'
that does not correspond to a via layer between the lower and upper
metal layers 'METAL8' and 'METAL9'. (line 1442) (TFCHK-070)
```

### What Next

Change either the cut layer, or the lower or upper metal layer so that the cut layer corresponds to the specified via layer. After making your changes, run the command again.

## TFCHK-071

(warning) ContactCode '%s' has an invalid cut layer '%s' that does not correspond to a via layer between the lower and upper metal layers '%s' and '%s'. (line %d)

### Description

This warning message occurs when the cut layer of the specified ContactCode section does not correspond to the via layer between the specified lower and upper metal layers. This ContactCode section is invalid and is ignored.

The following is an example of the warning message:

```
Warning : ContactCode 'via8_fat' has an invalid cut layer 'VIA89'
that does not correspond to a via layer between the lower and
upper metal layers 'METAL8' and 'METAL9'. (line 1442) (TFCHK-071)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change either the cut, lower, or upper metal layer so that the cut layer corresponds to the the specified via layer.

Feedback

## TFCHK-072

(information) ContactCode '%s' has a minimum cut spacing %g that is less than the cut layer minimum spacing %g. (line %d)

### Description

This message indicates that the specified ContactCode section's minimum cut spacing is less than the corresponding cut layer's minimum spacing. Each contact code's minimum cut spacing should be greater or equal to its cut layer's minimum spacing.

If it is via cell master in the contactCode, and cutArrayXSpacing/cutArrayYSpacing is smaller than cut layer minSpacing rule, this warning message will also be issued.

### What Next

This is only an informational message. No action is required.

However, if the result is not what you intended, you can change either the specified ContactCode section's minimum cut spacing or corresponding cut layer's minimum spacing to meet your requirement.

### Examples

Information : ContactCode 'VIA78fF' has a minimum cut spacing 0 that is less than the cut layer minimum spacing 0.4. (line 1599) (TFCHK-072)

## TFCHK-073

(warning) ContactCode '%s' has undefined or zero enclosures. (line %d).

### Description

This warning message occurs when the specified ContactCode section contains undefined or zero metal enclosure dimensions. If the zero metal enclosure values are set intentionally, this warning can be ignored. Otherwise, the values may cause the router to create enclosures that violate design rule constraints, such as completely enclosed spaces or donuts.

The following is an example of the warning message:

```
Warning : ContactCode 'VIA67f' has undefined or zero metal enclosures.
(line 1551). (TFCHK-073)
```

### What Next

This is only a warning message. No action is required.

However, if the zero metal enclosure values are not intentional, you can set the upper and lower enclosures of the ContactCode section to avoid potential design rule violations.

Feedback

## TFCHK-074

(error) ContactCode '%s' is defined as a fat and default contact code. (line %d)

### Description

This error message occurs when the specified ContactCode section is set as a fat and default contact code, which is not permitted. The contact code has both of the following attribute values:

**isDefaultContact** = 1

**isFatContact** = 1

The contact code cannot be marked simultaneously as a fat and default contact code.

The following is an example of the error message:

```
Error : ContactCode 'VIA23f' is defined as a fat and default
contact code. (line 1444) (TFCHK-074)
```

### What Next

Remove or set to 0 either the *isDefaultContact* or *isFatContact* attribute, and then run the command again.

## TFCHK-075

(warning) ContactCode '%s' is defined as a fake contact code. (line %d)

### Description

This warning message occurs when the specified ContactCode section contains the *_fake* string appended to the end of its name. This string is used to mark special contact codes to support special double vias for use during routing. However, this is a workaround and may not be supported in the future.

The following is an example of the warning message:

```
Warning : ContactCode 'via2_fake' is defined as a fake contact code.
(line 392) (TFCHK-075)
```

### What Next

This is only a warning message. No action is required.

However, if the workaround is no longer necessary, you can remove the specified ContactCode section.

Feedback

## TFCHK-076

(error) Default contact code %s defined for non-default via layer '%s'.

### Description

This error message occurs when the default ContactCode is defined for a non-default via layer. Default contactCode is allowed to be defined only for default via layer. Default via layer is identified by isDefaultLayer attribute, via layer without this attribute but is unique with specific mask name is also identified as default via layer.

The following is an example of the error message:

```
Error : Default contact code VIA12_X defined for non-default
via layer 'V12_X'. (TFCHK-076)
```

### What Next

Check the contact codes definition, either set the via layer used in contactCode as default layer, change via layer to another default via layer between the metal layers, or remove the isDefaultContact attribute in the contactCode can fix this error. After making your changes, run the command again.

## TFCHK-077

(warning) Multiple default contact codes exists for via layer '%s'.

### Description

This warning message occurs when there are multiple ContactCode sections with the specified via layer that are marked as the default. Each via layer is allowed only one default contact code with a *cutLayer* or *cutLayerNumber* attribute that corresponds to the specified via layer. If multiple default contact codes exist, the default contact code with the lowest contact code number is the used as the default.

The following is an example of the warning message:

### What Next

Warning : Multiple default contact codes exists for via layer 'VIA56'. (TFCHK-077)

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, check all contact codes with the specified cut layer, and mark only one as the default contact code.

Feedback

## TFCHK-078

(error) Valid contact code is missing for via layer '%s'.

### Description

This error message occurs when a ContactCode section meets one of following criteria:

- The ContactCode section is not defined for the specified via layer.
- The ContactCode section is defined for the specified via layer, but it is invalid.

A ContactCode section is defined for a particular via layer by assigning the *cutLayer* or *cutLayerNumber* attribute to the corresponding via layer name or number. At least one valid contact code must be defined for each via layer.

The following is an example of the error message:

```
Error : Valid contact code is missing for the via layer 'via4'.
(TFCHK-078)
```

### What Next

Define or correct the invalid ContactCode section for the specified via layer and then run the command again.

## TFCHK-079

(warning) DesignRule attribute '%s' is assigned a non-physical layer '%s'. (line %d)

### Description

This warning message occurs when the specified DesignRule section does not have a physical layer, such as poly, poly contact, metal, or via layer, assigned to the specified attribute. The application ignores the design rule.

The following is an example of the warning message:

```
Warning : DesignRule attribute 'layer1' is assigned a non-physical
layer 'VIA12'. (line 790) (TFCHK-079)
```

### What Next

This is only a warning message. No action is required.

However, if you do not want the design rule ignored, change the attribute for specified DesignRule section to a valid physical layer, such as a layer with a valid mask name.

Feedback

## TFCHK-080

(warning) DesignRule is defined with non-consecutive layers '%s' and '%s'. (line %d)

### Description

This warning message occurs when the specified DesignRule section contains two metal layers or two via layers that do not have consecutive mask names. For example, the mask names via1 and via2 are valid consecutive mask names. The mask names via2 and via4 are not consecutive and cause the warning message to occur and the design rule to be ignored. For cut to metal spacing rule with minSpacingUpperMetalWidthThresholdTbl, the rule should be defined in DesignRule section between cut and lower metal layers (via_x and metal_x). For forbiddenCut and separatedCut spacing rule, the attributes should be defined in DesignRule section between same cut layer; otherwise, TFCHK-080 will be issued.

The following is an example of the warning message:

```
Warning : DesignRule is defined with non-consecutive layers 'VIA2'
and 'VIA4'. (line 1954) (TFCHK-080)
```

### What Next

This is only a warning message. No action is required.

However, to avoid this warning message, change the layers of the DesignRule section so that the mask names of the layers are consecutive. After making your changes, run the command again.

## TFCHK-081

(warning) DesignRule is defined with non-distinct layers '%s' and '%s'. (line %d)

### Description

This warning message occurs when the layers of the specified DesignRule section are the same layer. The application ignores the design rule.

The following is an example of the warning message:

```
Warning : DesignRule is defined with non-distinct layers 'VIA3'
and 'VIA3'. (line 1960) (TFCHK-081)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, you can change one of the layers of the DesignRule section and then run the command again.

Feedback

## TFCHK-082

(warning) DesignRule is defined with invalid metal-to-via enclosure layers '%s' and '%s'. (line %d).

### Description

This warning message occurs when the DesignRule section specifies either a minimum or an end-of-line enclosure rule, for which one layer is not a via layer and/or the other layer is not a metal layer. The application ignores the design rule. Enclosure rules are only valid between a metal and via layer.

The following is an example of the warning message:

```
Warning : DesignRule is defined with invalid metal-to-via
enclosure layers 'via2' and 'via1'. (line 436). (TFCHK-082)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, change the layers of the DesignRule section so that one is a via layer and the other is a metal layer.

## TFCHK-083

(warning) Valid capacitance model is missing for reference layer '%s', lower ground plane '%s', and upper ground plane '%s'.

### Description

This warning message appears when one of the following occurs in the CapModel section:

- A CapModel section is not defined for the specified layers.
- A CapModel section is defined for the specified layers, but it is invalid.

If one capacitance model is defined in the technology file, then define all of the models. Every poly and metal layers requires a model. Each of these layers needs one capacitance model for each pair of lower and upper ground planes. The number of capacitance models for the layer is equal to the number of lower ground planes multiplied by the the number of upper ground planes. The lower ground planes include the reference layer and all of the poly or metal layers below the reference layer. The upper ground planes include the reference layer and all of the metal layers above the reference layer.

Feedback

The following is an example of the warning message:

```
Warning : Valid capacitance model is missing for the reference
layer 'CP', lower ground plane '', and upper ground plane 'METAL2'.
(TFCHK-083)
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, you can define or correct the invalid CapModel section for the specified layers and then run the command again.

---

## TFCHK-084

(warning) CapModel sections are missing. Capacitance models should be loaded with a TLU+ file later.

### Description

This warning message occurs when the technology file does not contain capacitance models. Load the TLU+ file later in the library preparation flow.

The following is an example of the warning message:

```
Warning : CapModel sections are missing. Capacitance models
should be loaded with a TLU+ file later. (TFCHK-084)
```

### What Next

This is only a warning message. No action is required.

However, it is best to practice to load the TLU+ file later in the library preparation flow.

---

## TFCHK-085

(error) CapModel '%s' references the non-existent table '%s'.

### Description

This error message occurs when the specified CapModel section references a CapTable section that does not exist.

The following is an example of the error message:

```
Error : CapModel 'polyConfig5' references the nonexistent
table 'polypoly_C_BOTTOM_GP_15MAX'. (TFCHK-085)
```

Feedback

### What Next

Define the missing CapTable section or remove the reference from the CapModel section and then run the command again.

---

## TFCHK-086

(warning) Layer '%s' has invalid fat table thresholds '%s'. (line %d)

### Description

This warning message occurs when the specified Layer section contains an invalid fat table threshold list. The threshold list must meet the following requirements:

- The number of threshold values must match the table dimension.
- All threshold values must be nonnegative numbers and listed in ascending order.
- The first threshold value must be between 0 and the minWidth inclusively.
- The second threshold value must be greater than the layer minWidth.

The following is an example of the warning message:

```
Warning : Layer 'METAL1' has invalid fat table thresholds '(0, 0,
1.505, 3.005, 4.505, 7.505)'. (line 225) (TFCHK-086)
```

### What Next

Please correct the tech file to meet the requirements described above. 1) All threshold values must be nonnegative numbers and listed in ascending order 2) The first threshold value must be between 0 and the minWidth inclusively 3) The second threshold value must be greater than minWidth on the layer.

After making your changes, run the command again.

---

## TFCHK-087

(error) Layer '%s' has invalid fatTblSpacing '%s'. (line %d)

### Description

This error message occurs when the specified Layer section contains an invalid fatTblSpacing list. The fatTblSpacing values must be equal to or greater than the layer minSpacing value. And fatTblSpacing[0] = minSpacing.

Feedback

### Examples

The following is an example of the error message:

```
Error : Layer 'METAL1' has invalid fatTblSpacing
 '(0.12,0.11,0.5,0.9,1.5,2.5,
0.11,0.17,0.5,0.9,1.5,2.5,
0.5,0.10,0.5,0.9,1.5,2.5,
0.9,0.9,0.9,0.9,1.5,2.5,
1.5,1.5,1.5,1.5,1.5,2.5,
2.5,2.5,2.5,2.5,2.5,2.5)'. (line 225) (TFCHK-087)
```

### What Next

Change the fatTblSpacing list of the specified Layer section so the values in the list are equal to or greater than the layer minSpacing value. After making your changes, run the command again.

---

## TFCHK-088

(warning) Layer '%s' has invalid fatTblSpacing '%s'. (line %d)

### Description

This warning message occurs when the specified Layer section contains an invalid fatTblSpacing list. The fatTblSpacing values must be equal to or greater than the layer minSpacing value. And fatTblSpacing[0] = minSpacing.

The following is an example of the warning message:

```
Warning : Layer 'METAL1' has invalid fatTblSpacing
 '(0.12,0.11,0.5,0.9,1.5,2.5,
0.11,0.17,0.5,0.9,1.5,2.5,
0.5,0.10,0.5,0.9,1.5,2.5,
0.9,0.9,0.9,0.9,1.5,2.5,
1.5,1.5,1.5,1.5,1.5,2.5,
2.5,2.5,2.5,2.5,2.5,2.5)'. (line 225) (TFCHK-088)
```

### What Next

This is only a warning message. No action is required.

However, it is best practice to change the fatTblSpacing list of the specified Layer section so the values are equal to or greater than the layer minSpacing value. After making your changes, run the command again.

---

## TFCHK-089

(warning) %s '%s' has invalid table values '%s'. (line %d)

Feedback

### Description

This warning message occurs when the specified section contains an invalid table value list, e.g. thresholds. The value list must meet the following requirements:

- The number of the values must match the table dimension.
- All values must be nonnegative numbers and listed in ascending order.
- The first threshold value must be between 0 and minWidth inclusively.
- The second threshold value must be greater than the layer minWidth. • The first spacing value must not be smaller than minSpacing, and the first maxSpacingCheckRange value must not be smaller than minSpacing * 2 + minWidth.
- In 2-D spacing table between the same layer, the values must be symmetrical.

  In minCutsTbl, if area is specified, extension should be specified. In enclosureTbl, if no lower/upper width is specified or an equivalent ContactCode to the specified enclosures is not found, this message will occur.

In generalized cut spacing rule with parallel length, if minSpacingDiagonalCheckTbl[i][j] = 1, at least one of minSpacingXParallelLengthThresholdTbl[i][j] and minSpacingYParallelLengthThresholdTbl[i][j] should be < 0; otherwise, TFCHK-089 will be issued to ignore minSpacingDiagonalCheckTbl[i][j]. If minSpacingXParallelLengthThresholdTbl or minSpacingYParallelLengthThresholdTbl is defined, orthoSpacingExcludeCornerTbl[i][j] should be 1; otherwise, TFCHK-089 will be issued to warn users that the corners will be checked by x/y spacing. Please note that the cutName in cutNameTbl should start with a letter, such as Vsm. Otherwise, you will see this message. For the table of fatTblExtensionRange, if fatTblExtensionRangeDimension defined, the value list must meet the following requirements:

- The number of the values must match the dimension.
- All values must be larger than 0 and listed in ascending order.

  For fatWireViaEnc rule, fatWireViaEncMinWidthThresholdTbl is recommended to be in ascending order. However, the tool accepts this table even it is not in ascending order as long as the min and max thresholds are paired in fatWireViaEncMinWidthThresholdTbl and fatWireViaEncMaxWidthThresholdTbl. Furthermore, if missing a width range between fatWireViaEncMinWidthThresholdTbl and fatWireViaEncMaxWidthThresholdTbl, this message will be issued.

  For maxStackLevel rule, the value in maxStackLevelCutAsViaArrayTbl for the smallest squared cut should be 0.

  For separatedCut spacing rule, if defined between the same cut layer, the following should hold: 1) separatedCut1NameTbl=separatedCut2NameTbl 2) separatedCut1ToUpperMetalExcludedSpacingTbl=separatedCut2ToUpperMetalExcludedSpacingTbl

Feedback

3) the 2D spacing tables separatedCutXMinSpacingTbl and separatedCutYMinSpacingTbl should be symmetrical.

x|yLegalDimensionTbl table values should be in ascending order.
voltageAreaThresholdTbl values should be in ascending order.

For minCutsTbl, if both lower and upper layer widths are specified with different values for extension rule, it also issues this message and takes both widths as thresolds. For via extension rule, only lower width needs to be specified.

The following is an example of the warning message:

```
Warning : Layer 'METAL1' has invalid table values '(0, 0,
1.505, 3.005, 4.505, 7.505)'. (line 225) (TFCHK-089)
```

**What Next**

Please change the value list of the specified section to meet the above requirements. After making your changes, run the command again.

---

## TFCHK-089e

(error) %s '%s' has invalid table values '%s'. (line %d)

**Description**

This error message occurs when the specified section contains an invalid table value list, e.g. thresholds. The value list must has all values be non-negative numbers and listed in ascending order.

The following is an example of the warning message:

```
Error : Layer 'VIA1' has invalid table values '(0, 0,
1.505, 3.005, 4.505, 7.505)'. (line 225) (TFCHK-089e)
```

**What Next**

Please change the value list of the specified section to meet the above requirements. After making your changes, run the command again.

---

## TFCHK-090

(warning) %s '%s' section occurred multiple times. (line %d)

**Description**

This warning message occurs when the same name section appeared in technology file more than once. Alternatively, when you redefine a predefined layer, it will issue the same

Feedback

message, for example, if you define Layer routeGuide, which is a predefined layer. In this case, always the values of the attributes in the last section will be used.

For example, if you load a tech file with Layer "V1" { layerNumber = 123 maskName = "via1" visible = 1 defaultWidth = 0.11 minWidth = 0.03 minSpacing = 0.1 } Layer "V1" { layerNumber = 24 maskName = "via1" defaultWidth = 0.12 minWidth = 0.04 } then the following will be used Layer "V1" { layerNumber = 24 maskName = "via1" visible = 1 defaultWidth = 0.12 minWidth = 0.04 minSpacing = 0.1 }

The following is an example of the warning message:

```
Warning : Layer 'M1' appeared multiple times. (line 758) (TFCHK-090)
```

**What Next**

This is only a warning message. No action is required.

However, it is recommended that you merge the data of the sections with the same section name into one section.

---

## TFCHK-091

(warning) ContactCode '%s' has an invalid cut width %g that is less than the cut layer minWidth %g. (line %d)

**Description**

This message indicates that the specified ContactCode section's cutWidth (or cutHeight) or corresponding cut layer's minWidth is invalid. Each contact code's cutWidth (cutHeight) should be greater than or equal to its cut layer's minimum width.

**What Next**

Change either the specified ContactCode section's cutWidth and/or cutHeight or corresponding cut layer's minWidth to meet this requirement.

**Examples**

Warning : ContactCode 'VIA78fF' has an invalid cut width 0.2 that is less than the cut layer minWidth 0.4. (line 1599) (TFCHK-091)

---

## TFCHK-092

(warning) Cut layer '%s' has a non-cross primary default ContactCode '%s'. (line %d)

**Description**

This message occurs when the cut layer has multiple default ContactCodes and the primary default ContactCode is a non-cross one. For a given cut layer, the primary

Feedback

ContactCode is defined to be the first one that appears in the technology file, and the primary default ContactCode is the first default ContactCode.

A non-cross (minus '-' shaped) ContactCode is one that has the same longitudinal direction of enclosures in both upper and lower layers. And a cross (plus '+' shaped) ContactCode is one that has different longitudinal directions of enclosures in both upper and lower layers. A cross ContactCode is determined by upperLayerEncWidth >= upperLayerEncHeight and lowerLayerEncWidth <= lowerLayerEncHeight or upperLayerEncWidth <= upperLayerEncHeight and lowerLayerEncWidth >= lowerLayerEncHeight and a non-cross contactCode is one that does not meet either of the above conditions. i.e. it is determined by upperLayerEncWidth > upperLayerEncHeight and lowerLayerEncWidth > lowerLayerEncHeight or upperLayerEncWidth < upperLayerEncHeight and lowerLayerEncWidth < lowerLayerEncHeight

The following is an example of the warning message:

```
Warning:  Cut layer 'VIA1' has a non-cross primary default ContactCode
 'V10'.
   (line 254) (TFCHK-092)
```

### What Next

When non-cross default ContactCode is in the first position, please choose from other default ContactCodes for this cut layer, if any, to get optimal routing performance.

---

## TFCHK-093

(warning) %s '%s' attribute '%s' has an invalid value of %g.

### Description

This warning message occurs when the value of the specified attribute is invalid or inconsistent with related attributes.

The value of the *minEnclosedArea* attribute for default metal layers should be greater than 0. Other values can affect the quality of the application results and can cause excessive design rule constraint violations during physical verification.

For a set of rule, completeness of rule parameters should be maintained:

For endOfLineViaWire spacing rule, the following should be met: (a) endOfLineViaWireMinWidth >= cutWidth + 2* minEnclosure (w or h) and endOfLineViaWireMinWidth > minWidth (b) endOfLineViaWireMinSpacing >= minSpacing + minEnclosure (c) endOfLineViaOrthoWireMaxThreshold >= minWidth

For direction based minSpacing rule, Both xMinSpacing and yMinSpacing should be specified and the value should not be smaller than minSpacing.

Feedback

For T-Junction rule, the following should be met: tJunctionStubToStubMinSpacing >= minSpacing *2 + minWidth tJunctionStubWireMaxThreshold >= minWidth tJunctionOrthoWireMaxThreshold >= minWidth

For cut geometry based cut rule, if orthoSpacingExcludeCornerTbl value = 1, cornerMinSpacing should be defined.

For asymmetric via to metal spacing rule, diffNetKeepoutMinWidth diffNetKeepoutMinLength diffNetKeepoutMinRadius should be defined on via and metal layer pair.

For fatWireViaEnc rule, the values in fatWireViaEncMinWidthThresholdTbl should be < fatWireViaEncMaxWidthThresholdTbl, respectively. For iso-dense rule only one entry in fatWireViaEnc[Min|Max]WidthThresholdTbl is required.

The following is an example of the warning message:

```
Warning : DesignRule '' attribute 'endOfLineViaWireMinWidth' has an
 invalid
value of 0.1. (TFCHK-093)
```

**What Next**

It is best practice to check the attribute value of the specified section, and then change the value to a valid value that is consistent with other related attributes in the same set of rule. After making your changes, run the command again.

---

## TFCHK-094

(warning) %s '%s' '%s' and '%s' coexist.

**Description**

This warning message occurs when the two rules/attributes coexist. If fatTblSpacing rule and consolidated fatTblXMinSpacing/fatTblYMinSpacing rule coexist, router will honor the latter and ignore the former. If fatTblParallelLengthDimension and fatTblSpacingMode coexist, router will ignore the latter since fatTblParallelLength is an independent threshold along with fatTblThreshold. If enclosedViaMetalMinLength rule is specified, minLengthMode in Technology section will be ignored. When minCutsTbl and fatTblFatContactMinCuts/fatTblExtensionMinCuts coexist, this message also will occur, and the router will honor the latter and ignore the former. For enclosedCut spacing rule, if both the table rule and the scalar rule are defined, the scalar rule will be ignored. If isDefaultContact = 1 is defined in ContactCode section, notAllowedForSignalRoute will be ignored. For fat metal via rule, the same contactNumber should not appear in both fatTblTotalEncContactNumber and fatTblExtraEncContactNumber. Otherwise, the one in fatTblExtraEncContactNumber will be ignored. onWireTrack should not coexist with onGrid attribute on the same layer section; otherwise, TFCHK-094 will be issued to ignore onGrid.

Feedback

The following is an example of the warning message:

```
Warning : Layer 'M1' 'fatTblSpacing' and 'fatTblXMinSpacing' coexist.
 (TFCHK-094)
```

### What Next

It is recommended that you remove the first rule that will be ignored from the technology file and reload it.

---

## TFCHK-095

(error) %s '%s' '%s' and '%s' coexist.

### Description

This message occurs when two conflicting rules/attributes coexist. For example, if minAreaFillMinLengthTbl/minAreaFillMinWidthTbl attributes and minAreaRectMinLengthTbl/minAreaRectMinWidthTbl coexist, router does not know which rule to apply. For fatWireViaEnc rule, fatWireViaEncMinWidthThresholdTbl / fatWireViaEncMaxWidthThresholdTbl and fatWireViaEncWidthThresholdTbl should not coexist. convexConvexMinEdgeLength scalar and table rules must not coexist.

The following is an example of the message:

```
Error: Layer 'M1' 'minAreaFillMinLengthTbl' and 'minAreaRectMinLengthTbl'
 coexist. (TFCHK-095)
```

### What Next

It is recommended that you choose the rule/attribute that you want and remove the other.

---

## TFCHK-096

(information) Unrecognized attributes in technology file %s were ignored.

### Description

This message indicates that the errors (TFCHK-009) for unrecognized attributes in the technology file were ignored because the following variable has been set to TRUE.

```
set ignore_tf_error true
```

This allows the tool to support a technology file with new attributes even if the new attributes are not yet recognized by the current tool version.

The following is an example of the message:

```
Information: Unrecognized attributes in technology file tech.tf were
 ignored. (TFCHK-096)
```

Feedback

### What Next

Verify that all of the unrecognized attributes in the technology file are safe to ignore. If the tool should not ignore the technology file errors reported by TFCHK-009, then the ignore_tf_error variable setting should be restored to the default value of FALSE.

---

## TFCHK-097

(warning) ContactCode '%s' with contactCodeNumber '%d' (>%d) ignored in %s.

### Description

This warning message occurs when contactCodeNumber in ContactCode section is out of range. There are two cases: 1) Using pre-2010.12 ICC/MW to open library created by 2010.12 ICC/MW or newer with contactCodeNumber>255. In this case, this ContactCode cannot be used in design and will be ignored. 2) Using 2010.12 ICC/MW or newer to create or open library that have contactCodeNumber>65535. In this case, library can still be generated, but design may not be able to use this ContactCode.

The following table lists a possible reason of this warning message:

```
Section Type            Attribute Value
-------------------------------------
ContactCode             contactCodeNumber > 255   (2010.03 and before)
ContactCode             contactCodeNumber > 65535 (2010.12 and later)
```

The following is an example of an index that is too large and the warning message that is generated.

```
Line 400: ContactCode "via2" {
 Line 401:     contactCodeNumber = 100000
 ...

 Warning : ContactCode 'via2' with contactCodeNumber 100000 (>65536)
 ignored in design. (TFCHK-097)
```

### What Next

Change the index of the specified section in tech file to a valid integer within the range specified in the table above, and then run the command again. ot if you see this message during open_mw_lib, you can ignore it since this contactCode cannot be used in design.

---

## TFCHK-098

(error) %s '%s' has incomplete '%s' defined. (line %d)

Feedback

**Description**

This error message occurs when some tables or values are not defined completely. It including these types of check:

In ContactCode 1) At least one valid Rect/PolygonTbl should be defined for each layer, or none of them should be defined under one contactCode section. 2) CutArrayXSpacing and cutArrayYSpacing must be defined together and their values must be larger than 0.

**What Next**

User should complete the tables/attributes and run the command again.

---

## TFCHK-098w

(warning) %s '%s' has incomplete '%s' defined. (line %d)

**Description**

This error message occurs when some tables or values are not defined completely or related section is missing. It including these types of check:

In ContactCode 1) At least one valid Rect/PolygonTbl should be defined for each layer, or none of them should be defined under one contactCode section. 2) CutArrayXSpacing and cutArrayYSpacing must be defined together and their values must be larger than 0. In DesignRule, if self-aligned via (SAV) related rules are defined, but SAV is not defined in ViaRule section.

In Layer, 1) For rectMinAreaTbl rule, rectMinAreaWidthThresholdTbl should start from minWidth to cover all width ranges;

**What Next**

User should complete the tables/attributes or related sections and run the command again.

---

## TFCHK-099

(warning) Unused attribute '%s' in %s '%s' is ignored and set to zero. (line %d)

**Description**

This warning message occurs when the Rect/PolygonTbl defined for ContactCode with via cell master correctly, cutWidth/cutHeight/EncWidth/EncHeight/minCutSpacing will not be used by router, and it will be set to 0.

Feedback

**What Next**

Remove these values from contactCode with via cell master, and the warning message will not be issued.

---

## TFCHK-100

(error) ContactCode '%s' has combined geometry table and cut array defined. (line %d)

**Description**

In contactCode with via cell master, either geometry tables (Rect/PolygonTbl) or cut array should be defined, but not both. This error message issued when such combined syntax definition detected.

**What Next**

User should check the contactCode and keep only the correct tables or cut array. After making your changes, run the command again.

---

## TFCHK-101

(error) ContactCode '%s' has no layer definition for geometry table %s. (line %d)

**Description**

In contactCode with via cell master, if geometry tables (Rect/PolygonTbl) defined, layer number must be specified prior to corresponding Rect/PolygonTbl.

**What Next**

Define layer number before the geometry table in contactCode. After making your changes, run the command again.

---

## TFCHK-102

(information) '%s' in ContactCode '%s' is not defined, using value of '%s [%g]' instead. (line %d)

**Description**

This information indicates that: When cut array used in contactCode via cell master, if cutArrayXSpacing and cutArrayYSpacing are not defined, value of minCutSpacing can be used to represent the array x/y spacing

**What Next**

This is only an informational message. No action is required.

Feedback

However, if user does not want to use minCutSpacing to represent cut array x/y spacing, please specify actual cutArrayXSpacing and cutArrayYSpacing.

---

## TFCHK-103

(error) Ambiguous '%s' and '%s' are defined in ContactCode '%s'. (line %d)

**Description**

This error message occurs if minCutSpacing, cutArrayXSpacing and cutArrayYSpacing are all defined in via cell master in contactCode, and their values are larger than 0, but not be equal.

**What Next**

User can remove minCutSpacing if want to set different array spacing on x/y direction. User can correct the value of these attributes and run the command again.

---

## TFCHK-104

(warning) 1x1 cut array defined in ContactCode '%s'. (line %d)

**Description**

This warning message occurs when cut array is used in via cell master, but cutArrayNumRows and cutArrayNumCols are both 1.

**What Next**

Assign correct value to these two attributes. User should not define 1x1 cut array, please use contactCode without via cell master instead.

---

## TFCHK-105

(warning) Default contact code '%s' defined as asymmetrical via, the contact code will be ignored. (line %d)

**Description**

This warning message occurs when the contact code defines an asymmetrical via with geometry tables or a cut array but is also marked as a default contact code. The router will not use this contact code.

**What Next**

Remove the isDefaultContact statement or remove the via definition from this contact code, and then rerun the command .

Feedback

- read_tech_file

---

## TFCHK-106

(error) Valid ContactCode not found for %s on Layer '%s'.

### Description

This message occurs when a valid ContactCode is not found in the tech file for the width threshold range from enclosureTbl or when a valid ContactCode is not found that is equivalent to or larger than the enclosures in enclosureTbl. Alternatively, when ContactCodes are found from enclosureTbl but a different set of ContactCodes are found from minCutsTbl, this message also occurs. The definition of the tables are enclosureTbl = (cutName, lowEncWidth, lowEncHeight, upEncWidth, upEncHeight, lowMetalWidth, upMetalWidth) minCutsTbl = (numCuts, cutName, lowMetalWidth, upMetalWidth, area, extension) Please note that the cutName should start with a letter, such as Vsm. Otherwise, you may see this message.

The following is an example of the message:

```
Error : Valid ContactCode not found for threshold [0.1,0.16) on Layer
 'V2'.
```

### What Next

Please add a ContactCode according to the enclosureTbl values or adjust enclosure and/or width values in enclosureTbl. After making your changes, run the command again.

---

## TFCHK-106w

(warning) Valid ContactCode not found for %s on Layer '%s'.

### Description

This warning message occurs when a valid ContactCode is not found in the tech file for the width threshold range from enclosureTbl or when a valid ContactCode is not found that is equivalent to or larger than the enclosures in enclosureTbl. The definition of the tables are

enclosureTbl = (cutName, lowEncWidth, lowEncHeight, upEncWidth, upEncHeight, lowMetalWidth, upMetalWidth)

minCutsTbl = (numCuts, cutName, lowMetalWidth, upMetalWidth, area, extension)

Feedback

When either lower or upper threshold < default or min width and valid ContactCode is not found for the EoU syntax, this message will also occur as Warning. Please note that the cutName should start with a letter, such as Vsm. Otherwise, you may see this message.

The following is an example of the warning message:

```
Warning: Valid ContactCode not found for threshold [0.1,0.16) on Layer
 'V2'.
   (TFCHK-106w)
Warning: Valid ContactCode not found for enclosureTbl =
   (Vsm,0.025,0.025,0.250,0.250,...) on Layer 'V2'. (TFCHK-106w)
```

**What Next**

Add a ContactCode according to the enclosureTbl values or adjust the enclosure and width values in enclosureTbl. After making your changes, run the command again.

---

## TFCHK-107

(error) ContactCode '%s' has unsupported polygon defined, post-flow cannot use this type of contactCode. (line %d)

**Description**

In contactCode with via cell master, non-rectilinear polygon cannot be recognized and used by post-flow correctly. This type of contactCode will not work as intended.

**What Next**

Redefine the contactCode with rectangle or rectilinear polygon and run the command again.

---

## TFCHK-108

(warning) Object '%s' name '%s' exceeds %d characters. (line %d)

**Description**

This warning message occurs when the specified object name in the technology file contains more than the maximum number of characters allowed.

The length limitation of objects name are:

---------- Type Limits ----------
Layer 31 Color 31 Stipple 31 LineStyle 31 Tile 31 CapModel 31 ResModel 31 ContactCode 255 ----------

Feedback

The following is an example of the warning message:

```
Warning : Object 'Layer' name 'thisisatestingcaseforlayernamemorethan32'
exceeds 31 characters. (line 342) (TFCHK-108)
```

**What Next**

The layer name will be truncated to 31 characters and saved into library. All occurrences of the object name in the same tech file will be updated.

Also please review the number of characters of the specified object to make sure it does not exceed the allowed maximum length and then rerun the command.

---

## TFCHK-109

(error) Default ContactCode '%s' on layer '%s' has cut size with no matching cut name found.

**Description**

The via layer has cutNameTbl defined for generalized cut spacing rule, but the specific default contactCode has cutWidth/cutHeight that are not of the values defined in the cutWidthTbl/cutHeightTbl.

This may lead incorrect router behaviour lately.

The following is an example of the error message:

```
Error: Default ContactCode 'via12' on layer 'via1' has cut size with no
matching cut name found. (TFCHK-109)
```

**What Next**

Check the generalized cut spacing rule and the specific default contactCode, correct the technology file, and run the command again.

---

## TFCHK-109w

(warning) Default ContactCode '%s' on layer '%s' has cut size with no matching cut name found.

**Description**

The via layer has cutNameTbl defined for generalized cut spacing rule, but the specific default contactCode has cutWidth/cutHeight that are not of the values defined in the cutWidthTbl/cutHeightTbl.

This may cause router cannot check DRC for the via lately.

Feedback

The following is an example of the warning message:

```
Warning: Default ContactCode 'via12' on layer 'via1' has cut size with no
matching cut name found. (TFCHK-109w)
```

### What Next

Check the generalized cut spacing rule and the specific default contactCode, correct the file and run the command again.

---

## TFCHK-110

(warning) Non-default ContactCode '%s' on layer '%s' has cut size with no matching cut name found.

### Description

The via layer has cutNameTbl defined for generalized cut spacing rule, but the specific non-default contactCode has cutWidth/cutHeight that are not of the values defined in cutWidthTbl/cutHeightTbl.

If the contactCode is a via cell master specified with geometry tables, such as cutLayerRectTbl, the cut size of such a contactCode is not counted in the matching since router does not currently use it

The following is an example of the error message:

```
Warning: Non-Default ContactCode 'via1Ap' on layer 'via1' has cut size
 with
no matching cut name found. (TFCHK-110)
```

### What Next

Check the generalized cut spacing rule and the specific contactCode. If needed, correct cutWidthTbl/cutHeightTbl and/or contactCodes size (cutWidth/cutHeight).

---

## TFCHK-111

(warning) cutNameTbl on layer '%s' has cut name '%s' with no matching ContactCode found.

### Description

The specific layer has generalized cut size defined, but the specific cut width and cut height has no corresponding contactCode found. This warning message can be ignored if user defined the cut size for later use.

Feedback

**What Next**

Add corresponding contactCode with specific cut size and run the command again.

---

## TFCHK-112

(warning) Layer '%s' has duplicate cut sizes defined, '%s' and '%s'. (line %d)

**Description**

There're same cut width and cut height defined in the generalized cut spacing rule in the specific via layer with different cut name. Cut size for different cut name should be unique.

**What Next**

Redefine the cut width/cut height in the generalized cut spacing rule and run the command again.

---

## TFCHK-113

(error) Layer '%s' with mask name '%s' has layer number '%d' exceeding upper limit %d. (line %d)

**Description**

This error is issued since the specified layer has pre-defined mask name, and it is expected to be defined on layers below the upper limit.

These pre-defined mask names are: Metal Layer: poly, metal1 - metal15 Via Layer: polyCont, via1-via14 Back Metal Layer: bmetal1-bmetal3 Back Via Layer: tsv, bvia1-bvia2

Example: Error: Layer 'V13' with mask name 'via13' has layer number '212' exceeding upper limit 187. (line 101).

**What Next**

Redefine the layerNumber attribute, to use number below specified upper limit.

---

## TFCHK-114

(warning) Layer '%s' with layer number '%d' is overriding pre-defined system layer. (line %d)

**Description**

This error is issued since the specified layer was defined with layer number used by pre-defined system layer. The system layer is used by ICC, and overriding may cause issues in post-flow applications, like router.

Feedback

The range for the pre-defined system layer numbers is: 188 ~ 255

Example: Warning: Layer 'TEXT10' with layer number 192 is overriding pre-defined system layer. (line 1024)

**What Next**

Redefine the layerNumber attribute, to use number below specified range.

---

## TFCHK-115

(error) Multiple layers exists with mask name '%s'.

**Description**

This error message occurs when there are multiple layer sections with the specified mask name. This type of mask name can only defined on one physical layer.

The following is an example of the error message:

```
Error : Multiple layers exists with mask name 'mimtop'.
(TFCHK-059)
```

**What Next**

Check all layers with the specified mask name and remove redundant layers. After making your changes, run the command again.

---

## TFCHK-116

(error) Layer '%s' attribute '%s' has an invalid value '%c'.

**Description**

This error message occurs when the value of the specified layer attribute is invalid.

The value of the *routingDirection* attribute for default metal layers shold be 'V' and 'H'

The following is an example of the error message:

```
Error: Layer 'metal3' attribute 'routingDirection' has a
value of 'S'. (TFCHK-116)
```

**What Next**

Change the attribute value of the specified layer to correct value and then run the command again.

Feedback

## TFCHK-117

(error) Layer '%s' attribute '%s' has an invalid value '%s'.

### Description

This error message occurs when the value of the specified layer attribute is invalid.

The value of the *trackMaskOrder* attribute for default metal layers shold be one of values in following list.

```
mask1
mask2
mask1_mask2
mask2_mask1
any
```

The following is an example of the error message:

```
Error: Layer 'metal3' attribute 'trackMaskOrder' has a
value of 'mark'. (TFCHK-117)
```

### What Next

Change the attribute value of the specified layer to correct value and then run the command again.

## TFCHK-118

(error) Attribute '%s' can only be specified in %s Layer (line %d)

### Description

This error message occurs when the attribute is not specified in asked layer.

Following attributes should be defined in Metal layer.

```
trackMaskOrder
routingDirection
trackOffset
```

The following is an example of the error message:

```
Error: Attribute 'trackMaskOrder' can only be specified in
Metal Layer (line 120) (TFCHK-118)
```

### What Next

delete the attribute from the specified layer and then run the command again.

Feedback

## TFCHK-119

(warning) Layer '%s' attribute '%s' is specifid without attribute '%s'!

### Description

This warning message occurs when an attribute is specified alone. it should be set toghether with other attributes. Applications will ignore the attribute. For example, *trackOffSet* must be specified together with *routingDirection*

The following is an example of the error message:

```
Warning: Layer 'M1' attribute 'trackOffset' is specifid without
attribute 'routingDirection'! (TFCHK-119)
```

### What Next

remove the attribute or add the other attibute and then run the command again.

## TFCHK-120

(error) %s '%s' attribute '%s' is assigned an invalid string '%s'. (line %d)

### Description

This error message occurs when the specified section has an unrecognized string value assigned to the specified attribute.

The valid string of attribute cutMaskPattern in ContactCode is : uniform, alternate.

The following is an example of the error message:

```
Error : ContactCode 'Via1' attribute 'cutMaskPattern' is assigned an
 invalid
string 'pattern'. (line 46) (TFCHK-120)
```

### What Next

Change the attribute value of the specified section to a valid value. After changing the value, run the command again.

## TFCHK-121

(error) ContactCode '%s' on cut layer '%s' has unsupported type '%s' of %s defined. (line %d)

### Description

This error message occurs when the specified section has an unsupported value assigned to the specified attribute.

Feedback

For cutArrayMaskPattern, currently zRouter cannot support pattern other than 'uniform' on cut layers with more than two masks.

The following is an example of the error message:

```
Error : ContactCode 'VIA1_VH' on cut layer 'CUT12' has unsupported type
 'alternate'
of cutArrayMaskPattern defined. (line 661) (TFCHK-121)
```

**What Next**

Change the attribute value of the specified section to a valid value. After changing the value, run the command again.

---

## TFCHK-122

(information) >>>Reading technology file %s <<<

**Description**

This information indicates that: Another technology file is included by user input technology file, and it is being loaded into library now. The line number reported after this line is the actual line number in the including file.

**What Next**

This is only an informational message. No action is required.

---

## TFCHK-123

(information) >>>Finish reading file %s <<<

**Description**

This information indicates that: The included technology file has been loaded into library. After this line, all line number reported is the actual line number in user input technology file.

**What Next**

This is only an informational message. No action is required.

---

## TFCHK-124w

(warning) This techfile version contains syntax that can affect correlation to IC Compiler II. It is recommended to use Design Compiler NXT embedded links to IC Compiler II for correlation with this techfile release version.

Feedback

**Description**

This information indicates that: The included technology file has an attribute which is part of the ignoredWithWarning list

**What Next**

No action is required.

# TIM

## TIM-001

(Warning) Case propagation conflict at pin '%s'. User value of '%s' will be used.

**Description**

A propagated case value is different from the value given to set_case_analysis at this pin. The propagated value will be ignored and the value from the constraint will be used.

**What Next**

Check that your constraint files are meant to be used for this mode.

## TIM-002

(Warning) Case propagation conflict at inout pin '%s'. The %s value of '%s' will be used.

**Description**

A propagated case value to the driver side of a bidirectional pin conflicts with a propagated case value from the load side of a bidirectional pin. The message includes which side and value won.

**What Next**

Check that your constraint files are meant to be used for this mode.

## TIM-003

(Warning) Case propagation conflict from multiple drivers of pin: '%s'. A value of zero being used

**Description**

A load pin of a multi-driven net, has conflicting case values from the net drivers. The value of zero will be used.

Feedback

**What Next**

Check that your constraint files are meant to be used for this mode.

---

## TIM-004

(Warning) '%d' updated moded-ETM instances do not have set_cell_mode values in design mode %s. The first %d instances are: %s

**Description**

Moded ETM library cells are created with the ETM for of ICC2 Library Manager. Each instance of a moded ETM must have a set_cell_mode set on it in order for the timing to be correct. The initialial timing update checks all instances of moded-ETM instance to check if they have set_cell_mode. Incremental updates will only report instances that have been changed by case propagation or set_cell_mode or reset_cell_mode commands.

Use the command report_cell_modes on to see what the available values are for an instance.

**What Next**

use the command set_cell_mode to specify the cell mode that should be used for instances of moded ETM cells.

---

## TIM-005

(Warning) Case value conflict at pin '%s'. The new value of '%c' will be used the moded-ETM value has been over written.

**Description**

A set_case_analysis statement has been given on a moded-ETM cells and the value given is different than the case value for the current mode.

**What Next**

If you want to restore the moded-ETM value you must remove_case_analysis on the pin and then set_cell_mode on the cell.

---

## TIM-006

(Warning) removing moded-ETM case value at pin '%s'.

**Description**

A remove_case_analysis statement has been given on a moded-ETM cell output pin that had a case value in the current_cell_mode from the library.

Feedback

### What Next

If you want to restore the moded-ETM value, you must use reset_cell_mode and then set_cell_mode again on the cell

---

## TIM-007

(Warning) The value '%s' for option '%s' is not supported and will be ignored.

### Description

The given option value is valid but not supported yet. The option value will be ignored.

### What Next

Use valid supported values, please check man pages of related commands.

---

## TIM-010

(Warning) From_pin '%s' is not a timing startpoint and will be ignored.

### Description

The pin was given with the *-from*, *-rise_from*, or *-fall_from* options, but it is not a proper timing startpoint. It will be ignored for reporting. This can happen if a register's D or Q pin is given instead of its clock pin, which is the actual timing startpoint. It can also happen for a port if the port has no *set_input_delay* or other constraint.

### What Next

Choose the correct startpoint pin, or add a constraint to this pin.

### See Also

- report_timing
- get_timing_paths
- set_input_delay

---

## TIM-011

(Warning) To_pin '%s' is not a timing endpoint and will be ignored.

### Description

The pin was given with the *-to*, *-rise_to*, or *-fall_to* options, but it is not a proper timing endpoint. It will be ignored for reporting. This can happen if a register's clock or Q pin is

Feedback

given instead of its D pin, which is the actual timing endpoint. It can also happen for a port if the port has no *set_output_delay* or other constraint.

**What Next**

Choose the correct endpoint pin, or add a constraint to this pin.

**See Also**

- report_timing
- get_timing_paths
- set_output_delay

---

## TIM-012

(Warning) Auto-inferred clock-gating checks for setup and hold violations will be disabled. Note that it's not consistent with PrimeTime's default behavior.

**Description**

Auto-inferred clock-gating checks on objects that have not also had a set_clock_gating_check command run against them will be disabled.

Note that it's not consistent with *PrimeTime*'s default behavior. But it has better correlation with *IC Compiler*.

**See Also**

- time.clock_gating_user_setting_only

---

## TIM-013

(Information) Checking for disabled timing arcs because of auto loop breaking for mode

**Description**

Timer automatically detects and breaks the loops in the timing paths. The loops are broken through disabling the timing arcs. If any such disabled arcs are found for a mode, these are reported with the recommendation to set the user constraint set_disable_timing before doing the timing update.

**What Next**

Set the user constraint set_disable_timing to disable these arcs to have consistent timing across the flow and between sessions.

Feedback

## TIM-014

(Warning) Use set_disable_timing [ get_timing_arcs -from { %s } -to { %s } ] to avoid loop in the timing path.

### Description

Timer automatically detects and breaks the loops in the timing paths. The loops are broken through disabling the timing arcs. If any such disabled arcs are found for a mode, these are reported with the recommendation to set the user constraint set_disable_timing before doing the timing update.

### What Next

Set the user constraint set_disable_timing to disable these arcs to have consistent timing across the flow and between sessions.

SH "SEE ALSO"

```
TIM-013
TIM-015
```

## TIM-015

(Information) %u arcs found disabled for mode

### Description

Timer automatically detects and breaks the loops in the timing paths. The loops are broken through disabling the timing arcs. If any such disabled arcs are found for a mode, these are reported with the recommendation to set the user constraint set_disable_timing before doing the timing update.

### What Next

Set the user constraint set_disable_timing to disable these arcs to have consistent timing across the flow and between sessions.

SH "SEE ALSO"

```
TIM-013
TIM-014
```

## TIM-016

(Information) The parasitics of virtually routed nets are automatically saved to RC Cache.

Feedback

### Description

By default the parasitics of virtual routed nets (nets which are unrouted) are not saved to RC Cache. However if majority of nets in the design are routed, then the parasitics of unrouted nets as determined based on virtual routing are also saved to RC Cache.

---

## TIM-017

(Information) The parasitics of virtually routed nets will be automatically saved to RC Cache during next timing update.

### Description

By default the parasitics of virtual routed nets (nets which are unrouted) are not saved to RC Cache. However the optimization clients of timer have forced the option to save the parasitics of virtually routed nets to RC Cache during next timing update.

---

## TIM-018

(Information) Auto loop-breaking disables the arc from '%s' to '%s' in mode '%s' which originally disabled by case-analysis.

### Description

Timer automatically detects and breaks the loops in the timing paths. Sometimes, to avoid aggressive optimization, auto loop-breaking still breaks the arc in the loops which originally has been disabled by case-analysis.

### What Next

No action needed.

SH "SEE ALSO"

```
TIM-013
TIM-014
```

---

## TIM-019

(Warning) The ignore threshold of composite aggressor is larger than per-aggressor filtering threshold. This may lead to over-filtering.

### Description

In composite aggressor mode, the per-aggressor threshold is the largest of *time.si_filter_per_aggr_noise_peak_ratio*, *time.si_xtalk_composite_aggr_noise_peak_ratio*, and *set_scenario_si_filtering*. The current ignore threshold determined by

Feedback

*time.si_xtalk_composite_aggr_ignore_noise_peak_ratio*, is larger than the per-aggressor threshold. It may lead to over-filtering so it's bounded by the per-aggressor threshold.

**What Next**

Check if the thresholds are expected, set per-aggressor filtering threshold and ignore threshold properly.

SH "SEE ALSO"

```
time.si_filter_per_aggr_noise_peak_ratio(3)
time.si_xtalk_composite_aggr_noise_peak_ratio(3)
time.si_xtalk_composite_aggr_ignore_noise_peak_ratio(3)
time.si_xtalk_composite_aggr_mode(3)
set_scenario_si_filtering(2)
```

---

## TIM-020

(warning) The option '%s' is ignored when specified with option '%s'.

**Description**

The listed command options are exclusive. If both are given, the first one will be ignored.

**What Next**

Look at the manpage for this command for more information on command options.

---

## TIM-021

(Warning) No timing paths pass through -through pin set %d.

**Description**

One of the -through pin sets does not contain any timed pins, so no timing paths pass through it. This will prevent commands such as report_timing or get_timing_paths from finding any paths.

**What Next**

Edit the command's -through options so that every -through set contains at least one timed pin, or remove the problematic -through set.

**See Also**

- report_timing
- get_timing_paths

Feedback

## TIM-022

(Information) MIS is not enabled in scenario %s because all clocks are ideal.

### Description

When MIS (multi-input-switching) feature is turned on, the hold timing could be significantly impacted. Before clock trees are synthesized and propagated, doing MIS analysis is not desired because the arrival window is inaccurate without accurate clock latency/CRPR, etc.

### What Next

You don't need to do anything, MIS will be automatically turned on when clocks are made propagated in later stage of the flow.

### See Also

- time.enable_multi_input_switching_analysis

## TIM-023

(error) Can't move cell %s, because %s

### Description

This message occurs during reparent_cells when moving the cell violates the following TIM constraints: (1) moving a dontTouch cell; (2) moving a cell with not-allowed sizeOnly reason The detailed reason is listed in this message.

### See Also

- reparent_cells

## TIM-030

(warning) The exclusivity set with '%s' option on the output pin '%s' is ignored, due to the violation of condition %d.

### Description

This warning message is issued when the exclusivity relationship defined on an output pin is not exercised due to one or more of the following conditions:

1. No clock reaches the output pin of the exclusivity from its inputs.
2. There is a clock reaching the select lines of the MUX exclusivity.

Feedback

3. All the select lines of the MUX exclusivity are defined as constants.
4. Only one input pin of the MUX exclusivity has clock(s).
5. The output pin of the MUX exclusivity is a clock source.
6. Maximum number of MUX levels exceeded.

For 6, set time.max_exclusive_mux_levels (default is 3) to desired value. Larger value can increase memory required. A value greater than 8 is not recommended.

WHAT NEXT Verify if the warning message for the pin is correct and expected.

---

## TIM-031

(Warning) The option '%s' is not supported and will be ignored.

**Description**

The given option is valid but not supported yet. The option will be ignored.

**What Next**

Use valid supported options, please check man pages of related commands.

---

## TIM-032

(Warning) The '%s' command is not supported and will be ignored.

**Description**

The given command is valid but not supported yet. The command will be ignored.

---

## TIM-034

(Information) Muxed clock exclusivity enabled for mode %s with %d exclusive pins.

**Description**

Muxed clock exclusivity enabled by either set_clock_exclusivity command or time.enable_auto_mux_clock_exclusivity app option.

**What Next**

Check reported information is as expected. If number of exclusive pins is too high then runtime will be adversely impacted. Reduce exclusive pins to improve runtime. If number of exclusive pins is zero then no valid exclusive clock muxes were found.

Feedback

## TIM-035

(Information) The set_clock_balance_points command, when using "-consider_for_balancing true", becomes scenario-specific and therefore expects either "-mode" or "-corner" or "-scenario" to be used. If none of these is specified then the balance point will be applied to the current_scenario.

### Description

Balance-delays are completely scenario specific and expects either "-mode" or "-corner" or "-scenario" options. In none of them is supplied, tool applies this command to current_scneario. In absence of current_scenario, it will issue an error message.

### What Next

Look at the manpage for this command for more information on command options.

## TIM-050

(Information) Timer using '%s'.

### Description

This message shows some timing related features that used in current IC Compiler-II. These features include Zero-interconnect delay calculation, PrimeTime delaly calculation, SI(Signal Integrity), Timing Window Analysis, AWP(Advanced Waveform Propagation), AOCV(Advanced On-Chip Variation), POCV (Parametric On-Chip Variation), CRPR(Clock Reconvergence Pessimism Removal), LLE (Local Layout Effect),

For LLE feature, LLE on means at least one cell has the following annotations: 1) physical parameters annotation 2) elelctrial parameters annotation 3) the corresponding pane of the its lib cell has LLE related table data.

## TIM-051

(warning) The option '%s' will be ignored because %s.

### Description

This warning denotes that the command option will be ignored because one or more prerequisites are not satisfied.

### What Next

The option will be ignored because it doesn't take effect in the current session settings. If this is not intended, please check if the values of other related options or app_options are appropriate.

Feedback

## TIM-052

(warning) Interpolation/Extrapolation resulted in a negative sigma. Sigma will be clipped at zero. ('%s')

### Description

The process of interpolation or extrapolation resulted in a negative sigma. By definition, the sigma must be greater than or equal to zero.

### What Next

Check the sigma tables.

### See Also

- time.pocvm_enable_analysis

## TIM-053

(Information) %s: the %s command will override the %s app option.

### Description

The command and the app option can affect same feature in ICC2 and the command has higher priority than the app option. This message shows the command will override the app option when the comamnd is set after the app option.

## TIM-054

(Information) %s: the %s command will take precedence over the %s app option.

### Description

The command and the app option can affect same feature in ICC2 and the command has higher priority than the app option. This message shows the command will take precedence over the app option when the app option is set after the command.

## TIM-055

(Error) %s not turned on for the scenario '%s'.

### Description

Both setup and hold analyses are required for getting timing window information in *write_rh_file*.

Feedback

### What Next

Check scenario status.

### See Also

- set_scenario_status

---

## TIM-056

(Error) rail analysis failed, cannot do timing update based on IR voltage drop. Will do regular timing update.

### Description

This error will only appear during timing update when time.enable_dvd_analysis is true but some settings for analyze_rail is not configured correctly.

### What Next

If you want to do timing update considering ir drop, check the error or warning message printed by analyze_rail before timing update and fix the related problems. If you want to do timing update without considering ir drop, just disable the time.enable_dvd_analysis app option.

### See Also

- analyze_rail

---

## TIM-101

(Warning) No physical information exists for design '%s'. Zero interconnect delay is used in timing analysis.

### Description

Either the physical information for the design is not loaded or it is incorrectly initialized. The net parasitics can not be calculated and the timer will use the zero interconnect delay for net estimation.

### What Next

Check the set up for the design. Check if the design was placed correctly and has valid core box defined.

Feedback

## TIM-102

(Warning) The extractor can not be initialized for design '%s'. Zero interconnect delay is used in timing analysis.

**Description**

Either the physical information for the design is not loaded or it is incorrectly initialized. The net parasitics can not be calculated and the timer will use the zero interconnect delay for net estimation.

**What Next**

Check the set up for the design. Check constraint corner's parasitic tech setup in run script. Run report_parasitic_parameters to make sure all corners are correctly set.

## TIM-103

(Warning) The extractor can not be initialized for block '%s'.

**Description**

Either the physical information for the block is not loaded or it is incorrectly initialized. The extractor for the top block will be used to estimate the nets within the block.

**What Next**

Check the set up for the block. Check if the design was placed correctly and has valid core box defined.

## TIM-104

(Information) Coupling caps annotated for %u nets in block '%s' (Mem = %.4f MB).

**Description**

Information about the coupling caps annotated from an abstract block for the nets retained in the abstract netlist. The annotated coupling caps are used in signal integrity (SI) analysis during the timing update. The message also prints the total memory requirement for the annotated coupling caps.

## TIM-105

(Warning) No physical information exists for design '%s'. Extractor is not initialized for this block.

Feedback

**Description**

Either the physical information for the design is not loaded or it is incorrectly initialized. If the top block has physical data, the extractor from the top block is used to estimate the nets in the sub-block. This may result in inaccurate timing for the nets inside the sub-block. If crosstalk analysis has been enabled for timing, the nets crossing the physical hierarchy into this block will have their coupling caps disabled and may encounter issues during parasitics stitching across the physical hierarchy.

**What Next**

Check the set up for the design. Check if the design was placed correctly and has valid core box defined.

---

## TIM-106

(Warning) The parasitic stitching across the physical hierachy is skipped for net '%s'.

**Description**

The tool failed to stitch the parasitics across the physical hierarchy for the net. This may either be related to the failure to calculate the parasitics for a sub-block net or dangling net connections. The timer will revert to flat net based estimation for the net and ignore the physical hierarchy. If crosstalk analysis is enabled, it is strongly advised to fix these warnings before proceeding. Otherwise the coupling on the net may be ignored.

**What Next**

Check the set up for the design. Check if the sub-blocks were placed correctly and have valid core box defined. Check if the net connections are defined properly.

---

## TIM-107

(Warning) The aggressor block net '%s' is not valid and is skipped from crosstalk analysis of victim net '%s'

**Description**

The victim net is coupled to an aggressor block net which is not present. This will happen because of dangling connections at the physical hierarchy.

**What Next**

Check the set up for the design. Check if the design has physical hierarchy and the net connections are defined properly.

Feedback

## TIM-108

(Warning) The aggressor '%s [flatNetId=%u]' has delay annotated and is skipped from crosstalk analysis of victim net '%s'.

### Description

The design has physical hierarchy such that net delays have been annotated on the aggressor net. If the delays are annotated on the net, then the base parastics are not stitched for the net. As such we cant stitch the coupling caps for this net in the coupled network.

### What Next

Check the set up for the design. If we created and linked an abstract for the block containing the aggressor net, check if there is need of annotating the delays on the aggressor net.

## TIM-109

(Warning) The aggressor '%s [flatNetId=%u]' is ideal and is skipped from crosstalk analysis of victim net '%s'.

### Description

The design has physical hierarchy and the aggressor net is defined as an ideal net. If the net is defined as ideal, then the base parastics are not stitched for the net. As such we can't stitch the coupling caps for this net in the coupled network.

### What Next

Check the set up for the design.

## TIM-110

(Warning) The aggressor '%s [flatNetId=%u]' is HFN and is skipped from crosstalk analysis of victim net '%s'.

### Description

The design has physical hierarchy and the aggressor net is a high fanout net (HFN). If the net is HFN, then the base parastics are not stitched for the net. As such we can't stitch the coupling caps for this net in the coupled network.

### What Next

Check the set up for the design. Take care of processing/synthesizing the HFN nets before turning on the crosstalk analysis.

Feedback

## TIM-111

(Information) Update timing completed net estimation for all the timing graph nets

**Description**

Full update timing was invoked on the design which led the tool to estimate all the nets in the timing graph. If any timing graph net is across the physical hierachy, the parasitics from the constituent sub-blocks nets are stitched before estimating the net.

## TIM-112

(Information) Net estimation statistics: timing graph nets = %u, routed nets = %u, across physical hierarchy nets = %u, parasitics cached nets = %u, delay annotated nets = %u, parasitics annotated nets = %u, multi-voltage nets = %u.

**Description**

Show the full net estimation statistics with respect to timing graph net count.

## TIM-113

(Warning) Incremental crosstalk analysis is limited to post route optimization for designs with physical hierarchy.

**Description**

When you perform crosstalk analysis on designs with physical hierarchy, the tool stitches together the coupling capacitances on nets across the physical hierarchy during a full timing update. Postroute optimization on these cross-physical-hierarchy nets also updates the coupling capacitances for various on-route optimization techniques such as buffer insertion and buffer deletion. Postroute optimization should not perform off-route optimization on these cross-physical-hierarchy nets and do the incremental timing update.

**What Next**

Check if crosstalk analysis has been accidently enabled in the flow before running postroute optimization. The *time.si_enable_analysis* application option controls crosstalk analysis.

## TIM-114

(Information) Crosstalk analysis has been disabled.

Feedback

**Description**

Crosstalk anslysis has been disabled because of one of the following reasons: 1. Coupling caps does not exist for the design after full extraction. 2. Top design is using zero interconnect delay mode.

**What Next**

Check if the design is actually routed. Check if crosstalk analysis has been turned ON during pre-route flow. Check if zero interconnect mode has been specified. Check the design set up to make sure that extractor can be initialized for top design. If user intention is not to do crosstalk analysis then disable the crosstalk analysis through app option time.si_enable_analysis.

---

## TIM-115

(Warning) Stale parasitics found in RC Cache for net connected to driver %s.

**Description**

The net connections in the timing graph and the stored parasitics are not consistent for the net. The timer will discard the stored parastics and do the virtual route based extraction for the net.

---

## TIM-116

(Warning) The net's leaf connection in the timing graph is missing in the net's parasitics.

**Description**

The net connections in the timing graph and the parasitics are not consistent for the net. The delay calculation is not performed for the net arc with missing driver or load and zero net delays are used.

---

## TIM-117

(Warning) Coupling caps are already annotated for %d nets in block '%s'.

**Description**

The coupling caps have already been annotated for the block. It is expected that earlier annotated coupling caps are removed before trying to reannotate the coupling caps for the same block.

**What Next**

See message TIM-104.n in the log file.

Feedback

## TIM-118

(Information) In-design Star RC extraction was done.

**Description**

Users have specified to use in-design Star RC extraction. Star RC extraction was invoked and completed successfully. The timing for the design will be based on parasitics calculated from Star RC extraction.

## TIM-119

(Information) The netlist change observers are disabled for incremental timing updates.

**Description**

Timer logs the incremental netlist changes if the netlist observers are enabled for incremental timing updates. By default these observers are always enabled. If netlist change observers are disabled, the optimization engine updates the timing graph explicitly corresponding to netlist changes before invoking the incremental timing update.

**What Next**

See also TIM-120, TIM-121

## TIM-120

(Information) The netlist change observers are enabled for incremental timing updates.

**Description**

Timer logs the incremental netlist changes after the netlist observers are enabled for incremental timing updates. By default these observers are always enabled. If netlist change observers are disabled, the optimization engine updates the timing graph explicitly corresponding to netlist changes before invoking the incremental timing update.

**What Next**

See also TIM-119, TIM-121

## TIM-121

(Information) The timing has been updated before disabling netlist and extraction change observers.

Feedback

**Description**

Timer and extractor logs the incremental netlist changes after the netlist and extraction observers are enabled for further incremental timing updates. By default these observers are always enabled. If netlist and extraction change observers are disabled, the optimization engine updates the timing graph and parasitics explicitly corresponding to netlist changes before invoking the incremental timing update.

**What Next**

See also TIM-119, TIM-120

---

## TIM-122

(Information) %u nets have annotated parasitics in block %s.

**Description**

The parasitics for the block nets are annotated from linked abstract block. If any block net in the linked abstract block does not have annotated parasitics, it will be estimated based on virtual routing.

---

## TIM-123

(Information) The net parasitics of block %s are cleared.

**Description**

The net parasitics for the block are stored in RC cache repository. The extraction engine stores the extracted parasitics for the routed nets in RC cache for the block. The unrouted nets are estimated based on virtual routing and are also stored in RC cache. If the timer clients forces a full timing update or the design state changes, both the timing delay data and the stored net parasitics are cleared. The net parasitics will be re-calculated (extracted) during next timing update.

---

## TIM-124

(Information) RDE mode is turned %s.

**Description**

Route driven estimate mode is changed in the flow. The design will undergo full extraction and the current timing delay data will be cleared.

Feedback

## TIM-125

(Information) The stitching and editing of coupling caps is turned %s for design '%s'.

**Description**

The extractor extract the coupling caps per physical block in the design. If SI analysis is turned on, coupling caps on the nets crossing the physical hierarchy are stitched on the parasitic network. The coupling caps are also edited during post route optimization flow corresponding to on-route optimization changes.

## TIM-126

(Information) The netlist change observers are disabled for incremental extraction.

**Description**

Extractor logs the incremental netlist changes if the netlist observers are enabled for incremental extraction. By default these observers are always enabled. If netlist change observers are disabled, the optimization engine updates the parasitics explicitly corresponding to netlist changes before invoking the incremental timing update.

**What Next**

See also TIM-119, TIM-120, TIM-121, TIM-127

## TIM-127

(Information) The netlist change observers are enabled for incremental extraction.

**Description**

Extractor logs the incremental netlist changes after the netlist observers are enabled for incremental extraction and timing updates. By default these observers are always enabled. If netlist change observers are disabled, the optimization engine updates the parasitics explicitly corresponding to netlist changes before invoking the incremental timing update.

**What Next**

See also TIM-119, TIM-121

## TIM-128

(Warning) The pin '%s' has overflow coordinates.

**Description**

The pin location is close to min/max integer. The virtual router will not run.

Feedback

**What Next**

Check the set up for the block. Check if the design was placed correctly.

---

## TIM-129

(Warning) For computing a common base period for a number of clocks ICC2 timer limits the waveform expansion of the smallest period to be no more than 1000 times and the waveform expansion of the largest period to be no more than 101 times. Since the largest period is too large compared to the smallest period, no common base period is possible satisfying these limits, and ICC2 timer has taken the largest period as the common base period but still has not expanded the smallest period beyond its limit. In certain situations, this can cause paths between these clocks to be unconstrained.

**Description**

In certain situations, this can cause paths between these clocks to be unconstrained.

---

## TIM-130

(Warning) There is no net conneted to term %s, skip it. This driver will be excluded from analyze_subcircuit analysis.

**Description**

Specify the term that has no nets connected to it, skip it

**What Next**

No action needed.

---

## TIM-131

(Warning) The pin %s is an internal pin, ignore it, and no measurement statement will be generated for simulation.

**Description**

Skip internal pins when tracing clock tree and data tree, not include them in SPICE simulation and analyze_subcircuit

**What Next**

No action needed.

Feedback

## TIM-132

(Warning) Moded graph is not initialized for constraint mode %s.

**Description**

Specify the constraint mode for which moded graph is not initialized

**What Next**

No action needed.

## TIM-200

(Warning) Update timing will revert to use native delay calculator.

**Description**

Even though the application option 'time.use_pt_delay' to use primetime delay has been turned on, timer can not use the primetime delay.

**What Next**

Check if the library DBs are available for the design with check_dbs command. Check if the design is routed. Check if the search path is corectly specified to find the library DB files.

## TIM-201

(Information) Update timing is using PrimeTime delay calculation.

**Description**

The application option 'time.use_pt_delay' to use primetime delay is a no-op. This app option will be deprecated soon.

## TIM-202

(Warning) DB file '%s' does not match NDM.

**Description**

The DB file being loaded is not same as the one used to generate the NDM. This inconsistency could result in issues during timing update with primetime delay calculation.

Feedback

**What Next**

Check if the DB file being loaded is correct. Regenerate NDM to make it consistent wth the available DBs.

---

## TIM-203

(Warning) The DB library object '%s' could not be found in NDM library.

**Description**

The DB libcell or libpin could not be found in the NDM library. This could be due to inconsistency between NDM and DB.

**What Next**

Check if the DB file being loaded is correct. Regenerate NDM to make it consistent wth the DBs.

---

## TIM-204

(Warning) Advanced receiver model has not been enabled for detailed routed design.

**Description**

Advanced reciever model has not been enabled for detailed routed design. For improving accuracy of delay calculation and to correlate with PrimeTime, it is recommended to set the application option 'time.enable_ccs_rcv_cap' to true.

**What Next**

Enable time.enable_ccs_rcv_cap for signoff accurate delay calculation.

---

## TIM-205

(Warning) Invalid user port delay or slew threshold setting, use default setting.

**Description**

The delay and slew threshold setting must meet some basic conditions: low slew threshold < 0.5, high slew threshold > 0.5 low slew threshold = 1 - high slew threshold low slew threshold < input delay threshold high slew threshold > input delay threshold Otherwise, this warning message will be issued and timing calculation will use default delay and slew threshold.

The delay and slew threshold settings are specified by following app options: time.port_input_threshold_fall time.port_input_threshold_rise

Feedback

time.port_slew_lower_threshold_rise time.port_slew_upper_threshold_rise time.port_slew_lower_threshold_fall time.port_slew_upper_threshold_fall

**What Next**

Check delay and delay threshold settings with report_app_options

---

## TIM-206

(Warning) A new advanced waveform propagation engine is available for better timing correlation. Set time.awp_compatibility_mode to false to enable the new engine.

**Description**

Starting from N-2017.09, a new AWP engine is available in ICC2. The new engine is more accurate for advanced nodes and ultra low voltage designs. It requires libraries built by M-2016.12-SP2 or later lm_shell. To switch to the new engine, use set_app_options -as_user_default -list {time.awp_compatibility_mode false}

**See Also**

- time.awp_compatibility_mode

---

## TIM-207

(Warning) Libraries do not have CCS noise model for accurate waveform analysis in advanced waveform propagation mode.

**Description**

When advanced waveform propagation analysis is enabled, it is required that the stage driver cell has CCS noise model(s) for its timing arcs in terms of either arc-based or pin-based CCS noise model(s). When such CCS noise model(s) are not present in the library, analysis with desired accuracy cannot be performed.

**What Next**

Fix the library to ensure that all library cell timing arcs have either arc-based or pin-based CCS noise models.

**See Also**

- time.delay_calc_waveform_analysis_mode
- time.awp_compatibility_mode

Feedback

## TIM-208

(Warning) Unexpected large derate value ecountered for arc delays. Timing results may not be accurate.

### Description

Derate value of equal to or larger than 2 has been specified. Delays calculated for hold paths may not be accurate.

### What Next

Check and fix the specified derate values.

## TIM-210

(Information) Update timing is using PrimeTime SI.

### Description

The application option 'time.use_pt_si' to use primetime crosstalk analysis has been turned on and timer is using the PrimeTime crosstalk analysis engine.

## TIM-214

(Information) Delta delay estimation has been turned on.

### Description

Timer estimates delta delays for global-routed designs when the signal integrity analysis has been enabled by using the *time.si_enable_analysis* app option. The delta delays are estimated and added to the net delays. Delta delay estimation is not done for the clock network.

### What Next

Please set *time.si_enable_analysis* to false to turn off the estimation of delta delays for global routed designs.

### See Also

- time.si_enable_analysis

## TIM-220

(Warning) High timing complexity detected at endpoint '%s' defined upon mode '%s'!

Feedback

**Description**

This message indicates design timing complexity is very high, at the problem endpoint, the mode total internal timing data number is huge and it exceeds one big threshold. This could result in very slow runtime.

**What Next**

Check the problem mode constraint definition at the problem endpoint, reduce number of constraints.

---

## TIM-260

(Warning) Library %s is pre-18.06 version %u.%u, Correlation with Primetime can be low.

**Description**

ICC2 Primetime delay calculation can work with reference library built by version later than 2018.06 only. If reference library is built before 2018.06, delay calculation can have poor corrleation with Primetime.

**What Next**

Rebuild the reference library with library manager version later than 2018.06, or turn on library configuration app option lib.configuration.update_timing_view_for_pt_delay

---

## TIM-261

(Warning) Library %s is pre-17.09 scaling library, Please switch to using define_scaling_lib_group with 18.06 libraries.\n"

**Description**

ICC2 Primetime delay scaling calculation can't work with the library manager scaled pane which is built by pre-17.09 library manager.

**What Next**

rebuild the reference library with 2018.06 or later version, use define_scaling_lib_group in ICC2 define the scaling library group.

---

## TIM-262

(Warning) Library %s has ETM mode: '%s' pane %d, library is not supported for pt_delay mode.

Feedback

**Description**

ICC2 Primetime delay scaling calculation can't work reference library created by pre-2018.06 library manager. It will revert to native delay calculation.

**What Next**

rebuild the reference library with 2018.06 or later version.

---

## TIM-263

(Error) Library %s pane %d is source pane for two scaling pane %d and %d

**Description**

One corner pane can be source pane of only one scaling pane. if user puts one db in two define_scaling_lib_group command, it will issue this message.

**What Next**

Check the given pane id in report_lib command, and correct user script define_scaling_lib_group command.

---

## TIM-351

(Warning) The hierarchical cell named '%s' that is being ungrouped has derate. This derate will be set on the lower level leaf cells if the leaf cell does not have a derate itself. This may cause timing inconsistency before and after ungrouping.

**Description**

By default, during ungroup, timing derate defined upon original hierarchical-cell will be copied to low-level leaf-cells.

If low-level leaf-cells already have some pre-defined derate settings, ungroup will not overwrite them.

**What Next**

No action needed.

---

## TIM-352

(Error) No replacement pins could be found to inherit constraints from constrained-pin '%s'!

Feedback

**Description**

During ungroup, timing-constraints defined upon hierarchical-pins/hierarchical-cell will be copied to corresponding replacement leaf-pins. However, for some reason, we can't find appropriate leaf-pins to receive the original timing-constraints.

**What Next**

Remove timing-constraints or enable ungroup buffer-adding by changing variable time.ungroup_allow_new_buffer as true.

---

## TIM-353

(Error) Can't create new-buffer to inherit constraints from constrained-pin '%s'!

**Description**

During ungroup, timing-constraints defined upon hierarchical-pins/hierarchical-cell will be copied to corresponding replacement leaf-pins. However, for some reason, we can't find appropriate leaf-pins to receive the original timing-constraints.

This error happens when tool tries to create some new-buffer which will be used to inherit timing-constraints. The error could be due to below reasons, 1) Tool can't find appropriate buffer-cell from library. 2) Tool hits internal fatal error when adding this new-buffer.

**What Next**

Check timing-constraints and make sure they have been set correctly. Check library files and make sure appropriate buffer-cells provided.

---

## TIM-354

(Error) Reject ungroup due to ('%s') defined upon '%s'!

**Description**

There are some timing-constraints which block the hierarchical-cell being ungrouped.

Some timing-constraints defined upon this hierarchical-cell could be lost if we continue to do ungroup.

**What Next**

Remove all timing-constraints which block the ungroup if you hope to continue.

---

## TIM-355

(Warning) Detect conflict constraints '%s'%sdefined upon '%s'%s.

Feedback

**Description**

There are conflict constraints defined upon some hierarchical cell/pins.

Tool will automatically resolve the conflict without the penalty of Qor-change.

**What Next**

No action needed.

---

## TIM-356

(Error) Constraints '%s' upon '%s' conflicts with constraints '%s' upon '%s'.

**Description**

There are conflict constraints defined upon two hierarchical cell/pins.

To avoid Qor change before/after ungroup, ungroup will stop once conflict constraints have been detected between original hierarchical-pin and target replacement leaf-pins.

**What Next**

To resolve the conflict, remove conflict constraints or enable 'time.ungroup_allow_new_buffer'.

---

## TIM-357

(Error) Cannot preserve timing constraints on IO pin '%s' during ungroup.

**Description**

Timing can't preserve the constraints defined upon IO hierarchical pin.

**What Next**

To resolve the error, you can remove the constraints upon IO pin.

---

## TIM-358

(Error) Reject ungroup due to unsupported constraints '%s' defined upon '%s'!

**Description**

Timing can't preserve the constraints defined upon specified objects due to unsupported constraints.

**What Next**

To resolve the error, you can remove those unsupported constraints before ungroup.

Feedback

## TIM-400

%sTIM-400%s (Warning) Timer query %s made when %s timer is out-of-date.

### Description

Timing analysis is outdated or non-deterministic because netlist changes are not consumed by the timer yet.

### What Next

Report this problem with error code ID and query information to Synopsys.

## TIM-666

(Warning) CCS pin capacitance data is not present in the '%s' reference library.

### Description

The tool issues this warning message when the timer is configured to use CCS pin capacitance data (the *time.enable_ccs_rcv_cap* application option is *true*) and the specified reference library contains incomplete CCS pin capacitance data. Incomplete CCS pin capacitance data occurs when the library source files contain CCS pin capacitance data but the reference library is created with a version of lm_shell prior to version K-2015.06-SP3.

### What Next

Recompile the specified reference library with version K-2015.06-SP3 or later of lm_shell.

### See Also

- time.enable_ccs_rcv_cap

## TIM-800

(Warning) Ignoring time.pba_optimization_mode setting 'none' as optimization already done with pba_mode '%s'.

### Description

Post route-optimization has been done with either path or exhaustive mode.
Default timing reports or subsequent optimization cannot be changed to GBA mode (time.pba_optimization_mode none). GBA timing does not provide any value once PBA optimization has been done and can lead to confusion and non-convergent optimization.

Feedback

**What Next**

Change the time.pba_optimization mode to either path or exhasitive.

---

## TIM-995

(Error) Timer unexpected state: '%s'

**Description**

Timer has some basic assuptions, if any assumption is violated, tool will issue this error message.

**What Next**

Report this problem with state information to Synopsys.

---

## TIM-998

(Error) Timer unexpected state: error code '%d', state information: '%s'

**Description**

Timer has some basic assuptions, if any assumption is violated, tool will issue this error message.

**What Next**

Report this problem with error code ID and state information to Synopsys.

---

## TIM-999

(Warning) Timer unexpected state: error code '%d', state information: '%s'

**Description**

Timer has some basic assuptions, if any assumption is violated, tool will issue this error message.

**What Next**

Report this problem with error code ID and state information to Synopsys.

Feedback

# TL

## TL-100

(error) Different instances of block reference %s are bound to different views. Skipping further checks on the Block.

### Description

Multiple Instantiated Block instances are bound to different views. For the TopLevel flow, all the Multiple Instantiated Block instances should be bound to one view of the block.

### What Next

Please change the view of the block instances using change_abstract/change_view so that they are bound to one view only.

### See Also

- change_abstract
- change_view

## TL-101

(error) Missing %s view for block reference %s in library %s.

### Description

The reported view for the design/abstract does not exist in the directory from which the design/abstract is referenced. The frame view of a block is expected to reside in the same directory as the view being referenced. The design view of a block is expected to reside in the same directory as the abstract view being referenced when the block constraints are missing as it may lead to issues during promote_clock_data.

### What Next

If the reported view exists in some other directory, copy it to the directory from where the design/abstract view is referenced.

For missing design view, you can optionally choose to tolerate the error by setting tolerate policy for *hier.block.abstract_missing_design_view* check using *set_early_data_check_policy* command. For missing frame view, you can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.missing_frame_view* check using *set_early_data_check_policy* command.

Feedback

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by creating frame view when *check_hier_design* command is invoked.

**See Also**

- check_hier_design
- promote_clock_data
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

---

## TL-103

(error) Internal Consistency failure. All views for the block %s are not referenced from the same library %s.

**Description**

All views of a block should be present in the same directory.

**What Next**

Please copy all the views of the block to one directory so that the views may be consistent over the flow.

---

## TL-104

(warning) Frame view of block reference %s created using non-recommended options. Use 'create_frame -block_all [true | auto | used_layers]' to avoid flow runtime/memory penalty.

**Description**

The frame view for the block has been created without using the -block_all option or using the option with value other than the recommended values. This may lead to runtime/memory impact during the flow.

**What Next**

Please recreate frame view for the block using create_frame -block_all [true | auto | used_layers].

Feedback

**See Also**

- create_frame

---

## TL-105

(error) Order of port(s) %s is/are different in %s and %s view of design %s.

---

## TL-106

(error) Missing port(s) %s in %s.%s compared to %s.%s.

**Description**

There is a mismatch in the ports among the reported views of the same block.

**What Next**

The mismatch between abstract and design views may be resolved using merge_abstract. You may choose to recreate the abstract or frame views using create_abstract or create_frame commands respectively.

For port mismatch between abstract/design view and frame view, you can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.port_mismatch_between_views* check using *set_early_data_check_policy* command.

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by re-creating frame view from the bound view when *check_hier_design* command is invoked.

**See Also**

- check_hier_design
- merge_abstract
- create_abstract
- create_frame
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

Feedback

## TL-107

(error) Abstract view of block reference %s created using non-recommended options. Can not be used for top-level timing analysis or optimization.

**Description**

The abstract linked in the design is not a timing abstract.

**What Next**

If you intend to do any timing analysis or optimization in the design, create the timing abstract using create_abstract.

**See Also**

- create_abstract

## TL-108

(error) Abstract view of block reference %s has not been created with implementation as target use. Cannot be used for top-level timing analysis or optimization.

**Description**

The abstract linked in the design is not targeted to be used for implementation.

**What Next**

If you intend to do any timing analysis or optimization in the design, create abstract with target use as implementation.

**See Also**

- create_abstract

## TL-109

(error) Missing port in block %s corresponding to block instance pin %s.

**Description**

The block is either inconsistent or corrupted.

**What Next**

Please merge or recreate the required view.

Feedback

You can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.reference_missing_port* check using *set_early_data_check_policy* command.

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by creating missing ports on the block reference when *check_hier_design* command is invoked.

**See Also**

- check_hier_design
- merge_abstract
- create_abstract
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

---

## TL-110

(error) Missing pin on block instance %s (Reference: %s) corresponding to port %s.

**Description**

The block is either inconsistent or corrupted.

**What Next**

Please merge or recreate the required view.

**See Also**

- merge_abstract
- create_abstract

---

## TL-111

(error) Missing core area in block %s. Can not run top-level timing analysis and optimization.

Feedback

### Description

The block is missing core area. This may lead to incorrect timing analysis.

### What Next

Open the block.design and use the get_core_area command to confirm that core area is correctly defined. If floorplanning was done in IC Compiler II, review the floorplanning steps to understand the reasons for missing core area. Re-do floorplanning after resolving the same. If floorplan was input using ASCII like DEF, review the DEF to confirm that the core are definition is correct.

### See Also

- get_core_area
- create_abstract

---

## TL-112

(error) Block instance %s (Reference: %s) is bound to Frame view. Cannot be used for top-level optimization.

### Description

The block is linked to the frame view which excludes cell-internal information about the block.

### What Next

Please change the view of the block using change_view command.

You can optionally choose to tolerate the error by setting tolerate policy for *hier.block.instance_bound_to_frame* check using *set_early_data_check_policy* command. If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.

### See Also

- check_hier_design
- change_view
- set_early_data_check_policy
- report_early_data_checks

Feedback

## TL-113

(error) Power domain %s does not have associated voltage area.

**Description**

Every power domain is associated with atleast one Flat VA. The reported power domain does not have any flat VA associated with it.

**What Next**

Associate a voltage domain with the power domain.

## TL-114

(error) Internal Consistency Failure. Internal voltage area %s does not have a voltage area.

**Description**

Every hierBlk VA is associated with a flat VA. The reported hierBlk VA does not have an associated flat VA.

**What Next**

Please check the relevant voltage area in top-level and block-level by using the report_voltage_area command. Also, check for missing power domain (PD) definition in top-level VA. If found missing, recreate the voltage area with the correct PD definition. If the issue still persists, report this issue to Synopsys.

## TL-115

(error) Internal Consistency Failure. Voltage area %s does not have associated power domain.

**Description**

Every Flat VA should have atleast one PD associated with it. The reported flat VA does not have any Power Domain associated with it.

**What Next**

This is a severe error. Report this issue to Synopsys.

## TL-116

(error) Internal Consistency Failure. Internal voltage area %s does not have associated power domain.

Feedback

**Description**

Every hierBlk VA should have power domain associated with it. The reported hierBlk VA does not have a power domain associated with it.

**What Next**

This is a severe error. Report this issue to Synopsys.

---

## TL-117

(error) Internal Consistency Failure. Internal voltage area %s does not have associated voltage area region.

**Description**

Every hierBlk VA should have an associated hierBlk VA region associated with it. The reported hierBlk VA does not have an associated hierBlk VA region.

**What Next**

This is a severe error. Report this issue to Synopsys.

---

## TL-118

(error) Internal Consistency Failure. Voltage area %s does not have any internal voltage area.

**Description**

Every flat VA must have atleast one hierBlk VA associated with it.

**What Next**

This is a severe error. Report this issue to Synopsys.

---

## TL-119

(error) Top-level has estimated_corner. Can not be used for top-level optimization.

**Description**

The top design has an estimated corner. This will result in inaccurate timing data.

**What Next**

In case top has an estimated corner, please remove the estimated corner from top design.

Feedback

You can optionally choose to tolerate the error by setting tolerate policy for *hier.top.estimated_corner* check using *set_early_data_check_policy* command. If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.

**See Also**

- check_hier_design
- set_early_data_check_policy
- report_early_data_checks

---

## TL-120

(error) Abstract view of block reference %s created using estimated timing. Can not be used for top-level optimization.

**Description**

The abstract view of the block has an estimated corner. This will result in inaccurate timing data.

**What Next**

Please remove the estimated corner from the design view of the block and recreate the abstract using create_abstract.

**See Also**

- remove_abstract
- create_abstract

---

## TL-121

(warning) Internal Consistency Failure. Hierarchical connection %s (dir: %s) %s. %s

**Description**

The reported hierarchical pin has no driver and/or load.

**What Next**

This is a severe error. Report this issue to Synopsys.

Feedback

## TL-122

(warning) The lib %s is set as reference lib from different paths. Such duplicate settings may lead to possible runtime/memory penalty in the flow. %s

### Description

The lib is set as a reference library in the designs from different paths.

### What Next

Remove the conflicting settings for the reference libraries.

### See Also

- set_ref_libs
- report_ref_libs

## TL-123

(error) The lib %s is set as reference lib from different paths. %s

### Description

The lib is set as a reference library in the designs from different paths.

### What Next

Remove the conflicting settings for the reference libraries.

### See Also

- set_ref_libs
- report_ref_libs

## TL-124

(Warning) Voltage area %s does not have an effective voltage area region.

### Description

The reported VA does not have an effective voltage area region. One possibility is that there may be other VA regions higher in the stacking order which may be reducing the effective region to zero.

Feedback

### What Next

Check the stacking order of the VA regions.

---

## TL-126

(error) Missing physical location for %s %s of block reference %s.

### Description

The pins of the block are not placed.

### What Next

Place the pins of the block by running place_pins command on the block. Use command run_block_compile_pg to place the power and ground pins of the block.

You can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.reference_missing_port_location* check using *set_early_data_check_policy* command.

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by placing the signal ports on the block boundary when *check_hier_design* command is invoked.

### See Also

- place_pins
- run_block_compile_pg
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

---

## TL-127

(error) %s %s of block reference %s is outside the block boundary.

### Description

The location of the ports of the block are outside the block boundary.

Feedback

### What Next

Use place_opt or create_placement command to place all the ports inside the block boundary.

You can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.reference_port_outside_boundary* check using *set_early_data_check_policy* command.

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by re-assigning the location for signal ports on the block boundary when *check_hier_design* command is invoked.

### See Also

- check_hier_design
- create_placement
- place_opt
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

---

## TL-128

(error) Missing location of leaf cell %s inside block reference %s.

### Description

The leaf cells inside the block are not placed.

### What Next

Please run placement on the block using the create_placement command.

You can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.missing_leaf_cell_location* check using *set_early_data_check_policy* command.

Feedback

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by assigning a location for the leaf cell inside the block boundary when *check_hier_design* command is invoked.

**See Also**

- check_hier_design
- create_placement
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

---

## TL-129

(error) Leaf cell %s inside block reference %s is outside block boundary.

**Description**

The leaf cells inside the block are placed outside the boundary of the block.

**What Next**

Use place_opt or create_placement command to place all the cells inside the block boundary.

You can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.leaf_cell_outside_boundary* check using *set_early_data_check_policy* command.

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by re-assigning leaf cell location to the nearest location inside block boundary when *check_hier_design* command is invoked.

**See Also**

- check_hier_design
- create_placement

Feedback

- place_opt
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

---

## TL-130

(error) Missing location of block instance %s (Reference: %s) in parent block reference %s.

### Description

The block instance in the given parent block reference is not placed.

### What Next

Please take care of block placement at parent level in Design Planning step ( shape_block ).

For missing child block instance location in sub-blocks, you can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.missing_child_block_instance_location* check using *set_early_data_check_policy* command.

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by assigning a location for child block instance based on connectivity inside block boundary when *check_hier_design* command is invoked.

Please note that location missing for direct child block instances of top shall not be tolerated or repaired. You need to manually handle it.

### See Also

- check_hier_design
- create_placement
- set_early_data_check_policy
- report_early_data_checks
- get_early_data_check_records

Feedback

## TL-131

(error) Block instance %s (Reference: %s) in parent block reference %s is outside the parent block boundary.

### Description

The block instances are outside the boundary of their parent block.

### What Next

If only small portion of block boundary is outside the top boundary , user can manually pull it inside the top boundary , else take care of block placement inside the parent core boundary in Design Planning Step ( shape_block ).

For location errors of child block instances in sub-blocks, you can optionally choose to tolerate or repair the error by setting tolerate or repair policy for *hier.block.child_block_instance_outside_boundary* check using *set_early_data_check_policy* command.

- If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.
- If repair policy is set, tool will attempt to repair the error by re-assigning the child block instance location to nearest location inside parent block boundary when *check_hier_design* command is invoked.

Please note that location errors for direct child block instances of top shall not be tolerated or repaired. You need to manually handle it.

## TL-132

(Warning) Missing physical location for %s %s of block reference %s.

Feedback

**Description**

The PG pins of the block are not placed.

**What Next**

Use command run_block_compile_pg to place the power and ground pins of the block.

**See Also**

- run_block_compile_pg

---

## TL-133

(Warning) %s %s of block reference %s is outside the block boundary.

**Description**

The location of the PG ports of the block are outside the block boundary.

**What Next**

Use command run_block_compile_pg to place the power and ground pins of the block.

**See Also**

- run_block_compile_pg

---

## TL-134

(error) Block instance %s (Reference: %s) has design type macro. Cannot be used for top-level optimization.

**Description**

Blocks created in IC Compiler II usually have 'module' design type. The block has design type macro, which excludes cell-internal information about the block.

**What Next**

(1) Since all blocks created in IC Compiler II have design type as 'module', check how this block was created (2) To continue the flow, set the design type of the block to 'module' or 'blackbox' as required.

You can optionally choose to tolerate the error by setting tolerate policy for *hier.block.instance_with_design_type_macro* check using *set_early_data_check_policy* command. If tolerate policy is set, the severity of error will be reduced, converted into warning and flow will be allowed to proceed. Be aware of the possible flow implications due to the warning.

Feedback

**See Also**

- check_hier_design
- set_attribute
- create_abstract
- set_early_data_check_policy
- report_early_data_checks

---

## TL-135

(error) Top design has a name conflict with the sub-block %s. This usage is not suppoted.

**Description**

The Top design has the same name as the sub-blocks. Current naming style is not supported.

**What Next**

Resolve the name conflict. If you are using the same name to indicate the stage of the design (for eg. place_opt), use labels for that purpose.

---

## TL-136

(error) Block instance %s (Reference: %s) is not linked to Top.

**Description**

Blocks instance is not linked to the Top design. This may happen if change_view is called for the sub-block. In check_hier_design command, automatic repair of this issue happens so that all further checks in the block shall be successfully performed. Tool does not automatically repair this issue from inside mega commands since doing so can potentially lead to runtime data issues.

**What Next**

Run link_block -force to link the block to the Top.

**See Also**

- link_block

Feedback

## TL-140

(Error) Logical loop detected. Output pin '%s' is driving input pin '%s' of the same physical hierarchy instance '%s'.

### Description

There is a logical loop as detailed in the message. These type of logical loops are not supported.

### What Next

Modify the design to remove such logical loops.

## TL-151

(information) In mode %s, balance points are updated for physical hierarchy pin %s:%s.

### Description

The mentioned balance point(s) are newly created or updated on the given boundary clock pins of physical hierarchy based on the latency inside the block. This will help in building clock tree in top-level to the boundary clock pins of CCD done blocks.

### See Also

- promote_clock_data
- report_clock_balance_points

## TL-152

(warning) In mode %s, no new balance point setting is made on pin %s. %s

### Description

No new balance point setting is made on the given boundary clock pin of the block instance. This may be because block did not have the port latency data for the given pin. Latency inside the block may not be used in top-level clock tree building.

If the given block boundary pin is connected to a block feedthrough net, no port latecy data will be promoted from the block since it can otherwise lead to inaccuracies and also ignoring clock tree on the output side of the feedthrough in top-level.

Feedback

### What Next

Check for the clock feedthrough nets in the block level or whether there are any sinks present from the fanout of the clock port. If required, proceed by manually setting the balance point on given boundary clock pin of the block.

### See Also

- promote_clock_data
- report_clock_balance_points

---

## TL-153

(warning) In mode %s, no new balance point setting is made on any of the boundary clock pins of block instance %s.

### Description

No new balance point setting is made on any of the boundary clock pins of the given block instance. This may be because block did not have the port latency data for the given block in the given mode. Either *compute_clock_latency* command was not run in the block-level on this mode or all clock ports of the block are connected to feedthrough nets.

This may also occur if port latencies are already promoted. The promoted data can be checked by using *report_clock_balance_points* command.

### What Next

Check if port latencies are already promoted. Check for clock feedthrough nets. Otherwise, activate required modes in the block , run *compute_clock_latency* command in the block and save the block. This will help create the necessary port latency data in the block. Then call *promote_clock_data -port_latency* in the top-level.

### See Also

- compute_clock_latency
- promote_clock_data
- report_clock_balance_points

---

## TL-154

(warning) Mode specific port latencies are being promoted from sub-block instance %s, the corner data can possibly be inconsistent.

Feedback

### Description

Port latencies being promoted are mode specific which are generated in older versions (before T-2022.03-SP3). The promoted data may have inconsistencies with respect to the corners especially when there are mismatches between the top-level and block-level corners.

### What Next

Skip saving or remove these promoted clock balance points at the top-level. At the block-level, re-link the design with link_block and save with save_block in T-2022.03-SP3 or later release. Then promote the port latencies afresh at top-level. This will ensure the promoted port latencies are scenario specific and have no inconsistencies with respect to the corners.

### See Also

- compute_clock_latency
- promote_clock_data
- report_clock_balance_points

---

## TL-156

(error) Cannot promote data for instance %s since it is neither design view nor abstract view.

### Description

Requested data cannot be promoted for the given physical hierarchy instance since the reference of the instance is neither design view nor abstract view. The *promote_block_data* command can be used to promote data only from design view or abstract view.

### What Next

Link to appropriate view - design or abstract and proceed with the promotion of data.

### See Also

- report_abstracts

---

## TL-157

(error) Cannot promote data for instance %s since the abstract view is not optimizable.

Feedback

**Description**

Requested data cannot be promoted for the given physical hierarchy instance since the abstract view is not optimizable. The *promote_block_data* command command needs to be run after *init_interface_optimization* command in top linked with abstracts flow.

**What Next**

Rerun *promote_block_data* command after *init_interface_optimization* command.

**See Also**

- report_abstracts

---

## TL-158

(information) Promoting dont_touch/size_only for instance '%s'.

**Description**

Dont_touch and size_only constraints are being promoted from the given lower-level instance to the top-level design.

---

## TL-159

(Error) Promoting dont_touch/size_only for instance '%s' failed.

**Description**

An error occured while promoting dont_touch/size_only constraints from the lower-level instance to the top-level design. The data has not been promoted or is only partially promoted.

**What Next**

Check the error messages that preceded this one for more details.

---

## TL-160

(Error) Invalid config name %s specified.

**Description**

Config name specified is invalid. The pre-defined configs available are default and auto_repair.

Feedback

**What Next**

Re-run command by specifying the correct config name.

---

## TL-161

(Error) Invalid check name %s specified.

**Description**

Check name specified is invalid. Command supports only pre-defined list of checks. Refer command manpage or *report_hier_check_policy* command output for list of supported checks.

**What Next**

Re-run command by specifying the correct check name.

---

## TL-162

(Error) Unsupported policy specified for check %s.

**Description**

Policy specified for the given check is not supported. Refer command manpage or *report_hier_check_policy* command output for list of supported checks and policy.

**What Next**

Re-run command by specifying appropriate policy name.

---

## TL-163

(Error) Skipping invalid reference name %s for %s check(s).

**Description**

Reference name specified is invalid. Reference name must be valid physical hierarchy name or top design name as relevant to the check. Command will fail for the invalid reference specified.

**What Next**

Re-run command by specifying the correct reference name.

---

## TL-164

(Error) Repair policy currently not supported.

Feedback

**Description**

Repair policy is not supported in the current release.

**What Next**

Re-run command by specifying supported policy only or fix issue manually.

---

## TL-165

(Error) Skipping lower most sub-block reference %s for %s check.

**Description**

Checks top_level.missing_sub_block_instance_location and top_level.sub_block_instance_location_outside_boundary can only be performed on block references which have lower-level sub-block instances.

**What Next**

Re-run command by specifying the appropriate reference name.

---

## TL-170

(Error) Repair for %s will not be attempted on sub-block %s because %s.

**Description**

The given block cannot be repaired for given check. There can be several reasons for this. First, editability might not be enabled on the block on which repair had to be performed. Second, library containing the block might not be opened for edit. Third, library containing the block might not be writable. Lastly, the bound view might either be an editable abstract or a read-only design. This restriction on the bound view type is taken into consideration to avoid issues/conflicts in the forthcoming merge.

**What Next**

Re-run check_hier_design command after performing the suggested actions listed below depending on the type of situation encountered.

1. Enable the editability on the blocks on which repair has to be performed using set_editability command. 2. Use -edit or -ref_libs_for_edit of open_lib or open_block to open the library in edit mode. 3. Check file access permissions and make the library containing the blocks writable. 4. Change the bound view to either a read-only abstract or an editable design.

Feedback

### See Also

- set_editability
- check_hier_design
- open_lib
- open_block
- create_abstract
- change_abstract

---

## TL-171

(Error) Repair related operations on parent block %s required due to repair of %s check in child block %s cannot be performed because %s.

### Description

Some of the checks might require parent repair when the child block is repaired. But the parent block could not be repaired. There can be several reasons for this. First, editability might not be enabled on the parent block on which repair had to be performed. Second, library containing the parent block might not be opened for edit. Third, library containing the parent block might not be writable. Lastly, the bound view of parent block might either be an editable abstract or a read-only design. This restriction on the bound view type is taken into consideration to avoid issues/conflicts in the forthcoming merge.

### What Next

Re-run check_hier_design command after performing the suggested actions listed below depending on the type of situation encountered.

1. Enable the editability on the parent block on which repair has to be performed using set_editability command. 2. Use -edit or -ref_libs_for_edit of open_lib or open_block to open the library in edit mode. 3. Check file access permissions and make the library containing the parent block writable. 4. Change the bound view to either a read-only abstract or an editable design.

---

## TL-180

(Information) Current config is set to %s.

**Description**

Indicates the current working hierarchical check congfig.

---

## TL-181

(Information) The policy settings of the config include user modified values. Use ‘set_hier_check_policy -reset’ if the pre-defined policy settings of the config are to be restored.

**Description**

Policy settings of the current working config have values different (due to user modifications) from that of the predefined policy settings for the config.

**What Next**

If this is not intended, use -reset option of set_hier_check_policy command to revert back the policy values to the predefined settings.

---

## TL-182

(Warning) Unsupported policy specified for check %s.

**Description**

Policy specified for the given check is not supported. Policy setting remains unchanged for the check. Refer command manpage or *report_hier_check_policy* command output for list of supported checks and policy.

**What Next**

Re-run command by specifying appropriate policy name.

---

## TL-200

(error) Command has modified (%s) the readonly block '%s'. Report this issue to Synopsys with below details.

Feedback

### Description

This error message is issued when a readonly block is being modified.

### What Next

This is a severe error. Report this issue to Synopsys.

---

## TL-220

(Warning) RDE data missing for sub-blocks %s. In Top level RDE flow, it is recommended to have RDE for all blocks once TOP has RDE.

### Description

This warning message is printed when TOP has RDE data but one or more sub blocks do not have RDE data available. This might be because of an oversight. If this message is issued, it is recommended to enable RDE during place_opt -from final_opto at block level, save the block and then use this block in TOP. Block's RDE data will be used in TOP only if TOP RDE is available/generated.

If block RDE is not available, then tool will use VR for blocks during net estimation. If user is fine with this, then no action is needed.

### What Next

If block RDE is needed, run place_opt -from final_opto at block level with RDE enabled.

---

## TL-221

(Warning) RDE data missing for blocks %s. In Top level RDE flow, it is recommended to have RDE for all blocks including TOP.

### Description

This warning message is printed when some blocks/TOP have RDE data and some blocks/TOP do not have RDE data available. For blocks/TOP with missing RDE, either they are fully abutted or it might be because of an oversight. If this message is issued and block is not fully abutted, it is recommended to enable RDE during place_opt -from final_opto at block level, save the block and then use this block in TOP.

If block RDE is not available, then tool will use VR for blocks during net estimation. If user is fine with this, then no action is needed.

### What Next

If block RDE is needed, run place_opt -from final_opto at block level with RDE enabled.

Feedback

## TL-300

(error) The abstract of block %s has constraints information that is out of date.

**Description**

This error message is issued when a timing abstract does not contain timing constraints information or contains timing constraint information that is out of date (possibly because it was created using an earlier version of the tool).

**What Next**

Create the abstract again using the latest executable.

## TL-301

(error) Cannot find information about block constraints for block %s

**Description**

This error message is issued when the command check_hier_design is used to check the consistency of constraints between top and block and there is no information about the block constraints associated with the abstract of a block.

**What Next**

Use the command create_abstract to create a new abstract for the blocks.

## TL-302

(error) Cannot find mapping of top level mode %s in block %s

**Description**

This error message is issued when a mode that is defined at the top-level does not have a corresponding mode in the block.

**What Next**

Use the command set_block_to_top_map to associate the top level mode to a mode defined in the block.

## TL-303

(error) Cannot find mapping of top level corner %s in block %s

Feedback

**Description**

This error message is issued when a corner that is defined at the top-level does not have a corresponding corner in the block.

**What Next**

Use the command set_block_to_top_map to associate the top level corner to a corner defined in the block.

---

## TL-304

(error) Cannot find mapping of top level scenario %s in block %s

**Description**

This error message is issued when a scenario that is defined at the top-level does not have a corresponding scenario in the block.

**What Next**

Use the command set_block_to_top_map to associate the top level corner/mode to a corner/mode defined in the block.

---

## TL-305

(error) The leaf cell %s in the block reference %s is unmapped.

**Description**

The leaf cell in the block is unmapped.

**What Next**

Please go through the appropriate synthesis flow to avoid any unmapped netlist.

---

## TL-310

(Error) Skipping invalid reference name: %s.

**Description**

Reference name specified is invalid. Reference name must be valid physical hierarchy name or top design name. check_hier_design command will fail for the invalid reference specified.

**What Next**

Re-run check_hier_design command by specifying the correct reference name.

Feedback

**See Also**

- check_hier_design

---

## TL-401

(warning) Missing %s view for block reference %s in library %s.

**Description**

The reported view for the design/abstract does not exist in the directory from which the design/abstract is referenced. It is expected that all the views of one block reside in the same directory.

**What Next**

If the reported view exists in some other directory, copy it to the directory from where the design/abstract view is referenced.

---

## TL-406

(warning) Missing port(s) %s in %s.%s compared to %s.%s.

**Description**

There is a mismatch in the ports among the reported views of the same block.

**What Next**

The mismatch between abstract and design views may be resolved using merge_abstract. You may choose to recreate the abstract or frame views using create_abstract or create_frame commands respectively.

**See Also**

- merge_abstract
- create_abstract
- create_frame

---

## TL-409

(warning) Missing port in block %s corresponding to block instance pin %s.

**Description**

The block is either inconsistent or corrupted.

Feedback

**What Next**

Please merge or recreate the required view.

---

## TL-410

(warning) Missing pin on block instance %s (Reference: %s) corresponding to port %s.

**Description**

The block is either inconsistent or corrupted.

**What Next**

Please merge or recreate the required view.

---

## TL-412

(warning) Block instance %s (Reference: %s) is bound to Frame view. Cannot be used for top-level optimization.

**Description**

The block is linked to the frame view which excludes cell-internal information about the block.

**What Next**

Please change the view of the block using change_view command.

**See Also**

- change_view

---

## TL-419

(warning) Top-level has estimated_corner. Can not be used for top-level optimization.

**Description**

The top design has an estimated corner. This will result in inaccurate timing data.

**What Next**

In case top has an estimated corner, please remove the estimated corner from top design.

Feedback

## TL-420

(warning) Abstract view of block reference %s created using estimated timing. Can not be used for top-level optimization.

**Description**

The abstract view of the block has an estimated corner. This will result in inaccurate timing data.

**What Next**

Please remove the estimated corner from the design view of the block and recreate the abstract using create_abstract.

**See Also**

- remove_abstract
- create_abstract

## TL-426

(warning) Missing physical location for %s %s of block reference %s.

**Description**

The pins of the block are not placed.

**What Next**

Place the pins of the block by running place_pins command on the block. Use command run_block_compile_pg to place the power and ground pins of the block.

**See Also**

- place_pins
- run_block_compile_pg

## TL-427

(warning) %s %s of block reference %s is outside the block boundary.

**Description**

The location of the ports of the block are outside the block boundary.

Feedback

**What Next**

Use place_opt or create_placement command to place all the ports inside the block boundary.

**See Also**

- create_placement
- place_opt

---

## TL-428

(warning) Missing location of leaf cell %s inside block reference %s.

**Description**

The leaf cells inside the block are not placed.

**What Next**

Please run placement on the block using the create_placement command.

---

## TL-429

(warning) Leaf cell %s inside block reference %s is outside block boundary.

**Description**

The leaf cells inside the block are placed outside the boundary of the block.

**What Next**

Use place_opt or create_placement command to place all the cells inside the block boundary.

---

## TL-430

(warning) Missing location of block instance %s (Reference: %s) in parent block reference %s.

**Description**

The block instance in the given parent block reference is not placed.

**What Next**

Please take care of block placement at parent level in Design Planning step ( shape_block ).

Feedback

## TL-431

(warning) Block instance %s (Reference: %s) in parent block reference %s is outside the parent block boundary.

### Description

The block instances are outside the boundary of their parent block.

### What Next

If only small portion of block boundary is outside the top boundary , user can manually pull it inside the top boundary , else take care of block placement inside the parent core boundary in Design Planning Step ( shape_block ).

### See Also

- create_placement
- place_opt

## TL-434

(warning) Block instance %s (Reference: %s) has design type macro. Cannot be used for top-level optimization.

### Description

Blocks created in IC Compiler II usually have 'module' design type. The block has design type macro, which excludes cell-internal information about the block.

### What Next

(1) Since all blocks created in IC Compiler II have design type as 'module', check how this block was created (2) To continue the flow, set the design type of the block to 'module' or 'blackbox' as required.

### See Also

- set_attribute
- create_abstract

## TL-451

(warning) Inconsistent value(s) of app option in block abstract(s) and top design '%s'. Details are in the following table.

Feedback

**Description**

There is an inconsistency in app option value(s) in block abstract(s) and top design.

**What Next**

The inconsistency could be avoided by setting the correct app option value in both the views.

---

## TL-452

(warning) '%s' app option name is disabled/invalid in block '%s'. Will not be checked for inconsistency.

**Description**

App option is disabled/invalid. Will be skipped for the inconsistency check.

**What Next**

The app option name in the file provided needs to be corrected.

---

## TL-501

(information) Frame view for block reference %s in library %s was found missing. Repaired and created new frame for the block.

**Description**

Frame view for the design/abstract did not exist in the directory from which the design/abstract is referenced. New frame has been created.

---

## TL-506

(information) Port(s) %s were found missing in %s.%s compared to %s.%s. Repaired and created new frame for the block.

**Description**

There was a mismatch in the ports among the reported views of the same block. Repaired and created new frame for the block.

Feedback

**See Also**

- merge_abstract
- create_abstract
- create_frame

## TL-509

(Information) New Port %s created on block %s corresponding to block instance pin(s) %s.

**Description**

Port was found missing in physical hierarchy reference corresponding to the pins on the physical hierarchy instance(s). New port was created on the physical hierarchy reference.

## TL-526

(information) Location of port %s in block reference %s was found missing. Repaired and updated the location of the port to %d , %d.

**Description**

The port location has been updated with respect to the block.

**What Next**

Please run check_hier_design command to make sure that location is updated correctly.

## TL-527

(information) Location of port %s of block reference %s was found outside the block boundary. Repaired and updated the location of the port to %d , %d.

**Description**

The port location has been updated with respect to the block.

**What Next**

Please run check_hier_design command to make sure that location is updated correctly.

## TL-528

(information) Location of leaf instance %s inside block reference %s was found missing. Repaired and updated the location coordinates of the instance to X: %d Y: %d.

Feedback

**Description**

The instance location has been updated with respect to the block.

**What Next**

Please run check_hier_design command to make sure that location is updated correctly.

---

## TL-529

(information) Location of leaf cell %s inside block reference %s was found outside the boundary. Repaired and updated the location coordinates of the instance to X: %d Y: %d.

**Description**

The instance location has been updated with respect to the block.

**What Next**

Please run check_hier_design command to make sure that location is updated correctly.

---

## TL-530

(information) Location of block instance %s in parent block reference %s was found missing. Repaired and updated the location coordinates of the instance to X: %d Y: %d.

**Description**

The instance location has been updated with respect to the block.

**What Next**

Please run check_hier_design command to make sure that location is updated correctly.

---

## TL-531

(information) Location of block instance %s in parent block reference %s was found outside the parent boundary. Repaired and updated the location coordinates of the instance to X: %d Y: %d

**Description**

The instance location has been updated with respect to the block.

**What Next**

Please run check_hier_design command to make sure that location is updated correctly.

Feedback

## TL-551

(information) New frame created for block reference %s to honor the %s repair performed on the block.

### Description

Frame created for the block that was repaired either for location related error or missing port error.

### See Also

- create_frame
- TL-526
- TL-527
- TL-530
- TL-531
- TL-509

## TL-552

(information) A new frame was created. User will need to save the library %s.

### Description

New frame created for the block. Original version of the frame, if any existed, has been cleared. You will need to save the library for this change to be saved.

### See Also

- create_frame
- TL-526
- TL-527
- TL-530
- TL-531
- TL-509

Feedback

## TL-555

(information) Since '-report_repair_feasibility' option is given, only checking for issues and repair feasibility reporting will happen. Tolerate/repair action will not be attempted.

### Description

'-report_repair_feasibility' option of check_hier_design command only prints information on feasibility of repair to be performed on each of the sub-block reference with relevant reasons. Tolerate or repair action will not be performed.

## TL-601

(error) Missing frame view for block reference %s in library %s. Attempt to repair failed.

### Description

The reported view for the design/abstract does not exist in the directory from which the design/abstract is referenced. It is expected that all the views of one block reside in the same directory. Repair was tried to create a new frame, but it didnot succeed.

### What Next

If the reported view exists in some other directory, copy it to the directory from where the design/abstract view is referenced.

## TL-606

(error) Missing port(s) %s in %s.%s compared to %s.%s. Attempt to repair failed.

### Description

There is a mismatch in the ports among the reported views of the same block. Repair was tried to create a new frame, but it didnot succeed.

### What Next

The mismatch between abstract and design views may be resolved using merge_abstract. You may choose to recreate the abstract or frame views using create_abstract or create_frame commands respectively.

### See Also

- merge_abstract
- create_abstract
- create_frame

Feedback

## TL-609

(error) Port %s was found missing in block %s corresponding to block instance pin(s) %s. Attempt to create port failed.

### Description

Port was found missing in physical hierarchy reference corresponding to the pins on the physical hierarchy instance(s). Attempt to create port on the physical hierarchy reference failed.

## TL-626

(error) Missing physical location for port %s of block reference %s. Attempt to repair location failed.

### Description

The port location could not be updated with respect to the block.

### What Next

Place the pins of the block by running place_pins command on the block. Use command run_block_compile_pg to place the power and ground pins of the block.

### See Also

- place_pins
- run_block_compile_pg

## TL-627

(error) Location of port %s of block reference %s was found outside the block boundary. Attempt to repair location failed.

### Description

Port location could not be updated with respect to the block.

### What Next

Use place_opt or create_placement command to place all the ports inside the block boundary.

Feedback

**See Also**

- create_placement
- place_opt

---

## TL-628

(error) Missing location of leaf cell %s inside block reference %s. Attempt to repair location failed.

**Description**

The instance location could not be updated with respect to the block.

**What Next**

(1) Please run placement on the block using the create_placement command. (2) Make sure the block reference has enough placed cells as to meet the threshold requirement.

**See Also**

- create_placement
- TL-650

---

## TL-629

(error) Location of leaf cell %s inside block reference %s is outside the boundary. Attempt to repair location failed.

**Description**

The instance location could not be updated with respect to the block.

**What Next**

Use place_opt or create_placement command to place all the cells inside the block boundary.

**See Also**

- create_placement
- place_opt

Feedback

## TL-630

(error) Missing location of block instance %s in parent block reference %s. Attempt to repair location failed.

### Description

The instance location could not be updated with respect to the block.

### What Next

(1) Please take care of block placement at parent level in Design Planning step ( shape_block ). (2) Make sure the block reference has enough placed cells as to meet the threshold requirement.

### See Also

- create_placement
- TL-650

## TL-631

(error) Block instance %s in parent block reference %s is outside the parent block boundary. Attempt to repair location failed.

### Description

The instance location could not be updated with respect to the block.

### What Next

If only small portion of block boundary is outside the top boundary , user can manually pull it inside the top boundary , else take care of block placement inside the parent core boundary in Design Planning Step ( shape_block ).

### See Also

- create_placement
- place_opt

## TL-650

(error) Block reference %s does not have enough placed instances to meet the threshold for repair. Attempt to repair location skipped.

Feedback

### Description

Block needs to have atleast 90% of its instances placed to invoke repair.

### What Next

Please run placement on the block using the create_placement command.

### See Also

- create_placement
- TL-628
- TL-630

---

## TL-651

(error) Failed to create new frame view for block reference %s that honors the %s repair performed on the block.

### Description

Creation of frame for the block that was repaired either for location related error or missing port error failed.

### What Next

You may choose to recreate the frame view using create_frame command.

### See Also

- create_frame
- TL-526
- TL-527
- TL-530
- TL-531

---

## TL-801

(warning) The editable abstract/read-only design view '%s' has been repaired by c heck_hier_design. Merge operation to the design view will not be allowed.

Feedback

**Description**

The editable abstract/read-only design view '%s' has been repaired by check_hier_design. Merge operation to the design view will not be allowed.

**See Also**

- check_hier_design

---

## TL-802

(warning) The design view has been modified due to repair in check_hier_design. The abstract view cannot be merged back.

**Description**

The design view has been modified due to repair in check_hier_design. The abstract view cannot be merged back.

**See Also**

- check_hier_design

---

## TL-803

(warning) The abstract view has been modified due to repair in check_hier_design. It cannot be merged to the design view.

**Description**

The abstract view has been modified due to repair in check_hier_design. It cannot be merged to the design view.

**See Also**

- check_hier_design

---

# TLNL

---

## TLNL-001

(information) Wrote top-level Verilog file '%s'.

Feedback

**Description**

The top-level netlist was successfully generated and the corresponding Verilog file was written out. This means that the command ran successfully.

**What Next**

The generated Verilog file can be used for further analysis.

---

## TLNL-002

(information) Created top-level design '%s'.

**Description**

The top-level netlist was successfully generated and the corresponding design was created. This means that the command ran successfully.

**What Next**

Run "list_blocks" to view the newly generated design. You can save the design on disk or write out Verilog using "write_verilog" or do further analysis on the design.

---

## TLNL-003

(error) Could not write top-level Verilog file.

**Description**

There was an issue while writing out the Verilog file for the generated top-level netlist. Please check if some Error or Warning messages have been printed before this message and correct your inputs accordingly.

**What Next**

Provide the correct inputs and rerun this command

---

## TLNL-004

(error) No connections file specified.

**Description**

There were no valid text files provided with the "-connections" option. Top-level netlist cannot be generated.

**What Next**

Provide valid and readable input files to "-connections" option.

Feedback

## TLNL-005

(error) Unsupported text format '%s'.

**Description**

The format specified with "-text_format" option is not supported currently.

**What Next**

Provide a valid value, e.g. "-text_format csv"

## TLNL-006

(warning) Ignoring '-output' as it cannot be specified with '-format design'.

**Description**

The option '-output' is used for specifying an output file name if the output format is 'verilog'. It does not mean anything if it is specified with 'design' output format as there is no text file to write out. The command will ignore '-output' option and continue.

**What Next**

Do not specify '-output' if '-format design' is specified.

## TLNL-007

(error) Unsupported output format '%s'.

**Description**

Output format provided with '-format' option is unsupported.

**What Next**

Provide a valid output format like 'verilog' or 'design'

## TLNL-008

(error) Design '%s' already exists in the library '%s'.

**Description**

The design with the specified name already exists in the current library. If not specified, it default to "TOP". Another design cannot be created with the same name.

Feedback

**What Next**

Provide a different name using "-design_name" option, or delete the existing design.

---

## TLNL-009

(error) Unsupported input file format '%s'.

**Description**

The input file format specified with "-text_format" is not supported. Hence the command cannot parse the text file.

**What Next**

Provide a valid value to "-text_format" option, e.g. "csv".

---

## TLNL-010

(error) Cannot specify '%s' as an ignored block.

**Description**

This error occurs when an invalid value is provided to the "-ignore_blocks" option. e.g. You cannot specify "_TOP_" as an ignored block, because that keyword refers to the top-level design.

**What Next**

Remove the invalid instance name from "-ignore_blocks" option and rerun the command.

---

## TLNL-011

(error) Could not parse map file '%s'.

**Description**

There was some error while parsing the column name mapping file specified using "-map_file" option. The file should be a CSV file which maps custom column names in the connections file to standard Synopsys column names in the form <custom_name>,<standard_name> per line.

**What Next**

Correct the map file and rerun the command.

Feedback

## TLNL-012

(error) Could not parse connection file '%s'.

**Description**

There was a major syntax error in the specified connections file. It should be a single text file containing information of all the connections in the system. The different text fields should be separated by comma. Please refer to messages printed before this message

**What Next**

Please correct the input text file and rerun the command

## TLNL-013

(error) Could not generate top-level design.

**Description**

There was an issue while converting the input connection information into a design. The command was unsuccessful. Refer to Error or Warning messages printed before this message.

**What Next**

Correct the input data and rerun the command.

## TLNL-014

(warning) Ignoring entry as number of columns in map file should be exactly 2. (%s line %u)

**Description**

The map file does not contain data according to the expected format. The specific issue is on the line number mentioned in the message. It maps custom column names in the connections file to standard Synopsys column names in the form <custom_name>,<standard_name> per line.

**What Next**

Please correct the map file and rerun the command.

## TLNL-015

(error) Syntax error in map file. Column name '%s' contains invalid characters. (%s line %u)

Feedback

**Description**

The custom column name in the map file contains some invalid characters like '?' or '*'. This cannot be used as a column name. The command cannot continue successfully.

**What Next**

Correct the column names in the map file.

---

## TLNL-016

(error) Syntax error in map file. Standard column name '%s' specified in the first column. (%s line %u)

**Description**

The map file maps custom column names in the connections file to standard Synopsys column names in the form <custom_name>,<standard_name> per line. An existing standard_name cannot be specified as a custom_name.

**What Next**

Correct the entry at the specified line of the map file.

---

## TLNL-017

(information) Setting '%s' as a custom name for column name '%s'.

**Description**

The column name mapping specified the map file was successfully parsed for that particular column name.

**What Next**

There was no issue, the command will proceed further.

---

## TLNL-018

(warning) Unrecognized column name '%s' in map file, ignoring it. (%s line %u)

Feedback

**Description**

The second column at the specified line number of the map file contains a column name which is not a standard column name. The command is unable to recognize it. Currently, following standard column names are supported:

Module Instance Module Reference Module Port Module Port Direction Connected Module Instance Connected Module Reference Connected Module Port Connected Module Port Direction

**What Next**

Use one of the standard column names in the second entries of the map file rows.

---

## TLNL-019

(error) Incorrect column names or missing columns in file %s. The whole file will be ignored.

**Description**

The connections file could not be parsed correctly because of incorrect or missing data. The possible reasons could be: (1) At least one of the mandatory columns is missing. Currently, following columns are mandatory:

Module Instance Module Reference Module Port Connected Module Instance Connected Module Reference Connected Module Port

(2) One of the columns was repeated.

(3) The column names were blank or have an incorrect spelling.

**What Next**

Correct the entries of the first header row of the connections file and rerun the command.

---

## TLNL-020

(warning) Syntax error or missing data on line %u. This row will be ignored.

**Description**

The specified row of the connections file had a syntax issue, or some of the mandatory entries were missing or incorrectly specified. That particular row will be ignored, and hence that connection will not be present in the top-level design.

**What Next**

Fix the syntax issue and provide valid data in that row.

Feedback

## TLNL-021

(warning) Column name '%s' is invalid. Ignoring the column.

**Description**

The specified column in the connection file is not a valid column name. The name should not contain special characters like '*' or '?'.

**What Next**

Provide valid column names and rerun the command.

## TLNL-022

(warning) Unrecognized column name '%s'. Ignoring the column.

**Description**

The specified column name is not a standard column name, and hence the command cannot recognize it. The whole column will be ignored. Currently, following standard column names are supported:

Module Instance Module Reference Module Port Module Port Direction Connected Module Instance Connected Module Reference Connected Module Port Connected Module Port Direction

If '-map_file' option was used, the column name was unrecognized even after applying the mapping.

**What Next**

Please use the a standard column name or provide a mapping using -map_file option

## TLNL-023

(error) Column '%s' is repeated.

**Description**

The specified column occurs more than once, which is not a valid syntax. The command cannot continue further. This could also be due to an errorneous entry in the map file if provided.

**What Next**

Provide only one column with the given name and rerun the command.

Feedback

## TLNL-024

(error) Column '%s' is missing.

**Description**

One of the mandatory columns is missing from the connections file. Currently, following columns are mandatory:

Module Instance Module Reference Module Port Connected Module Instance Connected Module Reference Connected Module Port

**What Next**

Please add the missing column data in the connections file and rerun the command

## TLNL-025

(warning) Number of columns in this row is different than that of row 1. (%s line %u)

**Description**

The number of columns in all the rows must be equal. If there is a mismatch in the number of columns in some row with respect to the first row, this message will be issued. The resultant connection in the top-level netlist might be incorrect or missing altogether.

**What Next**

Ensure that all rows have uniform number of entries.

## TLNL-026

(error) No valid connections found.

**Description**

There were no valid connections found in the connections file. This might be due to empty file or syntax errors in each of the line. The top-level netlist cannot be generated.

**What Next**

Provide valid connections data and rerun the command.

## TLNL-027

(error) Could not create module '%s'.

Feedback

**Description**

There was an issue while creating one of the modules which is to be instantiated at the top-level. This could be due to incorrect or invalid entries or some other issue.

**What Next**

Ensure that the input data is correct.

---

## TLNL-028

(warning) Top-level port is connected to itself. (%s line %u)

**Description**

This message is printed when both the sides of a connection in the connections file are top-level ports and they have the same name, which means it is a connection of a port to itself. This is an invalid connection specification and will be ignored.

**What Next**

Remove that particular row from the input file and rerun the command.

---

## TLNL-029

(warning) Could not create top-level '%s'. (%s line %u)

**Description**

This message is printed when there was an error while trying to create a top-level port or a pin in the design. This could be due to incorrect or invalid entries or some other issue.

**What Next**

Check whether the input data is correct and consistent.

---

## TLNL-030

(error) Cannot instantiate a module within itself. (%s line %u)

**Description**

On the specified row of the connections file, the module reference name was specified to be _TOP_ whereas the instance name was not _TOP_. This tries to suggest that top-level module is instantiated within itself, which is invalid. Hence this row will be ignored.

**What Next**

Correct the entry in the connections file and rerun the command.

Feedback

## TLNL-031

(warning) Module port direction is different from the previous value '%s'. Maintaining the original value. (%s line %u)

### Description

This message is printed when a port or pin appears more than once, and the directions specified in each of these occurences is not the same. e.g. It was "in" in some row, and "out" in another row.

### What Next

Please ensure that the port direction entries are consistent across the input files.

## TLNL-032

(warning) Reference module name '%s' of instance '%s' is different from '%s' which was was previously specified.

### Description

This message occurs when the same instance name is used with two or more different reference names. This is invalid as the instance names at the top-level must be unique.

### What Next

Ensure that the same instance name is not repeated across different modules.

## TLNL-033

(warning) Invalid %s name found. Ignoring this connection (%s line %d)

### Description

This message occurs when the instance, reference, or port name is an invalid string. e.g. if it contains special characters like $, ^, ? or *. There will be no connection for that line.

### What Next

Remove the special characters from the name and run the command again.

Feedback

# TLUP

## TLUP-001

(Warning) Ignore data with unknown Keyword '%s' in section '%s'.

**Description**

This is a keyword that is not known by tool.

**What Next**

Check whether the keyword is valid. If it is valid, try the newest tool to read it. Otherwise, re-generate the TLU+ file correctly.

## TLUP-002

(Error) Cannot parse TLUPlus file because of syntax error.

**Description**

The TLUPlus file has syntax error.

**What Next**

To perform TLUPlus file parse without error, please make sure the TLUPlus file is generated correctly or try the newest tool.

## TLUP-003

(Error) TLUPlus file syntax error. Unsupported value type for unknown '%s' table in section '%s'.

**Description**

The TLUPlus parser will skip unknown self-contained table. Supported table element type are int, double and char. This error means TLU+ parser encounters unknown type, so it cannot skip the unknown table.

**What Next**

To skip unknown tables, please check ITF file and then re-generate TLUPlus file again.

## TLUP-004

(Error) Mask pair (%s, %s) is missing in TLUPlus file.

Feedback

### Description

Fully populated mask pairs are expected when we read a TLUPlus file. This error message is shown by *read_parasitic_tech* when a mask pair is missing.

### What Next

Please check ITF file and then re-generate TLUPlus file again.

### See Also

- read_parasitic_tech

---

## TLUP-005

(Error) TLUPlus file content error. Values in "%s" table in %s section in %s layer "%s" are not in ascending order.

### Description

This table should be in ascending order.

### What Next

Sort values in the table, then regenerate the TLUPlus file. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

---

## TLUP-006

(Error) TLUPlus file content error. Values in "%s" table in %s section in %s layer "%s" are not in descending order.

### Description

This table should be in descending order.

### What Next

Sort values in the table, then regenerate the TLUPlus file. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

Feedback

## TLUP-009

(Error) Layer mapping file limitation error. Number of mapping pairs defined in layer mapping file exceeds limitation.

**Description**

Max number of conducting layers supported in layer mapping file is 32. Max number of via layers supported in layer mapping file is 31.

**What Next**

Remove unused layers from layer mapping file, then reload the TLUPlus file again. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

## TLUP-010

(Error) Layer mapping file error. Tech layer '%s' mapped in layer mapping file cannot be found in technology section.

**Description**

All tech layers mapped in layer mapping file should be defined in technology section.

**What Next**

If layer '%s' is not a valid tech layer, remove it from layer mapping file, then reload TLUPlus file again. If layer '%s' is a valid tech layer, define it in technology file, then reload technology file and TLUPlus file again. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

## TLUP-011

(Warning) Layer mapping file warning. Tech layer '%s' mapped in layer mapping file is mask name of '%s'.

**Description**

Layer name is more preferred than mask name.

**What Next**

This is only a warning message. If you don't want this message to appear, please change mask name mapped in layer mapping file to its corresponding layer name.

Feedback

## TLUP-012

(Warning) Layer mapping file warning. Tech layer '%s' is not a metal/via/mimtop/mimbottom/poly layer defined in technology section.

### Description

Each tech layer mapped in layer mapping file should be metal/via/mimtop/mimbottom/poly defined in technology section.

### What Next

If layer '%s' is not a valid tech layer, remove it from layer mapping file, then reload TLUPlus file again. If layer '%s' is a valid metal/via/mimtop/mimbottom/poly layer, define it in technology file, then reload technology file and TLUPlus file again.

## TLUP-013

(Error) Layer mapping file error. ITF layer '%s' mapped in layer mapping file cannot be found in TLUPlus file.

### Description

All ITF layers mapped in layer mapping file should appear in TLUPlus file.

### What Next

If layer '%s' is not a ITF layer, remove it from layer mapping file, then reload TLUPlus file again. If layer '%s' is a ITF layer, define it in ITF file, then regenerate TLUPlus file from ITF file and reload the TLUPlus file again. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

## TLUP-015

(Error) Layer mapping file error. Tech layer '%s' is missing in layer mapping file.

### Description

Layer mapping should be continues on tech layer's mask name. If technology section has mimcap layers, they should be in layer mapping file.

### What Next

Please add layer mapping for the missing tech layer to layer mapping file, then reload TLUPlus file again. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

Feedback

## TLUP-016

(Information) Layer mapping file information: There are extra tech layer(s) %s.

**Description**

Both technology section and TLUPlus file have layer stacking. Metal layers that appear in tech layer stacking but are not defined in ITF layer stacking are extra tech metal layers. Extra layers are always on top of tech layer stacking.

## TLUP-017

(Error) Layer mapping file error. Layer mapping (%s, %s) is missing.

**Description**

All tech layers in tech layer stacking should be mapped. Missing few top layers in layer mapping file is not allowed.

**What Next**

Please add the missing layer mapping to layer mapping file, then reload TLUPlus file again. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

## TLUP-018

(Error) Layer mapping file error. Via layer '%s' is missing in layer mapping file.

**Description**

If there are metal layers in layer mapping file, all via layers in between should also be in layer mapping file. This warning means layer mapping for the via layer is missing.

**What Next**

Please add layer mapping for the missing via layer to layer mapping file, then reload TLUPlus file again. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

## TLUP-019

(Warning) Layer mapping file warning. Layer mapping (%s, %s) is corrected for (%s, %s).

Feedback

**Description**

This message indicates that one of ITF layer names that appear in layer mapping file cannot be found in TLUPlus file, but we think this could be caused by mistake. We infer the correct layer mapping for you from TLUPlus context.

**What Next**

Please check the corrected layer mapping.

---

## TLUP-020

(Error) Layer mapping file error. ITF layer '%s' is missing in layer mapping file.

**Description**

ITF side layer mapping must be continuous in the order of ITF layer that appears in the TLUPlus file.

**What Next**

Add layer mapping for the missing ITF layer to the layer mapping file, then reload the TLUPlus file again. Turn on the -disable_sanity_check option of the read_parasitic_tech command to suppress this error. But letting the read_parasitic_tech command proceed silently might cause problems in the subsequent operations. The result is uncertain.

---

## TLUP-021

(Information) Layer mapping file information: There are extra ITF layer(s) %s.

**Description**

Both technology section and TLUPlus file have layer stacking. ITF layers that appear in ITF layer stacking but are not defined in tech layer stacking are extra ITF layers. Extra layers are always on top of ITF layer stacking.

---

## TLUP-024

(Error) Layer mapping file error. ITF layer '%s' and '%s' are not continues in TLUPlus file.

**Description**

ITF side layer mapping should be continues on the order of ITF layer appear in TLUPlus file.

Feedback

### What Next

Please add layer mappiing for the missing ITF layer(s) to layer mapping file, then reload TLUPlus file again. Turn on command option -diable_sanity_check of read_parasitic_tech to surpress this error, but letting read_parasitic_tech move forward silently may cause problem in subsequent operations. The result is uncertain.

---

## TLUP-030

(Warning) %s file %s isn't preserved because it has been changed since the last time it was loaded.

### Description

This message means TLUPlus file or layer map file that specified by read_parasitic_tech command has been changed since the last time it was loaded. It's dangerous to preserve the changed file arbitarily because its content isn't match corresponding TLUPlus model.

### What Next

Change original TLUPlus file or layer map file back or use command read_parasitic_tech to reload the changed file.

---

## TLUP-031

(Warning) Preserved %s file %s has been changed since the last time it was saved.

### Description

This message means preserved TLUPlus file or layer map file has been changed since the last time it was saved. This is likely because the preserved file is changed by user manually. Content of changed file isn't match corresponding TLUPlus model anymore.

### What Next

Change TLUPlus file or layer map file back, otherwise don't use it as original file of corresponding TLUPlus model.

---

## TLUP-032

(Warning) Preserved %s file %s doesn't belong to any TLUPlus model.

### Description

Preserved TLUPlus file name should contain information of the TLUPlus model it belongs to. This warning means the preserved file name is not correct. The tool cannot deduce the

Feedback

TLUPlus model name from the file name. This is likely because the preserved file name is changed by user manually or user add his own file to TLUPlus file folder.

**What Next**

If this file is really a TLUPlus file or layer map file for a certain TLUPlus model, please change the file name back. If this file is added by user, please ignore this message.

---

## TLUP-033

(Warning) %s file %s isn't preserved because it has been deleted since the last time it was loaded.

**Description**

This warning means TLUPlus file or layer map file that specified by read_parasitic_tech command has been deleted since the last time it was loaded. So the file cannot be preserved.

**What Next**

Restore original TLUPlus file or layer map file back.

---

## TLUP-034

(Warning) Preserved %s file %s has been deleted since the last time it was saved.

**Description**

This message means preserved TLUPlus file or layer map file has been deleted since the last time it was saved. This is likely because the preserved file is deleted by user manually.

**What Next**

Restore the preserved TLUPlus file or layer map file back if the file was accidentally deleted.

---

## TLUP-035

(Warning) TLUPlus file (%.2fMB) will not be preserved because it exceeds file size limit (%dMB).

**Description**

In general, the tool saves the original TLUPlus file as an attachment in the design library so you can use it for extraction validation and debugging. However, if the TLUPlus file exceeds the size limit, the tool issues this warning message and does not save it in the design library to conserve disk space. The default size limit is 20MB.

Feedback

### What Next

Without the original TLUPlus file, it can be hard to identify the root cause when a problem occurs in extraction. To keep the TLUPlus file, set the *file.tlup.max_preservation_size* application option to a value greater than or equal to the TLUPlus file size and read the TLUPlus file again.

### See Also

- read_parasitic_tech
- file.tlup.max_preservation_size

---

## TLUP-040

(Error) Old version TLUPlus file is not supported.

### Description

This TLUPlus file is too old to support.

### What Next

Regenerate TLUPlus file by the newest tool.

---

## TLUP-041

(Error) TLUPlus file syntax error. Unknown lead marker '%s'.

### What Next

To parse TLUPlus file without error, please make sure the TLUPlus file is generated correctly or try the newest tool.

---

## TLUP-042

(Error) TLUPlus file syntax error. Unknown table keyword '%s' in section '%s'.

### Description

This keyword isn't known by tool.

### What Next

Check whether the keyword is valid. If it is valid, try the newest tool to read it. Otherwise, regenerate the TLU+ file correctly.

Feedback

## TLUP-043

(Error) TLUPlus file content error. Parasitic table %s size is out of boundary.

**What Next**

Edit ITF file, then regenerate the TLUPlus file.

## TLUP-044

(Error) TLUPlus file content error. Mask-aware '%s' table misses DR2SIDEN content for some mask pairs.

**Description**

DR2SIDEN is categorized under MASK pairs and must be repeated for each mask pair. This error indicates that mask is defined but DR2SIDEN is NOT under all MASK pairs.

**What Next**

Please regenerate the TLUPlus file to have DR2SIDEN populated for all mask pairs.

## TLUP-045

(Warning) minSpacing value of layer '%s' does not match : ITF (%f) vs technology file (%f).

**Description**

The minimum spacing value is differs between the ITF file and the technology file. The values printed in the warning message for both the ITF file and the technology file include any scale factor defined by the HALF_NODE_SCALE_FACTOR entry in the ITF file.

**What Next**

This is only a warning message. To prevent this message, check the minimum spacing value in the ITF file and its corresponding layer in the technology file.

## TLUP-046

(Warning) minWidth value of layer '%s' does not match : ITF (%f) vs technology file (%f).

**Description**

The minimum width value is differs between the ITF file and the technology file. The values printed in the warning message for both the ITF file and the technology file include any scale factor defined by the HALF_NODE_SCALE_FACTOR entry in the ITF file.

Feedback

**What Next**

This is only a warning message. To prevent this message, check the minimum width value in the ITF file and its corresponding layer in the technology file.

# TMGR

## TMGR-001

(Error) Unexpected state. Information: queueNode node %d, level %d, processPass %d isn't greater than lot->_processPass %d".

**Description**

This error message indicates tool task manager problem.

**What Next**

Report this problem with the message information to Synopsys.

# TSMAP

## TSM-0006

(information) Design has %d hiers, %d insts, %d tristates (%d generic tristates).

**Description**

Generates the summary report of tristate activity inside initial_map. It lists the hier count, inst count, tristate count and generic tristate count.It runs in the LBO thread environment.

# UI

## UI-001

(error) %s

**Description**

A script or complex command failed, but the error was suppressed because the value of the app option shell.common.noTclErrors is true.

Feedback

**What Next**

Identify the error based on the error message, and fix the error if necessary

# UIAT

## UIAT-5

(warning) Cannot get attribute for more than one object.

**Description**

While getting the value of an attribute, you specified more than one object. You can only get the attribute for a single object.

**What Next**

Specify a single object.

# UIC

## UIC-001

(error) %s '%s' is not in mode '%s'.

**Description**

Constraints in one mode cannot refer to objects in other modes.

**What Next**

Specify objects that are within the current mode.

## UIC-002

(error) Unable to set %s on '%s'; %s.

**Description**

The command failed to set the information on the named object due to the reason specified.

**What Next**

Examine the reason in the error message.

Feedback

## UIC-003

(error) Clock source net '%s' is multi-driven.\n \tOnly driver pin/port '%s' will be used as the source.

### Description

You should generally use ports or pins as clock or generated clock sources. If a net is specified, a driver leaf pin or port is chosen as the source. This error indicates that a clock source net has multiple drivers, and only one will be used as the clock source.

### What Next

Identify a valid set of sources and reapply the *create_clock* or *create_generated_clock* command.

### See Also

- create_clock
- create_generated_clock

## UIC-004

(error) Clock source net '%s' has no leaf driver pins or ports.

### Description

You should generally use ports or pins as clock or generated clock sources. If a net is specified, a driver leaf pin or port is chosen as the source. This error indicates that a clock source net has no drivers, and the clock cannot be created.

### What Next

Identify a valid set of sources and reapply the *create_clock* or *create_generated_clock* command.

### See Also

- create_clock
- create_generated_clock

## UIC-005

(Warning) Unable to set %s delay with -reference_pin '%s'. Cannot specify '-reference_pin' with '-network_latency_included or -source_latency_included'.

Feedback

**DESCRIPTIONi**

The -network_latency_included and -source_latency_included options cannot be used at the same time as the -reference_pin option. If you use this option and the propagated clocking is being used, the delay value is related to the arrival time at the specified reference pin, which is clock source latency plus its network latency from the clock source to this reference pin. For ideal clock network, only source latency is applied.

**What Next**

Apply the constraint without using options '-network_latency_included or -source_latency_included'.

---

## UIC-006

(Warning) Unable to set %s delay with -reference_pin '%s'. Reference pin should be leaf pin or port in a clock network.

**DESCRIPTIONi**

The pin specified with the -reference_pin option should be a leaf pin or port in a clock network, and in the direct or transitive fanout of a clock source specified with the -clock option.

**What Next**

Determine correct reference_pin to specify or use it without the -reference_pin option.

---

## UIC-007

(warning) Reference pin '%s' specified with external delay is not in clock network and hence ignored.

**Description**

The pin specified with the -reference_pin option should be a leaf pin or port in a clock network, and in the direct or transitive fanout of a clock source specified with the -clock option.

**What Next**

Specify valid reference pin from clock network.

---

## UIC-008

(Error) Unable to set clock sense on %s.

Feedback

### Description

The object specified for the *set_clock_sense* command is invalid.

Valid objects include ports, leaf pins and combinational propagation cell arcs. Net arcs, timing check arcs (such as setup or hold), or sequential edge propagation arcs are not supported. For hierarchical pin, it is valid only if it is in clock network and the pin is the clock source of specified clock.

### What Next

Use the *set_clock_sense* command on valid ports, pins or cell timing arcs.

---

## UIC-009

(warning) Object '%s' is not a valid %s. The %s command will not match this object.

### Description

The specified object is neither a valid timing startpoint nor endpoint. Commands such as *set_false_path*, *set_multicycle_path*, and *group_path* require the *-from* option *from_list* objects to be valid timing startpoints and the *-to* option *to_list* objects to be valid timing endpoints.

One important limitation to note is that the call to *update_timing* command may cause the creation of path endpoints at combinational pins. One major example is clock gating checks if the pin connects to the signal gating the clock signal. In that case, entering an exception before an *update_timing* would emit this message, whereas doing so after an *update_timing* would not.

### What Next

Use input ports or register clock pins for the *from_list* objects. Use output ports or register data pins for the *to_list* objects.

### See Also

- group_path
- set_false_path
- set_multicycle_path
- update_timing

---

## UIC-010

(warning) Invalid direction for port '%s' in a %s specifier.

Feedback

### Description

The entered port direction does not match the specifier used. For example, an input port is used with a -to specifier.

### What Next

Re-enter the command with valid port directions.

---

## UIC-011

(warning) %s is forcing pin '%s' to be a timing %s.

### Description

The specified pin is neither a valid timing startpoint nor endpoint. The *set_max_delay* and *set_min_delay* commands are point-to-point timing exception commands. In this case, these commands override the default single-cycle timing relationship for affected timing paths, so the matched component of each path has a new startpoint (if you specify the *-from* option) and a new endpoint (if you specify the *-to* option). The remaining portions of the path are left unconstrained at the specified pin.

*set_input_delay* will force startpoints. and *set_output_delay* will force endpoints. Forcing a startpoint or endpoint breaks all paths that would have been seen through those pins.

### What Next

The tool assumes that the behavior described above is intended. If not, use input ports or register clock pins for the *from from_list* objects, and output ports or register data pins for the *-to to_list* objects.

### See Also

- set_max_delay
- set_min_delay

---

## UIC-012

(Warning) Clock edge values are not monotonically increasing, so waveform has been adjusted.

### Description

The clock waveform must be an even number of monotonically increasing values. In the special case where two edges are specified and the second value is smaller than the first by less than one period, one clock period is added to the second value. For example, if the

Feedback

period is 10 and the waveform is {5.0 3.0}, the adjusted waveform will be {5.0 13.0}. This means that the clock rises at 5 and falls at 13.

**What Next**

You can check the *waveform* attribute on the clock to ensure that the adjusted value is correct.

---

## UIC-013

(warning) Creating a generated clock on input or inout port '%s'.

**Description**

When creating a generated clock on an input or inout port, please note that the generated clock would only derive its waveform characteristics from the master clock. Delay, on the other hand, is derived from delay information at the port itself. Additionally, creating a generated clock to drive an inout port can cause unpredictable circuit behavior. If the port is functioning as an output while the clock is driving, bus contention occurs. If the clock is three-stated, any registers in the fanout of the clock can lose state.

**What Next**

Verify that the generated clock is on the intended object.

---

## UIC-014

(Error) The -edges spec of generated clock '%s' has edge number\n \tless than 1. The edge number should be 1 or greater.

**Description**

The edge_list in create_generated_clock command cannot use edge number of 0 or less.

**What Next**

Change your edge_list and re-enter the create_generated_clock command.

---

## UIC-015

(Error) In the edge list of create_generated_clock\n \t'%s', the edge numbers must be in increasing order.

**Description**

In the -edges specification of a create_generated_clock command, the edge numbers specified cannot be decreasing. Note that two subsequent edges can be equal for a pulse clock, such as *-edges {1 1 3}*.

Feedback

**What Next**

Check the edge list value in the create_generated_clock command.

---

## UIC-016

(warning) Creating a clock source on inout port '%s'.

**Description**

A circuit where a clock signal drives an inout port can be unpredictable. If the port is functioning as an output while the clock is driving, bus contention occurs. If the clock is three-stated, any registers in the fanout of the clock can lose state.

**What Next**

Verify that the circuit is safe according to your design rules. Ensure that any inout port with a clock source will not have contention or three-state when the clock is being used.

---

## UIC-017

(error) The 'create_clock' command cannot be used on output port '%s'.

**Description**

Clock sources must be input ports or internal pins. Inout ports can be used, but they are not recommended because of bus contention issues.

**What Next**

Identify a valid set of sources and reapply the *create_clock* command.

---

## UIC-018

(warning) Creating '%s' on a hierarchical pin '%s'.

**Description**

Defining a constraint at a hierarchical pin causes the timing arcs (net arcs) from leaf pins driving this pin to leaf pins driven by this pin to be broken. This gives rise to two distinct limitations. First, the hierarchical boundary is a virtual designation and, generally, does not map to a specific physical location. Hence, timing analysis cannot make any assumptions as to distributing the interconnect delay to the left and right of the bidirectional boundary. Second, breaking the original timing arcs may introduce a loss of timing information. For example, if the hierarchical pin were driven by three leaf pins and drives three other leaf pins, then breaking at the hierarchical boundary would reduce nine timing arcs to six, or worse, three considering the first limitation.

Feedback

### What Next

If possible, you may want to move the constraint to a leaf driver or load pin on the same net.

### See Also

- create_clock
- set_clock_sense
- set_input_delay
- set_output_delay

---

## UIC-019

(warning) Creating a clock on internal pin '%s'.

### Description

Clock sources should normally be input ports. Internal pins are supported but not recommended because they segment timing paths and prevent slew propagation. If the clock is derived from an incoming clock signal, use *create_generated_clock* instead of *create_clock*.

### What Next

Identify a valid set of sources and reapply the *create_clock* command.

### See Also

- create_clock

---

## UIC-020

(error) Invalid waveform. Edges must be an even number of\n \tmonotonically increasing values less than one period in duration.

### Description

The specified clock waveform is not valid.

### What Next

Specify a valid waveform for *create_clock*.

Feedback

## UIC-021

(warning) Creating virtual clock named '%s' with no sources.

**Description**

This warning occurs when a virtual clock is created. A virtual clock has a name but no sources. This means it is not applied to any ports or pins in the design. A virtual clock can be used to specify input or output delay.

**What Next**

The command *create_clock -period 10 -name CLK* does not apply the clock to any sources. If you want to apply the clock to a pin or port, you must specify the pin or port as in *create_clock -period 10 CLK* or *create_clock -period 10 -name CLK ff1/CP*.

## UIC-022

(error) The number of edges specified '%d' is not an odd number larger than or equal to 3.

**Description**

The number of edges to make one period of the generated clock waveform has to be an odd number larger than or equal to 3.

**What Next**

Carefully specify edges and ensure that you specify one full clock cycle using the edges.

## UIC-023

(error) The number of edge_shifts specified '%d'\n \tusing '-edge_shift' option is not equal to the number of edges specifed '%d'\n \tusing '-edges' option.

**Description**

The number of edge_shifts specified using the '-edge_shifts' option must be equal to the number of edges specified using the '-edges' option.

**What Next**

Specify an edge shift for each edge in the edge list.

## UIC-024

(error) You cannot specify an output port '%s' to be a generated clock master source.

Feedback

**Description**

A generated clock master can be an input or inout port or a pin.

**What Next**

Determine an appropriate master source for the generated clock.

---

## UIC-025

(warning) Virtual clock '%s' cannot be made propagated.

**Description**

A virtual clock cannot be made propagated as it has no source and does not affect any register in the design.

**What Next**

Remove the virtual clock from the clock list.

**See Also**

- remove_clock

---

## UIC-026

(warning) Converting propagated %s '%s' to ideal.

**Description**

The direct setting of clock network latency on a propagated clock converts it to a ideal clock.

**What Next**

Verify that this is the intended behavior.

**See Also**

- remove_clock_latency
- set_clock_latency

---

## UIC-027

(warning) Converting %s object '%s' from ideal to propagated.

Feedback

### Description

The direct setting of a propagated_clock attribute on a clock, pin, or port can convert all latches in the transitive fanout to propagated. This occurs if they were already marked ideal and had some network latencies set. The user-specified network latencies are removed and can not be recovered. This message is generated if you use the *set_propagated_clock* command on the objects (pin, port or clock) after setting network latencies by using the *set_clock_latency* command on the same objects.

### What Next

Verify that this is the intended behavior.

### See Also

- remove_clock_latency
- set_clock_latency
- set_propagated_clock

---

## UIC-028

(warning) Negative clock latency of %g specified for %s '%s'.

### Description

A negative value to *set_clock_latency* is legal, but may be unintended.

### What Next

Ensure that a negative value is appropriate for the latency.

---

## UIC-029

(error) Clock '%s' exists in more than one group.

### Description

The *set_clock_groups* command allows each clock can be defined in only one clock group.

### What Next

To define multiple groups related to the same clock, use multiple *set_clock_groups* commands.

Feedback

## UIC-030

(Warning) Clock groups with same clocks are already set in '%s'.

### Description

You receive this warning message because the clock groups you specified are already set by previous command.

### What Next

Use the *report_clock* with *-groups* option to check what clock groups have been set. To remove the existing clock groups, use the *remove_clock_groups* command.

### See Also

- report_clock

## UIC-031

(warning) Clock group '%s' exists. Overwriting it with the new description.

### Description

You receive this warning message because a clock group with the same name has already been specified. The old group will be removed and will be overwritten with the new command.

### What Next

Use the *report_clock* with *-groups* option to check what clock groups have been set. To remove the existing clock groups, use the *remove_clock_groups* command.

### See Also

- set_clock_groups
- remove_clock_groups
- report_clock

## UIC-032

(error) Clock group '%s' does not exist.

### Description

All names must be predefined by the set_clock_groups.

Feedback

### What Next

Use the set_clock_groups command to define clock groups. Use the report_clock command with -groups option to see existing clock groups.

### See Also

- remove_clock_groups
- set_clock_groups
- report_clock

---

## UIC-033

(information) '%s' has been renamed to '%s'.

### Description

You receive this message because the -exclusive option has been renamed to -logically_exclusive since -physically_exclusive is added.

### What Next

Check the set_clock_group documentation for better understanding of the new options and use the one which is more suited.

### See Also

- set_clock_groups

---

## UIC-034

(warning) Redefining clock '%s'. %s

### Description

This message is printed when the *create_clock* command creates a clock with the same name of an existing clock. The clock will be redefined with the period, waveform and sources specified in the most recent command.

### What Next

Determine if the redundant *create_clock* command is desired and modify constraint scripts as needed.

### See Also

- create_clock

Feedback

## UIC-035

(warning) Removing clock '%s'\n \tAll of its sources are now assigned to a new clock.%s

### Description

This message is printed when the *create_clock* command is issued on a source that already has a clock of a different name, and the *-add* option is not used. The existing clock(s) will be removed from these sources, and will be removed entirely if they have no remaining sources.

### What Next

If existing clocks should be preserved, use *-add* in the later *create_clock* command.

If only the later clock is desired, change the constraint script to eliminate previous *create_clock* commands on those sources.

### See Also

- create_clock

## UIC-036

(warning) Modifying clock '%s'; some of its sources are now assigned to a new clock.%s

### Description

This message is printed when the *create_clock* command is issued on a source that already has a clock of a different name, and the *-add* option is not used. This message indicates that a clock had some of its sources in common with the new clock. Those sources are removed from the previous clock because *-add* was not used. The previous clock remains but now has fewer sources.

### What Next

If existing clocks should not be modified, use *-add* in the later *create_clock* command. Otherwise ensure that the *create_clock* commands do not reference the same sources unless *-add* is used.

### See Also

- create_clock

## UIC-037

(warning) Ignoring option '%s' because '%s' is not specified.

Feedback

**Description**

The option specified is valid only if specified along with the other option.

**What Next**

This option will be ignored, so you can remove this option from the command.

---

## UIC-038

(warning) Negative clock uncertainty specified: %g

**Description**

A negative value to *set_clock_uncertainty* is legal, but may be unintended.

**What Next**

Ensure that a negative value is appropriate for the uncertainty.

---

## UIC-039

(warning) '%s' command option '%s' is not supported.

**Description**

The specified command option is not supported in this application. It will be ignored.

**What Next**

There may be another command or set of commands that performs a similar action. If possible, ensure that the script uses commands and options which are supported in all of the tools where the script will be used.

---

## UIC-040

(warning) Adjusting %s %s on %s '%s' so that %s.

**Description**

The tool automatically adjusts delay values so that either min is never greater than max or neither of the values are left uninitialized. This message occurs during either set_input_delay or set_clock_tree_balance_point constraint command. For input delays, this message indicates that one input delay value was changed to prevent min values from being larger than the max values only; unitialized values are left untouched. For clock tree constraints, this message can indicate both the situations.

Feedback

### What Next

Check your script to determine what value was intended for each of min_rise, max_rise, min_fall and max_fall.

---

## UIC-041

(warning) Clock '%s' is specified multiple times in the same group of a clock group.

### Description

The *set_clock_groups* command allows each clock to be defined only once in a group.

### What Next

Check if another clock should have been defined instead of the duplication.

---

## UIC-042

(warning) Unable to apply '%s' on non-current design '%s'.

### Description

The constraints can be applied only to the current_design.

### What Next

Check if the current_design setting is as expected or the object passed to the command is correct. You may want to use the instance name instead if the intention is to set it on a hierarchical sub-design.

### See Also

- current_design

---

## UIC-043

(warning) Object '%s' is not on clock network for '%s' mode's '%s' clock. The %s command cannot be applied to this object.

### Description

The constraints can only be applied to any pin/port on a clock network.

Feedback

## UIC-044

(warning) Object '%s' had a previously specified constraint set on it for clock '%s', which will be overwritten.

**Description**

A set_clock_tree_balance_point constraint has already been applied to this object-clock pair. The new constraint will overwrite this one.

## UIC-045

(info) %s of %s objects specified were not clock tree balance points.

**Description**

No clock tree balance constraints were applied to the specified objects previously. You should check if the object names provided were correct.

## UIC-046

(error) No pin specified in the given '%s' list belong to specified '%s' list.

**Description**

The report command has specifed both a pin list and a clock list and none of the clocks in the clock list pass through the pins in the pin list.

## UIC-047

(warning) Pins specified by the given '%s' list that do not belong to the specified '%s' list have been dropped from the current report.

**Description**

The report command has specifed both a pin list and a clock list and some of the pins in the pin list do not belong to any clock network specified in the clock list. These pins will not be considered during report generation.

## UIC-048

(error) None of the pins in the '%s' list is present in the clock networks of the given mode(s).

Feedback

**Description**

The pins in the pin list specified in the report command are not present on any of the clocks of the given/implicit modes.

---

## UIC-049

(warning) Pins that are not in a clock network are dropped from the '%s' list.

**Description**

Some of the pins in the pin list specified in the report command are not present on any of the clocks of the given/implicit modes.

---

## UIC-050

(error) 'from_pin' list and 'to_pin' list contain no pins that are clocked by the same clock; therefore, the skew cannot be reported.

**Description**

For the skew report the from pins and the to pins given in the command should have at least one pin which are part of the same clock network for local skew to be reported.

---

## UIC-051

(error) '%s' is a %s clock and cannot be specified for the '%s' constraint.

**Description**

This error happens when the clock is either a generated or a virtual clock. Since this is a clock tree synthesis constraint it cannot be applied to a virtual clock. Also, clock tree synthesis balances the generated clock network as part of the master clock network. Hence clock tree constraints can only be applied with respect to a master clock.

---

## UIC-052

(error) %s name '%s' already exists.

**Description**

The constraint with the given name already exists.

**What Next**

Specify another name which is unique.

Feedback

## UIC-053

(error) '%s' already has a skew group '%s' defined for it with respect to the clock '%s'.

**Description**

The constraint for the given object already exists with respect to the specified clock.

## UIC-054

(error) Unable to apply %s on design '%s' because it is not properly linked.

**Description**

The specified design must be successfully opened and linked.

**What Next**

Check the design object passed to the command.

## UIC-056

(warning) The '%s' command is not supported by read_sdc.%s

**Description**

The command is not supported within the *read_sdc* command and will be ignored.

**What Next**

The message text will include additional information if there is an alternate way to apply the constraint.

## UIC-057

(error) None of the specified scenarios are active for %s analysis.

**Description**

None of the specified scenarios have been activated for setup or hold analysis. Because of Thus, no setup or hold timing paths can be found.

**What Next**

Use the *-modes* or *-corners* options to specify currently-active scenarios, or use the *set_scenario_status* command to activate some scenarios for setup or hold analysis.

Feedback

## UIC-058

(warning) Scenario %s is not configured for %s analysis: skipping.

**Description**

The specified scenario has not been activated for setup or hold analysis. Because of this, no setup or hold timing paths can be found for it.

**What Next**

If setup or hold analysis is deliberately being skipped for this scenario, this warning can be ignored. Otherwise, use the set_scenario_status command to activate this scenario for setup or hold analysis.

## UIC-059

(warning) The option '%s' has been renamed to '%s'.

**Description**

The specified option has been replaced by a new option with the same functionality. The old command option still works but will stop working soon.

**What Next**

Update the scripts to use the new option.

## UIC-060

(warning) Mode '%s' does not exist on cell '%s'.

**Description**

The requested cell mode could not be found on the specified instance. This cell mode cannot be activated.

**What Next**

Update the scripts to use a valid set mode.

## UIC-061

(warning) Implicitly setting the '%s' option for the set_timing_derate command.

Feedback

**Description**

There were no option specified on the set_timing_derate command. The tool will apply derates assuming the -cell_delay option.

**What Next**

If this was not your intent, update your script by using at least one of the following options -cell_delay, -check_delay or -net_delay

---

## UIC-062

(error) Cannot activate modes '%s' on cell '%s' because they belong to the same mode group. No mode is activated.

**Description**

You are trying to activate two or more cell modes belonging to the same mode group. Only one mode in each mode group can be activated at a time. The cell mode status for that particular cell will be unchanged.

**What Next**

Update the scripts to activate only one mode per mode group.

---

## UIC-063

(error) CRPR is currently switched off.

**Description**

The command works only when CRPR is enabled but it was called when CRPR was disabled.

**What Next**

Update the script to enable CRPR, if desired. To enable CRPR set timer app option 'remove_clock_reconvergence_pessimism' as follows: set_app_options -global {time.remove_clock_reconvergence_pessimism true}

---

## UIC-064

(error) Pin '%s' is not an input clock pin of a sequential device.

Feedback

### Description

You receive this message if you execute report_crpr with an input pin (either from_pin or to_pin) that is not a sequential clock pin. Both, the from_pin and the to_pin, must be sequential clock pins.

### What Next

Run report_crpr command again and ensure that the pins specified for -from pin and -to pin are correct. For designs with multiple modes check if the correct mode is specified.

### See Also

- set_app_options
- report_crpr

---

## UIC-065

(error) Could not find clock '%s' for %s '%s'.

### Description

You receive this error message because the clock you specified does not correspond to the input clock pin or the port(either from_pin or to_pin) specified with the report_crpr command.

### What Next

Run report_crpr again and ensure that clocks specified can reach the from_pin and to_pin sequential clock pins or the ports are constrained by the specified clock. For designs with multiple modes, make sure the clocks are from the correct mode.

### See Also

- set_app_options
- report_crpr

---

## UIC-066

(error) Port '%s' is not an %s port%s.

### Description

You receive this message if you execute report_crpr with a port (either -from or -to) that is not correct input/output type or is not constrained by specified clock. Option -from expects an input port and -to expects an output port.

Feedback

### What Next

Rerun the command with correct port for -from and -to options with correct clock name. For designs with multiple modes, check if the clocks correspond to the mode specified or current mode if a mode was not specified.

### See Also

- report_crpr
- set_app_options

---

## UIC-067

(error) %s '%s' not in clock network.

### Description

You receive this error message because the -from pin you specified with report_crpr command is not in any clock network. Report_crpr allows data pins of sequential devices as -from pins when timer app option crpr_remove_clock_to_data_crp is set to true.

### What Next

Ensure that pins specified are either clock pins or if clock to data crp report is desired then the app option crpr_remove_clock_to_data_crp is set to true and the specified -from pin is a data pin of a sequential device driven by clock network. Remove_clock_to_data_crp mode can be set as follows: set_app_options -global {time.crpr_remove_clock_to_data_crp true}

### See Also

- set_app_options
- report_crpr

---

## UIC-068

(error) pulse clock sense merging at pin: '%s' for clock: '%s' The clock will not propagate forward from this pin.

### Description

A pulse clock is combined through combinational logic with another sense of the same clock. The tool does not resolve this conflict. Any registers down stream from this point will NOT have this clock assigned to them.

Feedback

### What Next

Resolve the conflict by specifying the sense of the clock by using the 'set_clock_sense' or 'set_sense -type clock' commands.

### See Also

- set_clock_sense
- set_sense

---

## UIC-069

(warning) Object '%s' is not a valid timing endpoint for mode '%s'. The %s command cannot be applied to this object.

### Description

The constraints can only be applied to a valid timing endpoint like register clock pin, output port, etc.

---

## UIC-070

(error) No scenarios were specified.

### Description

The modes and corners specified by the *-modes* and *-corners* options did not specify any scenarios.

### What Next

Use values for the *-modes* or *-corners* options that specify existing scenarios, or use the *-scenarios* option to explicitly specify the desired scenarios.

---

## UIC-071

(error) Scenarios from more than one mode were specified.

### Description

The specified scenarios belong to more than one mode. However, the command can only process scenarios that all belong to the same mode.

### What Next

You can specify a single mode with the *-modes* option to ensure that only appropriate scenarios are specified.

Feedback

## UIC-072

(error) Scenarios from more than one corner were specified.

**Description**

The specified scenarios belong to more than one corner. However, the command can only process scenarios that all belong to the same corner.

**What Next**

You can specify a single corner with the *-corners* option to ensure that only appropriate scenarios are specified.

## UIC-073

(error) More than one scenario was specified.

**Description**

Multiple scenarios were specified. However, the command can only process a single scenario.

**What Next**

You can specify a single scenario with the *-scenarios* option.

## UIC-074

(error) No active scenarios were specified.

**Description**

The *-modes*, *-corners*, *-scenarios* options did not specify any active scenarios.

**What Next**

Use values for the *-modes*, *-corners*, or *-scenarios* options that specify existing scenarios that are active for setup or hold analysis.

## UIC-075

(error) Current scenario does not exist or is inactive.

**Description**

By default, the command operates on the current scenario, but the current scenario does not exist, or is not active for setup or hold analysis.

Feedback

**What Next**

Use values for the *-modes*, *-corners*, or *-scenarios* options that specify existing active scenarios.

Set the current scenario to an existing active scenario.

Use the *set_scenario_status* command to make the current scenario active.

---

## UIC-076

(error) Current scenario does not exist.

**Description**

By default, the command operates on the current scenario, but the current scenario does not exist.

**What Next**

Set the current scenario to an existing scenario.

Use values for the *-modes*, *-corners*, or *-scenarios* options that specify existing scenarios.

---

## UIC-077

(warning) Data check from '%s' to '%s' is ignored since %s is on clock network

**Description**

This warning happens when either the from pin or the to pin of data check is on clock network. In this case the data check is ignored.

---

## UIC-078

(warning) Ignoring data check %s hierarchical pin '%s'

**Description**

This warning happens when either the from pin or the to pin of data check is a hierarchical pin. The data check on hierarchical pin is not supported.

---

## UIC-079

(Error) Cannot specify from/through/to group with special (async, clock_gating, in2reg, reg2out or in2out) path groups.

Feedback

**Description**

Inbuilt group path are special group path for async, clock_gating or boundary paths and no object can be added or removed from these path group using group_path command or remove_path_group command. These group paths can be enabled or disabled using timer app option.

---

## UIC-080

(warning) Ignoring data check %s pin '%s'

**Description**

This warning happens when either the from pin or the to pin of data check is not found on the graph and hence the data check is ignored.

---

## UIC-081

(error) report_ocvm currently supports only AOCVM.

**Description**

This error happens when either the type option is not provided or it is something other than aocvm.

---

## UIC-082

(warning) report_ocvm does not support check arc.

**Description**

This warning happens when a check arc is provided as an option to the report_ocvm command.

---

## UIC-083

(Error) Cannot create a group_path using reserved name used for special group paths like: default, async, clock_gating, in2reg, reg2out or in2out path groups.

**Description**

Inbuilt group path are special group path for default, async, clock_gating or boundary paths and each one of them have reserved names.

Feedback

## UIC-084

(warning) CTS Exception cannot be applied with respect to generated clock: %s and would be applied to its primary master clock.

**Description**

CTS Exceptions (balance and Ignore) cannot be applied on generated clocks. If specified with repect to generated clock, tool will transfer it to primary master clock. It is highly recommended to specify the constraint on a master clock for clean and unambiguous application.

## UIC-085

(Error) The priority value specified for group_path is less than 0.\n \tThe priority value should be greater than 0. Constraint is ignored.

**Description**

A negative value for priority option for *group_path* is not allowed.

**What Next**

Reapply with priority value larger than 0.

## UIC-086

(error) Specified corner does not exist for mode: %s.

**Description**

The corners specified by the *-corners* options does not exist for current mode.

**What Next**

Specify corners which exist in current mode.

## UIC-087

(info) PrimeTime does not support I/O path groups; for consistency with PrimeTime, disable this app-option.

**Description**

PrimeTime does not support I/O path groups and hence enabling them will make group paths different for both the tools.

Feedback

**See Also**

- get_app_option_value
- set_app_options
- report_app_options
- report_path_groups
- time.enable_io_path_groups
- time.deprioritize_io_path_groups

---

## UIC-088

(Warning) Timing constraint set on unmapped DesignWare operator '%s' may be ignored.

**Description**

The timing constraint is set on cells or pin of unmapped DesignWare operator. The timing constraint implied size_only may be ignored by the datapath optimization step. The constraint on the DesignWare operator may be lost.

**What Next**

Please try not to set timing constraint on unmapped DesignWare operator.

---

## UIC-090

(warning) There is no clock named '%s' in mode '%s'.

**Description**

Clock-related constraints in one mode cannot refer to clocks in other modes. If a clock from a different mode is provided, the tool will try to substitute a clock with the same name in the correct mode. This warning will be issued if such a clock cannot be found.

**What Next**

Specify clocks that are within the current mode.

---

## UIC-091

(warning) Unrealistically large(absolute) derate value specified: %s.

Feedback

**Description**

This warning message is issued when set_timing_derate_command is called with a value that makes total timing derate value greater than 2.0 or less than 0. The expected range for total derate value is [0 to 2].

Total derate value is the sum of base and incremental derates. A total derate value of more than 2 may result into unrealistic timing. And when the calculated total derate value is less than zero it is set to zero for timing.

**What Next**

It is likely that the specified derate value is incorrect, because of a user input error. Please specify a more realistic derate factor within the range [0 to 2].

---

## UIC-092

(warning) Detected '%d' empty groups, setting up specified relationship among the remaining '%d' clock groups.

**Description**

An invalid/empty/undefined clock or clocks are detected in set_clock_groups.

**What Next**

Carefully check the clocks used in set_clock_groups. ICC2 continues the run with the remaining valid clocks.

---

## UIC-093

(warning) Clock '%s' is not a generated clock.

**Description**

The *remove_generated_clock* command removes only generated clocks, and the given clock is a regular clock, not a generated clock.

**What Next**

Use *remove_clock* instead of *remove_generated_clock* to remove this non-generated clock.

---

## UIC-094

(warning) Clock '%s' is not a valid option.

Feedback

### Description

Clock option can be used only if app-option time.gen_clock_skew_group is set to true. Also, only generated clock can be specified as part of this app-option.

### What Next

Check the app-option and/or the skew group specification.

---

## UIC-095

(error) '%s' is not an input pin of a cell.

### Description

The command expects an input pin of a MUX or other standard cell. Any other type of pin will generate this error.

### What Next

Please specify valid input pin of a cell.

### See Also

- set_clock_exclusivity

---

## UIC-096

(error) Input pins not specified for user_defined type.

### Description

The command expects at least two input pins for user_defined type. Without input pins, clock exclusivity cannot be determined.

### What Next

Please specify valid input pins for clock exclusivity.

### See Also

- set_clock_exclusivity

---

## UIC-097

(error) Minimum two input pins are required for clock exclusivity.

Feedback

### Description

The command expects at least two input pins. The clocks on these specified input pins will be treated as exclusive beyond the output pin.

### What Next

Please specify minimum two valid input pins for clock exclusivity.

### See Also

- set_clock_exclusivity

---

## UIC-098

(warning) Non-output pins in the list are ignored.

### Description

The command expects only output pin but other pins were specified along with output pin(s). Such non-output pin(s) are ignored by the command.

### What Next

Please check the object list and make sure all objects are specified are correct. If objects are correctly specified then this message can be ignored. Otherwise, fix the list of objects.

---

## UIC-099

(error) '%s' is not an output pin of a cell.

### Description

The command expects an output pin of a MUX or other standard cell. Any other type of pin will generate this error.

### What Next

Please specify output pin of a cell.

### See Also

- set_clock_exclusivity
- remove_clock_exclusivity

Feedback

## UIC-100

Information: DRC disabled for '%s' nets.

**Description**

DRC is disabled for specfied nets through *set_auto_disable_drc_nets* command.

**What Next**

Use the *set_auto_disable_drc_nets -none* command to re-enable DRC for specfied nets.

## UIC-101

(info) CTS Exception cannot be applied in logical hierarchal pin %s.

**Description**

CTS Exceptions (balance and Ignore) can not be applied on logical hierarchal pins. If specified then it will ignored.

## UIC-102

(Warning) Delay value of balance point will be copied to all corners.

**Description**

set_clock_balance_point command is issued without corner option. Even though corners are not equivalent(different Process, Voltage or temperature) same delay value will be copied to all corners.

## UIC-103

(Warning) set_sense cannot be applied on hierarchical pin %s beacuse the clocks %s are not defined on the pins.

**Description**

The object specified for the *set_sense* command is invalid. For hierarchical pin, it is valid only if it is in clock network and the pin is the clock source of specified clock.

**What Next**

Use the *set_sense* command on valid ports, pins or cell timing arcs.

Feedback

## UIC-104

(Warning) Cannot find any clocks defined on the hierarchical pins %s.

**Description**

The object specified for the *set_sense* command is invalid. For hierarchical pin, it is valid only if it is in clock network and the pin is the clock source of specified clock.

**What Next**

Use the *set_sense* command on valid ports, pins or cell timing arcs.

## UIC-105

(warning) Offset latency can only be specified for clock-sink pins or clock-pin of ICG cell. Object '%s' is neither a clock sink pin nor a clock-pin of ICG and hence offset latency is dropped for analysis purpose.

**Description**

Offset latency can only be applied to any clock sink pin or a clock-pin of ICG.

## UIC-106

(error) The clock %s is not a multiply_by type of generated clock.

**Description**

A generated clock which is not multiply_by type cannot be used in 'set_clock_jitter' and 'remove_clock_jitter' commands.

**What Next**

To execute the command, use a *master clock* or multiple_by generated clock.

## UIC-107

(warning) CST-Exceptions can only be specified on clock network pins. Exception specified on object: '%s' will be dropped from analysis.

**Description**

CST-Exceptions can only be specified on clock network pins.

Feedback

## UIC-108

(warning) Cannot perform "%s" operation on pin %s. The new setting conflicts with the previous operation on the same pin: "%s"

### Description

The command cannot perform operation because of a conflict and ignores the operation with this warning.

### What Next

Please check the object list and make sure all objects specified are correct. User can either remove conflicting setting on the pin or ignore this message.

## UIC-109

(error) Cannot specify '-type mux' with '-inputs'.

### Description

The command doesn't allow specifying input pins with MUX type. Exclusivity set on mux output pin with this type takes ALL valid inputs automatically. Please use -type user_defined, if fewer mux inputs are to be considered for exclusivity or if the cell is not a mux.

### What Next

Please remove -input option or use -type user_defined.

### See Also

- set_clock_exclusivity

## UIC-110

(error) The exclusivity set with '-type mux' option on the output pin '%s' is dropped.

### Description

This error message is issued when there is a MUX-exclusivity relationship defined on an output pin and the cell is not of a MUX type.

### What Next

Make sure to specify MUX exclusivity only on MUX cells.

Feedback

### See Also

- set_clock_exclusivity

---

## UIC-111

(warning) Corner independent clock-tree-balance-point is not supported. Balance delay on pin '%s' is dropped.

### Description

This warning message is issued when there is corner independent clock-tree-balance-point is specified on a clock network pin. This scenario can exists only in older blocks saved using older builds where tool used to support corner-independent balance-delays.

### What Next

Make sure to specify balance delays with valid mode, corner or scenarios.

### See Also

- set_clock_balance_points

---

## UIC-112

Information: Max transition sigma is used for library constraints only. Some violations may be shown with nominal/mean transition values.

### Description

When app option, \Btime.pocvm_max_transition_sigma_for_lib_only\P is set to true, costing applies max transition sigma only against library constraints. User set constraints on design, clock, port and pin, using set_max_transition command, use nominal/mean transition value. Related app option, time.pocvm_max_transition_sigma, specifies nsigma to be used.

Max transition slack is calculated as follows:

MaxTransitionCost = Max (LibrearyCost, UserCost)

1) LibraryCost = (TransMean + MaxTrans_Nsigma * TransSigma) - (LibraryConstraint)

2) UserCost = (TransMean) - (UserSetConstraint)

Slack = - MaxTransitionCost

Feedback

**What Next**

If this mode is needed, expect nominal transitions with user set constraints in slack calculation.

## UIC-113

(Error) Limit exceeded: Cannot define multicycle path with a path_multiplier of value %d.

**Description**

The max threshold value of multi-cycle path is 100000.

**What Next**

Rerun the set_multicycle_path command with a smaller value for path_multiplier.

**See Also**

- set_multicycle_path

# UID

## UID-2

(error) There are no designs to be linked.

## UID-3

(warning) Can't read link_library file '%s'.

**Description**

This warning message will be printed out if the given link library file is protected or doesn't exist. In the absense of the given library file, there will be some unresolved references during linking.

**What Next**

Check the link_library and the search_path variables and set their value accordingly.

## UID-4

(error) Current design is not defined.

Feedback

**Description**

The tool issues this error when the current design is not defined.

**What Next**

If no designs are currently loaded into memory, read a design into the tool. To set the current design, run the *current_design* command.

---

## UID-5

(error) Current design '%s' has no schematic.

**Description**

The current design does not have a schematic.

**What Next**

You can create a schematic with the *create_schematic* command. Check the man page by typing *help create_schematic*.

---

## UID-6

(error) Technology library has not been specified.

---

## UID-7

(error) Couldn't read technology library '%s'.

---

## UID-8

(error) Technology library '%s' is not a library.

---

## UID-9

(error) Can't read '%s' files '%s'.

---

## UID-10

(error) Cannot specify output port %s as a path startpoint.

Feedback

**Description**

This error message occurs when the specified output ports are not valid as path startpoints. Output ports cannot be the startpoint for a timing path.

**What Next**

Examine the design to determine the correct startpoint for the path. After correcting the startpoint, run the command again.

---

## UID-11

(error) Cannot specify input port %s as a path endpoint.

**Description**

This error message occurs when the an input port is specified as a path endpoint. Input ports are not valid as timing path endpoints.

**What Next**

Examine the design to determine the correct endpoint for the path. After correcting the endpoint, run the command again.

---

## UID-12

(error) Cannot specify hierarchical cell %s as a path named %s.

**Description**

This error message occurs because hierarchical cell names are not valid as path startpoints or endpoints.

**What Next**

Use a clock, port, leaf or hierarchical pin, or leaf cell as the path startpoint or endpoint.

---

## UID-13

(error) '%s' doesn't specify a unique design\n \tPlease use complete specification: full_file_name:design_name

---

## UID-14

(error) Design '%s' is not in the system.

Feedback

**Description**

This error indicates that the current command cannot find the design in the system.

**What Next**

Provide the design in the system or load in a design.

---

## UID-15

(error) '%s' doesn't specify a unique library\n \tPlease use complete specification: full_file_name:library_name

---

## UID-16

(warning) No input ports on design '%s'.

---

## UID-17

(warning) No output ports on design '%s'.

---

## UID-18

(error) Invalid pin list.

---

## UID-19

(error) '%s' doesn't specify a unique instance\n

**Description**

The instance name given matches more than one instance.

**What Next**

Specify a unique name for the instance you want.

---

## UID-20

(error) Write command is not available.

---

## UID-21

(error) Invalid file or design list.

Feedback

## UID-22

(error) No files or designs were specified.

**Description**

This error message is displayed when no files or design objects have been supplied to the *write* command, or when the specified files or design objects are not in memory.

**What Next**

Re-issue the *write* command, correctly specifying the files or designs to be written.

## UID-23

(error) Only designs can be specified with File '%s' is ignored.

## UID-24

(error) No valid designs or design files were specified.

## UID-25

(error) Write command failed.

**Description**

This error is generated when the *write* command failed. Errors include

- an invalid format (see EXPT-3), - writing to a write permission denied directory. (see UID-30) - no valid designs or design files. (see UID-24) - other causes during writing.

**What Next**

Identify and correct the cause of the write command failed and reinvoke the *write* command.

## UID-26

(warning) Can't find in memory specified design or design file '%s'.

**Description**

This error is generated when there is no specified design or design file in memory, but invoke the *write* command.

Feedback

### What Next

Use *list_designs* commands to see whether given design in the memory or use *read* command to read a design in. Then invoke *current_design* command to set the desired current design and reinvode *write* command.

---

## UID-27

(error) '%s' doesn't specify a unique design file\n \tPlease use complete path name to specify this file.

### Description

The specified file is present in more than on directories listed in the search path.

### What Next

One possible solution is to use the complete path name to specify the file. Alternately, the search path can be modified so that only one of the directories in the path has the specified file.

---

## UID-28

(error) Cannot write the '%s' design to '%s'.

### Description

The tool issues this error when it fails to open or write to the specified file. There can be several reasons for this. The most common reasons are: you do not have write permissions in the directory, the disk is full, or you already have a file with the same name that cannot be deleted.

### What Next

Try to manually create a file with the same name. Fix any problems that you encounter, and then delete the file and run the command again.

---

## UID-29

(error) Cannot write the '%s' file.

### Description

The tool issues this error when it fails to open or write to the specified file. There can be several reasons for this. The most common reasons are: you do not have write permissions in the directory, the disk is full, or you already have a file with the same name that cannot be deleted.

Feedback

**What Next**

Try to manually create a file with the same name. Fix any problems that you encounter, and then delete the file and run the command again.

---

## UID-30

(error) Cannot write the specified designs to '%s'.

**Description**

The tool issues this error when it fails to open or write to the specified file. There can be several reasons for this. The most common reasons are: you do not have write permissions in the directory, the disk is full, or you already have a file with the same name that cannot be deleted.

**What Next**

Try to manually create a file with the same name. Fix any problems that you encounter, and then delete the file and run the command again.

---

## UID-31

(error) Multiple designs per file are not permitted by '%s' format.

---

## UID-32

(error) Format '%s' is not a valid write format.

**Description**

This error is generated when *write* command encounters an invalid write format.

**What Next**

Invoke *write* -help command for valid write formats. Identify and correct format, then reinvoke the *write* command.

---

## UID-33

(error) LSI Netlist format is not enabled.

**Description**

The LSI Netlist format is not enabled.

Feedback

**What Next**

The LSI Netlist format is not enabled. Check your permissions.

---

## UID-34

(error) TDL Netlist format is not enabled.

**Description**

The TDL Netlist format is not enabled.

**What Next**

The TDL Netlist format is not enabled. Check your permissions.

---

## UID-35

(warning) Option -add when timing_enable_multiple_clocks_per_reg is not set to true, creates the clock but analysis is not done with multiple clocks

**What Next**

Set variable timing_enable_multiple_clocks_per_reg to be true

---

## UID-36

(error) Verilog netlist format is not enabled.

**Description**

The Verilog netlist format is not enabled.

**What Next**

The Verilog netlist format is not enabled. Check your permissions.

---

## UID-37

(error) Mentor format is not enabled.

**Description**

The Mentor format is not enabled.

**What Next**

The Mentor format is not enabled. Check your permissions.

Feedback

## UID-38

(error) EDIF format is not enabled.

**Description**

The EDIF format is not enabled.

**What Next**

The EDIF format is not enabled. Check your permissions.

## UID-39

(error) Design '%s' isn't mapped.

**Description**

You are trying to write the current design to other format other than synopsys db format, but the design isn't mapped.

**What Next**

Invoke compile -map_effort for mapping the current design, then reinvoke write command.

## UID-40

(error) Wire load '%s' not found.

## UID-41

(error) No files are specified.

## UID-42

(error) Invalid file list.

## UID-43

(warning) File '%s' was not found in the search_path.

## UID-44

(error) Either -all or cell_list must be specified.

Feedback

## UID-45

(error) Invalid cell list.

## UID-46

(error) No valid cells are specified for ungrouping.

**Description**

The ungroup command was called without any valid cells being specified for ungrouping.

**What Next**

Call the ungroup command with a set of valid cells.

## UID-47

(warning) Can't %s unmapped logic cell '%s'.

**Description**

Only hierarchical cells can be ungrouped. The cell mentioned in the error message is not hierarchical and so will be ignored by the ungroup command.

**What Next**

No further action is required, this is merely a warning message.

## UID-48

(warning) Can't %s logic one cell '%s'.

**Description**

Only hierarchical cells can be ungrouped. The cell mentioned in the error message is not hierarchical and so will be ignored by the ungroup command.

**What Next**

No further action is required, this is merely a warning message.

## UID-49

(warning) Can't %s logic zero cell '%s'.

Feedback

**Description**

Only hierarchical cells can be ungrouped. The cell mentioned in the error message is not hierarchical and so will be ignored by the ungroup command.

**What Next**

No further action is required, this is merely a warning message.

---

## UID-50

(warning) Can't %s cell '%s'; its reference is unresolved.

**Description**

This error message is generated when you try to invoke a command on a cell that doesn't have a reference.

**What Next**

Use the *link* command, then reinvoke the current command.

---

## UID-51

(warning) Can't %s leaf cell '%s'.

**Description**

Only hierarchical cells can be ungrouped. The cell mentioned in the error message is not hierarchical and so will be ignored by the ungroup command.

**What Next**

No further action is required, this is merely a warning message.

---

## UID-052

(warning) A non-unate path in clock network for clock '%s'\n from pin '%s' is detected.

**Description**

The clock tree for the specified clock contains non-unate paths. Clock networks normally do not contain cells such as exclusive-OR gates which have non-unate behavior. This implies that both inverting and noninverting clock waveforms reach the specified pin. The sense that is propagated from this pin is non-deterministic.

Feedback

### What Next

Since there is ambiguity on which sense to choose to propagate, the tool picks one arbitrarily to propagate. If this is not acceptable, create a clock using the output of the non-unate gate as a source.

---

## UID-52

(warning) -return_null_values is not supported for attribute '%s' and will be ignored.

### Description

get_attribute returns a collection instead of a list for some attributes. For these attributes, -return_null_values will have no effect.

### What Next

No further action is required, this is merely a warning message.

---

## UID-53

(error) Cannot create_cell of type '%s' because the physical library cell has a non-power/ground pin '%s'. The cell type must be in the logical library for types with non-power/ground pins.

### Description

This error occurs because you are trying to create a logical netlist cell with the wrong notation or you are using the *create_cell* command on a cell type that is only in the physical library, but has a non-power/ground pin. (In this tool, *create_cell* requires that any cell type with a non-power/ground pin be in the logical library.)

### What Next

If you are trying to create a logical netlist cell, you might have to specify a library by using the slash (/) notation; for example:

```
create_cell my_cell library_name/AND4.
```

If you are using the *create_cell* command on a cell type that is only in the physical library, but has a non-power/ground pin , add a logical library cell type to the logical library and rerun.

### See Also

- create_cell

Feedback

## UID-56

(error) Read format '%s' is not supported.

**Description**

The specified read format is not supported.

**What Next**

Please enter a valid read format.

## UID-57

(error) No design file specified to read.

## UID-58

(error) Cannot read file '%s'.

**Description**

This error is generated when you try to read a file which is protected or does not exist.

**What Next**

Check and correct search_path, then reinvoke the read command.

## UID-59

(error) Can't read '%s' file '%s'.

**Description**

This error is generated when reading a given format file unsuccessfully.

This error is generated when a file cannot be read successfully using the specified format.

**What Next**

Check to make sure the correct file format is being specified and reinvoke the *read* command. The problem persists, check the file contents.

## UID-60

(error) Verilog HDL Compiler is not enabled.

Feedback

**Description**

A license is not available for Verilog HDL Compiler.

**What Next**

Check too see if your licenses have run out.

---

## UID-61

(error) Invalid list of operating conditions.

---

## UID-62

(error) No operating conditions were found.

**Description**

The named operating condition was not found in specified library or in any of the link libraries.

**What Next**

Use the 'report_lib' command to see names of operating conditions available in your libraries.

---

## UID-63

(warning) Operating conditions '%s' not found.

**Description**

The named operating condition was not found in specified library or in any of the link libraries.

**What Next**

Use the 'report_lib' command to see names of operating conditions available in your libraries.

---

## UID-64

(error) Only one of: cell list, -pla, -leaf, -logic, -fsm, -hdl_all_blocks \n\tor -hdl_bussed can be specified. -hdl_block can only be used separately \n\tor with -hdl_all_blocks or -hdl_bussed.

Feedback

## UID-65

(error) Either cell list or -pla or -leaf or -logic must be specified.

## UID-66

(error) No valid cells are specified for grouping.

## UID-67

(error) A design with name '%s' already exists in the same\n \tdesign file as the given design: '%s'.

**Description**

The design name you specified in the -design_name option of the 'group' command is already being used. The 'group' command needs to create a new design to represent the new level of hierarchy, so the name you specify must not conflict with existing designs in the system.

**What Next**

Specify a unique design name.

## UID-68

(error) A cell %s already exists in design '%s'.

**Description**

The cell name you specified in the -cell_name option of the 'group' command is already being used for another cell in the design. The 'group' command needs to create a new cell in the design to represent the new level of hierarchy, so the name you specify must not conflict with any existing cells in the design.

**What Next**

Specify a unique cell name.

## UID-69

(error) Except set option cannot be used with -hdl_block, \n-hdl_all, or -hdl_bussed option.

Feedback

## UID-70

(error) Can't find HDL block %s.

**Description**

The block name specified in the -hdl_block option of the 'group' command could not be found in the current_design. The named block needs to have been specified in the HDL description using block labels. Block labels are separated by a backslash (/), for example, my_process/my_function.

## UID-71

(warning) No designs or libraries are available to free.

## UID-72

(error) Only one type of object allowed.

## UID-73

(error) Invalid %s list.

## UID-74

(error) No valid %ss specified.

## UID-75

(error) Unknown port '%s'.

## UID-76

(error) The specified POCVM corner sigma %5.2f is negative. Variable setting is not changed.

**Description**

The POCVM corner sigma value must be greater than or equal to zero.

**What Next**

Use a positive POCVM corner sigma value.

Feedback

## UID-79

(warning) Timing options specified without -timing.

## UID-80

(error) Illegal -path option of '%s'.

**Description**

Valid options for -path are "short", "full", "only", "end". Type help 'report_timing' to see a description of the options.

**What Next**

Re-type command with correct options.

## UID-81

(error) Illegal -delay option of '%s'.

**Description**

Valid option strings for the -delay option are "min", "min_rise", "min_fall", "max", "max_rise", "max_fall". Type help 'report_timing' to see a description of the options.

**What Next**

Re-type command with correct options.

## UID-82

(error) -max_paths cannot be negative.

## UID-83

(information) Updating graph...

**Description**

This information message confirms that the timing graph update is in progress.

**What Next**

This is only an information message. No action is required.

Feedback

## UID-84

(warning) Hierarchy options specified without -hierarchy.

## UID-85

(information) Updating design information...

**Description**

This information message confirms that the design information update is in progress.

**What Next**

This is only an information message. No action is required.

## UID-86

(error) Could not update the design.

**Description**

Could not complete timing analysis because of an error.

**What Next**

There should be another error message describing what went wrong.

## UID-87

(error) Cannot read this library, it is old.

## UID-88

(error) Invalid port list.

## UID-89

(error) 'set_unconnected' cannot be set on an input port '%s'.

## UID-90

(error) 'set_unconnected' cannot be set on an unknown port '%s'.

Feedback

## UID-91

(error) '%s' cannot be set on an output port '%s'.

## UID-92

(error) '%s' cannot be set on an unknown port '%s'.

## UID-93

(error) Invalid object list.

## UID-94

(error) '%s' is not a valid attribute type.

## UID-95

(warning) Can't find %s '%s' in design '%s'.

**Description**

This error message is generated when you try to find a nonexistent object of a given type in the specified design or the design is hidden and so the object cannot be shown.

**What Next**

Check the object by invoke report_<object>, then reinvoke the current command.

## UID-96

(information) Creating new attribute '%s' on %s '%s'.

## UID-97

(error) '%s' doesn't have an attribute '%s' type '%s'.

## UID-98

(error) Invalid attribute type.

Feedback

## UID-99

(error) Attribute '%s' on %s '%s' is type boolean;\n \tcannot be set to '%s'.

## UID-100

(warning) '%s' is not a valid object type.

## UID-101

(warning) Attribute '%s' does not exist on %s '%s'.

**Description**

This error message is issued by commands related to attributes of objects in a design like *get_attribute*, *remove_attribute*, or *report_attribute*. When the command does not find the given attribute, the tool prints out this warning message.

**What Next**

Provide a correct attribute name for this object. If you are not sure about attribute names, do not specify this attribute.

## UID-102

(warning) Ignoring %s '%s' type.

**Description**

This error message is issued when the type of object is not supported by the command you are running.

**What Next**

Run the command with the *-help* option or check the man page of the current command for supported types of objects.

## UID-103

(fatal) Synopsys database corrupted.

## UID-104

(error) Design '%s' not found in target library.

Feedback

**Description**

The design specified was not found in the target library which is specified by the variable target_library.

**What Next**

Verify that the specified design is the correct one, set the correct target_library variable.

---

## UID-105

(error) Example design '%s' is not a flip-flop.

---

## UID-106

(error) Cannot determine flip-flop type of design '%s'.

---

## UID-107

(warning) Multiple operating conditions specified;\n \tonly '%s' accepted.

**Description**

This error message is issued by the *set_operationg_conditions* command. It prints out this message when it can not process the command with multiple operating conditions. The command only accepts one of them.

**What Next**

None.

---

## UID-108

(error) Can't find timing range '%s'.

**Description**

The timing range specified could not be found in the specified library or in the local_link_library or link_library.

**What Next**

Check that the correct timing range is specified and then check the library to make sure the timing range is present.

Feedback

## UID-109

(error) Can't find %s '%s'.

**Description**

The object of the specified type could not be found.

**What Next**

Check the man page for the current command.

## UID-110

(error) VHDL HDL Compiler is not enabled.

## UID-111

(error) Can't check security for format '%s'.

## UID-112

(error) '%s' is an invalid %s.

## UID-113

(error) No report section specified.

**Description**

This error is issued by report_test command because there is an incorrect or missing option.

**What Next**

Check the man page for report_test command.

## UID-114

(warning) %s exists on port '%s'. Cannot %s.

**Description**

This warning message is displayed when a conflict is found between a logic value that has already been set on a port and a command such as *set_logic_one*, *set_logic_zero*, or *set_logic_dc* attempting to set a different logical attribute value. Each of these commands

Feedback

checks for pre-existing logic attributes, and issues this warning message when such attributes are found.

**What Next**

Remove the conflicting logic attribute from the port via the *remove_attribute* or *reset_design* commands.

---

## UID-115

(warning) '%s' is not a library cell.

**Description**

This error message is issued by the *set_prefer* command. The message is printed out when the command cannot find this cell in the target library.

**What Next**

Use the *find* command to check for library cells in the target library, then reenter the *set_prefer* command with the correct library cell.

---

## UID-116

(error) Can't find %s '%s' in design '%s'.

**Description**

This error message is generated when you try to find a nonexistent object of a given type in the specified design or the design is hidden and so the object cannot be shown.

**What Next**

Check the object by invoke report_<object>, then reinvoke the current command.

---

## UID-117

(warning) Can't find %s '%s' in library '%s'.

**Description**

This message is issued when the current command cannot find this object in the specified library. Therefore, it does not perform the current command on this object.

**What Next**

Provide the correct object in the specified library. You can use the *find* command to find objects in the library.

Feedback

## UID-118

(error) Port '%s' is in design '%s', but port '%s' is in design '%s'.

### Description

This error message is displayed when ports in different designs are supplied as arguments to the *set_equal* or *set_opposite* command. These commands require their port arguments to be in the same design.

### What Next

Modify the arguments to only include ports on the same design and re-issue the command.

## UID-119

(warning) %s '%s' is of the wrong type.

### Description

This message is issued when you specify an incorrect object type as the command argument.

For example, the *all_connected* command accepts net, pin, or port objects. If you specify a cell object as the command argument, the tool issues the following message:

```
prompt> all_connected [get_cells U0]
Warning: cell 'U0' is of the wrong type. (UID-119)
{}
```

### What Next

Check the command man page to determine the valid object types and then rerun the command.

## UID-120

(error) The clock period value can't be negative.

### Description

The clock period value specified in your command is negative. The command doesn't accept a negative clock period value.

### What Next

Provide the valid value.

Feedback

## UID-121

(error) Invalid timing range list; specify one or two timing range names.

**Description**

This error message is issued by the *set_timing_ranges* command. The comman accepts only one or two timing range names.

**What Next**

Provide the valid timing range list.

## UID-122

(error) The '-exact' option must be used when the example design is a latch.

**Description**

This error message is displayed when an example latch is given to the *set_register_type* command without using the command line switch '-exact'. The *set_register_type* command requires that the '-exact' switch is used when specifying an example latch.

**What Next**

Re-issue the *set_register_type* command using the '-exact' command line switch.

## UID-123

(error) Can't set flip-flop type on non sequential cell '%s'.

**Description**

This error message is displayed because the *set_register_type* command requires that the components in the *cell_or_design_list* be valid sequential cells (latches or flip flops). Non-sequential cells are not valid arguments for the command.

**What Next**

Modify the argument list so that it only includes valid sequential components.

## UID-124

(error) Design '%s' is of "unknown" flip-flop type.

Feedback

**Description**

This error message is displayed when an example flip flop given to the *set_register_type* command is not of the correct sequential type.

**What Next**

Re-issue the command with a different example device.

---

## UID-125

(error) Attribute '%s' can't be %s on this %s with this command.

---

## UID-126

(warning) Design '%s' is in state table format. Writing only port information.

**Description**

This error message is issued by the *write* command. When the command finds the design is in state table format, it writes only port information.

**What Next**

None.

---

## UID-127

(error) Can't find library pin '%s'.

---

## UID-128

(error) No drive specified on library pin '%s'.

**Description**

This message is issued by the *drive_of* command. The command prints out the message when it finds no drive on the specified pin.

**What Next**

Provide the drive for the specified library.

---

## UID-129

(error) Either wire load model or mode has to be specified.

Feedback

**Description**

This error message is issued by the *set_wire_load* command. The command prints out this message when the wire load model or mode is missing in your current command input.

**What Next**

Provide either wire load model or mode for the command.

---

## UID-130

(error) Mode named %s is not a legal mode.

**Description**

This error message occurs if the argument to the *-mode* option of the *set_wire_load* command is not one of the recognized modes. The recognized modes are top, enclosed, or segmented.

**What Next**

Check for a spelling mistake or missing argument for the *-mode* option of the *set_wire_load* command.

---

## UID-131

(error) Can't find the specified library '%s' in memory.

**Description**

This error indicates that the current command cannot find the specified library in the current memory database of the program.

**What Next**

Check the search_path to include the path to the library. Otherwise, read in the library and rerun the command if you needs the information in the specified library to complete your work.

---

## UID-132

(error) The write command cannot be used: \n\ \t\t-- with the "-format %s" option \n\ %s\t\t-- and with a design_file_list of more than one file. \n\ \tUse the "-hierarchy" option.

**Description**

For the *edif* and *vhdl* formats, there are restrictions when the design list must have only a single design. See the *write* command for details.

Feedback

**What Next**

Review the details in the help page for the *write* command for the format you have selected, and reissue the command either with the *-hierarchy* option or with a design list of only one design.

---

## UID-133

(error) Attribute flag value must be either true or false.

**Description**

This error indicates the command you ran required an attribute flag value of either true or false.

**What Next**

Provide the valid attribute flag value.

---

## UID-134

(error) Clock '%s' is undefined for design '%s'.

**Description**

This error indicates that the command cannot find the clock in the design.

**What Next**

Provide the clock that is defined in the design.

---

## UID-135

(error) No clock specified for remove_clock().

**Description**

This error is issued by the *remove_clock* command when a clock is missing in the command input.

**What Next**

Provide the clock name for the command.

---

## UID-136

(error) The filter expression is not a Boolean expression.

Feedback

**Description**

The second argument to the filter command must be a Boolean expression that returns 1 for objects that pass the filter.

**What Next**

See the EXAMPLES section of the man page for the *filter* command for a description of Boolean expressions (also called conditional or logical expressions in some places).

---

## UID-137

(error) Error in expression. '%c' must be followed by an attribute name.

**Description**

This error is issued by the *filter* command when the attribute is missing after the indicator in the expression.

**What Next**

Provide the attribute name after the filter indicator.

---

## UID-138

(warning) Attribute '%s' does not exist for %s '%s'.

**Description**

This error message is issued by commands related to attributes of objects in a design like *get_attribute*, *remove_attribute*, or *report_attribute*. When the command does not find the given attribute, it prints out this warning message.

**What Next**

Provide a correct attribute name for this object. If you are not sure about attribute names, do not specify this attribute.

---

## UID-139

(error) Invalid inferred bus naming style specification.

**Description**

The setting of the environment variable "bus_inference_style" is invalid, so the bussing of ports could not be inferred on the design which was read.

Feedback

**What Next**

Correct the setting of the "bus_inference_style" variable.

---

## UID-140

(error) You cannot set the '%s' variable.

**Description**

The variable indicated is a derived variable. Its value is derived from some other information, so you cannot change its value directly.

**What Next**

None.

---

## UID-141

(error) Can not set -min_block_size if mode is not "enclosed".

**Description**

Cannot use the *-min_block_size* option to *set_wire_load* without specifying *-mode enclosed*. The *-min_block_size* option makes sense only when used on a hierarchical design whose top level *-mode* is *enclosed*.

**What Next**

Use *-mode enclosed* along with the *-min_block_size* option.

---

## UID-142

(warning) Could not convert '%s' into a piece_index for library\n \tpin '%s. Using '%s' for index value instead.

**Description**

This error message is issued by the *drive_of* command when it cannot convert the piece index string for the library pin. The command uses the index value instead.

**What Next**

None.

Feedback

## UID-143

(error) Cannot set a wire_load mode on a port.\n \tOnly a wire_load model can be set on a port.

**Description**

This error message is issued by the *set_wire_load* command when it only accepts a wire_load model on a port.

**What Next**

Provide the correct model to be set on a port.

## UID-144

(error) %s not allowed in object_list.

**Description**

Objects of the specified type are not allowed in the command's *object_list*.

**What Next**

Remove objects of the specified type from the *object_list* and try the command again. Please refer to the command's man-page for more information on the command's usage.

## UID-145

(information) Truncating parameter value '%f' to '%d'.

**Description**

Some commands (and command options) only accept integer arguments. This information message informs the user that an integer is expected, but a floating-point value was supplied. As a result, the floating-point value will be truncated to the integer portion only.

**What Next**

The parameter has been automatically truncated.

## UID-146

(error) Invalid combination of options enabled.

Feedback

**Description**

Not all options may be utilized simultaneously for certain commands. The specific combination of options that were enabled for this command was invalid.

**What Next**

Please refer to the command's man-page for more information on the command's usage and valid option combinations.

---

## UID-147

(error) Can not set a wire_load on a port\n and a cluster at the same time.

**Description**

Tried to use both the port and the *-cluster* options to *set_wire_load_model* command simultaneously. The *-port* option can only be used when the wire_load is being set on a design; clusters do not have explicit ports.

**What Next**

Specify either port or *-cluster*, as desired.

---

## UID-148

(error) Cannot set a wire_load mode on a cluster.

**Description**

It does not make sense to set a *-mode* on a cluster, as mode makes sense only for a top-level design. On a cluster, it is meaningless.

**What Next**

Remove the *-mode* switch from the command and run it again.

---

## UID-149

(error) The design '%s' does not have a cluster named '%s'.

**Description**

Could not find the cluster specified in the design indicated.

**What Next**

Run the *report_clusters* command to find out what clusters exist in this design, then re-execute the command which failed.

Feedback

## UID-150

(warning) Duplicate signals ignored.

## UID-151

(error) Undeclared optional signals.

## UID-152

(error) You cannot set a selection group on a port.\n \tOnly a wire_load model can be set on a port.

**Description**

The *set_wire_load* command was used on a port and the *-selection_group* option was used. This combination is not valid.

**What Next**

Either remove the *-selection_group* option or specify a design or cluster instead of a port.

## UID-153

(error) You cannot set a selection group if the mode is not "enclosed".

**Description**

An attempt was made to use the *set_wire_load* command with the *-selection_group* option when the wire load mode was not "enclosed". This is not valid.

**What Next**

Either change the wire load mode, or else do not use the *-selection_group* option.

## UID-154

(error) Specified selection group '%s' not found.

**Description**

The wire load selection group name specified was not found in the user specified library or in the first library in the link library path. Therefore, it was not set on the design/cluster.

Feedback

### What Next

Verify that the specified name is the correct one, specify on the command line the library which contains the selection group, or update the link library path such that the named group can be found.

---

## UID-155

(error) Specified path group %s not found.

### Description

This error message occurs when the specified path group name is not found. The path group must first be created with the *group_path* command.

### What Next

Verify that the specified name is correct. Use the *report_path_group* command to determine if the path group was created correctly. You can recreate the group using the *group_path* command.

### See Also

- group_path
- report_path_group

---

## UID-156

(error) Either -path_group or object list must be specified.

### Description

This error message occurs when the *set_noise_slack_range* command requires that either a path group or a object list be specified.

### What Next

Execute the *set_noise_slack_range* command again and specify a path group with the *-path_group* option, an object list with the *object_list* option, or both a path group and an object list.

---

## UID-157

(error) '-to' option must be specified for bidirectional \ pin.

Feedback

**Description**

The *set_annotated_delay* command requires that when a delay is annotated on a net from a bidirectional pin, that the load pin or pins also must be specified with the '-to' option.

**What Next**

Use the '-to' option to specify the loads on the net that should be annotated.

---

## UID-158

(warning) %s is a library. Use the find %s command.

**Description**

This warning message occurs because the *find* command does not accept an object type of cell when trying to find a library cell nor does it accept a an object type of pin when trying to find a library pin.

**What Next**

This is a only a warning message. No action is required.

However, if this is not the result you expected, run the *find* command again using either *find lib_cell* or *find lib_pin*.

---

## UID-159

(warning) Predefined methodology selected, other options ignored.

---

## UID-160

(error) Pin %s is not a scan-out pin.

---

## UID-161

(error) Cell %s does not have a scan-out pin.

---

## UID-162

(error) Duplicate cell entries found in test routing order.

**Description**

The pin list to the *set_test_routing_order* contains some duplicates, which means the scan chain order is not well defined.

Feedback

**What Next**

Revise the pin list so that each pin occurs at most once. See the help page for *set_test_routing_order*.

---

## UID-163

(error) Unrecognized test methodology %s.

---

## UID-164

(error) Test report options selected without -test.

---

## UID-165

(warning) Unknown test fault class, all classes will be displayed.

---

## UID-166

(error) Fault report options selected without -fault.

**Description**

The *report_test* options "-class", "-incremental", and "-inst" only apply when selecting the "-fault" reporting option.

**What Next**

Review the help page for *report_test*, and correct the options to the command. The most likely change is to add the "-fault" option.

---

## UID-167

(error) Scan-chain index must be positive.

---

## UID-168

(error) Non-sequential cell/reference %s can not be in a scan-chain.

**Description**

The reported cell or cell reference was in the argument list to a *set_scan_chain* command but it is not sequential. See the help page for *set_scan_chain*.

Feedback

### What Next

One possibility is that the name of the cell is incorrect, such as forgetting some levels of hiearchy or a typing error, and a nonsequential cell has been selected by mistake. Either correct the name or remove it from the cell list.

---

## UID-169

(error) Non-sequential cell/reference/design %s can not be made scannable.

### Description

The design object list for the *set_scan* and *set_scan_element* commands must consist of sequential cells only. The indicated object is not sequential. See the help page for the command for details.

### What Next

One possibility is that the name of the cell is incorrect, such as forgetting some levels of hiearchy or a typing error, and a nonsequential cell has been selected by mistake. Either correct the name or remove it from the cell list.

---

## UID-170

(warning) '%s' cannot be interpreted as a list of local link library files.

---

## UID-171

(warning) Design '%s' contains parameterized ECL components.\n Writing this design to the '%s' netlist format will\n cause a loss of parameterized information.

---

## UID-172

(information) Writing synthetic library implementations for design '%s'.\n \tUse "write -no_implicit" to get just the design.

---

## UID-173

(warning) Can't %s an uncompiled synthetic cell '%s'.

---

## UID-174

(error) Syntax error in line '%s'.

Feedback

## UID-175

(warning) Design '%s' contains unmapped components.\n \tThe description might not simulate and might not be read back into Design Compiler.

## UID-176

(Error) -name is required. Please specify snapshot name.

**Description**

This warning message occurs when the require option of the command create_qor_snapshot is not specified.

**What Next**

Specify the -name option.

## UID-177

(error) File '%s' is a directory name.

## UID-178

(error) The '%s' attribute of a %s cannot be set with this command.

## UID-179

(error) %s format is not enabled.

**What Next**

Invoke the *read* -help command for valid read formats. Identify and correct format, then reinvoke the *read* command.

## UID-181

(warning) Can't write sequential_type for %s '%s'.\n \tCannot find example design in target_library.

## UID-182

(warning) %s '%s' is of the wrong type. It seems to work but might not work in the future releases. Please fix the script.

Feedback

### Description

This message is issued when you specify an incorrect object type as the command argument and the tool ignores the object type and searches for objects using just the object name.

For example, the *all_connected* command accepts net, pin, or port objects. If you specify a cell object as the command argument, the tool issues the following message:

```
prompt> get_clocks [get_ports A]
Warning: port 'A' is of the wrong type. It seems to work but might
not work in the future releases. Please fix the script. (UID-182)
{}
```

### What Next

Check the command man page to determine the valid object types and then rerun the command.

---

## UID-183

(error) Unrecognized scan style '%s'.

### Description

The specified scan style is not recognized by the *set_test_methodology* command.

### What Next

Review the help page for *set_test_methodology* for a description of the recognized styles, and correct the command.

---

## UID-184

(error) Minimum fault coverage must be at least 80 percent.

---

## UID-185

(error) Minimum fault coverage cannot exceed 100 percent.

---

## UID-186

(information) Attribute '%s' is set on %d objects.

Feedback

## UID-187

(Error) Directory (%s) is not accessible. Please check the setting on icc_snapshot_storage_location variable.

**Description**

This warning message occurs when the snapshot directory specified by the variable is not available.

**What Next**

Check the setting of the snapshot directory.

## UID-188

(error) Data type '%s' does not match attribute type '%s'.

**Description**

This error message is displayed if The data type for an attribute does not matech predefined attribute type.

**What Next**

Re-issue the command with correct data type.

## UID-190

(error) The -design_name and -cell_name options are not used with the \n -hdl_all_blocks or -hdl_bussed options.

**Description**

The *group* command has been used with conflicting options.

**What Next**

Review the help page for the *group* command if necessary and change the options being used. The most likely change is to remove the use of the "-design_name" and "-cell_name" options.

## UID-191

(error) The -design_name option is required unless you are using the \n -hdl_all_blocks, -hdl_bussed, or -hdl_block options.

Feedback

**Description**

The "-design_name" option is required for the *group* command unless you have specified one of the following options: "-hdl_all_blocks", "-hdl_bussed", or "-hdl_block".

**What Next**

Review the help page for the group *command if necessary, and then correct the options to your group command.*

---

## UID-192

(error) -all_instances option must be used with instance cells when the parent instance is not unique.

**Description**

The *set_size_only* or *change_link* command has been used with conflicting options.

**What Next**

Use -all_instances option together with cell instances. Either add -all_instances option to set_size_only command or uniquify the parent design instance of the cell before calling set_size_only.

---

## UID-193

(information) %s %s for all instances of cell '%s' in subdesign '%s'.

**Description**

The *set_size_only* or *change_link* command has been applied to all instances of the cell in a design.

---

## UID-194

(error) -all_instances option must be used with instance cells.

**Description**

The *set_size_only* command has been used with conflicting options.

**What Next**

Use -all_instances option together with cell instances. The most likely change is to add -all_instances option.

Feedback

## UID-195

(error) Cannot change current_design from '%s' to '%s' after Milkyway CEL has been written by IC Compiler.

### Description

You receive this message if you are trying to change the current_design after a Milkyway CEL has already been written by IC Compiler. IC Compiler writes a Milkyway CEL automatically during *link*, *write_milkyway*, and some other commands.

Once a MW CEL is written the current_design cannot be changed to a sub-design.

### What Next

Utilize *current_design* to apply constraints, write reports, etc. without linking or writing to a Milkyway CEL. Then set the current_design to be the top-level design for physical synthesis. Perform *link* to write the Milkyway CEL and then proceed with physical synthesis commands.

You may also use *close_mw_cel* and *remove_design -all* to start again and establish a new current_design.

## UID-196

(error) size_cell can not perform when the parent instance is not unique.

### Description

The *size_cell* command can not perform when the parent instance is not unique.

### What Next

uniquify the parent design instance of the cell before calling size_cell.

## UID-200

(warning) Signal index values can not be negative.

## UID-201

(warning) Cannot rename nets in buffer tree.

### Description

When the variable *icc_track_net_names* is TRUE, IC Compiler renames the nets during *create_buffer_tree* and other optimizations so that the resulting nets have names with the

Feedback

same prefix as the original driving net. Note that nets touching (hierarchical) ports must have names the same as the (hierarchical) port name, so those nets cannot be renamed.

*report_net_changes* reports the groups of nets that are associated by being the result of the same optimization.

**What Next**

Report the problem to Synopsys if it is important to have the net names in the buffer tree share the same prefix.

---

## UID-202

(error) Design contains only combinational cells but scan style is not set to "combinational"; test patterns cannot be saved.

**Description**

You receive this message from *set_scan_configuration* if your design contains only combinational cells but the scan style is set to some value other than *combinational*. Although this condition does not prevent the *check_test* or *create_test_patterns* commands from running, *create_test_patterns* cannot save test patterns.

By default, DFT Compiler uses the scan style defined by the variable *test_default_scan_style*; the default value of this variable is *multiplexed_flip_flop*. You use *set_scan_configuration -style* to override the value of the *test_default_scan_style* variable for the current design. You have attempted to set a non-combinational scan style on a design with no sequential cell. The specification is rejected and the scan style remains unchanged.

You may specify the scan style for a design using the *set_scan_configuration -style* design. If you do not specify the scan style directly then DFT Compiler uses the default value defined in the variable *test_default_scan_style*.

**What Next**

To avoid receiving this message, and to allow *create_test_patterns* to save the test patterns, explicitly set the scan style of the current design to *combinational* using the *set_scan_configuration -style combinational* command.

If you want only to run *check_test*, or if you want only to run *create_test_patterns* to analyze your design without saving the test patterns, you can ignore this message and continue.

---

## UID-207

(error) The %s command is only supported in xg mode.

Feedback

**Description**

This error message occurs when the specified command is not supported in the dc_shell mode.

**What Next**

Start the shell in xg mode and run your scripts again.

---

## UID-208

(error) The cell %s is combinational. It cannot be the startpoint or endpoint of an ignore-path for retiming.

**Description**

This error message occurs when a combinational cell is specified as the startpoint or endpoint of an ignore-path for retiming. Only ports, sequential cells, pins of sequential cells, and clocks can be startpoints and endpoints of ignore-paths for retiming.

**What Next**

Use a suitable startpoint or endpoint for the path and reissue the command.

---

## UID-209

(error) A %s license must be authorized for the set_retiming_ignore_path command.

**Description**

This error message occurs because the *set_retiming_ignore_path* command requires the authorization for the specified license.

**What Next**

Check your license key file.

---

## UID-210

(error) Proprietary design '%s' can't become the current design.

---

## UID-211

(warning) Can't write proprietary design '%s'.

Feedback

### Description

Proprietary designs cannot be written in the selected format, so the named design was skipped. This might occur for example if you try to do a hierarchical write on a design which instantiates a proprietary design.

### What Next

Normally there is nothing to do, but if the warning is unexpected, you can review the link step in case there is an problem, e.g., with the search path, which is causing a proprietary design to be linked when you were expecting a non-proprietary design.

---

## UID-220

(error) Unrecognized test assert value '%s', (use one of "0","1").

---

## UID-221

(error) Can't set assume value as direction of hierarchical pin %s is inout.

### Description

This error message is displayed when a pin in the pin list supplied to the *set_test_assume* command is a hierarchical bidirectional pin. The *set_test_assume* command requires that all hierarchical pin arguments have directions that are either 'in' or 'out'.

### What Next

Re-issue the *set_test_assume* command using hierarchical pins that have direction either 'in' or 'out'.

---

## UID-222

(error) Can't set assume value as pin %s from a combinational cell.

### Description

This error message is displayed when a pin in the pin list supplied to the *set_test_assume* command belongs to a combinational component. The *set_test_assume* command requires that none of its pin arguments are part of combinational components in the design.

### What Next

Re-issue the *set_test_assume* command without a pin list containing combinational pins.

Feedback

## UID-223

(error) Can't set assume value on pin %s as not test isolated.

### Description

This error message is displayed when a pin in the pin list supplied to the *set_test_assume* command belongs to a sequential component which has not been marked as being test isolated via the *set_test_isolate* command. The *set_test_assume* command may only be used on pins of a sequential component if those pins (or their cells) have been marked as logically isolated via *set_test_isolate*.

### What Next

Remove the named pin from the argument list and then re-issue the *set_test_assume* command. Or, if it is correct to do so, use the *set_test_isolate* command on the pin or its cell, indicating that it is logically isolated and should be considered untestable during test design rule checking

## UID-224

(error) Can't set hold value as port %s is not an input.

### Description

This error message is displayed when a port in the port list supplied to the *set_test_hold* command is not an input port. The *set_test_hold* command requires that all port arguments have direction 'in'.

### What Next

Re-issue the *set_test_hold* command using only ports that have direction 'in'.

## UID-225

(error) Can't set require value as direction of pin %s not in/out.

### Description

This error message is displayed when a pin in the pin list supplied to the *set_test_require* command is neither an output pin nor an input pin. The *set_test_require* command requires that all pin arguments have directions that are either 'out' or 'in'.

### What Next

Re-issue the *set_test_require* command, using only input or output pins in the list of pin arguments.

Feedback

## UID-226

(error) Can't set require value as pin %s is test isolated.

### Description

This error message is displayed when a pin in the pin list supplied to the *set_test_require* command belongs to a sequential component which has been marked as being test isolated via the *set_test_isolate* command. The *set_test_require* command may only be used on pins of a sequential component if those pins (or their cells) have not been marked as logically isolated via *set_test_isolate*.

### What Next

Remove the named pin from the argument list and then re-issue the *set_test_require* command. Or, if it is correct to do so, use the *remove_attribute* command on the pin or its cell, removing the test_isolate attribute.

## UID-227

(error) Can't set require value as pin %s from an unknown cell.

### Description

This error message is displayed when a pin in the pin list supplied to the *set_test_require* command belongs to an unknown component. The *set_test_require* command may only be used on pins of a component which can be recognized by Design Compiler.

### What Next

Remove the named pin from the argument list and then re-issue the *set_test_require* command.

## UID-228

(warning) Design has no hierarchy. No cells can be ungrouped.

### Description

This warning message is displayed when the *ungroup* command is issued without a valid cell list, or in a design that contains no hierarchy. It indicates that without at least one valid hierarchical cell to operate on, the *ungroup* command will do nothing.

### What Next

Verify that the arguments supplied are correct, and that the design does indeed have hierarchy. Then, re-issue the *ungroup* command.

Feedback

## UID-229

(warning) All hierarchical cells are don't touched. No cells can be ungrouped.

## UID-230

(warning) All specified hierarchical cells are don't touched. No cells can be ungrouped.

## UID-231

(warning) All designs specified are un-changed and not written.

## UID-232

(information) Updating design information for flat timing report...

## UID-233

(warning) Can't resolve reference '%s' for cell '%s'

**Description**

This error is generated when there is no design reference for the given cell.

**What Next**

Check and correct the link_library and search_path. Invoke *link* command, then reinvoke the current command.

## UID-234

(error) Invalid port direction '%s'.

**Description**

This error message is displayed when the *create_port* command is issued with an invalid port direction. Valid port directions for the *create_port* command are 'in', 'out', or 'inout'.

**What Next**

Re-issue the *create_port* command using a valid direction argument.

## UID-235

(error) Port '%s' already exists.

Feedback

## UID-236

(error) Cannot specify port_list with -unused.

**Description**

It is illegal to specify a port_list when using the "-unused" argument.

**What Next**

Reissue the command either without the port list or without the "-unused" argument.

## UID-237

(error) Unable to remove port '%s'.

**Description**

This error message is displayed when a port cannot be removed from a design. Ports which are bussed may not be removed individually from a design.

**What Next**

Reissue the command without the named port.

## UID-238

(error) The '-associated_clock' switch can only be used with 'clocked_on_also' signal type.

**Description**

This error message is displayed when the *set_signal_type* command has been issued with the '-associated_clock' switch and the signal type being set is not 'clocked_on_also'. This is because the '-associated_clock' switch makes sense only in the context of defining Master and Slave clock ports with the 'clocked_on_also' signal type.

**What Next**

Re-issue the *set_signal_type* command either removing the '-associated_clock' switch, or changing the signal type to be 'clocked_on_also'.

## UID-239

(error) Cannot run this command without the -mpc option.

Feedback

### Description

This error message is displayed when the *write_physical_script* command is called without the *-mpc* option.

The *write_physical_script* command will be enhanced in the future to print physical information other than mpc options. Always use the *-mpc* option to this command to avoid breaking the script later.

### What Next

Run the command again with the *-mpc* option.

---

## UID-240

(error) Either the '-flip_flop' or the '-latch' argument must be used.

---

## UID-241

(error) Unable to find example %s '%s'.

### Description

This error message is displayed when an example gate given to the *set_register_type* command cannot be found in the current target library. The *set_register_type* command requires that the example gate given with the '-latch' or '-flip_flop' switches exist in the target library.

### What Next

Change the target library, or change the argument given as an example gate to *set_register_type* and reissue the command.

---

## UID-242

(error) Example design '%s' is not a %s.

### Description

This error message is displayed when an example gate given to the *set_register_type* command is not a valid example component. The *set_register_type* command requires that the example gate given with the '-latch' or '-flip_flop' switches actually be a valid latch, or flip flop, respectively.

### What Next

Change the argument given as an example gate to *set_register_type* and reissue the command.

Feedback

## UID-243

(error) The %s design '%s' is of "unknown" sequential type.

**Description**

This error message is displayed if the latch or flip-flop specified to the *set_register_type* command cannot be recognized by *Design Compiler*.

**What Next**

Re-issue the *set_register_type* command with a recognizable sequential device.

## UID-244

(error) Cell '%s' is a latch. \n The latch type was NOT specified on the command line.

## UID-245

(error) Cell '%s' is a flip-flop. \n The flip-flop type was NOT specified on the command line.

## UID-246

(error) Cell '%s' is neither a latch nor a flip flop.

## UID-247

(error) Non-sequential cell/reference/design %s can not be made transparent.

**Description**

Only level-sensitive sequential elements can be made transparent for ATPG.

**What Next**

Verify that the list of devices given to the *set_scan_transparent* are all level-sensitive. The *all_registers* command can be used to get a list of such registers in the design.

## UID-248

(error) The %s design '%s' is of "unknown" combinational type.

**Description**

The replacement gate in the set_combinational_type command does not have a recognized combinational function which can be used for exact replacement.

Feedback

**What Next**

The set_combinational_type command requires the replacement gate to have a recognized combinational function that can be used for exact replacement. Specify another gate as the replacement_gate for set_combinational_type.

---

## UID-249

(error) Cell '%s' is not a combinational gate.

**Description**

One of the cells specified in the cell_list for set_combinational_type is not a combinational gate. All of these cells must be combinational gates. Set_combinational_type will only work on those cells in the cell list which are combinational.

**What Next**

Only specify combinational cells in the cell list for set_combinational_type.

---

## UID-250

(error) Cannot find %s '%s'.

**Description**

This error message occurs if the object of the given type and name could not be found.

**What Next**

Correct the type or name of the object passed to the issued command and re-issue it.

---

## UID-251

(error) Cannot specify both %s and %s.

**Description**

This error message is issued if a command is invoked with two incompatible options.

**What Next**

Issue the command with only one of the two options displayed in the error message.

---

## UID-252

(error) '%s' is not an instance of design '%s'.

Feedback

**Description**

This error message is issued if a path to an instance does not represent a valid instance of the design.

**What Next**

Correct the path to the instance and re-issue the command.

---

## UID-253

(error) Cannot specify %s without %s.

**Description**

This error message is displayed if only one of two options, which need to be specified together, is specified.

**What Next**

Specify both the options displayed in the error message and re-issue the command.

---

## UID-254

(error) Invalid delay direction for port '%s'.

**Description**

This error message is displayed if a port argument to a command has a direction which is not valid for the command.

**What Next**

Re-issue the command with ports of the required directions only.

---

## UID-255

(error) Value for %s cannot be negative.

---

## UID-256

(error) Either %s or %s must be specified.

**Description**

This error message is issued if a command is issued without one of the two mandatory options being specified.

Feedback

### What Next

Re-issue the command with one of the two options in the error message.

---

## UID-257

(error) Invalid waveform. Edges must be an even number of monotonically\n increasing values less than one period in duration.

### Description

This error message is displayed if the waveform specified for a clock is invalid. There must be an even number of numbers specifying the waveform of the clock. In addition, these numbers must be in a monotonically increasing sequence. This error message is issued if either of these rules is violated.

### What Next

Re-issue the *create_clock* command with a valid specification for the waveform.

---

## UID-258

(error) Group weight must be between 0.0 and 100.0.

---

## UID-259

(error) Must specify one of %s, %s, or %s.

### Description

This error message is displayed if none of the three mandatory options for a command are specified.

### What Next

Re-issue the command by specifying one of the three options in the error message.

---

## UID-260

(error) The '%s' command is obsolete. It is ignored.

---

## UID-261

(error) Cannot set current instance to object '%s'.

Feedback

**Description**

This error message is displayed if the *current_design* does not own the instance which is being set as the *current_instance*.

**What Next**

Re-issue the *current_instance* command using an instance that is owned by the *current_design*.

---

## UID-262

(error) '%s' doesn't specify a unique object.

**Description**

This error message is displayed if multiple objects are passed as an argument to a command that requires a single object only.

**What Next**

Re-issue the command by specifying only a single object as argument.

---

## UID-263

(error) Cannot specify multiple objects for command %s.

**Description**

This error message is displayed if multiple objects are specified as an argument to a command that requires only as single object.

**What Next**

Re-issue the command with a single object as argument.

---

## UID-264

(error) Cannot specify multiple objects.

**Description**

The error message is displayed if multiple objects are specified as an argument to a command that requires a single object.

**What Next**

Re-issue the command with a single object as argument.

Feedback

## UID-265

(error) Cannot specify library object '%s' for command %s.

**Description**

This error message is displayed if library objects (library, library design, or library pin) are passed as an argument to a command that does not accept them.

**What Next**

Re-issue the command without library objects in the argument.

## UID-266

(error) Cannot specify library object '%s'.

## UID-267

(error) Command %s cannot be performed on instance %s within a hierarchy.\n Please re-issue the command in the design referenced by the current instance.

## UID-268

(error) Cannot perform this command on instance %s within a hierarchy.\n Please re-issue the command in the design referenced by the current instance.

## UID-269

(error) Can't find design corresponding to instance '%s'.

## UID-270

(error) Cannot write the '%s' script file.

**Description**

The tool issues this error when it fails to open a script file in write mode. There can be several reasons for this. The most common reasons are: you do not have write permissions in the directory, the disk is full, or you already have a file with the same name that cannot be deleted.

Feedback

**What Next**

Try to manually create a file with the same name. Fix any problems that you encounter, and then delete the file and run the command again.

---

## UID-271

(error) Current instance is not defined.

---

## UID-272

(error) Cannot set current design to library design '%s'.

**Description**

The current design can only be set to a non-library designs.

**What Next**

check if the specified design is correct. Try specifying the complete path to the design as follows:

current_design = <db_file_name>:<design_name>

---

## UID-273

(error) Command '%s' cannot be performed within a hierarchy.\n Please re-issue the command in the design referenced by the current\n instance or the top-level of the current design.

**Description**

The specified command can only be invoked from the top-level of the hierarchy. If the current instance is set to a subdesign, the command will fail.

**What Next**

If you want to execute the command in the design reffered by the current instance, set the current design to point to the design current instance is pointing to. Now invoke the command. Otherwise, set current instance to the top-level design. See the man pages for commands current_design and current_instance for further details.

---

## UID-274

(error) This command cannot be performed within a hierarchy. Please re-issue it\n in the design referenced by the current instance or the top-level of\n the current design.

Feedback

### Description

The specified command can only be invoked from the top-level of the hierarchy. If the current instance is set to a subdesign, the command will fail.

### What Next

If you want to execute the command in the design reffered by the current instance, set the current design to point to the design current instance is pointing to. Now invoke the command. Otherwise, set current instance to the top-level design. See the man pages for commands current_design and current_instance for further details.

---

## UID-275

(warning) No %s to list.

---

## UID-276

(error) Can't set current instance to leaf cell '%s'.

### Description

The *current_instance* command does not work on leaf cells. If you attempt to run *current_instance* on a leaf cell, you get this error.

### What Next

Make sure when you use *current_instance* the cell you specify is not a leaf cell.

---

## UID-277

(warning) No library contain the wire load model '%s' set on design '%s'.

### Description

The indicated design has a wire-load model that could not be found in the libraries in the search path. This situation can occur if the wire-load model was created with *create_wire_load*, which creates wire-load models and saves them on designs.

### What Next

To report on the specified wire load model, use *report_wire_load -name*. Here is an example of a report for a wire-load model:

```
****************************************
Report : wire loads
Design : counter
Version: v3.1-development
Date   : Mon Jan 25 10:47:24 1993
```

Feedback

```
****************************************

Wire load model:   counter_wl
Location       :   counter
Resistance     :   2
Capacitance    :   1
Area           :   0
Slope          :   1.333
                                 Average  Standard  % Standard
Fanout   Length   Points            Cap  Deviation  Deviation
------------------------------------------------------------
     1     0.58     1565           0.58       0.01       0.99
     2     1.46      168           1.46       0.04       2.78
     3     2.40       64           2.40       0.12       4.80
     4     3.33       56           3.33       0.15       4.59
     5     4.03       30           4.03       0.24       5.88
------------------------------------------------------------
Weighted Average Standard Deviation:                    2.08
```

Write a technology file describing the wire-load model, and update this file into a library on your search path with *update_lib*. Here is an example of a technology file with a wire-load model described in the previous report:

```
wire_Load("counter_wl") {
        resistance : 2;
        capacitance : 1;
        area : 0;
        slope : 1.333;
        fanout_length(1,0.58);
        fanout_length(2,1.46);
        fanout_length(3,2.4);
        fanout_length(4,3.33);
        fanout_length(5,4.03);
}
```

If the design still has the annotated capacitances that were used to create the wire-load model, use *create_wire_load -output* to write the wire-load model directly to a technology file.

With *report_wire_load -name*, you can verify that the technology file describes the same model as the one described.

Then use *update_lib* to update the technology file into a library on your search path. The *set_wire_load_model* line in the script written can then be updated with the *-library* option to identify the library where the wire-load model can be found.

---

## UID-278

(error) No annotated timing check information was removed.

Feedback

### Description

The timing checks defined in *remove_annotated_check* did not exist, and *remove_annotated_check* could not succeed.

### What Next

Use *report_annotated_check* to verify what timing checks are annotated.

---

## UID-279

(error) Cannot have current_instance set for this command.

### Description

This error message is displayed if the *current_instance* is defined. *Write_script* and *write_sdc* cannot recognize the current_instance because these commands write out information relative to the current_design.

### What Next

Re-issue the *current_instance* with no instance specified.

---

## UID-280

(error) Period value conflicts with waveform on clock '%s'.

---

## UID-281

(warning) Path group '%s' has no paths; it will not affect optimization.

### Description

The *group_path* command can be used to create or modify path groups. You can use *group_path -name clock -weight 5* to change the weight of an existing group. This warning is to let you know when you have created a path group that has no paths. This path group will not affect optimization unless paths are added to it by additional *group_path* commands.

### What Next

You should use *group_path -name clock -to clock* if you wish to include all paths to object "clock" in the path group. Use *report_path_group* to see the path groups that are currently defined.

Feedback

## UID-282

(information) Annotated '%s' delays are assumed to include load delay.

**Description**

Load delay (also known as extra source gate delay) is the portion of cell delay which is due to the capacitive load of the net being driven. Some SDF interfaces include load delay as part of the net delay - others include it as part of the cell delay. By default, Design Compiler assumes that load delay is included in cell delays.

**What Next**

Make sure that you understand how both your SDF reader and writer will treat load delay. Use the -load_delay option of the read_timing, write_timing, write_constraints, or set_annotated_delay commands to specify whether Design Compiler should include load delay in cell or net delays.

## UID-283

(error) Load delay location '%s' should be 'cell' or 'net'.

**Description**

Load delay (also known as extra source gate delay) is the portion of cell delay which is due to the capacitive load of the net being driven. Some SDF interfaces include load delay as part of the net delay - others include it as part of the cell delay. By default, Design Compiler assumes that load delay is included in cell delays.

**What Next**

The allowable values for the -load_delay option are "cell" or "net".

## UID-284

(warning) In ICC, use remove_buffer_tree instead of clean_buffer_tree.

**Description**

ICC does not support the *clean_buffer_tree* command.

Please use *remove_buffer_tree* instead.

## UID-285

(warning) '%f' value is negative.

Feedback

### Description

You receive this error message when a negative value has been specified with the *set_annotated_delay* command. Annotated delay values are usually positive, but negative delay values will be accepted.

### What Next

If you do not want the value to be negative, re-execute the *set_annotated_delay* command and specify a positive value.

---

## UID-286

(error) Rise/fall exceptions not supported.

### Description

You receive this error message when a *-rise_to*, *-fall_to*, *-rise_from*, *-fall_from*, *-rise_through*, or *-fall_through* option has been specified with any of the exception commands. Although these options are supported in PrimeTime, they are not supported in Design Compiler.

### What Next

Reexecute the desired command and specify the *-rise*, *-fall*, and *-through* options as necessary.

---

## UID-290

(error) Can't set test assertion on hierarchical object %s.

---

## UID-295

(error) The command set_clock_skew is obsolete.\n \tIt has been replaced by set_clock_latency, set_clock_uncertainty \n \tand set_propagated_clock commands.

### Description

The *set_clock_skew* command has been obsoleted. The functionality has been replaced by a set of commands, which have capability beyond the set_clock_skew command had implemented.

The *set_clock_skew* command has been replaced by the following commands:

*set_propagated_clock* replaces the -propagated option of *set_clock_skew*

*set_clock_latency* replaces the -delay option of *set_clock_skew*

Feedback

*set_clock_uncertainty* replaces the -uncertainty options of *set_clock_skew*

Example:

*set_clock_skew -propagated -delay 1.0 -plus_uncertainty 2.1 clk* \n

should be replaced as:

*set_propagated_clock clk*\n *set_clock_latency 1.0 clk*\n *set_clock_uncertainty -hold 2.1 clk*\n

**What Next**

You should substitute the *set_clock_skew* command with the equivalent commands as suggested above. Please consult the man pages for *set_clock_latency* *set_clock_uncertainty* and *set_propagated_clock*.

**See Also**

- set_propagated_clock
- set_clock_latency
- set_clock_uncertainty

---

## UID-296

(error) The option -cell is obsolete. Please use -lib_cell instead.

**Description**

The option *-cell* for the command *set_driving_cell* has been obsolete and will not be supported in XG mode. Please use the *-lib_cell* option instead.

**What Next**

You should substitute the *-cell* option with *-lib_cell* option for all *set_driving_cell* commands. Plese refer to the *set_driving_cell* man page for detailed information on obsolete options for this command.

**See Also**

- set_driving_cell

---

## UID-297

(error) The command set_wire_load is obsolete in XG mode.\n \tIt has been replaced by set_wire_load_model, set_wire_load_mode, \n \tset_wire_load_selection_group, and set_wire_load_min_block_size \n \t commands.

Feedback

**Description**

The *set_wire_load* command has been obsoleted in XG mode. The functionality has been replaced by a set of commands, which have capability beyond the set_wire_load command had implemented.

The *set_wire_load* command has been replaced by the following commands:

*set_wire_load_model*

*set_wire_load_mode*

*set_wire_load_selection_group*

*set_wire_load_min_block_size*

**What Next**

You should substitute the *set_wire_load* command with the equivalent commands as suggested above. Please consult the man pages for *set_wire_load_model*, *set_wire_load_mode*, *set_wire_load_selection_group* and *set_wire_load_min_block_size*.

---

## UID-300

(error) Cannot use hdl options with the soft option.

---

## UID-301

(error) 'get_attribute' can't get value for unknown attribute type.

---

## UID-302

(warning) Invalid value for link_force_case variable: default value check_reference will be used.

---

## UID-303

(error) Cannot set initial value on pin %s from a non-scan cell.

---

## UID-304

(error) Cannot set initial value on pin %s from an unknown cell.

Feedback

## UID-305

(error) Period value unspecified.

## UID-306

(error) Waveform set unspecified.

## UID-307

(error) Waveform set must consist of two floating point values.

## UID-308

(error) Period value cannot be zero.

## UID-309

(error) Value for period is different from the default value specified by test_default_period/ custom test protocol.

**Description**

Period is the length of time required for each test vector cycle on a tester. Typically, only a single period is defined for a test set. Therefore, all the test clocks you created for a particular ATPG run should have same value for the period as the one specified by the test_default_period variable or in a custom test protocol.

**What Next**

Omit the period specification, or specify the same value as the test_default_period variable.

## UID-310

(error) Port '%s' is not an input port.

**Description**

The definition of the timing of a clock can only be applied to input ports.

**What Next**

Use the *report_port* command to find the complete list of input ports. Select the correct port for applying the clock constraints. Reissue the command with the new port.

Feedback

## UID-311

(error) Cannot set testsim_input_delay on port '%s'.\n It is not an input or bidirectional port. Command ignored.

## UID-312

(error) Cannot set testsim_output_strobe on port '%s'.\n It is not an output or bidirectional port. Command ignored.

## UID-313

(error) The specified input delay %5.2f is more than the period %5.2f. Command ignored.

**Description**

The input delay must be less than the clock period.

**What Next**

The currently specified input delay has been ignored. Specify the input delay value again and ensure that the new value is less than the clock period.

## UID-314

(error) The specified output strobe %5.2f is more than the period %5.2f. Command ignored.

**Description**

The output strobe must be less than the clock period.

**What Next**

The currently specified output strobe value has been ignored. Specify the output strobe value again and ensure that the new value is less than the clock period.

## UID-315

(error) The specified input delay %5.2f is negative. Command ignored.

**Description**

The input delay must be greater than or equal to zero.

Feedback

## UID-316

(error) The specified output strobe %5.2f is negative. Command ignored.

**Description**

The output strobe must be greater than or equal to zero.

**What Next**

The currently specified output strobe value has been ignored. Specify the output strobe value again and ensure that the new value is a non-negative real number.

## UID-317

(error) Attribute '%s' has not been defined for %s.

**Description**

The *set_user_attribute* command requires that the attribute first be defined using either the *define_user_attribute* command or the *set_attribute* command.

**What Next**

Check that the attribute name is correct and define the attribute using *define_user_attribute*, or else just use *set_attribute*.

## UID-318

(error) Object class '%s' is not supported.

**Description**

The *-class* argument to the command requires a recognized object class such as design, cell, or net.

**What Next**

Use the *-help* option of the command or see the command man page to find out what object classes are supported by the command.

## UID-319

(error) Attribute '%s' is already defined as type %s for object class %s.

Feedback

**Description**

The attribute data type for a *define_user_attribute* or *set_attribute* command does not match the data type already defined for this attribute.

**What Next**

Check the attribute name and data type against any previous attribute definitions, and correct the command.

---

## UID-324

(warning) '%s' has '%d' unresolved design%s or reference%s.

**Description**

Elaboration of the indicated Verilog/SystemVerilog configuration did not completely link. Either a top design template, or a lower level design reference was not resolved within the specified design libraries.

**What Next**

Check the defined paths of design libraries using report_design_lib, or verify that the necessary link_libraries have loaded.

---

## UID-325

(warning) Option '%s' is ignored because '%s' is not specified.

**Description**

You receive this warning message because you have specified only one option with the *balance_buffer* command. You must specify both options or specify no options. The specified option is ignored.

**What Next**

Reissue the *balance_buffer* command and specify both options or do not specify either option.

---

## UID-326

(error) Can't find pin '%s' on cell '%s'.

---

## UID-327

(warning) Arcs dont exist or have been disabled from pin '%s' to pin '%s' on cell '%s'.

Feedback

### Description

It is invalid to disable timing arcs between two pins where there are no arcs between the pins. Either the pins dont exist on the library cell or they have been disabled for some reason.

---

## UID-330

(error) '%s' in command get_design_parameter is not a valid parameter name for the current design. Valid parameter names are '%s'.

### Description

The specified parameter name in the *get_design_parameter* command is not one of the parameters for the current design.

### What Next

Check your spelling of the parameter name, or check the current design.

---

## UID-331

(error) Parameter '%s' does not have a value.

### Description

The specified parameter for the current design has not been assigned a value, and has no default value.

### What Next

Specify a default value for this parameter in the library, or *elaborate* the cell with a value for this parameter.

---

## UID-332

(error) The -library option is only valid with the db format.

### Description

The *-library* option is used to write db designs into a design library.

### What Next

To store vhdl or verilog designs in a design library, use the *analyze* command. (Currently, only vhdl, verilog, and db designs can be stored in a design library.)

Feedback

## UID-333

(error) The -out flag cannot be used with the -library flag.

**Description**

When you write a db design into a library, the filename and path are determined from the db design name and the library name respectively. As a result, it is illegal to use the *-out* flag when the *-library* flag is specified.

**What Next**

Re-issue the command, using only one of these flags.

## UID-334

(error) Tried to write the root object '%s' into a design library.

**Description**

It is illegal to write root objects into a design library.

**What Next**

On the command line, specify the individual designs that you would like to write, instead of the root object.

## UID-335

(warning) The assignment operator "=" appears in the filter string.

**Description**

The assignment operator is illegal in a filter string.

**What Next**

You may have typed the assignment operator "=" in place of the comparison operator "==" (is equal to). Try the filter command again, but be sure to use "==" for comparison.

## UID-336

(error) You cannot perform the command '%s' on design '%s'\n \tbecause it is a limited design.

Feedback

### Description

Access to a design can be limited for either of two reasons: (1) The design is fully licensed, but it has not yet been mapped. (2) The only licence that could be checked out for the design was a limited license. As a result, the internals of the design are hidden. You cannot write the design out, view a schematic, or execute any commands that would allow you to see the internals. There are also certain commands (such as group) that do not apply to limited designs.

### What Next

If the design is simply not mapped, then compiling the design will allow you access to it. If the design is limited because of licenses, then the only way to get access to the design is to check out a license that gives full access.

---

## UID-337

(error) You cannot perform the command '%s' on design '%s'\n \tbecause it contains the limited design '%s'.

### Description

Access to a design can be limited for either of two reasons: (1) The design is fully licensed, but it has not yet been mapped. (2) The only licence that could be checked out for the design was a limited license. As a result, the internals of the design are hidden. You cannot write the design out, view a schematic, or execute any commands that would allow you to see the internals. There are also certain commands (such as group) that do not apply to limited designs.

### What Next

If the design is simply not mapped, then compiling the design will allow you access to it. If the design is limited because of licenses, then the only way to get access to the design is to check out a license that gives full access.

---

## UID-338

(error) Cannot access design parameters on object '%s'.\n \tDesign parameter values are only valid on designs and references.

### Description

By convention an attribute name beginning with a dollar sign ($) indicates a design parameter (i.e. VHDL generic or Verilog parameter). Design parameters only exist on design or reference objects.

Feedback

**What Next**

Either specify a valid design or reference, or don't use ``$" in your attribute name. You may need to specify objects using the command *find(design, my_des)* or *find(reference, my_ref)* to insure that you are working on a design or reference.

---

## UID-339

(warning) Can't remove attribute '%s' from object '%s'.

**Description**

You cannot remove a static or a derived attribute from this object.

**What Next**

Don't try to remove a static or derived attribute.

---

## UID-340

(error) The connection class attribute can be set only on design ports.

**Description**

The *set_connection_class* command works only on ports that are connected to a design. You can't use this command to change the connection class attribute for ports in a library.

**What Next**

To change the connection class for library ports, you need to change the text file description of the library (usually in a '.lib' file) and run Library Compiler on that library. If you intended to set the connection class for ports in a design, check that you have specified the port(s) correctly.

---

## UID-341

(warning) Design '%s' has '%d' unresolved references. For more detailed information, use the "link" command.

---

## UID-342

(error) The cell '%s' is not a synthetic library module, so set_implementation was not applied to it.

Feedback

**Description**

Implementations can only be set on synthetic library modules. You cannot use set_implementation on non-synthetic library parts. You also cannot use set_implementation on synthetic library operators. It works for modules, not for operators. Use report_cell to see which cells are synthetic library modules.

This error can sometimes arise if the synthetic library in which this implementation resides has not been referred to in the link_library variable.

**What Next**

Check the setting of the link_library variable to make sure it lists the synthetic library in which the module to which the cell refers resides. If not, update link_library and re-issue the set_implementation command.

If you want to set the implementation of a synthetic library operator, you can include directives in your HDL source.

---

## UID-343

(error) Invalid read_timing context. Valid contexts are vhdl, verilog.

---

## UID-344

(warning) Can't %s synthetic operator '%s'.

---

## UID-345

(error) The value for the 'max_levels' argument should be\n \tbetween 1 and %d for design '%s'.

---

## UID-346

(warning) The -max_levels argument is ignored when -hierarchy\n \toption is not given.

---

## UID-347

(warning) Can't link reference '%s' to design '%s'.

---

## UID-348

(warning) Creating virtual clock named '%s' with no sources.

Feedback

**Description**

This warning occurs when a virtual clock is created. A virtual clock has a name but no sources. This means it is not applied to any ports or pins in the design. A virtual clock may be used to specify input or output delay.

**What Next**

The command *create_clock -period 10 -name CLK* does not apply the clock to any sources. If you want to apply the clock to a pin or port, you must specify the pin or port as in *create_clock -period 10 CLK* or *create_clock -period 10 -name CLK ff1/CP*.

---

## UID-349

(warning) Could not read any link_library files. The link_library setting %s may be invalid.

---

## UID-350

(warning) Could not infer bus %s for design %s, because its index range does not match its width.

---

## UID-351

(warning) The variable '%s' is \n\ \tobsolete. Use %s.

**Description**

This variable has been replaced and no longer has any effect.

**What Next**

In your script, replace the setting of this variable with the new setting.

---

## UID-352

(error) At least one argument must be specified with this command.

**Description**

This command requires at least one argument. Please refer to the man page for the command for more information.

---

## UID-353

(error) Arguments '%s' and '%s' are mutually exclusive.

Feedback

**Description**

Some of the arguments specified in the command are mutually exclusive. Please refer to the man page for the command for more information.

---

## UID-354

(error) '%s' is a bad option. Please specify '%s'.

**Description**

The argument is not what is expected by the command. Please refer to the man page for the command for more information.

---

## UID-360

(error) Options -transparent and -user only valid when setting scan FALSE.

---

## UID-361

(error) Options -transparent and -user can not both be specified.

---

## UID-362

(error) Option -transparent can not be specified with non-latch cell/design %s.

---

## UID-363

(warning) Port information will be listed for the design of the current\n\tinstance. This information is not used for analysis or optimization\n\tunless current_design is set to '%s'.

**Description**

Attributes on subdesign ports are not considered for timing or optimization. Only those attributes on ports at the top level (as specified by the *current_design* command) are used. The *report_port* command shows the attributes for the design of the *current_instance*, but these attributes will not have an effect unless *current_design* is used to change the top-level design.

**What Next**

If you want information on the ports of the current design, use the *current_instance* command, with no arguments, before issuing the *report_port* command. If you want the information about ports for the design of the current instance, you can ignore this warning message.

Feedback

## UID-364

(error) The current_instance is not a unique instantiation \n\t of design %s. Please rerun command %s after running uniquify.

## UID-365

(error) Cell %s is not owned by the current_instance. \n\tOnly cells in the current_instance can be specified.

## UID-366

(error) Cell %s is not owned by the current_design. \n\tOnly cells in the current_design can be specified.

## UID-367

(error) Design %s is not referenced by any cell in current_design. \n\tOnly designs referenced in current_design can be specified.

## UID-368

(error) \n\tOnly one design can be specified for top-down copying of attributes.

## UID-369

(warning) \n\t The -all option to the link command is now obsolete.\n\t Please add "*" at the head of your link_library variable to get this functionality.

### Description

Make sure the astericks is in quotes when using the "*" option. A valid link_library setting is link_library = {your_library.db, "*"}

### What Next

Use the "*" in your link_library variable instead of the -all option.

## UID-370

(error) The design '%s' has clusters and cannot be modified by\n\ the 'group' command. Use the remove_clusters command to remove the\n\ clusters from the design first.

Feedback

**Description**

The *group* command cannot be executed on a design with physical hierarchy because this would result in the hierarchical names of the design's cells changing. This situation would make it impossible for the tool that created the physical hierarchy to recognize the names.

**What Next**

If appropriate, run the *remove_clusters* command to remove clusters from the design. After the *group* command creates a new hierarchy, you may have to update your PDEF file so that the clusters in it correspond to the new logical hierarchy.

---

## UID-371

(error) The '.' implementation can only be used with mapped synthetic modules.

**Description**

Using '.' as the implementation name locks a module to keep its current implementation. Since unmapped modules do not yet have their implementation chosen, it is impossible to know what implementation choice to lock.

**What Next**

Use *compile* or *replace_synthetic* first to pick module implementations.

---

## UID-372

(warning) \n\t No cells found to copy attributes from.

---

## UID-373

(error) \n\t The specified range is different from the number of specified objects.

---

## UID-374

(error) \n\t No cells in design '%s' reference any of the specified designs.

---

## UID-375

(error) Cannot use '%s' clock skew option on object '%s' \nbecause the '%s' attribute is already set on that object.

Feedback

### Description

The *rise_delay* and *fall_delay* clock skew attributes are incompatible with the *propagated_clock* attribute. In other words, the network delay to register clock pins is either determined by the delay attributes (ideal), or by evaluating the delays along the clock network (propagated). This error occurs in two situations. If there are already *rise_delay* or *fall_delay* attributes on an object, and *set_clock_skew -propagated* is used, it is an error. Also, it is an error if the *propagated_clock* attribute is present on an object when *set_clock_skew* is used with one of the following options: *-delay, -rise_delay, -fall_delay*.

### What Next

The *remove_attribute* command should be used to remove the conflicting attribute before applying the new information.

---

## UID-376

(warning) It is dangerous to create a clock source on inout port '%s'.

### Description

A circuit in which a clock signal drives an inout port may be unpredictable. If the port is functioning as an output while the clock is driving, bus contention will occur. If the clock is three-stated, any registers in the clock's fanout may lose state.

### What Next

Verify that the circuit is safe according to your design rules. DesignTime will assume that the clock is valid

---

## UID-377

(error) Clock '%s' is not ideal. Cannot set clock transition.

### Description

The indicated clock has a propagated clock skew. Clock transitions can only be specified for ideal clocks.

### What Next

To indicate ideal clocks, use set_clock_skew -ideal.

---

## UID-378

(error) '%s' is not a valid format.

Feedback

**Description**

The format option for the write_script command must be either dctcl or dcsh.

**What Next**

Either specify a valid -format option for write_script or don't specify that option and the result will be in the same format that the shell is currently being run in.

---

## UID-379

(error) Cannot perform %s on the instance %s because\n\tparent is not a unique instantiation of design %s. Please\n\trerun the command after uniquifying the instance.

**Description**

You have issued the command when the parent design is not unique. This command expects the parent design to be unique to make sure that the reference of the design is consistent.

**What Next**

If the instance was passed by mistake please rerun the command after fixing it. Otherwise call uniquify command with -cell option to uniquify the parent instance and rerun the command.

---

## UID-380

(error) Invalid minimum porosity constraint, must be between 0 and 90.

**Description**

The *set_min_porosity* command sets the minimum porosity constraint on the design. The minimum porosity constraint value must be a number between 0 and 90. If set to 0, no porosity optimization will be done. The maximum porosity constraint is 90. For example, if set to 20, Design Compiler optimizes the design so that, on average, 20% of the total cell area is available for over-the-cell routing.

**What Next**

Use *set_min_porosity* with a number between 0 and 90.

---

## UID-381

(error) You are not licensed to run routability optimization.

Feedback

### Description

The *set_min_porosity* command sets the minimum porosity constraint on the design. That is, it constrains the design for a minimum over-the-cell routing area. The routing layers use the over-the-cell routing area to route the design. Design Compiler can improve the routability of designs by favoring cells with over-the-cell routing.

### What Next

To improve the routability of your design, contact your sales representative to acquire a license to run optimization.

---

## UID-382

(warning) Setting a minimum porosity constraint to less than the default %g in link libraries.

### Description

The *set_min_porosity* command sets the minimum porosity constraint on the design. That is, it constrains the design for a minimum over-the-cell routing area. The routing layers use the over-the-cell routing area to route the design. The porosity constraint given is less than the default minimum porosity set in the technologies libraries in the link path. *report_constraint* uses the default minimum porosity constraint specified in the link libraries.

### What Next

With *report_lib*, verify the *default_min_porosity* values in the link libraries. If necessary, set the porosity constraint to a value greater than the minimum default in the link libraries.

---

## UID-383

(error) The porosity constraint value is less than the default %g in target libraries.

### Description

The *set_min_porosity* command sets the minimum porosity constraint on the design. That is, it constrains the design for a minimum over-the-cell routing area. The routing layers use the over-the-cell routing area to route the design. The porosity constraint given is less than the default minimum porosity set in the technologies libraries in the target path. *compile -routability* and *reoptimize_design -routability* use the default porosity constraint from the target libraries by default.

### What Next

Verify with *report_lib* the *default_min_porosity* values in the target libraries. Set the porosity constraint to a value greater than the minimum default in the target libraries if necessary.

Feedback

## UID-384

(error) \n\t Invalid value specified for bus_naming_style : '%s'.

## UID-385

(error) Invalid value specified for bus_range_separator_style %s.

**Description**

This error message occurs when you specify an invalid value for the *bus_range_separator_style* variable.

Invalid values are character strings that contain the following an odd number of % (percent symbols) followed by either the letter d or the letter s. All of the following are invalid values:

%d

abc%%%d43

xv%ssx

%%%s

**What Next**

Provide a valid value for the *bus_range_separator_style* variable and reexecute the command.

## UID-386

(warning) The variable '%s' is now\n\ \tobsolete. The following, equivalent variable is being set:\n\ \t\t%s = "%s"\t

**Description**

This variable no longer has any effect. It has been replaced.

**What Next**

Replace the setting of this variable in your script with the new setting.

## UID-387

(warning) The variable '%s' is now\n\ \tobsolete. The following, equivalent variables are being set:\n\ \t\t%s = "%s", and,\n\ \t\t%s = "%s"\t

Feedback

**Description**

These variables no longer have any effect. They have been replaced.

**What Next**

Replace the settings of these variables in your script with the new settings.

---

## UID-388

(error) Attribute '%s' does not exist on %s '%s'.

**Description**

The *set_attribute* command changes the value of existing attributes. If the attribute does not exist, then that attribute's value cannot be changed.

**What Next**

The *set_attribute* command can be used to create a new attribute and set that attribute's value when *set_attribute* is used with the *-type* option. The *-type* option is used to specify the data type of the new attribute to be created. See the *set_attribute* manual page for more information on *set_attribute* and the *-type* option.

---

## UID-389

(warning) Current operating conditions specify best_case_tree\n \tas the interconnect model. Annotated resistance will be ignored in\n \tthis case.

**Description**

The best_case_tree model for interconnect assumes 0 interconnect delay. In this case, all annotated resistance values will be ignored.

**What Next**

If best_case_tree is the desired interconnect model, then this message can be ignored. If the resistance values need to be accounted for during timing analysis, then choose a set of operating conditions which do not use the best_case_tree model to model the interconnect delay.

---

## UID-390

(warning) All data in the names file '%s' is invalid.

Feedback

## UID-391

(error) The 'create_clock' command cannot be used on output port '%s'.

**Description**

Clock sources should be input ports or internal pins. In/out ports can be used, but they are not recommended because of bus contention issues.

**What Next**

Identify a valid set of sources and reapply the *create_clock* command.

## UID-392

(error) The object '%s' is a hierarchical object. You cannot set an\n IDDQ-invalid condition on a hierarchical object.

**Description**

Invalid IDDQ conditions must be specified in terms of logic values at ports of the design and at cell pins.

## UID-393

(error) No valid nodes specified for the set_iddq_invalid_state command.

**Description**

The 'set_iddq_invalid_state' was used without specifying a pin/port list for either the -logic_zero or -logic_one conditions. In this case the command does nothing.

**What Next**

Specify a list of ports and/or leaf pins for either the -logic_one or -logic_zero conditions.

## UID-394

(error) Error in command input : set_iddq_invalid_state command ignored.

**Description**

All of the pins specified for the -logic_zero or -logic_one conditions of the 'set_iddq_invalid_state' command were on hierarchical cells. Only leaf pins or ports are allowed for this command.

Feedback

### What Next

Specify only leaf pins or ports for the -logic_zero and -logic_one conditions of the 'set_iddq_invalid_state' command.

---

## UID-395

(warning) Could not link design '%s'.\n \tTherefore, the results of the filter command may be incorrect.

### Description

The *filter* command automatically attempts to link the design before executing the filtering process. Therefore, this warning message is generated only if there were errors during the link.

If a design is not linked, some derived attributes will revert to their default values instead of having the values expected if the design were linked. Therefore, if the design cannot be linked, the *filter* command might not produce correct results.

For example, for a design that uses some sequential library cells that are not properly linked, the *is_sequential* attribute reverts to its default value of *false*, because there is no way to determine whether or not the design is sequential. This situation could occur if the design has not yet been linked, or if errors during the linking process prevent the sequential library cells from being linked properly.

Once the design is linked properly, however, then the *is_sequential* attribute maintains the correct value, and the *filter* command executes correctly.

### What Next

Resolve the link errors and then re-execute *filter*.

---

## UID-396

(error) The cell '%s' does not reference a synthetic library operator DW03_mult_n_stage, so set_pipeline_stages was not applied to it.

### Description

Cannot apply the 'set_pipeline_stages' command to the cell because it does not reference a synthetic library operator, DW03_mult_n_stage.

### What Next

Use report_cell to see which cells reference synthetic library operators DW03_mult_n_stage. Check the man page for the 'set_pipeline_stages' command.

Feedback

## UID-397

(error) You must chose one of {fixed min auto}.

## UID-398

(warning) Pin '%s' does not belong to a cell in design '%s'.

**Description**

This warning occurs when calling cell_of command on an instance pin. The given pin belongs to a hierarchical cell of the current design.

**What Next**

Set the current design to the design of that pin, then issue the cell_of command on the pin.

For example, if the message is

Warning: Pin 'U1/U2/U3/A' does not belong to a cell in design 'TOP'

cell_of can accept pins that belong to cells in the design TOP only. You are calling cell_of on an instance pin 'U1/U2/U3/A'. With this example, set current design to the design of instance 'U1/U2', then issue cell_of("U3/A");

## UID-399

(error) Cannot perform %s on the instance %s because\n\tit is not unique. Please\n\trerun the command after uniquifying the instance.

**Description**

You have issued the command when the instance is not unique. This command expects the instance to be unique to make sure that the reference of the design is consistent.

**What Next**

If the instance was passed by mistake please rerun the command after fixing it. Otherwise call uniquify command with -cell option to uniquify the parent instance and rerun the command.

## UID-400

(error) Design is already scan inserted, scan replaced or test ready.

Feedback

### Description

This error is generated when a design have been scan_replaced , is a test_ready or is scan_inserted. Since in all these cases the design have already been modified to have scan cells with an existing scan style, Hence it is not possible to change the scan style now.

### What Next

You can re read the design and set the new scan style and repeat the old flow to take into account the new scan_style.

---

## UID-401

(warning) Design rule attributes from the driving cell will be\n \tset on the port.

### Description

Design rule attributes from the driving cell will be set on the port when the set_driving_cell command is used. This is in addition to timing related parameters that are set on the port.

### What Next

Use the -no_design_rule option for set_driving_cell to avoid having design rules inferred.

---

## UID-402

(warning) Specifying an input delay without an associated clock\n \tcan cause the port's timing to be analyzed incorrectly.

### Description

If a port input delay is specified without reference to a clock, a default clocking waveform is inferred for the port's drivers, based on the flip-flops and latches in the port's transitive fanout. The input data will be assumed to be coming from an edge-triggered flip-flop clocked by the inferred waveform. The program attempts to figure out what the appropriate clock waveform should be, but there is no guarantee that the inferred clock will be appropriate for all cases. Therefore, it is safer to explicitly specify the clock whenever you set an input delay.

### What Next

To avoid having default clocks inferred, use the -clock option with set_input_delay. In some cases, the -level_sensitive and -clock_fall options might also be needed.

Feedback

## UID-403

(error) Can't read in the DB file '%s'.\n\tFile '%s' is created using program version '%s'\n \twhich is newer than '%s'.

### Description

This error indicates that your db file is created using Synopsys program version which is newer than the current program.

### What Next

Check your db file, make sure it is created with Synopsys product whose version is not newer than the current program you are using.

## UID-404

(error) No setup or hold margin was specified.

### Description

Because no setup or hold margin was specified, no clock gating checks will be created.

### What Next

To specify margins for the clock gating checks, use the *-setup* or *-hold* options.

## UID-405

(error) The set_auto_ideal_nets command is obsolete. Use set_auto_disable_drc_nets instead.

### Description

Ideal nets are now defined as having ideal timing (zero latency and transition by default), no DRC checking, and *dont_touch* attributes set on them. The now-obsolete *set_auto_ideal_nets* command was not consistent with this definition of ideal, and has therefore been renamed to *set_auto_disable_drc_nets*. This command works in exactly the same way as *set_auto_ideal_nets*; it accepts the same arguments and by default disables DRC on clock and constant nets.

### What Next

Replace this command with the *set_auto_disable_drc_nets* command. Alternatively, if you want to set nets to be ideal, use *set_ideal_net* or *set_ideal_network* instead.

Feedback

### See Also

- set_auto_disable_drc_nets
- set_ideal_network

---

## UID-406

(information) set_ideal_net disables DRC, sets dont_touch on the net, and makes its timing ideal.

### Description

This message informs you about the current behavior of the *set_ideal_net* command. Since release 2001.08, ideal nets are defined as having ideal timing (zero latency and transition by default), no DRC checking, and *dont_touch* attributes set on them. The previous behavior of the *set_ideal_net* command was only to switch off DRC checking for the net. To revert to the previous behavior, set the variable *use_old_ideal_net* to true.

### What Next

This is an informational message only. No action on your part is required.

### See Also

- set_ideal_network

---

## UID-408

(warning) Current design named %s is hidden.

### Description

This warning message occurs only in Incremental Mode.

You receive this warning message if the current design is hidden, either by a limited license or by a don't show reference.

Access to a design can be limited for either of the following reasons:

- The design is fully licensed, but it has not yet been mapped.
- The only license that could be checked out for the design was a limited license.

The result of limited access is that the internals of the design are hidden. You are not permitted to write the design out, view a schematic, or execute any commands that would allow you to see the internals. Certain commands, such as the *group* command, do not apply to limited designs.

Feedback

**What Next**

This is a warning message only. No action is required.

However if the result is not what you intended, you can do one of the following:

- If the design is not mapped, compile the design.
- If the design is limited because of licenses, check out a license that allows full access.

After making your changes, you can reexecute the command that issued this warning message.

---

## UID-409

(error) Cannot group the cell %s because its parent is not %s.\n\tOnly cells whose parents are same can be grouped.

**Description**

You have issued the command when the cells passed to group command have different parents. This command expects all the cells to have the same parent.

**What Next**

Please rerun the command after fixing the error.

---

## UID-410

(error) Unable to find replacement gate '%s'.

**Description**

The replacement gate specified in the set_combinational_type command could not be found in the target library.

**What Next**

Either change the target_library variable to include the library which contains the replacement gate or change the replacement gate.

---

## UID-411

(error) Replacement design '%s' is not a combinational gate.

**Description**

The replacement_gate in the set_combinational_type command is not a combinational gate.

Feedback

**What Next**

Set_combinational_type must have a combinational gate as its replacement gate. Specify a new replacement gate.

---

## UID-412

(warning) Overriding compile directives for cell %s.

**Description**

The compile directives set by the *set_compile_directives* command are ignored for this cell. The *set_combinational_type* command must override the compile directives to ensure that this cell is only translated into the given replacement cell.

**What Next**

Do not use *set_combinational_type* and *set_compile_directives* on the same cell.

---

## UID-413

(warning) Overriding previous replacement cell for cell %s.

**Description**

There was a previous *set_combinational_type* command issued for this cell. The old command is ignored.

**What Next**

The *set_combinational_type* overrides any previous *set_combinational_type* commands issued for this cell.

---

## UID-414

(error) Cannot set_compile_directives on cell %s because it already has set_combinational_type

**Description**

There was a previous *set_combinational_type* command issued for this cell. You cannot *set_compile_directives* for the same cell because the *set_combinational_type* command needs to ensure that this cell is only translated into the particular replacement cell.

**What Next**

Remove the *set_combinational_type* information by doing a remove_attribute <cell_name> combinational_type_exact.

Feedback

## UID-415

(error) Cell list contains generic cell %s.

**Description**

The *set_compile_directives* command has been called on a list of cells containing generic cells .

**What Next**

Use *set_compile_directives* only on list of technology specific cells.

## UID-416

(information) The compile directive given by option %s had already been %s on all specified cells.

**Description**

A *set_compile_directives* command option has no effect because the corresponding directive had already been set for the specified cells.

**What Next**

Check if the options of *set_compile_directives* are set correctly. Note that the default is TRUE.

## UID-417

(error) Cell list contains synthetic operator cell %s.

**Description**

The *set_compile_directives* command has been called on a list of cells containing synthetic operators.

**What Next**

Use *set_compile_directives* only on list of technology specific cells.

## UID-418

(error) Cell list contains cell %s which is control logic of SELECT_OPs.

Feedback

**Description**

The *set_compile_directives* command has been called on a list of cells containing control logic of SELECT_OPs.

**What Next**

Use *set_compile_directives* only on list of technology specific cells.

---

## UID-420

(error) %s cannot be used on port with clock specified.

---

## UID-421

(error) bc_dont_ungroup cannot be applied after the current design is scheduled.

**Description**

You receive this message if you attempt to use *bc_dont_ungroup* after the current design is scheduled. Currently, you must use *bc_dont_ungroup* before scheduling the current design.

**What Next**

Apply *bc_dont_ungroup* before scheduling your design.

---

## UID-422

(error) get_timing_paths requires a mapped design.

**Description**

You receive this error message if you attempted to use *get_timing_paths* with an unmapped design. You cannot generate a timing report for an unmapped design because the correct timing arcs are not available.

**What Next**

Compile your design using the *compile* command before executing *get_timing_paths*.

**See Also**

- get_timing_paths

Feedback

## UID-423

(error) Invalid path group name %s supplied with -group option.

### Description

This error message occurs if you specify a non-existent path group name when using the *-group* option with the *report_timing* command.

### What Next

Specify a valid (existing) path group name when using the *-group* option and then run the *report_timing* command again.

Path groups are created implicitly according to the clock of the destination register of a path. You can also define a path group with via the *group_path* command. To see a list of all valid path groups, issue the *report_path_group* command. Any of the path group names listed can be supplied with the *-group* option in the *report_timing* command.

### See Also

- group_path
- report_path_group
- report_timing

## UID-424

(warning) The min ideal latency is greater than the max ideal latency\n \t for the object '%s'. Using the latest value for both min and max.

### Description

You receive this message because you set the minimum ideal latency higher than the maximum ideal latency for the specified object. The max ideal latency must be greater than or equal to the min ideal latency for the same object. The message informs you that the latest value entered is being used for both minimum and maximum ideal latency.

### What Next

If it is acceptable to you for the latest value to be used for both minimum and maximum ideal latency, no action is required on your part. However, if you want different values for the minimum and maximum ideal latency, reset these values using the *set_ideal_latency* command, and ensure that the maximum value is greater than or equal to the minimum value.

Feedback

### See Also

- set_ideal_latency

---

## UID-425

(warning) You cannot set ideal latency on object %s, \n because it is not a pin of a leaf cell or a port of the current design.

### Description

You receive this message if you attempt to set an ideal latency on an object that is not a pin of a leaf cell (a cell that does not contain other cells), or a port of the current design. You can set an ideal latency only on leaf cell pins or top-level ports.

### What Next

Reexecute the *set_ideal_latency* command with an *object_list* that contains only leaf cell pins and/or top-level ports.

### See Also

- set_ideal_latency

---

## UID-426

(warning) You cannot set ideal transition time on object %s, \n \t because it is not a pin of a leaf cell or a port of the current design.

### Description

You receive this message if you attempt to set an ideal transition time on an object that is not a pin of a leaf cell (a cell that does not contain other cells) or a port of the current design. You can set an ideal transition time only on leaf cell pins or top-level ports.

### What Next

Reexecute the *set_ideal_transition* command with an *object_list* that contains only leaf cell pins and/or top-level ports.

### See Also

- set_ideal_transition

Feedback

## UID-427

(warning) The clock source '%s' has ideal timing specified, \n \t but the clock was just created as an ideal clock. \n \t Ignoring previously-specified ideal timing for this clock source.

### Description

You receive this message from the *create_clock* command to warn you that the specified clock source has ideal timing previously specified. Clocks created by the *create_clock* command are ideal clocks, which ignore ideal timing. This message warns you that the previously-specified ideal timing is being ignored for the specified clock source.

An ideal clock uses latency and transition specified by *set_clock_latency* and *set_clock_transition* and ignores an ideal timing. Therefore, you cannot use the *set_ideal_latency* and *set_ideal_transition* commands on this ideal clock.

### What Next

If it is acceptable to you that the previously-specified ideal timing is ignored for this clock, no action is required on your part. Otherwise, verify that the specified clock source was the one you intended to use for creating an ideal clock. If so, and if you want to set latency and transition time on the ideal clock, use the *set_clock_latency* and *set_clock_transition* commands.

### See Also

- create_clock
- set_clock_latency
- set_clock_transition
- set_ideal_latency
- set_ideal_transition

## UID-428

(warning) You cannot set an ideal latency on the clock source\n \t %s, because it is an ideal clock. Ignoring the specified ideal latency unless the clock source is marked as ideal.

### Description

You receive this message if you attempt to set an ideal latency on a clock source created using the *create_clock* command. Clocks created using *create_clock* are ideal clocks, and you cannot set an ideal latency on an ideal clock. Instead, to set its latency, use the *set_clock_latency* command.

Feedback

### What Next

If it is acceptable to you that the ideal latency is ignored for the specified ideal clock, no action on your part is required. Otherwise, if you want to set latency on the clock, do so using the *set_clock_latency* command.

### See Also

- create_clock
- set_clock_latency
- set_ideal_latency

---

## UID-429

(warning) You cannot set an ideal transition time on the clock source \n \t %s, because it is an ideal clock. Ignoring the specified ideal transition time unless the clock source is marked as ideal.

### Description

You receive this message if you attempt to set an ideal transition time on a clock source created using the *create_clock* command. Clocks created using *create_clock* are ideal clocks, and you cannot set an ideal transition time on an ideal clock. Instead, to set its transition time, use the *set_clock_transition* command.

### What Next

If it is acceptable to you that the ideal transition time is ignored for the specified ideal clock, no action on your part is required. Otherwise, if you want to set a transition time on the clock, do so using the *set_clock_transition* command.

### See Also

- create_clock
- set_clock_transition
- set_ideal_transition

---

## UID-430

(error) No object was specified for the set_clock_uncertainty comand.

Feedback

### Description

The clock uncertainty can be specified on a clock a clock or a clock pin. You can also specify inter-clock uncertainty by using the *-from* and *-to* to specify from which clock to which clock to apply this uncertainy. The *rise_delay* and *fall_delay* clock skew The source clock latency is the time it takes for a clock signal to propagate from its actual ideal waveform origin point to the clock definition point in the design. This attribute can be set on a clock source, or on the clock itself. In case it is set on the clock, it is applied to all the clock sources.

### What Next

Reapply the command with the relevant object(s).

---

## UID-431

(error) -to clock_name is missing.

### Description

This error message occurs when a required clock name is not specified. To set interclock uncertainty, specify a *-from from_clock* and *-to to_clock* pair. Use the *-from* and *-to* options only for interclock uncertainty.

To set uncertainty on a clock or a clock pin, specify the object name at the end of the command line.

### What Next

Run the command again using the correct options.

### See Also

- set_clock_uncertainty

---

## UID-432

(error) -from clock_name is missing.

### Description

This error message occurs when the required clock name is missing. To set interclock uncertainty specify both the *-from from_clock* and *-to to_clock*>. The *-from* and *-to* option are used only for interclock uncertainty.

To set uncertainty on a clock or a clock pin, specify the object name at the end of the command line.

Feedback

### What Next

Rerun the command using the correct options.

### See Also

- set_clock_uncertainty

---

## UID-433

(error) Too many objects for inter clock uncertainty.

### Description

To set inter-clock uncertainty use *-from* <from_clock> and *-to* <to_clock> option. To set uncertainty on a clock or a clock pin, just specify the object name at the end of the command line. These 2 different types of clock uncertainty values cannot be set in one command line.

### What Next

Reapply the command(s) with the correct options.

---

## UID-434

(error) '%s' is not a name of a clock.

### Description

To specify inter-clock skew the *-from* and *-to* options should be followed by a clock name. To specify a skew to a register, the object should be specified without the *-from* and *-to* option.

### What Next

Reapply the command with the correct syntax.

---

## UID-435

(error) Cannot set clock source latency on '%s' .This attribute can be set on a clock or a clock source pin.

### Description

The source clock latency is the time it takes for a clock signal to propagate from its actual ideal waveform origin point to the clock definition point in the design. If you receive this message, you have attempted to set clock source latency on an object other than a clock

Feedback

or a clock source pin. This attribute can be set on a clock source, or on the clock itself. If it is set on the clock, the attribute is applied to all clock sources.

**What Next**

If you want to set clock source latency, you need to identify the relevant clock or clock source where you want to set it. If you want to set actual latency on a clock pin, use the *set_clock_latency* command without the *-source* option.

---

## UID-436

(error) '-rise' and '-fall' options are valid only for inter-clock uncertainty

**Description**

You receive this message if you attempt to specify *-rise* and *-fall* options for an endpoint uncertainty; you can specify only one value for the setup check and one value for the hold check. The value is applied to both the rise and the fall transition. The *-rise* and *-fall* options are valid only for inter-clock uncertainty.

**What Next**

Reapply the command with the correct syntax.

---

## UID-437

(warning) '%s' option is obsoleted. Although it will still function normally now, please use '%s' command to replace this option in the future.

**Description**

The specified option is obsolete, although it is still functional in the current software version. In the future, please use the replacement command.

**What Next**

Replace the obsolete option with the specified command.

---

## UID-438

(warning) Attribute '%s' is removed from from object '%s'.

**Description**

The command executed caused the specified attribute to be removed from the specified object, either because the command must proceed without this attribute, or because the value of the attribute is invalid for this command.

Feedback

### What Next

This message is for your information. No action is required on your part.

---

## UID-439

(warning) '%s' command is obsoleted. Although it will still function normally now, please use '%s' command to replace this command in the future.

### Description

This command is obsolete. However, it is still functional in this version. In the future, please use the replacement command.

### What Next

Remove the obsolete commands, and replace it with the new command.

---

## UID-440

(error) Cannot write the '%s' constraints file.

### Description

The tool issues this error when it fails to open or write to the specified file. There can be several reasons for this. The most common reasons are: you do not have write permissions in the directory, the disk is full, or you already have a file with the same name that cannot be deleted.

### What Next

Try to manually create a file with the same name. Fix any problems that you encounter, and then delete the file and run the command again.

---

## UID-441

(warning) You cannot specify an input transition time for the %s '%s'\n \t using set_input_transition. Ignoring the transition time for this port.

### Description

You receive this message if you specify an input transition for the specified ideal network port or ideal clock source, using *set_input_transition*. You cannot use *set_input_transition* for these objects; you must use *set_ideal_transition* for ideal network ports, and *set_clock_transition* for ideal clock sources. This message informs you that the input transition specified by *set_input_transition* is being ignored for the specified object.

Feedback

### What Next

If it is acceptable to you that the input transition time is ignored, no action is required on your part. Otherwise, if you want to set an input transition time, use *set_ideal_transition* for an ideal network port and *set_clock_transition* for a clock source.

### See Also

- set_clock_transition
- set_ideal_transition
- set_input_transition

---

## UID-444

(error) '%s' is a PrimeTime option that is not supported by this tool.

### Description

The tool issues this error when you run a command with an option that is supported by PrimeTime, but is not supported by this tool. To see the options supported by this tool, run the command with the *-help* option.

### What Next

Remove the unsupported option and rerun the command.

---

## UID-445

(warning) Ignoring %s objects in collection '%s' because they are not of type %s.

### Description

You receive this error message when you specify a collection as an argument to a command, and some objects in the collection are not of a type accepted by the command. For example, you receive this error message if you execute the *report_net* command and not all of the objects in the specified collection are nets.

### What Next

Use the command *query_objects -verbose* to see the details of the objects in the collection and their types.

---

## UID-446

(Error) For pattern '%s', %s.

Feedback

### Description

A problem has occured while trying to compile the regular expression pattern shown.

### What Next

Review the description in the man page for regexp to identify and correct the problem. Make sure that you intended the pattern to be a regular expression instead of a simple string match. A common mistake is to mix up the use of the wildcard '*' in string match with the corresponding regular expression '.*'. Also, remember that in regular expressions, the square brackets '[', ']' by default enclose a range of characters, and must be escaped with a backslash to be treated as regular characters.

---

## UID-447

(warning) Your SDC output may contain ambiguous names because you have\n \tset the variable sdc_write_unambiguous_names to FALSE.

### Description

Beginning with version 1.2, the Synopsys Design Constraints (SDC) format has features which ensure that the cell, net, pin, lib_cell, and lib_pin names written to the file are unambiguous. Some third party applications do no understand these features, and to suppress them, you set the variable *sdc_write_unambiguous_names* to FALSE. This warning reminds you that the setting of this variable may cause your SDC output to be ambiguous.

### What Next

Verify that you really want to disable the writing of unambiguous names. Review the man pages for *write_sdc* and *sdc_write_unambiguous_names*.

---

## UID-448

(warning) The sdc version specified is not valid. Valid options are 1.2, 1.3, 1.4, 1.5, and latest.

### Description

You receive this message if you specify an invalid version with the *-version* option of *write_sdc*. Valid values for *-version* are 1.2, 1.3, 1.4, 1.5, and latest (the default). Notice that in this case, specifying latest or 1.5 are equivalent, as is issuing *write_sdc* without the *-version* option.

### What Next

Reexecute *write_sdc* and either specify a valid version with the *-version* option, or omit the *-version* option and get the latest version.

Feedback

**See Also**

- write_sdc

---

## UID-449

(warning) The sdc version specified is not valid for db mode. Valid options are 1.2, 1.3, 1.4, and latest.

**Description**

You receive this message if you specify an invalid version with the *-version* option of *write_sdc*. When in DB mode the valid values for *-version* are 1.2, 1.3, or 1.4. Notice that in this case, specifying 1.4 is equivalent to issuing *write_sdc* without the *-version* option.

**What Next**

Reexecute *write_sdc* and either specify a valid version with the *-version* option, or omit the *-version* option and get the latest supported version.

**See Also**

- write_sdc

---

## UID-450

(Warnning) Value for %s is negative.

**Description**

A negative value was given in the command line; the value was accepted.

**What Next**

It is the user's responsibility to verify that the negative value is a valid value to describe this property.

---

## UID-451

(Warnning) '%s' option is ignored when '%s' argument is present.

**Description**

The given option is ignored to the current command when the specified argument is present. The command performs without the given option.

Feedback

## UID-452

(Warning) Empty object list.

### Description

You receive this message if you execute the *report_net_fanout* command with an empty pair of braces ({}) for the *net_list* argument, or with all members of *net_list* invalid. This condition could be caused by spelling errors or typos, or by listing nets for the wrong instance.

### What Next

If you want *report_net_fanout* to generate the report for all nets in the current instance, execute the command without the optional *net_list* argument. Otherwise, verify that the net list is correct for the current instance and that the names are spelled correctly. Then reexecute the *report_net_fanout* command.

### See Also

- report_net_fanout

## UID-453

(error) The argument of the -bound option must be \n \t larger than the argument of the -threshold option.

### Description

You receive this message if you execute the *report_net_fanout* command and specify a value for the *-bound* option that is smaller than or equal to the value for the *-threshold* option. The *-bound* option represents the upper level of fanout for displaying nets, while the *-threshold* option represents the lower level. Therefore, the value of *-bound* must be larger than the value of *-threshold*.

### What Next

Reexecute the *report_net_fanout* command and specify a value for the *-bound* option that is larger than the value for the *-threshold* option.

### See Also

- report_net_fanout

## UID-455

(error) The value %s is not a legal option for the\n \tset_transform_for_retiming command.

Feedback

**Description**

The *set_transform_for_retiming* command can only have the values *-multiclass*, *-decompose*, or *-dont_retime*.

**What Next**

Check the spelling and choose either the *-multiclass*, *-decompose* or *-dont_retime* option for the *set_transform_for_retiming* command.

---

## UID-456

(error) The value %s is not a legal option for the\n \tset_state_for_retiming command.

**Description**

The comand *set_state_for_retiming* can only have the values *-preserve* or *-dont_care*.

**What Next**

Check the spelling and specify the *-preserve* or *-dont_care* option for the *set_state_for_retiming* command.

---

## UID-457

(error) Cannot set size_only on cell '%s'.

**Description**

The *set_size_only* command works only on leaf cells.

**What Next**

When you use *set_size_only*, make sure the cell you specify is a leaf cell.

---

## UID-458

(warning) Cannot perform '%s' on object '%s' because it is not a port.

**Description**

The specified object is not a port. The command cannot be applied.

---

## UID-459

(warning) Cannot perform '%s' on object '%s' because it is not a port.

Feedback

**Description**

The specified object is not a port. The command can not be applied.

**What Next**

Varify that the specified object is not a port.

---

## UID-460

(error) Option '%s' is only available for dc_shell-t.

**Description**

The indicated option is only available in Tcl mode (dcshell-t).

**What Next**

Start dc_shell as dc_shell-t or dc_shell -tcl_mode.

---

## UID-461

(error) The -xg_mode option is not available.

**Description**

This error message occurs when the *-xg_mode* option is not available for the current release, or when there is a problem with accessing proper license features.

**What Next**

Start dc_shell without using the *-xg_mode* option.

---

## UID-462

(error) Invalid implementation '%s' for cell '%s'.

**Description**

The specified implementation for the synthetic cell does not exist in the specified synthetic libraries.

**What Next**

Verify the existence of the specified implementation in the synthetic libraries. You can use the report_synlib command to list the contents of the synthetic library.

Feedback

## UID-463

(error) %s name is required to set implementation on operator '%s'.

**Description**

Either module name or implementation name is missing when setting implementation on operator.

**What Next**

Reissue the *set_implementation* command with the implementation string that contains the module name and implementation name in the "<module_name>/<impl_name>" format.

## UID-464

(error) Invalid module '%s' or implementation '%s' for cell '%s'.

**Description**

The specified module name or implementation name on operator cell does not exist in the synthetic libraries.

**What Next**

Verify the existence of the specified implementation in the synthetic libraries. You can use the report_synlib command to list the contents of the synthetic library.

## UID-465

(error) Incorrect arguments to the set_retiming_bound command. Choose either the -forward or -backward option to specify the direction of the retiming_bound.

**Description**

This error message occurs because the *set_retiming_bound* command can only have the value of *-forward* or *-backward*.

**What Next**

Check the spelling and rerun the *set_retiming_bound* command with either *-forward* or the *-backward*.

## UID-466

(error) Missing arguments to command set_retiming_bound. Specify the direction of the retiming_bound using the -forward or -backward option.

Feedback

### Description

This error message occurs because the *set_retiming_bound* command requires either the *-forward* or *-backward* option to specify the direction that the registers move.

### What Next

Rerun the *set_retiming_bound* command with either *-forward* or *-backward*.

---

## UID-467

(error) The '%s' option is not supported in Design Compiler.

### Description

This error message occurs when the specified option is not supported by Design Compiler.

### What Next

Rerun the command without the option.

### See Also

- report_qor

---

## UID-468

(warning) The '%s' option is not supported in Design Compiler and will be ignored.

### Description

This warning message occurs when the specified option is not supported by Design Compiler.

### What Next

Rerun the command without the option.

---

## UID-470

(warning) It is dangerous to create a generated clock on an inout port '%s'.

### Description

A circuit in which a generated clock drives an inout port may be unpredictable. If the port is functioning as an output while the generated clock is driving, bus contention will occur. If the generated clock is three-stated, any registers in the generated clock's fanout may lose state.

Feedback

**What Next**

Verify that the circuit is safe according to your design rules. DesignTime will assume that the generated clock is valid.

---

## UID-471

(error) The 'create_generated_clock' command cannot be used on output port '%s'.

**Description**

Generated clocks should be input ports or internal pins. In/out ports can be used, but they are not recommended because of bus contention issues.

**What Next**

Identify a valid set of sources and reapply the *create_generated_clock* command.

---

## UID-472

(error) You can specify only a single object for master clock source.

**Description**

The -source option takes only a single object as an argument.

**What Next**

You can have a generated clock derived from a single clock. You cannot generate a clock from more than one master clock.

---

## UID-473

(error) The number of edges specified '%d' is not an odd number > 3.

**Description**

The number of edges to make one period of the generated clock waveform has to be an odd number > 3.

**What Next**

Carefully specify edges and ensure that you specify one full clock cycle using the edges.

---

## UID-474

(Error) In the -edge specification of create_generated_clock\n \t'%s', the edge numbers must be greater than zero and in increasing order.

Feedback

### Description

In the -edge specification of a create_generated_clock command, the edge numbers specified must be in increasing order. The edge numbers should also be greater than zero, since it refers to the edge-number of the master clock.

### What Next

Check the -edge spec in create_generated_clock command and edge numbers increasing.

---

## UID-475

(Error) The master source must be specified.

### Description

For *create_generated_clock*, the -source option must be specified. This option specifies the source of the generated clock.

### What Next

Specify -source in the create_generated_clock command.

---

## UID-476

(warning) Converting propagated clock at '%s' to ideal clock.

### Description

You receive this message if you use *set_clock_latency* to set network latency on a propagated clock. Clocks processed by *set_clock_latency* are automatically converted to ideal clocks. The *set_propagated_clock* command is normally used to set propagated clock network latency. This message warns you that the specified propagated clock is being converted to an ideal clock.

### What Next

This is a warning message only. If it is acceptable to you that the specified propagated clock is converted to an ideal clock, no action is required on your part. Otherwise, if you want the clock to be propagated, do not use *set_clock_latency* on the clock; use *set_propagated_clock* to specify a propagated clock latency.

### See Also

- set_clock_latency
- set_propagated_clock

Feedback

## UID-477

(warning) Converting ideal clock at '%s' to propagated clock.

### Description

You receive this message if you use *set_propagated clock* to set the *propagated_clock* attribute on a clock on which you previously set latency or transition. Clocks for which latency or transition have been set are automatically considered to be ideal clocks. Setting the *propagated_clock* attribute on an ideal clock converts it to a propagated clock. This message warns you that the specified ideal clock is being converted to a propagated clock, and the previously-specified latency or transition will not be used.

### What Next

This is a warning message only. If it is acceptable to you that the specified ideal clock is converted to a propagated clock, no action is required on your part. Otherwise, if you want the clock to remain ideal, remove the *propagated_clock* attribute using the *remove_propagated_clock* command, and the previously-specified latency and transition values will be used.

### See Also

- set_clock_latency
- set_propagated_clock

## UID-478

(Error) Virtual clock `%s` cannot be made propagated.

### Description

You receive this message if you attempt to set a *propagated_clock* attribute on a virtual clock. You cannot specify a virtual clock as a propagated clock, because virtual clocks do not have any source and cannot be made propagated.

### What Next

Review your design to verify your intended clock scheme.

### See Also

- set_propagated_clock

Feedback

## UID-479

(Error) Clock transition cannot be specified for virtual clock `%s` .

### Description

You receive this message if you attempt to use the *set_clock_transition* command on a virtual clock. You cannot specify clock transitions on virtual clocks, because they do not have any source.

### What Next

Review your design to verify your intended clock scheme.

### See Also

- set_clock_transition

## UID-480

(Warning) Clock transition specified for propagated clock `%s` will be ignored.

### Description

You receive this message if you attempt to specify a clock transition on a propagated clock using *set_clock_transition*. You can specify clock transitions only for ideal clocks. This message warns you that the clock transition you specified is being ignored for the clock.

### What Next

If it is acceptable to you that the clock transition is ignored for this clock, no action is required on your part. Otherwise, if you want to specify a clock transition for the clock, remove the *propagated_clock* attribute from it using *remove_propagated_clock*. Then reexecute *set_clock_transition*.

### See Also

- remove_propagated_clock
- set_clock_transition

## UID-481

(error) White spaces are not allowed in the string '%s'.

Feedback

**Description**

This error message occurs when white spaces appear in the input. This command does not allow any white space, such as tabs or spaces, in the string argument.

**What Next**

Rerun the command without any white space in the string argument.

---

## UID-482

(error) An empty string argument was found.

**Description**

This error message occurs when an empty string is entered as an argument. This command does not allow empty strings as arguments.

**What Next**

Rerun the command with a non-empty string argument.

---

## UID-483

(error) Not allowed to remove default power (or ground) net '%s'.

**Description**

This error occurs because the tool attempted to remove from the design the default power net stored in the *mw_logic1_net* variable (or the *mw_logic0_net* variable), which is not allowed. You are allowed to remove other power nets.

**What Next**

Eliminate any command that attempts to remove the default power net.

---

## UID-485

(error) Cannot specify %s without -source.

**Description**

This error message occurs when a specified command option requires another option, which is omitted.

**What Next**

Refer to the manual page for this command for detailed information on valid options and rerun the command.

Feedback

## UID-486

(warning) The output of \ the propagate_constraints command is \ in DCSH mode. Use the UNIX utility dc-transcript to \ convert DCSH script to DC-Tcl script.

### Description

You receive this message because you executed the *propagate_constraints* command from dc_shell-t; that is, in DC-Tcl mode. This message warns you that whether you execute the *propagate_constraints* command in DCSH-mode or in DC-Tcl mode, the output is always in DCSH mode. Thus, the script you generate is in DCSH mode.

### What Next

To convert the script from DCSH format to DC-Tcl format, use the UNIX dc-transcript utility.

## UID-487

(warning) The '%s' option is obsolete. It is ignored.

## UID-488

(error) Cannot specify both "-high" and "-low" as the noncontrolling value for '%s'.

### Description

You receive this error message if you attempt to set the noncontrolling value for a particular object to both high and low through *set_clock_gating_check* command.

### What Next

Only use the *-high* or *-low* option when you are certain about the noncontrolling value for a particular cell. Only one of the two options can be specified.

### See Also

- set_clock_gating_check

## UID-489

(error) Cannot specify %s option for '%s'. Can only specify on cells or pins.

### Description

You receive this message if you execute the *set_clock_gating_check* command and specify both the *-hi* and *-low* options on objects that are neither cells nor pins.

Feedback

### What Next

Use the *-high* or *-low* options only on cells or pins.

### See Also

- set_clock_gating_check

---

## UID-490

(error) Cannot specify both high and low for the same object.

### Description

You receive this message if you executed the *set_clock_gating_check* command and specified both the *-high* and *-low* options for the same object. This message informs you that you can set the noncontrolling value of the clock for this particular clock gating check to be the high or the low interval of the clock, but not both.

### What Next

Reexecute the *set_clock_gating_check* command and specify either the *-high* or *-low* option. Use these options only when you are very certain about the controlling value of the clock for a particular cell.

### See Also

- set_clock_gating_check

---

## UID-491

(error) Only one clock can be specified.

### Description

You receive this message if you executed the *set_input_delay*, *set_output_delay*, *remove_input_delay*, or *remove_output_delay* and specified multiple clocks in the -clocks option. You can only specify one clock for this option.

### What Next

Reexecute the command and only choose one clock.

### See Also

- set_input_delay
- set_output_delay

Feedback

- remove_input_delay
- remove_output_delay

## UID-492

(error) Object specified in -clock option must be a clock type.

**Description**

You receive this message if you executed the *set_input_delay*, *set_output_delay*, *remove_input_delay*, or *remove_output_delay* and specified a non-clock object in the -clocks option. You can only specify one clock object for this option.

**What Next**

Reexecute the command and only choose one clock object.

**See Also**

- set_input_delay
- set_output_delay
- remove_input_delay
- remove_output_delay

## UID-493

(error) Timing derate value should be bigger than 0 and smaller than 2.0.

**Description**

This error message occurs when the timing value is not within the acceptable range. The timing derate value must be larger than 0 and smaller than 2.0.

**What Next**

Specify a value within the range of 0 to 2.0 and run the command again.

**See Also**

- set_timing_derate

## UID-494

(warning) No -early or -late option is specified.

Feedback

### Description

This warning message occurs when running the *set_timing_derate* command without specifying either the *-early* or the *-late* option. When neither option is specified, the default is that both are set to *true*, and the derate value is applied to both.

### What Next

This is only a warning message. No action is required on your part.

However, if you do not want the derate value to apply to both options, run the command again and specify either the *-early* or the *-late* option.

### See Also

- set_timing_derate

---

## UID-495

(error) Cannot specify %s option with object list.

### Description

This error message occurs if you execute the *set_timing_derate* command and specify the *-net_delay* option on the object list.

### What Next

Execute the command again with the *-net_delay* option but without the object list.

### See Also

- set_timing_derate

---

## UID-496

(warning) SDC does not allow -min and -max deratings

### Description

This warning occurs if you execute the *write_sdc* command and there is a difference between the -min and -max settings of a*set_timing_derate* . These switches are not found in SDC and as a result this information is lost when producing the SDC output. To be safe, the *write_sdc* command will produce the lesser of the two numbers for the early derating, and the greater of these two numbers for the late derating, although this may give overly pessimistic results further downstream.

Feedback

### What Next

Examin the instances of *set_timing_derate* in the SDC output to determine whether the values are the most appropriate for tools that will make use of the SDC constraints.

### See Also

- set_timing_derate
- write_sdc

---

## UID-497

(information) Drop incorrect(obsolete) 'high/low' set_clock_gating_checks.

### Description

This warning occurs if you execute the *write_sdc* command and there was some incorrect set_clock_gating_checks stored in old designs.

We will ignore those incorrect set_clock_gating_checks during design loading.

### What Next

Ignore this message.

### See Also

- set_clock_gating_check
- write_sdc
- write_script

---

## UID-499

(warning) The clock %s is not a generated clock. This command removes only generated clocks.

### Description

One or more clock(s) specified in your command arguments is not a generated clock. The *remove_generated_clock* command can remove only generated clocks. This is not an error though.

Feedback

### What Next

You can use remove_clock command to remove non-generated (or Master) clocks. To know more about this, see help for *create_clock, create_generated_clock, remove_clock, remove_generated_clcok*.

---

## UID-500

(warning) Pin '%s' is hierarchical and not valid for case analysis.

### Description

You receive this warning message because you specified hierarchical pins as objects for *set_case_analysis* and *remove_case_analysis*. Therefore, case analysis is not being set or removed on the specified pin. If there are multiple pins specified in the object_list, case analysis values will still be set or removed on nonhierarchical pins or ports.

### What Next

Do not specify hierarchical pins for *set_case_analysis* and *remove_case_analysis*.

### See Also

- remove_case_analysis
- set_case_analysis

---

## UID-501

(error) There are no valid objects specified for case analysis.

### Description

You receive this error message because you did not provide a list of nonhierarchical pins or ports when you executed the *set_case_analysis* command or the *remove_case_analysis* command.

### What Next

Specify a valid set of non-hierarchical pins or ports.

### See Also

- remove_case_analysis
- set_case_analysis

Feedback

## UID-502

(error) Value '%s' is not a valid value.

### Description

You receive this error message because you did not specify a valid value with the *set_case_analysis* command. Valid values are 0, 1, zero, and one.

### What Next

Specify a valid value for the *set_case_analysis* command.

### See Also

- set_case_analysis

## UID-503

(error) Rising and falling values are not currently supported.

### Description

You receive this error message because you did not specify valid values with the *set_case_analysis* command. Valid values are 0, 1, zero, and one. Although PrimeTime supports rise, fall, rising, and falling, these options are not currently supported in DesignTime.

### What Next

Specify valid values for the *set_case_analysis* command.

### See Also

- set_case_analysis

## UID-504

(error) Must specify either -all or object_list.

### Description

You receive this error message because you have not specified a value with the *remove_case_analysis* command. You must specify either an object list or the *-all* option with this command.

Feedback

### What Next

Reexecute the *remove_case_analysis* command and specify either an object list or the *-all* option.

### See Also

- remove_case_analysis

---

## UID-505

(error) Cannot specify both -all and object_list.

### Description

You receive this error message because you have executed the *remove_case_analysis* command and have specified the *-all* option and an object list. You can only specify one of these arguments with the *remove_case_analysis* command.

### What Next

Reexecute the *remove_case_analysis* command and specify either the *-all* option or an object list.

### See Also

- remove_case_analysis

---

## UID-506

(error) Cannot change link for instance cell '%s'.

### Description

You receive this error message because you have executed the *change_link* command for an instance cell.

### What Next

Reexecute the *change_link* command without instance cells.

---

## UID-507

(error) The syntax of the pin mapping specified by user is not valid.

Feedback

**Description**

You receive this error message because you have executed the *change_link* command and specified an incorrect pin mapping. This error occurs if the syntax of the pin map entries are incorrect.

**What Next**

Reexecute the *change_link* command with a valid pin map.

---

## UID-508

(error) The replacement cell specified has lesser number of pins that the original cell.

**Description**

You receive this error message because you have executed the *change_link* command and specified a replacement cell which has lesser number of pins than the original cell.

**What Next**

Reexecute the *change_link* command with a valid replacement cell.

---

## UID-509

(error) Pin mapping from %s to %s is not valid.

**Description**

You receive this error message because you have executed the *change_link* command and specified an incorrect pin mapping.

This error may be because of the following reason. The pins specified in the mapping may not be compatible, ie,. they may have mismatched pin number or pin direction.

**What Next**

Reexecute the *change_link* command with a compatible replacement cell.

---

## UID-510

(error) In Dcl mode, you can specify only one mode with the set_mode command.

**Description**

You receive this error message because you have executed the *set_mode* command and specified more than one mode. This is invalid and, as a result, no modes are set by this command.

Feedback

### What Next

Reexecute the *set_mode* command and specify only one mode.

---

## UID-511

(error) Specified instance %s not valid. Must be a cell.

### Description

You receive this error message because you have issued the *set_mode* command on an instance that is not a cell. This is invalid and, as a result, no modes are set by this command.

### What Next

Reexecute the *set_mode* command and specify a mode on a cell or a cell instance.

---

## UID-512

(error) Pin mapping for pin %s is not available and no pin %s is in the replacement cell.

### Description

You receive this error message because you have executed the *change_link* command and specified an incorrect pin mapping.

This error may be because of the following reason.There may not not exist a mapping corresponding to an original pin and no pin of the original name may exist in the specified replacement object.

### What Next

Reexecute the *change_link* command with a valid replacement cell.

---

## UID-513

(error) Pin mapping from %s to %s is not valid.

### Description

You receive this error message because you have executed the *change_link* command and specified an incorrect pin mapping.

This error may be because of the following reason. A mapping was corresponding to an original pin was specified, however, there does not exists a pin by that name in the specified replacement cell.

Feedback

### What Next

Reexecute the *change_link* command with a valid pin map or a valid replacement cell.

---

## UID-520

(error) Ungroup -start_level does not work when the variable disable_2001_ungroup is true.

### Description

This message is issued when the variable disable_2001_ungroup is true and ungroup -start_level option is used. The -start_level option is not supported in the old version of ungroup and so this error message is issued. The same error message will be generated when trying to use ungroup -start_level for Behavioral compiler designs. A Behavioral Compiler design will have the attribute is_post_scheduled_design.

### What Next

Set the variable disable_2001_ungroup to false. If the error message still occurs, verify that the design is not a Behavioral Compilerdesign. If the design is a BC design, the -start_level option is not supported. To ungroup different levels of the design, use a combination of current_instance and ungroup. See the man page of ungroup for more details.

---

## UID-521

(error) Ungroup -start_level cannot be used in conjunction with -small option.

### Description

This message is issued when the -small and -start_level options are used together with the ungroup command. Both of these two options represent completly different strategies.

### What Next

Use either the -small option or the -start_level option.

---

## UID-523

(Warning) Some valid instances of design '%s' are not ungrouped due to dont_touches or other MV-related constraints in other instances.

### Description

This message is issued when ungroup -flatten, ungroup -small or ungroup -start_level is used where one or more instances of the design's multiply-instantiated sub-blocks

Feedback

has an instance-specific dont_touch attribute placed on one of its child cells, or has instance specific operating condition that is different from the owner block. Ungroup cannot be performed where it may change certain instances such that all instances of a sub-design can no longer point to the same reference. This problem does not occur if the dont_touches or Mv-related constraint are not instance specific.

**What Next**

If it is not OK, remove the instance specific dont_touch or constraints and run ungroup again. Or use uniquify command to uniquify the design.

---

## UID-524

(Warning) Some valid instances of design '%s' are not ungrouped because of some instances outside the start_level"

**Description**

This message is issued when ungroup -start_level option is used in the case where one or more instances of the design's multiply-instantiated sub-block has a child cell which does not fall into the range of specified levels to be ungrouped. Ungroup cannot be performed where it may change certain instances such that all instances of a sub-design can no longer point to the same reference.

**What Next**

Use ungroup -flatten option to flatten the design. Or, simply use the uniquify command to uniquify the design.

**See Also**

- uniquify

---

## UID-526

(error) No valid cells to ungroup within the level specified.

**Description**

This message is issued when there are simply no valid cells to be ungrouped from the specified -start_level downwards. In this case, nothing will be ungrouped.

**What Next**

None.

Feedback

## UID-527

(error) Writing designs in DB format is no longer supported. Option xg_force_db is ignored.

**Description**

This message is issued when you are trying to write the design in XG mode in DB Format. Due to capacity reasons, it is recomended to write the netlist using DDC format instead of DB format.

**What Next**

Please use a different format such as ddc to write out the netlist.

## UID-528

(warning) Writing designs in DB format is no longer supported.

**Description**

This message is issued when you are trying to write the design in XG mode in DB Format. Due to capacity reasons, it is recommended to write the netlist using DDC format instead of DB format.

**What Next**

Modify your scripts to write DDC format or ignore this error message if the usage was intentional.

## UID-529

(warning) A previous '%s' attribute on net '%s' will be overwritten.

**Description**

The *set_attribute* command can be used to specify the wired logic type of a net. This warning is given when a previous wire logic type exists and is different from the one being set.

**What Next**

To avoid this warning message, use *remove_attribute* command to remove the existing wired logic attribute before setting the new wired logic attribute on the net.

## UID-530

(Error) Writing designs in DB format is no longer supported.

Feedback

### Description

This message is issued when you are trying to write the design in XG mode in DB Format. Due to capacity reasons, it is recommended to write the netlist using DDC format instead of DB format.

### What Next

Modify your scripts to write DDC format or ignore this error message if the usage was intentional.

---

## UID-531

(Warning) Some valid instances of design '%s' passed as an argument to ungroup -all_instances option are not ungrouped due to dont_touches in other instances or other MV-related constraints in this instance or other instances.

### Description

This message is issued when ungroup -all_instances is used where one or more instances of the design's multiply-instantiated sub-blocks has an instance-specific dont_touch attribute or datapath_optimization attribute placed on one of its child cells, or has instance specific operating condition/ power domains that is different from the owner block. Ungroup cannot be performed where it may change certain instances such that all instances of a sub-design can no longer point to the same reference. This problem does not occur if the dont_touches or Mv-related constraint are not instance specific.

### What Next

If it is not OK, remove the instance specific dont_touch or constraints and run ungroup again. Or use uniquify command to uniquify the design.

---

## UID-540

(error) -scenarios and -active_scenarios may only be used with ddc format

### Description

The *-scenarios* and *-active_scenarios* options to the *read_file* command may only be used if *-format ddc* is specified.

### What Next

Verify that the correct format option has been supplied to the *read_file* command.

Feedback

## UID-541

(error) The -active_scenarios option cannot be used without the -scenarios option.

### Description

This error message occurs because the *read_file* command with the *-active_scenarios* option can be used only when the *-scenarios* option is also specified and the *-scenarios* list is not empty.

### What Next

See the *read_file* command man page for information about controlling which scenarios' constraints are read from the .ddc file.

### See Also

- all_scenarios

## UID-542

(error) All scenario names specified in -active_scenarios\n must also be specified in -scenarios

### Description

The *read_file* command's *-active_scenarios* option may only contain scenario names that are also listed in the *-scenarios* option. The *-scenarios* option, however, may contain names that are not included in *-active_scenarios*.

### What Next

See *read_file*(2) for more information on controlling which scenarios' constraints are read from the ddc file.

### See Also

- all_scenarios

## UID-550

(error) Unable to read the library '%s' from '%s'.

### Description

This error message occurs when the library has been pruned to provide optimal performance of the tool. The library will be re-read from the disk on demand to restore the necessary information to memory.

Feedback

The library has been removed or moved to a different location. This message occurs because the tool does not expect the library files to be removed within a session.

**What Next**

Copy the library file to the appropriate location and rerun the command.

---

## UID-551

(error) The library '%s' from '%s' has been modified after reading.

**Description**

This error message occurs when the library has been pruned to provide optimal performance of the tool. The library will be re-read from the disk on demand to restore the necessary information to memory.

The library has been modified after the tool has read the library in memory. This message occurs because the tool does not expect the library files to modified while the tool is still running. A combination of timestamp and checksum are used to detect if the library has been modified after it has been read in by the tool.

**What Next**

Start a new session and run the same set of commands and make sure that the library is not updated after it has been read in by the tool.

---

## UID-560

(warning) this command will be ignored since option %s is not supported.

**Description**

This warning message occurs if you execute the *set_timing_derate* command and specify the *-dynamic* option.

**What Next**

Execute the command again without the *-dynamic* option

**See Also**

- set_timing_derate

---

## UID-561

(error) The option %s has to be specified with option %s.

Feedback

### Description

This error message occurs if you execute the *set_timing_derate* command and specify the *-static* option without the *-net_delay* option.

### What Next

Execute the command again with the *-net_delay* option

### See Also

- set_timing_derate

---

## UID-562

(warning) the option %s will be ignored, this command will be executed as if this option is not specified.

### Description

This warning message occurs if you execute the *set_timing_derate* command and specify the *-static* option.

### See Also

- set_timing_derate

---

## UID-600

(error) Illegal type '%s' specified with the -type option. The value must be either "buffer" or "inverter".

### Description

The tool issues this error if you run the *set_isolate_ports* command and use an invalid argument for the *-type* option. Valid arguments for *-type* are *buffer* and *inverter*. To see all valid options and arguments for the *set_isolate_ports* command, see the man page or the command help (*set_isolate_ports -help*).

### What Next

Rerun the *set_isolate_ports* command with a valid argument for the *-type* option.

---

## UID-601

(error) Cannot isolate port '%s' because it is an '%s' port; only input or output ports can be isolated.

Feedback

### Description

You receive this message if you execute *set_isolate_ports* and specify a port that is an inout port. You can isolate only input or output ports.

### What Next

Reexecute the *set_output_ports* command and ensure that the list of ports contains only input or output ports.

---

## UID-602

(error) Can't specify <power_value> or <power_unit> when -delete_all is specified

### Description

You receive this message if you specify <power_value> or <power_unit> along with '-delete_all' option to *set_cell_internal_power* command.

### What Next

Reexecute the *set_cell_internal_power* command and ensure that you specify either '-delete_all' option or <power_value> and/or <power_unit>.

---

## UID-603

(error) There are no valid objects specified for set_cell_internal_power command.

### Description

You receive this message if you do not specify <pin_objects> or '-delete_all' option to *set_cell_internal_power* command.

### What Next

Re-execute the *set_cell_internal_power* command and ensure that you specify either '-delete_all' option or list of pins where you want to annotate the power number.

---

## UID-604

(information) It is recommended to use set_ideal_network command instead of set_ideal_net.

### Description

This information message occurs because the *set_ideal_net* and *set_ideal_network* commands are being combined. The *set_ideal_network* command is replacing *set_ideal_net*.

Feedback

In the 2004.12 release, the *set_ideal_net* command is replaced by the following command, which is applied to the same objects:

```
set_ideal_network -no_propagate
```

### What Next

This is only an informational message. No action is required.

### See Also

- set_ideal_network

---

## UID-605

(warning) Replacing set_ideal_net command with set_ideal_network -no_propagate command.

### Description

This warning message occurs because the *set_ideal_net* and *set_ideal_network* commands are being combined. The *set_ideal_network* command is replacing *set_ideal_net*.

The attributes are applied on the global driver pins of the specified nets, instead of applying the *ideal_net* attribute on the specified nets.

In the 2004.12 release, the *set_ideal_net* command is replaced by the following command, which is applied to the same objects:

```
set_ideal_network -no_propagate
```

### What Next

This is only an informational message. No action is required.

### See Also

- set_ideal_network

---

## UID-606

(warning) Transferring ideal_net attribute onto the driver pin %s of net %s.

Feedback

### Description

This warning message occurs because the *set_ideal_net* and *set_ideal_network* commands are being combined. The *set_ideal_network* command is replacing *set_ideal_net*.

In the 2004.12 release, the *set_ideal_net* command is replaced by the following command:

```
set_ideal_network -no_propagate
```

The attribute for *ideal_net* is transferred from the specified nets to the global driver pins of those nets, and is translated to the corresponding ideal network attributes.

### What Next

This is only a warning message. No action is required.

### See Also

- set_ideal_network

---

## UID-607

(error) The option -instance is obsolete in XG mode. Please use the complete path to the net instance with the %s command instead.

### Description

You have used the option -instance which is obsolete in XG mode. In XG mode one can use the complete hierarcical net name to perform remove_net and create_net operations. Please check the man page of these commands for details and examples.

### What Next

Please re-issue the command with the new format.

---

## UID-608

(information) Performing automatic 'set_ideal_net' on net '%s'.

### Description

This message occurs because *set_ideal_net* is being automatically performed at the named net. This behavior can be controlled using the following variables:

*icc_auto_ideal_nets* (default is false) *icc_auto_ideal_fanout_threshold* (default is 500) *icc_auto_ideal_multi_driver_threshold* (default is 100)

Feedback

This feature is meant to provide better default behavior during optimization for high-fanout nets that cannot be decomposed by buffering (for example, because they are dont_touch).

**What Next**

No action is required.

**See Also**

- set_ideal_network

---

## UID-610

(error) '%s' is not a supported value for the '%s' option.

**Description**

The tool issues this error when you specify an invalid or unsupported value for a command option.

To get a list of the supported options and arguments for the command, run the command with the *-help* option. For detailed information about the supported options and arguments, see the man page.

**What Next**

Change the option value to one that is supported and rerun the command.

---

## UID-611

(warning) Analysis type '%s' is not supported. Using '%s' instead.

**Description**

The tool issues this warning when you specify an unsupported analysis type. The tool uses the closest available analysis type, which should be suitable in most cases. You can check which options are supported by running the command with the *-help* option or by viewing the man page.

**What Next**

Verify that the substituted analysis type is acceptable for your purposes. Otherwise, change the analysis type to a supported value and rerun the command.

---

## UID-620

(error) Number of pins on the cell being changed is not same as the number of pins on the new reference cell.

Feedback

**Description**

You receive this error message because the number of pins on the cell or reference being changed with change_link/size_cell, does not match the number of pins on the new reference.

**What Next**

Please provide a compatible reference library cell for change_link to work correctly

---

## UID-621

(error) write_milkyway is not permitted, because the design contains a PG netlist obtained from the original RTL. Please use write_file -pg -f verilog.

**Description**

write_milkyway is not permitted in DC if the design contains a PG netlist obtained from the original RTL.

The PG netlist would have been obtained from the source RTL while dc_allow_rtl_pg was true. In this case, the only permitted output format is verilog. It is also possible to output to ddc, but only for reading back into DC.

**What Next**

Use write_file -pg -f verilog to communicate the design to a downstream tool.

---

## UID-622

(error) PG net '%s' connects to signal pin '%s'.\n This connection will be lost.

**Description**

DC does not currently allow a PG network described in source RTL to connect to signal pins. Such connections will be lost.

The PG netlist would have been obtained from the source RTL while dc_allow_rtl_pg was true. In this case, the PG network allowed by DC is limited, and does not permit PG connections to signal pins.

---

## UID-623

(error) PG net '%s' is driven by constant value '%s'.\n DC does not support constant values on RTL PG nets. This connection will be lost.

Feedback

### Description

DC does not currently allow a PG network described in source RTL to be driven by constant values. Such connections will be lost.

The reason for this limitation is that the DC RTL readers may merge constant nets together, thus losing the intended connectivity of individual PG nets. Instead, PG nets should be driven by top-level ports.

Examples of illegal constant PG connections are wire vdd; assign vdd = 1'b1; AND2 U1(.VDD(vdd), ...); supply1 vdd; AND2 U1(.VDD(vdd), ...); AND2 U1(.VDD(1'b1), ...);

The PG netlist would have been obtained from the source RTL while dc_allow_rtl_pg was true. In this case, the PG network allowed by DC is limited, and does not permit PG connections to constant values.

---

## UID-624

(error) Some requested RTL PG connections were dropped earlier. \n Please review errors LINK-31, LINK-32, UID-622, UID-623 in the log. \n You need to revise your RTL to avoid undesired logic.

### Description

At some point earlier in the DC session, RTL PG connection errors occurred, and some requested connections were dropped.

Check your log for errors UID-622, UID-623, LINK-31, and LINK-32. Those messages will give details about why the connections were dropped.

This error is issued at the start of compile as a reminder, and compile will not proceed. If the RTL is not corrected to avoid unsupported connections, then the resulting logic may not operate as desired.

---

## UID-625

(error) Can only set one default mode on library.

### Description

This error message occurs when users want to set multiple default modes on library.

### What Next

This is error message.

Feedback

## UID-632

(warning) PG net '%s' connects to signal pin '%s'. This connection will be lost.

**Description**

Currently DC does not allow a PG network described in source RTL to connect to signal pins. Such connections will be lost.

## UID-633

(warning) PG net '%s' is driven by constant value '%s'. DC does not support constant values on PG nets. This connection will be lost.

**Description**

Currently DC does not allow a PG network described in source RTL to be driven by constant values. Such connections will be lost.

The reason for this limitation is that the DC RTL readers may merge constant nets together, thus losing the intended connectivity of individual PG nets. Instead, PG nets should be driven by top-level ports.

Examples of illegal constant PG connections are wire vdd; assign vdd = 1'b1; AND2 U1(.VDD(vdd), ...); supply1 vdd; AND2 U1(.VDD(vdd), ...); AND2 U1(.VDD(1'b1), ...);

## UID-660

(error) Option%s is mutually exclusive to option%s.

**Description**

You receive this error message if you specify two or more options on one command line that have adverse effects and are therefore mutually exclusive.

**What Next**

Refer to the man page for the command that you invoked for information about the options. Do not use options that cannot be specified together on one command line.

## UID-661

(warning) Data missing for physically aware net delay estimation.

**Description**

This warning message occurs when you start to use the physically aware net model without all of the essential data.

Feedback

Any of the following causes the warning message:

- The physical library is not specified.
- The library is specified, but it could not be read in successfully.
- The library did not provide all of the necessary data, including the site's row_height, average wire_width, capacitance, and resistance per unit length.

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended, you can do either of the following:

- Continue using the conventional wire load mode
- Make sure that you have specified a valid physical library.

## UID-662

(warning) %s data missing in physical library.

**Description**

This warning message occurs when the physical library currently set does not define all of the values necessary to correctly activate the physically aware wire load estimation method.

**What Next**

This is only a warning message. No action is required.

However, if the result is not what you intended, check that you are using the correct physical library.

## UID-663

(warning) Physical library not specified.

**Description**

You receive this warning message when the *physical_library* variable is not set or the specified libraries cannot be loaded.

**What Next**

This is only a warning message. No action is required.

However, you can check that you are using the correct physical library.

Feedback

## UID-665

(error) P/G net %s used in command %s.

**Description**

P/G nets can not be manipulated using connect_net or disconnect_net commands. connect_net and disconnect_net can only be used for signal nets.

**What Next**

Use one of *connect_pg_nets* , *connect_logic_zero* or *connect_logic_one* commands to do the necessary netlist changes for P/G nets.

## UID-666

(error) No Milkyway library is open.

**Description**

This error is generated when an ascii design is being read in without opening a Milkyway library first.

**What Next**

Use *open_mw_lib* command to open an existing Milkyway library Use *create_mw_lib* command to create a Milkyway library if one does not exist. Run the read command again.

## UID-667

(error) Some clocks have been specified in multiple groups.

**Description**

The messages prior to this show the clock that has been specified multiple times.

**What Next**

A clock should be specified only once.

## UID-668

(error) Can not specify -allow_paths with -logically_exclusive or -physically_exclusive.

**Description**

The allow_paths option is invalid for logically_exclusive or physically_exclusive option of set_clock_groups.

Feedback

**What Next**

Logically exclsuive relationship has no SI impact and only sets the false paths between the specified clocks. Hence -allow_paths does not make sense with -logically_exclusive option.

Physically exclusive clocks imply that clocks are not present at the same time and paths between the clocks can not exist.

---

## UID-670

(error) Design CEL is already read-in and created. Please close current CEL before reading in another design.

**Description**

The design CEL design is already read and created, so can't create another design.

**What Next**

The command read_ddc will create the design CEL, so if you want to load more than one ddc files, make sure read them in at once.

---

## UID-700

(error) There is unplaced eco cell in the given list when the option -legalize_only is used with -cells.

**Description**

When the option -legalize_only is used with -cells, it expects all the eco cells have been already placed. The option allows only doing legalization.

**What Next**

Use place_eco_cells -unplace to place the eco cells.

---

## UID-701

(error) This option -legalize_only is only used with -cells or -eco_changed_cells option. It cannot be used with -unplaced_cells.

**Description**

The option -legalize_only must be used with -cells or -eco_changed_cells.

Feedback

**What Next**

Use place_eco_cells -cells/-eco_changed_cells when the option -legalize_only is specified.

---

## UID-702

(warning) Skip to legalize the cell (%d) since it is not placed.

**Description**

When the option -legalize_only is used with -eco_changed_cells, the command will skip the cells that is not placed (attribute is_placed == false). The command should not legalize the unplaced cells.

**What Next**

Use place_eco_cells -unplaced(-cells) to place and legalize the cell.

---

## UID-820

(error) Floorplan block '%s' is not defined.

**Description**

You have specified a command which works on an existing fp_block. The block you specified could not be found.

**What Next**

Double check the names of defined blocks with write_fp_script.

---

## UID-821

(error) Floorplan atom '%s' is not defined.

**Description**

You have specified a command which works on an existing fp_atom. The atom you specified could not be found.

**What Next**

Double check the names of defined atoms with write_fp_script.

---

## UID-822

(error) Atom '%s' is already defined.

Feedback

**Description**

You are trying to redefine the binding of a floorplan atom which is already bound to another cell.

**What Next**

Use a different atom name, or first undefine the atom name in question using "define_fp_atom -name atom_name -undef".

---

## UID-823

(error) Atom '%s' is already defined for cell '%s'.

**Description**

You are attempting to redefine the the atom for a cell of the netlist.

**What Next**

Define the new atom for a different cell, or first undefine the current atom using "define_fp_atom -name old_atom_name -undef".

---

## UID-824

(error) Design '%s' (instance '%s') is multiply instantiated.\n\tFloorplan atoms are only permitted within uniquified hierarchies.

**Description**

You have attempted to define an atom in a part of the hierarchy which is instantiated multiple times. The designs for atoms may only be instantiated once in your design.

**What Next**

Use the "uniquify" command to force the multiple copies of the same design to be changed into multiple designs.

---

## UID-825

(error) You must specify an atom name or cell name.

**Description**

You have used define_fp_atom without specifying -name flag or a cell name. This is not supported.

Feedback

**What Next**

Specify a -name flag.

---

## UID-826

(error) The floorplan abstracts have not been created or are out of date.\n\tPlease (re)run create_fp_abstracts.

**Description**

This command requires create_fp_abstracts to be run before it can execute.

**What Next**

Please re(run) create_fp_abstracts.

---

## UID-827

(error) The floorplan abstract placement has not been created or is out of date.\n\tPlease (re)run place_fp_abstracts.

**Description**

This command requires place_fp_abstracts to be run before it can execute.

**What Next**

Please re(run) place_fp_abstracts.

---

## UID-828

(error) You can only select one of -select, -flyline, -expand, and -unexpand

**Description**

Only one of the given flags may be specified in a single command call.

**What Next**

Specify only one of these flags per call.

---

## UID-829

(error) You must specify a cell for -expand or -unexpand

**Description**

The -expand and -unexpand options require you to specify a cell to work on.

Feedback

**What Next**

Specify a cell name.

---

## UID-830

(error) You must specify an abstract name for -select abstract

**Description**

The -select abstract option requires you to also specify the name of the abstract that you want to select.

**What Next**

Specify the name of an abstract.

---

## UID-831

(warning) Cell '%s' has been assigned an abstract area of zero

**Description**

You have either omitted the -area flag or explitly specified zero to the -area flag. This will cause the given cell to be ignored for area analysis of the floorplan.

**What Next**

If you have assigned a zero area in error, you can either redefine the area by running "define_fp_abstract" again, or you can remove the abstract by using "define_fp_abstract -remove".

---

## UID-832

(warning) You need to define floorplan atoms or trial atoms before running this command

**Description**

This command analyzes design statistics based on the currently defined floorplan atoms and trial atoms. Without these, there is nothing to report.

**What Next**

Create floorplan atoms with define_fp_atom. Create trial atoms with define_trial_atoms.

---

## UID-833

(error) Floorplan block '%s' has no bound logic

Feedback

### Description

The specified floorplan block is currently empty. So there is nothing to show.

### What Next

Select a different floorplan block as a connection source, or do not specify any connection source.

---

## UID-834

(error) Cannot use '%s' as the clock reference. The clock reference used must be a clock object.

### Description

The clock network latency is the time it takes a clock signal to propagate from the clock definition point to a register clock pin. In the case of multiple clocks pass through the same pin or port object, clock network latency can be specified on this object with respect to a specific clock. In this way, different values can be applied as clock network latency for different clocks. With the *-clock* option, a clock object must be provided to specify which clock the clock network latency is referring to. Note, the clock network latency is only applied on ideal clock network.

### What Next

Make sure to provide a clock object when using *-clock* option. Use *report_clock* to report all clocks in the current deign.

---

## UID-835

(warning) Cannot use clock object '%s' in the object list when -clock option is provided. The -clock option will be ignored for '%s'.

### Description

The clock network latency is the time it takes a clock signal to propagate from the clock definition point to a register clock pin. In the case of multiple clocks pass through the same pin or port object, clock network latency can be specified on this object with respect to a specific clock. In this way, different values can be applied as clock network latency for different clocks. With the *-clock* option, only non-clock object can be provided in the object list. Otherwise, the *-clock* option will be ignored for these objects.

### What Next

Make sure to provide non-clock object in object list when using *-clock* option. Use *report_clock* to report all clocks in the current design.

Feedback

## UID-836

(error) Cannot use -clock option and any of the options -source, -early and -late at the same time.

### Description

See *set_clock_latency* man page for the differernce between clock network latency and clock source latency.

### What Next

Only set clock network latency or clock soruce latency at one time.

## UID-841

(error) Fail to rebuild timing design from database

### Description

Failed to load the timing design from the database. This is usually caused by database corruption.

### What Next

Quit and restart the session. Save the database to a new name to avoid corrupting the previously valid database. If you are using CEL as input, check the CEL by opening in the new session.

## UID-842

(warning) Command is not trace-mode compliant, and is ignored

### Description

You are running a trace-mode session, and the command executed is not trace-mode compliant. The command will be ignored.

### What Next

If you want to execute this command, please end the trace-mode session.

## UID-853

(warning) The extract_rc command is needed to report accurate AWE delays.

Feedback

**Description**

This warning message occurs when the Asymptotic Waveform Evaluation (AWE) delay method is set in the preroute stage but extraction has not yet been done.

**What Next**

The extract_rc command is needed to report accurate AWE delays.

---

## UID-900

(error) The -type argument must provide at least one cell.

**Description**

You receive this error message if you issue *set_scan_register_type -type* without an argument for the required *-type* switch. The *set_scan_register_type* command requires that at least one example cell be given with *-type*.

**What Next**

Reissue *set_scan_register_type -type* with at least one name of a valid example cell from the target library, as the argument to *-type*.

---

## UID-901

(error) The %s cell already has the set_register_type attribute set.

**Description**

You can only use *set_scan_register_type* after removing the *set_register_type* attribute.

**What Next**

Remove the *set_register_type* attribute and reissue the command.

---

## UID-902

(error) The cell %s issued as an argument to set_scan_register_type -type or set_scan_replacement options -lssd, -muxd, or -clocked_scan is a non-scan cell.

**Description**

You receive this error message when you issue the name of a non-scan cell as an argument to the *set_scan_register_type -type* command or the *set_scan_replacement* command with the *-lssd*, *-muxd*, or *-clocked_scan* option.

Feedback

The *set_scan_register_type* command *-type* switch requires a scan cell as an argument. The *-type* switch must specify a list of scan cells for the *insert_scan* or the *compile -scan* command to use for scan replacement of non-scan sequential cells or designs.

The *set_scan_replacement* command with the *-lssd*, *-muxd*, or *-clocked_scan* switches requires a scan cell as an argument. These switches specify a scan replacement for each scan style for the set of non-scan cells specified through the *-nonscan* option.

**What Next**

Reexecute the *set_scan_register_type* command and specify a scan cell as an argument.

---

## UID-903

(error) The %s cell is not valid for the methodology specified.

**Description**

You receive this error message when an example cell issued as an argument to the *set_scan_register_type -type* command or the *set_scan_replacement* command with the *-lssd*, *-muxd*, or *-clocked_scan* option is not valid for the methodology defined.

The methodology for the *set_scan_register_type* command is the one for the current design. The methodology for the *set_scan_replacement* command is specified by the option.

**What Next**

Verify the defined methodology using the *report_test -methodology* command.

You can reexecute the *set_scan_register_type* command with the *-type* argument, specifying only cells that are valid for that methodology for the *-type* argument.

Find the valid cell for the methodology and then you can reissue the *set_scan_replacement* command.

---

## UID-904

(error) Unable to find example %s '%s'.

**Description**

The tool issues this error if an example cell that you specify as an argument to the *set_scan_register_type -type* option cannot not be found in the target library. All example cells specified as arguments to the *-type* option must exist in the target library.

Possible causes for this error condition might be a spelling error in the example cell name or an incorrect library specified in the *target_library* variable.

Feedback

**What Next**

To correct this error,

1. Verify that the library that contains the example cell is specified in the *target_library* variable by running the *printvar target_library* command.
2. If necessary, reset the *target_library* variable so that it contains the appropriate target library.
3. Verify the correct capitalization and spelling of the example cell names and rerun the *set_scan_register_type* command.

---

## UID-905

(error) The %s design named %s is of "unknown" sequential type.

**Description**

You receive this error message if the type specified to the *set_scan_register_type* command or the *set_scan_replacement* command options cannot be recognized by the tool.

**What Next**

Reissue the *set_scan_register_type* or the *set_scan_replacement* command with a recognizable sequential device.

---

## UID-906

(error) There are no valid cells specified on which to assert set_scan_register_type.

**Description**

You receive this error message if you issue *set_scan_register_type* with the *cell_or_design_list* argument, but none of the cells on the list are valid. There is nothing for the command to operate on.

**What Next**

Examine the list of cells you entered, verify the spelling and capitalization of the names, or otherwise determine the reason why the cells were invalid. Then reissue the *set_scan_register_type* command with a list of valid cells for *cell_or_design_list*.

---

## UID-907

(warning) Cell '%s' is not a sequential cell.

Feedback

### Description

You receive this message if you issue *set_scan_register_type* with a nonsequential cell in the *cell_or_design_list*. *set_scan_register_type* must specify only sequential cells for *insert_scan* or *compile -scan* to replace with their scan equivalents.

### What Next

Reissue *set_scan_register_type* using only sequential cells in the *cell_or_design_list*.

---

## UID-908

(warning) Cell '%s' has the dont touch attribute set on it; cannot scan-replace.

### Description

You receive this message if *insert_scan* or *compile -scan* encounters a sequential cell that has the *dont_touch* attribute set to *true* on it. *insert_scan* and *compile -scan* attempt to perform scan replacement on your design by replacing each sequential cell with its scan equivalent. The *dont_touch* attribute is designed to protect cells from being modified or optimized, so cells that have this attribute cannot be scan replaced. This message informs you that the specified cell was not scan replaced.

### What Next

If you intended to protect the specified cell from scan replacement, no action is required on your part. However, if you want the specified cell to be scan replaced, first remove the *dont_touch* attribute, either with *remove_attribute* or by executing *set_dont_touch false*. Then reissue *insert_scan* or *compile -scan*.

### See Also

- set_dont_touch

---

## UID-909

(error) %s cannot be set on an input port %s.

### Description

This error message occurs when you attempt to set a *model_load* attribute on an input port. This attribute can only be set on output or inout ports.

### What Next

Reexecute the *set_model_load* command and ensure that the *port_list* contains only output and inout ports.

Feedback

## UID-910

(error) The argument of the -bound option must be larger than the argument of the -threshold option.

### Description

You receive this error message when you execute the *compare_rc* or *estimate_rc* command and specify a value for the *-bound* option that is smaller than or equal to the value for the *-threshold* option. The *-bound* option represents the upper level of back-annotated capacitance, and the *-threshold* option represents the lower level. For this reason, the value of the *-bound* must be larger than the value of the *-threshold* option.

### What Next

Reexecute the *compare_rc* or the *estimate_rc* command and specify a value for the *-bound* option that is larger than the value for the *-threshold* option.

## UID-911

(error) The -nonscan option requires at least one cell when mapping is specified.

### Description

You receive this error message if you do not specify at least one nonscan cell for the *-nonscan* option in the *set_scan_replacement* command for mapping.

### What Next

Reissue the *set_scan_replacement* command and specify a nonscan cell as an argument for the *-nonscan* option. The *-nonscan* argument is not needed when you use the *-remove* option alone.

## UID-912

(error) The replacement cell specified for the methodology %s is not a valid scan cell for the methodology.

### Description

You receive this error message for the *set_scan_Replacement* command when the scannable cell you specified for a given scan style is not a valid scan cell. The scan cell might not be valid for the scan style (*-lssd*, *-muxd*, or *clocked_scan*) that you specified.

### What Next

Reissue the *set_scan_replacement* command and specify a valid scan cell as an argument for the scan style option.

Feedback

## UID-913

(error) One of the -lssd, -muxd, and -clocked_scan options should have at least one cell when mapping is specified.

**Description**

You receive this error message when you do not specify at least one scannable cell for any of the *-lssd*, *-muxd*, or *clocked_scan* mapping options in the *set_scan_replacement* command.

**What Next**

Reissue the *set_scan_replacement* command and specify a scannable cell as an argument for the *-lssd*, *-muxd*, or *clocked_scan* option. These arguments are not needed when you use the *-remove* option alone.

## UID-914

(error) Cannot find target_library.

**Description**

This error message occurs when you do not specify a target library.

**What Next**

Set the *target_library* variable to the appropriate library and run the command again.

## UID-915

(error) Cannot find %s gate in the target_libray

**Description**

You receive this message if you do not specifiy a flop that exists in the target library in any of the options of set_scan_replacement.

**What Next**

Reissue *set_scan_replacement* , and specify a valid scan cell as an argument for the options. These arguments are not needed for -remove alone.

## UID-916

(error) Non-scan cell %s has more functional pins than the scan cell %s.

Feedback

### Description

You receive this message if a non-scan flop specified for -nonscan option of set_scan_replacement has more no of pins than a scan flop specified in one of the options . For example the non-scan flop might have async pins while scan flop is a simple scan flop without async pins.This is an error, since if scan replacement tries to use this to swap in a scan flop, it will result in bad logic.

### What Next

Re-issue *set_scan_replacement* , and specify a proper scan cell as an argument for the options.

---

## UID-917

(warning) Non-scan cell %s has less functional pins than the non-scan cell %s.

### Description

You receive this message if a scan flop specified for any of the options of set_scan_replacement has more no of pins than the non-scan flop. For example the scan flop might have async pins while non-scan flop is a plain D flip-flop.

### What Next

Re-issue *set_scan_replacement* , and specify a proper scan cell as an argument for the options. If not scan replacement will tie these pins to their default values.

---

## UID-918

(information) The timing reported below is an estimate. Please run vendor P&R tool to find out the actual design performance.

### Description

During timing analysis, DC FPGA uses cell delays and routing delays to calculate the path delays. Cell delays are provided by FPGA vendor and are thus accurate. The routing delays are estimates because DC FPGA does not have information on the cell placement and routing. Therefore, the timing reported by DC FPGA is an estimate. It is recommended that you always run vendor Place and Route tool to determine the actual design perfomance. Based on P&R timing result, you then decide whether and how you take the next step to improve timing.

### What Next

This is an informational message only. No action is required on your part.

Feedback

## UID-919

*UID-919* (Error) The -exact option has a list of cells to use for mapping.

### Description

This is shown when the -exact option in set_scan_register_type has a list of cells provided for mapping. Only a single cell newm should be provided.

### What Next

Usea single cell for -exact option and re-execute the command.

## UID-920

(error) The %s command is not allowed on %s, which is inside the noneditable block %s.

### Description

This error occurs because the tool does not support netlist editing within a noneditable block. The restricted commands are the following:

```
create_cell
create_net
create_port
connect_net
define_bus
disconnect_net
connect_pin
connect_logic_zero
connect_logic_one
remove_port
remove_cell
remove_net
insert_buffer
remove_buffer
size_cell
undefine_bus
```

### What Next

Restrict the collection of objects that you are editing to exclude any objects inside noneditable blocks and reapply the netlist editing commands.

### See Also

- create_cell
- create_net
- create_port

Feedback

- connect_net
- disconnect_net
- remove_cell
- remove_net
- insert_buffer
- remove_buffer
- size_cell

---

## UID-921

(warning) No shift-registers found matching given input pattern

### Description

This warning occurs because the tool executed the command get_shift_register_chains receiving a pattern, but no shift-register chains were found where at least one of the shift-register name's matches the pattern.

### What Next

Check that the pattern you are providing is correct, or that the objects you arexi providing as a collection contains valid shift-register cells. Also, check that you are using is a compile -scan flow in a test-ready compile, and the variable *compile_seqmap_identify_shift_registers* is set to TRUE.

---

## UID-922

(warning) Skipped shift-register head cells not connected to any shift-register flops

### Description

This warning occurs because the tool executed the command *get_shift_register_chains* and found a shift-register chains that contain a single SR cell in the chain, so it is actually not a chain, and it is not returned to the user.

### What Next

This warning message may arise if the tool optimized out the remaining of the SR chain, or this SR head cell was part of a Synchronous SR chain, where the next SR element was not directly connected to the head (or connected by inverters/buffers) but throught combinational logic. Synchronous SR chains are not supported by the command and are not expected to be reported.

Feedback

If the user wants to get this orphan SR cells reported as a valid SR chain, it must set the variable *get_shift_register_chains_filter_orphans* to FALSE.

---

## UID-950

(error) Unsupported pin name '%s' or its synonym '%s'.

**Description**

This error message occurs when the pin name or its synonym has unsupported cg=haracters. Wildcards and regular expressions are not supported. Forward slash '/' is also not supported for simple pin name synonyms.

**What Next**

Correct pin name or synonym string.

---

## UID-951

(error) Pin name synonym '%s' exists already.

**Description**

This error message occurs when there is a conflict in pin name synonym. Multiple synonym definitions for a pin name synonym is not supported.

**What Next**

Use '-force' switch to over-write the existing synonym. Use command report_pin_name_synonym to check the existing synonyms.

---

## UID-952

(information) Synonym '%s' not found.

**Description**

This error message occurs when trying to delete a pin name synonym that does not exist.

**What Next**

Use command report_pin_name_synonym to check the existing pin name synonyms.

---

## UID-955

(warning) Cannot find %s '%s' in design '%s'. This may be because the object has been modified or optimized away during group, ungroup, or optimization activity.

Feedback

**Description**

This warning message occurs when the specified object cannot be found in the specified design. One reason might be that the object was modified or optimized away during group, ungroup, or optimization activity. Another reason is that the design is hidden, so the object cannot be shown.

**What Next**

This is only a warning message. No action is required.

---

## UID-956

(error) Cannot specify '%s' with '%s'.

**Description**

This error message occurs when conflicts setting have been used together.

**What Next**

This is error message. Don't use conflict setting.

---

## UID-957

(warning) verification_priority attribute can not be set on %s, because it has dont_touch attribute.

**Description**

This error message is generated when you try to invoke command "set_verification_priority" on an object which has dont_touch attribute on it.

**What Next**

Check the object by invoke get_attribute, then reinvoke the current command.

---

## UID-958

(warning) verification_priority attribute can not be set on %s, because it is not a hierarchical cell.

**Description**

This error message is generated when you try to invoke command "set_verification_priority" on an object which is not a hierarchical cell.

Feedback

### What Next

Check the object by invoke get_attribute, then reinvoke the current command.

---

## UID-960

(error) connect_logic_net command failed to perform the connection as some of the specified ports do not exist in the design '%s'.

### Description

This error message occurs when one or more invalid objects are specified in the *-ports* option of *connect_logic_net* command.

The *connect_logic_net* progresses if all the specified objects exist. Else the command errors out and no connection is established.

### What Next

Specify the correct port(s) and rerun the command.

### See Also

- connect_logic_net

---

## UID-990

(error) Command '%s' is obsolete. Please use command '%s' instead.

### Description

The command is obsolete. Please try the alternative command.

### What Next

Try the alternative command.

---

## UID-991

(error) The driving cell %s has multiple inputs, and -from_pin is required when -input_transition_rise or -input_transition_fall is specified.

### Description

This error message is displayed if only one of two options, which need to be specified together in case of multiple input cells, is specified.

Feedback

**What Next**

This error message is displayed if -input_transition_rise or -input_transition_fall is specified, without specifying -from_pin for driving cells with multiple input pins.

---

## UID-992

(warning) Cannot find the top design for object %s.

**Description**

The top design for the given object could not be found. This may be caused either by a naming mismatch or an inconsistency in the hierarchy. As a result, the *setup* and *hold* attributes will not be propagated for this cell.

**What Next**

Report this problem to Synopsys.

---

## UID-993

(error) Cannot find the specified driving cell in memory.

**What Next**

Please use a driving cell from link library or from target library.

---

## UID-995

(error) Cannot find the target library.

**Description**

The specified target library could not be found. This may be caused by incomplete search path. As a result, the *set_driving_cell* will not be performed.

**What Next**

Please make sure the specified target library exists through search_path.

---

## UID-996

(error) Cannot find the output pin '%s'.

Feedback

### Description

This error message is issued by the *set_driving_cell* command. You receive this message if the specified driving pin is not found or its type is not output. This could be caused by a spelling error or typo.

### What Next

Verify the correct name of the specified output pin, then reexecute *set_driving_cell* with the correct name.

### See Also

- set_driving_cell

---

## UID-997

(warning) The set_dont_touch_network command is used for clock %s, for which no sources are specified.

### Description

This warning message occurs when the *set_dont_touch_network* command is used for a clock and the *dont_touch* attribute is assigned to the transitive fanout of the ports of the clock. The clock is created without specifying a list of ports, and the *set_dont_touch_network* command has no effect for this clock.

### What Next

This is only a warning message. No action is required.

Refer to the man pages for the *create_clock* command for more information.

### See Also

- create_clock
- set_dont_touch_network

---

## UID-998

(warning) Buffer tree at driver pin %s has cells or nets with dont_touch attribute.

### Description

This warning message occurs when the *clean_buffer_tree* command is applied to a buffer tree that has buffers, inverters, or nets with the *dont_touch* attribute. The specified cells and the cells that follow will not be removed.

Feedback

**What Next**

This is only a warning message. No action is required.

Refer to the man page for the *clean_buffer_tree* command for more information.

**See Also**

- set_dont_touch
- set_dont_touch_network

---

## UID-999

(error) Must specify either %s or %s.

**Description**

This error message occurs when neither of the two mandatory options for a command are specified.

**What Next**

Reissue the command and specify one of the two options in the error message.

---

## UID-1000

(error) Invalid scenario name.

**Description**

This error is generated when providing and invalid scenario name.

**What Next**

Use *all_scenarios* to see the names of the currently defined scenarios.

---

## UID-1001

(error) Current scenario is not defined.

**Description**

This error is generated when current scenario is not defined.

**What Next**

Use *all_scenarios* to see the names of the currently defined scenarios. Then invoke *current_scenario* to set the desired current_scenario.

Feedback

## UID-1002

(information) Cell %s is a special cell with always on pins and it is preserved with size_only attribute.

### Description

The tool issues this message to inform that cells with always on pins are marked with size_only attribute. Preserving these cells during optimization ensures power management logic is synthesized correctly. Only cells that are in power down regions are considered. Also, cells that are marked dont_touch and cells that are already marked size_only are not considered. TCL variable mark_always_on_logic_size_only can be used to turn off size_only marking of such cells. The default value of this variable is true.

### What Next

If you want to turn off automatic marking of size_only attribute on such cells, set TCL variable mark_always_on_logic_size_only to false.

## UID-1003

(warning) Driving cell was specified without the -library option. Using library_cell %s from library %s:%s.

### Description

This warning message is displayed if the set_driving_cell command is issued without the -library option.

### What Next

Specify the library for the driving cell using the -library option. This is very important for multi voltage designs where library cell of a given name may be present in multiple libraries. It is important for user to check if the correct library cell was picked.

## UID-1004

(error) Cannot use the '%s' option of save_mw_cel after ILM creation

### Description

This error is seen when, after creating an ILM, you run *save_mw_cel* with an option that is not supported. Currently, this includes only the '-overwrite' options.

### What Next

The '-overwrite' option is not currently supported after *create_ilm* is run. A fresh version of the ILM view must be created.

Feedback

## UID-1005

(error) Format '%s' is not a valid format.

**Description**

This error is generated when *write* command encounters an invalid write format. Please note that -power option works only for "verilog" format.

**What Next**

Identify and correct format, then reinvoke the *write* command.

## UID-1006

(information) Existing back annotation will be deleted.

**Description**

This message informs the user that the existing back annotation will be deleted.

**What Next**

This is only an information message. No action is required.

## UID-1007

(error) Static noise calculation requires ' set_si_options -static_noise true ' setting. Please set ' set_si_options -static_noise true ' and then run report_noise and report_noise_calculation.

**Description**

This error message occurs when the report_noise or report_noise_calculation is called without setting -static_noise option to true.

**What Next**

Use 'set_si_options -static_noise true ' and then run report_noise and report_noise_calculation command.

## UID-1008

(warning) Discarding all scenario specific information previously defined in this session.

Feedback

### Description

When issue the create_scenario command to create the first scenario, this warning will appear to remind you that any previously created scenario specific information will be discarded, and will not carry over into the context of the first scenario.

### What Next

No action is required, though you may want to review your script to ensure that scenario specific constraints are not erroneously created prior to the first create_scenario command.

### See Also

- create_scenario

---

## UID-1009

(warning) Current scenario changed to '%s'.

### Description

This warning is generated when current scenario changes without explicit use of the *current_scenario* command.

### What Next

Confirm that the new current scenario is the correct scenario for your purposes.

---

## UID-1010

(error) Invalid scenario '%s'.

### Description

This error is generated when a non-existent scenario is specified.

### What Next

Use *all_scenarios* to see the names of the currently defined scenarios.

---

## UID-1011

(error) Scenario is not active.

Feedback

### Description

This error is generated when a non active scenario is specified for current scenario. Only active scenarios can be set as the current scenario.

### What Next

Use *all_active_scenarios* to see the names of the currently active scenarios.

---

## UID-1012

(warning) %s scenario '%s' %s %s.

### Description

This warning message is issued because a command needs to temporarily activate inactive scenarios to avoid constraint or attribute losses during design changes. These scenarios are restored to their original states before the command returns.

### What Next

This is only a warning message and usually there is no action to be taken by user. However, active scenarios could use more memory.

### See Also

- all_scenarios

---

## UID-1015

(warning) Resetting 'min_delta_delay' to false when 'delta_delay' is set to false.

### Description

This warning message occurs when the *-delta_delay* option is being set to false while 'min_delta_delay' option is set to true.

### What Next

This is only a warning message. No action is required.

---

## UID-1016

(error) Cannot set 'min_delta_delay' to true without having 'delta_delay' option set to true.

Feedback

### Description

This error message is displayed if the option '-min_delta_delay' is specified to be true without having 'delta_delay' set to true.

### What Next

Set both '-min_delta_delay' and '-delat_delay' options to true, and re-run the command.

---

## UID-1017

(warning) Using the command-line option -nocase in rule-based matching could cause a high runtime.

### Description

This warning message occurs when using the *set_query_rules* command with the *-nocase* option.

During rule-based matching, switching the case-sensitivity mode using the command-line option *-nocase* forces rule-based matching to reconfigure each time the mode is changed, which incurs a high runtime.

### What Next

This is only a warning message. No action is required.

However, to avoid incurring a high runtime do one of the following:

- Set the *find_ignore_case* variable to true so that the rule-based matching always works in case-insensitive mode.
- Set the *find_ignore_case* variable to false and do not use the *-nocase* option with any command, so that rule-based matching always works in case-sensitive mode.

### See Also

- set_query_rules

---

## UID-1018

(error) Cannot set 'timing_window' to true without having 'delta_delay' or 'static_noise' option set to true.

### Description

This error message is displayed if the option '-timing_window' is specified to be true without having 'delta_delay' or 'static_noise' option set to true.

Feedback

### What Next

Set '-static_noise' or '-delat_delay' option to true, and re-run the command.

---

## UID-1019

(warning) Resetting 'timing_window' to false when 'delta_delay' and 'static_noise' are both set to false.

### Description

This warning message occurs when the *-delta_delay* option and *-static_noise* are being set to false while 'timing_window' option is set to true.

### What Next

This is only a warning message. No action is required.

---

## UID-1020

(error) the -all parameter can't be used with other options.

### Description

This error is generated when using the *set_active_scenarios* command, and both a list of scenarios and the *-all* parameter are specified.

### What Next

Either use *-all* or specify a list of scenario names.

---

## UID-1021

(error) You must specify at least one active scenario.

### Description

This error message occurs when using the *set_active_scenarios* command without specifying which scenarios to set active.

### What Next

Run the command again either using the *-all* option or specifying a list of scenario names.

---

## UID-1022

(Information) Scenario %s is no longer active.

Feedback

**Description**

This messages informs that a given scenario is now in the inactive state, and is not considered for optimization.

---

## UID-1023

(Information) Scenario %s is now active.

**Description**

This messages informs that a given scenario is now in the active state, and is considered for optimization.

---

## UID-1024

(information) Removed scenario %s from memory.

**Description**

This message indicates that the named scenario has been removed from memory. Any constraints associated with the scenario have been deleted.

**What Next**

This is an information-only message. No action is required.

---

## UID-1025

(Information) Mark scenario %s as CTS scenario.

**Description**

This messages informs that a given scenario was marked as CTS scenario, compile_clock_tree and optimize_clock_tree will work on CTS scenario if CTS scenario is marked.

---

## UID-1026

(Information) Scenario %s is no longer a CTS scenario.

**Description**

This messages informs that a given scenario was no longer CTS scenario, it happened when another scenario is marked and CTS scenario or the CTS scenario is removed.

Feedback

## UID-1027

(information) CTS scenario %s is already the only active scenario.

**Description**

This messages issued during compile_clock_tree and optimize_clock_tree to informs that the CTS scenario is the only active scenario inthe flow.

## UID-1028

(information) The current scenario has been switched to the CTS scenario %s.

**Description**

This messages is issued prior to clock tree optimization to inform you that the current scenario has been switched to the CTS scenario. Depending on the command, other scenarios may also be activated or deactivated. These are listed in the log file.

After this command is complete, the current and active scenarios will be restored.

## UID-1029

(error) Can't switch to CTS scenario %s, current scenario is %s

**Description**

This error is generated when compile_clock_tree and optimize_clock_tree trying to switch to CTS scenario but failed.

## UID-1030

(error) Cannot restore current scenario to previous value %s, current value is %s

**Description**

This error is generated when compile_clock_tree and optimize_clock_tree trying to restore current scenario from CTS scenario but failed.

## UID-1031

(information) Restore active scenarios, set current scenario to previous value %s

**Description**

This message informs you that compile_clock_tree and optimize_clock_tree have successfully restored the active scenarios and current scenario.

Feedback

## UID-1032

(error) Can't set both leakage-only and hold-only on current scenario!

### Description

This error is issued by the *set_scenario_options* command when trying to set both leakage-only and hold-only options on current scenario. The command will return fail and the current setting will be unchanged.

### What Next

Use *report_scenarios* to check the current setting and fix the problem in script.

### See Also

- report_scenarios

## UID-1033

(information) Using default format ddc because -format was not specified.

### Description

This information message occurs when the *-format* option of the *read_file* command is not specified. The file type cannot be inferred from the file name(s), so the default format of ddc is being used. It is good practice to always specify the format on the command line by using the *-format* option.

### What Next

This is an information-only message. No action is required.

### See Also

- UID-1034
- UID-1039

## UID-1034

(information) Inferring file format %s based on file name extension(s).

### Description

This information message occurs when the *-format* option of the *read_file* command is not specified. The command inferred the format based on the file name extension. It is good practice to always specify the format on the command line by using the *-format* option.

Feedback

### What Next

This is an information-only message. No action is required.

### See Also

- UID-1033
- UID-1039

---

## UID-1035

(error) Can't set leakage-only or hold-only on scenario %s.

### Description

This error is issued by the *set_scenario_options* command when trying to set leakage-only or hold-only options on an inactive scenario. The command will return fail and the current setting will be unchanged.

### What Next

Use *report_scenario_options* to check the current setting and fix the problem in script.

### See Also

- report_scenarios

---

## UID-1036

(warning) Can't find scenario %s.

### Description

This warning is issued by the *set_scenario_options* command when an invalid scenario name is passed to the -scenarios option. The command will skip the entry and continue with other scenarios in the list.

### What Next

Use *all_scenarios* to check all valid scenario names and fix the problem in script.

### See Also

- all_scenarios

Feedback

## UID-1037

(warning) Setting dynamic_power to false for scenario %s.

### Description

This warning is issued by the *set_scenario_options* command when trying to set dynamic_power to true without setting setup to true or when setup is set to false with dynamic_power left to true. Dynamic power computation needs scenario options setup and dynamic_power both set to true, to work properly. The command will finish successfully but will force dynamic_power to false. Set dynamic_power and setup to true to avoid this warning and enable dynamic power.

### What Next

Use *report_scenario_options* to report the current settings and fix the problem in script.

## UID-1038

(Warning) setting -cts_mode to true while -setup is false for scenario %s .

### Description

This warning is issued when the scenario option -cts_mode is set to true while the scenario option -setup is set to false. This will lead to multi-mode compile_clock_tree and optimize_clock_tree to abort.

### What Next

Use *report_scenario_options* to check the current settings and fix the problem in script.

## UID-1039

(error) Attempted to infer the file format based on file name extensions\n\t but there appear to be multiple file formats in the list. All\n\t the files in the list must be of the same format and it is\n\t recommended to always use the -format option.

### Description

This error message occurs when the *read_file* command determines that the file list may contain files of different formats. If the *-format* option of the *read_file* command is not specified, the tool attempts to infer the format from commonly-used file name extensions. The file list may contain only files of a single format, and if the file name extensions imply that multiple file formats were specified, this error occurs.

Feedback

### What Next

Use the *-format* option to force the command to use a particular format, and check that all of the files in the list are of the same format.

### See Also

- UID-1033

---

## UID-1040

(information) Removing all scenarios because all designs have been removed.

### Description

This information message occurs when the *remove_design* command has been used to remove all designs from memory, which triggers an automatic removal of any existing scenarios. If necessary, the *create_scenario* command can be used to re-create scenarios.

### What Next

This is an information-only message. No action is required.

### See Also

- create_scenario
- UID-1024

---

## UID-1041

(warning) Scenario '%s' does not exist on block %s.

### Description

This error message occurs when a nonexistent scenario is specified with the *select_block_scenario* command. The mapping has no effect on this block.

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, check the scenarios on reference blocks or fix the script for *select_block_scenario*.

---

## UID-1042

(information) Scenario %s not exists. %s will skip it.

Feedback

## UID-1050

(error) Only %d character string is accepted as %s.

### Description

The *-hierarchical_separators* option only accepts a list of single character strings; The *-bus_name_notations* option only accepts a list of two character strings.

### What Next

Fix the value of option *-hierarchical_separators* or *-bus_name_notations* and re-issue the command *set_query_rules*.

## UID-1051

(error) '%s' is not supported as %s.

### Description

The single character *-hierarchical_separators* option does not accept the following characters: 0-9, *, ?, \\, +, (, ), [, ], ^. In addition, '/' is not allowed in the multi-character hierarchy separator. The *-bus_name_notations* option does not accept the following characters 0-9, *, ?, \\, +, ^. The *-bus_name_notations* option does not accept unpaired brackets such as "][", "(_".

The *-hierarchical_separators* option only accepts at most one alphabetical character a-Z or one multi-character hierarchy separator.

The *-bus_name_notations* option only accepts at most one matching pair of alphabetical characters a-Z.

The *-suffix* option only accepts a list of elements "_reg" and "_tri".

### What Next

Fix the value of option *-hierarchical_separators*, *-bus_name_notations* or *-suffix*, and re-issue the command *set_query_rules*.

## UID-1052

(warning) %s is missing as %s. This may cause incorrect result and long runtime.

### Description

'/' is often used as hierarchical separator for in-memory netlist; "[]" is often used as bus name notation for in-memory netlist. Not including them in the rule-based matching options may cause the program fail to find the object.

Feedback

**What Next**

Consider adding '/' in the *-hierarchical_separators* list, and "[]" in the *-bus_name_notations* list.

---

## UID-1054

(error) Only cell, pin, port and net are supported.

**What Next**

Fix the value of option *-class* and re-issue the command *set_query_rules*.

---

## UID-1055

(information) %d %s objects are matched according to rule-based query options.

**Description**

This message is issued in verbose mode in case query had matched some object according to the options set by command *set_query_rules*.

---

## UID-1056

(information) Rule-based matching enabled. Please turn it off once rule-based matching is no longer needed.

**Description**

Rule-based matching could slow down the program considerably, and use more memory. To avoid runtime and memory overhead, turn it off once it is no longer needed.

---

## UID-1057

(error) '-reset' option can not be used together with other options except for '-show'.

---

## UID-1058

(error) There must be at least 2 elements in %s list.

---

## UID-1059

(information) Scenario %s either not exists or is inactive. %s will skip it.

Feedback

## UID-1060

(error) There must be at least 3 elements in %s list.

### Description

This error is generated when there are not enough elements for -regsub option for command 'set_query_rules'.

### What Next

Check out the man page for Tcl Built-In regsub then reset the options for this.

## UID-1061

(warning) '-regsub' option can not be used together with '-exhaustive' option, '-regsub' option will be ignored.

### Description

When '-exhaustive' is specified, '-regsub' will not be supported for run time concern.

### What Next

Set one of the two options only and rerun the command.

## UID-1062

(information) Object %s is found using matching pattern %s.

### Description

The tool issues this message to inform that object is found with which pattern during rule-based mathcing. This information can be used to double check the correctness of the SDC file sourcing.

### What Next

If you want to disable this message, turn off verbose mode by command *set_query_rules*.

### See Also

- set_query_rules

## UID-1063

(warning) Design %s doesn't have scenario %s

Feedback

### Description

This warning is generated by *report_scenario* when a scenario exists in the session but the top level design doesn't have that scenario. if the design is hierarchical, the scenario may exists in some hierarchical block. Or the scenario is create on other designs which has been closed. For hierarchical design, you may need to create the scenario for top-level design explicitly using *create_scenario*. Or, you may want to remove the scenario using *remove_scenario* to reduce memory.

---

## UID-1064

(error) Save operation not allowed for ILM designs.

### Description

This error occurred because the design being saved is an ILM design. ILM designs are not allowed to be saved with save_mw_cel.

### What Next

Use create_ilm to generate a new ILM view.

---

## UID-1065

(information) Overwrite is already the default. You do not need to specify this option.

### Description

As of 2007.12, by default, save_mw_cel will overwrite a cell, so this option is no longer needed.

### What Next

You do not need to specify this option.

---

## UID-1066

(information) Global options '-regsub' and '-regsub_cumulative' are obsolete. They are converted to port, pin and net regsub rules.

### Description

The global regsub query rules are obsolete. For backward compatibility purposes, they are converted to the corresponding regsub rules for port, pin and net.

### What Next

Update your script to use object class specific regsub query rules.

Feedback

## UID-1067

(error) At most %d alphabetical or multi-character %s is allowed.

### Description

The *-hierarchical_separators* option accepts a list of single character strings; The *-hierarchical_separators* option accepts a list of strings as the hierarchy separators. If the list contains an alphabetical element or an string of more than one characters, the total number of such elements can not be greater than 1.

### What Next

Fix the value of option *-hierarchical_separators* and re-issue the command *set_query_rules*.

## UID-1068

(warning) String pattern '%s' is ambiguous for hierarchy separator '%s', that could lead to longer runtime and possible wrong object matches.

### Description

When the *-hierarchical_separators* option defines a hierarchy separator of multiple characters for the rule-based queries, unclean design name scheme could lead to ambiguity in object names when the multiple-character hierarchy separator string overlaps in an object name. This could cause longer runtime and possible wrong object matches.

For example, if the hierarchy separator rule is defined as {/ _H_}, and if a cell is named "a_H_H_b" after running *ungroup* and *change_names* commands, it is ambiguous because the original cell name could be either "a/H_b" or "a_H/b", in addition to the possibility of being plain "a_H_H_b".

### What Next

Avoid using a string of multiple characters in change_name rules as the replacement for hierarchy separator, if the string itself could be part of the object name in the design. It is even better to not to use string of multiple characters at all as the replacement for hierarchy separator.

## UID-1072

(information) Object %s is found using matching pattern %s.

Feedback

### Description

The tool issues this message to inform that object is found with which pattern during rule-based mathcing. This information can be used to double check the correctness of the SDC file sourcing.

### What Next

If you want to disable this message, turn off verbose mode by command *set_query_rules*.

### See Also

- set_query_rules

---

## UID-1080

(error) In the embedded scripts of the design %s, the '.' implementation is used in set_implementation command.

### Description

Using '.' as the implementation name is not allowed when allow_hier_refs_in_embedded_scripts is set to false.

### What Next

Use the real implementation name in embedded scripts or set the variable allow_hier_refs_in_embedded_scripts to true.

---

## UID-1081

(warning) In the embedded scripts of the design %s, the -check_impl option is used with set_implementation command.

### Description

Using -check_impl in embedded scripts is not supported when allow_hier_refs_in_embedded_scripts is set to false. The option will be ignored.

### What Next

Ignore the warning or set the variable allow_hier_refs_in_embedded_scripts to true.

---

## UID-1087

(warning) Ignoring %s because the net %s is multiply driven or has inout pins.

Feedback

**Description**

You receive this message when you use -source_of option and there are muliply driven nets or nets with inout pins in the fanin of the pin.

**What Next**

If the argument passed was incorrect, please fix it and rerun the command.

---

## UID-1088

(error) Must specify one of %s, %s, %s, or %s.

**Description**

This error message is displayed if none of the four mandatory options for a command are specified.

**What Next**

Re-issue the command by specifying one of the four options in the error message.

---

## UID-1089

(warning) Ignoring %s because the %s is %s.

**Description**

You receive this message when you give an inout, output or hierachical pin or an inout or input port, as an argument to -source_of option to clean_buffer_tree command.

**What Next**

If the argument passed was incorrect, please fix it and rerun the command.

---

## UID-1098

(error) Need to specify one and only one port type.

**Description**

This error is generated when *set_output_clock_port_type* command without specifying correct port type.

**What Next**

Please specify port type using one and only one option -clock or -data.

Feedback

## UID-1099

(error) Need to specify port_list or use -all option.

**Description**

This error is generated when *set_output_clock_port_type* command without correctly specifying port_list.

**What Next**

Please specify port_list, or use -all option to apply the port type to all output ports.

## UID-1100

(warning) Don't apply this command on input port. Ignore it.

**Description**

This error is generated when user apply *set_output_clock_port_type* command on input port. Ignore this setting.

## UID-1101

(error) The design '%s' has physical/floorplan data and cannot be modified by\n\ the 'group' command. Use the merge_fp_hierarchy command instead.

**Description**

The *group* command cannot be executed on a design with physical hierarchy.

**What Next**

Please use merge_fp_hierarchy command instead.

## UID-1102

(error) This older version of snapshot utility is no longer supported.

**Description**

This error message occurs when using the older version of snapshot utility is used.

**What Next**

Switch to using the newer version of snapshot utility by setting the variable enable_concise_qor_snapshot to TRUE (default).

Feedback

### See Also

- create_qor_snapshot
- report_qor_snapshot
- remove_qor_snapshot

---

## UID-1103

(information) This newer version of snapshot utility does not support these options: %s. Ignored.

### Description

This error message occurs when running the qor snapshot command with the above options

### What Next

User can ignore the message or re-run without the options.

### See Also

- create_qor_snapshot
- report_qor_snapshot
- remove_qor_snapshot

---

## UID-1104

(error) Not able to perform command due to read/write permission issue.

### Description

Read/Write permission problem. There can be several reasons for this. The most common reasons are: the user does not have read/write permissions in the directory, the disk is full or the user already has a file with the same name which can't be deleted.

### What Next

Try to create a file with the same name from the ICC shell. Fix any problem that you might encounter. Delete the file and invoke the icc_shell command again.

---

## UID-1105

(error) -lib_cell must specify a valid library cell in the form <library>/<cell>.

Feedback

## UID-1106

(error) -from_pin and -to_pin must specify different pins.

## UID-1107

(error) -from_pin must specify an input pin.

## UID-1108

(error) -to_pin must specify an output pin.

## UID-1200

(error) cannot recognize the given value for option '%s' in this SI command.

**Description**

check the command and give a valid value for the option.

## UID-1201

(warning) Overriding result from previous set_ideal_network command on object %s.

**Description**

The previous setting of the ideal network on an object is being over-written.

**What Next**

This is only a warning message. No action is required.

## UID-1202

(warning) expecting %s objects of type %s.

## UID-1203

(Error) This newer version of report_signal_em does not support these options: '%s'.

**Description**

This error message occurs when running electromigration command with the above options.

Feedback

### What Next

User could use command set_em_options to define the options.

### See Also

- report_signal_em
- fix_signal_em

---

## UID-1220

(error) Cannot find operating condition %s in library %s.

### Description

This error message is displayed if the specified operating conditions can't be found in the library from -max_library or -min_library option of set_operating_conditions command.

### What Next

Specify correct operating condition which can be found in the library.

---

## UID-1221

(information) %s command do not work on physical informaiton in ICC.

### Description

Please be aware that group/ungroup commands in ICC work only on the netlist view of a design and do not handle physical information of the design. The above mentioned commands are planned to be EoL once a replacement is available.

### What Next

This is only an informational message. Check manpages of group/ungroup for more informaion.

---

## UID-1301

(error) The field '%s' has already been specified for the current '%s'

### Description

This error occurs when a field is specified more than once for a given table. The error can also occur if the user does not include all fields during a table specification.

Feedback

**What Next**

Correct the AOCVM syntax by ensuring that each field is only specified once for a given table.

---

## UID-1302

(error) The current table is missing one or more fields

**Description**

This error occurs when a table is found at the end of the aocvm file without the required number of fields.

**What Next**

Correct the AOCVM syntax by adding the missing fields to the file.

---

## UID-1303

(error) Expected to find a valid field name but found '%s'.

**Description**

This error occurs when the parser cannot find a valid field name.

**What Next**

Correct the AOCVM syntax by ensuring that each field is
specified in the format name: data\n where name is one of
version,table,distance,depth,object_spec,derate_type,delay_type,rf_type,object_type.

---

## UID-1304

(error) Cannot specify '%s' for field '%s'.

**Description**

The data found in the AOCVM file is not valid for the given field.

**What Next**

Check the AOCVM spec to see allowed values for the field and update the AOCVM file appropriately.

---

## UID-1305

(warning) Cannot associate table with leaf cell '%s'.

Feedback

**Description**

AOCVM does not support the association of AOCVM data with leaf cells.

**What Next**

Associate AOCVM tables with hierarchical cells, library cells and designs only.

---

## UID-1306

(warning) Cannot find any objects of type '%s' for specification '%s'.

**Description**

Could not find any objects for the given specification. The table is not annotated on any objects but parsing and annotation will not stop due to this warning.

**What Next**

Check that the specification is correct.

---

## UID-1307

(error) Expected table of size %d but found table of size %d.

**Description**

The size of the 2D AOCVM table must equal the number of depth indices by the number of distance indices

**What Next**

Correct the size of the table

---

## UID-1308

(error) Cannot finish AOCVM file on a line continuation

**Description**

The AOCVM file ends with a line continuation. The parser expects more data but there is none.

**What Next**

Remove the line continuation character

Feedback

## UID-1309

(error) Could not find the specified AOCVM file

**Description**

The AOCVM file could not be found

**What Next**

Correct the name and path of the AOCVM file

## UID-1310

(error) The field '%s' must be specified before '%s'

**Description**

While parsing an AOCVM 2D table a field cannot be set because another field has not been specified

**What Next**

Change the order of the field specifications.

## UID-1311

(error) The version '%s' is not valid. Allowable versions are '%s'

**Description**

An invalid version number has been specified

## UID-1312

(error) An aocvm file version must be specified.

**Description**

The version number is used for backward compatibility purposes if the AOCVM file format changes in the future. It does affect the results of the analysis.

The version of the aocvm file must be specified on the first line of the AOCVM file. e.g version:1.0

**What Next**

Add the version information to the start of the AOCVM file.

Feedback

## UID-1313

(error) The %s array does not increase or decrease sequentially

**Description**

Sequential elements in the specified array must sequentially increase or decrease.

**What Next**

Fix the array so that it sequentially increases or decreases.

## UID-1314

(error) Negative values are not allowed

**Description**

Negative values are not allowed for the distance,depth arrays or in the 2D tables.

**What Next**

Remove negative values from the AOCVM file.

## UID-1315

(error) Cannot specify delay type %s with object type %s

**Description**

This combination of delay type and object types is not allowed as it makes no sense.

**What Next**

Correct the AOCVM file to remove the invalid combination of delay type and object type.

## UID-1316

(error) Cannot specify a non-monotonic derate table.

**Description**

This message is issued because the derate table specified in the message is incorrectly defined. The table has not been annotated.

The timing derates specified in each row and each column of the derate table must increase or decrease monotonically.

Feedback

### What Next

Fix the specified table so that sequential elements in each row and each column of the table sequentially increase or decrease.

---

## UID-1317

(error) Derate table variability is not decreasing with increasing depth.

### Description

This message is issued because the derate table specified in the message is incorrectly defined. The table has not been annotated.

For a late derate table, the timing derates specified in each row of the derate table must decrease monotonically as depth increases. For an early derate table, the timing derates specified in each row of the derate table must increase monotonically as depth increases.

No further restriction is placed on the table contents; however, typically, derate variability should be proportional to 1/sqrt(depth).

### What Next

Fix the specified table so that sequential elements in each row of the early (or late) table sequentially increase (or decrease) as depth increases.

---

## UID-1318

(error) Derate table variability is not increasing with increasing distance.

### Description

This message is issued because the derate table specified in the message is incorrectly defined. The table has not been annotated.

For a late derate table, the timing derates specified in each column of the derate table must increase monotonically as distance increases. For an early derate table, the timing derates specified in each row of the derate table must decrease monotonically as distance increases.

No further restriction is placed on the table contents; however, typically, derate variability should be proportional to distance.

### What Next

Fix the specified table so that sequential elements in each column of the early (or late) table sequentially decrease (or increase) as distance increases.

Feedback

## UID-1319

(information) Excluding block abstractions, ILMs, and physical hierarchy \n blocks from the list of designs to be written.

### Description

This message occurs when the *write_file* command detects one or more block abstractions, interface logic models (ILMs), or physical hierarchy blocks in the requested set of designs to be written out. Such designs are normally excluded by the *write_file* command unless the design is the top design in the hierarchy that is being written out.

### What Next

This is an information-only message. No action is required.

## UID-1320

(error) No Milkyway cell is open.

### Description

This error indicates that the current command needs the Milkyway cell to be opened first.

### What Next

Use *open_mw_cel* command to open a Milkyway cell. Run the current command again.

## UID-1321

(information) Excluding block abstractions from the list of designs to be written.

### Description

This message occurs when the *write_file* command detects one or more block abstractions in the requested set of designs to be written. Block abstractions are excluded from .ddc files unless the only thing being written is the block abstraction itself.

In this case, "block abstraction" refers to either the full design that has been processed by the *create_block_abstraction* command or the block abstraction (interface logic only) as specified by the *set_top_implementation_options* command.

### What Next

This is an information-only message. No action is required.

Feedback

## UID-1322

(error) Library cell '%s' belong to the other family '%s'.

**Description**

A library cell can only belong to one libcell subset. So in order to create a libcell subset, all libcells in the -libcell_list should not belong to any other libcell subset.

**What Next**

Remove the families which the specified libcells belong to using 'remove_libcell_subset -family_name' and re-run define_libcell_subset.

## UID-1323

(error) Could not find library cells '%s'.

**Description**

All library cells in -libcell_list should be able to be found in the link libraries.

**What Next**

Check the libcell list and the link libraries.

## UID-1324

(error) Library cell '%s' is not in the same function class as others.

**Description**

All library cells in the libcell list should be in the same function class.

**What Next**

Check the (user) function class of the library cells in the libcell list.

## UID-1325

(error) Cell '%s' is niether a sequential cell nor a lib-cell. The commands define_libcell_subset and set_libcell_subset supports sequential cells or instantiated lib-cells only.

**Description**

All (library) cells given to define_libcell_subset and set_libcell_subset should be sequential cells or instantiated lib-cells.

Feedback

### What Next

Specify seqential cells and seqential library cells in set_libcell_subset and define_libcell_subset, respectively.

---

## UID-1326

(error) Could not find the family. The family needs to be defined first.

### Description

Prior to execute set_libcell_subset, a family of library cells should be defined first using define_libcell_subset.

### What Next

Execute define_libcell_subset to create a family of library cells, and use the family name in set_libcell_subset.

---

## UID-1327

(error) Library cell '%s' of '%s' is not defined in family '%s'.

### Description

The *set_libcell_subset* command cannot set specifed cells in family if their library cells are not defined in the same family in advance.

### What Next

Please use remove_libcell_subset to remove the family, then use define_libcell_subset to redefine the family.

---

## UID-1328

(error) Reading user designs from db files is no longer supported.

### Description

This message occurs when you attempt to read a .db file that contains user-created designs instead of libraries. Reading user designs from .db files is no longer supported by the tool.

### What Next

Read the designs from RTL, or use an older version of the tool to convert the designs from a .db file to a .ddc file.

Feedback

## UID-1329

(warning) overriding result from previous dont_touch_network command on object %s.

**Description**

This warning is issued when dont_touch_network is applied to an object more than once.

**What Next**

This is only a warning message. No script fix is mandated.

## UID-1330

(warning) ignore net %s because -no_propagate is not specified.

**Description**

When set_ideal_network is applied to net object, -no_propagate option has to be used. Note also that it is no longer recommended to set a new object as ideal.

**What Next**

Consider applying set_ideal_network to the driver of the net, or using -no_propagate.

**See Also**

- set_ideal_network

## UID-1331

(information) %s %s for all instances of cell '%s' in subdesign '%s'.

**Description**

The *ssize_only* or *change_link* has been applied to all instances of the cell in a design.

## UID-1332

(Error) Path from %s to %s cannot be found.

**Description**

The set_register_replication command cannot find the path from specified register to the cell specified in -include option.

Feedback

## UID-1333

(Error) Sequential cell %s specified in -include option.

**Description**

The set_register_replication command should have only one register specified as the argument for the command itself.

## UID-1334

(Error) Path specified has boundary optimization set to false. Split cannot be done.

**Description**

If the path specified in set_register_replication command has loads across hieracchy and the hireachy has boundary optimization set to false, this warning is shown. The compile command will not split for loads across this hierarchy.

## UID-1335

(Error) cell %s has loads that cross a hirearchy with no bounray optimization.

**Description**

If the path specified in set_register_replication command has loads across hieracchy and the hireachy has boundary optimization set to false, this warning is shown. The compile command will not split for loads across this hierarchy.

## UID-1336

(Warning) Cell %s has dont_touch.

**Description**

Register replication will stop at cells that have dont_touch.

## UID-1337

(Error) Path (%s to %s) crosses power domains.

**Description**

Register (or path) replication will not be done if path crosses power domains.

Feedback

## UID-1338

(Error) Path (%s to %s) crosses more than %d hierarchies.

**Description**

Register (path) replication will not be done if path crosses more than the mentioned hierarchies.

## UID-1339

(Warning) Cell %s is not valid for split

**Description**

Register replication will not be perfnormed if the cell is dont_touch, retimed or is multibit.

## UID-1340

(Error) Sequential cell %s has dont_touch.

**Description**

Register replication will not be perfnormed if the sequential cell has dont_touch.

## UID-1341

(error) Field '%s' cannot be specified when ocvm_type is specified as '%s'.

**Description**

Invalid field specified.

**What Next**

Refer to the table format in documentation.

## UID-1342

(error) Field '%s' cannot be specified with field '%s'.

**Description**

Invalid fields specified.

**What Next**

Refer to the table format in documentation.

Feedback

## UID-1343

(warning) AOCVM analysis are not yet supported in POCVM. Turning POCVM analysis off.

### Description

POCVM analysis is incompatible with AOCVM analysis. If AOCVM is enabled concurrently with POCVM, POCVM analysis is not performed.

### What Next

This is a warning message only. The analysis will proceed disabling POCVM analysis internally. To ensure POCVM is used, disable AOCVM analysis.

### See Also

- time.aocvm_enable_analysis
- time.pocvm_enable_analysis

## UID-1344

(warning) '%s' analysis is only supported in IC Compiler.

### Description

AOCV and POCV analysis are only supported in IC Compiler, and they cannot be enabled in the current tool.

### What Next

This is a warning message only. The tool will proceed without POCV or AOCV analysis enabled.

## UID-1345

(Error) %s is not supported in Design Compiler.

### Description

AOCV analysis is not supported in Design Compiler.

## UID-1346

(Error) %s is supported only in DC Graphical and IC Compiler.

Feedback

## UID-1347

(warning) '%s' analysis is supported only in DC Graphical and IC Compiler.

### Description

POCV analysis is supported only in DC Graphical and IC Compiler, and they cannot be enabled in the current tool.

### What Next

This is a warning message only. The tool will proceed without POCV analysis enabled.

## UID-1400

(information) This command 'all_registers' now returns a collection containing integrated clock-gating cells since the variable 'all_registers_include_icg' is set to TRUE.

### Description

When the variable *all_registers_include_icg* is set to TRUE, command *all_registers* returns a collection containing integrated clock-gating cells.

### What Next

This is an informational message only. No action is required on your part.

### See Also

# UIED

## UIED-037

(Warning) Location {%s} on route shape %s is outside the core area. Buffer/inverter cannot be added at this location.

### Description

This warning message occurs when the location for buffer/inverter is outside the core area. The command could not place the buffer on this kind of location, so it is neglected.

### What Next

This is only a warning message.

Feedback

**See Also**

- add_buffer

---

## UIED-50

(error) The %s '%s' is of direction inout. Ports/pins of direction inout is not supported.

**Description**

This command does not support a port/pin which has a direction inout.

---

## UIED-060

(error) The inverter number from the driver to load pin/port '%s' are non-even.

**Description**

This error occurs when add_buffer_on_route detects that it will insert non-even inverter for the path from the driver to the load pin or top port.

**What Next**

Please re-estimate the "-repeater_distance" or "-location" to ensure that it could insert even buffer from the driver to all its loaders.

---

## UIED-066

(error) Internal error - %s.

**Description**

Internal error.

**What Next**

Report the problem to Synopsys

---

## UIED-114

(error) No valid net specified.

**Description**

This command requires a valid net to work on.

Feedback

**What Next**

Please provide correct inputs to the command

---

## UIED-123

(error) Cannot find the specified reference %s.

**Description**

The specified reference can not be found in any reference library path

**What Next**

Please provide correct inputs to the command

---

## UIED-156

(warning) No locations for the buffer can be found for net (%s)

**Description**

add_buffer_on_route doesn't find any buffer location for the specified net.

It may be caused by: 1. Route is too short for buffering comparing with repeater_distance/first_distance. Note: Buffers must be a little away from load pins, so route that is just as long as repeater_distance/first_distance may not be buffered as well. This feature could be controlled by eco.add_buffer_on_route.min_distance_buffer_to_load . 2. No gas station (whose is_primary is false) on route, while user requires add buffer only inside gas stations. 3. Cannot find bufferable location along route. Unbufferable situation include: i. Route over blockage/macro ii. Route outside core area iii. Route topology mismatches hierarchical netlist connection. (Detail will be reported by UIED-331.) iv. Route over/cross voltage areas that mismatch the power domains its net is in/cross.

**What Next**

Please re-specify suitable option value or modify the route if you still want to buffer the net by this command. You can also try -location.

---

## UIED-157

(error) Route segments of the net (%s) are not fully interconnected.

**Description**

The connection of route segments is not complete.

Feedback

**What Next**

Please verify the net's route segments are fully interconnected before using "add_buffer_on_route". For users do not expecting incomplete route feature of abor, they could use check_routes(2) to make sure the net to buffer is not open. For users expecting incomplete route feature of abor, they could open GUI and do mannually checking.

---

## UIED-158

(warning) delete wire '%d' for it is covered by wire '%d'.

**Description**

One wire is covered by another, so it is removed from database.

---

## UIED-159

(error) The net '%s' has dangling route.

**Description**

The net has dangling route. It will caused the incorrect buffer insertion behavior.

**What Next**

Please make sure the net has no dangling route.

---

## UIED-164

(warning) No locations for the buffer can be found for net (%s): New inserted buffers are out of core area.

**Description**

add_buffer_on_route doesn't find any buffer location for the specified net. New inserted buffers are out of core area.

---

## UIED-165

(error) incorrect input format, should be {{layer_name scaler} {layer_name scaler} ...}.

**What Next**

Please correct the input format.

Feedback

**See Also**

- add_buffer_on_route

---

## UIED-166

(error) cannot find layer with the name '%s'.

**Description**

the specified layer name doesn't exist.

**What Next**

Please correct the layer name.

**See Also**

- add_buffer_on_route

---

## UIED-167

(error) The value '%s' must be less than the value '%s'.

---

## UIED-170

(Error) Multiple driver net '%s' is not supported.

**Description**

This error message occurs when the operating net has more than one driver pin

**What Next**

*add_buffer_on_route* cannot operate on nets having multiple driver pins.

**See Also**

- add_buffer_on_route
- add_buffer
- remove_buffers

---

## UIED-171

(Error) library cell '%s' is not a buffer or an inverter.

Feedback

### Description

You recieve this error message, if the library cell matching the specified name is not a buffer or inverter library cell from the reference library.

### What Next

Choose the correct reference name of buffer/inverter.

---

## UIED-172

(Error) Invalid argument '%s'. '%s'.

### Description

You recieved this error message because an option in the command has an incorrect value. Either the tool could not find the expected value for the argument or the number of arguments is invalid.

### What Next

Clarify the proper use of the option, see the man page of the command.

---

## UIED-173

(Warning) Specified location (%.4f, %.4f) for buffer/inverter is outside the core area.

### Description

This warning message occurs when the coordinates provided for *-location* option of *add_buffer_on_route* command is not inside the core area of the design.

### What Next

This is only a warning message.

If you don't want this message to appear provide locations for the buffers which are inside the core area.

### See Also

- add_buffer_on_route

---

## UIED-174

(Warning) Library cell '%s' is an inverter; assuming -inverter_pair option.

Feedback

### Description

You recieve this message, if you have specified an inverter library cell for *buffer_lib_cell* option without specifying the *-inverter_pair* option.

### What Next

This is just a warning message, if result is not what you expected.

a) specify a library buffer cell.

b) specify -inverter_pair option along with inverter library cell.

### See Also

- add_buffer_on_route
- report_lib

---

## UIED-176

(error) Failed to find valid locations to add buffers

### Description

This error happens when *add_buffer_on_route* command fails to find valid locations along the net route, to place buffers on.

### What Next

Make sure the net is routed. If *"-location"* option was used, please make sure that the locations used are actually on the route.

---

## UIED-178

(error) Number of locations on net %s must be even when library cell is an inverter

### Description

The number of locations provided as input to command *add_buffer_on_route*, must be even when the library cell is an inverter. This is because inverters must be added as pairs.

### What Next

Provide an even number of locations.

Feedback

## UIED-179

(error) Failed to legalize new buffers on net %s. please try -max_distance_for_legalized_location to increase the search area for legalization.

**Description**

The command failed to find legal locations for the new buffers to be added along the route. No buffers are added to any nets.

**What Next**

Run the command with different parameters

## UIED-180

(error) Failed to add buffers

**Description**

The command failed to add any buffers.

**What Next**

Review errors from the command, before this one to proceed.

## UIED-183

(error) Failed to reroute new nets

**Description**

The command failed to reroute new nets created when buffers were added along the route of original net.

**What Next**

Run the command with different parameters

## UIED-184

(error) Location not specified correctly.

**Description**

Each of the locations provided to add_buffer_on_route, need to be a triplet containing the x coordinate, y coordinate and the routing layer name. The routing layer name is used to restrict the chosen route segment when there are multiple candidates in different layers

Feedback

for the specifed x and y coordinates. If the layer of route segment does not matter, the option "-detect_layer" can be used and the routing layer name is no need. When option "-detect_layer" is specified, the first route segment encountered is selected.

**What Next**

Specify the location with the format {x y layer_name} or {x y} -detect_layer.

**See Also**

- add_buffer_on_route

---

## UIED-185

(error) The PG net or the tie net is not allowed for this command.

**Description**

The PG net or the tie net is not allowed for this command.

**What Next**

Run the command with correct data

---

## UIED-186

(error) Failed to add buffer on net %s, due to mismatch between physical and logical hierarchy

**Description**

The physical location of the load pins of the net results in buffer locations which does not match the logical hierarchy. The logical nets end up driving load pins in different logical hierarchies.

**What Next**

Change the repeater_distance so that the number of buffers changes.

---

## UIED-189

(information) The section: '%s' starts.

**Description**

The section is running.

Feedback

## UIED-197

(error) duplicated layer name '%s' in the layer scaling list

**Description**

the specified layer name was used more than one time.

**What Next**

Please check the layer scaling list.

**See Also**

- add_buffer_on_route

## UIED-199

(error) Failed to snap new buffers to site rows.

**Description**

The command add_buffer_on_route failed snap new buffers to site rows. The snapping failed due to the site infomation of the specified library cells are not mathced to site rows in the design.

**What Next**

specify other library cells whose site infomation matched site rows in the desin. Or create new site rows.

## UIED-200

(error) %s.

**Description**

Input data error.

**What Next**

Please input correct data.

## UIED-201

(error) The location (%.4f %.4f) for buffer %s is out of search area (%.4f %.4f) (%.4f %.4f).

Feedback

**Description**

Although legal location has been returned but it is out within the search area requested by the add_buffer_on_route command. The search area might be out of with voltage area assigned to this buffer.

**What Next**

report_voltage_areas

---

## UIED-255

(error) Value for %s cannot be negative.

---

## UIED-300

(error) Classical router is not supported

**Description**

The command failed due to classical router not supported.

---

## UIED-303

(error) physical connectivity tracing error

**Description**

The command failed due to the physical connectivity tracing error.

---

## UIED-304

(error) Can't find place to insert buffer by given location (%.4f, %.4f).

**Description**

This error occurs when add_buffer_on_route can't find a route object to insert buffer on, within a region around the user given location. The region is specified by -max_distance_to_route.

**What Next**

You can re-assign the location (e.g. to be more close to the route) and try again.

**See Also**

- add_buffer_on_route

Feedback

## UIED-306

(error) inconsistent VA errror

### Description

The command failed due to inconsistent VA.

## UIED-307

(warning) Diode pin/port (%s): Routes that only drive this pin/port will be treated as dangling. No buffer is allowed to only drive a diode pin/port.

### Description

add_buffer_on_route find a diode pin/port as a load. It will be treated as dangling. If "-repeater_distance" is used, a buffer that only drives a diode pin/port will not be added. If "-location" is used, a buffer that only drives a diode pin/port will cause an error(UIED-159).

## UIED-308

(error) Bad location : Buffer location (%.4f, %.4f) is inside an unbufferable region %s.

### Description

The location to add buffer is inside an invalid region, e.g. placement blockage, macro, physical-logical inconsistent route segment.

Physical-logical inconsistent route segment means the route topology does not match with logical hierarchy. For example, in layout, a buffer (to be added on such route segment) drives module_A/module_B/cell1/I and module_A/module_C/cell2/I, but does not drive module_A/module_B/cell3/I. However, logically, if inserting such buffer in module_A (to be able to drive both cell1/I and cell2/I), cell3/I will be driven as well (which should not be driven).

### What Next

If -location is specified, please modify the location. In physical-logical inconsistent situation, you could also try to find out what is the inconsistency: 1. start_gui and identify the reported buffer location. Then find out which loads are physically driven by the buffer to add on layout. 2. Get the reported hierarchical net that tool derived to insert such buffer. 3. Find hierarchical ports and pins driven by the such reported hierarchical net. 4. For each one of these hierarchical ports and pins, you should check whether part loads of such hierarchical pin/port are physically driven by such buffer while the others are not.

Feedback

## UIED-309

(Error) Add buffer on route fail to get or process route of net %s

**Description**

Could not get or process route of a net

**What Next**

Check whether the net is valid

## UIED-310

(Error) Add buffer on route fail to check voltage area of net %s

**Description**

Meet unsupported voltage area case.

**What Next**

Check voltage areas.

## UIED-311

(Error) The add_buffer_on_route command does not support the route shape which has more than 2 points.

**Description**

*add_buffer_on_route* supports only horizontal and vertical route shapes.

## UIED-312

(error) Failed to add buffer on net %s, due to region %s mismatch between physical and logical hierarchy. %s

**Description**

The physical location of route crossing region does not match the netlist crossing logical hierarchy.

## UIED-313

(Warning) Failed to add buffer on net %s

Feedback

**Description**

Could not add buffer with current parameters on the net

**What Next**

Run the command with different parameters

---

## UIED-314

(Warning) The add_buffer_on_route_min_distance_buffer_to_load variable is ignored when you use the -inverter_pair option.

**Description**

The tool issues this warning when you run the *add_buffer_on_route* command with the *-inverter_pair* option and you have previously set the *add_buffer_on_route_min_distance_buffer_to_load* variable. When both are specified, the tool ignores the *add_buffer_on_route_min_distance_buffer_to_load* variable.

**What Next**

If this is not the desired behavior, rerun the *add_buffer_on_route* command without the *-inverter_pair* option.

**See Also**

- add_buffer_on_route

---

## UIED-318

(Error) Failed to split routes of net %s.

**Description**

The command failed when trying to split routes of a net for buffer insertion.

**What Next**

Please check database first.

---

## UIED-319

(Warning) This option is for a customer-specific flow. When you use the -load_pin_hierarchy option, buffers are added into the specified hierarchy.

Feedback

**Description**

When you use the -load_pin_hierarchy option, the tool adds buffers into the specified hierarchy.

---

## UIED-328

(Warning) Repeater distance length ratio >= 1

**Description**

Repeater distance length ratio of a value >=1 should only be used when user want to only add buffer(s) specified by -first_distance or -first_distance_length_ratio.

**What Next**

Check command argument value, unless it is just as expectation.

**See Also**

- add_buffer_on_route

---

## UIED-329

(error) net (%s) is dangling.

**Description**

The net is dangling. add_buffer_on_route does not support it.

**What Next**

Please check netlist before using "add_buffer_on_route".

---

## UIED-330

(Error) %s is an unsupported object.

**Description**

It is an unsupported object for add_buffer_on_route.

**What Next**

Please use get_nets to get nets for add_buffer_on_route (or use valid net name). If you have to use $flat_net which is returned by get_flat_net, please use [get_nets -of [get_pins -of $flat_net -filter "direction==out"]].

Feedback

## UIED-331

(Warning) No buffer will be added on route of net %s after location (%f, %f)%s, due to mismatch between route topology and hierarchical netlist connection topology.

### Description

After such location, route topology does not match with hierarchical netlist connection topology. add_buffer_on_route will not add buffers after such location, or the netlist connection and route of added buffer will drive different loads.

### What Next

Use other methods. (e.g. add "anchor buffer", then re-route) or use add_buffer_on_route -punch_port.

## UIED-332

(Error) Net %s has multi highest hier nets. It is not supported.

### Description

If request adding buffers in highest hierarchy, there should NOT be multi highest hier nets.

### What Next

Change netlist to meet command request.

## UIED-333

(error) Can not find unique layer to insert buffer near given location (%0.4f, %0.4f).

### Description

This error occurs when -location find multi possible layer to split for adding buffer, within a region around the user given location. The region radius is specified by -max_distance_for_legalized_location.

### What Next

If you use -detect_layer to let command auto choosing layer, you can assign a particular layer in format -location {x y layer_name} instead.

### See Also

- add_buffer_on_route

Feedback

## UIED-334

(error) Track assignment or detail route data is not supported by global routed net buffering.

### Description

This error message occurs if add_buffer_on_route -only_global_routed_nets is on and input net is track assigned or detail routed.

### What Next

Turn off -only_global_routed_nets or remove the route data then do only global route for the input net.

### See Also

- add_buffer_on_route
- route_global

## UIED-336

(error) user_specified_buffer not specified correctly.

### Description

Each of the "user_specified_buffer" provided, need to be a fiveplet containing the name, library cell, x coordinate, y coordinate and the routing layer name. If option "-detect_layer" is specified, then the routing layer name is no need and the tool detects the layer of location coordinates automatically.

### What Next

Run the command with correct data

## UIED-337

(error) Global route "%s" are not supported when bufferring track assigned or detail routed net.

### Description

This error message occurs if add_buffer_on_route finds global routes on the net when option -only_global_routed_nets is off.

Feedback

### What Next

If net is supposed to be track assigned or detail routed, check the route segment and re-route the net before run add_buffer_on_route. If net is global routed, turn on -only_global_routed_nets and try add_buffer_on_route again.

---

## UIED-338

(warning) New repeater will be named as "%s" (User specified cell name "%s" is already used by an existed cell).

### Description

User specified cell name is already used by an existed cell, tool will rename the new repeater.

---

## UIED-339

(error) Unsupport type %s of object %s .

### Description

This error message occurs if add_buffer_on_route finds unsupported type of objects on the net. The supported type of objects are "port", "leaf pin", "vertical and horizontal path", "global route" and "via".

### What Next

Check the type of reported objects. If it is path which contains non-vertical or non-horizontal wire, re-route the net and try add_buffer_on_route again. If it is other types, report bug to Synopsys.

---

## UIED-340

(Info) Cannot add repeaters from point (%0.4f, %0.4f) %s of net %s, due to inconsistent connection topology between logical hierarchy and physical route.

### Description

On some route segments, the physical location of the load pins of the net does not match logical hierarchy to insert buffer. Tool will not add buffers on such route segments, or their logical nets will drive load pins in different logical hierarchies. But tool still will add buffers on other route segments of such net.

Feedback

**What Next**

Please check logical hierarchy connection topology and physical route topology after the reported point.

---

## UIED-341

(error) Failed to find route segments in max search distance for opened pin %s.

**Description**

add_buffer_on_route failed to find route within search area for incomplete route.

**What Next**

Specify proper value of -max_distance_for_incomplete_route and try again.

**See Also**

- add_buffer_on_route

---

## UIED-342

(error) Can't find place to insert buffer by given location (%0.4f, %0.4f).

**Description**

This error occurs when add_buffer_on_route -location can't find a route object to insert buffer on, within a region around the user given location. The region radius is specified by -max_distance_to_route.

**What Next**

You can re-assign the location (e.g. to be more close to the route) or the search region radius and try again.

---

## UIED-343

(error) Unable to insert repeaters on net %s. Tool meets a route tracing error when crossing region border at point (%0.4f, %0.4f) %s.

**Description**

Tool meets an internal error when processing region (plangroup, voltage area, macro or blockage). E.g. there is a route overlapping with a blockage border somewhere before the reported point.

Feedback

**What Next**

Please check the route topology. If there is a wire overlapping with a blockage border, you can try to move the wire away from border and rerun this command. Please report this issue to Synopsys.

---

## UIED-344

(Info) Resuming buffering from point (%0.4f, %0.4f) %s of net %s, after route segments with inconsistent connection topology between logical hierarchy and physical route.

**Description**

On some route segments, the physical location of the load pins of the net does not match logical hierarchy to insert buffer. Tool will not add buffers on such route segments, or their logical nets will drive load pins in different logical hierarchies. But tool still will add buffers on other route segments of such net.

---

## UIED-345

(info) Port(s) %s are punched for connecting repeater %s and its load(s) %s on specified net %s due to inconsistent connection topology between logical hierarchy and physical route.

**Description**

On some route segments, the physical location of the load pins of the net does not match logical hierarchy to insert buffer. Tool will punch ports to connect such loads.

---

## UIED-346

(Error) %s is not a valid voltage area.

**Description**

User must specify a valid voltage area name or collection with a single VA, or DEFAULT_VA for default voltage area.

**What Next**

Check whether the voltage area is right.

---

## UIED-347

(error) %s not specified correctly.

Feedback

**Description**

This option ask user provide pairs which contains a valid voltage_area name and a valid library cell.

**What Next**

Run the command with correct option value.

---

## UIED-348

(info) In option %s, %s %s has already been specified with same %s.

**Description**

Duplicated items are specified in this option.

**What Next**

If it is a typo, run the command with correct option value.

---

## UIED-349

(error) In option %s, %s %s has already been specified with different %s.

**Description**

Conflict items are specified in this option.

**What Next**

Run the command with correct option value.

---

## UIED-354

(Warning) After buffering net %s, hierarchical port %s will be driven by an inverted signal.

**Description**

There will be odd number inverters from original driver till this hierarchical port. So the hierarchical port will be driven by an inverted signal.

**What Next**

A user could make inverters even from original driver till this hierarchical port by adjusting inverter locations.

Feedback

## UIED-355

(Error) Cannot find terminal of %s.

**Description**

This command cannot support a pin or port without terminal.

**What Next**

Make user each related pin or port has its terminal.

## UIED-370

(Error) No driver net '%s' is not supported.

**Description**

This error message occurs when the operating net has no valid driver pin.

**What Next**

*add_buffer_on_route* cannot operate on nets having no driver pin.

**See Also**

- add_buffer_on_route
- add_buffer
- remove_buffers

## UIED-371

(Error) Not support %s '%s' which is in a sub block.

**Description**

This error message occurs when the operating object is in a sub block.

**What Next**

Cannot operate on objects in sub blocks.

## UIED-372

(error) Cannot specify '%s' with '%s' when '%s' is used.

Feedback

**Description**

The listed command options are exclusive if the specified option is used. Only one of them can be specified.

**What Next**

Look at the manpage for this command for more information on command options.

---

## UIED-373

(error) Failed to find the legal location to add buffer due to max fanout violation (real fanout:%d > max fanout: %d) around {(%0.4f, %0.4f) (%0.4f, %0.4f)} on the net:%s.

**Description**

The max fanout violation has been detected, but there is no any legal location to add the buffer. The reason can be either placement blockage, macro, or macro keepout margin.

**What Next**

Adjust the location or shape for the placement blockage, macro or macro keepout margin.

---

## UIED-374

(error) Failed to find the legal location to add buffer due to max fanout violation (real fanout:%d > max fanout: %d) after (%0.4f, %0.4f) on the net:%s.

**Description**

The max fanout violation has been detected, but there is no any legal location to add the buffer. The reason can be either placement blockage, macro, or macro keepout margin.

**What Next**

Adjust the location or shape for the placement blockage, macro or macro keepout margin.

---

## UIED-375

(error) Based on the route topology, max-fanout:%d can not be satisfied near to (%0.4f, %0.4f) on the net:%s.

**Description**

According to the route topology, the buffer can not be able to add near the reported location in order to meet the input specified max_fanout number. It could be due to the route topology, placement blockage, macro or macro keepout margin.

Feedback

**What Next**

Adjust the route topology or route shape, placement blockage, mcro keepout margin or macro location, or use higher max_fanout number.

---

## UIED-376

(error) Based on the route topology, the buffer can not be added to drive the specified loads near to (%0.4f, %0.4f) on the net:%s.

**Description**

According to the route topology, the buffer can not be able to add near the reported location in order to drive the specified loads. It could be due to the route topology, placement blockage, macro or macro keepout margin.

**What Next**

Adjust the route topology or route shape, placement blockage, mcro keepout margin or macro location, or different input loads.

---

## UIED-378

(error) It is not supported to specify gas station %s (whose is_primary is false) in %s.

**Description**

This feature is for primary voltage area only. This command does not support physical only feed through gas stations.

**What Next**

Create supported gas stations. This command only support gas station whose power domain is same with the primary voltage area surrounding it. And it cannot be physical only crossed. Or you can create disjoint regions of primary voltage areas.

---

## UIED-379

(warning) Buffer %s is added inside voltage area %s. However, power domain of its hierarchy is %s, which does not belong to the voltage area.

**Description**

This buffer is inserted in a hierarchy whose power domain does not match the voltage area this buffer is inside in layout. It usually happens when you allow add buffer in a physical only feed through voltage area. A second possibility is the voltage area is a not supported gas station whose power domain is different with the primary voltage area surrounding it.

Feedback

**What Next**

If the voltage area is primary, you could use set_eco_power_intention to update the buffer's power domain. If the voltage area is not primary, you could replace it with a disjoint primary voltage area. You could also manually set the power domain of the buffer.

---

## UIED-380

(error) Library '%s' is missing technology information.

**Description**

The technology information is missing in the current library. This information is necessary in order to read the input layer mapping file.

**What Next**

Load a technology file into the library using the *read_tech_file* command.

---

## UIED-381

(error) Neither conducting_layers nor via_layers is found in the layer map file.

**Description**

Both conducting_layers and via_layers is required in the layer map file

**What Next**

Specified the conducting_layers or via_layers if either of them is missing.

---

## UIED-382

(error) No any %s layers mapping are specified

**Description**

There is no any conducting layers mapping or via layers mapping are found and stored.

**What Next**

At least one layer mapping is required to specified.

---

## UIED-383

(error) The layer '%s' cannot be found.

Feedback

**Description**

The layer with the given name cannot be found in the technology database.

---

## UIED-384

(error) '%s' is not a single rail buffer. It cannot be added inside gas-station %s.

**Description**

User should add single rail buffer inside gas stations (whose is_primary is false).

**What Next**

Specify a single rail buffer.

---

## UIED-385

(Error) The port punching on port will not be supported for -respect_voltage_areas.

**Description**

The port punching on port will not be operated for -respect_voltage_area.

**What Next**

remove -respect_voltage_areas.

---

## UIED-386

(error) user_specified_bus_buffer not specified correctly.

**Description**

Each of the "user_specified_bus_buffer" provided, need to be a 4-tuple containing eco bus buffer pattern, library cell, x coordinate and y coordinate.

**What Next**

Run the command with correct data

---

## UIED-387

(error) Fail to apply pattern %s on route at %s %s.

**Description**

Pattern can only be added at route segment which is fully parallel and meet pattern style.

Feedback

**What Next**

Select other patterns or change location to add buffers.

---

## UIED-388

(error) bus_cell_prefix not specified correctly.

**Description**

Each of the "bus_cell_prefix" provided, need to be a pair containing eco bus buffer pattern and cell prefix string.

**What Next**

Run the command with correct data

---

## UIED-389

(error) The specified minimum porosity should between 0 and 1.

**What Next**

Please correct the given porosity value.

**See Also**

- add_group_repeaters

---

## UIED-390

(error) Can not insert buffer in overlapping area at location (%0.4f, %0.4f).

**Description**

This error occurs when the specified location is in overlapping area of different wires.

**What Next**

Please specify location outside the overlapping area.

---

## UIED-391

(error) Can not find unique wire near location (%0.4f, %0.4f).

Feedback

**Description**

This error occurs when on the same layer, there are multiple possible wires that have the same distance to the specified location.

**What Next**

Please specify location that is closer to the wire that you want to insert buffer.

# UIG

## UIG-001

(warning) -from and -to objects must be on the same library cell.\n \tIgnoring invalid combination from '%s' to '%s'.

**Description**

This command expects that from and to library pins will be on the same library cell. It is ok to specify multiple library pins on different library cells in -from if -to is not specified, or in -to if -from is not specified. If -from objects are on a different library cell than -to objects, those combinations are ignored.

**What Next**

Specify from and to objects that are on a single library cell.

# UIL

## UIL-0

(information) Note that the ".synopsys_lc.setup" init file of\n \tlc_shell is a subset of the dc_shell ".synopsys_dc.setup" init file.\n \tIf a command other than an lc_shell command is encountered in the init file,\n \tan error message is issued and the processing might terminate.\n \tRefer to the Library Compiler manuals for supported commands.

**Description**

During the initialization phase, the Library Compiler command line tool *lc_shell and the graphical tool library_compiler read in a setup file .synopsys_lc.setup. Both tools perform a subset of the Design Compiler dc_shell commands. If a dc_shell command is encountered such as read_design command), Library Compiler tools issue an error. Depending on the semantics of the command read, it might terminate.*

Feedback

### What Next

Refer to the Library Compiler User Guide and Reference Manuals for supported commands.

---

## UIL-1

(warning) Overwriting an old symbol library '%s' file with a new one.

### Description

The symbol library, specified in your *read_lib* command, already exists in the database. The old library is deleted from the database and replaced by the new one. This message is generated when

```
- Reading a symbol library directly or
        - Reading an EDIF file with the "-symbol option" set to the
          same symbol filename
```

### What Next

Use *list -lib* to find all available libraries. No action is required if you decide to overwrite a library name reported by *list -lib*.

### Examples

Reading a symbol library explicitly:

```
lc_shell> read_lib uil1_symbol.slib
             Reading '/tmp/uil1_symbol.slib' ...
             Symbol library 'uil1' read successfully
   lc_shell> read_lib uil1_symbol.slib
             Reading '/tmp/uil1_symbol.slib' ...
             Warning: Overwriting an old symbol library '/tmp/uil1.sdb'
 file with a  new one. (UIL-1)
```

Reading a symbol library though the EDIF file:

```
lc_shell> read_lib -format edif uil1.edif -symbol uil1_symbol.slib
             Reading '/tmp/uil1_symbol.slib' ...
             Symbol library 'uil1' read successfully
   lc_shell> read_lib -format edif uil1.edif -symbol uil1_symbol.slib
             Reading '/tmp/uil1_symbol.slib' ...
             Warning: Overwriting an old symbol library '/tmp/uil1.sdb'
 file with a new one. (UIL-1)
```

### Examples

```
Warning: Overwriting an old symbol library '/tmp/uil1.sdb' file with a
 new one. (UIL-1)
```

Feedback

## UIL-2

(warning) Overwriting an old technology library '%s' file with a new one.

### Description

The technology library, specified in the *read_lib* command, already exists in the database. The old library is deleted from the database and is replaced by the new one.

### What Next

Use *list -lib* to find all available libraries. No action is required if you decide to overwrite a library name reported by *list -lib*.

### Examples

```
lc_shell> read_lib uil2.lib
                  Reading '/tmp/uil2.lib' ...
                  Technology library 'uil2' read successfully
        lc_shell> read_lib uil2.lib
                  Reading '/tmp/uil2.lib' ...
                  Warning: Overwriting an old technology library
 '/tmp/uil2.db' file with a new one. (UIL-2)
```

### Examples

```
Warning: Overwriting an old technology library '/tmp/uil2.db' file with a
 new one. (UIL-2)
```

## UIL-3

(warning) The '%s' library has not been read in yet.

### Description

The command issued tries to access a library that does not exist in the database. A typo in the library name can also result in this problem. Any of the following commands might trigger the generation of this warning: *add_module, compare_lib, write_lib, report_lib and update_lib.*

### What Next

Use *list -lib* to find all available libraries. Make sure the library name is among the ones being reported by *list -lib*. Otherwise, load the library into the database using *read* for a db file, or *read_lib* for a library source file, then reissue the command.

### Examples

```
Warning: The 'uil3' library has not been read in yet. (UIL-3)
```

Feedback

## UIL-4

(error) The '%s' library source file is not found.

### Description

The library source file is not found either because

```
- The file is not in the search_path, assuming that the full
          path is not specified or,
        - There is a typo in the filename.
```

### What Next

Issue the command with the correct file name and the full path. Alternatively, you can add the path to the current *dc_shell* or *lc_shell search_path*, and issue the command with the correct file name.

### Examples

```
Error: The 'uil4.lib' library source file is not found. (UIL-4)
```

## UIL-5

(error) The read_lib command does not support '%s' as the\n \t'-format' switch value. The only format allowed is 'edif'.

### Description

Currently, *read_lib* accepts only *edif* as *-format* switch value for reading in symbol library in EDIF format. It is reported as an error if you specify any other *-format* switch value.

### What Next

If you want to read in an EDIF symbol library, make sure the *read_lib* switch *-format* has the value *edif*. Otherwise, do not specify the *-format* switch with the *read_lib* command. Reinvoke the *read_lib* with the correct switch value. For quick reference, invoking *read_lib* with -help switch, causes *read_lib* to print out its legal command syntax.

### Examples

```
dc_shell> read_lib -help
        Usage: read_lib
             -format      (EDIF symbol format; default is Synopsys
 format)
             -symbol      (with EDIF, name of Synopsys library file to
 create)
             <file_name>  (technology or symbol library file)
             -no_warnings (disable warning messages)
             -names_file  <file_list>  (one or more names files)
```

Feedback

## UIL-6

(warning) Library Compiler is not enabled. The cell\n \tfunctionality is ignored.

### Description

This site is not licensed for Library Compiler. The attempt to compile a technology library is restricted to timing information only. All cell functions are removed, so they become black-boxes.

### What Next

If you are compiling a technology library for timing analysis use only, ignore this warning message. However, if you want to have full Library Compiler capability, contact your Synopsys system administrator to purchase Library Compiler.

### Examples

```
Warning: Library Compiler is not enabled. The cell
        functionality will be ignored. (UIL-6)
```

## UIL-7

(error) Cannot write the library to the '%s' file.

### Description

An attempt to write out a database (db or sdb) file w with *write_lib* failed. The reasons you get this error could be because either

```
- You do not have write permission to the target directory or,
        - There is not enough disk space for the file.
```

### What Next

Check disk space and permission of the target directory. Make sure you have enough disk space and write permission before using *write_lib*.

## UIL-8

(error) The '%s' pin of the '%s' cell in the '%s' technology library\n \tis not found in the same cell of the '%s' symbol library.

### Description

The Library Compiler detects unmatched pin names between a technology library and a symbol library using the *compare_lib* command.

Feedback

### What Next

Correct the mismatch either in the technology library or the symbol library, and recompile the modified library.

### Examples

```
Error: The 'D' pin of the 'uil8' cell in the 'techlib' technology library
        is not found in the same cell of the 'symblib' symbol library.
 (UIL-8)
```

---

## UIL-9

(error) The '%s' cell does not exist in the '%s' symbol library.

### Description

A correspondent symbol cell cannot be found in the symbol library. This error is caused by a typo in a cell name in either the technology library file or the symbol library file, or a missing symbol cell. This error results in the use of a generic symbol library symbol or a black box symbol in a schematic containing the cell.

### What Next

If the error is due to a typo, correct the cell name typo. If the error is due to a missing symbol, add it to the symbol library. Recompile the modified library, and run compare_lib command.

### Examples

```
Error: The 'uil9' cell does not exist in the 'symblib' symbol library.
 (UIL-9)
```

---

## UIL-10

(error) Trying to compare a '%s' library with a '%s' library.\n \tcompare_lib compares a technology library and a symbol library.

### Description

The two libraries submitted to *compare_lib* are not a legitimate combination. *compare_lib* compares a technology library and a symbol library.

### What Next

Use *report_lib* to obtain the types of libraries. Make sure that you compare a symbol library and a technology library.

Feedback

### Examples

```
Error: Trying to compare a 'Technology' library with a 'Technology'
 library.
        compare_lib compares a technology library and a symbol library.
 (UIL-10)
```

---

## UIL-12

(error) Trying to compare a library with itself. compare_lib\n \tcompares a technology library and a symbol library.

### Description

The two libraries submitted to *compare_lib* are identical. The *compare_lib* command compares a technology library and a symbol library.

### What Next

Compare a symbol library and a technology library. If the technology library and symbol library share the same library name, specify the symbol library with its full name in *format file_path:library_name*. For example, the libraries are both named *uil12*. Issue the commands

```
dc_shell> list -library
              Library           File                    Path
              -------           ----                    ----
              uil12               uil12.db
  /synopsys/libraries
              uil12               uil12.sdb
  /synopsys/libraries
      1

      dc_shell> compare_lib uil12.db:uil12 uil12.sdb:uil12
```

### Examples

```
dc_shell> compare_lib uil12 uil12
```

### Examples

```
Error: Trying to compare a library with itself. compare_lib
        compares a technology library and a symbol library. (UIL-12)
```

---

## UIL-13

(error) The specified '%s' library cannot be found in memory.

Feedback

### Description

You try to access a library that has not been read in yet. This error could result from typos in the library name.

### What Next

Use *list -lib* to find all available libraries. Make sure that you type in the correct library name with your command. If the library is not reported by the *list -lib* command, load the library with *read_lib* for a library source file, or *read* for a db file, before reissuing the command.

---

## UIL-15

(warning) No libraries in the '%s' library file.

### Description

A file is read in, but no library is found in the file. It is most likely that the file is empty.

### What Next

Read in the correct file with a library.

---

## UIL-16

(error) Cannot find the '%s' library or library file in memory.

### Description

This error is obsoleted.

---

## UIL-17

(error) Could not open the '%s' file for reading.

### Description

You do not have read permission of the specified EDIF file.

### What Next

Check the permissions for the file. Make sure you have read permissions for the file.

### Examples

```
Error: Could not open the 'uil17.edif' file for reading. (UIL-17)
```

Feedback

## UIL-18

(error) Could not open the '%s' file for writing.

### Description

An attempt to open an output file has failed. This problem might be caused by

```
1. Trying to write to a directory for which you do not have write
 permission.
       2. Trying to write to an existing file for which you do not have
 write permission.
       3. The output file name specifies a non-existing path.
       4. The file system is full.
```

### What Next

Check the correctness of file name and path, and make sure you have write permission for the file. If the file system is full, provide more disk space.

## UIL-19

(error) The '%s' cell does not exist in the '%s' technology library.

### Description

This error message is issued by either *compare_lib* or *report_lib*. In the *compare_lib* case, if it cannot find a matched technology library cell for a symbol component, it reports this error with the message. In the *report_lib* case, if you specify a nonexistent cell in the cell list, this error message is displayed. This error usually is caused by a typo.

### What Next

Provide a correct name with each cell in a cell list. If you are not sure about cell names, do not specify a cell list.

## UIL-20

(error) The '%s' symbol in the '%s' symbol library has an extra '%s' pin.

### Description

This error message is issued by the *compare_lib* command. For each cell of a symbol library, Library Compiler checks for pin names in the same cell of the technology library and issues an error if the pin does not exist.

Feedback

### What Next

Correct the symbol library by removing the pin name or adding it to the technology library. Use Library Compiler to recompile the modified library, and run the compare_lib command.

---

## UIL-21

(error) The '%s' synthetic module does not exist in the '%s' library.

### Description

This error message is issued by the *report_lib* command. You might have specified a nonexistent synthetic module in the module list. This error is usually caused by a typo.

### What Next

Provide a correct name with each module in a module list. If you are not sure about module names, do not specify a module list.

---

## UIL-23

(error) Invalid output format '%s'.

### Description

Currently, for dc_shell *write_lib* accepts only *db, edif*, and *vhdl* as *-format* switch value for writing libraries in the specifBed format. For lc_shell, only *db* and *vhdl* switch values are accepted. It is reported as an error if you specify any other *-format* switch value.

### What Next

If your want to write a db library, do not specify the *-format* switch with the *write_lib* command. Otherwise, make sure that the *write_lib* switch *-format* has the value edif or vhdl.

Reinvoke the *write_lib* with the correct switch value. For quick reference, invoking *write_lib* with the -help switch, causes *write_lib* to print out its correct command syntax.

### Examples

```
dc_shell> write_lib -help
             Usage: write_lib
             <library_name> (a library already loaded into dc_shell)
             -format        db|edif|vhdl (write library in the specified
 format;
                            default is db)
             -output        <file_name>  (write library to the specified
 file)
             -names_file    <file_list>  (one or more names files)
```

Feedback

## UIL-24

(error) Unacceptable VHDL library generation.\n \tYou must read in the `%s` library from a technology library source file.

### Description

This error is issued when the *write_lib -format vhdl* uses a library read as a db file using the *read* command.

### What Next

Read in the library from a technology library source file. Reissue the write_lib -format vhdl command.

### Examples

```
Error: Unacceptable VHDL library generation.
        You must read in the `uil24` library  from a technology library
 source file. (UIL-24)
```

## UIL-25

(error) The '-symbol' option can only be used with the '-format EDIF' option.

### Description

Currently, *read_lib* accepts the *-symbol* option only with *edif* as a *-format* switch value for reading in symbol library in EDIF format. It is reported as an error if you specify -symbol without the edif format.

### What Next

If your want to read in an EDIF library and select the Synopsys file to create a symbol library, make sure the *read_lib* switch *-format* has the value edif followed by the *-symbol filename* option. Otherwise, do not specify the *-symbol* switch with the *read_lib* command. Reinvoke the *read_lib* with the correct switch value. For quick reference, invoking *read_lib* with the -help switch, causes *read_lib* to print out its correct command syntax.

### Examples

```
dc_shell> read_lib -help
        Usage: read_lib
             -format      (EDIF symbol format; default is Synopsys
 format)
             -symbol      (with EDIF, name of Synopsys library file to
 create)
             <file_name>  (technology or symbol library file)
             -no_warnings (disable warning messages)
             -names_file  <file_list>  (one or more names files)
```

Feedback

## UIL-26

(error) Unacceptable list of cells for the '%s' library.

### Description

This error message is issued by the *report_lib* command. You might have specified an empty or a corrupted cell list. This error usually is caused by a typo.

### What Next

Provide a correct name with each cell in a cell list. If you are not sure about cell name, do not specify a cell list.

## UIL-27

(error) Invalid technology library timing report.\n \tYou must read in the `%s` library from a technology library source file.

### Description

This error message is issued by *report_lib -timing_arcs* or *-timing* command. The timing options are used only on a library that has been read from a ".lib" technology library source file by the *read_lib* command.

### What Next

To use the report_lib with the -timing option, read in the technology source library instead of the db file.

## UIL-28

(warning) The '%s' vendor specific delay model is used in this library.\n \tThe library timing report might be incomplete.

### Description

This message is issued during a *report_lib -timing* command. The *delay_model* attribute in the technology source file is set to a non-generic delay model, such as *generic_cmos* or *table_lookup*. In the case of a *cmos2*, *report_lib* does not display any information about the slope.

### What Next

You can choose to ignore the warning or to modify the delay model attribute in the technology source file if you want more timing information. Reread the library, and reissue the report_lib command.

Feedback

### Examples

```
Warning: The 'cmos2' vendor specific delay model is used in this library.
        The library timing report might be incomplete. (UIL-28)
```

---

## UIL-29

(error) The '%s' library is a synthetic library.\n \tUse the report_synlib command.

### Description

This error is issued when the *report_lib* command is used for reporting on a synthetic library. A dc_shell command *report_synlib* is used to report on synthetic libraries.

### What Next

Use *report_synlib* command to report on synthetic libraries.

---

## UIL-30

(error) The '%s' library is not a synthetic library.\n \tUse report_lib command.

### Description

This error is issued when the *report_synlib* command is used on reporting on a technology library. A Library Compiler command *report_lib* is used to report on technology libraries.

### What Next

Use *report_lib* command to report on technology libraries.

---

## UIL-32

(warning) The '%s' model library is different from the current link library.

### Description

The *model* command might generate this message whenever the model library is different from the current link library. This situation should not occur frequently, but whenever a *model* is used with a 'for' loop construct to get the model library, it is possible that the link library will be different from the model library.

### What Next

Redefine *link_library* to be the same as the model library.

Feedback

## UIL-33

(error) Invalid technology library state table report.\n \tYou must read in library `%s` from a technology library source file.

**Description**

The report_lib options '-table' and '-full_table' require that the technology library source file is read in by read_lib. These options print out the state table information in the technology library.

**What Next**

Read the technology library source file, then reissue the *report_lib* command with the *-table* or *-full_table* options.

## UIL-34

(information) Updating technology library (please save) ...

**Description**

Every db technology library written out by a version of Library Compiler older than 4.0, is processed again every time that it is read in. To cut out this very significant amount of overhead, after reading in the db technology library, write the library back out and use the updated library.

The variables 'read_db_lib_warnings' and 'read_translate_msff' control options for this processing step. Please refer to their man pages for more details.

**What Next**

Write the technology library back out by using the *write_lib* command.

## UIL-35

(warning) operating conditions '%s' not overwritable in lib '%s'

**Description**

The command issued tries to overwrite an operating condition group that has been declared permanent before. create this operating condition with a different name.

**What Next**

Use *report_lib* to find all available operating conditions for that lib. Choose a name which is not there and create a new one.

Feedback

### Examples

```
Warning: operating conditions 'WCCOM'  not overwritable in lib
 'my_lib' (UIL-35)
```

## UIL-36

(warning) operating condition already defined in lib '%s'

### Description

The command issued tries to overwrite an existing group with the same name.

### What Next

Use -overwrite option. If it is still not overwritable use *report_lib* to find all available operating conditions for that lib. Choose a name which is not there and create a new one.

### Examples

```
operating condition already defined in lib 'mylib' (UIL-36)
```

## UIL-37

(information) The DCM vendor specific delay model is used in this library.\n \tThe library report will not contain timing-related information.

### Description

This message is issued during a *report_lib* command. The *delay_model* attribute in the technology source file is set to "dcm" delay model. The *report_lib* command does not display any timing information.

### Examples

```
Information: The DCM vendor specific delay model is used in this library.
        The library report will not contain timing-related information.
 (UIL-37)
```

## UIL-39

(error) The psuedo techonlogy file %s not found.\n

### Description

This message is issued during a *read_lib -format gdsii* command. The given pusedo library file doesn't exist in the directory.

Feedback

**What Next**

1. Set the search_path variable correctly to point to the pusedo library directory. 2. Check to see if the file exists and has read permissions.

---

## UIL-40

(warning) The library '%s' is not a physical library. Ignore -macro_only option.

**Description**

You receive this warning message because you have executed the *write_lib* command with the *-macro_only* option and specified a library that is not a physical library. The *-macro_only* option with the *write_lib* command applies only to the physical library.

**What Next**

Do not use the *-macro_only* option when writing a non-physical library. Or, ensure that the specified library is in the physical library before executing the *writ_lib -macro_only* argument.

---

## UIL-41

(error) Invalid technology library noise report.\n \tYou must read in the `%s` library from a technology library source file.

**Description**

This error message is issued by *report_lib -noise command. The timing options are used only on a library that has been read from a ".lib" technology library source file by the read_lib command.*

**What Next**

To use the report_lib with the -noise option, read in the technology source library instead of the db file.

---

## UIL-42

(error) %s '%s' is duplicated.

**Description**

This error message is issued by *merge_lib* command.

Feedback

## UIL-43

(error) Library '%s' is not a NLDM library and can't be merged.

**Description**

This error message is issued by the *merge_lib* command.

**What Next**

Only native nldm libraries can be merged.

## UIL-44

(error) The '%s' of object '%s' and of object '%s' are different.

**Description**

This error message is issued by the *merge_lib* command.

**What Next**

Some key properties of the two objects to merge should be the same.

## UIL-45

(error) Can not open the Milkyway reference library '%s'.

**Description**

You receive this warning message because you have executed the *write_lib* command with the *-mw_ref_lib* option and specified a Milkyway reference library. However the Milkyway reference library can not be opened. The generated .db/.pdb file is not written into the Milkyway reference library

**What Next**

Check if the Milkyway reference library specified exists and is not locked by other applications.

## UIL-46

(warning) The operating condition '%s' is not valid. Use the default value of 'min'.

Feedback

### Description

You receive this warning message because you have executed the *write_lib* command with the *-mw_oc_type* option and specified an operating condition that is not valid. The value of -fB-mw_oc_type *can only be 'max', 'min', 'typical' or 'other'.*

---

## UIL-47

(error) The option '-mw_ref_lib' is not specified while using the '-mw_oc_type' option.

### Description

You receive this warning message because you have executed the *write_lib* command with the *-mw_oc_type* option and specified an operating condition without specifying a Milkyway reference library.

### What Next

Specify the '-mw_ref_lib' option along with the option '-mw_oc_type'

---

## UIL-48

(error) the output format is not in db format while trying to write the output into a Milkyway reference library.

### Description

You receive this warning message because you have executed the *write_lib* command with the *-mw_ref_lib* option and specified an output format which is not in db format. Only db format file can be written into an Milkyway reference library by *write_lib*

### What Next

Do not use the *-mw_ref_lib* option when writing a non-db format file.

---

## UIL-49

(error) Invalid technology library user-defined data report.\n \tThe 'report_user_data' library_feature is not specified in the '%s' library.\n \tYou must read in the `%s` library from a technology library source file.

### Description

This error message is issued by *report_lib -user_defined_data command. The user-defined_data options are used only on a library that has been read from a ".lib" technology library source file by the read_lib command.*

Feedback

**What Next**

To use the report_lib with the -user_defined_data option, read in the technology source library instead of the db file.

---

## UIL-50

(error) The '%s' cell does not exist in the '%s' physical library.

**Description**

This error message is issued by *report_lib*. In the *report_lib* case, if you specify a nonexistent cell in the cell list, this error message is displayed. This error usually is caused by a typo.

**What Next**

Provide a correct name with each cell in a cell list. If you are not sure about cell names, do not specify a cell list.

---

## UIL-51

(error) The '%s' library is a symbol library.\n \tIt is not supported by the get_lib_attribute command.

**Description**

This error is issued when the *get_lib_attribute* command is used for a synthetic library. The gerht_lib_attribute command can only be used for technology libraries.

**What Next**

Use *get_attribute* command for synthetic libraries.

---

## UIL-52

(error) The '%s' library is a physical library.\n \tIt is not supported by the get_lib_attribute command.

**Description**

This error is issued when the *get_lib_attribute* command is used for a physical library. The gerht_lib_attribute command can only be used for technology libraries.

**What Next**

Use *get_attribute* command for physical libraries.

Feedback

## UIL-53

(error) Unacceptable list of library objects for the '%s' library.

**Description**

This error message is issued by the *get_lib_attribute* command. You might have specified an empty or a corrupted library object list. This error usually is caused by a typo.

**What Next**

Provide a correct name with each object in a library object list. If you are not sure about library object name, do not specify a library object list.

## UIL-54

(error) The '%s' object does not exist in the '%s' technology library.

**Description**

This error message is issued by *get_lib_attribute*. If you specify a nonexistent object in the library object list, this error message is displayed. This error usually is caused by a typo.

**What Next**

Provide a correct name with each object in a libray object list. If you are not sure about object names, do not specify a object list.

## UIL-55

(error) The '%s' library_feature is not specified in the '%s' library.

**Description**

This error message is issued by *set_lib_attribute*. If you use set_lib_attribute command for a library which does not have 'allow_update_attribute' library feature, this error message is displayed.

**What Next**

Set the 'allow_update_attribute' library_feature in the source library as follows: library(sample) { ... library_features(allow_update_attribute); ... }

## UIL-56

(error) The value '%s' is not valid for the attribute '%s', or the attribute '%s' is not modifiable.

Feedback

**Description**

This error message is issued by *set_lib_attribute*.

**What Next**

Correct the attribute value.

---

## UIL-57

(error) Invalid technology library power report.\n \tYou must read in the `%s` library from a technology library source file.

**Description**

This error message is issued by the *report_lib -power* command when the library is read from a db file that is not enabled for reporting power information. In such cases, the *-power* option is enabled only if that library is read from a ".lib" technology library source file by the *read_lib* command.

A library db file can be enabled for reporting power information by compiling it from a ".lib" file that enables the library feature *report_power_calculation*.

**What Next**

To use *report_lib* with the *-power* option, read in the technology source library instead of the db file.

---

## UIL-58

(error) The format of the -%s option is incorrect.

**Description**

Command "merge_lib" requires that the -baseline option define a pair of baseline library name and calc_mode. Command "merge_lib" requires that the -library option define pairs of library name and calc_mode.

---

## UIL-59

(error) Calc_mode '%s' is not valid.

**Description**

This error message is issued by the *merge_lib* command. 1.If the baseline defines the default_operating_conditions, then the name of that default operating condition can't be used as a calc_mode for other libraries to be merged. 2.If the baseline does not defines the default_operating_conditions, then the name of the baseline library can't be used as

Feedback

a calc_mode for other libraries to be merged. 3. The name of the baseline library plus "_CALC_MODE" can't be used as a calc_mode for other libraries to be merged.

---

## UIL-60

(error) Cannot attach test model to library cell '%s'.

**Description**

This error is generated because a test model in CTL format is successfully read in but cannot be associated with the named cell because it does not have a CTL interface or it does not exist.

**What Next**

Make sure the named design exists and has the same CTL interface.

---

## UIL-61

(warning) Override the test model attached to the library cell '%s'.

**Description**

The library cell already has a test model attached to it but a newly generated test model is going to override the old one and attach to the library cell.

**What Next**

Make sure it is intended to override a previous attached test model to the library cell

---

## UIL-62

(warning) Operating condition '%s' is not found in library '%s'.

**Description**

The command issued tries to access an operating condition that does not exist in the specified library. A typo in the operating condition name can also result in this problem. Any of the following commands might trigger the generation of this warning: *report_operating_conditions, delete_operating_conditions*.

**What Next**

Use *report_operating_conditions -lib* to list all operating conditions. Make sure the operating condition name is among the ones being reported by *report_operating_conditions -lib*.

Feedback

### Examples

```
Warning: Operating condition 'OC1' is not found in library 'a_lib'.
 (UIL-62)
```

## UIL-63

(warning) Operating condition '%s' can't be deleted since it is not created by users using command 'create_operating_conditions'.

### Description

Only those operating conditions created by users using command *create_operating_conditions and not being used by any design can be deleted from a library.*

### Examples

```
Warning: Operating condition 'OC1' can't be deleted since it is not
 created by users using
command 'create_operating_conditions'. (UIL-63)
```

## UIL-64

(warning) Operating condition '%s' can't be deleted since it's still used by design : %s.

### Description

Only those operating conditions created by users using command *create_operating_conditions and not being used by any design can be deleted from a library.*

### Examples

```
Warning: Operating condition 'OC1' can't be deleted since it's still used
 by design : DESIGN1 DESIGN2. (UIL-64)
```

## UIL-65

(error) The '%s' library_feature is not specified in the '%s' library.

### Description

This error message is issued by *report_lib -yield*. If you use 'report_lib -yield' command for a library which does not have 'report_yield' library feature, this error message is displayed.

Feedback

### What Next

Set the 'report_yield' library_feature in the source library as follows: library(sample) { ... library_features(report_yield); ... }

---

## UIL-66

(error) Cannot write the library '%s'. The Composite Current Source information has been stripped while reading the library.

### Description

This library was read into memory when db_load_ccs_data was set to false. Hence the Composite Current Source driver and receiver model from the library has been stripped while reading. To be able to write the library, the variable db_load_ccs_data has to be set to true before reading the library.

### What Next

Set the variable db_load_ccs_data to true in a new dc_shell session, read the library and then perform write_lib.

---

## UIL-67

(error) Could not close the '%s' file.

### Description

The file cannot be closed.

### What Next

Check to see if there are any error messages before this file closing operation.

### Examples

```
Error: Could not close the 'a.lib' file. (UIL-67)
```

---

## UIL-70

(warning) Cannot load the Composite Current Source information since you are not authorized for the license Galaxy-Beta.

### Description

The license Galaxy-Beta is a requirement for using Composite Current Source (CCS) information. This message will be issued when the site is not authorized for Galaxy-Beta license and the user is trying to set the variable db_load_ccs_data to true. The same

Feedback

message will be repeated if he is not authorize for Galaxy-Beta license and he is reading a library with Composite Current Source driver and receiver model when the variable db_load_ccs_data is true.

---

## UIL-71

(error) Cannot write the library '%s'. Writing of the library which has Composite Current Source timing information is not supported inside '%s' in this release. Please use lc_shell.

**Description**

In this release, writing of the library which has CCS timing information is supported only in lc_shell. Hence issue the write_lib command inside lc_shell.

---

## UIL-72

(warning) The Composite Current Source information in the library '%s' is not reported. Reporting of CCS information is not supported inside '%s' in this release.

**Description**

In this release, report_lib -timing reports the CCS timing information only in lc_shell. If you want to view the CCS timing information, please use lc_shell.

---

## UIL-73

(error) Invalid technology library switch cell report.\n \tYou must read in the `%s` library from a technology library source file.

**Description**

This error message is issued by *report_lib -switch* command. The switch option is used only on a library that has been read from a ".lib" technology library source file by the *read_lib* command.

**What Next**

To use the report_lib with the -switch option, read in the technology source library instead of the db file.

---

## UIL-74

(error) Invalid technology library pg pin report.\n \tYou must read in the `%s` library from a technology library source file.

Feedback

### Description

This error message is issued by *report_lib -pg_pin* command. The pg_pin option is used only on a library that has been read from a ".lib" technology library source file by the *read_lib* command.

### What Next

To use the report_lib with the -pg_pin option, read in the technology source library instead of the db file.

---

## UIL-75

(warning) The directory '%s' exists and the files with same name under it will be updated.

### Description

This message is given if the directory exists. If so, the files with same name under it will be updated.

### What Next

If you want to keep the old files under this directory, just rename the output directory name by option *datasheet_output_dir* for Datasheet generator or *veriloglib_output_dir* for VERILOG generator.

### Examples

```
datasheet_output_dir=test_datasheet
write_lib -format datasheet  dbvh13

OR

veriloglib_output_dir=test_verilog
write_lib -format verilog dbvh13
```

### Examples

```
Warning: The directory already exists and the files with same name under
 it will be updated. (UIL-75)
```

---

## UIL-76

(error) No/Invalid option value specified for '%s'.

Feedback

### Description

In calculate_caa_based_yield2db command, some options have dependency and requirement:

(1) Operating target should be a valid library name (already loaded in Library Compiler), or a valid db file (that can be read into LC successfully). (2) If the operating target is a db file, not a library name, The -output option with a valid db file name should be specified. And the output db file name should be different from input db file. (3) Currently, for '-data_kit_type' option, only 'tsmc' and 'tsmc_encr' are valid values. (4) When there are more than one routing layers defined in the library, The '-layer_dsd_alias' option must be provided. If there is only one routing layer in library, use default {0 0 0 0 0} as its value. (5) "-layer_dsd_alias" option value must contains 5 integer values, for the value of alias layers: Mx, My, Mz, Mr, Mt by order.

### What Next

Check the options to this command, specify all necessary and valid options.

### Examples

```
calculate_caa_based_yield2db -data_kit_type tsmc \
 -particle_distr_func_file tsmc.ddk a.db -output a.db

OR
calculate_caa_based_yield2db -data_kit_type tsmc \
 -particle_distr_func_file tsmc.ddk -layer_dsd_alias {0 0} test

OR
calculate_caa_based_yield2db -data_kit_type tsmc \
 -particle_distr_func_file tsmc.ddk nonexist.db
```

### Examples

```
Error: No/Invalid option value specified for '-output'.(UIL-76)
Error: No/Invalid option value specified for '-layer_dsd_alias'.(UIL-76)
Error: No/Invalid option value specified for 'nonexist.db'.(UIL-76)
```

---

## UIL-77

(error) The directory '%s' doesn't exist.

### Description

This message is given if the directory doesn't exist. If so, the custom function file directory is wrong.

### What Next

If you want to define the directory for custom function files, define the correct directory name by option *veriloglib_custom_func_dir* for VERILOG generator.

Feedback

### Examples

```
veriloglib_custom_func_dir=test_dir
write_lib -format verilog dbvh13
```

### Examples

```
Error: The directory 'test_dir' doesn't exit. (UIL-77)
```

---

## UIL-78

(information) The mapping file "func.map" for custom udp flow doesn't exist.

### Description

This message is given if the custom function directory is defined, but "func.map" file doesn't exit in the directory.

In custom UDP flow, verilog generator will check for mapping file "func.map" in the directory first. If the file doesn't exit or there is no mapping information for the cell, verilog generator will search for file "[cell_name].func" as the single cell function part for the cell. If this file doesn't exit, verilog generator will search for file "[library_name].func", and search the cell's function part in this packet file. If this can't be found either, verilog generator will not use custom UDP flow and comes to the general flow.

### What Next

Users can ignore this information if they have provided [cell_name].func, or [library_name].func for custom UDP flow, or they haven't provided any kind of function files by don't want to use custom UDP flow. If users want to use mapping file approach in custom UDP flow, you must provide the "func.map" file as in the description part.

---

## UIL-79

(warning) Syntax error of mapping file "%s".

### Description

This message is given if the mapping file has some syntax error.

Mapping file must be defined by the following syntax. Each line contains the mapping information of a specific file to multiple cells. Cell name is separate by blank. The bracket is needed here. No comment is applied here.

<file name> [<cell name1> <cell name2>]

Feedback

### What Next

If user want to use mapping file approach in verilog and datasheet , user need to edit the mapping file and correct the syntax error.

### Examples

```
Foo2.func [FDQ1X1 FDQ1X2]
```

---

## UIL-80

(error) The %s format isn't supported by datasheet generator.

### Description

This error is given if the format is not "text" and "html".

### What Next

If user want to generate html format datasheet, set datasheet_enable to "html"; if user want to generate text format datasheet, set datasheet_enable to "text".

### Examples

```
html format:
set datasheet_enable html

text format:
set datasheet_enable text
```

---

## UIL-81

(error) The directory [%s] doesn't exist.

### Description

This error is given if the directory doesn't exist or there is a typo in the directory name.

### What Next

check whether the directory exist or type the correct directory name.

### Examples

```
Error: The directory [/slowfs/xxx] doesn't exist. (UIL-81)
```

---

## UIL-82

(error) The file [%s] can not be found

Feedback

### Description

This error is given if the file does not exist.

### What Next

check whether the file exist or type the correct file name.

### Examples

```
Error: The file [/slowfs/xxx/yunz.txt] can't be found. (UIL-82)
```

---

## UIL-83

(error) Can't merge power db '%s' to timing db '%s'.

### Description

This error is given because the two db don't pass merge availability checking.
The checking includes, (1) Library-level attributes "time_unit", "voltage_unit", "capacitive_load_units" must be equal individually in the two libraries power_db and timing_db. (2) The two libraries power_db and timing_db should have same-number and same-name designs. (3) Every two same-name cells from power_db and timing_db should have same-number and same-name pins. (4) Every two same-name cells from power_db and timing_db should have same-number and same-name pg_pins.

### What Next

Find another proper power.db to merge.

### Examples

```
Error: Can't merge power db 'power.db' to timing db 'timing.db'. (UIL-83)
```

---

## UIL-84

(warning) Attribute '%s' cannot be used in group %s, it will be ignored.

### Description

This warning indicates that the attribute name specified in the -by option of sort_objects command cannot be used to sort the supplied groups. It will be ignored.

### What Next

Remove the invalid attribute and run again.

### Examples

```
Warning: Attribute 'wire_load' cannot be used in group cell, it will be
 ignored. (UIL-84)
```

Feedback

## UIL-85

(warning) Sort objects failed, either no valid attribute name nor the object has no name.

### Description

This warning indicates that the sort_objects failed to sort the supplied objects, it could be: (1) If user supplied attribute(s) name with -by option, there's no valid attribute can be used to sort the group or (2) If user does not specify -by option, name of the objects will be used to sort, but the object has no name, e.g. timing group.

### What Next

Specify correct attribute to be used to sort the objects.

### Examples

```
Warning: Sort objects failed, either no valid attribute name nor the
 object has no name. (UIL-85)
```

## UIL-90

(warning) write_lib in %s could result in library data inaccuracy. Please use lc_shell to perform library operation tasks instead. Please consult with Synopsys support if write_lib flow is needed in %s.

### Description

It is recomended to use lc_shell to perform library operation.

### What Next

Use write_lib in lc_shell or consult Synopsys support if write_lib is needed in dc_shell or de_shell.

## UIL-91

(error) write_lib in %s is not enabled. Please start new session and do enable_write_lib_mode to enable it, or use lc_shell instead.

### Description

By default, write_lib is not enabled. Use enable_write_lib_mode at the beginning of tool session to enable it. It is recommended to use lc_shell to perform library operation. Please refer Solvnet article 037767 on restriction of write_lib usage in Design Compiler and IC Compiler. Also, Solvnet article 030453 about on-the-fly PG library update in ICC 2010.03 updated training.

Feedback

### What Next

Use enable_write_lib_mode or use write_lib in lc_shell or consult Synopsys support if write_lib is needed in icc_shell or dc_shell or de_shell.

---

## UIL-92

(error) write_lib mode cannot be enabled since a library is found to be already existing in memory.

### Description

Unable to enable write_lib mode for the tool. Since,a library is found to be already existing in memory. This message informs that enable_write_lib_mode command failed.

### What Next

To enable write_lib mode, make sure no library is loaded.

---

## UIL-93

(warning) This %s session is for library operations only. You should not perform optimization on the design. Please exit when you are finished with the library operation.

### Description

It is recommended to use lc_shell to perform library operation. Please refer Solvnet article 037767 on restriction of write_lib usage in Design Compiler and IC Compiler. Also, Solvnet article 030453 about on-the-fly PG library update in ICC 2010.03 updated training.

---

## UIL-94

(Error) Read the JCR file failed.

### Description

The message is given if read the JCR file failed. The reasons are list as below: 1) JCR file is not found 2) JCR information is not found in file 3) Invalid data in the file a.run status cannot be negative b.start time cannot be earlier than the end time c.number of files cannot be negative d.warning as error is a boolean value - it can be eitehr 0 or 1 e.number of threads cannot be negative or very large number f.number of cores cannot be negative

### What Next

If the error occurs, user need to update the JCR file.

Feedback

### Examples

```
Error: Read the JCR file failed. (UIL-94)
```

---

## UIL-95

(Error) Store the JCR failed.

### Description

The message is given if store the JCR file failed.

### What Next

If the error occurs, user need to update the JCR file.

### Examples

```
Error: Store the JCR file failed. (UIL-95)
```

---

## UIL-96

(Error) No jcr info can be reported.

### Description

The message is given if the option '-jcr' is attach to the command "report_lib", but no jcr info is stored in the report db.

### What Next

If the error occurs, user need to delete the option 'jcr' or re-generate a .db with jcr info.

### Examples

```
Error: No jcr info can be reported. (UIL-96)
```

---

## UIL-99

(information) Message '%s' will be changed from Warning to Error starting from '%s' release.

### Description

This message is issued at the end of a *read_lib* command. The reported "Warning" ID will be upgraded to an "Error" in the furture release. User should fix their library in this period of time, otherwise the library won't be complied.

Feedback

### What Next

Search this message ID in the screener log file, and fix all these "Warnings" in this library.

### Examples

```
Information: Message 'LBDB-993' will be changed from Warning to Error
 starting from '2016.12' release. (UIL-99)
```

---

## UIL-100

(error) The command is not enabled, it's support in advanced tcl mode only.

### Description

This command is supported in Library Compiler advanced tcl mode only.

### What Next

Check with Synopsys Library Compiler support team, to know how to enable the advanced tcl mode.

---

## UIL-101

(Error) %s objects from '%s' were of the %scorrect class.

### Description

Some commands do not allow heterogeneous collections as argument. The collection contained some objects that were of a class which is not accepted by the command. The message will indicate whether some objects or no objects were accepted by the command.

### What Next

Please make sure the command was applied to the objects which were expected.

---

## UIL-102

(warning) No libraries at all in memory.

### Description

The message is given if Library Compiler have not read in a library successfully at all.

### What Next

If the warning occurs, user need to read in a valid library.

Feedback

### Examples

```
Warning: No libraris at all in memory. (UIL-102)
```

### See Also

- read_lib
- read_db

---

## UIL-103

(error) Can't find %s '%s'.

### Description

The object of the specified type and name could not be found.

### What Next

Check if Librariy Compiler has read in the specified objects.

### Examples

```
Error: Can't find library 'z0'. (UIL-103)
```

### See Also

- read_lib
- read_db

---

## UIL-104

(error) Cannot get %s '%s' in library '%s' due to lack of required library_features value.

### Description

The object/attribute of the specified type and name could not be accessed, because the library_features in this library has no required value.

library_features lets other Synopsys products use the command features that you specify as attribute values. Related values of library_features are: report_delay_calculation, report_power_calculation, report_noise_calculation, report_user_data

Missing any of the value in library_features will make those related objects/attributes inaccessible.

It has no impact if the library is read from ASCII file.

Feedback

### What Next

Add required value to library_features in the original liberty file, or consult library provider.

### Examples

```
Error: Cannot get object 'cell_rise' in library test due to lack of
 required library_features value. (UIL-104)
```

### See Also

- read_lib
- read_db

---

## UIL-110

(error) Can't find %s '%s'.

### Description

The object of the specified type could not be found.

### What Next

Check the man page for the current command.

---

## UIL-111

(error) Attribute '%s' can't be %s on this %s with this command.

### Description

This error message is issued by *set_attribute*.

---

## UIL-112

(error) The '%s' attribute of a %s cannot be set with this command.

### Description

This error message is issued by *set_attribute*.

---

## UIL-113

(error) '%s' doesn't specify a unique library\n \tPlease use complete specification: full_file_name:library_name

Feedback

**Description**

This error is generated when there are more than one library who have the same library_name in memory.

---

## UIL-114

(error) Cannot read file '%s'.

**Description**

This error is generated when you try to read a file which is protected or does not exist.

**What Next**

Check and correct search_path, then reinvoke the read command.

---

## UIL-115

(Error) For pattern '%s', %s.

**Description**

A problem has occured while trying to compile the regular expression pattern shown.

**What Next**

Review the description in the man page for regexp to identify and correct the problem. Make sure that you intended the pattern to be a regular expression instead of a simple string match. A common mistake is to mix up the use of the wildcard '*' in string match with the corresponding regular expression '.*'. Also, remember that in regular expressions, the square brackets '[', ']' by default enclose a range of characters, and must be escaped with a backslash to be treated as regular characters.

---

## UIL-116

(error) In advanced tcl mode, the input library objects can only\n \tbe specified by collections. It doesn't accept library object name(string) as input.

**Description**

Only collection type data is allowed under advanced tcl mode only.

**What Next**

Check with Synopsys Library Compiler support team, to know how to enable the advanced tcl mode.

Feedback

## UIL-117

(Error) . The specified %s is not a user defined %s.

**Description**

The attribute name(object class type) is not user defined.

**What Next**

Remove the -user_defined_data option or change the attribute name(object class type).

## UIL-118

(warning) Process label '%s' from command line overwrites value '%s' from Liberty source

**Description**

In the library Compiler, you used *read_db* or *read_lib* to read a logical library source file. The source file already had a process label specified on the default operating conditions, and the value you specified on the command line differs from the source file.

**What Next**

Ensure that the process label you are using is correct.

## UIL-119

(error) Failed to update process_label for library %s!

**Description**

This error indicates that the set_process_label failed to set process_lable attribute on default operating_conditions group, it could be:

(1) The library is not read in successfully. or (2) There is no default operating_conditions group.

**What Next**

Please make sure library is loaded successfully and source file is correct

## UIL-200

(warning) The following cells do not have FRAM view:\n { %s}

Feedback

### Description

This message is for missing frame cells in physical library when write_physical_lib. In this case, if the library contains partial frames, for example: 10 cells have design view, but only 6 have frame, the library can still be written out.

### What Next

Use create_frame to create FRAM view for the cells which do not have FRAM view, and then rerun write_physical_lib.

### See Also

- create_frame

---

## UIL-201

(error) None of the cells have FRAM view!

### Description

This message is for missing all frame cells in physical library when write_physical_lib. In this case, write_physical_lib will error out and no disk file will be written.

### What Next

Use create_frame to create FRAM view for all the cells which do not have FRAM, and then rerun write_physical_lib.

### See Also

- create_frame

---

## UIL-210

(Error) The fusion_lib opened, please use %s to %s library.

### Description

This message indicates if there is fusion_lib library being opened in lc_shell. Before closing the currently opened fusion_lib library, user can only edit the library using fusion_lib comands.

### What Next

Please close the currently opened fusion_lib library, or use fusion_lib commands to edit the currently opened fusion_lib library.

Feedback

## UIL-211

(Warning) The %s set on command %s can only affect DB loaded after the command.

**Description**

If user uses this command set_fusion_lib_process_label when any fusion library is opened in memory, this warning message will be issued out that only the db loaded after this command will be affected.

**What Next**

Please use command set_fusion_lib_process_label before open_fusion_lib/ create_fusion_lib/compile_fusion_lib.

## UIL-212

(Error) Command '%s' can not be used in Physical Library mode.

**Description**

This message indicates if there is physical library being opened in lc_shell. Before closing the currently opened physical library, user can not use the command. for example, read_db cannot be used during create_physical_lib/open_physical_lib and close_physical_lib.

**What Next**

Please close the currently opened physical library.

## UIL-213

(Error) Command '%s' can not be used outside fusion library session!

**Description**

This message indicates if there is no fusion_lib library being opened in lc_shell. Customer can only use the command after open a fusion_lib library.

**What Next**

Please open a fusion_lib library.

## UIL-214

(Error) The option '%s' set on command '%s' can only work with app option '%s 'set to '%s'.

Feedback

### Description

This message indicates the command is used outside of fusion library virtual frame flow. Customer need to set the required app option to true to enable the feature.

### What Next

Please add "set_app_options -name fusion_lib.create_missing_macro_frame -value true" before the command.

---

## UIL-215

(Warning) There is logical library in memory, please use "remove_lib -all" to remove all.

### Description

This message indicates there is logical library opened when entering fusion lib session by using command like create_fusion_lib, compile_fusion_lib, open_fusion_lib. This will not be allowed in the future.

### What Next

Please use "remove_lib -all" to remove all logical libraries before create/open a fusion library.

---

## UIL-550

(information) The "%s" variable(%.5g) will be used in LBDB-550 check

### Description

This message indicating one of the 4 global float global variables was defined: - lc_lvf_mean_shift_threshold#if abs(mean_shift)<lc_lvf_mean_shift_threshold, then any mean_shift related checks will be skipped - lc_lvf_skewness_threshold# if abs(skewness)<lc_lvf_skewness_threshold, then any skewness related checks will be skipped - lc_lvf_sigma_threshold#if abs(sigma_early-sigma_late)<lc_lvf_sigma_threshold, then any sigma related checks will be skipped - lc_lvf_normalized_skewness_threshold# if abs(skewness/std_dev)^3)<lc_lvf_normalized_skewness_threshold, then any skewness related checks will be skipped

Effect on 3 rules: If either lc_lvf_mean_shift_threshold or lc_lvf_skewness_threshold or lc_lvf_normalized_skewness_threshold defined and satisfied, skip Rule 1 check (Rule 1) mean_shift * skewness < 0 If either lc_lvf_skewness_threshold or lc_lvf_normalized_skewness_threshold or lc_lvf_sigma_threshold defined and satisfied, skip Rule 2 check (Rule 2) skewness * (sigma_late – simga_early) < 0 If lc_lvf_sigma_threshold defined and satisfied, skip Rule 3 check (Rule 3) (std_dev – sigma_early) * (std_dev – sigma_late) > 0

Feedback

**What Next**

No action required.

---

## UIL-551

(Error) Option '%s' cannot be empty.

**Description**

Value specified for the option is empty. Non empty value is required.

**What Next**

Specify non-empty value.

---

## UIL-552

(Error) Options '%s' and '%s' cannot have same value.

**Description**

Values specified for the options are same. Different values are required.

**What Next**

Specify different values for the two options.

---

## UIL-553

(Error) Failed to rename rail: %s.

**Description**

Indicates rename rail failed with given reason.

---

# UIM

---

## UIM-001

(warning) Filter expression has %d characters, which exceeds the maximum of %d characters.

Feedback

**Description**

The command is not accepted because the filter expression exceeds the maximum length supported by the tool. Very long filter expressions can also cause long runtime for the command.

**What Next**

Break the command into multiple separate commands, using a smaller filter for the get_ command, and multiple *filter_collection* commands to obtain the final desired collection of objects.

---

## UIM-002

(error) Invalid format string '%s'.

**Description**

The format string does not match the available values. For example, using "%s" as the format for a floating-point value.

**What Next**

Specify a format string appropriate for this command.

---

## UIM-003

(Error) Found %d objects but expected %d.

**Description**

A collection command was entered with the *-expect* option. The number of matching objects is not equal to the expected number.

**What Next**

Use the collection command without *-expect* to determine which objects did match.

---

## UIM-004

(Error) Found %d objects but expected at least %d.

**Description**

A collection command was entered with the *-expect_at_least* option. The number of matching objects is less than the minimum expected number.

Feedback

**What Next**

Use the collection command without *-expect_at_least* to determine which objects did match.

---

## UIM-005

(warning) Application option '%s' is not supported

**Description**

This application option is not yet supported in this tool. Setting this option will have no effect.

**What Next**

Determine if there is another way to achieve the same effect.

---

## UIM-006

(error) Application option '%s' cannot be specified on a design

**Description**

This application option is only supported for global scope. Not all application options can be specified on a design.

**What Next**

Use "set_app_options" without "-design" option when modifying this option to refer to the global scope. Note that global app options will affect all designs and are not persistent.

---

## UIM-007

(error) Cannot modify read-only application option '%s'.

**Description**

This application option is read-only. You cannot change its value.

**What Next**

Some application options can be set only in the .synopsys_icc2.setup file, and become read-only after the file has been read. Determine if that is the case for this option.

---

## UIM-008

(error) Invalid column specification '%s':\n %s

Feedback

**Description**

The column specification for a tabular report is not valid. It must be one of the following: a valid column name such as "area", a valid column name and width such as "area:10", or a valid column name, width and number of significant digits such as "area:10.4".

The specified column name must be one of the valid choices for this report. The optional column width must be between 1 and a maximum value (currently 10000). The significant digits must be between 1 and 13, and must be less than the column width.

**What Next**

Enter a valid column specification.

---

## UIM-009

(error) Application option '%s' must be specified with a %s unit.

**Description**

This application option is a typed value and must be specified with a unit. It is not allowed to specify its value without a unit.

**What Next**

Specify a correct unit with the option value. For example, "20ps" for time values, "0.1um" for lengths, etc.

---

## UIM-010

(error) '%s' is not a valid report name for '%s'.\n %s

**Description**

The command is used to configure certain reports. The report name given is not one of the reports that is configurable by the specified command.

**What Next**

Enter a valid report name.

---

## UIM-011

(error) Command '%s' is not available in this shell.

**Description**

The command is not available in the shell being used. The command will be ignored.

Feedback

**What Next**

Check the command name and the shell you are using.

---

## UIM-012

(error) Command '%s' option '%s' is not available in this shell.

**Description**

The command option is not available in the shell being used. The command will be ignored.

**What Next**

Check the command option name and the shell you are using.

---

## UIM-013

(error) Container Technology doesnot support 'rsh'.

**Description**

The specified submit command(-submit_command) or submit protocol(-submit_protocol) used in the command is not a supported type for the container Technology. Currently 'rsh' is not supported in container technology.

**What Next**

Set a valid submit command or submit protocol for Container Technology.

---

## UIM-014

(warning) Container Technology doesnot support 'rsh', 'ssh' will be used intead.

**Description**

The specified submit command(-submit_command) or submit protocol(-submit_protocol) used in the command is not a supported type for the container Technology. Currently 'rsh' is not supported in container technology. Instead 'ssh' will be used.

**What Next**

Set a valid submit command or submit protocol for Container Technology.Otherwise, 'ssh' will be used.

Feedback

### UIM-015

(warning) Named host options are not available in this shell.

**Description**

The *-name* argument of the *set_host_options* command is not available in the shell being used. The argument will be ignored.

**What Next**

Check the shell you are using.

## UIT

### UIT-2

(warning) Unrecognized compaction mode ignored.

**Description**

You receive this message because you have entered an incorrect value for the *-compaction_effort* option. Valid values for this option are *low*, *medium*, or *high*. Or, you can use the *-no_compaction* option.

The *create_test_patterns* command will continue to run with a default value of *low*.

**What Next**

If you are willing to accept the results of low effort compaction, no action is required on your part. However, using low effort compaction typically results in a higher vector count than is a result of using medium or high effort compaction.

If you want to use *-compaction_effort medium* or *-compaction_effort high*, rerun the *create_test_patterns* command with the appropriate option.

### UIT-3

(error) Unrecognized test program format or missing license key.

**Description**

You receive this message if *write_test* does not recognize the format you specified with *write_test -format*, or if you do not have a required license key. *write_test* recognizes only formats that are contained in the variable *write_test_formats*; by default, *write_test_formats* contains the formats *synopsys*, *tds*, *wgl*, *verilog*, and *vhdl*. If you want

Feedback

to use a different format (for example, tdl91), you must enter it into *write_test_formats* so that *write_test* will recognize it. In addition, the tdl91 format requires a CTV key.

**What Next**

If you receive this message, do the following:

1. Within *dc_shell*, list the *write_test_formats* variable to see whether it contains the format you want to use.

```
dc_shell> list write_test_formats
    write_test_formats = {"synopsys", "tssi_ascii", "tds", "verilog",
 "vhdl", "wgl"}
```

1. If the required format (for example, tdl91) is not contained in the variable *write_test_formats*, add it, as follows.

```
dc_shell> write_test_formats = write_test_formats + tdl91
```

1. Ensure that you have the correct key (in this case, the CTV key).
2. Re-issue the *write_test* command and specify the required format.

```
dc_shell> write_test -format tdl91
```

---

## UIT-4

(warning) You have asked for scan replacement, but attributes show that the design already has scan circuitry. Your request is ignored.

**Description**

This message tells you that you have asked DFT Compiler to replace non-scan cells with scan cells. Design attributes tell DFT Compiler that this process has already occurred. Your request is ignored.

**What Next**

To eliminate the warning, change command options so that you do not ask scan insertion to do scan replacement.

---

## UIT-5

(warning) No existing test circuitry to route, scan will be inserted.

**Description**

You receive this message if you run *insert_dft* on a design with scan replacement disabled and scan routing enabled, but where attributes on the design show that the design is not

Feedback

scan replaced. For example, you receive this message if you enter the following sequence of commands:

```
read_file -format verilog rtl.v
compile
set_scan_configuration -replace false -route true
insert_dft
```

The message informs you that *insert_dft* is overriding your specification to not scan replace the design since *insert_dft* cannot route a design that is not scan replaced.

You receive this message if you read in a design from an ASCII format (Verilog or VHDL) that you have compiled with test-ready compile (*compile -scan*) and have run *insert_dft* with scan replacement disabled and scan routing enabled. Following is another example of a command sequence that will result in the return of this error message:

```
read rtl.v -format verilog
current_design = top
compile -scan
write -hierarchy -format verilog -out design_tr.v
remove_design -designs
read -format verilog design_tr.v
current_design top
set_scan_configuration -replace false -route true
insert_dft
```

After invoking *insert_dft*, you receive the following message:

```
Warning:  No existing test circuitry to route, scan will be inserted.
Loading desing 'top'
Using test design rule information from previous dft_drc run
Architecting Scan Chains
Inserting Scan Cells
Routing Global Signals
Mapping New Logic
Transferring design 'top' to database 'top.db'
```

This is an invalid flow. You should only save and read the test-ready designs from .ddc format. The scan configuration is correct for a test-ready design that you have saved in .ddc format because the .ddc format includes attributes to indicate to the *insert_dft* command that the design is scan replaced. However, these attributes are missing from the ASCII format.

**What Next**

Correct your script to avoid running the *insert_dft* command with replacement disabled but routing enabled on a design that does not contain the attributes to indicate that the design is scan replaced.

If you intended to perform scan replacement on the design, no action is required on your part and you can use the resulting design.

Feedback

If your design was already scan replaced but did not have the necessary attributes, the *insert_dft* command has built valid scan chains (verify this with *dft_drc*). However, this is not an optimum flow for your design and your design may not be optimum for area and timing. If your design does not meet your area and timing constraints, correct your compile scripts to save the test-ready design in .ddc format and rerun both compilation and scan insertion.

---

## UIT-6

(error) Cannot load test vector database file.

### Description

The test vector database file cannot be loaded, because of one or more of these errors:

```
wrong search path for the file
        nonexistent test vector database file
        misspelled test vector database filename
        the file is write-protected
        the file has wrong permissions set
        the file contains no vectors
```

### What Next

Make sure that the file exists, has the correct search path, correct spelling, appropriate permissions, and contains test vectors.

---

## UIT-8

(warning) Design has no scan path. Generated vectors will not be saved.

### Description

You receive this message when attributes indicate that a design has no scan chain and the scan style is not set to combinational.

Under these circumstances, DFT Compiler performs a "what if" analysis to predict the coverage if you were to insert scan chains. Without scan chains, the vectors that are generated are meaningless and are not saved.

### What Next

If you wish only to check the coverage that DFT Compiler can achieve and do not wish to save the vectors, no action is required on your part. However, you can check what the achievable coverage is more quickly by using the *-dft* option of *create_test_patterns*.

If your design has an existing scan path, establish attributes that indicate to DFT Compiler that the scan chain exists. To do this, annotate test ports using *set_dft_signal*. Then declare the existing scan using the command *set_scan_configuration -existing_scan true*

Feedback

and run *dft_drc*. For example, for a circuit with an existing multiplexed flip-flop style scan chain and test ports TEST_SI_PORT, TEST_SE_PORT, and TEST_SO_PORT, do the following:

1. Issue the command *set_dft_signal -type ScanDataIn -port TEST_SI_PORT*.
2. Issue the command *set_dft_signal -type ScanEnable -port TEST_SE_PORT*.
3. Issue the command *set_dft_signal -type ScanDataOut -port TEST_SO_PORT*.
4. Issue the command *set_scan_configuration -style multiplexed_flip_flop*.
5. Issue the command *set_scan_onfiguration -existing_scan true*.
6. Run *dft_drc*.
7. Run *create_test_patterns*.

If you have a combinational design and wish to save the ATPG vectors, you must set the combinational scan style using the *set_scan_configuration -style combinational* command.

---

## UIT-9

(error) Test clock period of %.2f on port '%s' is inconsistent with period of %.2f specified in the test protocol.

**Description**

The test clock period on the port is inconsistent with the period you have specified in the test protocol.

**What Next**

Check that your test clock period specification is consistent with your test protocol.

---

## UIT-10

(error) internal failure, write_test vector formatter (stran) failed.

**Description**

Attempt to format vector failed. This may be caused by improperly installed formatter executable, bin_path which points to the formatter is improperly specified, corrupted formatter executable, formatter executable has been tampered with, not enough disc space to write vectors, formatter run time execution error etc.

**What Next**

Make sure that the formatter executable is properly installed, that your bin_path is properly set, and that there is sufficient disc space to generate vectors.

Feedback

## UIT-11

(error) internal failure, write_test vector formatter (stran) failed. (%d).

**Description**

Vector formatting process was abruptly terminated. Possible causes are: 1. Not enough disc space to continue writing vectors. 2. Formatter executable was accidentally deleted by another process. 3. Does not have write permission to either write to the directory, or to overwrite an existing vector file. 4. Temporary network problems.

**What Next**

Make sure that sufficient disc space is available when generating vectors, all the right permissions are set, then reinvoke write_test.

## UIT-13

(Information) The variable atpg_test_asynchronous_pins is obsolete. It has no effect.

**Description**

In release 1999.10, the variable atpg_test_asynchronous_pins was made obsolete. The create_test_pattern command now always generates tests for faults on asynchronous pins.

**What Next**

No action required.

## UIT-14

(error) internal error, key error for write_test formatter (stran).

**Description**

Intermediate (SIF) file used as input to the formatter executable contained illegal key. The intermediate file may be corrupted or have been manually tampered with.

**What Next**

Reinvoke write_test command

## UIT-15

(error) internal error, write_test formatter (stran) can not generate '%s' format.

Feedback

**Description**

Unsupported test vector format indicated in the intermediate (SIF) input file for the write_test formatter executable. The file may be corrupted or may have been manually tampered with.

**What Next**

Reinvoke write_test command

---

## UIT-16

(error) No scan chains extracted for design - patterns cannot be formatted.

**Description**

Formatting scan test patterns into a set of manufacturing test vectors requires information about the scan chains within the design. This information includes the cells in each chain, the order in which they are connected, and scan chain inversions.

*DFT Compiler* automatically extracts scan chain information from a design when the *dft_drc* or *create_test_patterns* commands are executed. Execution of these two commands stores a copy of the design in *db* format in memory. If the design is saved in *db* format, scan chain information is saved with the design.

If the design is not saved in *db* format, the scan chain information is not available and the *write_test* command in unable to format the patterns. Typically this happens when a design is read in as a netlist and an existing pattern database file is used as input to the *write_test* command.

**What Next**

Run the *dft_drc* command to automatically extract the details of the design scan chains; use the *report_test -scan* command to verify that this information has been extracted. The extracted scan chain information is used by the *write_test* command to format test patterns.

---

## UIT-19

(error) No test protocol exists for design '%s'.

**Description**

A test protocol is required for the successful completion of the current command. But no test protocol was found for the specified design.

**What Next**

Install a test protocol.

Feedback

Test protocols can be user-specified or automatically inferred. To specify a test protocol, use the commands read_test_protocol or read_init_protocol. To make DFT Compiler infer a test protocol, use the command dft_drc.

---

## UIT-20

(error) Cannot open output test protocol file '%s'.

**Description**

You receive this message if you execute the *write_test_protocol* command and did not succeed.

**What Next**

Check if the destination directory has write permission.

---

## UIT-21

(warning) Unrecognized backtrack effort '%s' ignored.

**Description**

You receive this message when you have entered an incorrect value for the *-backtrack_effort* option of *create_test_patterns*. Valid values for this option are *low*, *medium*, and *high*.

The *create_test_patterns* command will continue to run with a default value of *low*.

**What Next**

If you are willing to accept the results of low backtrack effort, no action is required on your part. However, some circuits running *create_test_patterns* with a low backtrack effort may encounter aborted faults when *create_test_patterns* is unable to generate patterns without exceeding the backtrack limit.

If the results of *create_test_patterns* do not meet your fault coverage requirements and there are many aborted faults, re-execute *create_test_patterns* with a backtrack effort of *medium* or *high*.

---

## UIT-22

(warning) Only %d%% of faults were considered in ATPG run.

**Description**

You receive this message if you use *restore_test* or *write_test* on a vdb file generated by *create_test_patterns -sample*.

Feedback

This message reminds you that the vectors were generated only for a sample of faults in the design.

**What Next**

If you wish to generate vectors for all faults, you need to either regenerate the vectors from scratch using *create_test_patterns*, or use the same vdb file again as a starting point for ATPG by using the *-input* option of *create_test_patterns*.

---

## UIT-23

(error) No test protocol defined for design - patterns cannot be formatted.

**Description**

Formatting scan test patterns into a set of manufacturing test vectors is controlled by the test protocol defined for a design. The protocol specifies the steps of the scan test sequence (scan-in, parallel measure/capture, and scan-out).

The *dft_drc* and *create_test_patterns* commands automatically infers a default protocol for a design. If the design is stored in *db* format, this protocol is saved with the design. Custom protocols may be necessary for designs that require preconditioning vectors or designs that employ nonstandard scan test sequences. A custom protocol can be defined for a design and specified using the *read_test_protocol* command.

In this case, this information is not available, and the *write_test* command in unable to format the patterns. Typically this happens when a design is read in as a netlist and an existing pattern database file is used as input to the *write_test* command.

**What Next**

Run the *dft_drc* command to automatically infer a default protocol for the design. If a custom protocol is read in using the *read_test_protocol* command, execute *dft_drc* to extract detail's of the design's scan chains.

*Note:* If you create a protocol for a design, make sure that it is the same protocol used when existing pattern database files were created. If the protocols are different, the *write_test* command fails because the scan test patterns are inconsistent with the protocol. An example of an inconsistency is the use of different scan cells. Ideally, the design and its protocol should always be saved in *db* format after execution of the *create_test_patterns* command.

---

## UIT-24

(warning) vhdlout_single_bit="%s" not supported; assuming vhdlout_single_bit="VECTOR".

Feedback

**Description**

The *write_test* command issues this warning if you are writing out your vectors in VHDL format and the *vhdlout_single_bit* variable is not set to *VECTOR* or *BIT*. The warning message indicates which value the*vhdlout_single_bit* variable is set to.

The *vhdlout_single_bit* variable defines whether bussed ports are written as individual single bits in the test pattern. The *write_test* command only supports VECTOR or BIT values for this variable. However, the default value for this variable is *USER*. If you use the value *USER*, the *write_test* commmand will issue this message and automatically change the *vhdlout_single_bit* variable to *VECTOR*. Your vectors will be written out with the ports bussed.

**What Next**

To avoid this violation, set the *vhdlout_single_bit* variable for *VECTOR* or *BIT* before issuing the *write_test* command.

If you have used the value *USER* and wish to write out your vectors in bit-blasted fashion, you will need to set the *vhdlout_single_bit* variable to *BIT* and re-execute the *write_test* command.

If you have used the value *USER* and wish to write out your vectors in bussed fashion, then no action is required on your part.

---

## UIT-26

(error) Strobe value is required to be less than period value.

**Description**

Your strobe value has exceeded the period value.

**What Next**

Change your strobe value.

---

## UIT-27

(error) %s is a serial-only vector format.

**Description**

Invalid vectors are generated if you invoke *write_test* with the *-parallel* option for serial-only vector formats. When such an error occurs, this error message displays.

**What Next**

for serial-only vector formats, invoke *write_test* without the *-parallel* option.

Feedback

## UIT-28

(error) Current test protocol cannot be used with a parallel load format.

### Description

Currently the only protocols inferred by dft_drc can be used with a parallel load format. Therefore any custom test protocols cannot use this format due to the fact that it is difficult to determine which bits correspond to which registers. This error message is displayed when such an error occurs. This error message will also be issued when it does not make sense to write out vectors in parallel load format, such as trying to write out parallel vectors for a combinational design or for a design which contains no scan element.

### What Next

Either let dft_drc infer a test protocol to use a parallel load format or do not use the parallel load format.

## UIT-29

(error) No nets have global tracing enabled in design '%s'.

### Description

*BACKGROUND INFORMATION*

Using the *dft_drc* command, DFT Compiler design rule checking (DRC) is performed by doing a symbolic simulation of the test protocol for a design.

If the data applied at the scan in ports is successfully and predictably loaded into the scan chain, the cells are scan controllable. If data can be captured into the scan cells during the parallel capture cycle, and successfully and predictably unloaded, the cells are scan observable. When sequential cells are neither fully scannable (both scan controllable and scan observable) nor valid nonscan cells (for partial scan designs), fault coverage suffers.

DFT Compiler provides a net tracing capability which allows you to view the results of the symbolic simulation to help in the identification and correction of test protocol problems. DFT Compiler displays the logic values of the nets as information messages. All output from the design rule checker, including information messages, is linked to the design schematic. You can debug your protocol by selecting nets with certain values, then viewing the corresponding section in the schematic through the Design Analyzer.

Net tracing is enabled in either of two fashions. If *trace_nets statements* are added to vector or stream groups within a custom test protocol supplied by the designer, they enable tracing within a *local* scope limited to that vector or stream group. Alternatively, by specifying nets using the *trace_nets command*, nets can be traced within the *global* scope of the entire current test protocol. The *untrace_nets* command only acts on nets specified by the *trace_nets* command.

Feedback

*MANIFESTATION*

This error message is generated when the *untrace_nets* command has been invoked when there are *no* nets in the current design which have *global* tracing enabled as a result of a previous *trace_nets* command.

**What Next**

This is a benign error message indicating that you have asked that tracing be disabled on nets for which *global* tracing is not enabled. If you are still seeing net tracing for any nets, it must be the result of *local trace_nets statements* in your custom protocol. Remove those statements from the custom protocol.

---

## UIT-30

(error) Global tracing not enabled for net '%s' in design '%s'.

**Description**

*BACKGROUND INFORMATION*

Using the *dft_drc* command, DFT Compiler design rule checking (DRC) is performed by doing a symbolic simulation of the test protocol for a design.

If the data applied at the scan in ports is successfully and predictably loaded into the scan chain, the cells are scan controllable. If data can be captured into the scan cells during the parallel capture cycle, and successfully and predictably unloaded, the cells are scan observable. When sequential cells are neither fully scannable (both scan controllable and scan observable) nor valid nonscan cells (for partial scan designs), fault coverage suffers.

DFT Compiler provides a net tracing capability which allows you to view the results of the symbolic simulation to help in the identification and correction of test protocol problems. DFT Compiler displays the logic values of the nets as information messages. All output from the design rule checker, including information messages, is linked to the design schematic. You can debug your protocol by selecting nets with certain values, then viewing the corresponding section in the schematic through the Design Analyzer.

Net tracing is enabled in either of two fashions. If *trace_nets statements* are added to vector or stream groups within a custom test protocol supplied by the designer, they enable tracing within a *local* scope limited to that vector or stream group. Alternatively, by specifying nets using the *trace_nets command*, nets can be traced within the *global* scope of the entire current test protocol. The *untrace_nets* command only acts on nets specified by the *trace_nets* command.

*MANIFESTATION*

This error message is generated when a net specified by the *untrace_nets* command does not currently have *global* tracing enabled as a result of a previous *trace_nets* command.

Feedback

If an asterisk (*) is encountered within a net name passed to *untrace_nets*, the set of all nets in the design containing the associated partial net name specified will be checked for tracing. If no net within the set was found to have tracing enabled, this error message is invoked for *all* the nets in the set.

**What Next**

This is a benign error message indicating that you have asked that tracing be disabled on a net for which *global* tracing is not enabled. If you are still seeing net tracing for this net, it must be the result of a *local trace_nets statements* in your custom protocol. Remove that statement from the custom protocol.

If this error message is being produced multiple times it probably indicates that you have made imprecise use of a wildcard asterisk (*) when specifying your net. Check your use of asterisks within your list of net names passed to the *untrace_nets* command.

---

## UIT-31

(error) Cannot find vector file '%s' written by TestSim.

**Description**

This error message will appear when you are trying to perform the *write_test* command on a test program created by a fault simulation run. During a fault simulation run, two *.vdb* files are created : *<test_program_name>.vdb* and *<test_program_name>.testsim.vdb*. The *write_test* command needs both of these files to write out the output vector file.

**What Next**

Confirm that you have not accidentally deleted this file. If you have deleted this file, you will have to re-run fault simulation.

---

## UIT-32

(error) Bad protocol format '%s'.

**Description**

You receive this message if you specify a test protocol format other than stil or tpf; these are the only formats allowed by *write_test_protocol*. By default, *write_test_protocol* uses tpf format.

**What Next**

Re-execute *write_test_protocol* and specify either stil or tpf as the protocol format. Alternatively, if you want to use the default format (tpf), you can execute *write_test_protocol* with no format specification.

Feedback

## UIT-33

(error) Bad test model format '%s'.

### Description

You receive this message if you specify a test model format other than ctl; this is the only format allowed by *write_test_model*.

### What Next

Re-execute *write_test_model* and specify ctl as the test model format, or do not specify any format.

## UIT-34

(warning) Redundant TCK period specification `%f' ignored.\n \tExisting TCK period ` %f' (frequency `%e') retained.

### Description

This warning message is generated when *insert_jtag -tck_period* is invoked on a design with an existing boundary scan Test Access Port (TAP) TCK port where a clock has been previously specified at this port. The period and resulting frequency of this clock is reported in the message. In this case, DFT Compiler ignores the new specification and retains the old specification.

### What Next

If the old specification (probably generated using the *create_clock* command) is unsatisfactory, either remove the clock attribute on the TAP TCK port and invoke *insert_jtag -tck_period <correct_period>*, or change the existing clock period specification and invoke *insert_jtag* without the *-tck_period* option.

## UIT-35

(error) Physical dft preview doesn't support the shadow logic client.

### Description

You receive this message if you've specifed the shadow logic DFT client to be executed during DFT logic preview with the command: set_dft_configuration -order {wrapper} To perform physical dft preview, you have used the following commands: preview_dft -physcial Currently, physical dft preview doesn't support that client. This will prevent the completion of DFT logic previewing .

Feedback

**What Next**

Reset your DFT configuration: remove_dft_configuration Only set the Autofix client if you wish to use it as well as to perform physical dft preview. set_dft_configuration -order {autofix}. Proceed to DFT logic previewing.

---

## UIT-36

(Error) Test protocol already exists for design '%s'.

**Description**

A valid test protocol already exists in memory. It was either created by using create_test_protocol command or read by using read_test_protocol command.

**What Next**

You have to use remove_test_protocol command to avoid this message.

---

## UIT-37

(Warning) Test protocol that already exists for design '%s' is invalid.

**Description**

An invalid test protocol exists in memory. It was either created by using create_test_protocol command or read by using read_test_protocol command. This invalid test protocol will be removed and a new one will be created.

**What Next**

You can use remove_test_protocol command to avoid this message and read in a new protocol or create it from scratch.

---

## UIT-39

(error) The test_require attribute cannot be set on the three-state driver '%s'.

**Description**

DFT Compiler will not be able to account for the specified *test_require* on the three-state driver. The specification is ignored.

**What Next**

There are multiple ways to specify required values around a three-state bus: up-stream from the driverds, after the bus, or on the enables. In order to obtain the effect of a require on a single three-state driver, do the following. Identify the driver's input and enable pins.

Feedback

Manually insert buffers driving these pins. Set the desired test_require value on the driver of the data pin. Set a test_require value of 1 on the driver of the enable pin.

---

## UIT-41

(error) No implementation for component "%s" supplied.

**Description**

You must specify an implementation for the passed component type.

The implementation must be available in the jtag.db library. It may be a default implementation supplied with DFT Compiler, or a user supplied implementation added to the jtag.db.

Refer to the DFT Compiler reference manual for details of how to add custom components to the jtag.db

**What Next**

Re-execute the command, specifying an implementation type from those available in the jtag.db.

---

## UIT-42

(error) '%s' is not a valid value for %s option of the dft_drc command.

**Description**

This message tells you that you have given the *dft_drc* command invalid *-check_contention* or *-check_float* option arguments.

**What Next**

Repeat the *dft_drc* command using valid option arguments.

---

## UIT-43

(information) %s won't force conditioned bidirectionals.

**Description**

The default protocol inferred by DFT Compiler assumes that all bidirectional ports are turned in the same direction during scan shift. They can be turned inwards or outwards.

This message tells you that scan insertion does not insert logic to reconfigure ports that are turned in the opposite direction during scan shift.

Feedback

### What Next

Set "test_force_conditioned_bidir_pads" to "true" to change this behavior.

---

## UIT-44

(information) Assuming %s for combinational methodology.

### Description

This message tells you that DFT Compiler does not insert disabling logic when the test methodology is combinational.

### What Next

If you want to insert disabling logic, change the test methodology. To make the warning go away, ask for no disabling logic.

---

## UIT-45

(information) %s won't find the best scan-out pins.

### Description

This message tells you that scan insertion does not look for the best scan-out pins when it routes scan chains.

### What Next

Set "test_disable_find_best_scan_out" to "false" to change this behavior.

---

## UIT-46

(information) %s will create dedicated subdesign scan-out ports.

### Description

You receive this message because DFT Compiler does not look for existing connections and creates dedicated subdesign scan-out ports if no port has a *test_scan_out signal_type* attribute.

When connecting scan chains from subdesigns to parent designs, DFT Compiler first looks for subdesign ports that have *test_scan_out signal_type* attributes. DFT Compiler then checks to see whether an existing connection can be used. If nothing is found, DFT Compiler creates a dedicated subdesign scan-out port.

Feedback

### What Next

Set the *test_dedicated_subdesign_scan_outs* environment variable to *false* to change this behavior.

---

## UIT-47

(warning) Dedicated subdesign scan-out ports will be created for sub-designs when hierarchical isolation is specified. \n\tIgnoring hierarchical isolation if there are exsting dedicated subdesign scan-out ports.

### Description

You receive this message because DFT Compiler does not create dedicated subdesign scan-out ports when you also requested hierarchical isolation logic. The request for hierarchical isolation logic takes precedence. If the sub-designs already have dedicated scan-out ports hierarchical isolation request will not be valid.

When connecting scan chains from subdesigns to parent designs, DFT Compiler first looks for subdesign ports that have *test_scan_out signal_type* attributes. DFT Compiler then checks to see if an existing connection can be used. If it finds none, it creates a dedicated subdesign scan-out port.

You can set the *test_dedicated_subdesign_scan_outs* environment variable to *true* to direct DFT Compiler to ignore existing connections and create dedicated subdesign scan out ports.

### What Next

To obtain dedicated subdesign scan-outs, do not ask for hierarchical isolation logic. Set the *test_dedicated_subdesign_scan_outs* environment variable to *false* to eliminate the warning message.

---

## UIT-48

(warning) Scan insertion will not add clock gating logic.

### Description

Sequential ATPG assumes that valid nonscan cells in designs using multiplexed flip-flop scan styles retain their states during scan shift. To insert clock gating logic into your design and falidate this assumption, use the *-clock_gating* option of *set_scan_configuration*.

This message tells you that you decided not to insert clock gating logic. *dft_drc* violates nonscan cells that do not retain their states during scan shift, and *create_test_patterns* cannot use them to control or observe test vectors.

Feedback

**What Next**

Confirm that you do not want scan insertion to add clock gating logic.

---

## UIT-49

(warning) Scan style '%s' does not implement scan clock gating. Ignoring the set_scan_configuration -clock_gating command.

**Description**

Only the multiplexed_flip_flop scan style implements scan clock gating.

This message tells you that you asked DFT Compiler to implement scan clock gating, but have specified a scan style that is not a multiplexed_flip_flop. DFT Compiler is telling you that it is ignoring your *-clock_gating* option.

**What Next**

To get rid of the warning, remove the *-clock_gating* from the *set_scan_configuration* option list, or set the scan style to multiplexed_flip_flop.

---

## UIT-50

(warning) Test methodology '%s' does not implement scan clock gating. Ignoring the set_scan_configuration -clock_gating command.

**Description**

Only the partial scan test methodology implements scan clock gating.

This message tells you that you asked DFT Compiler to implement scan clock gating, but specified a test methodology that is not partial_scan. DFT Compiler is telling you that it is ignoring your *-clock_gating* option.

**What Next**

To get rid of the warning, remove the *-clock_gating* from the *set_scan_configuration* option list, or set the test methodology to partial_scan.

---

## UIT-51

(warning) Area-critical partial scan is not enabled. Ignoring the set_scan_configuration -area_critical true command.

Feedback

**Description**

Ultimately, DFT Compiler covers the entire scan spectrum. By default, DFT Compiler selects scan cells to maximize fault coverage, subject to both area and timing constraints. Tell DFT Compiler to ignore area constraints by setting a *set_scan_configuration -area_critical* option *false*, and tell it to ignore timing constraints by setting a *set_scan_configuration -timing_critical* option *false*.

The user model sees timing-critical partial scan as the first step to scan spectrum coverage. Tell DFT Compiler to maximize fault coverage subject to timing constraints, and ignore area constraints. Give *set_scan_configuration* an *-area_critical* option, and ask for timing-critical partial scan by giving it a mandatory *false* argument.

**What Next**

To get rid of the warning, remove the *-area_critical true* from the *set_scan_configuration* option list.

---

## UIT-52

(warning) Test methodology '%s' cannot not scan cells on timing critical paths. Ignoring the set_scan_configuration -area_critical command.

**Description**

Only the partial scan test methodology cannot scan cells on timing critical paths.

This message tells you that you asked DFT Compiler to implement not scan cells on timing critical paths, but specified a test methodology that is not partial_scan. DFT Compiler is telling you that it is ignoring your *-area_critical* option.

**What Next**

To get rid of the warning, remove the *-area_critical* from the *set_scan_configuration* option list or set the test methodology to partial_scan.

---

## UIT-53

(information) Enabling area critical partial scan.

**Description**

DFT Compiler can make scan cells non-scan to meet area constraints. Use this capability when you need to back off scan in a small percentage of cells to meet critical area constraints.

This message tells you that the capability is enabled.

Feedback

### What Next

Confirm that you want to use the capability. To tell the DFT Compiler that you do not want to use the capability, use *set_scan_configuration -area_critical false*.

---

## UIT-54

(Error) The format tpf is no longer supported.

### Description

You receive this error message because you invoked one of the following commands: read_init_protocol or read_test_protocol or write_test_protocol with the -format option set to tpf. The tpf format has been obsoleted and the only valid format is the stil format.

### What Next

While writing the test protocol, replace the tpf format by the stil format and reissue the command. While reading an initialization protocol or a test protocol, ensure that the protocol has the stil format, replace the tpf format by the stil format and reissue the command.

---

## UIT-55

(Error) All the scan signals have to be routed in the compression flow.

### Description

You receive this error message because the scan_signals option of the set_scan_configuration command has to be set to all for the scan compression feature.

### What Next

Set to all the scan signals for the set_scan_configuration command.

---

## UIT-56

(Error) Scan methodology must be multipexed_flip_flop and all the scan signals have to be routed in the logic BIST flow.

### Description

You receive this error message related to the set_scan_configuration command because the methodology must be set to multiplexed_flip_flop, the scan_signals option must be set to all and the route option must be set to true for the logic BIST flow.

Feedback

### What Next

Set to multiplexed_flip_flop the methodology, set to all the scan signalsand set to true the route for the set_scan_configuration command.

---

## UIT-85

(error) The 'compile' and 'compile_ultra' commands are disabled in the boundary-scan RTL generation flow.

### Description

The *compile* and *compile_ultra* commands are disabled in the boundary-scan RTL generation flow.

The RTL generation flow is enabled with the *-rtl enable* option of the *set_bsd_configuration* command. In this flow, use the *write_bsd_rtl* command to write out the RTL for the generated boundary-scan logic inserted in the top-level design.

You get this message even if you disable the RTL generation flow and attempt to use the *compile* or *compile_ultra* commands on the in-memory boundary-scan RTL.

To use the *compile* or *compile_ultra* commands to compile the boundary-scan design in the RTL generation flow, you must write out the boundary-scan RTL, remove the design in memory, then reread it and compile. For example,

```
insert_dft
remove_design CORE
write_bsd_rtl -format verilog -all -output TOP_bsd_rtl.v

remove_design -designs

analyze TOP_bsd_rtl.v
elaborate TOP
# also read in core logic, etc.
current_design TOP
link
compile
```

---

## UIT-86

(error) Write command disabled for BSDC RTL insertion flow. Instead use write_bsd_rtl command.

### Description

*write* command is disabled for BSDC RTL insertion flow. To write RTL output file, one should use *write_bsd_rtl* command.

Feedback

BSDC RTL flow is enabled using *-rtl enable* option of *set_bsd_configuration* command. In this flow *write_bsd_rtl* command can be used to write out the BSDC inserted RTL file for top level design. One can use *write* command in Netlist flow, during which *-rtl disable* is set. Netlist flow is the default flow.

### What Next

In RTL flow use *write_bsd_rtl* command in place of *write* command.

---

## UIT-87

(warning) Assignment of %s-only BSR cells to port `%s`\n\ \tis not compliant with the IEEE 1149.1 JTAG standard.

### Description

Unless the user requests a user-defined Boundary Scan Register (BSR) cell implementation using the *set_jtag_implementation* command, DFT Compiler selects default BSR cells from among the following 10 defined types:

```
Type      Default Name      BSR Cell Function

        BSRINBOTH       JTAG_BSRINBOTH  set & observe data input cell
        BSRINSET        JTAG_BSRINSET   set-only data input cell
        BSRINOBS        JTAG_BSRINOBS   observe-only data input cell
        BSRINCLKBOTH    JTAG_BSRINCLKBOTH       set & observe clock input
 cell
        BSRINCLKSET     JTAG_BSRINCLKSET        set-only clock input cell
        BSRINCLKOBS     JTAG_BSRINCLKOBS        observe-only clock input
 cell
        BSROUTBOTH      JTAG_BSROUTBOTH set & observe data output cell
        BSROUTSET       JTAG_BSROUTSET  set-only data output cell
        BSROUTOBS       JTAG_BSROUTOBS  observe-only data output cell
        BSRCTL  JTAG_BSRCTL     control cell
```

IEEE 1149.1 Standard rule 10.1.1 specifies legal boundary scan register cell types. Several of the 10 types listed above are not compliant with the standard. Nonetheless, DFT Compiler supports them in order to allow designers the greatest possible flexibility when using Programmable JTAG.

```
10.1.1(b) "For a unidirectional system input pin (clock or nonclock), a
boundary-scan register cell shall be connected between the system pin and
 the
on-chip system logic to allow the state of the system pin to be observed
 and,
optionally, for the state of the system logic to be controlled."
```

Thus, legal data and clock input BSR cell types for unidirectional system input pins are observe-only and both control and observe. BSRINSET and BSRINCLKSET are non-compliant types.

Feedback

**10.1.1(c)** "For 2-state and open-collector system output pins, a boundary-scan register cell shall be provided to allow the state of the system pin to be controlled and the state of the on-chip system logic output to be observed."

Thus, the legal output BSR cell type for system 2-state and open-collector output pins is both control and observe. BSROUTSET and BSROUTOBS are non-compliant types.

**10.1.1(d)** "For 3-state system output pins, boundary-scan register cells shall be provided to allow both the data value and the output drive state (active or inactive) to be controlled and for the corresponding system logic outputs to be observed."

Thus, the legal output BSR cell type for system 3-state output pins is both control and observe. BSROUTSET and BSROUTOBS are non-compliant types.

**10.1.1(e)** "For a bidirectional system pin, boundary-scan register cells shall be provided to allow the value and direction of data at the system pin to be controlled *or* observed and, where appropriate, for the corresponding system logic inputs to be controlled."

This is somewhat ambiguous. Test Compiler interprets this rule to indicate that as applied to bidirectional signals BSRINSET, BSROUTSET and BSROUTOBS are non-compliant types.

The types `*BSR*xxx*BOTH*' (control and observe) `*BSR*xxx*SET*' (control-only) and `*BSR*xxx*OBS*' (observe-only) differ. They correspond respectively to the three modes `both', `control' and `observe' specified with the *set_jtag_port_mode* command. When this command is invoked for one or more ports of the design, BSR cells for those ports will have BSR cells of the specified type associated with them.

If the specified type will result in a non-compliant BSR cell being synthesized for a port, this warning message is issued.

**What Next**

Determine whether non-compliant BSR cells can be tolerated in your design. If not, modify the port mode settings for the offending ports.

---

## UIT-88

(error) Data register `%s` pin of type `%s` not found.

Feedback

### Description

You receive this message because the specified data register pin is not recognized as a port at the top level of the core design.

As a designer customizing the JTAG chip interface, you may want the JTAG Test Access Port (TAP) to access core test structures that DFT Compiler cannot automatically recognize. For example, suppose you want to activate a RAM test using an embedded test data register. You must do the following:

1. Initiate the test.
2. Capture the result of the test in the data register.
3. Shift the test result out through *TDO*.

To perform this test using the JTAG TAP, you require:

- An activation signal enabled by the associated JTAG instruction. This signal enters the data register through its *enable_pin*.
- Connection of the data register's serial input to *TDI*. This connection is optional, required only if data must be shifted *into* the data register to execute the test. This signal enters the data register through its *load_pin*.
- An input to the JTAG MUX (which selects between data registers) dedicated to this data register. This input is selected when the associated JTAG instruction is active. This signal leaves the data register through its *capture_pin*.

In order to retain the functional and structural identity of the core logic, the DFT Compiler's JTAG logic synthesis interacts with the design's core logic at the top level of the design's hierarchy. This ensures that simulation of the core logic, before and after JTAG synthesis, remains identical. Thus, for DFT Compiler to automatically connect to the JTAG TAP the *capture_pin*, *load_pin*, and *enable_pin* of a user-specified core data register, these pins must exist as pseudo-ports at the top level of the original circuit. That is, it is the responsibility of the designer to ensure that the signals controlling and observing a core test register traverse the circuit hierarchy until they are visible at the top level of the design.

### What Next

Determine the reason that the pin has not been found. If it is appropriately named, check to ensure that the pin appears as a pseudo-port of the top level of the design core.

---

## UIT-89

(error) An illegal implementation `%s`\n\ \thas been specified for JTAG component type `%s`.

Feedback

### Description

Any alternate implementation for one of the JTAG component types

```
- the Test Access Port (TAP) Controller: TAP,
- the Bypass Register: BR
- the device Identification Register: ID
- the JTAG instruction register: IR, or
- one of the Boundary Scan Register cells: BSRINBOTH, BSRINSET,
BSRINOBS, BSROUTBOTH, BSROUTSET, BSROUTOBS,
BSRCTL, BSRINCLKBOTH, BSRINCLKSET or BSRINCLKOBS
```

must have all the I/O ports that exist on the default implementation.

### What Next

Compare the I/O of the user-specified implementation with that of the default component of the specified component type.

---

## UIT-90

(error) set_jtag_implementation must be invoked with a legal\n\ \tcomponent type. `%s` is not a recognized component type.

### Description

*set_jtag_implementation* must be invoked with one of the JTAG component types

```
- the Test Access Port (TAP) Controller: TAP,
- the Bypass Register: BR
- the device Identification Register: ID
- the JTAG instruction register: IR, or
- one of the Boundary Scan Register cells: BSRINBOTH, BSRINSET,
BSRINOBS, BSROUTBOTH, BSROUTSET, BSROUTOBS,
BSRCTL, BSRINCLKBOTH, BSRINCLKSET or BSRINCLKOBS
```

These are the *only* legal JTAG component types.

### What Next

Invoke the dc_shell JTAG command with the *-help* option to review the correct command syntax and make sure a legal JTAG component type has been selected.

---

## UIT-91

(warning) Illegal JTAG ground_bounce value `%d` replaced by `%d`.

Feedback

### Description

The environmental variable *test_jtag_ground_bounce_limit* has been added to the .synopsys setup environment to provide the user with a mechanism to ensure that the `ground bounce' problem does not occur for designs with JTAG synthesized by DFT Compiler.

This problem arises when the pins of a chip that does not normally support simultaneous switching or enabling of all outputs are controlled from the Boundary Scan Register (BSR), rather than from the on-chip system logic. For example, this situation arises when the EXTEST instruction is selected. It is possible that the tests supplied through the boundary-scan path will cause all outputs to change state and/or be active simultaneously. If precautions are not taken, the sum of the switching currents of all pins may produce VCC and VSS glitches that could exceed the tolerance level of the IC, and the core logic as well as the BSR cells and TAP would then be subject to interference. The power consumption could be increased beyond the capacity of the power pins for a prolonged period, perhaps resulting in incorrect operation of the chip.

Delays that only effect the signal path when the chip is in JTAG test mode can be added to prevent simultaneous switching of outputs when pins are driven from the BSR. The added delays should be small in comparison with the minimum period of TCK, but should be sufficient to ensure that the power-current demand arising from the change of state at one pin or group of pins does not overlap with that from another group producing the excessive power consumption.

However, if the process to optimize the number of BSR cells results in a single BSR cell (for example a bus three-state enable signal) driving too many enable signals, there is no way to introduce delays between the signals controlled by that BSR cell and ground bounce may not be prevented.

The environmental variable test_jtag_ground_bounce_limit puts a cap on the number of ouputs that can be driven by a single BSR cell. A default value is establised for this variable. The user can establish another positive non-zero limit, by changing the value of the variable in the .synopsys_dc.setup file.

The value of the ground-bounce limit for a particular JTAG design can be determined by executing *report_test -jtag*.

A detailed discussion of the Ground-Bounce problems is presented in Chapter 15, `Providing Boundary-Scan on Chips with Power or Output-Switching limitations' of `The Test Access Port and Boundary-Scan Architecture' by Colin M. Maunder and Rodham E. Tulloss, IEEE Computer Society Press Tutorial, 1990.

### What Next

Reset the value of the *test_jtag_ground_bounce_limit* to a legal value.

Feedback

## UIT-92

(information) User defined instruction '%s' not associated with\n\ \tidentifiable data register. Dangling signals will be synthesized.

### Description

Each JTAG instruction activates a single target data register. By definition, the target register of any user defined instruction is not specified in the IEEE 1149.1 JTAG Standard; therefore, that target register cannot be inferred by DFT Compiler. The user must identify the target register by using either *-reg_name core_scan_chain_name* or *-reg_coordinates capture_pin* [*load_pin*] and *-reg-enable enable_pin*.

When invoking *set_jtag_instruction instruction_name* [*-code code*] if you do not specify *-reg_name core_scan_chain_name*, *-reg_coordinates capture_pin* [*load_pin*], or *-reg-enable enable_pin*, DFT Compiler will synthesize all the necessary instruction decode logic and create two new design ports: an input port called <*instruction_name*>*CAPTURE* and an output port called <*instruction_name*>*ENABLE*. The port <*instruction_name*>*ENABLE* is active *HIGH* when the instruction *instruction_name* is loaded into the IR. The designer can then manually edit the circuit to connect these two signals to the appropriate data register circuitry.

### What Next

Manually connect the two signals <*instruction_name*>*CAPTURE* and <*instruction_name*>*ENABLE* to the appropriate data register circuitry.

## UIT-93

(warning) One or more ports have been excluded from the JTAG\n\ \tBoundary Scan Register (BSR). JTAG logic synthesized based on this\n\ \tconfiguration will not be compliant with the IEEE 1149.1 JTAG standard.

### Description

The IEEE 1149.1 JTAG Standard specifies that *all* non-TAP I/O ports must be included in the BSR. Exclusion of one or more ports results in this warning message.

### What Next

If a non-compliant JTAG implementation is satisfactory, ignore this message. Otherwise, compliance with this condition may be met by executing *set_jtag_port -default*.

## UIT-94

(error) Erroneous JTAG data register '%s' associated with JTAG\n\ \tinstruction '%s'.

Feedback

### Description

The IEEE 1149.1 JTAG Standard specifies and requires three mandatory JTAG instructions: BYPASS, SAMPLE/PRELOAD and EXTEST. If a JTAG device Identification Register (IDreg) exists, then a fourth JTAG instruction, IDCODE, is mandatory. The standard also defines three other instructions: INTEST, RUNBIST and USERCODE. The target register selected by each of these instructions is designated by the standard as follows:

```
Instruction     Target Data Register

        BYPASS  JTAG_BYPASS_REG
        SAMPLE/PRELOAD  JTAG_BSR
        EXTEST  JTAG_BSR
        INTEST  JTAG_BSR
        IDCODE  JTAG_ID_REG
        USERCODE        JTAG_ID_REG
        RUNBIST JTAG_BIST_REG
```

Because only one data register is associated with each of these instructions, it need never be specified by the designer. If the target data register *is* specified, using *set_jtag_instruction instruction_name -reg_name name*, a check is made that the legal data register has been specified. This error message appears if an illegal register is specified.

Note, however, that if you specify a particular core BIST register with RUNBIST, you need to include register coordinate information.

### What Next

Since specifying the data register with any of these seven JTAG instructions is redundant, avoid this error by simply removing the erroneous specification.

---

## UIT-95

(error) JTAG logic already inserted into this design.\n\ \tinsert_dft not invoked.

### Description

Invoking JTAG synthesis on a design twice returns an error. The danger is that preexisting JTAG logic might be confused with core logic and result in duplicate JTAG logic synthesis.

When DFT Compiler successfully inserts JTAG into a design, it sets a design attribute flag. A call to *insert_dft* is not executed if a check for the presence of this design attribute indicates pre-existing JTAG logic.

Feedback

**What Next**

If you want to reinvoke JTAG synthesis, make sure you begin with a clean design without JTAG.

---

## UIT-96

(error) Port '%s' excluded from the JTAG Boundary Scan Register (BSR).\n\ \tNo BSR cells can be associated with it.

**Description**

BSR cells are only synthesized for ports that are included in the JTAG BSR. Thus it is an error to specify a routing order for BSR cells relative to ports that are excluded from the BSR.

**What Next**

Either remove reference to those BSR cells associated to the excluded port or specify inclusion of the port in the BSR by executing *set_jtag_port* TRUE *port_name*.

---

## UIT-97

(error) '%s' not an input or output port.\n\ \t(You must specify '/out', '/in' or '/ctl'.)

**Description**

For bidirectional ports, the *port_name* is insufficient to differentiate between the Boundary Scan Register (BSR) input, output, and control cells.

**What Next**

A trailing specifier */in*, */out* or */ctl* must be appended to *port_name* to identify each bidirectional port BSR cell.

---

## UIT-98

(error) '%s' not a port of the current design.

**Description**

JTAG Boundary Scan Register (BSR) cells can only be specified in *set_jtag_port_routing_order* relative to ports in the current design.

**What Next**

Check the ports of the current design to verify the set of legal *port_name* candidates.

Feedback

## UIT-99

(error) Unrecognized BSR cell specifier '%s'.\n\ \t(Must be '/out', '/in' or '/ctl'.)

### Description

The *ordered_list_of_annotated_BSR_port_names* contains members of four classes:

- *<input_or_output_port_name>* which, depending on the direction of the port, specifies a BSR input or output cell;
- *<bidirectional_port_name>***/in** which specifies the BSR input cell associated with this bidirectional port;
- *<bidirectional_port_name>***/out** which specifies the BSR output cell associated with this bidirectional port;
- *<tristate_or_bidirectional_port_name>***/ctl** which specifies the BSR three-state control cell associated with this output or bidirectional port.

### What Next

Only three legal specifiers (*/in*, */out* or */ctl*) may be appended to a *port_name* to identify a BSR cell.

## UIT-100

(error) Instruction Register (IR) too small.\n\ \tThis design requires an %d-bit register.

### Description

The IEEE 1149.1 JTAG Standard mandates that the JTAG Instruction Register (IR) be at least two bits wide. DFT Compiler supports IRs of between 2 and 32 bits inclusively. The size of the IR is set in three ways:

- specifying the size using **insert_jtag -ir_size** *bit_width*;
- forcing the IR size by specifying an instruction code **set_jtag_instruction -code** "*code*";
- DFT Compiler will automatically infer the IR size from the set of specified and mandatory instructions selected.

## UIT-101

(error) JTAG Test Access Port (TAP) I/O port '%s' may not be included\n\ \tin the boundary scan register (BSR).

### Description

The IEEE 1149.1 JTAG Standard specifies that the Boundary Scan Register (BSR) is a data register connected between TDI and TDO. The BSR may not include any of the JTAG

Feedback

Test Access Port (TAP) ports. An error will result if you include ports carrying the following signals:

```
- TDI: JTAG Test Data In
- TDO: JTAG Test Data Out
- TMS: JTAG Test Mode Select
- TCK: JTAG Test Clock
- TRST: JTAG Test Reset
```

---

## UIT-102

(error) Illegal JTAG boundary scan port mode '%s' specified.

**Description**

The JTAG circuitry associated with each port allows that port to be *controlled* only, *observed* only, or *both* controlled and observed. This is the JTAG operational mode of a port.

The default mode can be initially set in the .synopsys file using *jtag_bsr_port_mode* = `<mode_string>' where allowable port modes are *control*, *observe*, or *both*.

---

## UIT-103

(error) Illegal JTAG boundary scan port signal type '%s' specified.

**Description**

The JTAG circuitry associated with a port can be optimized depending on the signal type, *clock*, *enable* or *data*, of that port.

The JTAG circuitry associated with an *input* port can be optimized based on the signal type (*clock* or *data*) of that port. Ports that drive clock trees can be associated with specialized JTAG circuitry. An input port can be explicitly identified as carrying one of the "clock" or "data" categories.

When the three-state elements driving three-state and bidirectional *outputs* are found in the core logic of the IC (i.e. not embedded in the pads themselves) DFT Compiler requires that these three-state elements be located at the top hierarchy of the core of the design so that Boundary Scan Register (BSR) cells can be placed on the *inside* of the three-state elements in order to control and observe the data and enable lines. In these cases, only a single three-state line exits the core logic.

However, in the cases where the three-state controller for output signals will be embedded in the three-state output or bidirectional input/ouput pad associated with these ports of a design two signals exit the core logic; a *data* line and a *enable* line. Unless, TC knows the distinction between these two types of exit lines, it will always assume that they are data lines and not insert the correct type of BSR cell on the enable lines. By specifying "enable"

Feedback

or "data" on a port the designer instructs TC on which type of BSR cell to place on these output ports.

Where possible, DFT Compiler will extract this information from the circuit design. A port may be explicitly identified as carrying one of these catagories of data.

**What Next**

If you are defining the characteristics of input ports, choose between the "clock" and "data" options. If you are defining the characteristics of ouput ports, choose between the "enable" and "data" options.

---

## UIT-104

(error) Requested Instruction Register size '%d' is less than\n\ \tpreviously specified Instruction code size '%d'.

**Description**

The IEEE 1149.1 JTAG Standard mandates that the JTAG Instruction Register (IR) be at least two bits wide. DFT Compiler supports IRs of 2- to 32-bit widths inclusively. The size of the IR is set in three ways:

```
- specifying the size using insert_jtag -ir_size bit_width;
- forcing the IR size by specifying an instruction code
set_jtag_instruction -code "code";
- DFT Compiler will automatically infer the IR size from the set of
specified and mandatory instructions selected.
```

This error is generated if one or more JTAG instructions with specified codes of length *n* have been previously specified, but *insert_jtag -ir_size m* is invoked where *n* > *m*.

If *m* > *n* then DFT Compiler can pad the *m-n* high order bits of the previously specified instruction codes with 0s. But it cannot truncate previously specified codes when *m* > *n*.

**What Next**

Either invoke *insert_jtag -ir_size* with a size greater or equal to the length of all previously specified codes, or, if a smaller IR is required, specify codes for all instructions with previously specifed codes, so that their code length is less than or equal to the desired IR size.

---

## UIT-105

(error) Instruction '%s' has code fixed by the 1149.1 JTAG standard.\n\ \tYou cannot assign the code '%s' to this instruction.

Feedback

### Description

You receive this message because DFT Compiler generates it when an attempt is made to reset *BYPASS* and *EXTEST* JTAG code.

Each JTAG instruction requires the following triplet of information:

- Instruction name
- Target data register
- Instruction code

DFT Compiler can automatically generate some of this information.

The mandatory *BYPASS* and *EXTEST* JTAG instructions have mandatory codes. The *BYPASS* code is all *1*s (ones). The *EXTEST* code is all *0*s (zeros). All other mandatory and nonmandatory JTAG instructions support arbitrary codes.

Since the *BYPASS* and *EXTEST* instructions have mandatory codes, the designer never has to specify them. DFT Compiler automatically extracts all information relative to these two instructions.

---

## UIT-106

(warning) The 1149.1 JTAG standard instruction '%s' does not\n\ \tsupport register coordinate specification.\n\ \t(Specifications ignored.)

### Description

The IEEE 1149.1 JTAG Standard specifies and requires three mandatory JTAG instructions: BYPASS, SAMPLE/PRELOAD, and EXTEST. If a JTAG device Identification Register (IDreg) exists, then a fourth JTAG instruction, IDCODE, is mandatory. The standard also defines three other instructions: INTEST, RUNBIST, and USERCODE. The target register selected by each of these instructions is designated by the standard as follows:

```
Instruction     Target Data Register

        BYPASS  JTAG_BYPASS_REG
        SAMPLE/PRELOAD  JTAG_BSR
        EXTEST  JTAG_BSR
        INTEST  JTAG_BSR
        IDCODE  JTAG_ID_REG
        USERCODE        JTAG_ID_REG
        RUNBIST JTAG_BIST_REG
```

For the first six JTAG instructions above only one data register is associated with each of these instructions; the register does not need to be specified. In these six cases,

Feedback

if the target data register *is* specified, using *set_jtag_instruction instruction_name -reg_coordinates capture_pin* [*load_pin*] *-reg_enable enable_pin*, the register coordinate information is ignored and this warning message is generated.

If you specify a particular core BIST register with RUNBIST, you need to include register coordinate information.

**What Next**

Since specifying the data register with any of these seven JTAG instructions is redundant, avoid this error by simply removing the redundant coordinate specification.

---

## UIT-107

(error) Code length '%d' of instruction '%s' conflicts with a\n\ \tpreviously specified instruction code length '%d'.

**Description**

The IEEE 1149.1 JTAG Standard mandates that the JTAG Instruction Register (IR) be at least two bits wide. DFT Compiler supports IRs of 2- to 32- bit widths inclusively. The size of the IR is set in three ways:

```
- specifying the size using insert_jtag -ir_size bit_width;
- forcing the IR size by specifying an instruction code
set_jtag_instruction -code "code";
- DFT Compiler will automatically infer the IR size from the set of
specified and mandatory instructions selected.
```

If you specify codes to be assigned to specific instructions, the length of these codes must be consistent with any previously specified codes or the previously specified Instruction Register (IR) size.

**What Next**

Modify the length of the offending codes to be equal that of previously specified instruction codes and/or IR size.

---

## UIT-108

(error) Code '%s' for instruction '%s' conflicts with the\n\ \tcode for instruction '%s'.

**Description**

You receive this message because the code for an instruction conflicts with the code specified for another instruction.

Feedback

Each instruction must have a unique code that does not conflict with the code specified for another instruction. In the absence of a user-specified code for an instruction, DFT Compiler generates a unique code for that instruction.

Each JTAG instruction requires a triplet of information:

- Instruction name
- Target data register
- Instruction code

DFT Compiler can automatically generate some of this information. The mandatory *BYPASS* and *EXTEST* JTAG instructions have mandatory codes. The *BYPASS* code is all *1*s (ones). The *EXTEST* code is all *0*s (zeros). All other mandatory and nonmandatory JTAG instructions support arbitrary codes.

**What Next**

Eliminate the coding conflict by executing a legal change of code for one of the two conflicting instructions. (You cannot change the mandatory codes of the *BYPASS* and *EXTEST* instructions.)

Again execute the *set_jtag_instruction* command.

While changing the conflicting code, you must keep all other specifications relative to the instruction the same.

---

## UIT-109

(error) BSR cell '%s' has been assigned multiple routing positions.

**Description**

Each JTAG Boundary Scan Register (BSR) cell only appears once in the BSR. Therefore, when specifying its location in the BSR using the *set_jtag_port_routing_order* instruction, it is an error to specify more than one location for each BSR cell.

**What Next**

Remove multiple specifications of the BSR cell reported in the error message, leaving at most one reference to it in the *ordered_list_of_annotated_BSR_port_names* when executing *set_jtag_port_routing_order*.

---

## UIT-110

(warning) Compliance with the IEEE's 1149.1 JTAG Standard requires\n\ \ta BYPASS Register. This implementation is non-compliant.

Feedback

### Description

If you specify that a JTAG BYPASS register not be synthesized, the resulting JTAG architecture will *not* be IEEE 1149.1 compliant.

### What Next

If you want a compliant JTAG architecture, do not invoke *insert_jtag* with the *-no_bypass* option.

---

## UIT-111

(warning) JTAG component implementation '%s' not found.\n\ \tThe default implementation will be used instead.

### Description

The basic JTAG components (*BSRin*, *BSRout*, *BSRcontrol*, *TAP*, *BYPASS*, *ID*, and *IR*) must have functionality that conforms the the IEEE 1149.1 standard. Each can be implemented in a number of different architectures. There are several different functionality implementations (set-only, observe-only, or both set and observe) of the JTAG Boundary Scan Register (BSR) cells. DFT Compiler has a default implementation for each of the three types (input, output, and control) of BSR cells.

You can override the default implementation of all the JTAG components:

```
- one of the Boundary Scan Register (BSR) cells BSRin, BSRout, or
BSRcontrol
- the Test Access Port (TAP) Controller TAP
- the Bypass Register BYPASS
- the device Identification Register ID
- the JTAG instruction register IR
```

by executing

```
set_jtag_implementation component_type implementation
```

where *component_type* is *BSRin*, *BSRout*, *BSRcontrol*, *TAP*, *BYPASS*, *ID*, or *IR*.

You can override the implementation of one or more of the BSR cells of the specified type in the BSR by executing the *set_jtag_implementation* instruction with the correct arguements:

```
- set_jtag_implementation BSRin implementation [list_of_ports]
- set_jtag_implementation BSRout implementation [list_of_ports]
- set_jtag_implementation BSRcontrol implementation [list_of_ports]
```

The *implementation* is the name of the desired JTAG component in the JTAG component library. If DFT Compiler cannot find this component in the library, it issues this message and uses the default implementation for this type of BSR cell.

Feedback

### What Next

If you want to override the default implementation, make sure that the JTAG component named *implementation* is in the JTAG library.

---

## UIT-112

(error) Target core register '%s' not found.

### Description

If you want to specify an instruction and, optionally, the code for a specific internal scan chain, execute *set_jtag_instruction instruction_name -reg_name name* [*-code code*].

The *name* of each internal scan chain is the name of its parallel scan-in port; that is, the port which has the *test_scan_in* attribute assigned to it. This guarantees the uniqueness of names for these scan chains and provides DFT Compiler with a mechanism to identify each target scan chain. If DFT Compiler cannot find this unique parallel scan-in port, this message is generated.

### What Next

Verify the names of the parallel scan-in ports of the design using *report_test -scan*.

---

## UIT-113

(information) Creating user defined instruction '%s'.\n\ \t(not a 1149.1 JTAG standard instruction)

### Description

DFT Compiler recognizes the seven standard instructions defined by the IEEE 1149.1 JTAG Standard:

```
Instruction     Target Data Register

        BYPASS  JTAG_BYPASS_REG
        SAMPLE/PRELOAD  JTAG_BSR
        EXTEST  JTAG_BSR
        INTEST  JTAG_BSR
        IDCODE  JTAG_ID_REG
        USERCODE        JTAG_ID_REG
        RUNBIST JTAG_BIST_REG
```

DFT Compiler also accepts user-defined JTAG instructions. These instructions may access core scan chains or invoke other test circuitry in the design. When a user-defined instruction has been successfully parsed, this information message is issued.

Feedback

The existence of this message also provides a check for mispelled names of the seven standard JTAG instructions. It verifies that you in fact want to create a user-defined instruction.

## UIT-114

(information) Creating 1149.1 JTAG standard instruction '%s'.

### Description

DFT Compiler recognizes the seven standard instructions defined by the IEEE 1149.1 JTAG Standard:

```
Instruction     Target Data Register

        BYPASS  JTAG_BYPASS_REG
        SAMPLE/PRELOAD  JTAG_BSR
        EXTEST  JTAG_BSR
        INTEST  JTAG_BSR
        IDCODE  JTAG_ID_REG
        USERCODE        JTAG_ID_REG
        RUNBIST JTAG_BIST_REG
```

DFT Compiler also accepts user-defined JTAG instructions. This information message confirms that DFT Compiler has recognized and parsed one of the standard instructions.

The existence of this message also provides a check for user-defined instructions which have been mislabeled with standard instruction names.

## UIT-115

(error) Illegal joint specification of -no_internal scan and\n\ \t-daisy_chained internal scan. (Specify only one of these options.)

### Description

By default DFT Compiler will attach core test structures that it recognizes (for example, internal scan chains) to the JTAG Test Access Port (TAP). Internal scan chains will not be connected to the TAP if you execute *insert_jtag -no_internal_scan*. If you want all of the recognized core scan chains accessible as a single long register comprised of the individual scan chains serially daisy-chained together, execute *insert_jtag -daisy_chained* [*ordered_set_of_scan_chain_indexes*].

These two options are mutually exclusive. This error message is invoked if both options are specified at once.

Feedback

### What Next

Determine which core scan chain option is desired and invoke *insert_jtag* with the appropriate argument.

---

## UIT-116

(information) Instruction '%s' has been cancelled.

### Description

Any non-mandatory instruction may be removed from the set of instructions "understood" by the synthesized JTAG instruction decode logic. This message confirms removal of the specified instruction. As a result, decode logic will not be synthesized to recognize this instruction.

---

## UIT-117

(error) Mandatory instruction '%s' may not be cancelled.

### Description

The IEEE 1149.1 JTAG Standard requires the following mandatory instructions:

```
- BYPASS,
- SAMPLE/PRELOAD
- EXTEST.
```

If a Device Identification (ID) Register is part of the JTAG logic, then IDCODE is also mandatory.

The first three instructions will *always* be included in the set of instructions "understood" by the synthesized JTAG instruction decode logic. If you request an ID register, you must include the fourth instruction, IDCODE. An error message will appear if you attempt to cancel any one of these instructions.

---

## UIT-118

(error) JTAG insertion terminated abnormally.

### Description

Anytime DFT Compiler encounters a fatal designer JTAG specification error after *insert_dft* has been invoked, an error message identifying the problems appears and DFT Compiler executes a graceful abnormal termination of JTAG synthesis. Any changes to the design resulting from execution of *insert_dft* are eliminated.

Feedback

Fatal designer JTAG specification errors include encountering a three-state cell controlling a port which is not at the top level of the design (see *UIT-119*); and JTAG component library not found (see *TEST-234*).

**What Next**

Identify and correct the cause of the abnormal termination and reinvoke *insert_dft*.

---

## UIT-119

(error) Three-state cell `%s` controlling port(s)\n\ \tin the JTAG Boundary Scan Register not at the top level of the design.

**Description**

Up to three Boundary Scan Register (BSR) cells can be associated with each port of the design. A simple input port has a single BSR input cell associated with it. If it is a two state output, an output port will have one BSR cell associated with it. If it is a three-state output, it will have two BSR cells associated with it. A bidirectional port can have three BSR cells associated with it (input, output and control BSR cells). When DFT Compiler inserts boundary scan cells for three-state ports into the design, it determines their location by locating the data and control inputs to generic three-state devices.

Whether or not you want to group all system logic into a level of (core) hierarchy, you must ensure that the three-state devices controlling the behavior of any ports are visible at the top level of the core hierarchy. This is necessary for pad optimization since three-states can be absorbed into a pad.

The following script fragment demonstrates this:

```
dc_shell> read -f lsi AMPM.NET

/* get the top level design */
dc_shell> current_design  = DESIGN

/* need to separate any top level port three_state control cells from the
 core.
   In this case they are buried in sub-modules U6 and U7 */
dc_shell> ungroup  {U6 U7}

/* group the core logic with the exception of the 6 three-state cells */
dc_shell> group -design_name  CORE -except
{U6/UU2 U6/UU3 U6/UU4 U7/UU4 U7/UU5 U7/UU6} -cell_name  AMPM

/* need to set port_is_pad to do pad insertion */
dc_shell> set_port_is_pad find  (port,"*")

dc_shell> insert_dft
```

Feedback

This error message results when DFT Compiler encounters a three-state cell controlling a port which is not at the top level of the design. The complete hierarchical name of the offending cell is reported in the error message. DFT Compiler then gracefully aborts JTAG insertion.

**What Next**

Bring the offending three-state cell to the top level as shown in the script fragment above to eliminate this error.

---

## UIT-120

(warning) -no_asynchronous_reset option invoked\n\ \tbut port '%s' with jtag_trst attribute found.\n\ \tPort '%s' will NOT be included in the JTAG Boundary Scan\n\ \tRegister (BSR). \n

**Description**

The JTAG Test Access Port (TAP) provides the test interface in JTAG mode between the chip and the outside world. It includes the three mandatory input ports (test data in *TDI*, test mode select *TMS*, and test clock *TCK)* and one optional input (test reset *TRST**). It also includes a single output port (test data out *TDO*).

The active-LOW asynchronous reset signal, if present, provides asynchronous initialization of the TAP controller and other JTAG test logic in the circuit. In the absense of the *TRST** signal, the TAP controller will synchronously enter the *Test-Logic-Reset* controller state following five rising edges of *TCK*, provided *TMS* is held high.

If none of the TAP I/O ports exist, the mandatory ports will be automatically generated. By default, the JTAG logic will be synthesized with an asynchronous reset. The optional *TRST** port will not be generated if requested using *insert_jtag -no_asynchronous_reset*. If however, the *TRST** port already exists, and it has been identified using *set_dft_signal -type trst* with *insert_jtag -no_asynchronous_reset* invoked, this warning message is generated to flag the apparent discrepancy in designer intent.

**What Next**

Determine whether an asynchronous reset of the TAP controller is desired and act accordingly. If you want the port with the jtag_trst attribute included in the BSR, remove this attribute using *remove_attribute jtag_trst port_name*.

---

## UIT-121

(error) Erroneous JTAG Manufacturer ID Number '%d'.

Feedback

### Description

The JTAG Device Identification Register (IDreg) is permanently loaded with a 32-bit number comprised of the JEDEC chip ID number, the design version number, and the manufacturer ID number.

Since the JTAG Device Identification register has a fixed size with four fixed-size fields, legal values for these fields must fall within the specified ranges. If DFT Compiler encounters an illegal value for the manufacturer ID field, this error message is generated along with error message UIT-124 specifying the erroneous value and the range of legal values.

### What Next

Enter a legal *integer* for *integer_in_range_0_to_2047* where *0* <= *integer* <= *2407* when executing *set_jtag_manufacturer_id* (see UIT-124).

---

## UIT-122

(error) Erroneous JTAG Part Number '%d'.

### Description

The JTAG Device Identification Register (IDreg) is permanently loaded with a 32-bit number comprised of the JEDEC chip ID number, the design version number, and the manufacturer ID number.

Since the JTAG Device Identification register has a fixed size with four fixed-size fields, legal values for these fields must fall within the specified ranges. If DFT Compiler encounters an illegal value for the part number field, this error message is generated along with error message UIT-124 specifying the erroneous value and the range of legal values.

### What Next

Enter a legal *integer* for *integer_in_range_0_to_65535* where *0* <= *integer* <= *65535* when executing *set_jtag_part_number* (see UIT-124).

---

## UIT-123

(error) Erroneous JTAG Version Number '%d'.

### Description

The JTAG Device Identification Register (IDreg) is permanently loaded with a 32-bit number comprised of the JEDEC chip ID number, the design version number, and the manufacturer ID number.

Feedback

Since the JTAG Device Identification register has a fixed size with four fixed-size fields, legal values for these fields must fall within the specified ranges. If DFT Compiler encounters an illegal value for the design version field, this error message is generated along with error message UIT-124 specifying the erroneous value and the range of legal values.

**What Next**

Enter a legal *integer* for *integer_in_range_0_to_15* where *0* <= *integer* <= *15* when executing *set_jtag_version_number* (see UIT-124).

---

## UIT-124

(information) \tNumber out of legal range.\n\ \t(Must be between %d and %d inclusively.)

**Description**

Since the JTAG Device Identification register has a fixed size with four fixed-size fields, legal values for these fields must fall within the specified ranges. Legal values for these ranges are specified as non-negative integers within the inclusive range specified in the error message.

**What Next**

Enter a legal *integer* for *integer_in_range_X_to_Y* where *X* <= *integer* <= *Y* when executing *set_jtag_version_number*, *set_jtag_part_number* or *set_jtag_manufacturer_id*. The erroneous field is identified by the previous error message (see UIT-121, UIT-122 or UIT-123).

---

## UIT-125

(warning) -cancel mode should be invoked with instruction name only.\n\ \t(Other arguments will be ignored.)

**Description**

Any non-mandatory instruction may be removed from the set of instructions "understood" by the synthesized JTAG instruction decode logic by executing *set_jtag_instruction instruction_name* [*-cancel*].

It is sufficient to supply *instruction_name* to identify which instruction to cancel, so the existence of other arguements to *set_jtag_instruction* is ignored when [*-cancel*] is included.

**What Next**

To eliminate this warning, remove the superfluous arguments when executing [*-cancel*].

Feedback

## UIT-126

(error) `00001111111' (127) is an illegal Manufacturer ID when\n\ \tused in JTAG ID registers.

### Description

The JTAG Device Identification Register (IDreg) is permanently loaded with a 32-bit number comprising the JEDEC chip ID number, the design version number, and the manufacturer ID number.

With respect to the manufacturer number, Rule 11.2.1(b) of the IEEE 1149.1 standard specifies that "00001111111 shall not be used in components that are otherwise compatible with this standard."

DFT Compiler generates this error message if this number is illegally defined using *set_jtag_manufacturer_id integer_in_range_0_to2047* [*list_of_designs*].

### What Next

Enter another manufacturer number using *set_jtag_manufacturer_id integer_in_range_0_to2047* [*list_of_designs*]. If you require (integer) 127 as the manufacturer ID number, enter (integer) 0 and manually rewire the code into the IDreg.

## UIT-127

(error) Direction of pin '%s' is erroneous.

### Description

You may want to control and access core test structures that DFT Compiler is unable to recognize automatically. For example, you may want to activate a RAM test, capture a response from that test structure, and shift it out through TDO.

To support such a scenario, two or three "hooks" are required:

```
enable_pin        (input) - the existence of an activation signal enabled
 by
                           the associated JTAG instruction
        load_pin  (input) - optional connection to TDI of the serial
 input
                           of the core test structure data register
        capture_pin         (output)        - a dedicated MUX input for
 selecting this
                           data register as the source of TDO output.
```

You need to select this latter MUX input when the associated JTAG instruction is active. Specify the existence of these "hooks" with the command *set_jtag_instruction instruction_name* [*-code code*] *-reg_coordinates capture_pin* [*load_pin*] *reg_enable*

Feedback

*enable_pin*. If you specify *capture_pin*, *load_pin* and *enable_pin*, the inputs will be connected to the appropriate synthesized JTAG instruction control logic.

Note that if you specified *-reg_coordinates*, the *capture_pin* is mandatory and the *load_pin* is optional. Test compiler checks that the specified pins are of the correct direction, and issues this error message if a pin has an erroneous direction.

If you do not specify the *enable_pin* and *capture_pin*, the result is a synthesis of all the necessary JTAG instruction decode and control logic as well as the creation of two new (bogus) ports connected to the design; an input port named "<*instruction_name*>CAPTURE" and an output port named "<*instruction_name*>ENABLE". The port <*instruction_name*>ENABLE is active HIGH when *instruction_name* is loaded into the JTAG Instruction Register (IR). You can then manually edit the circuit to connect these two (bogus) ports to the appropriate input and output pins of the target core test structure (thus "removing" them as ports).

**What Next**

If the specified pin direction is erroneous, then this is not the correct pin for this signal. Verify the design to identify to correct pin.

---

## UIT-128

(error) Port '%s' must have pad attribute set.

**Description**

The JTAG Boundary Scan Register (BSR) associates a register with each pad of a device which can be used to either `capture' (observe) the value at the pad and/or `apply' (control) a value at the pad distinct from the value applied externally or internally. These registers are serially chained to form the BSR from which their values may be serially set and read.

Since the BSR only includes design ports which will eventually have pads associated with them (that is, *not* module ports internal to the final top level design), DFT Compiler only considers ports which have been designated as requiring pads as candidates for inclusion in the BSR. At least one port must be specified as requiring a pad, since the BSR must have at least one element.

DFT Compiler will generate this error if a port processed by *set_jtag_port* (or any other command processing ports to be included in the BSR) does not have its *port_is_pad* attribute set.

**What Next**

Set the *port_is_pad* attribute using the *set_port_is_pad* command on each port to be considered for inclusion in the BSR. Note that this does not automatically mean that the

Feedback

port *will* be included in the BSR. For example, if a JTAG TAP port has the *port_is_pad* attribute set TRUE, it will nonetheless be excluded from the BSR.

One easy way to specify ports as pads is to execute *set_port_is_pad find (port,"*")* on the current_design.

---

## UIT-129

(warning) -default should be invoked alone.\n\ \t(Other arguments will be ignored.)

### Description

Many of the dc_shell JTAG commands include a *-default* argument which resets the specified JTAG settings to their default values. The *-default* argument overrides all other arguments so it should be invoked alone. This error message results from specification of *-default* with other arguments.

### What Next

Remove the conflicting arguments and reexecute the command.

---

## UIT-130

(error) No options specified for the "%s" command.\n\ \tFor available options, execute "%s -help".

### Description

You must specify at least one optional argument with this command. This error message is generated when no options are specified with the command, and when the command is invoked with the *-help* option.

### What Next

Invoke the command with the *-help* option to review the correct command syntax. Then, re-execute the command, using one of the optional arguments on the command line.

---

## UIT-131

(error) JTAG Port '%s' is not an input or bidirectional port.

### Description

Only input or bidirectional ports can take the */in* specifier. There are no input BSR cells associated with an output port. Thus, <*output_port_name*>*/in* is an illegal BSR cell identifier.

Feedback

In *set_jtag_port_routing_order*, the *ordered_list_of_annotated_BSR_port_names* contains members of four classes:

```
- <input_or_output_port_name>, which specifies
a BSR input or output cell (depending on the
direction of the port),
- <bidirectional_port_name>/in, which
specifies the BSR input cell associated with
this bidirectional port,
- <bidirectional_port_name>/out, which
specifies the BSR output cell associated with
this bidirectional port, or
- <tristate_or_bidirectional_port_name>/ctl,
which specifies the BSR three-state control
cell associated with this output or
bidirectional port.
```

Thus there are only three legal specifiers (`*/in*', `*/out*' or `*/ctl*') that can be appended to a *port_name* to identify a boundary scan register (BSR) cell. Each of these specifiers can only be associated with a subset of the port types (input, two-state output, three-state output and bidirectional ports) that can be included in the BSR.

DFT Compiler generates this message if you associate a non-existent boundary scan register (BSR) cell type (`*/in*', `*/out*' or `*/ctl*') with a port. DFT Compiler also generates UIT-138, which identifies the nature of the problem.

**What Next**

An illegal specifier for *output_port_name* indicates that a port of that type does not have a BSR input cell associated with it. Therefore, either delete this reference to a non-existent BSR input cell or correct the reference to an existing BSR cell by correcting *output_port_name*.

(See UIT-138)

---

## UIT-132

(error) JTAG Port '%s' is not an output or bidirectional port.

**Description**

Only output or bidirectional ports can take the */out* specifier. There are no output BSR cells associated with an input port. Thus, *<input_port_name>/out* is an illegal BSR cell identifier.

In *set_jtag_port_routing_order*, the *ordered_list_of_annotated_BSR_port_names* contains members of four classes:

```
- <input_or_output_port_name>, which specifies
a BSR input or output cell (depending on the
direction of the port),
```

Feedback

```
- <bidirectional_port_name>/in, which
specifies the BSR input cell associated with
this bidirectional port,
- <bidirectional_port_name>/out, which
specifies the BSR output cell associated with
this bidirectional port, or
- <tristate_or_bidirectional_port_name>/ctl,
which specifies the BSR three-state control
cell associated with this output or
bidirectional port.
```

Thus there are only three legal specifiers (`*/in*', `*/out*' or `*/ctl*') that can be appended to a *port_name* to identify a boundary scan register (BSR) cell. Each of these specifiers can only be associated with a subset of the port types (input, two-state output, three-state output and bidirectional ports) that can be included in the BSR.

DFT Compiler generates this message if you associate a non-existent boundary scan register (BSR) cell type (`*/in*', `*/out*' or `*/ctl*') with a port. DFT Compiler also generates UIT-138, which identifies the nature of the problem.

**What Next**

An illegal specifier for *input_port_name* indicates that a port of that type does not have a BSR output cell associated with it. Therefore, either delete this reference to a non-existent BSR output cell or correct the reference to an existing BSR cell by correcting *input_port_name*.

(See UIT-138)

---

## UIT-133

(error) JTAG Port '%s' is not three-stated.

**Description**

Only three-state ports can take the */ctl* specifier. There are no control BSR cells associated with an input or a two-state output port. Thus, *<two_state_input_or_output_port_name>/ctl* is an illegal BSR cell identifier.

In *set_jtag_port_routing_order*, the *ordered_list_of_annotated_BSR_port_names* contains members of four classes:

```
- <input_or_output_port_name>, which specifies
a BSR input or output cell (depending on the
direction of the port),
- <bidirectional_port_name>/in, which
specifies the BSR input cell associated with
this bidirectional port,
- <bidirectional_port_name>/out, which
specifies the BSR output cell associated with
```

Feedback

```
this bidirectional port, or
- <tristate_or_bidirectional_port_name>/ctl,
which specifies the BSR three-state control
cell associated with this output or
bidirectional port.
```

Thus there are only three legal specifiers (`*/in*', `*/out*' or `*/ctl*') that can be appended to a *port_name* to identify a boundary scan register (BSR) cell. Each of these specifiers can only be associated with a subset of the port types (input, two-state output, three-state output and bidirectional ports) that can be included in the BSR.

NOTE that even when a port is in fact three-stated, if the three-state is not visible at the top level of the core hierarchy, this error message may be generated and must be resolved. DFT Compiler determines whether a port is three-stated by checking for three-states at the top level of hierarchy. If it does not find them there, it assumes that the port is not three-stated and issues this error message when an operation requiring a three-stated port is invoked.

**What Next**

An illegal specifier for *two_state_port_name* indicates that a port of that type does not have a BSR control cell associated with it. Therefore, either delete this reference to a non-existent BSR control cell or correct the reference to an existing BSR cell by attaching the */ctl* specifier to the correct *three-state_or_bidirectional_port_name*.

If the offending port is in fact three-stated, you must regroup your core logic so that the three-state controlling this port is visible at the top level.

(See UIT-138)

---

## UIT-134

(error) Insufficient information included with user-specified\n \tinstruction '%s'. You must include either a register name or both\n \treg_coordinate(s) and reg_enable specifications.

**Description**

Each JTAG instruction activates a single target data register. The target register of a user-defined instruction is (by definition) not specified in the IEEE 1149.1 JTAG Standard. Therefore that target register cannot be inferred by DFT Compiler, and you must identify it by using either *-reg_name core_scan_chain_name* or *-reg_coordinates capture_pin* [*load_pin*] and *-reg-enable enable_pin*.

This message is also generated if you only partially identify the data register by using only one of the two options *-reg_coordinates capture_pin* [*load_pin*] or *-reg-enable enable_pin*. For complete identification of the target data register, you must specify both.

Feedback

**What Next**

Determine what information is missing and supply it.

If you want to specify an instruction and (optionally) the code for a specific internal scan chain, execute *set_jtag_instruction instruction_name -reg_name name* [*-code code*].

The *name* of each internal scan chain is the name of its parallel scan-in port; that is, the port which has the *test_scan_in* attribute assigned to it. This guarantees the uniqueness of names for these scan chains and provides DFT Compiler with a mechanism to identify each target scan chain.

If you want to specify some other core test structure, identify it by using *-reg_coordinates capture_pin* [*load_pin*] and *-reg-enable enable_pin*.

[See UIT-92]

---

## UIT-135

(error) Instruction '%s' has illegal JTAG instruction\n \tcode string '%s'.\n \t(The code string must contain only '0's and '1's.)

**Description**

JTAG instruction codes are loaded `as is' into the JTAG Instruction register. Therefore, they must be fully specified binary codes. Code cubes (which include `dont care' X bits) are not allowed. The only characters permitted in these code strings are '0's and '1's.

**What Next**

Re-write the instruction code string using only '0's and '1's.

---

## UIT-136

(error) Incompatible arguments. Specify either a register name or\n\ \tboth register coordinate(s) and register enable.

**Description**

Each JTAG instruction activates a single target data register. The target register of a user-defined instruction is (by definition) not specified in the IEEE 1149.1 JTAG Standard. Therefore that target register cannot be inferred by DFT Compiler, and you must identify it by using either *-reg_name core_scan_chain_name* or *-reg_coordinates capture_pin* [*load_pin*] and *-reg-enable enable_pin*.

Specifying both *-reg_name core_scan_chain_name* and *-reg_coordinates capture_pin* [*load_pin*] or *-reg-enable enable_pin* is not supported and generates this error message.

Feedback

### What Next

If you want to specify an instruction and (optionally) the code for a specific internal scan chain, execute *set_jtag_instruction instruction_name -reg_name name* [*-code code*].

The *name* of each internal scan chain is the name of its parallel scan-in port; that is, the port which has the *test_scan_in* attribute assigned to it. This guarantees the uniqueness of names for these scan chains and provides DFT Compiler with a mechanism to identify each target scan chain.

If you want to specify some other core test structure, identify it by using *-reg_coordinates capture_pin* [*load_pin*] and *-reg-enable enable_pin*.

---

## UIT-137

(error) Instruction Register (IR) must be between 2 and 32 bits wide.

### Description

The IEEE 1149.1 JTAG Standard mandates that the JTAG Instruction Register (IR) be at least two bits wide. DFT Compiler supports IRs of between 2 and 32 bits inclusively. There are three ways to set the size of the IR:

```
- You specify the size using insert_jtag
-ir_size bit_width,
- You force the IR size by specifying an
instruction code set_jtag_instruction
-code "code", or
- DFT Compiler automatically infers the
IR size from the set of specified and
mandatory instructions selected.
```

### POSSIBLE CAUSES

This error occurs if you have *not* surrounded your specified code in quotes (" "). In the absence of quotes, the command line parser interprets the first character as an independent string and assumes that a 1-bit code has been specified, forcing a 1-bit IR.

### What Next

Specify an IR width between 2 and 32 bits. If you forgot the quotes in your *set_jtag_instruction* command, re-issue the command with quotes around the code.

---

## UIT-138

(error) Non-existent BSR '%s' cell with routing\n \tposition '%d' associated with port '%s'.

Feedback

### Description

In *set_jtag_port_routing_order*, the *ordered_list_of_annotated_BSR_port_names* contains members of four classes:

```
- <input_or_output_port_name>, which specifies
a BSR input or output cell (depending on the
direction of the port),
- <bidirectional_port_name>/in, which
specifies the BSR input cell associated with
this bidirectional port,
- <bidirectional_port_name>/out, which
specifies the BSR output cell associated with
this bidirectional port, or
- <tristate_or_bidirectional_port_name>/ctl,
which specifies the BSR three-state control
cell associated with this output or
bidirectional port.
```

Thus there are only three legal specifiers (`*/in*', `*/out*' or `*/ctl*') that can be appended to a *port_name* to identify a boundary scan register (BSR) cell. Each of these specifiers can only be associated with a subset of the port types (input, two-state output, three-state output and bidirectional ports) that can be included in the BSR.

DFT Compiler generates this message if you associate a non-existent boundary scan register (BSR) cell type (`*/in*', `*/out*' or `*/ctl*') with a port. DFT Compiler also generates a message (UIT-131, UIT-132 or UIT-133) that tells you why the specifier you used is illegal.

### What Next

An illegal specifier for a port indicates that that type of port does not have that type of BSR cell associated with it. Therefore, either delete this reference to a non-existent BSR cell or correct the reference to an existing BSR cell by correcting the associated *port_name*.

(See UIT-131, UIT-132 or UIT-133)

---

## UIT-139

(error) -no_internal_scan invoked but instruction '%s' specifies core scan chain '%s'.

### Description

If you want to specify an instruction and (optionally) the code for a specific internal scan chain, execute *set_jtag_instruction instruction_name -reg_name name* [*-code code*].

The *name* of each internal scan chain is the name of its parallel scan-in port; that is, the port which has the *test_scan_in* attribute assigned to it. This guarantees the uniqueness of names for these scan chains and provides DFT Compiler with a mechanism for identifying each target scan chain.

Feedback

By default DFT Compiler will attach core test structures that it recognizes (e.g. internal scan chains) to the JTAG Test Access Port (TAP). Internal scan chains will *not* be connected to the TAP if you execute *insert_jtag -no_internal_scan*.

DFT Compiler generates this error message if *-no_internal_scan* has been invoked, but you have explicitly specified a JTAG instruction for one of the internal scan chains using *set_jtag_instruction instruction_name -reg_name name* [*-code code*].

**What Next**

Resolve the conflict. If you want to cancel the scan chain instruction, execute *set_jtag_instruction instruction_name -cancel*. Otherwise invoke *insert_jtag* without *-no_internal_scan*.

---

## UIT-140

(warning) The DFT Compiler specific JTAG instruction '%s'\n\ \tdoes not support register name or coordinate specification.\n \tSpecifications ignored.

**Description**

It is meaningless to specify *-reg_name*, *-reg_coordinates*, or *-reg_enable* with the *DAISY_CORE_SCAN* instruction. Doing so results in this error message.

The *DAISY_CORE_SCAN* instruction selects a single scan chain made up of all internal scan chains daisy-chained together. To assign a specific code to this instruction, issue the command *set_jtag_instruction DAISY_CORE_SCAN -code code*. This is equivalent to executing *insert_jtag -daisy_chained*, so you do not need to invoke *-daisy_chained* explicitly, UNLESS you want to specify the routing order of the serially daisy-chained scan chains.

**What Next**

Re-invoke *set_jtag_instruction DAISY_CORE_SCAN -code code* without the *-reg_name*, *-reg_coordinates*, and/or *-reg_enable* specifications.

---

## UIT-141

(error) Bad model scale factor, must be positive.

**Description**

For the command, set_model_scale, the scale value must be positive. You have entered a zero or negative number.

**What Next**

Reenter the command with a positive scale factor.

Feedback

## UIT-142

(error) Bad model load value, should not be negative.

**Description**

For the command, set_model_load, the load value cannot be negative. You have entered a negative number.

**What Next**

Reenter the command with a non-negative load value.

## UIT-143

(error) Bad model drive value, should not be negative.

**Description**

For the command, set_model_drive, the drive value cannot be negative. You have entered a negative number.

**What Next**

Reenter the command with a non-negative drive value.

## UIT-144

(warning) Port '%s/%s' is not an input or inout port; model_drive not set.

**Description**

The *set_model_drive* command works only on input or inout ports.

**What Next**

Examine the design to determine the correct ports for the command.

## UIT-145

(error) Erroneous specification of a list of ports since\n\ \tset_jtag_implementation has not been invoked with a Boundary Scan\n\ \tRegister (BSR) component.

**Description**

*set_jtag_implementation* only supports a *list_of_ports* when invoked with Boundary Scan Register (BSR) components (*BSRin*, *BSRout* or *BSRcontrol*), associating a JTAG component implementation of a BSR cell with specific ports in the BSR. A port list is

Feedback

meaningless with respect to the JTAG TAP controller, Bypass Register, Instruction Register or device Identification Register.

**What Next**

Resolve the inconsistency either by removing the list_of_ports, or by specifying a BSR cell component.

---

## UIT-146

(error) Three-state cell `%s`\n\ \t(technology library cell `%s`) is dont_touch.

**Description**

For successful JTAG synthesis, DFT Compiler requires that all three-state devices associated with circuit I/O be at the top level of the design. When DFT Compiler inserts boundary scan cells for three-state ports into the design, it determines their location by locating the data and control inputs to the associated generic three-state devices. In order to translate a three-state device into its generic equivalent, the original three-state device must *not* have its *dont_touch* attribute set *TRUE*. If it is ` set *TRUE*, this error message is generated.

There are two ways that a device can have its *dont_touch* attribute set *TRUE*; the user can explicitly set the attribute, or the technology library cell with which the device is implemented may specify that the device should not be touched.

**What Next**

Remove the *dont_touch* attribute associated with the offending three-state device.

---

## UIT-147

(error) Invalid sample percentage value '%d'.

**Description**

The *-sample* option of the command *create_test_patterns* specifies the percentage of faults to be considered for test generation.

**What Next**

The value of this option should be in the 0-100 range.

---

## UIT-149

(Information) The set_jtag_part_number command is overriding the\n\ \tenvironmental variable "jtag_part_number" value `%d'\n\ \tby `%d'.

Feedback

### Description

It is possible to specify the value of the 16-bit binary part number field of the JTAG ID register in two ways: using the *set_jtag_part_number* command or using the environmental variable *jtag_part_number*. This message indicates that the value set by *set_jtag_part_number* is overriding the default value set by *jtag_part_number*.

### What Next

Using environmental variables for those JTAG synthesis constraints that rarely change in your synthesis environment reduces the number of explicit JTAG synthesis commands you must invoke.

---

## UIT-150

(Information) The set_jtag_manufacturer_id command is overriding the\n\ \tenvironmental variable "jtag_manufacturer_id_number" value `%d'\n\ \tby `%d'.

### Description

There are two ways to specify the value of the 11-bit binary manufacturer ID field of the JTAG ID register: by using the *set_jtag_manufacturer_id* command, or by using the environmental variable *jtag_manufacturer_id_number*. This message indicates that the default value set by the latter is being overridden by the value specified by the former.

### What Next

To reduce the number of explicit JTAG synthesis commands you must invoke, use environmental variables for those JTAG synthesis constraints that rarely change in your synthesis environment.

---

## UIT-151

(Information) The set_jtag_version_number command is overriding the\n\ \tenvironmental variable "jtag_version_number" value `%d'\n\ \tby `%d'.

### Description

There are two ways to define the value of the 4-bit binary version number field of the JTAG ID register: by using the *set_jtag_version_number* command, or by using the environmental variable *jtag_version_number*. This message indicates that the default value set by the latter is being overridden by the value defined by the former.

### What Next

To reduce the number of explicit JTAG synthesis commands you must invoke, use environmental variables for those JTAG synthesis constraints that rarely change in your synthesis environment.

Feedback

## UIT-152a

(warning) The '%s' command is ignored. Either a '%s' license\n\t or '%s' license is required for this command.

### Description

You receive this warning message as a result of the *write_test* command. To run this command, you must have either the Test-Compiler license or the Test-IEEE-Std-1149-1 license.

### What Next

Verify that your installation is correct and that you are authorized for this license feature. If you are not authorized for this feature, contact Synopsys.

## UIT-152

(warning) The '%s' command is ignored. A '%s' license\n\t is required for this command.

### Description

Some dc_shell commands require specific licenses. This error may occur when the required feature is not authorized.

### What Next

Make sure your installation is correct and that you are supposed to be authorized for this license feature.

## UIT-153

(error) The sum of strobe time (%10.2f) and strobe width value (%10.2f) is required to be less than period value (%10.2f).

### Description

You have specified a strobe time and strobe width value such that the end of the strobe period stretches beyond the period.

### What Next

Check your strobe time specifications.

## UIT-154

(error) Unable to fault-simulate vectors because %s.

Feedback

### Description

The current vectors could not be fault-simulated, either because the the test protocol is not parallel-loadable, or because the *vdb* file was not created by a v3.1 or later version of ATPG.

During fault simulation of *vdb* files, scan operations are performed in a parallel-load fashion. Thus, fault simulation of *vdb* files is restricted to parallel-loadable protocols only. Currently, custom test protocols are NOT parallel-loadable. Initialization protocols read with the *read_init_protocol* command are acceptable.

Only *vdb* files written by v3.1 (or later) ATPG can be directly fault- simulated by TestSim; *vdb* files written by TestSim itself cannot be directly fault-simulated by TestSim.

### What Next

If you have a *vdb* file with vectors that are not parallel-loadable, you can use the *write_test* command to write these vectors out into a *tds* or a *wgl* vector format and then fault-simulate that *tds* or *wgl* file. The *wgl* format is preferable because its vector file is usually smaller in size. Note, however, that if you simulate a scan vector set in a serial format such as *tds* or *wgl*, then fault simulation of scan operations will be serial and therefore considerably slower.

If you got this message because your *vdb* file was created by a previous release version of ATPG, then you will need to create a new *vdb* file or write out the vectors to *tds* or *wgl* as suggested above.

---

## UIT-155

(error) write_test could not find the intermediate (SIF) file to be formatted.

### Description

Write_test formatter executable could not find the required input file (SIF file) to be formatted. The file may be deleted accidentally from the directory where this program is being run or it may not have been created due to errors such as not enough disc space to write vector file, occuring during write_test.

### What Next

Re-run write_test after ensuring that you have enough disk space

---

## UIT-156

(error) write_test failed to open temporary file to be used during vector formatting.

Feedback

**Description**

Write_test could not open temporary file(s) needed during the vector formatting process. This may be caused by lack of write permission to the directory, or failure due to insufficient disc space to write the file(s).

**What Next**

Make sure that sure that there is sufficient disc space, and that all the right permissions are set.

---

## UIT-157

(error) Insufficient memory, write_test failed to format vectors.

**Description**

Write_test ran out of run-time memory during vector formatting.

**What Next**

Ensure that sufficient memory is available.

---

## UIT-158

(error) internal error, write_test formatter executable (stran) failed due to syntax error in input (SIF) file.

**Description**

The write_test formatter failed due to syntax error in the intermediate (SIF) file used as its input. The file may have been corrupted, incompletely generated (e.g. due to insufficient disc space) or have been manually tampered with

**What Next**

Re-invoke write_test and notice any error and warning messages issued. Report any relevant messages to Synopsys.

---

## UIT-159

(error) internal error, unexpected end-of-file found in input file to the write_test formatter executable (stran).

Feedback

**Description**

The write_test formatter failed due to unexpected end-of-file found in the intermediate (SIF) file used as its input. The file may have been corrupted, incompletely generated (e.g. due to insufficient disc space) or have been manually tampered with

**What Next**

Ensure that sufficient disc space is available, and that the write_test command does not issue any error messages.

---

## UIT-160

(error) Unsupported vector format '%s' specified in the -format option.

**Description**

The vector format specified in the *-format* option of the *fault_simulate* command is not supported. Use one of the supported formats. The formats currently supported for the *fault_simulate* command are "sif", "tds", "vdb", "wgl", and "wif".

For the *prepare_testsim_vectors* command, all except the "vdb" format are supported. If you are using the "vdb" format, input this directly to the *fault_simulate* command without going through the *prepare_testsim_vectors* command.

**What Next**

Use one of the supported vector formats.

---

## UIT-163

(error) JTAG Port '%s' is not an input port.

**Description**

Only input ports can take the *clock* specifier. The JTAG circuitry associated with an *input* port can be optimized based on the signal type (*clock* or *data*) of that port. Ports that drive clock trees can be associated with specialized JTAG circuitry. An input port can be explicitly identified as carrying one of the "clock" or "data" categories.

DFT Compiler generates this message if you attempt to assign an output or bidirectional port the *clock* specifier.

The only legal output port specifiers are *enable* or *data*. (See error message UIT-164.)

**What Next**

Remove all output ports from the list of ports receiving the *clock* specifier. If you are trying to specify the type of an output port, select between *enable* or *data*.

Feedback

## UIT-164

(error) JTAG Port '%s' is not a two-state output port.

**Description**

Only two-state output ports can take the *enable* specifier.

When the three-state elements driving three-state and bidirectional *outputs* are found in the core logic of the IC (i.e. not embedded in the pads themselves) DFT Compiler requires that these three-state elements be located at the top hierarchy of the core of the design so that Boundary Scan Register (BSR) cells can be placed on the *inside* of the three-state elements in order to control and observe the data and enable lines. In these cases, only a single three-state line exits the core logic.

However, in the cases where the three-state controller for output signals will be embedded in the three-state output or bidirectional input/ouput pad associated with these ports of a design a pair of two state signals exit the core logic; a *data* line and a *enable* line. (It does not make sense for one of these ports to be a bidirectional port.) Unless, TC knows the distinction between these two types of exit lines, it will always assume that they are data lines and not insert the correct type of BSR cell on the enable lines. By specifying "enable" or "data" on a port the designer instructs TC on which type of BSR cell to place on these output ports.

DFT Compiler generates this message if you attempt to assign an input or bidirectional port the *enable* specifier, or if you have assigned the *enable* specifier to a three-state output.

The only legal input port specifiers are *clock* or *data*. (See error message UIT-163.)

**What Next**

Remove all input ports from the list of ports receiving the *enable* specifier. If you are trying to specify the type of an input port, select between *clock* or *data*.

## UIT-165

(error) %s time (%10.2f) must be less than strobe time (%10.2f).

**Description**

Data application time/delay must happen before strobe time

**What Next**

Change strobe time, and/or delay or bidirectional delay time such that data application time happens before strobe time, and rerun create_test_protocol. To set the strobe time

Feedback

use the test_default_strobe variable, and to set the bidirectional delay time use the test_default_bidir_delay variable.

---

## UIT-167

(error) Test program '%s' does not match the design '%s'.\n.

**Description**

This message indicates that the test program does not match the design. The design has probably been changed since the test program was written.

**What Next**

If you need to use this test program, you must change the design back to what it was when the test program was written out. Otherwise, the test program cannot be used and a new one will have to be generated.

---

## UIT-168

(error) Test program '%s' does not match the design '%s'. Could not get value for port '%s' in test program. This port is present in the design.

**Description**

This message indicates that the test program does not match the design. The design has probably been changed since the test program was written.

**What Next**

If you need to use this test program, you must change the design back to what it was when the test program was written out. Otherwise, the test program cannot be used and a new one will have to be generated.

---

## UIT-169

(Error) No port has been specified.

**Description**

The set_dft_signal command allows design objects to specify ports. The port specicification is mandatory.

**What Next**

Specify a port with the -port option and re-issue the command

Feedback

## UIT-170

(error) Value '%s' is not supported for the clock_gating option.\n \tUse either 'entire_design' or 'leaf_cell' as values.

**Description**

The *clock_gating* option currently supports the\n options *entire_design* and *leaf_cell*.

The default behavior if the *clock_gating* option is not specified is to do entire design clock gating.

**What Next**

Specify either *entire_design* and *leaf_cell* as values for the *clock_gating* option.

## UIT-171

(error) The test program sequence contained in the test program '%s'\n \tdoes not match the expected test program sequence.

**Description**

The test program sequence information contained in the test program specified in this error message is incorrect. It does not match the test program sequence information that was expected. The expected test program sequence information was based on the information in the test program that was input to this 'write_test' command.

This will happen when the original vdb file for the test program specified in this error message was overwritten by a later fault processor run.

When you lose or corrupt a vdb file for a test program, all test programs which depended on this test program (i.e. all test programs which were after it in the same sequence) are also invalidated.

**What Next**

Recreate the test program which is in error. You may have to also regenerate all test programs in the sequence following this test program.

## UIT-172

(information) Formatting of test vectors was successful for test program '%s'.

Feedback

### Description

You receive this message when you use the *-cummulative* option in a multi-pass test (*multi_pass_test_generation* set to *true*) after *write_test* successfully formats each test program.

### What Next

No action is required on your part.

---

## UIT-173

(warning) Formatting of test vectors failed for test program '%s'.

### Description

This message indicates that a serious error occured while *write_test* was processing your patterns. *write_test* has failed to save your patterns in the format you requested. Earlier messages will give you details of the specific problems encountered by *write_test*.

### What Next

Review previous error messages in the transcript and take the appropriate action based on those messages. See the man pages for the previous messages if you need more details on what action to take.

---

## UIT-174

(warning) You cannot use the -output option with the -cumulative option.\n \t The -output option will be ignored.

### Description

You receive this message when you attempt to use both the *-cummulative* and *-output* options in a multi-pass test (*multi_pass_test_generation* set to *true*). You cannot set both options because when you use the *-cummulative* option, you are writing out more than one file. The *-output* option specifies only one filename.

The *write_test* command ignores the *-output* option and will write out more than one file.

### What Next

To avoid this violation, change your script so you do not use the *-cummulative* and *-output* options simultaneously.

If you wish to format your patterns into a single file, you must use single pass test generation.

Feedback

## UIT-177

(warning) You cannot use the -all option as well as specify the object list with the set_test_unmask_fault command.\n \t The -all option wins. All faults in the entire design will be unmasked.

**Description**

You receive this message if specify both an object list and the *-all* option for the *set_test_unmask_fault* command. For example:

dc_shell> *set_test_unmask_fault U1 -all*

Object list and the *-all* option are mutually exclusive. The message warns you that the *set_test_unmask_fault* command has honored the *-all* option and ignored object list.

**What Next**

If you intend to unmask all faults, no action is required on your part. However, you can prevent future occurences of this error message by removing the object list.

If you intended to unmask only those faults specified by the object list, you need to re-establish fault masking on the faults you wish to mask. Use the *set_test_mask_fault* command to do this. Or, if you are using a script, you can correct and rerun the script.

## UIT-178

(error) You must either use the -all option or specify the object list with the set_test_unmask_fault command.

**Description**

You receive this message if you do not specify either an object list or the *-all* option. The following command will result in this error message:

dc_shell> *set_test_unmask_fault -sa1*

You must specify either the *-all* option or an object list to identify which masked faults you wish to unmask.

**What Next**

Issue the *set_test_unmask_fault* command with either an object list or the *-all* option specified.

## UIT-184

(error) JTAG instruction '%s' not yet declared, so it cannot be cancelled.

Feedback

**Description**

An instruction may not be deleted from the specification of the Boundary Scan Instruction Register instruction set, if it has not previously been added to that set.

In other words, *set_jtag_instruction <instruction_name> -cancel* may not be invoked if *set_jtag_instruction <instruction_name> has not been previously invoked.*

**What Next**

Remove this call to cancel the instruction from your script as it is effects no useful operation.

---

## UIT-186

(error) Illegal IDDQ fault model '%s'. Choose between 'shorts' and 'toggle'.

**Description**

The IDDQ fault model specified in the *-fault_model_iddq* option of the *fault_simulate* command is not supported. The IDDQ fault models currently supported are *shorts*, which targets transistor shorts and models 6 shorts per transistor; and *toggle*, which targets node toggle coverage.

**What Next**

Reissue *fault_simulate* and specify either of the valid fault models *shorts* or *toggle* for the *-fault_model_iddq* option.

---

## UIT-189

(error) Can't write output vdb file '%s'.

**Description**

This message indicates that the output *vdb* file cannot be written, because a file of the same name already exists and is protected from being overwritten.

**What Next**

Use a different name for the output test program, or remove the write protection from the existing *vdb* file so that it can be overwritten. Then re-execute.

---

## UIT-191

(error) '%s' is not a known clock domain restriction.

Feedback

**Description**

The set_scan_configuration command accepts a clock_domains option. This tells DFT Compiler how to define clock domains. Option arguments must be known restrictions.

**What Next**

Replace the option argument with a known restriction, for example "no_mix", "mix_edges", or "mix_clocks".

---

## UIT-192

(error) '%s' is not a known clock gating technique.

**Description**

The set_scan_configuration command accepts a clock_gating option. When a partial scan methodology and a multiplexed flip flop scan style is chosen, this tells DFT Compiler what technique to use to gate the clocks connected to non-scan cells. Option arguments must be known techniques.

**What Next**

Replace the option argument with a known technique, for example "entire_design", "superbuffer", or "leaf_cell".

---

## UIT-193

(error) Can not insert '%s' scan chains.

**Description**

The set_scan_configuration command accepts a chain_count option. This tells DFT Compiler the number of scan chains to implement in the testable design. Option arguments must be positive integers or "default" strings.

**What Next**

Repeat the set_scan_configuration command using a positive integer or the string "default".

---

## UIT-194

(error) '%s' is not a known bidirectional mode.

Feedback

### Description

The set_scan_configuration command accepts a dedicated_scan_ports option. This tells DFT Compiler whether to turn bidirectional ports inwards or outwards during scan. Arguments specified must be known bidirectional modes.

### What Next

Replace the option argument with a known bidirectional mode, for example "input" or "output".

---

## UIT-195

(warning) Arguments override the default script file name, but do not ask for a script. None is generated.

### Description

You receive this message because you are overriding a default script file name, but have not asked for a script file.

When you use *preview_dft* command with the *-script* option, DFT Compiler generates a script that completely specifies the scan design. If you do not specify the *-script* option, no script is generated.

The script file has a default name that you can override by specifying a script file name.

### What Next

Specify the *preview_dft* command with the *-script* option, if you want a script file. Otherwise, ignore the warning, or do request the script file name.

---

## UIT-196

(warning) '%s' is a %s and can not be used to specify a scan signal port.

### Description

The set_dft_signal command allows design objects to specify ports. These must be ports. Other kinds of design objects cannot be used to specify scan signal ports, and are rejected.

### What Next

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

Feedback

## UIT-197

(warning) '%s' is a %s and can not be used to specify a scan signal pin.

**Description**

The set_dft_signal command allows design objects to specify pins. These must be pins or pin instances. Other kinds of design objects cannot be used to specify scan signal ports, and are rejected.

**What Next**

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

## UIT-198

(error) '%s' is not a scan signal type.

**Description**

The *set_dft_signal* command lets you associate scan signal semantics with design ports. Specified signal types must be scan signal types in test_scan_enable, test_scan_enable_inverted, test_scan_clock, test_scan_clock_a, test_scan_clock_b, test_clock, test_scan_in, and test_scan_out. Other signal types do not have scan signal semantics and are rejected.

**What Next**

Repeat the *set_dft_signal* command using a scan signal type.

## UIT-199

(error) '%s' is not a signal type for the '%s' scan style.

**Description**

The set_dft_signal command lets you associate scan signal semantics with design ports. Specified signal types must be consistent with the specified scan style. Other signal types do not have scan signal semantics in the specified scan style and are rejected.

**What Next**

Repeat the set_dft_signal command using a scan signal type that has meaning in the specified scan style.

Feedback

## UIT-200

(warning) %s port '%s' can not be a %s.

**Description**

You can use the *set_dft_signal* command to put associated scan semantics with design ports. This warning is generated when you try to set the signal type of a port to something that is inconsistent with its direction. For example, signal type test_scan_out is associated with scan chain outputs. It cannot be associated with an input port.

**What Next**

Repeat the command using the correct port.

## UIT-201

(warning) did not complete set_dft_signal. '%s' is a %s, not a design port.

**Description**

You can use the set_dft_signal command to put test-specific signal types on design ports. This warning is generated when you try to set the signal type of an object that is not a design port.

**What Next**

Repeat the command using the correct port name.

## UIT-202

(warning) did not complete set_dft_signal. %s port '%s' can not be a %s.

**Description**

You can use the set_dft_signal command to put test-specific signal types on design ports. This warning is generated when you try to set the signal type of a port to something that is inconsistent with its direction. For example, signal type test_scan_out is associated with scan chain outputs. It cannot be associated with an in port.

**What Next**

Repeat the command using the correct port.

## UIT-203

(warning) %s pin '%s' can not be a %s.

Feedback

**Description**

You can use the set_dft_signal command to specify hookup pins for design ports that have scan semantics. This warning is generated when you try to set the hookup pin for a port to something that is inconsistent with its direction. For example, ports with signal type test_scan_out should be associated with output pins. They cannot be associated with input pins.

**What Next**

Repeat the command using the correct hookup pin.

---

## UIT-204

(error) There is no valid scan port.

**Description**

You use the set_dft_signal command to associate scan signal semantics with design ports. You see this error when nothing you specify is a valid design port.

**What Next**

Study accompanying messages for the reasons why specified ports were not acceptable, and repeat the command using valid ports.

---

## UIT-205

(error) No specified hookup pin is valid.

**Description**

You can use the set_dft_signal command to associate hookup pins with scan signal ports. You see this error when nothing you specify is a valid design pin.

**What Next**

Study accompanying messages for the reasons why the specified access pins were not acceptable. Repeat the command using valid pin instances.

---

## UIT-206

(warning) %d scan ports have been specified. Only the first will be processed.

**Description**

You use the set_dft_signal command to associate scan signal semantics with design ports. You see this error when you try to specify the signal type of multiple design ports using

Feedback

the same command. To simplify commands and eliminate ambiguity, separate commands must be used.

**What Next**

Split outstanding scan port specifications among multiple commands.

---

## UIT-207

(warning) %d hookup pins have been specified. Only the first will be processed.

**Description**

You can use the set_dft_signal command to associate hookup pins with scan signal ports. You see this warning when you try to associate more than one hookup pin with a design port. Only one can be specified.

**What Next**

If you want another hookup pin to be used, repeat the command specifying only that pin.

---

## UIT-208

(warning) There is no scan chain called '%s'. Specification is ignored.

**Description**

You can use the set_dft_signal command to associate scan chains with scan signals. You see this warning when you try to associate a non-existent chain with a scan signal. Chains must already have been specified using set_scan_path command.

**What Next**

Correct the chain name, if you've made a mistake, or specify the chain using the set_scan_path command before repeating the specification.

---

## UIT-209

(warning) %d scan ports have been specified, but access pins or scan chains have been specified also. Only the first scan port will be processed.

**Description**

You use the set_dft_signal command to associate scan signal semantics with design ports. You see this error when you try to specify the signal type of multiple design ports, and associate access pins of scan chains with them, using the same command. To simplify commands and eliminate ambiguity, separate commands should be used.

Feedback

### What Next

Split outstanding scan port specifications among multiple commands.

---

## UIT-210

(error) '%s' is not a known scan link type.

### Description

Use the set_scan_link command to declare scan links for the current design. Known scan link types include "wire" and "scan_out_lockup". You see this error when you specify an unknown scan link type.

### What Next

Repeat the specification using a known scan link type.

---

## UIT-211

(warning) '%s' is not a scan signal type. Discarding specified access point.

### Description

The *set_scan_group* command lets you specify access points with scan signal semantics. Specified signal types must be scan signal types in testdb_scan_enable, testdb_scan_enable_inverted, testdb_scan_clock, testdb_scan_clock_a, testdb_scan_clock_b, testdb_clock, testdb_scan_in, and testdb_scan_out. Other signal types do not have scan signal semantics and are rejected.

### What Next

Repeat the *set_scan_group* command using a scan signal type.

---

## UIT-212

(warning) '%s' does not identify a design pin. Discarding specified access point.

### Description

The *set_scan_group* command lets you specify access points with scan signal semantics. Specified access points must identify design pins. Other kinds of design objects cannot be used to specify access points, and are rejected.

### What Next

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

Feedback

## UIT-213

(warning) Access point specification is not paired. Last specification is incomplete and is discarded.

**Description**

The *set_scan_group* command lets you specify access points with scan signal semantics. Specified access points must be pairs, where each pair includes a signal type and a design port or pin. Incomplete pairs cannot be used to specify access points, and are rejected.

**What Next**

Remove the last object from the argument list to get rid of the warning.

## UIT-214

(error) Link name '%s' identifies a design cell. Link specification creates ambiguity and is discarded.

**Description**

The set_scan_link command lets you define scan links. Specified link names cannot identify design cells. Otherwise future scan chain specifications would be ambiguous.

**What Next**

Rename the scan link.

## UIT-215

(error) Segment name '%s' identifies a design cell. Specification creates ambiguity and is discarded.

**Description**

The *set_scan_group* command lets you define scan segments. Specified segment names cannot identify design cells. Otherwise future scan chain specifications would be ambiguous.

**What Next**

Rename the scan segment.

## UIT-216

(warning) %s pin '%s' can not be a %s.

Feedback

### Description

You can use the *set_scan_group* command to specify access pins for scan segment using scan semantics. This warning is generated when you try to set the access point for a segment to something that is inconsistent with its direction. For example, ports with signal type test_scan_out should be associated with output pins. They cannot be associated with input pins.

### What Next

Repeat the command using the correct access pin or signal type.

---

## UIT-217

(error) '%s' is not a signal type for the '%s' scan style.

### Description

The *set_scan_group* command lets you associate scan signal semantics with design ports and pins. Specified signal types must be consistent with the specified scan style. Other signal types do not have scan signal semantics in the specified scan style and are rejected.

### What Next

Repeat the set_dft_signal command using a scan signal type that has meaning in the specified scan style.

---

## UIT-218

(warning) Segment access list has multiple hookup points for signal type '%s'. All but the first is discarded.

### Description

The *set_scan_group* command lets you associate scan signal semantics with design ports or pins. You can associate at most one hookup point with each signal type. This message tells you that you have tried to associate more than one hookup point with a signal type, and that DFT Compiler is discarding all but the first.

### What Next

Repeat the *set_scan_group* command if you want to specify a different hookup point.

Feedback

## UIT-219

(warning) Segment access list has multiple signal types for hookup point '%s'. All but the first is discarded.

### Description

The *set_scan_group* command lets you associate scan signal semantics with design ports or pins. You can associate at most one signal type with each access point. This message tells you that you have tried to associate more than one signal type with an access point, and that DFT Compiler is discarding all but the first.

### What Next

Repeat the *set_scan_group* command if you want to specify a different signal type.

## UIT-220

(warning) Scan chain '%s' has scan style '%s' that differs from design scan style '%s'. Specification is ignored.

### Description

You can use the set_dft_signal command to associate scan chains with scan signals. You see this warning when you try to associate a chain that you have specified under one scan style with a scan signal you specify under another. Chains must have been specified using the same scan style.

### What Next

Change the scan style and reapply the set_dft_signal command, or reapply your earlier set_scan_path command using the new scan style.

## UIT-221

(warning) '%s' identifies multiple pins. Discarding specified access point.

### Description

The *set_scan_group* command lets you specify access points with scan signal semantics. Specified access points must identify one design pin. Wildcards cannot be used to specify access points, and are rejected.

### What Next

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

Feedback

## UIT-222

(warning) Segment '%s' does not have scan style '%s' and is not being added to the scan chain.

### Description

The set_scan_path command accepts an ordered list of design objects. These must be cells, instances, links or segments. DFT Compiler does not support scan chains with mixed scan styles. Segments must have the same scan style as the scan chain. You cannot add segments with other scan styles to a scan chain.

### What Next

If you really do want to add the segment to the chain, simply re-specify it using the same scan style as the chain.

## UIT-223

(warning) '%s' is not a cell, instance, scan segment, or scan link, and is not being added to the scan chain.

### Description

The set_scan_path command accepts an ordered list of design objects. These must be cells, instances, links or segments. Other kinds of design objects cannot be added to scan chains, and are rejected.

### What Next

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

## UIT-224

(warning) write_test_max_scan_patterns value specified (%d) ignored.

### Description

Illegal value specified for this variable: the value can not be a negative or a 1. The value specified is ignored.

### What Next

Use a value of greater than 1 for this variable

Feedback

## UIT-225

(warning) write_test_max_cycles value specified (%d) ignored.

**Description**

Illegal value specified for this variable: the value can not be a negative. The value specified is ignored.

**What Next**

Use a positive value for this variable

## UIT-226

(warning) Scan chain element '%s' is a scan link\n\tand is not being added to the scan chain.

**Description**

The *set_scan_path* command accepts an ordered list of design objects. The first object in the list can not be a scan link because there is no preceding cell to associate it with.

**What Next**

Remove the object from the argument list to get rid of the warning.

## UIT-227

(warning) Scan style '%s' does not add lockup latches to the scan chain.\n \tIgnoring the set_scan_configuration -add_lockup command.

**Description**

Only the multiplexed_flip_flop scan style adds lockup latches to the scan chain.

This message tells you that you have asked DFT Compiler to add lockup latches to the scan chain, but have specified a scan style that is not multiplexed_flip_flop. DFT Compiler is telling you that it is ignoring your *-add_lockup* option.

**What Next**

To get rid of the warning, remove the *-add_lockup true* from the *set_scan_configuration* option list, or set the scan style to multiplexed_flip_flop.

## UIT-228

(warning) Ignoring preview_dft -show option argument '%s'.

Feedback

**Description**

The *preview_dft* command has a *-show* option, that gives users the flexibility they need to customize what they see.

The option takes a list argument, containing case-insensitive keywords in "cells", "scan", "segments", "scan_clocks", "scan_signals", and "all".

This message says that you have used a *-show* option argument that is not a keyword. DFT Compiler ignores the specification.

**What Next**

To get rid of the warning, remove the unknown keyword from the *preview_dft -show* option argument list.

---

## UIT-229

(warning) Scan style '%s' does not need scan clock domain constraints. Ignoring the set_scan_configuration -clock_mixing command.

**Description**

Only the multiplexed_flip_flop scan style needs scan clock domain constraints.

This message tells you that you have asked DFT Compiler to implement scan clock domain constraints, but have specified a scan style that is not multiplexed_flip_flop. DFT Compiler is telling you that it is ignoring your *-clock_mixing* option.

**What Next**

To get rid of the warning, remove the *-clock_mixing* from the *set_scan_configuration* option list, or set the scan style to multiplexed_flip_flop.

---

## UIT-230

(information) To support new scan insertion capabilities, this command is being replaced by the set_scan_path command, which is used with the insert_scan command. Please see the DFT Compiler Scan Synthesis User Guide for more information about set_scan_path and insert_scan.

**Description**

To support new scan insertion capabilities, the *insert_test* command is being replaced by *insert_scan*.

The *set_scan_chain* command is not recognized by *insert_scan*. The *set_scan_path* command is used instead.

Feedback

DFT Compiler continues to support *set_scan_chain* and *insert_test* for a transition period, so legacy *dc_shell* scripts continue to work.

We believe that *set_scan_path* and *insert_scan* supports all *set_scan_chain* and *insert_test* features, and ultimately intend obsoleting *set_scan_chain* and *insert_test*.

**What Next**

See the DFT Compiler Scan Synthesis User Guide for more information about *set_scan_path*, *insert_scan*, and the hierarchical scan user interface. Let Synopsys know about any *set_scan_chain* or *insert_test* feature that you rely on, and is not supported by *set_scan_path* and *insert_scan*.

---

## UIT-231

(Error) The options -chain and -cell cannot be specified at the same time.

**Description**

This message indicates that a report_scan_path command has been issued, but the two options -chain and -cell cannot be specified at the same time. You choose either to report the scan signal information for the scan chains with the -chain option or to report the cells of the scan chains with the -cell option.

**What Next**

Remove one of the options (-chain or -cell) and reissue the command.

---

## UIT-232

(warning) Coverage threshold option ignored. Coverage threshold must be greater than 0%%.

**Description**

The specified coverage threshold for fault_simulate was ignored because it was less than or equal to 0%.

**What Next**

The coverage threshold must be greater than 0% and less than or equal to 100%.

---

## UIT-233

(warning) Coverage threshold option ignored. Coverage threshold must be less than or equal to 100%%.

Feedback

### Description

The specified coverage threshold for fault_simulate was ignored because it was greater than 100%.

### What Next

The coverage threshold must be greater than 0% and less than or equal to 100%.

---

## UIT-235

(error) cannot generate TSTL2 format, too many timing types.

### Description

All the inputs with same delay are grouped into one input timing type. All the outputs with same delay (or strobe time) are grouped into one output timing type. TSTL2 format allows a maximum of seven (6 + 1 dedicated for DT waveform) types of input timing and two types of output timing. One TIMESET statement is generated for each timing type. Input to the write_test requires it to generate more than allowed TIMESET statements.

### What Next

To generate TSTL2 format, change the timing values on inputs and/or outputs to reduce the number of timing types. Read TIMESET statement section of TSTL2 specifications for detailed information.

---

## UIT-236

(warning) You have invoked preview_dft with -script and one or more of the following options: -show, -test_points, -test_wrapper, -core_integration, -mbist, -bsd, -test_mode, -verbose. These options are ignored.

### Description

The *preview_dft* command option *-script* is mutually exclusive to the following options *-show*, *-test_points*, *-test_wrapper*, *-core_integration*, *-mbist*, *-bsd*, *-test_mode*, and *-verbose*. This message says that you have asked for one or more of the options. DFT Compiler ignores the additional option(s) and generates a script.

### What Next

To get rid of the warning, invoke *preview_dft* with either the *-show* option and/or the following options: *-test_points*, *-test_wrapper*, *-core_integration*, *-mbist*, *-bsd*, *-test_mode*, *-verbose* OR just the *-script* option, but not both.

Feedback

## UIT-237

(information) You have invoked remove_scan_configuration with no options. The command is ignored.

**Description**

The *remove_scan_specification* command does nothing when it is invoked without options.

This, in itself, is not a problem. No scan specifications are removed. You might, however, have meant to use the "-all" option or one of the other more limited options.

**What Next**

To get rid of the information message, invoke *remove_scan_configuration* with options.

## UIT-238

(information) To support new scan insertion capabilities, this command is being replaced by the insert_scan command. Please see the DFT Compiler Scan Synthesis User Guide for more information about insert_scan.

**Description**

To support new scan insertion capabilities, the *insert_test* command is being replaced by *insert_scan*.

DFT Compiler continues to support both commands for a transition period, so legacy *dc_shell* scripts continue to work.

*insert_scan* supports all *insert_test* features and ultimately intend obsoleting *insert_test*.

**What Next**

See the DFT Compiler Scan Synthesis User Guide for more information about *insert_scan* and the hierarchical scan user interface. Let Synopsys know about any *insert_test* feature that you rely on, and is not supported by *insert_scan*.

## UIT-239

(information) To support new scan insertion capabilities, this command is being replaced by the set_scan_path command, which is used with the insert_scan command. Please see the DFT Compiler Scan Synthesis User Guide for more information about set_scan_path and insert_scan.

Feedback

**Description**

To support new scan insertion capabilities, the *insert_test* command is being replaced by *insert_scan*.

The *set_test_routing_order* command is not recognized by *insert_scan*. The *set_scan_path* command is used instead.

DFT Compiler continues to support *set_test_routing_order* and *insert_test* for a transition period, so legacy *dc_shell* scripts continue to work.

*set_scan_path* and *insert_scan* support all *set_test_routing_order* and *insert_test* features, and ultimately intend obsoleting *set_test_routing_order* and *insert_test*.

**What Next**

See the DFT Compiler Scan Synthesis User Guide for more information about *set_scan_path*, *insert_scan*, and the hierarchical scan user interface. Let Synopsys know about any *set_test_routing_order* or *insert_test* feature that you rely on, and is not supported by *set_scan_path* and *insert_scan*.

---

## UIT-240

(information) Some design changes may have occurred after "create_test_patterns" or "create_test_patterns" was run in a different dc_shell session.

**Description**

write_test prints this message if it detects any design changes after "create_test_patterns" or if "create_test_patterns" was run in a different dc_shell session. Make sure that any changes made to the design after the test vectors were generated do not invalidate the patterns. This can cause simulation mismatches.

**What Next**

If there are any design changes that invalidate the patterns, please rerun "create_test_patterns".

---

## UIT-241

(warning) Ignoring the -complete true option because scan chain '%s' is empty.

**Description**

Specify scan chains using the *set_scan_path* command. Tell DFT Compiler to not add elements to your scan chain by setting the *-complete* option to *true*.

This message tells you that DFT Compiler ignores a *-complete true* option because it is applied to an empty scan chain.

Feedback

### What Next

Remove the option from the command line or specify valid scan chain elements to get rid of the warning. If you did specify chain elements, study accompanying warning messages to see why they were discarded.

---

## UIT-242

(information) The %s attribute on the library cell %s now has priority over this attribute on an instance, reference or design.

### Description

You receive this message when you perform *set_scan_element* or *set_scan_transparent* on a library cell. The message indicates that the command has been executed (and the specified attribute is now present on the library cell), but warns you that this attribute now has precedence and so cannot be overwritten by performing *set_scan_element* or *set_scan_transparent* on an instance, reference or design.

### What Next

If it is acceptable to you that the library cell attribute takes precedence over the attribute on an instance, reference or design, no action on your part is required. If this is not acceptable, remove the attribute from the library cell using *set_scan_element -false*, *set_scan_transparent -false*, or *remove_attribute*.

---

## UIT-243

(warning) The design %s corresponding to the object %s has the %s\n attribute set to true. This specification will not have any effect.

### Description

The value of the scan element or scan transparent attribute on a design has precedence over the the value of the scan element or scan transparent attribute on an instance or a reference. If the scan element or the scan transparent attribute is set on an instance or a reference, and the design corresponding to this instance or reference has the scan element or scan transparent attribute set, the specification does not have any effect because of the precedence rules.

### What Next

Remove the attribute on the design if you want to see the effect of the scan element or scan transparent attribute on an instance or reference.

Feedback

## UIT-244

(warning) The design %s corresponding to the object %s has the %s\n attribute set to true. This specification will not have any effect for the level-\n sensitive elements inside %s.

### Description

The value of the scan element or scan transparent attribute on a design has precedence over the the value of the scan element or scan transparent attribute on an instance or a reference. If the scan element or the scan transparent attribute is set on an instance or a reference, and the design corresponding to this instance or reference has the scan element or scan transparent attribute set, the specification does not have any effect because of the precedence rules.

### What Next

Remove the attribute on the design if you want to see the effect of the scan element or scan transparent attribute on an instance or reference.

## UIT-245

(warning) Deleting the scan transparent attribute on object %s.

### Description

If the value of the *scan_element* attribute on a design object is true, it implies that all flip-flops and all latches inside that design object, that do not have violations, must be made a part of the scan chain. Therefore, setting the *scan_element* attribute value on a design object that already has the scan transparent value set to true causes the scan transparent attribute to be deleted.

### What Next

If you do not want the scan transparent attribute deleted, use the *set_scan_element command to set the scan_element attribute false. To reapply the scan transparent attribute, use the set_scan_transparent command.*

## UIT-246

(error) Compliance enable specification is not paired.

### Description

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a boundary scan design. Each compliance enable pattern consists of a set of port_name value pairs. Incomplete pairs cannot be used to specify a compliance enable pattern and are rejected.

Feedback

**What Next**

Make sure that the compliance enable pattern has port_name value pairs.

---

## UIT-247

(error) '%s' is not a port of the design.

**Description**

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a boundary scan design. Each compliance enable pattern consists of a set of port_name value pairs. One of the port names specified in the compliance enable pattern does not correspond to a design port.

**What Next**

Change the compliance pattern specification such that all port names appearing in a compliance pattern are ports of the design.

---

## UIT-248

(error) Multiple design objects found with name '%s'.

**Description**

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a Boundary Scan Design. Each compliance enable pattern consists of a set of port_name-value pairs. One of the port names specified in the compliance enable pattern corresponds to multiple design objects.

**What Next**

Re-issue the *set_bsd_compliance* command making sure that each port name in a compliance enable pattern corresponds to a unique design object.

---

## UIT-249

(error) The value specified at a compliance enable port must be either a '0' or a '1'.

**Description**

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a boundary scan design. Each compliance enable pattern consists of a set of port_name value pairs. The value at a compliance enable port must be either a logic zero or a logic one.

Feedback

**What Next**

Make sure that the value at each compliance enable port in a compliance enable pattern is either a logic zero or a logic one.

---

## UIT-250

(error) The following compliance enable port is not an input port: %s.

**Description**

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a boundary scan design. Each compliance enable pattern consists of a set of port_name value pairs. Each port name in a compliance enable specification must correspond to an input port of the design.

**What Next**

Make sure that each port in the compliance enable pattern corresponds to an input port of the design.

---

## UIT-251

(error) The following compliance enable port is a TAP port: %s.

**Description**

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a boundary scan design. Each compliance enable pattern consists of a set of port_name value pairs. No compliance enable pattern may include a TAP port.

**What Next**

Remove the TAP ports from the compliance pattern specification.

---

## UIT-252

(warning) No TAP ports were found for the design.

**Description**

The *set_bsd_compliance* command issues an error if any compliance enable port is a TAP port. You get this warning if this check is not performed because no IEEE 1149.1 Test Access Ports were found for the design.

**What Next**

No further action is necessary.

Feedback

## UIT-253

(error) The following port appears more than once in a\n \tcompliance enable pattern: '%s'.

**Description**

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a boundary scan design. Each compliance enable pattern consists of a set of port_name value pairs. No port can appear more than once in a compliance enable specification.

**What Next**

Make sure that the compliance enable pattern has no duplicate ports.

## UIT-254

(information) Writing '%s' package description.

**Description**

The *read_pin_map* command lets you read port-to-pin map files for Boundary Scan Designs. The *read_pin_map* command produces this information message when the user reads in a port-to-pin map file.

**What Next**

No further action is necessary.

## UIT-255

(information) Overwriting '%s' package description.

**Description**

The *read_pin_map* command lets you read port-to-pin map files for Boundary Scan Designs. If a port-to-pin map file with some package name has been read in and the user tries to read in another port-to-pin map file with the same package name, the *read_pin_map* command produces this information message.

**What Next**

No further action is necessary.

## UIT-256

(information) Deleting '%s' package description.

Feedback

**Description**

The *remove_pin_map* command lets you delete a package description for a Boundary Scan Design. The *remove_pin_map* command produces this information message when the user tries to delete a package description.

**What Next**

No further action is necessary.

---

## UIT-257

(error) Could not find package '%s'.

**Description**

The *remove_pin_map* command lets you delete a package description for a Boundary Scan Design. The *remove_pin_map* command produces this information message when the package name specified by the user has not been read in.

**What Next**

Check the packages read in for the design using the *report_pin_map* command and reissue the *remove_pin_map* command with a valid package name.

---

## UIT-258

(error) Naming check must be one of 'VHDL', 'BSDL' or 'none'.

**Description**

The only valid values for the naming_check argument to *write_bsdl* are "VHDL", "BSDL" or "none". This error message indicates that the naming_check argument has some value other than these.

**What Next**

Make sure that the value of the naming check argument is valid.

---

## UIT-259

(error) Unable to open output file '%s' for writing.

**Description**

This error message occurs when the output file cannot be opened for writing.

Feedback

**What Next**

Make sure that the output file and the directory have write permissions and run the command again.

---

## UIT-260

(information) Opened BSDL file '%s' for writing.

**Description**

This information message indicates that the BSDL generation subsystem has successfully opened the output file for writing.

**What Next**

No further action is necessary.

---

## UIT-261

(error) Cannot read file '%s'.

**Description**

This error appears when you try to read a protected pin map file or the file does not exist.

**What Next**

Check and correct search_path, then reinvoke the *read_pin_map* command.

---

## UIT-262

(error) File '%s' is a directory name.

**Description**

You receive this message from the *read_pin_map* command if the argument you issued with that command is a directory name and not a filename. The argument of *read_pin_map* must be the full name of a file containing the port-to-pin mapping for your design.

**What Next**

Verify the full pathname of your port-to-pin mapping file, then reissue *read_pin_map* using the complete, correct filename as the argument.

Feedback

## UIT-263

(warning) %d ports have been specified. Only the first will be processed.

**Description**

You use the set_dft_signal command to associate test mode signal semantics with exactly one design port. You see this error when you try to specify the test mode of multiple design ports using the set_dft_signal command.

**What Next**

Ensure that you want to associate test mode semantics with the first design port. Remove additional specifications to silence the warning.

## UIT-264

(warning) %s port '%s' can not be a %s.

**Description**

You can use the set_dft_signal command to associate test mode signal semantics with exactly one design input port. This warning is generated when you apply the set_dft_signal command to a port that is not an input port.

**What Next**

Repeat the command using the correct port.

## UIT-265

(error) There is no valid test mode port.

**Description**

You use the set_dft_signal command to associate test mode signal semantics with exactly one design input port. You see this error when nothing you specify identifies a design input port.

**What Next**

Study accompanying messages for the reasons why the port you specified was not acceptable, and repeat the command using a valid input port.

## UIT-266

(error) '%s' is not a test mode signal type.

Feedback

**Description**

The set_dft_signal command lets you associate test mode signal semantics with exactly one design input port. Specified signal types must be test mode signal types in test_hold_logic_zero and test_hold_logic_one. Other signal types do not have test mode signal semantics and are rejected.

**What Next**

Repeat the set_dft_signal command using a test mode signal type.

---

## UIT-267

(warning) Port '%s' has a '%s' signal_type attribute. This may conflict with '%s' signal semantics.

**Description**

The set_dft_signal command lets you associate signal semantics with design ports. This message tells you that a port has a signal_type attribute that may conflict with these semantics.

**What Next**

Satisfy yourself that there is no conflict.

---

## UIT-268

(warning) Port '%s' has a test_hold '%s' attribute. This conflicts with '%s' signal semantics.

**Description**

The set_dft_signal command lets you associate signal semantics with exactly one design input port. This message tells you that the port has a test_hold attribute that conflicts with these semantics.

**What Next**

Satisfy yourself that there is no conflict.

---

## UIT-269

(error) The type of a Test Access Port must be one\n \tof %s, %s, %s, %s, or %s.

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on design ports. The only valid signal types for 1149.1 TAP ports are tdi, tdo, tms, trst, or tck. This error

Feedback

message appears when you try set the signal type of a TAP port to a value other than tdi, tdo, tms, trst, or tck.

**What Next**

Repeat the command using the correct TAP port type.

---

## UIT-270

(error) More than one port specified with the set_1149.1_port command.

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on a design port. This error occurs when you try to perform *set_bsd_port* on a set of ports.

**What Next**

Specify exactly one port when using the *set_bsd_port* command.

---

## UIT-271

(error) Did not complete set_bsd_port. '%s' is a %s, not a design port.

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on design ports. This error is generated when you try to set the signal type of an object that is not a design port.

**What Next**

Repeat the command using the correct port name.

---

## UIT-272

(error) Did not complete set_bsd_port. %s port '%s' can not be a %s.

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on design ports. This error is generated when you try to set the signal type of a port to something that is inconsistent with its direction. For example, signal type tdo is associated with boundary scan test data output. It cannot be associated with an input port.

**What Next**

Repeat the command using the correct port.

Feedback

## UIT-273

(error) A port, '%s', with a signal type of '%s' already exists in the design.

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on a design port. This error message is produced if a port with the given signal type already exists in the design.

**What Next**

Remove the signal_type attribute from the existing port and reissue the command.

## UIT-274

(error) The '%s' port is a system clock.

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on a design port. This error message is produced if you try to declare a system clock port as the TDI, TDO, TMS or TRST pin of the TAP.

**What Next**

Reissue the *set_bsd_port* command specifying a non-clock port as the TDI, TDO, TMS or TRST pin of the TAP.

## UIT-275

(error) The '%s' port is a test clock.

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on a design port. This error message is produced if you try to declare a test clock port as the TDI, TDO, TMS or TRST pin of the TAP.

**What Next**

Reissue the *set_bsd_port* command specifying a port that is not a test clock as the TDI, TDO, TMS or TRST pin of the TAP.

## UIT-276

(Warning) Overwriting the signal type attribute for the port '%s'.

Feedback

**Description**

You can use the *set_bsd_port* command to put test-specific signal types on a design port. This warning message is produced if you try to perform *set_bsd_port* on a port that already has a signal type attribute.

**What Next**

No further action is necessary.

---

## UIT-277

(error) The '<signal_port_bit_value_pairs>' list has no members.

**Description**

The *set_bsd_compliance* command lets you specify a compliance enable pattern for a Boundary Scan design. The signal_port-bit_value list in a *set_bsd_compliance* cannot be empty.

**What Next**

Reissue the command with a nonempty list of signal_port-bit_value pairs.

---

## UIT-278

(information) You invoked remove_bsd_specification with no\n \toptions. The command is ignored.

**Description**

The *remove_bsd_specification* command does nothing when it is invoked without options.

This, in itself, is not a problem. No IEEE 1149.1 specifications are removed. However, you might have meant to use the *-all* option or one of the other more limited options.

**What Next**

To get rid of the information message, invoke *remove_bsd_specification* with options.

---

## UIT-279

(warning) The sense value '%s' is ignored.

**Description**

In command *set_scan_signal*, the option *-sense* is applicable only if a hookup pin has been specified. If there is no hookup pin, the sense value is then ignored.

Feedback

**What Next**

If you want to specify a hookup pin, use the option *-hookup*.

---

## UIT-280

(error) '%s' is not a correct hookup sense type.

**Description**

The *set_dft_signal* command lets you associate scan signal semantics with design ports. With respect to a specific design port, if a hookup pin also is specified, *insert_dft* connects wires to the hookup pin. The sense between the port and the hookup pin is specified by the option of *-sense*. The valid values are *non_inverted* and *inverted*, and the default value is *non_inverted*.

**What Next**

Repeat the command using a correct hookup sense value.

---

## UIT-281

(information) Setting the default package for the design '%s'.

**Description**

The *-default_package* switch of the *set_bsd_configuration* command lets you set the the default package for a Boundary Scan Design. You get this information message when you invoke the *set_bsd_configuration* command to set the default package for a Boundary Scan Design.

**What Next**

No further action is necessary.

---

## UIT-282

(information) Overwriting the default package for the design '%s'.

**Description**

The *-default_package* switch of the *set_bsd_configuration* command lets you set the the default package for a Boundary Scan Design. If the default package for a Boundary Scan Design has already been set, and you invoke the *set_bsd_configuration* command to set the default package for the Boundary Scan Design, you get this information message.

Feedback

### What Next

No further action is needed.

---

## UIT-283

(warning) Signature is not supported for '%s' instruction. Ignored the signature specification.

### Description

This error message occurs when you specify a signature for another instruction. The *set_bsd_instruction* command allows you to set the signature for the RUNBIST instruction.

### What Next

The signature specification is ignored for this instruction. To avoid this warning, remove the signature specification.

---

## UIT-284

(error) The signature for the RUNBIST instruction is invalid.

### Description

The *set_bsd_instruction* command allows you to set the parameters for the RUNBIST instructions. This error message indicates that you either ignored signature specification for RUNBIST or specified a RUNBIST signature that contains values other than a logic zero or a logic one.

### What Next

Make sure you specify signature if time or clock cycle is specified for RUNBIST instruction. Also make sure that the signature specified for the RUNBIST instruction is a stream of logic ones and zeros of a length equal to the length of the test data register selected by the RUNBIST instruction.

---

## UIT-285

(error) The wait specification for the RUNBIST/INTEST instruction is missing.

### Description

This error message occurs when you have not specified the duration required for the RUNBIST or INTEST instruction to complete. The *set_bsd_instruction* command allows you to set the timing parameters for the RUNBIST or INTEST instructions.

Feedback

### What Next

Specify the wait duration required for the RUNBIST or INTEST instructions to complete using either the *-time* or the *-clock_cycles* options.

---

## UIT-286

(error) The time specified for RUNBIST/INTEST\n \tto complete must be a positive real number.

### Description

This error message occurs when you specify a nonpositive duration for the RUNBIST or INTEST instructions to complete. The *set_bsd_instruction* command allow you to set the parameters for the RUNBIST or INTEST instructions

### What Next

Specify a positive wait duration for the RUNBIST or INTEST execution and run the the command again.

---

## UIT-287

(error) The clock_port num_cycles list in the wait specification\n \tfor the RUNBIST/INTEST instruction is empty.

### Description

This error message occurs when the the argument passed using the *-clock_cycles* option contains no members. The *set_bsd_instruction* command allows you to set the parameters for the RUNBIST and INTEST instructions. One way to specify the RUNBIST or INTEST duration is to provide a list of clock_port integer pairs using the *-clock_cycles* option for these instructions.

### What Next

Make sure that the argument passed using the *-clock_cycles* option has a positive, even number of members and run the command again.

---

## UIT-288

(error) The RUNBIST/INTEST execution time specification is not paired.

### Description

This error message occurs when the argument passed using the *-clock_cycles* option contains an odd number of members. The *set_bsd_instruction* command allows you to

Feedback

set the parameters for the RUNBIST and INTEST instructions. One way to specify the RUNBIST or INTEST duration is to provide a list of clock_port integer pairs using the *-clock_cycles* option for these instructions.

**What Next**

Make sure that the argument specified with the *-clock_cycles* option contains an even number of members.

---

## UIT-289

(error) The number of clock cycles in the wait specification must be a positive integer.

**Description**

This error message occurs when you have specified a non-integer or a non-positive integer with the *-clock_cycles* option of the *set_bsd_instruction* command. The *set_bsd_instruction* command allows you to set the parameters for the EXTEST_PULSE, EXTEST_TRAIN, RUNBIST, and INTEST instructions. The number of clock cycles specified using the *-clock_cycles* option for this command must be a positive integer.

**What Next**

Make sure that the number of clock cycles specified via the *-clock_cycles* option is a positive integer.

---

## UIT-290

(error) Could not find port '%s' in the design '%s'.

**Description**

This error message occurs when a port name specified using the *-clock_cycles* option of the previous commands is not a port of the design.

The *set_bsd_instruction* command allows you to set the parameters for the EXTEST_PULSE, EXTEST_TRAIN, RUNBIST, and INTEST instructions.

**What Next**

Make sure that the port name specified with the *-clock_cycles* option is a port of the design.

---

## UIT-291

(error) The '%s' port in the wait specification is not an input/inout port.

Feedback

**Description**

This error message occurs when a port specified using the *-clock_cycles* option of the prior commands is not an input or inout port.

The *set_bsd_instruction* command allows you to set the parameters for the RUNBIST and INTEST instructions.

**What Next**

Make sure that all ports in the wait specification are input or inout ports.

---

## UIT-292

(error) The '%s' port in the RUNBIST/INTEST duration specification is not a system or test clock.

**Description**

The *set_bsd_runbist* and the *set_bsd_intest* commands allow you to set the parameters for the RUNBIST and INTEST instructions respectively. This error message indicates that a port specified using the *-clock_cycles* switch of the above commands is not a system or test clock.

**What Next**

Make sure that all ports in the wait specification are either system clocks or test clocks.

---

## UIT-293

(error) The '%s' port appears more than once in the RUNBIST/INTEST wait specification.

**Description**

The *set_bsd_runbist* and the *set_bsd_intest* commands allow you to set the parameters for the RUNBIST and INTEST instructions respectively. This error message indicates that a clock port appears more than once in the wait specification for the above commands.

**What Next**

Make sure that no clock ports appear more than once in the RUNBIST/INTEST wait specification.

---

## UIT-294

(information) Writing the parameters for the INTEST instruction.

Feedback

**Description**

The *set_bsd_intest* command allows you to set the parameters for the INTEST instructions. This information message indicates that the parameters associated with the INTEST instruction are being written to the db design.

**What Next**

No further action is needed.

---

## UIT-295

(information) Overwriting the parameters for the INTEST instruction.

**Description**

The *set_bsd_intest* command allows you to set the parameters for the INTEST instructions. This command is not cumulative. This information message indicates that the existing parameters associated with the INTEST instruction are being overwritten by the new user specification for the INTEST parameters.

**What Next**

No further action is needed.

---

## UIT-296

(information) Writing the parameters for the RUNBIST instruction.

**Description**

The *set_bsd_runbist* command allows you to set the parameters for the RUNBIST instructions. This information message indicates that the parameters associated with the RUNBIST instruction are being written to the db design.

**What Next**

No further action is needed.

---

## UIT-297

(information) Overwriting the parameters for the RUNBIST instruction.

**Description**

The *set_bsd_runbist* command allows you to set the parameters for the RUNBIST instructions. This command is not cumulative. This information message indicates that the

Feedback

existing parameters associated with the RUNBIST instruction are being overwritten by the new user specification for the RUNBIST parameters.

**What Next**

No further action is needed.

---

## UIT-298

(error) The '%s' port is not an IEEE 1149.1 Test Access Port.

**Description**

The *remove_bsd_port* command allows you to remove the IEEE 1149.1 attributes from the test access ports. This error message indicates that the port you specified does not have the attributes associated with IEEE 1149.1 Test Access Ports.

**What Next**

Run *report_test -port* to identify the IEEE 1149.1 test access ports and reissue the command.

---

## UIT-299

(error) Could not remove the '%s' IEEE 1149.1 test access port.

**Description**

The *remove_bsd_port* command allows you to remove the IEEE 1149.1 attributes from the test access ports. This error message tells you that the *remove_bsd_port* cannot remove the IEEE 1149.1 test attibutes from the port.

**What Next**

Make sure that the port is indeed an IEEE 1149.1 test access port.

---

## UIT-300

(warning) The specified routing signals are ignored because the -route option is set to false.

**Description**

In command *set_scan_configuration*, the option *-route_signals* is not applicable when the option *-route* is set to false.

**What Next**

Set the option *-route* to true, or just take the default value.

Feedback

## UIT-301

(error) The specified routing signal type '%s' is incorrect.

**Description**

In command *set_scan_configuration", the correct routing scan signal types for the option -route_signals are {all, global, serial, scan_enables, clocks}.*

**What Next**

Repeat the command using the correct routing scan signal types.

## UIT-302

(warning) The specified routing signal type '%s' is not valid for the scan style '%s'.

**Description**

In command *set_scan_configuration", the correct routing scan signal types for the option -route_signals are {all, global, serial, scan_enables, clocks}.*

However, some route signal types do not belong to certain scan styles. For example, the routing signal type *clocks* is not valid for *multiplexed-flip-flop* scan style, and *scan_enables* is not valid for *lssd* scan style.

**What Next**

Check your set_scan_configuration -style and -route_signals specifications are consistent.

## UIT-303

(warning) The -internal_clocks option will be ignored. It only applies to multiplexed-Flip-Flop scan style.

**Description**

You receive this message if you are using a scan style other than *multiplexed_flip_flop* and specified the *-internal_clocks* option with either the *set_scan_configuration* or *set_dft_signal* command. You can use the *-internal_clocks* option only with the *multiplexed_flip_flop* scan style; the option is ignored for all other scan styles.

**What Next**

If you want to use the *-internal_clocks* option, set the scan style to *multiplexed_flip_flop* using *set_scan_configuration*, and re-apply the *-internal_clocks* option. If you want to keep your current scan style, or if it is acceptable for the *-internal_clocks* option to be ignored, you do not need to take any action.

Feedback

## UIT-304

(warning) Restoring Constrained value for port '%s'.

**Description**

In the STIL procedures, you can force a constrained port to a state other than the requested constrained value, but usually this is allowed only for a few tester cycles, and then the port must be returned to the constrained value. For example, you might want to hold a global reset port to an off state for general ATPG patterns but allow it to be asserted to initialize the design.

**What Next**

This message is purely an informational message; no action is required.

## UIT-305

(error) '%s' is not a DFT signal type.

**Description**

You receive this message if you execute the *set_dft_signal* command and use a signal type that is not a valid DFT signal type. Valid DFT signal types are test_point_normal_data_source, test_point_normal_data_sink, test_point_clock and test_mode. Other signal types do not have DFT signal semantics and are rejected.

**What Next**

Reexecute the *set_dft_signal* command using a valid DFT signal type.

## UIT-306

(warning) %d DFT ports have been specified, but access pins have been specified also. Only the first port will be processed.

**Description**

You receive this message if you execute the *set_dft_signal* command and specify both the *-hookup pin* and *-port port_list* options, where *port_list* contains more than one port. If you use the *-hookup* option, you can use only one design port for *port_list*.

**What Next**

Re-execute the *set_dft_signal* command, and specify only one port if you are also specifying access pins with the *-hookup* option. If you want to specify multiple DFT ports, use a single command for each port.

Feedback

## UIT-307

(warning) '%s' is a %s and cannot be used to specify a DFT signal port.

**Description**

The set_dft_signal command allows design objects to specify ports. These must be ports. Other kinds of design objects cannot be used to specify DFT signal ports, and are rejected.

**What Next**

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

## UIT-308

(warning) '%s' is a %s and cannot be used to specify a DFT signal pin.

**Description**

The set_dft_signal command allows design objects to specify pins. These must be pins or pin instances. Other kinds of design objects cannot be used to specify DFT signal ports, and are rejected.

**What Next**

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

## UIT-309

(warning) %s port '%s' cannot be a %s.

**Description**

You can use the *set_dft_signal* command to put associated DFT semantics with design ports. This warning is generated when you try to set the signal type of a port to something that is inconsistent with its direction. For example, signal type test_point_normal_data_source is associated with input ports. It cannot be associated with an output port.

**What Next**

Repeat the command using the correct port.

Feedback

## UIT-310

(error) There is no valid DFT port.

**Description**

You receive this error message if you execute the *set_dft_signal* command and do not specify a valid design port.

**What Next**

Study accompanying messages to determine why specified ports were not acceptable, and repeat the command using valid ports.

## UIT-311

(error) No specified hookup pin is valid.

**Description**

You receive this message if you execute the *set_dft_signal* command with the *-hookup* option, and its argument is not a valid design pin.

**What Next**

Study accompanying messages to determine why the specified access pins were not acceptable. Repeat the command using valid pin instances.

## UIT-312

(warning) %s pin '%s' cannot be a %s.

**Description**

You can use the set_dft_signal command to specify hookup pins for design ports that have DFT semantics. This warning is generated when you try to set the hookup pin for a port to something that is inconsistent with its direction. For example, ports with signal type test_point_normal_data_source should be associated with output pins. They cannot be associated with input pins.

**What Next**

Repeat the command using the correct hookup pin.

## UIT-313

(warning) %d DFT ports have been specified. Only the first will be processed.

Feedback

### Description

You use the *set_dft_signal* command to associate DFT signal semantics with design ports. You receive this error message when both of the following are true:

```
1. The set_dft_signal specification has multiple ports specified using
 the -port
switch.

2. The set_dft_signal specification has a hookup pin specified using
 the -hookup
switch.
```

### What Next

Execute the *set_dft_signal* command specifying a single port each time you wish to specify a hookup pin for the DFT signal.

---

## UIT-314

(warning) %d hookup pins have been specified. Only the first will be processed.

### Description

You receive this message if you execute *set_dft_signal -hookup* with more than one pin name as the argument to *-hookup*. You can specify only one pin name for the *-hookup* option. This message informs you that all pin names after the first one are ignored.

### What Next

Re-execute *set_dft_signal -hookup* with a single pin as the argument. If you want an additional hookup pin to be used, re-execute the command specifying that pin for the design port.

---

## UIT-315

(information) The list of ports from which the DFT signals are to be removed is empty.

### Description

You receive this message if you issue the *remove_dft_signal* command and the *object_list* argument is empty. The *object_list* argument is required; the command does nothing when it is invoked with an empty set of boundary scan ports to be removed.

### What Next

If you did not intend to remove DFT signals from any ports, no action is required on your part. Otherwise, re-issue the *remove_dft_signal* command with at least one port as argument.

Feedback

## UIT-316

(error) At present, the '%s' command only supports the full scan test methodology.

### Description

You receive this error message if you execute *insert_dft* or *preview_dft* and have previously specified a scan test methodology of *partial_scan* or *none*. Currently the *insert_dft* and *preview_dft* commands support only the *full_scan* test methodology.

### What Next

Specify the *full_scan* test methodology by executing *set_scan_configuration -methodology full_scan*. Then reexecute *insert_dft* or *preview_dft*.

## UIT-317

(error) At present, the '%s' command does not support the '%s' scan style.

### Description

You receive this error message if you execute *insert_dft* or *preview_dft* and have previously specified a scan style other than *multiplexed_flip_flop* or *lssd*. Currently the *insert_dft* and *preview_dft* commands support only the *multiplexed_flip_flop* scan style and the *lssd* scan style.

### What Next

Specify the *multiplexed_flip_flop* scan style or the *lssd* scan style by executing *set_scan_configuration -scan_style multiplexed_flip_flop* or *set_scan_configuration -scan_style lssd*. Then reexecute *insert_dft* or *preview_dft*.

## UIT-318

(information) The '%s' command will become obsolete in the 2000.04 release. Please use '%s' instead.

### Description

This message informs you that the *set_scan*, *set_scan_chain*, *set_test_routing_order* and *insert_dft* commands will become obsolete in the 2000.04 release of DFT Compiler. You are advised to use the specified replacement commands instead.

### What Next

Use the *set_scan_element*, *set_scan_path* or *insert_dft* commands instead.

Feedback

## UIT-319

(error) Cannot change the scan style for a '%s' design.

### Description

You receive this error message if you attempt to use *set_scan_configuration -style* to change the scan style of a design whose scan state is test ready, scan replaced, scan routed or existing scan. In all these cases, the design has already been modified to have scan cells according to the current scan style. Therefore, you cannot change the scan style for such designs.

### What Next

If you want to change the scan style for a design, you must start with a pre-scan design.

## UIT-320

(warning) You have executed insert_dft with both the -dont_fix_constraint_violations and -map_effort options. Ignoring -map_effort.

### Description

You receive this message if you invoke *insert_dft* with both the *-dont_fix_constraint_violations* and *-map_effort* options. If you use the *-dont_fix_constraint_violations* option, *insert_dft* does not fix constraint violations after scan synthesis. Therefore, the *-map_effort* option has no meaning and is ignored.

### What Next

If it is acceptable to you that the *-map_effort* option is ignored, no action is required on your part. Otherwise, reissue *insert_dft -map_effort* without the *-dont_fix_constraint_violations* option.

## UIT-321

(warning) The model command is obsolete as of release 2000.10. Use the PrimeTime STAMP functionality instead.

### Description

This message informs you that the *model* command is obsolete as of release 2000.10; it has been replaced by the PrimeTime STAMP functionality.

### What Next

If you have questions or issues, contact your local Synopsys representative.

Feedback

## UIT-322

(warning) Invalid argument for -chain_length: '%s'. Argument must be a postive integer or the string "default". If an invalid argument is provided the "default" value will be used.

**Description**

You receive this message if you execute the *set_scan_configuration* command and use an invalid argument for the *-chain_length* option. Valid arguments are positive integers or the string "default".

**What Next**

Reexecute the *set_scan_configuration* command and use a valid argument for the *-chain_length* option.

## UIT-324

(error) Library cell %s not found in any of the libraries currently available in dc_shell.

**Description**

You get this error message when the library cell specified by the *define_dft_design* command, is not found in any of the libraries available in dc_shell.

**What Next**

Insure that the library cell name is correct and the library it belongs to is available in the dc_shell. Check the *link_library* variable. Check the *search_path* variable.

## UIT-325

(error) Pin named "%s" not found on the library cell "%s".

**Description**

You get this error message when the library cell specified by the *define_dft_design* command does not have a pin as specified in the access list.

**What Next**

Insure that correct library cell name and pin names are specified.

## UIT-326

(information) The '%s' command will become obsolete in the '%s' release. Please use '%s' instead.

Feedback

**Description**

This message informs you that the command specified in the error message will be obsolete in the release specified in the error message. You are advised to use the specified replacement command instead.

**What Next**

Use the replacement command instead.

---

## UIT-327

(Warning) Disable result '%s' is not valid for pad type '%s'. Ignoring the specified disable result and using the default value.

**Description**

You get this warning message when the disable result specified by the *-disable_res* option of the *define_dft_design* command, is not valid for the pad type.

Following are valid disable results for different pad types:

*tristate_output - Z bidirectional - Z open_drain_output - WEAK0, PULL0 open_source_output - WEAK1, PULL1 open_drain_bidirectional - WEAK0, PULL0 open_source_bidirectional - WEAK1, PULL1*

**What Next**

Specify a valid disable result for the pad design and rerun.

---

## UIT-328

(error) Signal types port and/or port_inverted not specified for differential pad design.

**Description**

You get this error message when the option *-differential* of the command *define_dft_design* is set to true and the *access_list* does not specify both *port* and *port_inverted* signal types. For differential pad designs both *port* and *port_inverted* signal types must be specified in the access list.

**What Next**

Specify both *port* and *port_inverted* signal types for the pad design and rerun.

Feedback

## UIT-329

(Error) Instruction '%s' has illegal opcode "%s". (The opcode string must contain only binary values '0's and '1's.)

### Description

BSD instruction opcodes must be binary codes. Code cubes (which include `dont care' X bits) are not allowed. The only characters permitted in these code strings are '0's and '1's.

### What Next

Re-write the binary opcode for the instruction using only '0's and '1's.

## UIT-330

(information) TPF protocol format will no longer be the default format from 2003.03 release. Please switch to STIL format in future releases.

### Description

The tool shows this message to indicate that the default format of the test protocol will be changed in the future release. Please switch to the new test protocol format.

## UIT-331

(information) The '%s' command will become obsolete in the 2002.05 release. Please use TetraMAX ATPG tool instead.

### Description

This message informs you that the *create_test_patterns* command will become obsolete in the 2002.05 release of DFT Compiler. You are advised to refer to TetraMAX ATPG tool for test pattern generation.

### What Next

Refer to the TetraMAX ATPG User Guide for more information about using TetraMAX ATPG tool.

## UIT-332

(warning) Port '%s' has a driven_by_logic_%s attribute. This conflicts with '%s' signal semantics.

Feedback

**Description**

The set_dft_signal command lets you associate signal semantics with exactly one design input port. This message tells you that the port has a driven_by_logic attribute that conflicts with these semantics.

**What Next**

Satisfy yourself that there is no conflict.

---

## UIT-333

(warning) Port '%s' has a dft_signal_type '%s' attribute. The signal semantics conflicts with the test_hold '%s' attribute.

**Description**

The set_test_hold command sets the test_hold attribute to a logic value to be assumed on specified input ports during testing. This message tells you that a port has a dft_signal_type attribute and the signal semantics conflicts with the value of the test_hold attribute.

**What Next**

Satisfy yourself that there is no conflict.

---

## UIT-334

(error) Incorrect value for the -async_fix option argument. Allowed values are mux and MUX; or gate and GATE.

**Description**

This error message informs you that you used the *set_autofix_configuration* command with an invalid argument for the *-async_fix* option. Allowed values for the *-async_fix* option argument are mux and MUX; or gate, GATE.

**What Next**

Use the *set_autofix_configuration* command with the *-async_fix* option and specify one of the allowed values as the argument.

---

## UIT-335

(warning) You have specified the command '%s' for the port '%s' with a sense inout. Make sure you apply the correct test constraints for test design rule checking.

Feedback

**Description**

This warning message informs you that you used one of the following commands - *set_dft_signal*, *set_autofix_clock*, *set_autofix_async* - to specify a port with a direction inout.

**What Next**

Make sure you apply the correct test constraints for test design rule checking.

---

## UIT-336

(error) Boundary scan data register length should be a positive integer.

**Description**

You receive this message if you execute the *set_bsd_register* command and specify an invalid value for the *legth*.

**What Next**

Specify a positive integer value for the boundary scan data register length.

---

## UIT-337

(error) License feature '%s' required for the '%s' option of the '%s' command could not be found in the license file.

**Description**

Some dc_shell commands require specific licenses for some of their options. This error may occur when the required feature is not authorized.

**What Next**

Make sure your installation is correct and that you are supposed to be authorized for this license feature.

---

## UIT-338

(error) '%s'is not a valid value for the '%s' option of the '%s' command.

**Description**

You get this error when the value specified for the command option is invalid.

Feedback

**What Next**

Specifiy a valid value for the command option and rerun. See the command man page for a list of valid values for the option.

---

## UIT-339

(error) Specified pin '%s' is not found in the design '%s'.

**Description**

You receive this message if the named pin is not found in the current design.

**What Next**

Reexecute the command with the correct pin that exists in the current design.

---

## UIT-349

(error) Register not specified for the instruction %s. The -register argument is required for user-defined and RUNBIST instructions.

**Description**

A standard data register or a user-defined register previously declared with the *set_scan_path* command must be specified for user-defined and RUNBIST instruction by *-register* argument. For user-defined and RUNBIST instructions there is no default register to be connected for serial access between TDI and TDO when the instruction is active.

**What Next**

Specify a standard data register or a user-defined register for the *-register* argument of the instruction.

---

## UIT-350

(error) '%s' is not a standard instruction.

**Description**

The *set_bsd_instruction* command is used to specify a standard boundary scan instruction as defined by IEEE Std 1149.1. You have used this command to specify a nonstandard boundary scan instruction.

**What Next**

Issue the command with a standard boundary scan instruction.

Feedback

## UIT-351

(error) The '%s' instruction is not supported.

**Description**

The *set_bsd_instruction* command is used to specify a standard boundary-scan instruction as defined by IEEE Std 1149.1. At present, the *set_bsd_instruction* command only supports the following instructions: BYPASS, EXTEST, SAMPLE, HIGHZ, CLAMP and IDCODE. You have used this command to specify one of the following instructions: RUNBIST, INTEST or USERCODE.

**What Next**

Reissue *set_bsd_instruction* command specifying a set of boundary scan instructions supported by BSD Compiler.

## UIT-352

(information) Writing boundary-scan instruction '%s'.

**Description**

You receive this message from the *set_bsd_instruction* command to inform you that the specified instruction is being written to the database, to be implemented during the Boundary Scan logic insertion performed by *insert_dft*.

**What Next**

If you intend that the specified instruction be implemented, no action is required on your part. Otherwise, you can remove the instruction using *remove_bsd_instruction*.

## UIT-353

(warning) Overwriting boundary-scan instruction '%s'.

**Description**

You receive this message if you issue the *set_bsd_instruction* command and specify an instruction that is already on the list of instructions to be implemented by *insert_dft*. This message informs you that the specified instruction is being overwritten in the list by the *set_bsd_instruction* command you just issued.

**What Next**

This is an informational message only. No action is required on your part.

Feedback

## UIT-354

(warning) %d boundary scan TAP ports have been specified. Only\n \tthe first boundary scan port will be processed.

**Description**

Use the *set_bsd_signal* command to associate boundary scan signal semantics with design ports. This error occurs when you try to specify the signal type of multiple design ports.

**What Next**

Split outstanding boundary scan TAP port specifications among multiple commands.

## UIT-355

(error) There is no valid boundary scan TAP port.

**Description**

Use the *set_bsd_signal* command to associate boundary scan signal semantics with design ports. This error occurs when nothing you specified is a valid design port.

**What Next**

Study accompanying messages for the reasons why specified ports were not acceptable, and repeat the command using valid ports.

## UIT-356

(warning) %d boundary scan ports are specified. Only the\n \tfirst will be processed.

**Description**

Use the *set_bsd_signalcommand to associate boundary scan signal semantics with design ports. This error occurs when you try to specify the signal type of multiple design ports using the same command. To simplify commands and eliminate ambiguity, use separate commands.*

**What Next**

Split outstanding boundary scan port specifications among multiple commands.

## UIT-357

(error) Instruction encoding must be one of 'default' or 'one_hot'.

Feedback

**Description**

You can use the *set_bsd_configuration* command to specify the instruction encoding for the boundary scan instructions synthesized by the *create_bsd* command. The only valid values for instruction encoding are *one_hot* or *default*. You have specified an instruction encoding other that *default* or *one_hot*.

**What Next**

Specify the instruction encoding to be either *default* or *one_hot*.

---

## UIT-358

(error) You must specify at least one option.\n\ For available options, input "set_bsd_configuration -help".

**Description**

The *set_bsd_configuration* command does nothing when it is invoked without options.

**What Next**

To get rid of the information message, invoke *set_bsd_configuration* with at least one option.

---

## UIT-359

(information) The set of boundary scan instructions to be removed is empty.

**Description**

The *remove_bsd_instruction* command does nothing when it is invoked with an empty set of instructions to be removed.

**What Next**

To get rid of the information message, invoke *remove_bsd_instruction* with at least one instruction to be removed.

---

## UIT-360

(information) Removing boundary scan instruction '%s'.

**Description**

The *remove_bsd_instruction* command is used to remove boundary scan instructions previously specified with the *set_bsd_instruction* command.

Feedback

**What Next**

Empty.

---

## UIT-361

(warning) Could not remove boundary scan instruction '%s'.

**Description**

The *remove_bsd_instruction* command is used to remove boundary scan instructions previously specified with the *set_bsd_instruction* command. This warning message indicates that the boundary scan instruction specified by the user could not be removed.

**What Next**

Check if the instruction was previously specified using the *set_bsd_instruction* command.

---

## UIT-362

(warning) Could not find boundary scan instruction '%s'.

**Description**

The *remove_bsd_instruction* command is used to remove boundary scan instructions previously specified with the *set_bsd_instruction* command. This warning message indicates that the boundary scan instruction specified by the user could not be found.

**What Next**

Check if the instruction was previously specified using the *set_bsd_instruction* command.

---

## UIT-363

(information) The list of ports from which the boundary scan signals are to be removed is empty.

**Description**

The *remove_bsd_signal* command does nothing when it is invoked with an empty set of boundary scan ports to be removed.

**What Next**

To get rid of the information message, invoke *remove_bsd_signal* with at least one boundary scan port to be removed.

Feedback

## UIT-365

(warning) The direction switch may only be used with bidirectional ports.

**Description**

The *-direction* switch of the *set_bsr_cell_type* command should only be used for bidirectional ports. You have used the *-direction* switch with some input or output ports. The *set_bsr_cell_type* command issued will only operate on bidirectional ports in the list of ports specified.

**What Next**

None.

## UIT-366

(warning) Ignoring the command for the %s ports.

**Description**

This warning message occurs when you invoke the *set_bsr_cell_type* command with the *-direction* switch and there are some input or output ports in the port list. This warning message also occurs when you specify a boundary scan cell type of *observe_only* for an output port or the output side of a bidirectional port.

**What Next**

Correct your *set_bsr_cell_type* specification and re-issue the command.

## UIT-367

(warning) Observe-only is not a valid boundary scan cell type for %s port.

**Description**

This warning message occurs when you specify a boundary scan cell type of *observe_only* for an output port or the output side of a bidirectional port.

**What Next**

Correct your *set_bsr_cell_type* specification and re-issue the command.

## UIT-368

(error) Invalid boundary scan cell type '%s'. Boundary scan cell type must be one of 'none', 'observe_only' or 'control_observe'.

Feedback

**Description**

You have specified an invalid boundary scan cell type. Boundary scan cell type must be one of none, observe_only or control_observe.

**What Next**

Specify one of the valid boundary scan cell types and re-issue the *set_bsr_cell_type* command.

---

## UIT-369

(error) Invalid direction argument '%s'. The direction must be one of 'in' or 'out'.

**Description**

You have specified an invalid direction argument for a bidirectional port. The direction argument must be one of in or out, corresponding to the input and output sides of a bidirectional port.

**What Next**

Re-issue the *set_bsr_cell_type* command with the correct direction.

---

## UIT-370

(error) Scan specification on cell '%s' would make multibit '%s' in design '%s' non-homogeneous.

**Description**

Multibits have the property that each bit implements the same function. The scan specification is such that, if insert_dft implements it, the bits of this multibit no longer have the same function.

In order to avoid breaking the homogeneity property of multibits, DFT Compiler ignores this scan specification.

**What Next**

If you still want the scan specification on this cell, you have two options:

1) Remove the multibit with the remove_multibit command. For this operation, you will need to set the current design to the design containing the multibit.

2) Issue the scan specification for the whole multibit.

Feedback

## UIT-371

(Warning) Multibit '%s' in design '%s' is not a scan segment.

**Description**

You have used a multibit in a context where a scan segment is expected. This particular multibit is not a segment. Either the global default (set using the set_scan_configuration) calls for multibits not to be segments, or you have marked this multibit as not a segment.

The multibit and its constituant cells are ignored.

**What Next**

You can make a multibit into a scan segment using the *set_scan_group* command. You can also list the individual bits of the multibit.

## UIT-372

(Warning) The '%s' option of the set_scan_group command does not apply to synthesizable segments; the option is ignored.

**Description**

The command you have issued refers to a synthesizable segment. You can not specify access points or the contained cells of a synthesizable segment. These options are used for user segments.

The extra option is ignored.

**What Next**

See the description of the *set_scan_group* command for an explanation of the various options and their interrelations.

## UIT-373

(Warning) The '%s' option of the set_scan_group command does not apply to user segments; the option is ignored.

**Description**

The command you have issued refers to a user segment. In a user segment, the order of the cells are determined by the connectivity of the design. You cannot alter this through scan specifications.

The -reverse_order option has no effect, it is ignored.

Feedback

**What Next**

See the description of the *set_scan_group* command for an explanation of the various options and their interrelations.

---

## UIT-374

(warning) Multibit '%s' is already a synthesizable segment.

**Description**

The specification is redundant. It is ignored.

**What Next**

No action required if you don't mind the extra message.

---

## UIT-375

(warning) '%s' is already a segment.

**Description**

The specification is redundant. It is ignored.

**What Next**

No action required if you don't mind the extra message.

---

## UIT-376

(information) There is no explicit synthesizable segment specification for multibit '%s'; it remains%s a synthesizable segment, as specified in the scan configuration.

**Description**

You have attempted to remove a segment specification which you have not given explicitly using the *set_scan_group* command.

**What Next**

If you want to override the default provided by the scan configuration, use the *set_scan_group* command.

---

## UIT-377

(information) The explicit synthesizable segment specification for multibit '%s' is removed; now, it is%s a synthesizable segment, as specified in the scan configuration.

Feedback

### Description

You have removed a segment specification which you previously set using the *set_scan_group* command. This message informs you of the default specification this segment inherits from the scan configuration.

### What Next

If you are happy with the current state of this segment, no action is required. Otherwise, you can issue an explicit scan configuration using the *set_scan_group* command.

---

## UIT-378

(error) Instance '%s' is not in the system.

### Description

This error indicates that the current command cannot find the instance in the system.

### What Next

Use a different -instance option.

---

## UIT-379

(error) Incorrect value of -clock option argument. Allowed values are true, TRUE, on, and ON; or false, FALSE, off, and OFF.

### Description

You receive this message if you execute *set_autofix_configuration* or *set_autofix_element* with an incorrect argument for the *-clock* option. Allowed values of the *-clock* option argument are *true, TRUE, on*, and *ON*; or *false, FALSE, off*, and *OFF*.

### What Next

Re-issue the command with one of the allowed values for the *-clock* option argument.

---

## UIT-380

(error) Incorrect value of -async option argument. Allowed values are true, TRUE, on, and ON; or false, FALSE, off, and OFF.

### Description

You receive this message if you execute *set_autofix_configuration* or *set_autofix_element* with an incorrect argument for the *-async* option. Allowed values of the *-async* option argument are *true, TRUE, on*, and *ON*; or *false, FALSE, off*, and *OFF*.

Feedback

### What Next

Re-issue the command with one of the allowed values for the *-async* option argument.

---

## UIT-381

(error) Incorrect value of -fix_protocol option argument. Allowed values are true, TRUE, on, and ON; or false, FALSE, off, and OFF.

### Description

You receive this message if you execute *set_autofix_configuration* or *set_autofix_element* with an incorrect argument for the *-fix_protocol* option. Allowed values of the *-fix_protocol* argument are *true, TRUE, on*, and *ON*; or *false, FALSE, off*, and *OFF*.

### What Next

Re-issue the command with one of the allowed values for the *-fix_protocol* option argument.

---

## UIT-382

(error) Incorrect value of -string option argument. Allowed values are true, TRUE, false, or FALSE.

### Description

You receive this message if you execute *set_autofix_element* with an incorrect argument for the *-string* option. Allowed values of the *-string* option argument are *true*, *TRUE*, *false*, or *FALSE*.

### What Next

Re-issue the command with one of the allowed values for the *-string* option argument.

---

## UIT-383

(error) No port of name %s was found in design %s.

### Description

This is an error message. The port %s was not found in design %s.\n \tCheck the name and re-invoke the command.

### What Next

You may want to use find command to list all ports.

Feedback

## UIT-384

(error) Port %s is not a test clock.

### Description

The port %s is not a test clock. Use the *set_dft_signal* command to create a test clock associated with port %s.

### What Next

Use *report_test -port* to report all test clocks available on the current design.

## UIT-385

(error) Port %s is not of type input.

### Description

You receive this error message if the specified port, given with the *set_autofix_clock* command or the *set_autofix_async* command, is not an input port. This argument must be an input port.

### What Next

Re-issue the *set_autofix_clock* command or the *set_autofix_async* command and specify an input port.

## UIT-386

(warning) Cannot find cell %s in design %s.

### Description

You receive this message if the specified cell, which you gave as part of the *object_list* argument of the *set_autofix_clock* command or the *set_autofix_async* command, or the *cellNames* argument of the *set_dft_drc_rules* command, cannot be found. Often, typos or spelling errors cause messages of this type.

### What Next

Use the *find* command to list the cells in your design, and re-execute the command using the name of a valid cell.

## UIT-387

(warning) Cell %s is combinational; you must use a sequential cell or a hierarchical cell with sequential elements.

Feedback

**Description**

This message warns you that the specified cell is combinational. *set_autofix_clock*, *set_autofix_async* and *set_autofix_element* require sequential cells or hierarchical cells with sequential elements. You cannot use combinational cells.

**What Next**

Re-issue the command and make sure that *object_list* does not contain any combinational cells.

---

## UIT-388

(error) You cannot specify more than one clock.

**Description**

You receive this error message if you execute *set_autofix_clock* and specify more than one clock. You can specify only one clock.

**What Next**

Re-execute *set_autofix_clock* and specify only one clock.

---

## UIT-389

(error) You cannot specify more than one asynchronous port.

**Description**

This message informs you that you used the *set_autofix_async* command and specified more than one asynchronous port. You can specify only one asynchronous port with this command.

**What Next**

Rerun *set_autofix_async* and specify only one asynchronous port.

---

## UIT-390

(error) Clock port %s has a hold value of %s. You cannot\n \tspecify a clock port that has a hold value set on it.

**Description**

You receive this message from *set_autofix_clock* if the specified clock port has the specified hold value set on it. Clocks with hold values are not valid for *set_autofix_clock*. A hold value is set on a clock by using the *set_test_hold* command, which places

Feedback

the *test_hold* attribute on the clock. You can remove the *test_hold* attribute using the *remove_attribute* command; *reset_design* removes all attributes, including *test_hold*.

**What Next**

Remove the *test_hold* attribute from the clock port using the *remove_attribute* command. Then reissue the *set_autofix_clock* command and respecify the clock port.

**See Also**

- reset_design

---

## UIT-391

(information) Performing set_autofix_clock of\n \tclock "%s" on cell/instance "%s".

**Description**

This message informs you that *set_autofix_clock* is being performed on the specified clock on the specified cell or instance.

**What Next**

This is an informational message only; no action is required on your part.

---

## UIT-392

(warning) The variable disable_transition_degradation is now obsolete. Use disable_library_transition_degradation instead.

**Description**

This message informs you that the variable *disable_transition_degradation* is now obsolete, and has been replaced by *disable_library_transition_degradation*. However, *disable_transition_degradation* will continue to be supported for backward compatibility.

**What Next**

Use *disable_library_transition_degradation* instead of *disable_transition_degradation* in future designs.

---

## UIT-393

(error) '%s' is not a valid compliance enable pattern name.

Feedback

**Description**

The *remove_bsd_specification -compliance <all | pattern name>* command let you remove all compliance enable patterns, or one compliance enable pattern with given pattern name.

**What Next**

You mush specify a valid pattern name, or "all". To view all existing compliance patterns, use command *report_test -bsd*.

---

## UIT-394

(error) Port %s is not a test asynch or a test asynch inverted.

**Description**

The port %s is neither a test asynch nor a test asynch inverted. Use *set_dft_signal* to create a test asynch or test asynch inverted associated with the port %s.

**What Next**

Use *report_test -port* to report all test asynchs available on the current design.

---

## UIT-395

(error) Port %s is already a test asynch or a test asynch inverted and can not be a test clock.

**Description**

The port %s is a test asynch or test asynch inverted and can not be a test clock. Use *remove_attribute* if you do not want the port %s to be a test asynch (or a test asynch inverted) and repeat the *set_dft_signa* clock definition command.

**What Next**

Use *report_test -port* to report all test clocks and test asynchs available on the current design.

---

## UIT-396

(error) Port %s is already a test clock and can not be a test asynch or a test asynch inverted.

Feedback

**Description**

The port %s is a test clock and can not be a test asynch or a test asynch inverted. Use *remove_attribute* if you do not want the port %s to be a test clock and repeat *set_dft_signal*.

**What Next**

Use *report_test -port* to report all test clocks and test asynchs available on the current design.

---

## UIT-397

(error) You cannot specify more than two async ports.

**Description**

You receive this error message if you execute *set_autofix_async* and specify more than two asyncs. You can specify one or two asyncs.

**What Next**

Re-execute *set_autofix_async* and specify one or two asyncs.

---

## UIT-398

(error) Options '-function' and '-direction' cannot be specified together.

**Description**

You receive this error message if you execute *set_bsd_data_cell* command and specified both the '-function' and '-direction' options. Currently *set_bsd_data_cell* command supports two alternate options to specify the BSR data cell function at a port. The '-function' option provides a direct way of specifying the BSR data cell function at a port. In the alternate way of specification the BSR data cell function is inferred from the '-direction' option and the port_direction. You should use exactly one of the '-function' and '-direction' options in your specification.

**What Next**

Re-execute *set_bsd_data_cell* and specify exactly one of the '-function' and '-direction' option.

---

## UIT-399

(error) Invalid value %s specified for the '-function' option.

Feedback

**Description**

You receive this error message if you execute *set_bsd_data_cell* command and specified an incorrect value for the '-function' option. The '-function' option provides a direct way of specifying the BSR data cell function at a port. The valid values for this option are: INPUT INPUT_INVERTED OUTPUT OUTPUT_INVERTED BIDIR BIDIR_INVERTED OBSERVE

**What Next**

Re-execute *set_bsd_data_cell* and specify a valid value for the '-function' option.

---

## UIT-400

(error) internal error, write_test vector formatter (stran) is unable\n to write out status.

**Description**

The *write_test* command invokes the vector formatter *stran* in order to translate .sif files to different vector formats. Once *stran* is run, it communicates back its result status to *write_test* through a file named '.stran.status'.

The error message above is issued by the *write_test* command when the '.stran.status' file is not writable. Two reasons for that to happen: either '.stran.status' has WRITE permission or no disk space left.

**What Next**

Check for write permission on the .stran.status file or disk space.

---

## UIT-401

(error) Unknown -command option argument '%s' for preview_scan, assuming 'insert_scan' (default).

**Description**

If you receive this message, you have probably used an invalid argument for the *-command* option of the *preview_scan* command. The valid arguments are *insert_scan* (the default) or *reoptimize_design*; this message informs you that the default, *insert_scan*, is being used.

When *-command* is set to *insert_scan*, *preview_scan* works only in logical domain. When *-command* is set to *reoptimize_design*, *preview_scan* takes the physical design information into account.

Feedback

### What Next

If you do not want *preview_scan* to use the *insert_scan* argument to the *-command* option, reapply the *preview_scan* command with the *reoptimize_design* option. For details, see the *preview_scan* man page.

---

## UIT-402

(error) BSD configuration style must be either synchronous or asynchronous.

### Description

You receive this message if you issue *set_bsd_configuration -style* with an invalid argument for the *-style* option. Valid values are *synchronous* and *asynchronous*. The *set_bsd_configuration* command specifies the configuration style for the boundary scan design synthesized by the *insert_dft* command.

### What Next

Reissue *set_bsd_configuration -style* with a valid argument for the *-style* option.

---

## UIT-403

(error) BSD instruction width must be in the range of 2 to 31.

### Description

You receive this message if you issue the *set_bsd_configuration* command with an invalid value for the *-ir_width* option argument. Valid values are 2 through 31 only. The *insert_dft* command uses the *-ir_width* option value to specify the number of bits in the instruction register when synthesizing the boundary scan design.

### What Next

Reissue the *set_bsd_configuration* with a valid value for the *-ir_width* option argument.

---

## UIT-404

(error) Invalid boundary scan register type for a bidirectional port.

### Description

You receive this message if you issue the *set_bsd_data_cell* command and specify an invalid value for the boundary scan register cell type to be used for a bidirectional port. Valid values of boundary scan register cell types for input, output, and bidirectional ports are listed in the man page and the online help for the *set_bsd_data_cell* command.

Feedback

The *insert_dft* command uses the specified boundary scan register cell types when synthesizing the boundary scan design.

**What Next**

Refer to the man page or the online help for the *set_bsd_data_cell* command to determine the current valid boundary scan register cell types, and reissue the *set_bsd_data_cell* command with a valid type.

---

## UIT-405

(error) Invalid boundary scan register cell type for an input port.

**Description**

You receive this message if you issue the *set_bsd_data_cell* command and specify an invalid value for the boundary scan register cell type to be used for an input port. Valid values of boundary scan register cell types for input, output, and bidirectional ports are listed in the man page and the online help for the *set_bsd_data_cell* command. The *insert_dft* command uses the specified boundary scan register cell types when synthesizing the boundary scan design.

**What Next**

Refer to the man page or the online help for the *set_bsd_data_cell* command to determine the current valid boundary scan register cell types, and reissue the *set_bsd_data_cell* command with a valid type.

---

## UIT-406

(error) Invalid boundary scan register cell type for an output port.

**Description**

You receive this message if you issue the *set_bsd_data_cell* command and specify an invalid value for the boundary scan register cell type to be used for an output port. Valid values of boundary scan register cell types for input, output, and bidirectional ports are listed in the man page and the online help for the *set_bsd_data_cell* command. The *insert_dft* command uses the specified boundary scan register cell types when synthesizing the boundary scan design.

**What Next**

Refer to the man page or the online help for the *set_bsd_data_cell* command to determine the current valid boundary scan register cell types, and reissue the *set_bsd_data_cell* command with a valid type.

Feedback

## UIT-407

(error) Invalid port type '%s' specified for user-defined BSR, TAP, or BSD Register.

### Description

You receive this message if you issue the *set_bsd_bsr_element*, *set_bsd_tap_element*, or *set_bsd_register* command and specify an invalid port type. Valid port types are found in the man page or online help for each of the three commands. The *insert_bsd* command uses the user-defined registers when synthesizing the boundary-scan design.

### What Next

Refer to the man pages or the online help for the *set_bsd_bsr_element*, *set_bsd_tap_element*, or *set_bsd_register* command to determine the current valid BSR, TAP, and BSD register port types, respectively. Then reissue the appropriate command with a valid port type.

## UIT-408

(error) Invalid port or control BSR name '%s'.

### Description

You receive this message if you issue the *set_bsd_path* command and the *identifier_list* contains a name that is neither a valid design port nor a valid control BSR cell identifier; this could be caused by a typo or spelling error. The *identifier_list* must contain a list of names of valid ports and valid control BSR identifiers. The order of the names in the list determines the order that the *insert_dft* command uses when it implements the boundary scan design.

### What Next

Verify the correct names of the ports and control BSR cell identifiers, then reissue the *set_bsd_path* command using the correct names and identifiers.

## UIT-409

(error) Port direction must be either "in" or "out".

### Description

You receive this message if you execute *set_bsd_data_cell* or *set_bsd_path* and specify an invalid port direction. Valid port directions are "in" and "out". For *set_bsd_data_cell*, you specify the port direction using the *-direction* option. For *set_bsd_path*, you can specify the direction of a bidirectional port by attaching /in or /out to the port name in the *identifier_list*.

Feedback

The *insert_dft* command uses the port direction information when synthesizing the boundary scan design.

**What Next**

Choose a valid port direction for the port, and reissue the appropriate command using the valid port direction.

---

## UIT-410

(error) You cannot specify the direction of a nonbidirectional port.

**Description**

You receive this message if you execute the *set_bsd_path* command and specify the direction of a port that is not a bidirectional port. You can specify the direction of a bidirectional port in the *identifier_list* as *port_name*/in or *port_name*/out; however, it is an error to attach /in or /out to the name of a nonbidirectional port. *insert_dft* uses the *identifier_list* to determine the order in which the BSR cells are to be connected in the synthesized boundary scan design.

**What Next**

Verify the port types in the *identifier_list*, and reexecute the *set_bsd_path* command specifying the direction for only the bidirectional ports.

---

## UIT-411

(error) Cannot find the specified pin '%s'.

**Description**

You receive this message if you issue the *set_bsd_register* command and a pin specified in the *access_list* cannot be found on the user-specified boundary scan data register cell. This could be caused by a typo or spelling error. The *insert_dft* command uses the user-specified boundary scan data register cell in synthesizing the boundary scan design. You may also get this message if you intend to specify a scan-through tap register, and issue the *set_bsd_register* command with the reserved words *SR_SI* or *SR_SO* in the access list, however the register name is not the reserved word *STT_REG*.

**What Next**

Verify the correct name for the specified pin, and reissue the *set_bsd_register* command using the correct pin name. If you want to specify a scan-through-tap register use the reserved name *STT_REG* for the register and reissue the command.

Feedback

## UIT-412

(error) You cannot specify a control BSR cell for a non-tristate port '%s'.

### Description

You receive this message if you execute the *set_bsd_control_cell* command and the *port_list* contains a port that is not connected to a tristate pad. You specify a control BSR cell to control tristate port pads only. The *insert_dft* command uses the control BSR cell when synthesizing the boundary scan design.

### What Next

Reexecute the *set_bsd_control_cell* command with a *port_list* that contains only names of ports that are connected to tristate pads.

## UIT-413

(error) Cannot find the specified port '%s' in the design or instance.

### Description

You receive this message if you execute the *set_bsd_bsr_element*, *set_bsd_tap_element*, or *set_bsd_register* command and a port you specify cannot be found in the design or instance. This could be caused by a typo or spelling error.

### What Next

Verify the name of the port. Then reissue the appropriate command using the correct port name for the design or instance.

## UIT-414

(error) Cannot find cell name '%s' in the current design.

### Description

You receive this message if you issue the *set_bsd_register* command and the name you specify for the *hierarchical_cell* argument cannot be found in the current design. This could be caused by a typo, a spelling error, or an incorrect path.

The *insert_dft* command uses the user-specified boundary scan data register cell in synthesizing the boundary scan design.

### What Next

Verify the correct name and hierarchical path of the cell you want to specify as a boundary scan data register, and reissue the *set_bsd_register* command using the correct name.

Feedback

## UIT-415

(error) Invalid cell type for boundary scan register element.

### Description

You receive this message if you issue the *set_bsd_bsr_element* command and specify an invalid value for the boundary scan register cell type. Valid values of boundary scan register cell types are listed in the man page and the online help for the *set_bsd_bsr_element* command. The *insert_dft* command uses the specified boundary scan register cell type when synthesizing the boundary scan design.

### What Next

Refer to the man page or the online help for the *set_bsd_bsr_element* command to determine the current valid boundary scan register cell types, and reissue the *set_bsd_bsr_element* command with a valid cell type.

## UIT-416

*UIT-416* (error) Invalid cell type for boundary scan tristate control register.

### Description

You receive this message if you issue the *set_bsd_control_cell* command and specify an invalid cell type for the boundary scan tristate control register. Valid values of cell types for a boundary scan tristate control register are listed in the man page and the online help for the *set_bsd_control_cell* command. The *insert_dft* command uses the specified boundary scan control register cell type when synthesizing the boundary scan design.

### What Next

Refer to the man page or the online help for the *set_bsd_control_cell* command to determine the current valid cell types for the boundary scan tristate control register, and reissue the *set_bsd_control_cell* command with a valid cell type.

## UIT-417

(error) Invalid boundary scan register cell type for ports.

### Description

You receive this message if you issue the *set_bsd_data_cell* command and specify an invalid value for the boundary scan register cell type to be used for specified ports. Valid values of boundary scan register cell types for input, output, and bidirectional ports are listed in the man page and the online help for the *set_bsd_data_cell* command.

Feedback

The *insert_dft* command uses the specified boundary scan register cell types when synthesizing the boundary scan design.

**What Next**

Refer to the man page or the online help for the *set_bsd_data_cell* command to determine the current valid boundary scan register cell types, and reissue the *set_bsd_data_cell* command with a valid cell type.

---

## UIT-418

(error) Cannot find the specified design in memory.

**Description**

You receive this message if you execute the *set_bsd_bsr_element* or *set_bsd_tap_element* command and the name you specify for the *design_name* argument cannot be found in memory. This could be caused by a typo or spelling error. The *insert_dft* command uses the specified design as a boundary scan register or tap controller when synthesizing the boundary scan design.

**What Next**

Verify that the design you want to use does exist in memory, and verify its spelling. Then re-execute the appropriate command using the correct design name.

---

## UIT-419

(error) You cannot use a reserved word as a user-defined boundary scan data register name.

**Description**

You receive this message if you execute the *set_scan_path* command and specify a reserved word (for example, BOUNDARY, BYPASS, or DEVICE_ID) as the *register_identifier*. Reserved words are predefined names, reserved for boundary scan test data; you cannot use a reserved word to name a user-defined data register. Reserved words are listed in the man page for the *set_bsd_register* command. The *insert_dft* command uses the user-defined data register when synthesizing the boundary scan design.

**What Next**

Refer to the man page of the *set_bsd_register* command for the list of reserved words, and specify a *register_identifier* that is not a reserved word.

Feedback

## UIT-420

(error) Invalid bidirectional port is specified

**Description**

You can use the *set_bsd_path* command to specify the order in which the BSR cells need to hooked up in the boundary scan design synthesized by the *create_bsd* command. This command takes a list of design ports or control BSR names as input. For a bidirectional port the direction can be specified as <port_name>/in or <port_name>/out if the input BSR cell and output BSR cell for the port need to be routed in a particular order. Direction can't be specified for a non bidirectional port. You have specified direction for a non bidirectional port.

**What Next**

Don't specify direction for a non bidirctional port.

## UIT-421

(error) Invalid bidirectional port is specified

**Description**

You can use the *set_bsd_path* command to specify the order in which the BSR cells need to hooked up in the boundary scan design synthesized by the *create_bsd* command. This command takes a list of design ports or control BSR names as input. For a bidirectional port the direction can be specified as <port_name>/in or <port_name>/out if the input BSR cell and output BSR cell for the port need to be routed in a particular order. Direction can't be specified for a non bidirectional port. You have specified direction for a non bidirectional port.

**What Next**

Don't specify direction for a non bidirctional port.

## UIT-422

(error) Invalid bidirectional port is specified

**Description**

You can use the *set_bsd_path* command to specify the order in which the BSR cells need to hooked up in the boundary scan design synthesized by the *create_bsd* command. This command takes a list of design ports or control BSR names as input. For a bidirectional port the direction can be specified as <port_name>/in or <port_name>/out if the input BSR cell and output BSR cell for the port need to be routed in a particular order. Direction can't

Feedback

be specified for a non bidirectional port. You have specified direction for a non bidirectional port.

**What Next**

Don't specify direction for a non bidirctional port.

---

## UIT-423

(error) Invalid bidirectional port is specified

**Description**

You can use the *set_bsd_path* command to specify the order in which the BSR cells need to hooked up in the boundary scan design synthesized by the *create_bsd* command. This command takes a list of design ports or control BSR names as input. For a bidirectional port the direction can be specified as <port_name>/in or <port_name>/out if the input BSR cell and output BSR cell for the port need to be routed in a particular order. Direction can't be specified for a non bidirectional port. You have specified direction for a non bidirectional port.

**What Next**

Don't specify direction for a non bidirctional port.

---

## UIT-424

(error) Specified BSD pad design "%s" does not exist.

**Description**

You receive this error message because you have executed the *define_dft_design* command and specified a design that does not exist in memory. You can use *define_dft_design* to specify and characterize a design as a pad design. Such a design is treated like a pad cell by the boundary-scan insertion.

**What Next**

Use the *list_designs* command to see what designs are in memory, then use the *read* command to read in the design. Next, execute the *define_dft_design* command to set the desired design as a pad design.

---

## UIT-425

(error) Signal type "%s" specified in the access list of the pad design is invalid.

Feedback

### Description

You receive this error message because you have executed the *define_dft_design* command and have specified an invalid signal type as part of the access list for the pad design. You use the *define_dft_design* command to specify and characterize a design as a pad design. The access list for the pad design is specified as a list of pairs of signal types and pin names. Valid signal types are data_in, data_in_inverted, data_out, data_out_inverted, enable, and enable_inverted.

### What Next

Reexecute the *define_dft_design* command and specify a valid signal type in the access list for the *-access* option.

---

## UIT-426

(error) Specified pad design "%s" does not have a pin named "%s".

### Description

You receive this error message when you execute the *define_dft_design* command and specify a pin name in the access list that does not exist in the pad design. The *define_dft_design* command is used to specify and characterize a design as a pad design. The access list for the pad design specifies a list of pairs of signal types and pin names.

### What Next

Reexecute the *define_dft_design* command and specify a valid pin name in the access list for the *-access* argument.

---

## UIT-427

(error) "%s" is not a valid value for the "%s" option of the define_dft_design command.

### Description

You receive this error message because you have specified an invalid argument for the *-type* option, the *-disable_res* option, or the *-differential* option of the *define_dft_design* command. Use the *define_dft_design* command to specify and characterize a design as a pad design. Valid arguments for the *-type* option are input, output, tristate_output, and bidirectional. Valid arguments for the *-disable_res* option are WEAK0, WEAK1, PULL0, and PULL1. Valid arguments for the *-differential* option are true and false.

### What Next

Reexecute the *define_dft_design* command and specify a valid option argument.

Feedback

## UIT-428

(error) Insufficient BSD instruction width '%d' specified. Requires at least '%d'.

**Description**

This error message tells you that you used the *set_bsd_configuration* command and specified an invalid value for the *-ir_width* option. The specified width is not sufficient to hold all the instruction opcodes specified with the *set_bsd_instruction* command. The *insert_dft* command uses the *-ir_width* option value to specify the number of bits in the instruction register when synthesizing the boundary scan design.

**What Next**

Use the *set_bsd_configuration* command with the *-ir_width* option and specify a value sufficient to hold all the instruction opcodes.

## UIT-429

(error) BSD instruction opcode width must be in the range of 2 to 31.

**Description**

This error message indicates that you ran the *set_bsd_instruction* command with the *-code* option and specified an invalid opcode width. Valid opcode widths are 2 through 31. The *insert_dft* command uses the opcode width to specify the number of bits in the instruction register when synthesizing the boundary scan design.

**What Next**

Rerun the *set_bsd_instruction* command and specify a valid opcode width for the *-code* option argument.

## UIT-430

(error) Signal type '%s' specified twice or specified with its inversion.

**Description**

This message informs you that you ran the *define_dft_design* command with an access list that specifies a signal type twice, or that specifies a signal type and its inversion. For example, an access list specifying both enable and enable_inverted signal types, or specifying two data_in signal types results in this error message.

**What Next**

Rerun the *define_dft_design* command with a valid access list.

Feedback

## UIT-431

(error) Signal type '%s' specified twice.

### Description

You receive this message if you issue the *define_dft_design* command with an access list specifying a signal type or it's inverted type twice. For instance an access list specifying both enable and enable_inverted signal types, or an access list specifying two data_in signal types.

### What Next

Reissue the *define_dft_design* with a valid access list.

## UIT-432

(error) Incorrect %s field is specified for input/output ports.

### Description

You receive this message if you execute *set_bsd_data_cell* command and specify an incorrect direction/function for an input or output port. The direction field in *set_bsd_data_cell* command for input/output ports should be unspecified(in which case it is assumed to be the same as the port direction) or should be consistent with the port direction. The function field in *set_bsd_data_cell* command for input ports should be unspecified(in which case it is assumed to be INPUT) or should be either INPUT or INPUT_INVERTED or OBSERVE. The function field in *set_bsd_data_cell* command for output ports should be unspecified (in which case it is assumed to be OUTPUT) or should be either OUTPUT or OUTPUT_INVERTED. Please note that options direction and function are mutually exclusive.

### What Next

For input/output ports, leave the direction/function field blank or specifiy a direction/function consistent with the port direction. For bidirectional port, you should specify the direction/function, or leave it blank in case you specify the cell_type as "BC_7", or "none".

## UIT-433

(error) The output format '%s' was not supported by new translation engine.

### Description

You receive this message if you execute *write_test* command with *write_test_new_translation_engine* = true(default), but specify a test program format which is not currently supported by new translation engine.

Feedback

### What Next

For valid test program formats currently supported by new translation engine, execute "write_test -help" for more information.

---

## UIT-434

(error) The design does not have a BSD clock port.

### Description

You receive this message if you execute *write_test* command to write out the BSD test program in or through STIL format, but the design does not have a BSD clock port.

### What Next

Please check if the jtag clock of the design was defined correctly.

---

## UIT-435

(error) The unix environment variable LTRAN_ROOT is not defined.

### Description

You receive this message if you execute *write_test* command to write out test program with format tdl91, tstl2, or ftdl, with environment variable *write_test_new_translation_engine" set to true(default). In this case, the environment variable LTRAN_ROOT must be correctly set to invoke Ltran executable.*

### What Next

You should set it as,

setenv LTRAN_ROOT $SYNOPSYS/$TARGET_ARCH/syn/tran

---

## UIT-436

(warning) Assigning name "%s" to the bsr element.

### Description

You get this warning when the (optional) name parameter for the bsr element is not specified. When unspecified, a name identical to the bsr element type("BC_1", "BC_2", "BC_4" or "BC_7") is assigned to the bsr element. As BSD compiler recognizes the bsr elements named as "BC_1", "BC_2", "BC_4" and "BC_7" as the default bsr elements of types BC_1, BC_2, BC_4 and BC_7 respectively, this bsr element will become the default bsr element for the type. If a bsr element named so(explicitly or implicitly) is not defined, then Design Ware bsr element remains the default bsr element for the type. A default

Feedback

bsr element is the one chosen from different implementations for bsr cells not having a "set_bsd_data_cell" or "set_bsd_control_cell" specification.

**What Next**

Specify a valid name other than "BC_1", "BC_2", "BC_4" and "BC_7" for the bsr element if you do not intend to use this bsr element as the default for the type, and rerun the command.

---

## UIT-437

(error) Reserved name %s cannot be used as bsr element name for type %s.

**Description**

You get this warning when the name specified for the bsr element is one of the reserved names "BC_1", "BC_2", "BC_4" or "BC_7" and it does not match with the specified type of the bsr element. Reserved bsr elements names "BC_1", "BC_2", "BC_4" and "BC_7" are used to explictly define the default bsr elements of types BC_1, BC_2, BC_4 and BC_7 respectively (else Design Ware bsr elements are used as default), and must match with the type. A default bsr element is the one chosen from different implementations for bsr cells not having a "set_bsd_data_cell" or "set_bsd_control_cell" specification.

**What Next**

Correct the name or the type of the bsr element. Specify a unique name other than "BC_1", "BC_2", "BC_4" and "BC_7" for the bsr element if you do not intend to use this bsr element as the default for the type.

---

## UIT-438

(error) Reserved name "%s" cannot be used as bsr element name.

**Description**

You get this warning when the name specified for the bsr element is one of the reserved names "DW_BC_1", "DW_BC_2", "DW_BC_4", "DW_BC_7" or "NONE". These reserved bsr elements names are used to convey the following meaning when used as the bsr element idenetifier in the "set_bsd_data_cell" and "set_bsd_control_cell" commands:

DW_BC_1 - Insert a Design Ware BSR cell of type BC_1 DW_BC_2 - Insert a Design Ware BSR cell of type BC_2 DW_BC_4 - Insert a Design Ware BSR cell of type BC_4 DW_BC_7 - Insert a Design Ware BSR cell of type BC_7 NONE - Do not insert a BSR cell

**What Next**

Specify a valid name for the bsr element other than "DW_BC_1", "DW_BC_2", "DW_BC_4", "DW_BC_7" or "NONE".

Feedback

## UIT-439

(error) BSR element named %s has already been defined.

### Description

You get this warning when the name specified for the bsr element has already been used to define a bsr element by an earlier "set_bsd_bsr_element" command.

### What Next

Specify a unique and valid name for the bsr element, and rerun the command.

## UIT-440

(warning) This bsr cell becomes the default bsr element for type %s.

### Description

BSD compiler recognizes the bsr elements named as "BC_1", "BC_2", "BC_4" and "BC_7" as the default bsr elements of types BC_1, BC_2, BC_4 and BC_7 respectively. If a bsr element named so is not defined, then Design Ware bsr element remains the default bsr element for the type. Note that if the name is not specified for a bsr element then BSD compiler assigns a name identical to the bsr element type("BC_1", "BC_2", "BC_4" or "BC_7") for the bsr element. A default bsr element is the one chosen from different implementations for bsr cells not having a "set_bsd_data_cell" or "set_bsd_control_cell" specification.

### What Next

Specify a valid name other than "BC_1", "BC_2", "BC_4" and "BC_7" for the bsr element if you do not intend to use this bsr element as the default for the type, and rerun the command.

## UIT-441

(error) Ilegal width %d for port '%s'. Port width for signal type '%s' must be %d.

### Description

You get this error when you specify a custom tap design port signal type and the actual width of the port is not found valid. The bus port widths must be as follows for different access types:

instructions = 32-bit tap_state = 16-bit user_code_val = 32-bit ver = 4-bit part_num = 16-bit mnfr_id = 11-bit

Rest of the access types are scalar with expected port width of 1.

Feedback

### What Next

Provide a correct interface for the tap design.

---

## UIT-442

(error) Usercode value is not specified for the %s instruction.

### Description

You get this error when you specify the USERCODE instruction, but don't provide a usercode value. USERCODE instruction must have the usercode value specified using the "-user_code_val" option of the "set_bsd_instruction" command.

### What Next

Correct the specification by specifying the usercode value. The 32-bit usercode value can be specified as design pin(s) and/or sized binary constant and/or sized hex constant. Design pins must be specified as full hierarchical full pin names. Binary and hex constants must be specified using the verilog syntax.

Example: -------

Following is an incomplete and hence invalid USERCODE specification:
set_bsd_instruction USERCODE -code {0110}

The above USERCODE specification should be corrected by specifying the usercode value. For instance following is a valid USERCODE specification:

set_bsd_instruction USERCODE -code {0110} -user_code_val {version_reg/v3, version_reg/v2, version_reg/v1, version_reg/v0, 16'b1111111110000000, 12'h2ab}

---

## UIT-443

(error) Usercode value cannot be specified for %s instruction. Usercode value can only be specified for the USERCDOE instruction.

### Description

You get this error when you specify the usercode value for a non USERCODE instruction. An instruction is treated as the USERCODE instruction when the instruction name is spelt as u-s-e-r-c-o-d-e (case insensitive).

### What Next

Correct the specification. If you have USERCODE specification mixed with other instructions, you will get this error for other instructions in the list. If this is the case, separate the USERCODE specification.

Feedback

If you intend to implement the USERCODE instruction and get this message make sure that the instruction name is spelt correctly(it must be spelt as case insensitive u-s-e-r-c-o-d-e).

---

## UIT-444

(error) '%s' is a PrimeTime command that is not supported by Design Compiler.

### Description

Although this command is supported by PrimeTime, it is not currently supported by Design Compiler. You can check which commands are supported by Design Compiler by executing *list -commands* or *help* in dc_shell.

### What Next

Remove the command that is not supported.

---

## UIT-445

(warning) Invalid value '%s' for spdm_mode. The valid values are either false or true.Setting default value as false.

### What Next

Set it to one of the valid values.

### Examples

```
Error: Invalid value 'false' for spdm_mode. The valid values are either
 false or true. Setting default value as false.(UIT-445)
```

---

## UIT-446

(error) Invalid argument in the usercode value list. '%s' is not a valid design pin, sized binary or a sized hex constant.

### Description

You get this error when you specify an invalid value in the usercode value argument list for the USERCODE instruction. The 32-bit usercode value can be specified as any combination of design pin(s) and/or sized binary constant and/or sized hex constant.

Feedback

**What Next**

Check and correct the usercode value argument syntax. Design pins must be specified as full hierarchical full pin names. Binary and hex constants must be specified using the following verilog syntax:

<size>'[b|B|h|H]<binary or hexadecimal value>

Example: ------- Following is a valid USERCODE specification:

set_bsd_instruction USERCODE -code {0110} -user_code_val {version_reg/v3, version_reg/v2, version_reg/v1, version_reg/v0, 16'b1111111110000000, 12'h2ab}

---

## UIT-447

(error) Invalid size %d of the usercode value argument '%s'. Usercode value argument's size should be in the range of 1 to 32-bits.

**Description**

You get this error when you specify a binary or hexadecimal constant value in the usercode value argument list and the size of the argument is not in the valid range of 1 to 32-bits.

Binary and hex constants are specified using the following verilog syntax:

<size>'[b|B|h|H]<binary or hexadecimal value>

Example: ------- Following is a valid USERCODE specification:

set_bsd_instruction USERCODE -code {0110} -user_code_val {version_reg/v3, version_reg/v2, version_reg/v1, version_reg/v0, 16'b1111111110000000, 12'h2ab}

**What Next**

Check and correct the usercode value argument's size.

---

## UIT-448

(error) %s usercode value '%s' cannot be represented in the specified %d bits.

**Description**

You get this error when you specify a binary or hexadecimal constant value in the usercode value argument list and the specified size of the argument is not sufficient enough to represent the value you have specified.

Binary and hex constants are specified using the following verilog syntax:

<size>'[b|B|h|H]<binary or hexadecimal value>

Feedback

**What Next**

Check and correct the usercode value argument's size.

Example: ------- Following is a wrong USERCODE specification, leading to the above error as the hex value 5'h2ab cannot be represented in 5 bits:

set_bsd_instruction USERCODE -code {0110} -user_code_val {version_reg/v3, version_reg/v2, version_reg/v1, version_reg/v0, 16'b1111111110000000, 5'h2ab}

Following would be a corrected specification:

set_bsd_instruction USERCODE -code {0110} -user_code_val {version_reg/v3, version_reg/v2, version_reg/v1, version_reg/v0, 16'b1111111110000000, 12'h2ab}

---

## UIT-449

(error) A %s value is specified as the usercode value. Usercode value must be a 32-bits value.

**Description**

You get this error when the cumulative bit width of the arguments specified in the '-user_code_val' option of the set_bsd_instruction command is not 32-bits.The 32-bit usercode value can be specified as any combination of design pin(s) and/or sized binary constant and/or sized hex constant.

Binary and hex constants are specified using the following verilog syntax: <size>'[b|B|h|H]<binary or hexadecimal value>

**What Next**

Check and correct the usercode value argument's size.

Example: ------- Following is a wrong USERCODE specification, leading to the above error as the cumulative bit width of the usercode value here is 31:

set_bsd_instruction USERCODE -code {0110} -user_code_val {version_reg/v3, version_reg/v2, version_reg/v1, version_reg/v0, 16'b1111111110000000, 11'h2ab}

Following would be a corrected specification:

set_bsd_instruction USERCODE -code {0110} -user_code_val {version_reg/v3, version_reg/v2, version_reg/v1, version_reg/v0, 16'b1111111110000000, 12'h2ab}

---

## UIT-450

(error) Cannot read test model file '%s'.

Feedback

**Description**

This error occurs when you try to read a test model file that is protected or does not exist.

**What Next**

Check that the file exists, check the search_path, and check what protections are set on the file. Then, rerun the *read_test_model* command.

---

## UIT-451

(error) Cannot write test model file '%s'.

**Description**

This error is generated when you run the *write_test_model* command and attempt to write the test model file to a nonexistent or protected directory, or over a file that is protected.

**What Next**

Check the existence and the write protection of the directory.

Check the protection of the existing file with the same name. Make the necessary change to the file or directory, and rerun the *write_test_model* command.

---

## UIT-452

(error) Cannot attach test model to design '%s'.

**Description**

This error is generated because a test model in CTL format is successfully read in but cannot be associated with the named design because it does not have a CTL interface.

**What Next**

Make sure the named design exists and has a CTL interface. Then, rerun the *read_test_model* command.

---

## UIT-453

(error) Design '%s' has no test model.

**Description**

This error is generated when you request a test model operation on a design that has no test model.

Feedback

### What Next

Make sure you specified the design you intended. To see a list of designs that have test models, use the *list_test_models* command. You may try to read a test model with the *read_test_model\P command or infer one with the check_dft\P command.*

---

## UIT-454

(error) Format '%s' is not a valid test model format.

### Description

This error message indicates that you specified an invalid format with the *read_test_model* command. Valid formats are db (the default) and ctl.

### What Next

Rerun the *read_test_model* command and specify a valid format.

---

## UIT-455

(error) The CTL model in '%s' is not accepted.

### Description

This error occurs when you run the *read_test_model* command and specify a CTL file that has errors that prevent the correct interpretation of the file. The exact errors are reported as CTL-* messages immediately preceding this message.

### What Next

Fix the reported errors and reissue the command.

---

## UIT-456

(error) The CTL model on design '%s' is not accepted.

### Description

This error occurs when the test model stored on the specified design contains errors that prevent its correct interpretation. The errors are reported as CTL-* messages immediately preceding this message.

### What Next

This error is most likely due to a corrupted db file. Verify that the file is not corrupted by reading it using the *read* command and using the design in a context other than test models. If the file is not corrupted, report the problem to Synopsys immediately.

Feedback

## UIT-457

(information) The name of the design is included in the model file; the -design option is ignored.

### Description

This message informs you that the *-design* option does not need to be specified with the *read_test_model* command. For test models in .ddc format, the model file contains the design name.

### What Next

To avoid receiving this message, use the *read_test_model* command without the *-design* option.

## UIT-458

(error) Asynchronous port %s has a hold value of %s. You cannot\n \t specify an asynchronous port that has a hold value set on it.

### Description

This error message tells you that the asynchronous port given to the *set_autofix_async* command has the specified hold value set on it. Asynchronous ports with hold values are not valid for *set_autofix_async*. A hold value is set on an asynchronous port using the *set_test_hold* command, which places the *test_hold* attribute on the asynchronous port. You can remove the *test_hold* attribute by using the *remove_attribute* command; *reset_design* removes all attributes, including *test_hold*.

### What Next

Remove the *test_hold* attribute from the asynchronous port using the *remove_attribute* command. Then, run the *set_autofix_async* command and specify the asynchronous port.

### See Also

- reset_design

## UIT-459

(information) Running set_autofix_async on\n \t asynchronous port(s) "%s" to autofix the asynchronous signal(s) on the cell or instance "%s".

Feedback

**Description**

This message informs you that *set_autofix_async* is being run on the specified asynchronous port to autofix the asynchronous signal(s) of the specified cell or instance.

**What Next**

This is an informational message only. No action is required on your part.

---

## UIT-460

(error) Mode decoding style must be one of 'default' or 'one_hot'.

**Description**

This error message tells you that you have specified a decoding style other than default or one_hot for the *-mode_decoding_style* option to the *set_core_integration_configuration* command. You use *set_core_integration_configuration* to specify the decoding style for the test mode ports used during core integration by the *insert_dft* command.

**What Next**

Specify default or one_hot as the mode decoding style.

---

## UIT-461

(information) You must specify the -mode_decoding_style option and the default or one_hot switch.

**Description**

This informational message tells you that you did not specify any options with the *set_core_integration_configuration* command.

**What Next**

Use the *set_core_integration_configuration* command and specify an option.

---

## UIT-462

(information) You must specify at least one of the following switches: -all.

**Description**

This message informs you that you did not specify an option when you used the *remove_core_integration_configuration* command. The *remove_core_integration_configuration* command does nothing when it is used without options.

Feedback

**What Next**

Use the *remove_core_integration_configuration* command with at least one option.

---

## UIT-463

(error) Design '%s' already has a wrapper.

**Description**

This error message indicates that you attempted to insert a wrapper around a design using the *set_dft_configuration -wrapper enable* command, but the design is already wrapped.

**What Next**

If the design is already wrapped, remove the core wrapping test mode definition and configuration commands from your script, then rerun it.

---

## UIT-464

(warning) Resolution of tristate port '%s' failed.

**Description**

This warning message tells you that the core wrapper architect only supports simple tristate drivers; for example, single-cell drivers at the top-level. Complex drivers are not supported.

**What Next**

Use simple tristate drivers in the design. Alternatively, the port can be excluded from wrapping.

---

## UIT-465

(warning) Resolution of bidirectional port '%s' failed.

**Description**

This warning message tells you that the core wrapper architect only supports simple bidirectional drivers, which are single cell drivers at the top level. Complex drivers are not supported.

**What Next**

Use simple bidirectional drivers in the design. Alternately, exclude the port from wrapping.

Feedback

## UIT-466

(warning) Degenerate bidirectional port : %s.

**Description**

This warning messages means that the core wrapper architect excludes the specified port from wrapping because it is a degenerate bidirectional port.

**What Next**

Rerun the command and specify a port that is not a degenerate bidirectional port.

## UIT-467

(warning) Degenerate tristate port : %s.

**Description**

This warning message informs you that the core wrapper architect excludes the specified port from wrapping because it is a degenerate tristate port.

**What Next**

Rerun the command and specify a port that is not a degenerate tristate port.

## UIT-468

(error) You must specify at least one of the following switches: -default_wrapper_cell, -default_safe_state.

**Description**

This error occurs because you used the *set_core_wrapper_configuration* command but did not specify any options.

**What Next**

Run the *set_core_wrapper_configuration* with at least one option.

## UIT-469

(warning) Bad type for wrapper cell. \n

**Description**

This warning message informs you that the specified wrapper cell type is invalid. The default specification is used.

Feedback

**What Next**

Rerun the command and specify a valid wrapper cell type.

---

## UIT-470

(error) You must specify at least one of the following switches: -cell_type, -safe_value, or -port_list.

**Description**

This error occurs because you used the *set_core_wrapper_cell* command and did not specify and option.

**What Next**

Run the *set_core_wrapper_cell* command with at least one option.

---

## UIT-471

(warning) Bad port: '%s'.

**Description**

This warning message informs you that you specified a port that is not in the design.

**What Next**

Run the command and specify a port that is in the design.

---

## UIT-472

(error) Error when running Core Wrapper.

**Description**

This message informs you that the Core Wrapper client could not be run successfully. This indicates an error in the design or in the specifications for core wrapping. Causes might be one of the following:

```
1. Trying to directly wrap a CTL model
2. Trying to wrap a design without any connected ports
3. An error while instantiating wrapper cells due to incorrect libraries
4. Unsupported scan methodology
```

**What Next**

Check the design. Make sure you are not directly trying to wrap a test model. Check the specifications.

Feedback

## UIT-473

(error) '%s' identifies multiple pins.

### Description

This error occurs if you use the *set_bsd_register* command and specify a pin in the access list that contains a wildcard that identifies multiple pins on the register cell. Each signal type and pin name pair must identify only one pin. If you want to identify multiple pins of the same type, you must specify multiple signal types and pin name pairs.

### What Next

Reissue the *set_bsd_register* command and specify multiple pin name pairs, or use a more specific wildcard.

## UIT-474

(error) The test model for design '%s' is stored in version %s of CTL. It cannot be retrieved.

### Description

The version of CTL in which the test model is expressed is incompatible with the tool's capabilities.

CTL is an evolving standard (P1450.6) which is not under the control of the Synopsys developers. Since the Beta version, some incompatible changes were introduced into the language.

Note that the CTL version is not an official denomination of P1450.6. It is an arbitrary number assigned to Synopsys' implementation of a snapshot of the evolving standard. The first production release supports version 1.00.

### What Next

There are two options. If the model is on a design for which full implementation is available, then you can run dft_drc to regenerate the model in the current version of CTL. If the design implementation is not readily available, then the process by which the model was created, most likely insert_dft, needs to be repeated using the current version of the tool.

## UIT-475

(information) The test model on design '%s' is updated to the current CTL version. Writing out the design to disk will make this update permanent.

Feedback

### Description

The version of CTL in which the stored test model is expressed is not compliant with the current state of the proposed standard. The model was retrieved and automatically translated to the newer version of the CTL syntax.

CTL is an evolving standard (P1450.6) which is not under the control of the Synopsys developers. Since the previous version of DFT Compiler, some incompatible changes were introduced into the language.

Note that the CTL version is not an official denomination of P1450.6. It is an arbitrary number assigned to Synopsys' implementation of a snapshot of the evolving standard. DFT Compiler currently supports version 1.70.

### What Next

There are two options. 1- Do nothing, in which case the same message will be reissued each time this test model is used in this version of DFT Compiler. 2- Save the db file containing this test model back to disk.

---

## UIT-476

(error) The test model for design '%s' cannot be retrieved.

### Description

The version of CTL in which the test model is expressed is compatible with the tool's capabilities, but the information cannot be retrieved. This may be due to data corruption on the .db file, or incomplete compatibility between tool versions.

### What Next

There are multiple options.

If the .db file containing the model is very old, reading it into a previous version of DFT Compiler and writing it back to disk will automatically update the text of the model to the DFT Compiler version. The current version of DFT Compiler will most likely be able to read the newly updated model. Otherwise, the model can be regenerated from the current text, from the current netlist, or from the pre-DFT netlist.

To update the model from the current text, edit the ASCII version of the model contained in file <design_name>_obsolete_model.ctl, in the current directory. It can then be read back in and re-attached to the design using the *read_test_model* command.

If the model is on a design for which full implementation is available, then the model may be regenerated from the netlist: you can run DRC to regenerate the model in the current version of CTL. If the design implementation is not readily available, then the process by which the model was created, most likely by the *insert_dft* command, needs to be repeated using the current version of the tool.

Feedback

## UIT-477

(information) The '%s' command is obsoleted in the 2003.03 release. Please use '%s' instead.

### Description

This message informs you that the *set_test_signal* command is obsoleted in the 2003.03 release of DFT Compiler. You are advised to use the specified replacement commands instead.

### What Next

Use the *set_dft_signal* command instead.

## UIT-478

(Error) Valid index required for scan-in and scan-out ports

### Description

This message indicates that you are attempting to describe the scan-in and scan-out ports in the design without associated indices. In order to to correctly extract scan chains using descriptive specifications, the test design rule checker needs information associating scan access pins to their respective scan chains.

### What Next

Specify the appropriate indices.

## UIT-479

(information) The option -order '{%s}' is obsolete in the 2003.12 release. Please use the options -autofix and/or -shadow_wrapper.

### Description

This message informs you that the *-order* option of the *set_dft_configuration* command is obsolete in the 2003.12 release of DFT Compiler. You are advised to use the specified replacement options instead.

### What Next

Use the the *-autofix* and/or *-shadow_wrapper* options instead.

Feedback

## UIT-480

(error) The -order option cannot not be used with the -autofix and/or -shadow_wrapper options.

**Description**

The *-order* option will become obsolete in the 2003.12 release. You are advised to use the *-autofix* and/or the *-shadow_wrapper* options instead.

**What Next**

Modify the options accordingly to the recommendations and repeat the command.

## UIT-481

(warning) Resolution of tristate port '%s' connected to pin '%s' of cell '%s' failed. The port will be excluded from wrapping.

**Description**

This warning message tells you that the core wrapper architect didn't find any tristate driver for the specified port connected to a tristate pin of a cell with test model.

**What Next**

Use simple tristate drivers in the design for the speciied port. Alternatively, the port can be excluded from wrapping.

## UIT-482

(warning) Resolution of bidirectional port '%s' connected to pin '%s' of cell '%s' failed. The port will be excluded from wrapping.

**Description**

This warning message tells you that the core wrapper architect didn't find any bidirectional driver for the specified port connected to a bidir pin of a cell with test model.

**What Next**

Use simple bidirectional drivers in the design. Alternately, exclude the port from wrapping.

## UIT-483

(warning) Mapping Wrapper Cell Designs is not successfull, turning off wrapper insertion.

Feedback

### Description

This warning message tells you that the core wrapper insertion couldn't map wrapper cell designs successfully. Wrapper insertion can't proceed without mapped wrapper cells. Wrapper insertion will be turned off.

### What Next

Check if link library is setup properly to include the libraries used in mapping wrapper cells. Check if there is a license available to map wrapper cells.

---

## UIT-484

(error) Instance '%s' of design '%s' has no test model.

### Description

This error is generated when there is no test model for the design corresponding to the cell instance you specified in a *set_test_target* command.

### What Next

Make sure you specified the instance you intended. To see a list of designs that have test models, use the *list_test_models* command. You may need to use the read_test_model command to attach a test model to the design specified in the error message.

---

## UIT-485

(error) Test mode '%s' does not exist.

### Description

This error is generated when the *-test_mode* argument to the current command is invalid.

### What Next

Use the *list_test_modes* command to see the valid *-test_mode* arguments. If the desired test mode is not listed, you can create a new test mode with the *define_test_mode* command.

---

## UIT-486

(error) Cell '%s' is repeated.

Feedback

### Description

This error is generated when a cell is repeated in the cell list specified by any of the following options:

- the *-cores* option of the *set_test_target* command
- the *-target* option of the *define_test_mode* command
- the *-include* option of the *define_dft_schedule* command

### What Next

Ensure there are no repeated cells in the specification and repeat the command. You can use the *report_test_model* command to see the available test modes for a given design.

---

## UIT-487

(error) Cell '%s' can not be in wrapped mode '%s' when -purpose is top_internal_test.

### Description

This error is generated when you try to put a core into a wrapped internal test mode (i.e. wrp_if mode) when you have specified the purpose of the mode as a top-level scan test. These are incompatible, because the top-level scan test implies that you will apply a set of patterns to the top level and the wrapped internal test mode implies that you will apply the patterns that were generated for the core. There is no way to apply both patterns at once.

### What Next

You should use the *define_test_mode* command to create two test modes. Use *set_test_target -purpose top_internal_test* without cores for one mode, and *set_test_target -purpose core_internal_test* with the desired cores for the other mode.

---

## UIT-488

(error) Test mode '%s' does not exist or is not supported for instance '%s'. of design '%s'.

### Description

This error is generated when the *-cores* argument to the *set_test_target* command specifies an invalid mode or *-target* list includes a test mode other than internal or external test mode.

### What Next

Use the *report_test_model* command to see the valid test modes for the design indicated in the error message. Retry the *set_test_target* command using a valid mode.

Feedback

If using *define_test_mode* command with *-target* option, make sure that the targeted mode is an internal or external test mode. The cores that are not included in the *-target* list are put in mission mode if they are wrapped or are put in an internal scan mode if they are not wrapped.

---

## UIT-489

(error) No mode specified for instance %s.

**Description**

This error is generated when the *-cores* argument to the *set_test_target* command specifies an instance without a mode.

**What Next**

Make sure that the *-cores* argument contains complete instance/mode pairs when you retry the *set_test_target* command.

---

## UIT-490

(error) Bad -purpose '%s'.

**Description**

This error is generated when you you specify an unrecognized *-purpose* for the *set_test_target* command.

**What Next**

Retry the command with a valid *-purpose*.

---

## UIT-491

(error) You must specify -cores when -purpose is core_internal_test.

**Description**

This error is generated when you specify *-purpose core_internal_test* without the *-cores* argument for the *set_test_target* command.

**What Next**

Retry the command with a the *-cores* argument, or change *-purpose* to *top_internal_test*.

Feedback

## UIT-492

(error) Current test mode is not defined.

### Description

This error is generated when the *-test_mode* argument is omitted from the current command, and the current test mode has not been set.

### What Next

Use the *current_test_mode* command to define the current test mode, or specify a test mode directly with the *-test_mode* argument when you retry the command.

## UIT-493

(error) Test mode '%s' must be type InternalTest.

### Description

This error is generated when the test mode for the *set_test_target* command does not have type InternalTest. Since the *set_test_target* command only specifies internal tests (either at the top level or core level) it doesn't make sense for the test mode to be anything other than InternalTest.

### What Next

Use the *define_test_mode* command to create a test mode with *-type InternalTest*, and specify that test mode with either the *current_test_mode* command, or the *-test_mode* argument when you retry the *set_test_target* command.

## UIT-494

(error) Cannot write CTL model with exec name '%s' to file '%s'.

### Description

This error is generated when you run the *write_test* command and failed to write out the CTL model with the specified pattern exec name to the given file.

### What Next

Check the existence and the write protection of the directory.

Check the protection of the existing file with the same name.

Check the CTL model if the specified PatternExec exists. Be sure not to have quoted pattern exec name in the command line.

Feedback

## UIT-495

(error) There is no valid pattern info in file '%s'.

**Description**

This error occurs when you run the *read_pattern_info* command and there is no valid pattern information block in the input file although it is a valid CTL file.

**What Next**

Check the input file to add pattern info block.

## UIT-496

(error) The patinfo for Pattern '%s' already existed.

**Description**

This error occurs when you run the *read_pattern_info* command and the patinfo blocks in the input file already exist in the CTL model. Unless '-overwrite' switch is added, it is an error to re- define the existing patinfo.

**What Next**

Add switch '-overwrite' if you want to redefine the existing patinfo.

## UIT-497

(error) Cannot find pattern matching name '%s' in existing CTL model.

**Description**

This error occurs when you run the *read_pattern_info* command and the pattern name in the patinfo file does not have a match in the existing CTL model.

**What Next**

The user should change the pattern block name in the test program and patinfo file to match the pattern name in the CTL model.

## UIT-498

(Warning) The following ports of design '%s' have no corresponding Signals in its test model:%s.

Feedback

### Description

The error occurs when you run the *read_test_model* command, if some ports of the design don't have corresponding Signals in the read test model. This means that there is no test information for these ports. This will make the test model unusable.

### What Next

The user should check the validity of the test model and whether it realy is the test model of the design it is being attached to.

---

## UIT-499

(Warning) The following test model Signals have no corresponding ports in design '%s': %s.

### Description

The error occurs when you run the *read_test_model* command, if some Signals of the model don't have corresponding ports in the design it is being associated with. This means that the model provides information about non-existing port. This will make the test model unusable.

### What Next

The user should check the validity of the test model and whether it realy is the test model of the design it is being attached to.

---

## UIT-500

(Warning) The following ports of sub-design '%s' have no corresponding Signals in its test core:%s.

### Description

The error occurs when some ports of a sub-design don't have corresponding Signals in its test core referenced by the test model of current design. This will make the CoreType unusable.

### What Next

The user should check the validity of the test core defined in the test model of current design.

Feedback

## UIT-501

(Warning) The following test core Signals have no corresponding ports in sub-design '%s': %s.

### Description

The error occurs when some Signals of a core referenced by the model of current design don't have corresponding ports in the sub-design it is being associated with. This means that the CoreType provides information about non-existing port. This will make the CoreType unusable.

### What Next

The user should check the validity of the CoreType in the test model of current design.

## UIT-502

(error) Mode decoding style must be one of 'binary' or 'one_hot'.

### Description

This error message tells you that you have specified a decoding style other than binary or one_hot for the *-mode_decoding_style* option to the *set_dft_configuration* command. You use *set_dft_configuration* to specify the decoding style for the test mode ports used during multi-mode DFT insertion by the *insert_dft* command.

### What Next

Specify binary or one_hot as the mode decoding style.

## UIT-503

(Error) The signal '%s' must be predefined as an Oscillator signal.

### Description

This error tells you that one of the specified PLL clocks has not been predefined as an Oscillator signal and hence the clock controller specification cannot be accepted. The *set_dft_clock_controller* command specification is ignored due to the error.

### What Next

To correct this error, specify the PLL clocks signals as having the Oscillator signal type.

A PLL clock pll/out is defined using

dc_shell> *set_dft_signal -view existing_dft -type Oscillator -hookup_pin pll_out -active_state < 0 | 1 >*

Feedback

## UIT-504

(Warning) The port '%s' has not predefined as an Oscillator signal.

**Description**

This warning tells you that one of the specified ATE clocks has not been predefined as an Oscillator signal. If the ATE clock is a reference clock, it has to be predefined as an Oscillator signal; otherwise, this warning can be ignored. The *set_dft_clock_controller* command specification is not ignored due to this warning.

**What Next**

You can ignore this warning if the ATE clock is not a reference clock. If the ATE clock is a reference clock, specify the ATE clock signal as having the Oscillator signal type and reissue the set_dft_clock_controller command.

An ATE clock ate_clk is defined using

dc_shell> *set_dft_signal -view existing_dft -type Oscillator -port ate_clk -active_state < 0 | 1 >*

## UIT-505

(Error) An ATE clock must be a port of the design; '%s' is not a valid port name.

**Description**

This error tells you that one of the specified ATE clock names is not a valid port name. The *set_dft_clock_controller* command specification is discarded due to this error.

**What Next**

If you want to specify a hookup pin for an ATE clock, you should specify the hookup pin with the *set_dft_signal* command and reissue the *set_dft_clock_controller* command.

## UIT-506

(Warning) The port '%s' has not predefined as a clock signal.

**Description**

This error tells you that the specified port has not been predefined as a clock signal and that the Oscillator signal specification cannot be accepted. If the port is a reference clock it has to be first defined as a clock and then defined as a reference clock. The *set_dft_signal* command specification is ignored due to this error.

Feedback

**What Next**

If the port is a reference clock, specify the ATE clock signal as having the a clock signal type and reissue the *set_dft_signal* command.

---

## UIT-510

(Error) Test Model of core instance '%s' is not valid for integration.

**Description**

SoC BIST does not allow integration of unencapsulated cores during core integration. This error tells you that the specified core instance is not encapsulated and hence a test mode of the core instance can't be used with *set_test_target* command. The *set_test_tagret* command specification is ignored due to the error.

**What Next**

To avoid the error, specify only encapsulated core test modes with *set_test_target* command.

---

## UIT-511

(Error) More than one bist test modes are specified, bist test modes can't be tested in parallel.

**Description**

SoC BIST does not allow bisted cores to be tested in parallel currently. This error tells you that the *set_test_target* specification includes more than one bist test modes. The *set_test_target* command specification is ignored due to the error.

**What Next**

To avoid the error, specify only one encapsulated bist test mode with *set_test_target* command.

---

## UIT-512

(Error) Bist test modes are specified along with scan test modes, bist test modes can't be tested in parallel.

**Description**

SoC BIST does not allow bisted cores to be tested in parallel currently. This error tells you that the *set_test_target* specification includes one or more bist test modes and one or

Feedback

more scan test modes. The *set_test_target* command specification is ignored due to the error.

**What Next**

To avoid the error, don't mix bist test modes with scan test modes with *set_test_target* command.

---

## UIT-515

(Error) The -setup_instructions and -bsd_test_setup options are mutually exclusive.

**Description**

The test_setup procedure for the boundary-scan patterns can be generated in two ways:

- Using the *-setup_instructions* option of the *create_bsd_patterns* command

  This method creates a test_setup procedure by initializating the user-defined test data registers (UTDRs) associated with the specified instructions. The initialization data is specified with the *-bsd_init_data* option of the *set_bsd_instruction* command.

- Using the *-bsd_test_setup* option of the *create_bsd_patterns* command

  This method inserts the test_setup section from the provided STIL protocol file into the created patterns. The setup protocol must be read using the *read_test_protocol -section test_setup* command prior to pattern creation.

The *-setup_instructions* and *-bsd_test_setup* options are mutually exclusive.

**What Next**

Use only one of the two methods previously described to create test_setup vectors.

---

## UIT-517

(Error) Cannot specify -jtag_reset disable without -setup_instructions or -bsd_test_setup. f

**Description**

This message will appear when neither *-setup_instructions* nor *-bsd_test_setup* is specified along with *-jtag_reset disable* in create_bsd_patterns.

Allowed options are:

The -jtag_reset disable option is valid only when it is used either with -setup_instructions or with -bsd_test_setup.

By default, -jtag_reset option is *enable*

Feedback

## UIT-520

(error) Specified dft design "%s" does not exist.

### Description

You receive this error message because you have executed the *define_dft_design* command and specified a design that does not exist in memory. You can use *define_dft_design* to specify and characterize a design as a dft design. Such a design is treated like a user dft design of the specified type for dft insertion.

### What Next

Use the *list_designs* command to see what designs are in memory, then use the *read* command to read in the design. Next, execute the *define_dft_design* command to set the desired design as a pad design.

## UIT-521

(error) Specified dft design "%s" does not have a pin named "%s".

### Description

You receive this error message when you execute the *define_dft_design* command and specify a pin name in the interface list that does not exist in the specified dft design. The *define_dft_design* command is used to specify and characterize a design as a dft design of a type. The interface list for the dft design specifies a list of triplets of signal type, pin name and pin polarity.

### What Next

Reexecute the *define_dft_design* command and specify a valid pin name in the interface list for the *-interface* argument.

## UIT-522

(error) Syntax error with the list specified with -interface option, expects a list of triplets <signal_type> <pin_name> <pin_polarity> .

### Description

You receive this error message when you execute the *define_dft_design* command and specify an incorrect interface list. The *define_dft_design* command is used to specify and characterize a design as a dft design of a type. The interface list for the dft design specifies a list of triplets : signal type, design pin name and design pin polarity.

Feedback

### What Next

Reexecute the *define_dft_design* command and specify a valid list for the *-interface* argument.

---

## UIT-523

(error) Invalid design name '%s' - this design name is reserved.

### Description

You receive this error message when you execute the *define_dft_design* command and specify a design name that is reserved. The *define_dft_design* command is used to specify and characterize a design as a dft design of a type. The design name specified with this command can not be one of the following names as the name conflicts with our designware implementation of the dft component.

DW01_decode DW_control_force DW_Z_control_force DW_observ_dgen DW03_shftreg DW_bc_1 DW_bc_2 DW_bc_3 DW_bc_4 DW_bc_5 DW_bc_7 DW_bc_8 DW_bc_9 DW_bc_10 DW_wc_d1_s DW_wc_s1_s DW_INSTRREG DW_tap DW_tap_uc DFT_bistc DFT_codec DFT_xbistc DFT_xcodec DFT_clk_mux DFT_clk_chain DW_mbist_ctrl DW_mbist_wrapper

### What Next

Reexecute the *define_dft_design* command and specify a valid design name for the *-design_name* argument.

---

## UIT-524

(error) Illegal width %d for pin '%s' of signal type '%s', legal width must be %d.

### Description

You receive this error message when you execute the *define_dft_design* command and specify a design pin of invalid width. The *define_dft_design* command is used to specify and characterize a design as a dft design of a type. The dft design pins are checked for legal width according to the specified dft design type.

The legal widths of bus pins for different interface pin types as as follows.

DFT Design Type : TAP

instructions = 32-bit tap_state = 16-bit

DFT Design Type : TAP_UC

instructions = 32-bit tap_state = 16-bit user_code_val = 32-bit ver = 4-bit part_num = 16-bit mnfr_id = 11-bit

Feedback

**What Next**

Reexecute the *define_dft_design* command and specify a valid design with bus pins of legal width.

---

## UIT-525

(error) Incorrect syntax specified for list param, list param should be terminated with $end_list$

**Description**

You receive this error message when you execute the *define_dft_design* command and specify a list parameter with no list terminator. The syntax of a list paramter is as follws.

<parameter name> <parameter type> <param value1> <param value2> ... $end_list$

where <parameter type> is string .

**What Next**

Reexecute the *define_dft_design* command and specify the correct syntax for list parameters.

---

## UIT-530

(error) Specified pin '%s' is not found in the current design.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify a pin name that does not exist in the current design.

**What Next**

Reexecute the *set_bsd_instruction* command and specify a valid pin name.

---

## UIT-531

(error) Register '%s' can't be used with standard instruction(s) : %s .

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify an incorrect register name for a standard instruction.

Here are the standard instructions and the corresponding register names.

Feedback

This error message is issued when a non standard register is specified for a standard instruction.

**What Next**

Reexecute the *set_bsd_instruction* command and specify thye correct register name.

---

## UIT-532

(error) Invalid Input Clock Conditioning '%s' specified.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify an incorrect input clock conditioning value.

Here are the allowed values for input clock conditioning.

PI

TCK

**What Next**

Reexecute the *set_bsd_instruction* command and specify thye correct input clock conditioning value with option -input_clock_condition.

---

## UIT-533

(error) Invalid Output Conditioning '%s' specified.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify an incorrect out conditioning value.

Here are the allowed values for output conditioning.

BSR

HIGHZ

NONE

Feedback

**What Next**

Reexecute the *set_bsd_instruction* command and specify thye correct output conditioning value with option -output_condition.

---

## UIT-534

(error) Input Clock Conditioning can't be specified for a short BSR chain instruction.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify input clock conditioning for an instruction that selects a short BSR chain.

**What Next**

Reexecute the *set_bsd_instruction* command with out input clock conditioning.

---

## UIT-535

(error) Output Conditioning can't be specified for a short BSR chain instruction.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify output conditioning for an instruction that selects a short BSR chain.

**What Next**

Reexecute the *set_bsd_instruction* command with out output conditioning.

---

## UIT-536

(error) Invalid Excluded BSR Conditioning '%s' specified.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify an incorrect excluded bsr cell onditioning value.

Here are the allowed conditioning values for BSR cells excluded from the current instruction.

CLAMP

NONE

Feedback

### What Next

Reexecute the *set_bsd_instruction* command and specify thye correct excluded bsr conditioning value with option -excluded_bsr_condition.

---

## UIT-537

(error) Excluded BSR Conditioning can't be specified for a non short BSR chain instruction.

### Description

You receive this error message when you execute the *set_bsd_instruction* command and specify excluded bsr conditioning for an instruction that doesn't select a short BSR chain.

### What Next

Reexecute the *set_bsd_instruction* command with out excluded bsr conditioning.

---

## UIT-538

(error) Invalid BSR chain name '%s'.

### Description

You receive this error message when you execute the *set_scan_path* command and specify a reserved name as the BSR chain (path) name.

Here are the reseved names that are not allowed for BSR chains:

BYPASS DEVICE_ID STT_REG

### What Next

Reexecute the command and specify a different name for the BSR chain name.

---

## UIT-539

(error) Conflicting BSD register name '%s'.

### Description

You receive this error message when you execute the *set_scan_path* command and specify a conflicting name as the BSD register name. The name is also used to describe a short BSR chain.

### What Next

Reexecute the command and specify a different name for BSD register name.

Feedback

## UIT-540

(error) Conflicting BSR chain name '%s'.

**Description**

You receive this error message when you execute the *set_scan_path* command and specify a conflicting name as the BSR chain name. The name is also used to describe a short BSD register.

**What Next**

Reexecute the command and specify a different name for the BSR chain name.

## UIT-541

(warning) Unable to find the bsr cell for '%s', ignoring the member.

**Description**

You receive this error message when you execute the *set_scan_path* command and specify a short BSR chain and a member of the short chain doesn't point to a valid BSR cell.

Please note that input/output/control BSR cells of a tristate/bidir ports can be included separately in a short BSR chain only if they are defined.

EX:-

set_bsd_data_cell -function input -port out set_bsd_data_cell -function output -port out set_bsd_control_cell CTRL1 -type BC_1 -port out

set_bsd_path -name SHORT_BSR1 { out/in out1 out/out out3 CTRL1 }

Individual BSR cells of BSR embedded pads can't be included in a short BSR chain, either alll of embedded BSR cells can be included in a short BSR chain or none.

**What Next**

Reexecute the command and specify a valid BSR cell name.

## UIT-542

(error) Invalid or missing %s Condition specified for standard instructions : %s .

Feedback

### Description

You receive this error message when you execute the *set_bsd_instruction* command and specify *-input_clock_condition* or output_condition *options. These options are not allowed for the following standard instructions.*

EXTEST EXTEST_PULSE EXTEST_TRAIN SAMPLE PRELOAD BYPASS HIGHZ CLAMP IDCODE USERCODE

The standard predefines condition if any required for these instuctions and user is not allowed to change that.

You also see this error message for INTEST or RUNBIST instructions if *-input_clock_condition* or output_condition *options are not specified or incorrect value specified for the option output_condition*.

The standard allows only BSR or HIGHZ output condition for these instructions.

There are no restrictions on output condition for user defined instructions.

### What Next

Reexecute the command with the correct options.

---

## UIT-543

(error) Invalid bit '%c' specified in capture value.

### Description

You receive this error message when you execute the *set_bsd_instruction* command and specify *-capture_value* option and specify an invalid capture value string.

The format of capture value string is as follows.

nn'bXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

where nn is between 1 and 32 and X can be 0 or 1, -

nn'hXXXXXXXX

where nn is betweeen 1 and 32 and X can be 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, a, A, b, B, c, C, d, D, e, E, f, F, -

### What Next

Reexecute the command with correct capture value.

Feedback

## UIT-544

(error) Invalid capture value length '%d'.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify *-capture_value* option and specify an invalid capture value string.

The format of capture value string is as follows.

nn'bXXXXXXXXXXXXXXXXXXXXXXXXXXXXXXX

where nn is between 1 and 32 and X can be 0 or 1, -

nn'hXXXXXXXX

where nn is between 1 and 32 and X can be 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, a, A, b, B, c, C, d, D, e, E, f, F, -

The bit stream length in binary form can't exceed 32.

**What Next**

Reexecute the command with correct capture value.

## UIT-545

(error) Invalid LSB for IDCODE capture value.

**Description**

You receive this error message when you execute the *set_bsd_instruction* command and specify *-capture_value* option and specify an invalid capture value string. The LSB bit of the capture value string for IDCODE instruction should be '1'.

**What Next**

Reexecute the command with correct capture value.

## UIT-546

(error) BSD Test Data Register length is mandatory, specify the length with -exact_length option.

Feedback

**Description**

You receive this error message when you execute the *set_scan_path* command to specify a User-defined Test Data Register (UTDR) and don't specify the length of the Test Data Register.

**What Next**

Reexecute the command and specify the length of the TDR using -exact_length option.

---

## UIT-547

(error) One of the options -ordered_elements or -hookup_elements is mandatory for BSD.

**Description**

You receive this error message when you execute the *set_scan_path* command to specify a BSR chain or User-defined Test Data Register (UTDR) and don't specify either of the required options.

In view spec, the -ordered_elements option specifies a BSR chain.

In view spec/existing_dft, the -hookup_elements option specifies a TDR.

**What Next**

Reexecute the command and specify either of the options as required.

---

## UIT-548

(error) Options -ordered_elements, -hookup_elements are mutually exclusive for BSD.

**Description**

You receive this error message when you execute the *set_scan_path* command to specify a BSR chain or User-defined Test Data Register (UTDR) and specify both of the above options. These options are mutually exclusive, specify only one of the options.

In view spec, the -ordered_elements option specifies a BSR chain.

In view spec/existing_dft, the -hookup_elements option specifies a TDR.

**What Next**

Reexecute the command and specify only one of the above options as required.

---

## UIT-549

(error) BSR chains can not be specified in view existing_dft.

Feedback

### Description

You receive this error message when you execute the *set_scan_path* command in view existing_dft to specify a BSR chain. BSR chains can not be specified in view existing_dft.

BSR chains can be specified in view spec using the option -ordered_elements in conjunction with the option -class bsd.

### What Next

Fix the error and reexecute the command.

---

## UIT-550

(error) Invalid argument in the capture value list. '%s' is not a valid design pin, sized binary or a sized hexadecimal constant.

### Description

This error message occurs when an invalid value is specified in the capture value argument list for the USERCODE instruction. The 32-bit capture value can be specified as any combination of design pin(s), sized binary constant(s), and/or sized hexadecimal constant(s).

Specify binary and hexadecimal constants using the following Verilog syntax:

```
<size>'[b|B|h|H]<binary or hexadecimal value>
```

For example, the following is a valid USERCODE specification:

```
set_bsd_instruction USERCODE -code {0110}
   -capture_value {version_reg/v3, version_reg/v2, version_reg/v1, \\
   version_reg/v0, 16'b1111111110000000, 12'h2ab}
```

### What Next

Check and correct the capture value argument syntax. Specify design pins as full hierarchical pin names.

---

## UIT-551

(error) Invalid size %d of the capture value argument '%s'. Capture value argument's size should be in the range of 1 to 32 bits.

### Description

This error message occurs when you specify a binary or hexadecimal constant value in the capture value argument list, and the size of the argument is not in the valid range of 1 to 32 bits.

Feedback

Specify binary and hexadecimal constants using the following Verilog syntax:

```
<size>'[b|B|h|H]<binary or hexadecimal value>
```

For example, the following is a valid USERCODE specification:

```
set_bsd_instruction USERCODE -code {0110}
   -capture_value {version_reg/v3, version_reg/v2, version_reg/v1, \\
   version_reg/v0, 16'b1111111110000000, 12'h2ab}
```

**What Next**

Check and correct the size of the capture value argument, and run the command again.

---

## UIT-552

(error) %s capture value '%s' cannot be represented in the specified %d bits.

**Description**

This error message occurs when you specify a binary or hexadecimal constant value in the capture value argument list and the specified size of the argument is not sufficient to represent the specified value.

Specify binary and hexadecimal constants using the following Verilog syntax:

```
<size>'[b|B|h|H]<binary or hexadecimal value>
```

For example, the following is a valid USERCODE specification:

```
set_bsd_instruction USERCODE -code {0110}
   -capture_value {version_reg/v3, version_reg/v2, version_reg/v1, \\
   version_reg/v0, 16'b1111111110000000, 12'h2ab}
```

**What Next**

Check and correct the size of the capture value argument, and run the command again.

---

## UIT-553

(error) A %s value is specified as the capture value. Capture value must be a 32-bit value.

**Description**

This error message occurs when the cumulative bit width of the arguments specified in the *-capture_value* option of the *set_bsd_instruction* command is not 32 bits. The 32-bit capture value can be specified as any combination of design pin(s), sized binary constant(s), and/or sized hexadecimal constant(s).

Feedback

Specify binary and hexadecimal constants using the following Verilog syntax:

```
<size>'[b|B|h|H]<binary or hexadecimal value>
```

For example, the following is a valid USERCODE specification:

```
set_bsd_instruction USERCODE -code {0110}
   -capture_value {version_reg/v3, version_reg/v2, version_reg/v1, \\
   version_reg/v0, 16'b1111111110000000, 12'h2ab}
```

**What Next**

Check and correct the size of the capture value argument, and run the command again.

---

## UIT-554

(error) '%s' cell does not exist in the design.

**Description**

This error message occurs when the cell that was specified as part of of the *state_cells* argument of the *set_tap_elements* command, cannot be found.

Typographical or spelling errors often cause this type of error message.

**What Next**

Use the *find* command to list the cells in your design, and rerun the *set_tap_elements* command using the name of a valid cell.

---

## UIT-555

(error) Invalid data. Recheck the file format or type.

**Description**

This error message indicates that an invalid data is read with the *read_bsdl* command. This might happen when a BSDL file read is not in proper unix format. You might observe this for files transferred from different platforms or operating systems.

**What Next**

Check the file type using unix *file* command. Recheck the BSDL file data.

---

## UIT-580

(error) The test_modes value, %s, specified is not a valid value.

Feedback

**Description**

The -test_modes option requires a valid integer number of modes required in the design.

---

## UIT-581

(error) The client %s specified is not a valid dft client.

**Description**

You receive this message if you issue *set_dft_configuration -order* and specify an invalid value for the *-order* option argument. Valid values are *autofix*, to specify the Autofix utility as dft client; or *wrapper*, to specify the Shadow LogicDFT utility as dft client. For more information, see the man page for the *set_dft_configuration* command.

**What Next**

Reissue *set_dft_configuration -order* with a valid value for the *-order* option argument.

---

## UIT-582

(error) Core Integration of cores is mutually exclusive with options : -shadow_wrapper | -core_wrapper | -testability | -mbist | -scan_compression .

**Description**

You receive this message if you issue *set_dft_configuration -core_integration* and also specify one of the following options. *-shadow_wrapper -core_wrapper -testability -mbist -scan_compression* UI option *-core_integration* is mutually exclusive with the above options. For more information, see the man page for the *set_dft_configuration* command.

**What Next**

Reissue *set_dft_configuration* command with valid options.

---

## UIT-583

(error) Core Integration of MBIST cores doesn't support the options : -clock_controller | -bist .

**Description**

You receive this message if you issue *set_dft_configuration -core_integration* and also specify one of the following options. *-bist -clock_controller* UI option *-core_integration* is mutually exclusive with the above options when the design contains MBIST(Tech2) cores. UI option *-core_integration* is mutually exclusive with the option *-clock_controller* when

Feedback

the design contains MBIST(Tech1) cores. For more information, see the man page for the *set_dft_configuration* command.

**What Next**

Reissue *set_dft_configuration* command with valid options.

---

## UIT-584

(error) Object '%s' is not valid, it's either not found or not a cell of current design, '%s'.

**Description**

Object specified in the command has to be present as a cell under the current design.

**What Next**

Check whether the name of the object is correct and current design is specified correctly.

---

## UIT-587

(error) Cell '%s' doesn't have a test model.

**Description**

Cell specified in the command should have a test model. The specification can't be executed if there is no test model for the specified cell.

**What Next**

Check whether the name of the cell is correct and it has a test model. Correct the specification and reexecute the command. Note that test model can be attached to a cell using read_test_model command.

---

## UIT-588

(error) MBIST(Tech2) encapsulated core modes can't be used with set_test_target command.

**Description**

You receive this message if you issue *set_test_target* command and also specify an encapsulated MBIST(Tech2) core mode with *-cores* option. DFT architect creates a single top level mode to target all MBIST(Tech2) encapsulated core modes of the same type and user can't change this behavior with set_test_target command. The name of such a test mode can be controlled with *define_test_mode* and *set_dft_logic_usage* commands.

Feedback

**What Next**

Don't specify *set_test_target* command with MBIST(Tech2) core modes.

---

## UIT-590

(error) A configuration for port %s already exits.

**Description**

The *set_port_configuration* command has previously been specified for this port.

**What Next**

Check to see if the *set_port_configuration* command has previously been specified for this port.

---

## UIT-591

(error) Duplicate control specification for %s data port of %s.

**Description**

The *set_port_configuration* command has previously been specified for this port.

**What Next**

Verify that the *set_port_configuration* command has previously been specified for this port.

---

## UIT-592

(error) %s has a clock port specified for it that is different from the port specified in the command.

**Description**

A previous *set_port_configuration* command has specified a different clock port for this port.

**What Next**

Check if the *set_port_configuration* command has previously been used to specify a clock for this port.

---

## UIT-593

(error) %s specified as clock port in the command does not exist on the cell

Feedback

### Description

You receive this message if you issue the *set_port_configuration* command and the clock port you specified was not found on the specified cell. This could be caused by a spelling error or typo.

### What Next

Verify that the port exists on the cell, and verify the correct spelling. Then reexecute *set_port_configuration*.

---

## UIT-594

(error) Multiple ports named %s on Object %s

### Description

You receive this message if you execute *set_port_configuration* and specify a port name that occurs more than once on the specified object. There can be only one port associated with a given port name.

### What Next

Examine the library description of the cell to determine why there are two ports with the same name. Ensure that there is only one port associated with each port name. Then reexecute *set_port_configuration*.

---

## UIT-595

(error) The read control pattern is not paired (port value)

### Description

You receive this message if you issue the *set_port_configuration* command with the *-read* option, and a *signal_value_pin_pairs* argument to *-read* does not contain two values. Each *-read* argument must be a pair that includes both a signal value and the name of the input pin associated with that value. One of those values is missing.

### What Next

Examine your execution of *set_port_configuration* for an unpaired pin name or signal value. Reexecute *set_port_configuration -read* and ensure that all arguments to *-read* are signal_value/pin_name pairs.

---

## UIT-596

(error) port %s not found on %s

Feedback

**Description**

You receive this message if you issue *set_port_configuration* and the *port_name* cannot be found on the specified object. This could be caused by a spelling error or typo.

**What Next**

Verify that the port exists on the object, and verify the correct spelling. Then reexecute *set_port_configuration*.

---

## UIT-597

(error) Illegal value %s speicified in the read control for port %s

**Description**

You receive this message if you issue the *set_port_configuration* command with the *-read* option and specify an illegal value for the *signal_value* part of the *signal_value_pin_pairs* argument pair. *signal_value* can have values of only 0 or 1.

**What Next**

Reexecute *set_port_configuration -read* with a valid value for *signal_value*.

---

## UIT-598

(error) Illegal direction for port %s

**Description**

You receive this message if you issue the *set_port_configuration* command with the *-read* option and specify a non-input port as the control port of the *signal_value_pin_pairs* argument. You can specify only input ports.

**What Next**

Reexecute *set_port_configuration -read* using the name of an input port as the control port for the *signal_value_pin_pairs* argument.

---

## UIT-599

(error) port %s has already been specified in the read control pattern

**Description**

You receive this message if you issue the *set_port_configuration* command with the *-read* option and the specified port name appears more than once in the list of *signal_value_pin_pairs*. Each port name can be used only once.

Feedback

**What Next**

Reexecute *set_port_configuration -read* without duplicating any port names in the *signal_value_pin_pairs* arguments.

---

## UIT-600

(error) %s, %s specification conflicts with previous value specified on %s

**Description**

You receive this message if you issue the *set_port_configuration* command with the *-read* option and a signal value assigned to a pin as one of the *signal_value_pin_pairs* conflicts with the value already assigned to that pin through a previous execution of *set_port_configuration*. Each pin can have only one value assigned to it.

**What Next**

Remove the ealier specification using remove_port_configuration command if the previous specification was incorrect and then issue both correct set_port_configuration commands. If the current specification is wrong then reissue only the current command with correct specification.

---

## UIT-601

(error) cound not find object named %s

**Description**

You receive this message if you issue *set_port_configuration* or *remove_port_configuration* and the specified object cannot be found in the design. This could be caused by the wrong current design setting, or by a spelling error or typo.

**What Next**

Verify that the current design is set as intended. Verify that the object exists in the design, and verify the correct spelling. Then reexecute the command.

---

## UIT-602

(error) %s is an output port. It can't have an write control.

**Description**

You receive this message if you issue the *set_port_configuration* command with the *-write* option and specify an output port as a control port for the *signal_value_pin_pairs* argument. You can specify only input ports as control ports.

Feedback

### What Next

Reexecute *set_port_configuration -write* using the name of an input port as part of the *signal_value_pin_pairs* argument.

---

## UIT-603

(error) The read control pattern is missing or empty

### Description

You receive this message if you issue the *set_port_configuration* command with the *-tristate* option and do not specify a read control using the *-read* option. A tristate port must have a read control.

### What Next

Reexecute *set_port_configuration* and use the *-read* option to specify a read control for the tristate port.

---

## UIT-604

(error) The current design does not exist

### Description

You receive this message if you issue the *set_port_configuration* command and the specified current design cannot be found in memory. This could be caused by a spelling error or typo.

### What Next

Verify that the current design exists in memory, and verify the correct spelling. If necessary, load the design into memory or respecify using *current_design*. Then reexecute *set_port_configuration*.

### See Also

- current_design

---

## UIT-605

(error) The direction of port %s is missing

### Description

You receive this message if you issue the *set_wrapper_element* command and do not supply a direction for the specified port. Each port must have a specified direction.

Feedback

### What Next

Check the model for the cell, and find out the port direction. Then reexecute *set_wrapper_element* and specify the direction of the port.

---

## UIT-606

(error) The port configuration information is missing for %s

### Description

You receive this message if you issue *set_wrapper_element* and the specified port does not have port configuration information. Each port must either be modeled using Library Compiler's memory syntax, or the port interface must be described using *set_port_configuration* for each output or bidirectional port.

### What Next

Either modify the module description in the library or provide the interface information using the *set_port_configuration* command. Then reexecute *set_wrapper_element*.

---

## UIT-607

(error) No objects specified in the command

### Description

You receive this message if you issue *set_wrapper_element* and do not specify an object. You must specify at least one object.

### What Next

Reexecute *set_wrapper_element* and specify at least one object.

---

## UIT-608

Wrapper attribute not found on %s

### Description

You receive this message if you issue the *remove_wrapper_element* command and the *wrapper_element* attribute was not found on the specified object. You can remove the *wrapper_element* attribute from an object only if the attribute has been set on that object using the *set_wrapper_element* command.

You might not have been aware that the specified object did not have the attribute; or you might have inadvertently specified the wrong object when you executed the *remove_wrapper_element* command.

Feedback

**What Next**

Determine whether the object specified in this warning message is the object from which you intended to remove the *wrapper_element* attribute. If necessary, reexecute the *remove_wrapper_element* command and specify only objects on which the *wrapper_element* attribute has been set.

---

## UIT-609

(error) %s is an output port; can't have a write control

**Description**

You receive this message if you issue the *set_port_configuration* command with the *-write* option and specify an output port as part of the *signal_value_pin_list* argument. Only input ports can have write control.

**What Next**

Verify the correct spelling of the input ports you want to use as control ports. Then reexecute *set_port_configuration* and specify only input ports as part of the *-write signal_value_pin_list* argument.

---

## UIT-610

(error) Illegal object type. Need reference or design

**Description**

Only reference of design can be specified in the command. You receive this message if you issue *set_port_configuration* or *remove_port_configuration* with an illegal object type as part of the *cell_design_ref_list* argument. Objects can be only cells, designs, or references.

**What Next**

Reexecute the command and specify only cells, designs, or references for the *cell_design_ref_list* argument.

---

## UIT-611

(error) Black_boxes are not supported.

**Description**

Only modules with descriptions or empty boxes are supported by the command.

Feedback

**What Next**

create an empty box i.e. an interface description for the module in the design.

---

## UIT-612

(error) Port %s not found on %s

**Description**

Port specified in the command should be there on the cell specified for command to be successful.

**What Next**

check whether cell name and port name are correct.

---

## UIT-613

(error) Object %s not found in %s

**Description**

Object specified in the command has to be present under the current design.

**What Next**

Check whether the name of the object is correct and current design is specified correctly.

---

## UIT-614

(error) Wrapping a constant is not supported

**Description**

The module to be wrapped has to be a non-constant.

**What Next**

Check whether name of the object is correct.

---

## UIT-615

(warning) %s has already been specified for wrapping

**Description**

An Object can be specified for wrapping only once. You receive this message if you issue the *set_wrapper_element* command and the *wrapper_element* attribute is already set

Feedback

on the specified object. You can set the *wrapper_element* attribute only once on a given object.

You might not have been aware that the specified object already had the attribute, or you might have inadvertently specified the wrong object, when you executed the *set_wrapper_element* command.

**What Next**

Determine whether the object specified in this warning message is the object on which you intended to set the *wrapper_element* attribute. If necessary, reexecute the *set_wrapper_element* command and specify only objects on which the *wrapper_element* attribute has not already been set.

---

## UIT-616

(warning) %s has already been wrapped

**Description**

An object can be wrapped only once.

**What Next**

Check whether the object name is correct.

---

## UIT-617

(warning) %s has already been specified as clock port for %s port

**Description**

Duplicate specification is detected.

**What Next**

Check the names of clock port and data port.

---

## UIT-618

(error) '%d' is not a valid value for %s option of the dft_drc command.

**Description**

You receive this message when you have assigned an invalid value to the *-max_detail_lines* option for the *dft_drc* command. The value must be greater than or equal to 0.

This message is only issued in the RTL test DRC flow.

Feedback

**What Next**

Reexecute the *dft_drc* command using a valid value.

---

## UIT-619

(error) '%s' is not a valid disabling option for a tristate net.

**Description**

You receive this message if you issue *set_scan_configuration* or *set_scan_tristate* with an invalid value for the scan shift tristate disabling option for internal or external tristate nets. Valid values for the tristate disabling option in scan shift are *enable_one*, *disable_all*, or *no_disabling*.

**What Next**

Reissue the *set_scan_tristate* or *set_scan_configuration* command and specify a valid scan shift disabling option for tristate nets in the design.

---

## UIT-620

(information) Writing the disable option for the tristate net '%s'.

**Description**

You receive this message to inform you that the *set_scan_tristate* command is writing to the persistent database the scan shift disabling option you specified for this tristate net.

**What Next**

This is an informational message only. No action is required on your part.

---

## UIT-621

(warning) Overwriting the disable option for the tristate net '%s'.

**Description**

You receive this message to inform you that there was already a scan shift disabling option set for this tristate net, and that setting is being overwritten by the scan shift disabling option you just specified using the *set_scan_tristate* command.

**What Next**

No action is required on your part.

Feedback

## UIT-622

(error) The '%s' object is a '%s'.

### Description

You receive this message if you issue the *set_scan_tristate* command and the *net_list* argument includes the name of an object that is not a net. You can specify only net names with the *set_scan_tristate* command.

### What Next

Reissue the *set_scan_tristate* command and specify a *net_list* argument that lists only net names.

## UIT-623

(error) '%s' is not a bidirectional port.

### Description

You receive this message if you issue the *set_scan_bidi* command and the *port_list* argument includes the name of an object that is not a bidirectional port. You can specify only bidirectional ports with the *set_scan_bidi* command.

### What Next

Reissue the *set_scan_bidi* command and specify a *port_list* argument that lists only bidirectional port names.

## UIT-624

(information) Writing the mode in scan shift for the bidirectional port '%s'.

### Description

You receive this message to inform you that the *set_scan_bidi* command is writing to the persistent database the scan shift mode you specified for this bidirectional port.

### What Next

This is an informational message only. No action is required on your part.

## UIT-625

(warning) Overwriting the mode in scan shift for the bidirectional port '%s'.

Feedback

**Description**

You receive this message to inform you that there was already a scan shift mode set for this bidirectional port, and that setting is being overwritten by the scan shift mode you just specified using the *set_scan_bidi* command.

**What Next**

No action is required on your part.

---

## UIT-626

(error) '%s' is not a valid disabling option for internal tristate nets.

**Description**

You receive this message if you issue *set_scan_configuration* with an invalid value of the scan shift tristate disabling option for internal tristate nets. Valid values are *disable_all*, *enable_one* (the default) or *no_disabling*.

**What Next**

Reissue the *set_scan_configuration* command and specify a valid scan shift tristate disabling option for internal tristate nets in the design.

---

## UIT-627

(error) '%s' is not a valid value for the -prtool option argument.

**Description**

You receive this message if you execute *set_scan_configuration* with an incorrect argument for the *-prtool* option. Currently allowed values are *cadence* and *avant*.

**What Next**

Reissue the *set_scan_configuration* command with one of the allowed values for the *-prtool* option argument.

---

## UIT-628

(warning) The design '%s' is not scan completed and cannot be represented with a test model.

**Description**

Only a scan completed design may be represented using a test model. You have specified a design that is not scan completed as a scan core.

Feedback

**What Next**

Make sure that your design is scan completed and re-issue the *set_scan_core* command.

---

## UIT-629

(Error) The scan path specification has been rejected.

**Description**

The error displayed by the tool caused the current scan path specification to be ignored. Please correct the error and enter the command again. Common mistakes associated with this error are:

- Scan path name not specified
- No elements specified for the current scan path
- Incorrect test mode name specified

**What Next**

Make sure that your specification is correct and re-issue the command.

---

## UIT-630

(error) Pin '%s' is not sticky.

**Description**

You receive this message if you issue the *set_rtl_load* command and specify a pin that is not sticky. A sticky pin is a pin or port that is guaranteed to be persistent throughout the early stages of optimization, so that annotated capacitance and resistance can "stick" to those pins and not be lost. You can perform *set_rtl_load* only on sticky pins, or on nets connected to sticky pins.

For a complete explanation of sticky pins, see the man page for the *set_rtl_load* command.

**What Next**

If you want to set an RTL load value on the specified pin, you must make it sticky; you can do so by using *set_dont_touch* or *set_size_only* on the pin. Then reissue the *set_rtl_load* command.

If you do not need to set an RTL load on the specified pin, remove it from the *pin_net_list* and reissue the *set_rtl_load* command.

Feedback

### See Also

- set_dont_touch
- set_size_only

---

## UIT-631

(error) Net '%s' has no sticky pins.

### Description

You receive this message if you issue the *set_rtl_load* command and specify a net that has no sticky pins. A sticky pin is a pin or port that is guaranteed to be persistent throughout the early stages of optimization, so that annotated capacitance and resistance can "stick" to those pins and not be lost. You can perform *set_rtl_load* only on sticky pins, or on nets connected to sticky pins.

For a complete explanation of sticky pins, see the man page for the *set_rtl_load* command.

### What Next

If you want to set an RTL load value on the specified net, you must make one or more pins of the net sticky. You can make pins sticky by using *set_dont_touch* or *set_size_only*; alternatively, you can make the net sticky by using *set_dont_touch* on the net. Then reissue the *set_rtl_load* command.

If you do not need to set an RTL load on the specified net, remove it from the *pin_net_list* and reissue the *set_rtl_load* command.

### See Also

- set_dont_touch
- set_size_only

---

## UIT-632

(error) You must specify at least a capacitance or resistance value.

### Description

You receive this message if you issue the *set_rtl_load* command and do not specify a capacitance or a resistance value on the pin or net. You must specify at least one; otherwise, the command has no effect. For more information, see the man page for the *set_rtl_load* command.

Feedback

### What Next

Reissue the *set_rtl_load* command and specify a capacitance or resistance value, or both, using the *-cap cvalue* or *-res rvalue* arguments.

---

## UIT-633

(error) You must specify a net or pin object or -all.

### Description

You receive this message if you issue the *remove_rtl_load* command and do not specify either *-all* or *pin_net_list*. You must specify one or more target objects on which the *remove_rtl_load* command is to operate.

### What Next

Reissue the *remove_rtl_load* command and specify either *-all* or *pin_net_list*.

---

## UIT-634

(error) You must specify either or both of the -capacitance and -delay options.

### Description

You receive this message if you issue the *calculate_rtl_load* command without either the *-capacitance* or *-delay* option. At least one of these options is required, and you can specify both.

### What Next

Reissue the *calculate_rtl_load* command and specify at least one of the *-capacitance* and *-delay* options.

---

## UIT-635

(error) Net '%s' must have a set_load value.

### Description

You receive this message if you issue *calculate_rtl_load -capacitance* and the specified net does not have a *set_load* value on it. In order for the *-capacitance* option to be processed, you must have previously placed a *set_load* value on the specified net, or on the net that is connected to the specified pin.

Feedback

### What Next

Set a load on the specified net using *set_load*. Then reissue the *calculate_rtl_load* command.

### See Also

- set_load

---

## UIT-636

(Error) The scan path removal specification has been rejected.

### Description

The error displayed by the tool caused the current scan path removal specification to be ignored. Please correct the error and enter the command again. Common mistakes associated with this error are:

- Scan path name not specified
- No elements specified for the current scan path
- Incorrect test mode name specified

### What Next

Make sure that your specification is correct and re-issue the command.

---

## UIT-650

(warning) A set_test_point_element command has already been specified for the pin %s and for the type %s.\n \tThe previous set_test_point specification will be deleted and replaced with the current one.

### Description

You have used set_test_point_element to set a new test point on pin %s \n \tA user-defined test point specification already exists on that pin. This is a warning message \n \tThe previous user-defined test point specification will be deleted.

### What Next

If you do not want to remove a test point which already exists on the specified pin, do not specify this pin with the set_test_point_element command.

Feedback

## UIT-651

(Information) The previous user-defined test point specification in location %s of type %s \n \tis being deleted.

### Description

This is an information message. The previous user-defined test point specification in location %s of type %s \n \tis being deleted.

### What Next

You can specify another test point location with the set_test_point_element command.

## UIT-652

(warning) Cell %s has a dont_touch attribute. \n \tThe asynchronous violation associated with it will not be autofixed.

### Description

You receive this warning message because the asynchronous violation associated with cell %s will not be autofixed because of a *dont_touch* attribute on this cell.

### What Next

If you are satisfied with this result, no action is required on your part. If you want the asynchronous violation associated with the specified cell to be autofixed, remove the *dont_touch* attribute from the specified cell and rerun autofix.

## UIT-653

(warning) Cell %s has a dont_touch attribute. \n \tThe clock violation associated with it will not be autofixed.

### Description

You receive this warning message because the clock violation associated with cell %s will not be \n autofixed because of a *dont_touch* attribute on this cell.

### What Next

If you are satisfied with this result, no action is required on your part. If you want the clock violation associated with the specified cell to be autofixed, remove the *dont_touch* attribute from the specified cell.

Feedback

## UIT-654

(information) There are %d other cells with the same violation.

### Description

This message summarizes the total number of violations identified in UIT-652 and UIT-653.

### What Next

This is an informational message. No action is required on your part. For more information, see the man page for UIT-652 and UIT-653.

## UIT-655

(warning) Scan style '%s' does not add lockup latches to the scan chain.\n \t Ignoring the set_scan_configuration -insert_end_of_chain_lockup_latch command.

### Description

This warning message tells you that you have asked DFT Compiler to add lockup latches to the scan chain but have specified a scan style that is not multiplexed_flip_flop. The compiler is ignoring the *-insert_end_of_chain_lockup_latch* option. Only the multiplexed_flip_flop scan style adds lockup latches to the scan chain.

### What Next

To avoid receiving this warning message, remove *-insert_end_of_chain_lockup_latch true* from the *set_scan_configuration* option list, or set the scan style to multiplexed_flip_flop.

## UIT-656

(warning) port '%s' is the wrong direction to be a %s.

### Description

This warning message informs you that you tried to set the access point for a register port to something that is inconsistent with its direction. The *set_bsd_register* command lets you specify access points for a user-defined register using boundary scan signal semantics. Ports with signal type "tdo" must be associated with output ports. Ports with all other signal types should not be associated with output ports or tristate ports.

### What Next

Issue the *set_bsd_register* command and specify a valid access port or signal type.

Feedback

## UIT-657

(error) Register port list has multiple signal types for hookup point '%s'.

### Description

This error message informs that you tried to associate more than one signal type with a port. The *set_bsd_register* command lets you specify ports for user-defined registers using boundary-scan signal semantics. However, you can associate only one signal type with each port.

### What Next

Use the *set_bsd_register* command and specify only one signal type per port.

## UIT-658

(warning) Port specification is not paired. Last specification is incomplete and is discarded.

### Description

This warning message informs you that you specified an incomplete port with the *set_bsd_register* command. The *set_bsd_register* command lets you specify ports for user-defined registers using boundary-scan signal semantics. Specified ports must be pairs, and each pair must include a signal type and a design port or pin. Incomplete pairs cannot be used to specify ports and are discarded.

### What Next

To avoid receiving this warning message, remove the last object from the argument list.

## UIT-659

(error) Port type '%s' is repeated.

### Description

This error message informs you that multiple ports have been specified for the same signal type in the access list. The *set_bsd_register* command lets you specify ports for user-defined registers using boundary-scan signal semantics. Port signal types "tdi" and "tdo" can be specified multiple times only for register named as *STT_REG*. For all other registers signal types "tdi" and "tdo" can be specified only once. All other signal types can always be repeated.

Feedback

### What Next

Run the *set_bsd_register* command and specify only one "tdi" and one "tdo" port if the register is not *STT_REG*. If you want to specify a scan-through-tap register use the reserved name *STT_REG* for the register and reissue the command.

---

## UIT-660

(error) Access point specification is missing signal type '%s'.

### Description

The *set_bsd_register* command lets you specify access points for a user-defined register with boundary-scan signal semantics. This error is generated because the register cannot be wired correctly without a signal of the designated type.

### What Next

Rerun the *set_bsd_register* command and include ports for the required signal type using the *-access* option.

---

## UIT-661

(Error) Missing ports for user-defined BSR or TAP elements.

### Description

This error is generated because some of the required access ports for the BSR and TAP elements are missing from the specification. The *set_bsd_bsr_element* or *set_bsd_tap_element* command lets you specify user-defined BSR or TAP elements.

### What Next

Rerun one of the commands and specify all required access ports using the *-access* option. For a list of required access ports, see the man page for the *set_bsd_bsr_element* or *set_bsd_tap_element* commands.

If you are getting this error on set_bsd_tap_element, it might be due to the reason that you are using an old custom tap imlementation and signal type 'instructions' is missing in the access list. In this case you might want to set the variable 'bsd_use_old_tap' to true and rerun the command.

---

## UIT-662

(error) Mismatched signal types 'tdi' and 'tdo'.

Feedback

**Description**

The *set_bsd_register* command lets you specify access points 'tdi' and 'tdo' multiple times for the scan-through-tap register *STT_REG*. This error is generated either because access points 'tdi' and 'tdo' do not match in number or because they are not specified in alternate order.

**What Next**

Correct the access points 'tdi' and 'tdo' specified in the *-access* option and rerun the *set_bsd_register* command.

---

## UIT-663

(error) Multiple signal types cannot be specified for hookup port '%s'.

**Description**

This error message informs that you tried to associate more than one signal type with a hookup port. The *set_dft_signal* command lets you specify hookup ports for diffrent types. However, you can associate only one signal type with each port.

**What Next**

Use the *set_dft_signal* command and specify only one signal type per hookup port.

---

## UIT-664

(error) -bsd_style can only be specified with -view spec.

**Description**

You receive this error message when you execute the *set_scan_path* command with view existing_dft and -bsd_style options. The -bsd_style option can not be specified with view existing_dft.

**What Next**

Fix the error and reexecute the command.

---

## UIT-665

(error) -bsd_style can only be specified for user defined test data registers.

Feedback

### Description

You receive this error message when you execute the *set_scan_path* command with -bsd_style option for Boundary or Short BSR Chains. -bsd_style can be specified for User Defined Test Data Registers only.

### What Next

Use -bsd_style for User Defined Test Data Registers only.

---

## UIT-666

(warning) Scan-in and scan-out ports for compression mode %s should be specified only in the base mode.

### Description

This warning message occurs when scan-in and scan-out ports are specified in the compression mode.

The compression mode specifications are specifically used to guide the tool to build scan chains outside compressor/decompressor in the compression mode. These chains can be specified in the compression mode by using the *set_scan_path command* and assigning the flops to be routed between the external scan-in and scan-out ports.

If you do not intend to build any chains outside compressor/decompressor, specify scan-in and scan-out specifications only in the all_dft mode or the base scan mode.

For example, the following commands instruct the tool to build scan chains outside compressor/decompressor in compression mode:

```
set_dft_signal -type ScanDataIn -port my_si \\
  -view spec -test_mode ScanCompression_mode

set_dft_signal -type ScanDataOut -port my_so \\
  -view spec -test_mode ScanCompression_mode

set_scan_path my_ext_chain -view spec -scan_data_in my_si \\
  -scan_data_out my_so -include_elements {Flop1 Flop2 Flop3} \\
  -complete true -test_mode ScanCompression_mode
```

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended, use the commands shown above for correct specifications, or remove the scan-in and scan-out specifications from the compression mode and specify them in the all_dft or the base scan mode.

Feedback

## UIT-667

(error) Pin name '%s' specified more than once.

**Description**

This message informs you that you ran the *define_dft_design* command with an access list that specifies a pin name more than once.

**What Next**

Rerun the *define_dft_design* command with a valid access list.

## UIT-668

(error) Signal type '%s' specified more than once.

**Description**

This message informs you that you ran the *define_dft_design* command with an access list that specifies any of the following signal types more than once: data_in, data_out or enable.

**What Next**

Rerun the *define_dft_design* command after making sure that the signal types viz. data_in, data_out and enable are specified only once.

## UIT-669

(error) Polarity high(H) specified more than once for signal type '%s'.

**Description**

This message informs you that you ran the *define_dft_design* command with an access list that specifies polarity "high" more than once for any of the following signal types: data_in, data_out and port.

**What Next**

Rerun the *define_dft_design* command after making sure that the polarity "high" is specified exactly once if the signal type is data_in, data_out or port.

## UIT-670

(error) Polarity low(L) specified more than once for signal type '%s'.

Feedback

### Description

This message informs you that you ran the *define_dft_design* command with an access list that specifies polarity "low" more than once for any of the following signal types: data_in, data_out and port.

### What Next

Rerun the *define_dft_design* command after making sure that the polarity "low" is specified exactly once if the signal type is data_in, data_out or port.

---

## UIT-671

(warning) Signal type '%s' should not be specified for 'hybrid' PAD. Ignored the specification.

### Description

This message informs you that you ran the *define_dft_design* command for a hybrid PAD with an interface list that specifies any of the following signal types: port, data_in, data_out, or enable. These signal types are not used for a hybrid PAD. For a hybrid PAD this information is collected from the *$bsr_segment$* specification of the *-params* option of the *define_dft_design* command.

### What Next

This is only a warning message. No action is required.

However, if the result is not what you intended you can make sure that the port, data_in, data_out, and enable signal types are not specified for the hybrid PAD, and then run the *define_dft_design* command again.

---

## UIT-700

(warning) Invalid scan state.

### Description

This warning message informs you that you have specified an invalid scan state with the *set_scan_state* command.

### What Next

Rerun the *set_scan_state* command and specify a valid scan state.

Feedback

## UIT-701

(error) Incorrect value of -power_saving_on option argument. Allowed values are true, TRUE; or false, FALSE.

### Description

You receive this message if you execute *set_testability_configuration* with an incorrect argument for the *-power_saving_on* option. Allowed values of the *-power_saving_on* option are *true, TRUE; or false, FALSE.*

### What Next

Re-issue the command with one of the allowed values for the *-power_saving_on* option argument.

## UIT-702

(warning) '%s' is not an external port and cannot be used to specify a port.

### Description

This warning informs you that you used an object other than an external port to specify a port. The *set_test_hold* command allows only external ports to specify ports. Other kinds of objects cannot be used to specify ports and are rejected.

### What Next

Remove the offending object from the argument list. Use hierarchical instance names, with respect to the top-level design, to locate external ports. Then, rerun the command with a valid external port.

## UIT-703

(warning) The test point '%s' is not inserted, because the instance location '%s' does not exist due to insert_dft optimization.

### Description

You receive this warning message if you execute *insert_dft* after the *set_test_point_element* command. The set_test_point_element command allows design objects to specify pin instances on which test points need to be inserted. Some test points might be rejected if their corresponding pin instances do not exist after the optimization.

### What Next

If the test point is required then use the *set_dont_touch* command to prevent the cell from being modified or replaced during optimization. Another way consists

Feedback

in using *insert_dft* with optimization switched off. Use *-dont_fix_constraints* and *-ignore_compile_design_rules* options to switch off optimization.

**NAME**

*UIT-703* (warning) The test point '%s' is not inserted because the instance location '%s' does not exist due to insert_dft optimization.

**Description**

This messages informs you that the specified test point is rejected because corresponding pin instances do not exist after optimization. You receive this warning message if you use the *insert_dft* command after the *set_test_point_element* command. The *set_test_point_element* command allows design objects to specify pin instances on which test points must be inserted.

**What Next**

Use the *set_dont_touch* command to prevent the cell from being modified or replaced during optimization; or, use *insert_dft* with optimization switched off. Use the *-dont_fix_constraints* and *-ignore_compile_design_rules* options with the *insert_dft* command to switch off optimization.

**See Also**

- set_dont_touch

---

## UIT-704

(warning) Cell '%s' has a dont_touch attribute. \n \tThe violation(s) associated with it will not be autofixed.

**Description**

This message informs you that the *dont_touch* attribute exists on the specified cell and prevents violations associated with this cell from being autofixed. You receive this warning message when you use the *preview_dft* command. The full list of instances with the *dont_touch* attribute is reported using the *preview_dft -verbose* command. Without the *-verbose* switch, the *preview_dft* command reports the first violation and the total number occurrences of the *dont_touch* attribute.

**What Next**

If you are satisfied with this result, no action is required on your part. If you want the violation(s) associated with the specified cell to be autofixed, remove the *dont_touch* attribute from the specified cell and rerun AutoFix.

Feedback

## UIT-705

(information) There are %d other cells with the same violation.

### Description

This message summarizes the total number of violations identified in UIT-704. Specifically, this message reports the first violation and the total number of occurrences of the *dont_touch* attribute in the design.

### What Next

This is an informational message. No action is required on your part. For more information, see the man page for UIT-704.

### See Also

- UIT-704

## UIT-706

(information) The port %s is used as a test mode signal to AutoFix asynchronous sets and resets and as a test scan enable signal.

### Description

This message informs you that the port %s is shared between the test mode signal and the test scan enable signal to Autofix asynchronous sets and resets. You have used the *set_autofix_configuration* command with the *-fix_async_with_se true* option to use the test scan enable signal to Autofix asynchronous sets and resets.

### What Next

This is an informational message only. No action is required on your part.

## UIT-707

(error) Incorrect value for -fix_async_with_scan_en option argument. Allowed values are true, TRUE, on, and ON; or false, FALSE, off, and OFF.

### Description

This error message informs you that you used the *set_autofix_configuration* command with an invalid argument for the *-fix_async_with_scan_en* option. Allowed values for the *-fix_async_with_scan_en* option argument are true, TRUE, on, and ON; or false, FALSE, off, and OFF.

Feedback

### What Next

Use the *set_autofix_configuration* command with the *-fix_async_with_scan_en* option and specify one of the allowed values as the argument.

---

## UIT-708

(Warning) Overwriting the async port specification '%s' to autofix the cell/instance '%s'.

### Description

You can use the *set_autofix_async* command to put a specific async port to autofix a cell/instance. This warning message is produced if you try to perform *set_autofix_async* on a cell/instance that already has a specified async port.

### What Next

No further action is necessary.

---

## UIT-709

(information) One asynchronous pin of the cell %s has already been AutoFixed. As a consequence, another handler %s will be used to AutoFix the second asynchronous pin %s.

### Description

You receive this information message because one of the asynchronous signals of the cell has been AutoFixed. The same handler cannot be used to AutoFix the asynchronous pins of the same register. Therefore, two different handlers will be used to AutoFix the two asynchronous pins of the same register.

### What Next

Use the *set_dft_signal* command to specify an additional test data port to be available to AutoFix to fix asynchronous signals.

---

## UIT-710

(error) Invalid cell type for core wrapper insertion.

### Description

You receive this message if you issue the *set_core_wrapper_design* command and specify an invalid value for the wrapper cell type. Valid values of wrapper cell types are listed in the man page and the online help for the *set_core_wrapper_design* command. The

Feedback

*insert_dft* command uses the specified wrapper cell type when synthesizing wrapper into the design.

**What Next**

Refer to the man page or the online help for the *set_core_wrapper_design* command to determine the current valid wrapper cell types, and reissue the *set_core_wrapper_design* command with a valid wrapper cell type.

---

## UIT-711

(error) Cannot find the specified design in memory.

**Description**

You receive this message if you execute the *set_core_wrapper_design* command and the name you specify for the *design_name* argument cannot be found in memory. This could be caused by a typo or spelling error. The *insert_dft* command uses the specified design as a wrapper cell design when synthesizing wrapper into the design.

**What Next**

Verify that the design you want to use does exist in memory, and verify its spelling. Then re-execute the appropriate command using the correct design name.

---

## UIT-712

(error) Invalid port type '%s' specified for user-defined wrapper cell design.

**Description**

You receive this message if you issue the *set_core_wrapper_design* command and specify an invalid port type. Valid port types are found in the man page or online help for the above command. The *insert_dft* command uses the user-defined wrapper cell design when synthesizing wrapper into the design.

**What Next**

Refer to the man pages or the online help for the *set_core_wrapper_design*, command to determine the current valid wrapper cell design port types, respectively. Then reissue the appropriate command with a valid port type.

---

## UIT-713

(Error) Missing ports for user-defined wrapper cell design : %s.

Feedback

**Description**

This error is generated because some of the required access ports for the wrapper cell design are missing from the specification. The *set_core_wrapper_design* command lets you specify user-defined wrapper cell design.

**What Next**

Rerun one of the commands and specify all required access ports using the *-access* option. For a list of required access ports, see the man page for the *set_core_wrapper_design* command.

---

## UIT-714

(error) Cannot find the specified port '%s' in the design.

**Description**

You receive this message if you execute the *set_core_wrapper_design* command and a port you specify cannot be found in the design. This could be caused by a typo or spelling error. The *insert_dft* command uses the specified wrapper cell type when synthesizing wrapper into the design.

**What Next**

Verify the name of the port. Then reissue the appropriate command using the correct port name for the design or instance.

---

## UIT-715

(error) Scan chain '%s' exists in another mode.

**Description**

DFT Compiler does not allow same scan chains to be specified using multiple *set_scan_path* commands. This warning tells you that an earlier specification for the same scan chain exists for another mode. Scan chain names should be unique for the whole design.

**What Next**

Establish whether you want the specification to be overwritten. If not, combine the two specifications into one *set_scan_path* command for the same mode.

---

## UIT-717

(error) The option test_use_test_models is not supported by write_layout_scan.

Feedback

**Description**

You receive this message if you set the env variable *test_use_test_models* to TRUE before the command write_layout_scan. This flow is not supported for write_layout_scan.

**What Next**

Reset the env variable *test_use_tes_models* before the command *write_layout_scan*

---

## UIT-718

(error) The -power_saving_on option is only available when the -method option has the tdvr argument.

**Description**

You receive this message if you execute *set_testability_configuration* with the *-power_saving_on* option and without tdvr as an argument for the *-method* option.

**What Next**

Re-issue the command with tdvr for the *-method* option argument or re-issue the command without the fB-power_saving_on *option.*

---

## UIT-719

(Error) The type %s is not a valid type for the set_test_point_element command.

**Description**

This message indicates that a set_test_point_element command has been issued, but the type is not a valid type for the command.

**What Next**

Check the valid types in the manpage of the set_test_point_element, modify the type and re-issue the command.

---

## UIT-720

(Error) The parameter for the %s option has to be enable or disable.

**Description**

This message indicates that a set_test_point_element command has been issued, but the parameter for the option is not a valid one. The valid parameters are enable or disable.

Feedback

### What Next

Change the parameter for the option and re-issue the command.

---

## UIT-721

(Error) Port %s is not a test mode.

### Description

The port %s is not a test mode. Use *set_dft_signal* to create a test mode associated with port %s.

### What Next

After the dft signal specification, re-issue the command.

---

## UIT-722

(Warning) The -scan_test_point_enable option is ignored for the type %s.

### Description

This message indicates that a set_test_point_element command has been issued, but the -scan_test_point_enable option is not an option that can be specified for the type and the option is ignored. The -scan_test_point_enable option is a valid option for the control types.

### What Next

Remove the -scan_test_point_enable option.

---

## UIT-723

(Warning) The -test_points_per_test_point_enable option is ignored for the type %s.

### Description

This message indicates that a set_test_point_element command has been issued, but the -test_points_per_test_point_enable option is not an option that can be specified for the type and the option is ignored. The -test_points_per_test_point_enable option is a valid option for the control types.

### What Next

Remove the -test_points_per_test_point_enable option.

Feedback

## UIT-724

(Warning) The -test_point_enable option is ignored for the type %s.

**Description**

This message indicates that a set_test_point_element command has been issued, but the -test_point_enable option is not an option that can be specified for the type and the option is ignored. The -test_point_enable option is a valid option for the control types.

**What Next**

Remove the -test_point_enable option.

## UIT-725

(Error) The port or the pin %s does not have the correct direction.

**Description**

This message indicates that a set_test_point_element command has been issued, but the port or the pin does not have the correct direction according to the option in which the port or the pin has been specified.

**What Next**

Specify another port or another pin with the correct direction and re-issue the command.

## UIT-726

(Error) The pin %s does not have the correct direction for a test point location.

**Description**

This message indicates that a set_test_point_element command has been issued, but a pin from the list does not have the correct direction. A test point location has to be an output pin.

**What Next**

Specify another pin with the correct direction for the test point location and re-issue the command.

## UIT-727

(Error) The port %s cannot be specified for a test point location.

Feedback

**Description**

This message indicates that a set_test_point_element command has been issued, but a port cannot be the location of a test point. A test point location has to be an output internal pin.

**What Next**

Specify an internal output pin and re-issue the command.

---

## UIT-728

(warning) Cell '%s' has no function specification. \n \tThe asynchronous pin violation(s) associated with it will not be autofixed.

**Description**

This message informs you that the specified cell has no function specification and this prevents the asynchronous pin violations associated with this cell from being autofixed. You receive this warning message when you use the *preview_dft* and *insert_dft* commands.

**What Next**

If you are satisfied with this result, no action is required on your part. If you want the violation(s) associated with the specified cell to be autofixed, provide the library for the cell; the test_simulation_library does not provide enough information to autofix the asynchronous pins of the specified cell.

---

## UIT-730

(Error) Unsupported client '%s' for RTL Insertion.

**Description**

This message informs you that RTL insertion is incompatible with any other DFT clients.

**What Next**

Remove DFT clients from set_dft_configuaration and insert_dft UI commands.

---

## UIT-731

(Error) Unrecognized HDL format '%s'.

Feedback

### Description

This message informs you that the specified HDL format for RTL insertion is not valid. Only 'verilog' and 'VHDL' are valid values.

### What Next

Change the HDL format to 'verilog' or 'VHDL'.

---

## UIT-732

(error) '%s' is not a directory.

### Description

You have specified an invalid directory; or, the directory or one or more of its parents are read or search protected.

### What Next

Check your project file to ensure that variables specifying directories are correctly set.

Change your permissions to enable reading and searching of the appropriate directory and all of its parents. For example,

```
chmod a+rx <dir_name>
```

---

## UIT-733

(error) Cannot perform RTL insertion because the variable hdlin_enable_rtldrc_info is set to FALSE

### Description

The variable hdlin_enable_rtldrc_info must be set to TRUE to perform RTL insertion. FALSE is the hdlin_enable_rtldrc_info variable default value.

This message is only issued in the RTL test DRC flow.

### What Next

Set the variable hdlin_enable_rtldrc_info to TRUE For example,

```
set hdlin_enable_rtldrc_info TRUE
```

Feedback

## UIT-770

(Warning) The option -identify_shift_register will be ignored in 2007.03 SP4. Shift register identification will be moved fully to DC Ultra in Z2007.03 SP4.

### Description

This options is ignored in 2007.03 release. Added back in 2007.03 SP1. This option will again be ignored from 2007.03 SP4. The functionality is incorporated into *compile_ultra -scan*. The variable compile_seqmap_identify_shift_registers can be used to enable/disable the identification in compile_ultra -scan

### What Next

Execute *compile_ultra -scan*

## UIT-800

(warning) Bad value for the number of test points per observe flop option. Eight test points per observe flop will be considered during test point insertion.

### Description

In order to provide balanced xor tree, the only accepted values for *-test_points_per_observe_flop* option are 1, 2, 4 and 8. If a different value is set, then the default value (8) will be considered.

### What Next

Set number of test points per observe clock with a correct value.

## UIT-801

(warning) No observe test point will be inserted.

### Description

This warning message appears when *-max_observe_points* and/or *-max_observe_logic_area* are set to zero. In this case, no observe test point will be inserted in the design.

### What Next

Set *-observe_points_per_scan_cell* and/or *-max_observe_logic_area* options with the correct value.

Feedback

## UIT-802

(Error) Unable to read the TRC file %s given.

**Description**

This is issued from the command *read_trc_file* . The command is not able to read the file specified due to errors given before.

**What Next**

Check the file syntax as well is as per the standard supported.

## UIT-803

(information) reverting value of environment variable '%s' to its default value '%s'.

**Description**

DFT Compiler validates the values of environment variables it uses. You see this message when an environment variable value is invalid. DFT Compiler supplies a default.

**What Next**

Confirm that the environment variable is invalid. Modify the environment variable value to remove the warning.

## UIT-804

(Warning) '%s' is not a valid scan style.

**Description**

DFT Compiler validates the values of environment variables it uses. You see this message when an environment variable that needs to specify a scan style specifies an invalid one. DFT Compiler will use a default scan style.

**What Next**

Confirm that the environment variable is invalid. Modify the environment variable value to remove the warning.

## UIT-805

(Warning) '%s' is not 'true' or 'false'.

Feedback

**Description**

DFT Compiler validates the values of environment variables it uses. You see this message when an environment variable that needs to specify either 'true' or 'false' specifies something else. DFT Compiler will use a default value.

**What Next**

Confirm that the environment variable is invalid. Modify the environment variable value to remove the warning.

---

## UIT-806

(warning) Cannot associate a '%s' signal with chain '%s'.

**Description**

DFT Compiler uses one scan enable signal to enable scan mode. This message warns that you used the *set_dft_signal* command to associate a scan enable with a specific scan chain. Because the scan enable is associated with all scan chains, the specific association is ignored.

**What Next**

Remove the association to suppress the warning.

---

## UIT-807

(information) reverting value of environment variable '%d' to its default value '%d'.

**Description**

DFT Compiler validates the values of environment variables it uses. You see this message when an environment variable value is invalid. DFT Compiler supplies a default.

**What Next**

Confirm that the environment variable is invalid. Modify the environment variable value to remove the warning.

---

## UIT-808

(Warning) '%s' does not include the substring '%%s'.

Feedback

**Description**

DFT Compiler validates the values of environment variables it uses. You see this message when an environment variable that needs include the substring "%s" does not. DFT Compiler will use a default value.

**What Next**

Confirm that the environment variable is invalid. Modify the environment variable value to remove the warning.

---

## UIT-809

(warning) Hookup sense value '%s' conflicts with the old value '%s'.

**Description**

DFT Compiler only associates exactly one hookup sense between a design port and an internal hookup pin. This message warns that you have used the *set_dft_signal* command to associate a second hookup sense, and that the second specification has overwritten the first.

**What Next**

Check that you do want to overwrite the specification. Repeat the correct specification if the overwrite was mistaken.

---

## UIT-810

(error) Argument -memory_cells should be specified for a single controller.

**Description**

This error occurs because you used the *set_mbist_controller* command to assign a list of memory cells to two or more controllers.

**What Next**

Run the *set_mbist_controller* command spcifying one controller with -controller_names and a list of memory cells using -memory_cells.

---

## UIT-811

(error) Memory '%s' has already been assigned to a controller. Cannot change notouch value to TRUE.

Feedback

### Description

This error occurs because you either used the *set_mbist_controller* command to assign a memory cell, which has already been assigned to a controller, to a new controller or you used *set_mbist_element* command to set notouch value to TRUE for that memory cell.

### What Next

Run the *remove_mbist_configuration* command to remove the current MBIST configuration. Assign the memory cell to the new controller using *set_mbist_controller* command spcifying one controller with -controller_names and the memory cell using -memory_cells.

---

## UIT-812

(error) -notouch and -ip_parameters are mutually exclusive.

### Description

This error occurs because you used the *set_mbist_element* command to simultaneously set the -notouch value and assign the -ip_parameters for the memory cells.

### What Next

Run the *set_mbist_element* command with either -notouch or the -ip_parameter switch.

---

## UIT-813

(error) Odd number of items in the -ip_parameters list.

### Description

This error occurs because you used the *set_mbist_element* or *set_mbist_controller* command to pass odd number of items in the -ip_parameters list.

### What Next

Run the *set_mbist_element* or *set_mbist_controller* command with even number of items in the -ip_parameter list.

---

## UIT-814

(error) -notouch value can be either TRUE or FALSE.

### Description

This error occurs because you used the *set_mbist_element* command to set -notouch to a value other than TRUE or FALSE.

Feedback

**What Next**

Run the *set_mbist_element* command with -notouch value as TRUE or FALSE

---

## UIT-815

(error) Memory '%s' has notouch value set to TRUE and cannot be assigned ip parameters or to a controller .

**Description**

This error occurs because you either used the *set_mbist_controller* command to assign a memory cell, which has already been excluded from MBIST consideration, to controller or tried to assign ip parameters using /fBset_mbist_element/fP.

**What Next**

Run the *remove_mbist_configuration* command to remove the current MBIST configuration. Assign the memory cell to the new controller using *set_mbist_controller* command spcifying one controller with -controller_names and the memory cell using -memory_cells.

---

## UIT-816

(error) Invalid value for the -mbist parameter

**Description**

This error occurs because you specified an invalid value for the -mbist parameter.

**What Next**

See the list of available values

---

## UIT-817

(error) "%s" is not a valid command line option for set_mbist_run command.

**Description**

You receive this message because the parameter(s) name or value specified in the set_mbist_run command are not valid.

**What Next**

Please enter valid parameter name and values in the command line.

Feedback

## UIT-818

(error) Parameter "fail_limit" can be defined only for debug mode.

**Description**

You receive this message because the parameter "fail_limit" was specified for a test_mode other than debug mode.

**What Next**

Please change the test_mode to debug mode or remove the "fail_limit" parameter from the command line.

## UIT-819

(error) Memory instance %s does not exist in the top level model.

**Description**

You receive this message because either the memory instance is missing from the top model or the corresponding reference object is missing.

**What Next**

Please add the memory instance to the netlist. If the instance does not exist in the design, remove the instance name from the list of memories in the command line. If the memory instance is in the design, read the library cell or the design object corresponding to the reported memory instance in the dc_shell.

## UIT-820

(error) Odd number of items in the -parameters list.

**Description**

This error occurs because you used the *set_mbist_wrapper*, *set_mbist_controller* or *set_mbist_configuration* command to pass an odd number of items in the *-parameters* list.

**What Next**

Run the respective command with an even number of items in the -parameter list.

## UIT-821

(error) Controller '%s' has no memories assigned to it, and can not have -complete TRUE.

Feedback

**Description**

This error occurs because you used the *set_mbist_controller* command to set a controller as complete (no more memories can be assigned), but you never assigned any memories. This means you tried to specify a controller that controls nothing.

**What Next**

Try the same *set_mbist_controller* command again, while including some -memory_cells.

---

## UIT-822

(error) 'memory_cells' (alias 'target' in XG mode) parameter is required when view is set to SPEC

**Description**

This is issued from the command *set_mbist_element* (or *set_mbist_wrapper* in XG mode) because the 'memory_cells' (alias 'target' in XG mode) parameter is missing. This is required when view is set to SPEC.

**What Next**

Look at *set_mbist_element* (or *set_mbist_wrapper* in XG mode) man page

---

## UIT-823

(warning) '-mem_id' is ignored when 'view' option is set to EXISTING

**Description**

This is issued from the command *set_mbist_element* (or *set_mbist_wrapper* in XG mode) because the 'mem_id' option is specified in the case of 'view' option set to SPEC. The 'mem_id' option is required only when 'view' is set to EXISTING.

**What Next**

Look at *set_mbist_element* (or *set_mbist_wrapper* in XG mode) man page

---

## UIT-824

(warning) '-no_touch', '-memory_cells' (alias '-target' in XG mode) and '-ip_parameters' (alias '-parameters' in XG mode) options are ignored when 'view' option is set to EXISTING

Feedback

**Description**

This is issued from the command *set_mbist_element* (or *set_mbist_wrapper* in XG mode) because the '-no_touch', '-memory_cells' (alias '-target' in XG mode) and '-ip_parameters' (alias '-parameters' in XG mode) options are used when 'view' option is set to SPEC and are ignored when 'view' option is set to EXISTING.

**What Next**

Look at *set_mbist_element* (or *set_mbist_wrapper* in XG mode) man page

---

## UIT-825

(error) the test model has not been generated by MBISTC Tech 2

**Description**

This is issued from the command *set_mbist_element* (or *set_mbist_wrapper* in XG mode) because the test model of the current design has not been generated by MBISTC Tech 2 and so it can not be modified.

**What Next**

Read the correct test model and set the correct current design

---

## UIT-826

(error) 'content_file' option supports only one file name in the case of 'view' option set to EXISTING

**Description**

This is issued from the command *set_mbist_element* (or *set_mbist_wrapper* in XG mode) because the 'content_file' option value is a list of file names. The 'content_file' value can be a file name list in the case of 'view' option set to SPEC; only one file name is supported for 'content_file' option in the case of 'view' option set to EXISTING.

**What Next**

Look at the *set_mbist_element* (or *set_mbist_wrapper* in XG mode) man page

---

## UIT-827

(error) At least one of the trace_file parameters must be specified

Feedback

**Description**

This is issued from the command *report_mbist_trace* as no trace file was specified. You must specify at least one of the following parameters: *-trace_file*, *-repair_trace_file*

**What Next**

Specify a trace file parameter

---

## UIT-900

(warning) '%s' is not a cell, instance, scan segment, or scan link, and is not being added to the scan group.

**Description**

The set_scan_group command accepts an unordered list of design objects. These must be cells, instances, links or segments. Other kinds of design objects cannot be added to scan groups, and are rejected.

**What Next**

Remove the object from the argument list to get rid of the warning. Use hierarchical instance names, with respect to the top-level design, to locate design objects.

---

## UIT-901

(warning) Scan group element '%s' is a scan link\n\tand is not being added to the scan group.

**Description**

The *set_scan_group* command accepts an unordered list of design objects. The first object in the list can not be a scan link because there is no preceding cell to associate it with.

**What Next**

Remove the object from the argument list to get rid of the warning.

---

## UIT-902

(Error) Ignoring the scan group specification as the scan group '%s' is empty.

**Description**

Specify scan groups using the *set_scan_group* command.

Feedback

This message tells you that DFT Compiler ignores a *set_scan_group* command because the scan group is empty .

**What Next**

Specify valid scan group elements to get rid of the error. If you did specify group elements, study accompanying warning messages to see why they were discarded.

---

## UIT-903

(error) Scan %s '%s' element '%s' has internal and wrapper segments.

**Description**

This error message is generated when you try to include a core cell into a scan group or scan segment. A core cell is a cell with a test model and has both internal scan and wrapper segments. As internal scan segments and wrapper segments can't be mixed during core integration, you can't include such a cell with other elements of a scan group or a scan segment.

**What Next**

Check if you have specified core_integration flag of dft configuration. If you are not integrating cores, remove such a specification and reinvoke the current command.

---

## UIT-904

(error) Scan Group '%s' has %s segments.

**Description**

This error message is generated when you try to include a wrapper or an internal scan segment with other segments in a scan group during core integration. Wrapper or internal scan segments can not be mixed with other segments during core integration.

**What Next**

Check if you have specified core_integration flag of dft configuration. If you are not integrating cores, remove such a specification and reinvoke the current command.

---

## UIT-905

(warning) Scan group '%s' overwrites an earlier specification.

Feedback

**Description**

DFT Compiler does not allow scan groups to be specified using multiple *set_scan_group* commands. This warning tells you that an earlier specification of scan group is being overwritten.

**What Next**

Establish whether you want the specification to be overwritten. If not, combine the two specifications into one *set_scan_group* command.

---

## UIT-906

(error) Scan group '%s' exists in another mode.

**Description**

DFT Compiler does not allow same scan group to be specified using multiple *set_scan_group* commands. This warning tells you that an earlier specification for the same scan group exists for another mode. Scan group names should be unique for the whole design.

**What Next**

Establish whether you want the specification to be overwritten. If not, combine the two specifications into one *set_scan_group* command for the same mode.

---

## UIT-907

(error) Scan groups '%s' and '%s' have common elements.

**Description**

DFT Compiler does not let scan groups share scan elements (cells or design instances). This error tells you that some elements belong to more than one group.

**What Next**

If the common elements can be removed from the scan group you're specifying, remove them and reapply the *set_scan_group* command. Otherwise, apply the *remove_scan_group* command and start again specifying without common elements between groups.

---

## UIT-908

(error) Signal of data type '%s' is not valid for internal pins flow.

Feedback

**Description**

The signal data types that are valid for internal pins flow are MasterClock, ScanMasterClock, Reset, Constant, ScanDataIn, ScanDataOut, ScanEnable, and TestMode.

**What Next**

Please specify a valid data type using the *set_dft_signal* command and turn on the internal pins flow using the *set_dft_drc_configuration*.

---

## UIT-909

(error) Internal pin '%s' of type '%s' direction is not valid for internal pins flow.

**Description**

If the internal pin specified is not a hierarchical pin and is of data type MasterClock, ScanMasterClock, Reset, Constant, ScanDataIn, ScanEnable, and TestMode, the pin should be of direction Out and if the data type is ScanDataOut, the pin should be of direction In. For the hierarchical pins, pins with both In and Out directions are valid.

**What Next**

Please specify a pin with valid direction using the *set_dft_signal* command and turn on the internal pins flow using the *set_dft_drc_configuration*.

---

## UIT-910

(error) The hookup pin '%s' of type '%s' is not a valid hookup pin.

**Description**

Driver pins specified with the *-hookup_pin* option of the *set_dft_signal* command must be driven by potentially active combinational or sequential logic, or they must be output pins of black-box cells.

In this case, the specified hookup pin is not valid. Possible causes are:

- The pin is driven by constant 0 or constant 1 logic value.
- The pin is undriven.

**What Next**

Change the netlist to ensure that the specified hookup pin is properly driven or specify another hookup pin with a valid driver. If the pin is expected to be a black-box output pin, check that the cell is indeed a black box by using the *report_cell* command to check for the 'b' (black box) attribute.

Feedback

## UIT-911

(error) Numbers of pipeline head and tail registers do not match the respective numbers in previously specified scan paths

### Description

You have specified several scan paths with their corresponding head and tail registers. But the number of head pipeline registers specified for the current chain is different from the one specified in previous chains or the number of tail pipeline stages specified for the current chain is different from the one specified in previous chains. The number of head pipeline registers should be the same across all chains. The number of tail pipeline registers should be the same across all chains.

### What Next

Correct the list of register name for *set_scan_path -pipeline_head* or *-pipeline_tail* command

## UIT-912

(error) The pin '%s' is not a valid hookup pin.

### Description

When hookup pins are specified with the *-hookup* option of the *set_scan_path* command, they must be previously defined with the correct signals types using the *set_dft_signal* command.

In this case, the tool could not find any pin type information for the indicated hookup pin.

### What Next

Verify that the pins are defined with the correct signal types using the *set_dft_signal* command.

If you are using a multiple test mode flow, be sure that the *set_dft_signal* commands are defined on the *all_dft* mode. Do this either by defining the signals before defining the test modes, or by defining the signals explicitly with the *-test_mode all_dft* option.

## UIT-913

(warning) Same hookup pin specified more than once. Duplicate hookup pins will be removed.

Feedback

**Description**

The hookup pins specified for set_scan_path are expected to be unique. Multiple use of a hookup pin gives this warning. The duplicate hookup pin specification is ignored.

**What Next**

Use unique hookup pins with *-hookup* option of *set_scan_path* command. Use *report_scan_path* command to observe the scan path set.

---

## UIT-914

(warning) Specification of a signal of type Oscillator in spec view is ignored.

**Description**

You receive this message because you have specified a signal of type Oscillator with -view spec or without the -view option. In this case, the command will be ignored because a signal of type Oscillator must be specified in view existing_dft.

**What Next**

Please specify the signal in existing view using the *set_dft_signal* command.

---

## UIT-915

(error) Hookup pin is not allowed for the '%s' boundary scan port.

**Description**

This error message occurs when a hookup pin is specified while using the *set_dft_signal* command with the *-type TAP* ports option. A hookup pin cannot be specified for the TCK, TDI, TDO, TMS and TRST boundary scan TAP ports.

**What Next**

Remove the *-hookup_pin* option for BSD TAP ports. See the *set_dft_signal* man page for more information.

---

## UIT-916
